It seems probable, speaking of the current season, that Japan producers, warned by the low prices at which teas were only saleable at the close of 1876, will greatly limit the amount of third crop leaf picked, and as the United States markets seem to point to an import of 18,000,000 lbs. as a fully ample supply for each year, anything in excess being against the interests of shippers, we are likely to have a decrease in export. The past season 1876-1877 showed an export of 22,750,000 lbs. against 25,500,000 lbs. exported in the season 1875-1876, and this season the export from Japan will probably not greatly exceed 20,000,000 lbs. In speaking of "seasons" as regards tea, the period from the arrival of the new crop, which may be said to date from May 1st to the same date in the succeeding year, is meant.

The decrease in the export as noted above is, I think, to be attributed to the overstocked markets in America. The same reasons will account for depreciation in value, as prices during 1876 were fully fifteen to twenty per cent. lower than in the previous year. I append a table showing the export of tea in each month from Yokohama during the year 1876, and fluctuations in price of good medium (market standard) during same period.

1876.	Exported each Month.	Price of good medium per picul, 133½ lbs.	Rise during course of Month.	Fall during course of Month.	Remarks.
January	1,075,592	26 to 29			
February	903,657	—			
March	442,911	25 to 28			
April	261,393	no quotations			
May	690,688	29 to 31			
June	1,779,192	24 to 26			
July	2,774,879	20 to 22			
August	2,148,003	18 to 20			
September	1,151,080	21 to 23			
October	1,389,737	22 to 24			
November	2,733,353	21 to 23			
December	473,342	19 to 22			
		Total 15,820,327 lbs.			

representing a total a little in excess of the Custom House Returns.

The fluctuations in other grades correspond very nearly with those of "good

medium," which are accepted here as the market standard.

Shipping.—Under the heading "General" British shipping exhibits an increase of 18,685 tons in the entrances and 24,483 tons in the clearances as compared with 1875, mail steamers remaining much the same. American shipping "General" also shows an increase of 16,582 tons inwards and 18,690 tons outwards in 1876, against 14,692 and 13,633 tons respectively in 1875; but in mail steamers the decrease is very marked. In 1876 the entrances were 37 vessels of 133,931 tons, the clearances 39 vessels of 141,154 tons, against 79 vessels of 228,771 tons entered, and 77 vessels of 221,154 tons cleared in 1875.

The falling off in number of vessels and tonnage is due to the transfer from the American to the Japanese flag of the three steamers *Costa Rica*, *Oregonian*, and *Golden Age*, known now as the *Genkai Maru*, the *Nagoya Maru*, and the *Hiroshima Maru*. The steamer *New York* of the same line was transferred to the Japanese flag on the 10th August, 1874, the *Oregonian* on the 22nd October, 1875, the *Golden Age* and *Costa Rica* on the 1st and 9th November, 1875.

In my report on the trade of 1875, and under the heading "Shipping," I drew attention to the falling off in entries and clearances of mail steamers (American) as compared with the previous year, to be attributed, as I then remarked, to the sale of three of the Pacific Mail Company's steamers to the Japanese. The *New York* it should be remembered, had been sold the year previous—1874—but the sale of those steamers did not take place until October and November 1875, the American flag therefore had the benefit of their tonnage returns for ten months of the year 1875. Throughout the year 1876, these steamers have continued under the Japanese flag, thus accounting for the falling off in American tonnage which the returns for 1876 exhibit. I may take this opportunity of noting that the American steamer *Nevada*, which boat alone continued to run between this and Shanghai during the year 1876 under the American flag, was transferred to the Japanese flag on the 24th of January of this year. The shipping returns (American) for the current year will probably, in consequence, at its close, compare unfavourably with those of 1876.

I may here mention that the transfer of these boats from the American to the Japanese flag has not affected the carrying trade either in respect to goods or passengers. The steamers are run with commendable regularity, due regard being had to their liability to being taken up for Government purposes. I am not, I think, saying too much when I state that the management and working of the Mitsubishi Company—the name under which the Japanese line is known—compares well with that of the older Companies established here.

Some fast passages have been made during the year 1876 by the steamers of the Pacific Mail Line (American) and those of the Occidental and Oriental Steam Ship Line (English) between this and San Francisco. The steamer *City of Peking* (American Steamer) made one passage from this to San Francisco in fifteen days eleven hours, the *Oceanic* (British Steamer) in fourteen days fifteen and one-third hours.

French shipping, both in respect to general and mail steamers, exhibits no marked difference comparing the figures of 1876 and 1875.

German shipping exhibits a decrease of

over five thousand tons in the entries and clearances as compared with 1875.

Russian shipping exhibits no great change.

Swedish and Norwegian tonnage has sprung from 312 tons entered and cleared in 1875 to 3,635 tons entered and cleared in 1876.

Danish tonnage calls for no particular comment.

Dutch shipping exhibits an increase. Numerically the entries and clearances of Danish, Dutch, Swedish, and Norwegian and Russian ships remain at a low figure, as will be seen by a reference to the tables.

A report on the shipping of 1876, of far as this port is concerned, would be incomplete were I to omit mention so the Regulations issued by the Japanese Government in respect to the engagement of masters, mates, and engineers, and the granting of certificates to same, and of the Regulations in respect to pilots and pilotage. The first mentioned were published on the 6th June, the latter on the 15th December, 1876.

With regard to masters, mates, and engineers, being foreigners employed on Japanese vessels, the possession of Board of Trade or other certificates has not relieved the holders from the obligation of appearing before the Japanese Board of Examiners and satisfying that Board of their proficiency.

The Japanese are assisted by competent foreigners in the conduct of these examinations, and I have good reason for believing that candidates are subjected to as searching an examination as they would be in England, or any other country, where this subject commands attention.

The Pilotage Regulations have for the moment supplied a want long felt, and the obligation is now on every master of a vessel entering the port who may engage a pilot, to see that he holds a certificate qualifying him for the pursuit of his vocation as Pilot.

The following are the signals for a pilot in the day time:—

1st.—The jack or other national colour of the ship hoisted at the fore.

2nd.—The International code pilot signal P.T.

At night the following signals, when used together or separately, are deemed to be signals for a pilot:—

1.—A blue light every fifteen minutes, or

2.—A bright white light flashed or shown at short intervals just above the bulwarks for about a minute at a time.

The attention of the Japanese Government has also been directed to the overloading of junks, and regulations are now in force under which all cargo in excess of that allowed to be carried is confiscated to the Japanese Government.

I append, as customary, a table of the Traffic receipts of the line of Railway between this and Yedo (Tokio) for the year 1876, and add for purposes of comparison a table of the receipts for the preceding year, 1875.

No. of Passenger.	Amount.	Goods.	Amount.

YUKI KOTSUKE-NIUDO IN HADES.

(From the *Taiheiki*.)

The ship in which Yuki Kôtsuke-Niudô sailed being separated from that of the prince, was driven to the harbour of Ano in the State of Isé, after having drifted about the boundless ocean for seven days and nights. There Yuki repaired the damages done to the vessel, and was ready to sail again for his destination, which was the State of Mutsu, when he was suddenly taken ill, and was shortly after carried to the grave. Before the warrior died he was visited by a benevolent priest, who kindly advised him to repeat prayers in order that he might be saved from the sins he had committed, and to put away his wordly thoughts, and confide in him if he had anything to communicate to his relatives. As soon as the old warrior heard this, he sat up in his bed and said, laughing in a ghastly manner:—"I am now seventy years old, and have enjoyed through my life good fame and the highest confidence of the Tennô, so I have nothing to regret at my death, except that I die before I can destroy all the enemies of my master. Tell my son in the country that he need not make any offerings to Buddha and the priests, to obtain my future beatitude. Nothing he can do will better satisfy me than the offering of the heads of our enemies, which he shall cut off and hang before my tomb." Having said this, he expired with his drawn sword in his hand. Well, this fierce man was a great hater of religion and had killed numberless priests; and he used to say that he could not sleep comfortably unless he had some human heads laid near his pillow. His relatives being in the State of Mutsu, it was long before the intelligence of his death reached them.

In the interval, a high priest travelling on his way from Musashi to Shimosa, met a *yamabushi*, one evening, while he was seeking in vain for a lodging, and was taken by him to a certain place where he could see a large

iron gate, on which were inscribed the words "The Great Temple of Fire." Entering it, he saw before him a magnificent shrine named the "Judgment of Right and Wrong." Here the *yamabushi*, leaving the priest in the courtyard, went in alone, but soon came back with a box containing two prayer-books, one of which he handed to the priest, saying that he must read it aloud calmly while a terrible sight appeared. Then, opening the other book for himself, he read very reverently. It was now midnight, and very calm with clear moonlight; but suddenly black clouds hid the light, and fierce lightning flashed through the torrents of rain which began to fall. Then appeared numberless demons setting on fire a heap of coals, while poisonous serpents stretched out their red tongues, and savage dogs barked terribly. Next a fire cart bearing a criminal descended from the sky, drawn by many demons. The victim was taken out and placed between huge iron blocks which the savage demons pressed together with horrible yells, the blood meanwhile streaming down into a large tub placed to receive it. When the body was pressed as thin as a sheet of paper, it was taken out, and one demon thrust an iron skewer through it and held it over a slow fire as if it were a fish he was cooking. When it had become perfectly dry, it was stretched upon a block, where it was cut into a hundred pieces which were put in a basket. A demon shook the basket saying:—"Live! live!", when the fragments were turned to a human being as before.

Then the chief demon exclaimed, standing before him:—"It is not hell, but your own crimes that torture you thus!" The rebuked criminal wept without tears, for he could not cry, as iron balls were caused to choke his throat, and he was exposed to a hot fire, which dried his tears as soon as they started; and his agony was beyond expression. The terrified priest asked the *yamabushi* who the criminal was. "He is Yuki Kôtsuke-Niudô of Mutsu," replied he, "who died in Isé, and he has fallen into the hell of Ahi. When you happen to see his relatives, tell them to copy a prayer-book and thereby rescue him from those tortures. I am Jizo Bosatsu, whose name was accidentally inscribed on the sleeve of the garment in which he used to fight; so I take compassion upon him." As soon as this had escaped his companion's lips, the priest heard the wild wind sweeping through the pine trees: the bell of a distant temple proclaimed the dawn; and he found himself on the grass of the wide plain of Shimosa. Marvelling much at such a vision, the priest hastened to Mutsu, and narrated all the horrible sights he had witnessed to Yuki Gonshoyu, the son of Kôtsuke Niudô, and advised him to obey the commands of Jizo Bosatsu. This taking place before the intelligence of Kôtsuke Niudô's fate had reached his home, much doubt of its truth was entertained by the family; but, after a few days, a messenger arrived from Isé, bringing the sad news, and the last words of the late warrior.

THE BOOK STORES.

(From the *New Tokio Hanjoki*.)

NO ANCIENT time could exceed the brightness of learning and the richness in literary works of the present time. Numerous books of English, French, German, and Chinese literature, with the new Shinto and Buddhist publications, form a great emporium for education, which produces sons wiser than

their fathers, and affords a remedy for the blind. It is true that the extent of the civilization of a country can be ascertained by the number of its books; and now there are in Tokio about 500 old book stores besides their branch establishments, which are almost beyond calculation, and they are all in a condition of great prosperity, having many patrons.

Well, learning is for promoting intellectual power, which produces inventive genius, which again necessarily produces new books; so, perhaps, all existing books will be mere waste-paper after ten years. "What shall you do," asked a friend of mine, once, "when your New Hanjoki, which is naturally a useless work, comes to be handed to the waste-paper dealers?" "I have no fear for that," said I, "for I shall have then another Hanjoki, written upon the then new condition of Tokio's prosperity."

Every European book store has nice book cases close to the walls, covered with glass doors, in which many beautifully bound books are arranged in order. Webster's big Dictionaries are always deposited in the central case; works on Moral Philosophy on the left, and such as Parley's history of the World, Geography and Natural Philosophy on the right, while the Readers—mostly first, second, and third, perhaps there being nobody yet able to read the more advanced numbers—are heaped together on one side.

The banto there understands some English, and the kozo know all the titles of books by heart.

A self-conceited youth taking a seat in the shop addresses the banto:—"Have any new books arrived per recent mail?" "Yes sir, there have," replies banto promptly, and he lays a few volumes before the customer, who remarks, turning over a few pages of each volume:—"Oh! this is Mill's Political Economy; that is Buckle's History of Civilization! I know their contents by heart! And what are those? Oh! these are no newer than Mill or Buckle! I want something very new." The banto produces another volume, saying:—"This is only a story, sir, but it is exceedingly well written, I am told." While the young customer is eyeing the pages deliberately, a kozo who has been watching him says softly: "Really the eyes of a learned man must be different from those of common people's. How else is it possible for him to read any book, held upside down?" "Never mind, boy!" says the other, "I have hurt my sight by close night study," and, turning the book to its proper position exclaims:—"Ah! this is the work of an American, which I read ten years ago." "Perhaps not, sir," says the banto concealing his emotion, "it is one written by one of our countrymen in London!"

An old man, standing before the shop, asks in a low tone:—"Have you any English Grammars?" "Yes, but of what kind sir?" says the kozo rather sharply, "Peneo's or Quackembos'?" "Well, don't trouble yourself," says the old man hesitatingly, "only give me one with explanations in kana."

"There is no such grammar, sir," retorts kozo. "Probably you want some translation." "What do you mean?" asks the man, "one translated into English or Chinese?" "I don't understand, sir," says the kozo still more sharply. "Translations are mostly made in Japanese for those who cannot read English; but if you intend to learn English, you have no need of one of that kind, I should suppose."

"Well, then, give me," says the old fellow feebly, "a self teacher (Hitori-geiko) of English conversation." At this the banto ex-

claims indignantly:—"In our store we keep European books only, sir; pray go and ask at smaller shops for such books as you want." The poor fellow goes out silently, when banto remarks, laughing:—"I think he is likely to make good progress in learning English at fifty years of age."

In another kind of bookseller's shop, where various kinds of publications, including newspapers, copybooks, and paintings, there always are hung upon the walls long slips of papers describing the titles of books newly published. A genteel priest covered with a European hat, and clad in a Buddhist robe and Japanese hakama comes in smiling, as he inquires of the banto:—"Have you any book which treats on Shintoism?" "Oh, yes, we have," replies the banto. "We have Kojiki, Nifongi, &c., but which do you want?" "Well, I should like to have one which contains enough in a single volume for preaching purposes." "Here is one," says the banto, producing a book, entitled "Epitome of Shintoism." "That is good enough," says the priest. Then, producing some ten volumes of ancient books he adds:—"But will you kindly exchange these books for that single one?" "Well, as you know," replies the banto not well pleased, "Buddhist books have no value at present; even the 600 volumes of the famous Daihannia-kio are not saleable at all, so I cannot do so, unless you add a few sen." "Now, listen to what I tell you," says the priest, with tears. "These precious volumes have been kept in the library of my temple for many centuries. During that time they used to be let out once a year for recitation to remove popular ills. Now the Government have established many preaching houses, and I, being chosen one of the preachers, must understand Shintoism thoroughly; but this I do only to feed my stomach. It happened one night in my dreams that those and other books in the library appeared to me and said, very lamentably, 'Oh! unfortunate are we, religious books! For we have not seen the blue skies for years together, being imprisoned in a library. Issetsu-kio is entirely out of use, and Nehan-kio is really sleeping. Besides, severe attacks are made upon our religion. We don't know where we shall take refuge by-and-by. Why do you not protect us, being our guardian? Truly we should think it better for us to be thrown into the hands of waste-paper dealers, and so to be of some use in the world!' This was followed by loud lamentations and prayers, which waked me from my dream. In the good old time," he continues, "a single Kannon-kio used to feed a great many priests, including goma-burners and cooking priests; and it is impossible to calculate how many persons lived upon the charity of other books; so, although I would confide these books to a bookseller's care, I could not bear to see them suffer indignity at the hands of waste-paper dealers. Pray, therefore, have some pity upon them."

"I sympathize with you!" exclaims, confidentially, a Chinese scholar, who has been reading a Chinese paper, standing by the priest. "Indeed, our Confucian books are in similar circumstances. Our classics, which monopolised the schools, public as well as private, have come to be exposed for sale in the open streets, or are covered with cobwebs, since the introduction of European learning; and though there be but few and occasional purchasers, their prices are lamentably low. Moreover they are constantly ridiculed and slandered by students of English and French, who always say that the Confucian doctrine is tedious and hard to be attained by learners,

but they never know really why it is so, because they don't study it at all. They think it sufficient when they know Chinese characters enough to be employed in translating Japanese into English. But their translations are often so obscure in their meaning as to be utterly useless. If they first study Chinese well, and then begin English, they may make good scholars: so the Buddhist doctrine, when it is brought into real practice, may do much good to the public. Indeed, I do sympathize with you for the deplorable fact."

The clever banto interferes here, saying:—"Allow me to offer the remark that your views are rather narrow. There are many European, Chinese, Buddhist, and Shinto adherents, each following his own inclination; but no matter what may be the doctrine taught anything new is always received into popularity. So the Confucian may invent a new argument out of the original ones; and a Buddhist can do the same to gain popularity." Then, pointing to the list of actors, which hangs on the wall, he adds:—"The cleverest actors are always the youngest. A doctrine is a stage: scholars, actors, and books, the performances. So, a talented scholar must produce some new performance suited to his stage." While the discussion is thus going on, the clock strikes three, and a kozo, rubbing his sleepy eyes, remarks:—"The performance is just finished. Pray let the old spectators go out, and let new ones come in!"

IN A BARBER'S SHOP.

(From the New Tokio Hanjoki.)

A barber's shop, being always got up in imitation of a European house, is painted on the outside so as to resemble a house of stone, while its pillars are of iron in appearance, and the building itself is generally very small. Before the shop stands a long pole, with a ball on the top, and decorated with red and white stripes, which serves as the sign-board of the barber. Whether the colored stripes on the pole and the ball at the top are supposed to represent the hair and heads of the barber's customers I cannot tell, and must leave the solution of the problem to some more learned man. There are several ways of dressing hair,—the English, French, Japanese, and other styles—and different prices are charged at different shops, but in the majority the price is half a bu for the first cut,—that is to say, when a Japanese wishes to have his hair done in European style,—and seven or eight sen afterwards. At present there is a semi-civilized fashion of cutting hair which is very curious to look at. The person desirous of conforming to this custom has the front part of his head shaved and the remainder of his hair cut close.

There sits silently, on a bench, an old man of Daichi, who regards himself as a store stocked with ancient knowledge, and looks of contempt upon those who mention the Western world with an air. A young student is close by, and rather abruptly addresses the old sage, saying:—"Look, a large dragon fly (meaning the knot of hair) has perched upon your head! Why do you not cut it off? If you continue going through life in this way, I fancy you will experience but very little pleasure." The ancient strokes his chin slowly, and, while a bitterly sarcastic smile steals over his features, says:—"People, when they take to dressing their hair in accordance with European fashions, are apt to think themselves civilized, but they are far from it so long as their minds remain uncultivated. And, let me ask, what pleasure

do you yourself derive from having your hair dressed in that way? A gentleman is slow in speech but quick in action; and civilization must have a simple exterior while internally it must be perfect. I don't like the present fashions, which are quite the reverse of what they used to be. It is also said now that the doctrine of Confucius is tedious, and the religion of Shaka false; and the only thing which seems to be profitable to society is the doctrine preached by the foreigners, which, if true, everybody will most likely believe in. However, I am sorry to notice the establishment of private schools for the teaching of foreign languages, because they are always closed up shortly after being opened, owing to their funds being expended in mere outward show, and in things totally unnecessary. A beautiful structure does not induce students to study harder, and I have never known one who studied in a magnificent palace become more advanced, in consequence, than the scholar who learned in a thatched house. Do Europeans regard those as great men who attempt an undertaking which is beyond their power to accomplish? Those who are devoid of truth, and only pay attention to outward decorations, are like the fanciful sign-boards of the theatres; and who is it that believes the statements they contain? The dressing of hair according to European style is only an attempt at counterfeiting civilization, which I detest very much, so I don't think I shall drive away the dragon fly from the top of my head." With these remarks the old man is about to rise and take his departure, but the other catches him by the sleeve of his dress, saying:—"Stay a moment! You say that the wearing of hair according to foreign style is only a sign-board. It may be so, perhaps, but do you think it is of no value? If you do, you make a mistake. If Seishi (a Chinese lady celebrated for her beauty) were to carry manure about, she would cease to be attractive; and if Komachi (a Japanese beauty) were to turn beggar, people would turn away in disgust from her. This would not be because the beauty of either of the ladies had diminished in any degree, but because surrounding circumstances had changed. Now, suppose a great European scholar, who, however, has a taste for antiquated costumes, and wears a short sleeved coat, long sword, and ties his hair in a knot on the top of his head,—who could believe that he was a very learned man? Again, suppose a youth who, although he cannot read a single page of an English book, dresses his hair in European style, wears European clothes and leather boots,—who would suppose him to be an ignorant clinger to ancient customs? When a person is careful in his dress he is never careless in his behaviour, so the sign-board, as you are pleased to term it, is an important thing after all. If a theatre had no sign-board it would not have so many persons to witness the performance as if it had one; and if a medicine had no testimonials as to its virtue no one would buy it." The old man laughs contemptuously as he replies:—"The hair civilization may be effected for half a bu; but how do you contrive to cleanse a dirty mind?" "There is a hospital for that purpose," retorted the other, "but as I am not a physician I cannot inform you as to what medicines would have to be applied. For further particulars you had better apply to a gentleman of the medical profession. The scarcity of civilized men is owing to the scarcity of sign-boards: therefore, I would like to call all the barbers together, and with their assistance cut off the hair of all the fellows who dressed it in such a barbarous style as yours." "Hair-cutting is my business, Sir," chimes in the barber, stopping for an instant the working

of his busy scissors, "and I am quite willing to civilize as many heads as I am entrusted with." "You may clean their heads," says the old man, still harping on his text, "but who will wash their dirty minds?" "Why, sir, there are many European washermen to perform that operation; and when any part of the internal organ is hurt or torn, there are also plenty of European tailors to mend it," is the barber's ready reply.

A GIRLS' SCHOOL.

(From the new *Tokio Hanjoki*.)

It is most important for a woman to have learning, because every word and movement of a mother is an example followed by her children. How is it possible for a mother to teach her children well unless she has learned herself? And how is it possible for children to know how to govern themselves without being taught?

Many youths waste their lives in idleness and indolence, while many girls disgrace themselves by the commission of shameful acts, the final result, that they both come to an ill end, being due to the fact of their ill bringing up. Indeed, the duty of a mother is a weighty one, or, as the Western sages say, "the goodness of the rising generation depends upon the female parents;" because the education of children during their early years, falls upon their mothers; therefore it is very necessary for women to be properly trained.

Thus, we are very sorry to find in the city of Tokio, many men and women of bad and loose character, who maintain unlawful relations with each other, to their mutual misfortune, and with the result of frequent suicides. Why do they regard their precious lives as such a trifling matter? Because their mothers knew nothing but *Iro* (the first three letters of the Japanese alphabet, also meaning love) and so they could teach their children nothing else. Most girls, when they come to the age of fifteen, know very well how to dress themselves in fine clothes, and how to arrange their toilet, but they do not know at all how to work with their needle. They can recite licentious songs very well, but cannot distinguish, by the writing, whether a pawnbroker's ticket is not an official notification. How can such women educate their children properly?

All enlightened countries have established female schools, thereby producing good mothers, and this practice is being imitated in our country, where many female schools, public and private, have been founded; and the number of pupils is daily increasing. Recently Government has instituted a normal school for women, in order to extend female education; and I have no doubt that, after a few years, there will be a great improvement in the morality of young women, who will give perfect leisure to King Emma of Hades, who will have nothing about the suicides of lovers to record in his book, which, therefore, he will be compelled to deliver up to the Izumo temple, there to be kept evermore. However, into the questions of social reform in the relations between male and female, and the entire disappearance of the practice of polygamy, my small brain has no power to enter; so I beg to leave this matter to fortune-tellers and physiognomists.

A Government Girls' School is at Takehira-cho, within the Hitotsu-bashi gate, and the new structure is modelled after the European style. It is not very large, but it is surrounded with beautifully laid-out gardens. A Women's Normal School has been constructed close to

what was the Seido, and is now the magnificent Normal School at Kanda. Here accommodation was devised for one hundred pupils; but nearly double that number of girls have arrived from all quarters, desirous to be admitted. Though Tokio has several female schools, the pupils are not allowed to lodge in them, except in the case of the Female Normal School.

The ages of the pupils are from twelve to sixteen, and the regulations for instruction adopted are those in use in common schools, to which, however, English lessons, with needle-work, and other accomplishments necessary to a lady's education, are added. These schools are all superintended by female teachers, who also take good care to inculcate lessons of morality and virtue.

Two neatly attired girls are on their way to school, each holding her books under her left arm, and an umbrella in the right hand. They talk as they go.

"How old are you?" asks Miss Ume; "I guess you are nearly sixteen." "Not so old," replies Miss Kiku, an intelligent looking girl; "but why are you so anxious to know my age?" "There is nothing to wonder at," says the other: "only I am jealous of you, being younger than myself." "I am already sixteen years and two months old," continues Ume, "and, indeed, flowers fade too soon: besides there are the cruel rain and wind, which may destroy their beauty unexpectedly. To tell you the truth, I am in great distress, from which I am unable to free myself, I suppose." "I will help you, if I can," says the younger girl earnestly; "but tell me what it is." "Well, my family belongs to a certain Han," begins the elder girl, "to which my father rendered much service, but, unfortunately, he died shortly after my birth; and, having no brother to support me, I have been brought up entirely under the kind care of my mother in the midst of great poverty; and the late reduction of pensions has brought additional misery upon us. Now," continues she, "my poor mother was so imprudent as to promise a son of one of her relatives, a cousin, to give me to him in marriage, and she is now longing to see me married to him as soon as possible, while he, too, is pressing me to hasten the day. But this man, to whom I am betrothed, is a most detestable fellow, with a visage as black as a varnished mask, a flat nose, and pock-marks all over his face. Besides, he is ill formed, and ill tempered as well, just like the villain Iwanaga in the drama; but mind, I do not care a bit about his ugly features, but I can not endure to marry an ignorant fool, who knows nothing about the art of writing. Moreover, I am told that he has joined those idle Shizoku, who are uselessly urging on the expedition to Corea, and I do hate him with all my heart! So you see," she goes on, "if I disobey my mother, I shall be disowned as an undutiful child and, if I obey her, I must suffer the greatest misery all my life. Such being the case, my distress is not like a stone, which may be rolled round and away. I have no heart to learn anything, though I go to school. Now, can you lend me a helping hand to save me from a future unhappy life?" "I tell you, my dear, you have nothing to fear in any case," says the cheerful Kiku. "I think you have not been long at school, so you are not quite free from the ancient notion that a sovereign and a father had such arbitrary power as to kill their own subjects and children, according to their own will. This was a barbarous custom; and now things are different. Mankind, being the creatures of God, the duty of parents towards their children is to bring them up properly. God must be res-

pected above all other things, and the parents come next. This is a fact acknowledged throughout the world. Now, a parent, as well as a sovereign, has certain limits to the exercise of his authority: so, if you have sufficient reason to oppose the wish of your mother, you can do so lawfully. Besides, marriage being the most important event in one's life, which neither a sovereign nor a father has any right to enforce, against the will of the party concerned, you are perfectly justified in rejecting a marriage proposed against your wish, and you may still preserve your self-respect. Then, you would ask," goes on the clever girl, "how may you preserve your independence and self-respect? Very well! Hear what I would do, myself, if situated as you are. Educated females being yet scarce in our country, I should study hard, till I was able to be a school-mistress, and be paid sufficiently to support myself. Then I should be free to choose a husband whom I could love with all my heart, and have nobody to interfere with me. Is this not very pleasant? Now, what I advise you to do is this: be studious, and take care not to lose your freedom." "Very good, indeed!" exclaims Miss Ume much delighted, "I accept your kind advice with grateful heart, my dear!" "Then tell your mother what you intend to do without delay," says Miss Kiku. "Yes I will!" replies the other, as they enter the school gate together.

THE STRANDING OF THE "ASAMA-KUWAN."

(From the *Osaka Nippo*.)

THE man-of-war *Asama-kuwan* was cruising off a part of the coast of Hiuga, which is occupied entirely by the rebel army. On the 29th June she ran on some rocks off the island of Oshima, opposite Cape Tonoura, Hiuga. It was 3 o'clock a.m.: the sea was very high, and the weather foggy. Captain Itokata, in command of the ship, and others tried their best to get the vessel off the rocks. But she would not move, and the water soon gained the cabin. As they were close to the enemy's ground, the captain landed on the island, with 17 young officers and 23 marines, who were drawn up in line and stationed in the best position in which to meet the insurgents should they appear. Rice and other necessities were landed. But, very fortunately for the imperialists, the insurgents did not know of the wreck at first. On the evening of the same day, however, the rebels fired upon the island, but it was then too dark for their fire to be dangerous. Meanwhile, the water rose high, and the man-of-war commenced unexpectedly to float off the rock. All on board were very joyful, and shouted and clapped their hands. The imperialists who had landed left their rice and other things on the island, which the rebel soldiers were then approaching, re-embarked on board the man-of-war, and did their best to stop the leak. Previous to this time the captain had despatched a small boat to the *Nisshin-kuwan* in Saiki, Bungo, asking for aid. The latter place was distant about fifty ri from the site of the accident, and the weather was unfortunately stormy, so that no one on board expected that the messengers would reach Saiki. Nevertheless the small boat, which left the man-of-war at 3 p.m. on the 29th, arrived in the harbour of Saiki on the following morning. The *Nisshin-kuwan* was at once despatched to the assistance of her consort, and, arriving off the coast of Takaki, Hiuga, met the latter and accompanied her as far as Saga, where they arrived with great difficulty, and where the *Asama-kuwan* is now repairing damages.

THE PROGRESS OF THE INSURRECTION.

(From the *Nichi Nichi Shinbun*)

Before the Kagoshima insurgents overtly raised the standard of revolt against the Central Government, and even after they had prevented the imperialists from embarking the gunpowder, then in the naval arsenal in Iso, Kagoshima, on board the *Sekirio Maru* in conformity with the order of the War Department, they found it very difficult to frame any justification of their conduct. So they arrested without reason those officers of the Police Department, who had just returned from Tokio to Kagoshima, and obliged them, by the infliction of cruel torture, to confess just what they choose them to say. The Shigakko-to then excited all the shizoku in Satsuma by publishing their confessions, and sent to the neighbouring ken a manifesto signed by Oyama, the then Governor of Kagoshima. No sensible men could be misled by such a transparent device. But the poor shizoku in Satsuma, Hiuga, and Osumi, who looked upon Saigō-Takamori as their father or their god, distrusted the government rather than their present commander. When the Mikado's envoy landed in Kagoshima, he released the prisoners, whom he sent back to Tokio, together with the ex-Governor Oyama, for examination. They were shortly brought before the Daishin-in, where a trial took place. Nakahara, one of the prisoners, is a native of Ishu-in, Satsuma. During the 6th year of Meiji (1873) he was stationed in Tokio as a police inspector. When the question of a Korean expedition arose, and the present rebel commanders resigned their posts in the Government, Nakahara favoured their opinion and followed them to Kagoshima. In the following year, when the Government decided on an expedition to Formosa, he was ordered to that island at the head of a force, formed of the Kagoshima shizoku. In March he landed in Formosa, whence he returned to Kagoshima after a few months. He noticed the condition of excitement prevailing among the Shigakko-to. The latter spoke evil against the Government; and no orders from the Central Authorities were obeyed by them. Nakahara did his best to persuade those of his friends and relations who were members of the Shigakko-to to leave them; and the society in consequence looked upon him as their worst enemy. So he left Kagoshima and was again employed in the service of the Police Department in Tokio. Towards the close of last year, he received a letter from his home, stating that the Shigakko-to had increased in numbers and were much excited. He and two others, Sonoda and Suyehiro, determined to return to their homes where they hoped to be able to assist in preserving peace. Four other Kagoshima men also in the service of the Police Department, namely, Auraku, Mayeda, Matsuhita, and Stami, cherished the same desires. During December, they were allowed by the Government to visit their homes. At this time various rumors were current through the entire country. On the 10th January this year they arrived in the harbour of Chiyo in Satsuma. Nakahara passed the night in Chiyo at the house of a friend, who spoke to him as follows:—"The Shigakko-to have much increased in number and power. Very few shizoku have entered their school; and, in consequence, are persecuted by them. The members have recently been very busy purchasing fire-arms; and they consider all those arrive from Tokio to be spies of the Government. Further, they have issued a notice to the effect that anyone

holding communication with new comers from the east shall be destroyed." On the following night Nakahara arrived at his home in Ishu-in. But none of his friends or relations visited him; and those who happened to meet the newcomer in the street, looked fiercely at him. Nakahara and his companions found it too late to return to Tokio. On the 12th February he was ordered to appear before the district office. On his way to the office, he was arrested and taken to the police station in Kagoshima, where he found all his companions from Tokio in custody, and showing signs of bodily injuries, more or less severe.

Matsushita, who was a prisoner in the hands of the Kagoshima insurgents, was born in Gama. On returning from Tokio to his native province he found that Etsumi Jurota was District Officer; and he also became aware of the fact that this official was busily engaged purchasing ammunition at the public expense. On ascertaining this, he called secretly on the Kocho and some other officials, and informed them of what Etsumi was doing, and urged them to cherish their reputations, and to watch the actions of the Gakko-to. On the second of February, Itami, who belonged to the Kajiki district, and who had been a companion of Matsushita's from Tokio, called upon him and told him that the Gakko-to had forced their way into the Naval Arsenal of Iso, and seized large quantities of ammunition, and destroyed everything; and that the shizoku of the Gama district had joined the Gakko-to. The faithful Matsushita saw that any interference on his part with the actions of the Gakko-to would be useless, so he left his home and proceeded to Itami for the purpose of consulting his friends there. The result of the interview was that they resolved to carry this wonderful intelligence to Tokio. It was arranged that they were to start on the 4th of February, but when they were on the point of starting about fifteen members of the Gakko-to, each armed with swords, rifles, or clubs, forced their way into Matsushita's house and arrested him.

Mayeda and Itami were residing together in Itami, and endeavoured, even at the risk of their lives, to quell the disaffection which was growing rapidly. At this time Beppu-Shinsuke, Kucho of the district, ordered the shizoku to rise and join the Gakko-to. Notwithstanding his influence, however, the two loyal men, by their eloquent arguments, contrived to gain a number over to their side, who promised to follow them to Tokio to avoid being obliged to join the Gakko-to.

During the night of the 1st February, excitement prevailed in the district, and about 200 persons were seen, armed with swords and firearms, running as quickly as possible towards the city of Kagoshima. On the following day large quantities of ammunition were brought to Kajiki both by land and by sea. Through these demonstrations Mayeda became very distrustful of the Gakko-to, and sent a letter to Kishima in Kagoshima enquiring what was the matter. The messenger whom he sent brought back the intelligence that Kishima was at the head of the rebels, and that he had seized all the firearms belonging to the Government. Notwithstanding the heavy rain which fell on the morning of the 4th, Mayeda and Itami left their home at three o'clock for the purpose of communicating with the Kumamoto garrison. They went as far as the village of Yoshida, where they resolved to pass the night in company with two loyal acquaintances, Kawa and Kawakami. But, unfortunately for them, they were pursued by about fifty rebels, who found out where they were staying and forced their way into their bedrooms, shouting out—"Criminals! follow us and obey the order

from the Kencho!" Upon a close scrutiny the two men observed a number of their personal friends and relations among the rebels, to their great surprise. The night was very dark and the rebels marched by the light of a pine torch, taking the poor men with them, and proceeded towards Kagoshima. As they journeyed along, Kawakami looked smilingly upon Itami and said: "Do you remember the famous poem of Buntensho, sir?" Itami replied that he had no recollection of it. Then the bold Kawakami sung the song in a loud voice, with the intention of shaming the rebels. The latter, however, became very angry and one of them struck him on the face with a burning pine torch. Kawakami was not dismayed by this act of violence, and told the man who struck him that he was an insolent fellow, whereupon the rebels beat him until he fell fainting to the ground. At dawn on the 5th the party reached Yokogawa, and arrived at Kagoshima on the evening of the same day.

As we have already mentioned, some officers connected with the police department in Tokio, along with others, had been arrested and imprisoned in the police station at Kagoshima. Nakahara, whom the insurgents considered as a leader, was tied to a post. He was first brought up for trial before Nakajima and others belonging to the Gakko-to. Nakajima looked savagely at him and said:—"You, bold fellow, have returned to Kagoshima in order to assassinate Saigo Takamori, Commander-in-Chief of the imperial army. You must confess what you have been ordered by the Government to do." The poor prisoner started in surprise at such an unexpected announcement. He, however, said:—"I know nothing about what you refer to, I have simply returned because my parents are in ill health." The investigator said, in an angry tone:—"This obstinate fellow must be severely beaten," whereupon a number of those present assailed him with their clubs and beat him over the head, face, shoulders, and wherever they could get a stroke at him. But there was no yielding on the part of the faithful and brave man, who was determined to do what was right come what would, though he was severely wounded, for the blows fell upon him as thick as rain, until at length he fainted. When the poor fellow lost his senses, they gave him a cup of water which revived him, and the question which was put before was again put, but Nakahara answered that he had no other answer than he had already given. He was again tortured until he fainted, when medicine was given to restore him. Nakajima again said to him when he had sufficiently recovered: "You obstinate fellow, notwithstanding the repeated trials given you you still persist in refusing to confess. You are a popular man in Ishin-in, but you are believed to be acting under the secret instructions of Kawaji" (Director of the Police Department). He then asked the prisoner who it was that permitted him to return to his birth place, and added: "If you will not spit the fact out of your mouth we will beat it out of your hands and feet." Again the torture was applied until the unfortunate man again fainted, when water was thrown over him. He was then taken and placed in a dark jail where he remained until the 5th of February, when he was again taken out and tortured eight times.

Suyeshiro was one of those unfortunate prisoners whose lot was to fall into the hands of the insurgents in Kagoshima, and he was confined in gaol until 5 p.m. on the 5th of February when, for the first time, he was brought up for trial before Nakamura, Keibu of Police, in Kagoshima. His judge said: "Why have you been arrested?" "I have no idea," replied the prisoner. "Then,

why did you come here from Tokio?" interrogated Nakayama angrily. "It is to carry out no small matter that you and others have returned from the East. Your companions have already confessed all the facts, and you, poor fellow, would do well to follow their example, and tell us what you have been commissioned in Tokio to perform in Kagoshima." Suyeshiro was astonished. He, however, said:—"If you want to know what business has induced me to return from Tokio, I will tell you. It is not of a public character, my principal desire being to return and make personal enquiries after the health of my father, who is sick. However, as I am an officer of the Police Department in Tokio, it is also my duty to observe all that passes of any importance and report the same; and the performance of this duty is only in accordance with an article embodied in the Police Regulations: and I have made up my mind to do this." His interrogator became flushed with anger as he listened to these remarks, and exclaimed:—"You speak too freely, you intruder!" He then ordered him to be taken and tortured. The prisoner was immediately assailed by a number of persons, who were armed with clubs, and who beat him on all parts of his body. He stood the assault most bravely, and said quietly:—"Don't be so wicked. I will inform you of the object of my return from the East without your resorting to such a cruel method of extracting it from me." The rebels then left off beating him and he said:—"I heard of the high excitement among the members of the Gakkoto, so I returned for the purpose of advising them to remain faithful to the Mikado." "Who told you there was high excitement in the Kagoshima ken?" enquired the investigator. "What a strange question to ask, when it is universally known all over Tokio, and throughout all Japan, for it has repeatedly been referred to by all the newspapers, and everybody knows about the feeling of the Gakkoto." Some of the members of the Gakkoto, were present and heard the prisoner make these statements, whereupon they glared at him savagely, and with one voice said:—"Do you know who it was who established the Shigakko?" The prisoner replied that it was founded by Mr. Saigo. He was then questioned as to his knowledge of the rules of the Society, and answered that he was not acquainted with all of them, but one was to the effect that the members were bound to serve their sovereign and their country to the best of their ability. "You are right," exclaimed the insurgents angrily, "but how is it then, if you knew this, that you doubted the sincerity of their motives and distrusted their actions." As their victim was about to reply, one of the rebels seized him by the hair of his head and pulled him down, while others kicked and beat him. Suyeshiro remained silent when subjected to a further examination, and so was returned to his dark cell and there fastened to a post. Sonoda, Yasuki, Matsushita, Mayeda, Itami and others were subjected to the same kind of brutal treatment, which defies description. Still they kept up their courage and astonished the rebels by their fortitude.

Besides the persons mentioned above, Nomaguchi, Sugei, Nishiko, and three others, members of the police in Tokio, returned to their respective birth places. The first named left Tokio on the 29th December, 1876, and reached Demidzu during the following month. This town contains about 1,200 houses belonging to shizoku. Yamaguchi, a member of the Gakko-to was serving at the time of Nomaguchi's visit as district officer. He collected all the young shizoku and advised them to enter the Shi-gakko, and threatened that, if any

refused, their pensions should be confiscated. He continually abused the Government in order to excite them, and so day by day the power of the Gakko-to increased; and they cut down Government timber and applied it to relieve their private necessities. When Nomaguchi arrived at Demidzu 200 of the local shizoku had already joined the Gakko-to; and he found that extensive preparations for war were being made. Nomaguchi at once turned his attention to persuading as many as possible to remain loyal to the Government. But it was too late, and his efforts were unattended with success. About 5 o'clock on the morning of the 5th of February he was roused out of his sleep by a noise at his gate. This was caused by a number of the Gakko-to, who soon forced an entrance into the house, and proceeded straight to his bedroom, where he was arrested and taken thence to the local police station. On the following morning the prisoner was escorted to Kagoshima. To his great surprise he found that Nakahara and a number of others were imprisoned and tied to posts, besides bearing marks of having been severely tortured. His turn soon came. He was examined and put under torture; but when water and medicine were given him to restore his fainting spirit he refused to take either one or the other.

Hiwaki of the Police Department was one of those who accompanied Nakahara to Kagoshima, and used every possible argument to induce his friends not to endanger their reputations. The members of the Gakko-to made secret enquiries into his conduct; and during the night of the 17th of January four of them visited him at his residence. They had no sooner taken their seats than they commenced to revile, and ultimately went so far as to beat him very severely, and turned everything in the house upside down. Hiwaki, being desirous of living peaceably, smiled upon his assailants and told them they could do they liked what with him, but still he could not believe that they bore any malice towards him. The neighbours heard the noise, however, and interfered, and compelled the rioters to leave the premises. Every night after that a party of the Gakkoto assembled before the gate and reviled him loudly, at the same time throwing pebbles into the house and beating the door as if they would break it open. But the loyal occupant bore these insults patiently.

On the night of the 28th of January Hiwaki was in Kagoshima, staying with a friend. He noticed that the Gakko-to were running about with powder and other ammunition, and was told that they had broken into the arsenal at Iso. Hiwaki made hurried preparations to leave for Tokio. But on the 3rd of February he was visited by four of the Gakkoto, who compelled him to drink *saké* with them, and informed him that they were not going to live long in this world. They each related what they were going to do; and one in particular said in a boastful manner:—"You, Hiwaki, just listen to what I am going to tell you. We, the brave young members of the Gakko-to, have lately questioned Mr. Kirino about going to Tokio. He smiled and replied, saying:—'If we start for Tokio, there will be nothing to oppose us. Kumamoto castle will be taken before breakfast and we shall arrive victoriously in Tokio before tiffin. The time for testing our power and courage has arrived.'" The four men compelled Hiwaki to partake to excess of *saké* and left the premises about 10 p.m. About 1 o'clock the same night he was awakened by a loud noise outside the house, and found that the premises were entered or surrounded by a number of the Gakkoto-

who were armed with clubs. He was arrested and taken to the police station, and tied to a tree, where he remained for a short time, and was then taken before Yamamoto for trial, and severely tortured. On the 4th of February he was removed to Kagoshima, where he was surprised to find so many of his companions in prison. The members of the Gakkoto were not satisfied with reviling him every time they passed near, but repeatedly caused him to be tortured.

(To be Continued.)

CORRESPONDENCE WITH SAIGO.

The following is the translation of a letter addressed to Saigo and his followers by Kawamura Sumiyoshi, Vice-Minister of the Naval Department, and published in the *Nichi Nichi Shinbun* of the 11th July:—

"When it became known that Saigo Takamori and his confederates had penetrated to Kumamoto at the head of a large army, His Majesty the Mikado trembled with anger, and ordered both land and naval forces to proceed to the scene of rebellion and punish them. Since that time a number of battles have been fought with varying success: but it is impossible for anything rebellious to long stand in the way of right. Lately the points of the swords of the insurgents have become blunted, and those who wield them have been reduced to great extremities, and there is no way open for them to advance or retreat in, and they are dying in the fields and on the mountains. Thus they have been reduced to the greatest distress, and they now languish for assistance. But heaven is angry with them on account of their iniquity; and they will look in vain for assistance from man in carrying out their treacherous plans. At the present time Beppu and Etsumi (two distinguished lieutenants of Saigo) are endeavouring to raise fresh levies in Kagoshima. But as the insurgents lose every battle, their own friends have become disheartened and distrustful. But they are persuaded by clever arguments to join in the rebellion, and, if they persist in refusing, their lives are threatened.

"I Sumitoshi, having been informed of this, cannot rest night or day on account of my sorrow, and have long desired to send a letter to Kagoshima to encourage the faithful, and condemn the treacherous conduct of others; but press of business has prevented me from carrying out my desire. Now from information I received yesterday, I find that Yamazaki, Captain of the *Hosho Kawan*, has addressed a letter to the insurgents, embodying the sentiments I wished to express. I am glad of it, and am momentarily expecting to hear that the insurgents have laid down their arms.

"It is clearly understood that it is unreasonable to expect that treachery will dominate over right in the end, or that a servant will succeed in opposing his lord. At the present time, when strife is decimating the inhabitants of foreign countries, all of us should do our utmost to promote the welfare of the country. And yet the insurgents became angry about most trivial matters, and have injured our land and retarded the progress of civilization. Though you have once gone astray and have opposed the Mikado's army, you are, I know, not naturally restless men; and I know full well the reasons which have prompted you to rise in rebellion. If you are sorry for your past conduct, and will lay down your arms, I will petition the Government to use all clemency towards you. Decide therefore whether you will die in battle as rebels, or live and serve the

country faithfully hereafter. The latter course will not only mitigate your crime, but will also bring renown to you. This is, therefore, my advice to you. You will then consider what I have said and decide what you will do."

The following answer was received from the insurgent army:—We have received the letter from Your Excellency, Kawamura Sumiyoshi, Vice Minister of the Naval Department, and have read it through. You instruct us as to what is loyal and what is treacherous: but your arguments are illogical. You know one but not two, and speak of a branch of a tree without considering its trunk. Who is the person who has caused the present state of affairs but ———? During the time Saigo Takamori was in Kagoshima he was one of the *Daijin* of the Mikado's Government, and ranked as *Shosanmi*, and was Marshal-General of the Imperial Armies.

But ——— and others transgressed the laws of the country, and appointed men to assassinate a *Daijin* of the Government. They are the persons who deserve to be regarded as traitors. By what other name can we call them? The present disturbances have originated in consequence of their conduct: and yet the Government does not enquire into the conduct of these traitors. It is true that the country is in a state of anarchy; and, while the laws are so badly administered, is it likely that the Government will be preserved, or that the country will remain in a state of good order! Saigo Takamori was much distressed, and could not remain at home and gaze guiltily on the doings of the Government; so, at the commencement of this year, he left Kagoshima with the object of visiting the capital and of laying certain matters before the Government. When he arrived as far as Kumamoto he found his further advance obstructed by the local garrison troops. In the meantime his rank and office were both taken from him, and he was stigmatised as a traitor. This was not done from any personal feeling on the part of His Majesty the Mikado; but he was treacherously deceived by his servants, who, by that means, sought to throw a cover over their own wickedness, and denounced Saigo as a rebel. This naturally provoked much excitement among our soldiers, who determined to punish the wicked advisers of the Mikado on the one hand, and on the other to put an end to the existing confused state of affairs, and are anxious to clear away the clouds which obscure the goodness of His Majesty the Mikado.

In your letter you remarked that the insurgents opposed the Mikado's army, which is true. They have no wish to be considered as imperial troops who are employed by traitors, and are rightfully said to be a thievish set, who oppose our way, and whom we shall be compelled to punish. Your letter also contains a statement to the effect that you will use your influence with the Government in dealing with us. We reject your offer, and cannot but entertain feelings of anger at your proposal. No! Our soldiers will not be deterred from carrying out their determination; and we cannot understand why you should ask us to lay down our arms: nor do we know what you mean by the assertion that our swords have become blunted. Our troops, who besiege the castle of Kumamoto* are irresistible, and the castle is expected to fall into our hands in the course of a few days. The facts are quite contrary to the statements contained in your letter, and we think Your Excellency must have lost your

* The *Nichi Nichi Shinbun* does not give the dates of this correspondence, which, however, is shown by this allusion to be already remote.

reason. We are sorry for you: but if your Excellency loses your power you may come to our camp and beg pardon for your crimes. We now inform you that we must positively decline to receive any more letters which you may think proper to send to our camp.

JAPANESE IN COREA.

On the 10th instant we published a letter from the Okura Trading Company in Fusan, Corea. The following is from the same source, and a continuation of the first letter, as published in the *Choya Shinbun*:—

The Korean Government oppresses its subjects so severely that they do not seem to have any freedom. The people seem to be perfectly contented with their poor condition, and have no ambition to become rich; and are seemingly satisfied with the poor food which they live upon, as well as with the coarse clothing they wear. But they are as shy and cunning as monkeys, which is the result of the evil administration of political affairs. The Korean Government repeatedly extorts large sums of money from rich merchants and farmers, and in return will elevate them in rank, which is a similar custom to that which prevailed in our own country when it was under the reign of the Tokugawa Government, when wealthy merchants and farmers were allowed to wear swords on presenting a certain sum of money to the Government. In the case of an extortionate demand being made by the Korean authorities and refused, the unfortunate merchant or farmer will be mulcted by means of a fine. Thus it is that the poorer class of people are apt to consider that they are in a preferable condition to the rich, and are not so liable to be charged with some criminal act. This induces them to neglect their business and rest satisfied with their present condition: they do not manifest any desire to start into any new sphere of business; thus it is that in the course of a hundred years they make no progress at all.

No pen can properly and sufficiently describe the despotism of the Korean Government, which literally has no sympathy whatever with the interests or feelings of its subjects. Owing to the ravages committed by the famine last year, large numbers of people were daily to be met with in the streets of every town and village in the country in a state of the most abject poverty, and yet no effort was put forth on the part of the authorities to relieve the fearful distress; but, on the contrary, the tyrannical exactions were continued as before. The people were naturally spiritless and powerless; and lived calmly under the wicked administration, and never thought of upbraiding the officials. This servility may be attributed to the fact that the officers are feared as much as tigers, and looked upon as gods.

The nobility wear a garment resembling our *hitatare*. The women dress very much like the lower class of European women, with the exception of the trousers which are after the style worn by the Chinese women. But we cannot help admiring the exactitude with which both the men and women, of even the lowest classes, dress. They always dress neatly, and are scrupulously particular in not allowing any part of their arms or legs to be exposed. Our people allow their arms and legs to be naked, which affords the Koreans an opportunity to ridicule a custom they deem most barbarous.

They are polite in their intercourse with us; but, like the Chinese, they are very immoral, and they are also addicted to wasting their time in idle talk. If a native makes any

purchase two or three times from us, he considers he has a perfect right to be treated as an intimate friend. After the fourth purchase he considers he is entitled to obtain goods on credit. If we refuse, he becomes very angry and complains of our ingratitude. It is also customary for them, after making a small purchase, to ask for some dinner or something to drink, and in the event of their request being refused, they turn round and abuse us. The lower classes of men are exceedingly lazy, and make the women do all the work in the rice fields or on the farms.

In our settlement are found the remains of a Buddhist temple, and also a graveyard where many of the Tsushima islanders are sleeping.

JAPANESE FINANCE.

(From the *Nichi Nichi Shinbun*, July 16.)

A very large army is now engaged in the work of suppressing the insurgents in the South-West, and indeed has been so employed for the past six months; and thousands of yen are daily expended in the maintenance of this army; therefore those persons who consider the subject are filled with anxiety as to what the financial condition of the country will be on the conclusion of the war. Remarks on the subject have frequently been inserted in the newspapers; and foreign writers have also commented upon it, though in an insignificant manner, for they base their opinions upon the rumours they hear in the streets. The *Japan Gazette* of the 12th instant, had an article headed "A Japanese loan," the substance of which was only an emanation from the inventive faculties of the writer. But the statements about our financial condition make us tremble. (Reference is here made to the figures, concerning the financial prospects of Japan, which were published in the article referred to.) The writer in the *Japan Gazette* bases his conclusions on a report that Inouye Kaworu is in London for the purpose of raising a loan. If we heard such a report we should make enquiries as to its truthfulness. This rumour about the foreign loan originated first about the time Inouye left Japan last summer. But the rumour was entirely without foundation, and the Japanese soon detected the mistake. Still we observe that foreigners yet give credence to it. We have constantly kept our eyes upon the actions of Inouye since he left Japan, and if he had been engaged in raising a new loan, though the matter were kept secret by the Government, we should have been sure to have heard of it; but up to the present day we have heard nothing. * * *

The *Japan Gazette* has been misled by the false rumour; but we do not consider that it has spoken evil against the government, but on the contrary has administered a good dose of medicine to our disease. According to the Budget published in 1876, the national debt of Japan amounted to 148,900,000 yen, which sum does not include 17,700,000 yen which have to be paid yearly in pensions. And to pay off all the pensioners with interest it would take 141,600,000 yen, not including the 15,000,000 yen borrowed from the Fifteenth National Bank; and if all these are added together it will make a round sum of 305,500,000 yen. So the *Gazette* is not far wrong in its estimate. We suppose that the Government pays six per cent per annum for this 300,000,000, which will amount yearly to 18,000,000 yen, or equal to one tenth of the entire revenue. We much fear seeing an unlimited quantity of paper money put in circulation. Already 94,054,731 yen in paper has been issued by the Finance Department;

and this supply is increased every time a National Bank is established. In a report on the Home and Foreign Markets it is stated that the Capital of the National Banks amounts to 22,276,100 yen; and that the quantity of paper money issued by them is 17,820,880 yen. Thus the sum total of paper, money current in Japan is 111,875,600 yen; or 3.39 yen per head of the population, which is estimated at 33,000,000. * * *. Is not such an enormous amount of paper currency likely to prove a great burden to the Financial Department?

NIPPON NOTES.

PRINCE Higashi-Fushimi-no-Miya will probably leave for the seat of war at the head of reinforcements on the 15th inst.

ITAGAKI, *ex-Sangi*, Hayashi and two others, members of the Risshi-sha, are expected to arrive in Kioto in a few days from Kochi.

On a recent evening a fire broke out in the dispensary in Idzumi-bashi, Tokio. The entire building was destroyed.

HACHISUKA, *Juni-i*, *ex-Daimio*, who is now in London, has ordered 10,000 yen to be distributed among his ex-retainers.

ABOUT 24 or 25 political criminals are imprisoned in Kioto.

H. E. SAMURAI, Vice Minister for Foreign Affairs, left for Kioto in the *Tokio-maru*.

THE newly appointed Italian Minister notified the Government of his desire to go to Kioto, there to present his credentials to H. M. the Mikado. H. E. accordingly went to Kioto, and was presented.

IN CONSEQUENCE of the late dry weather, water is everywhere becoming very scarce. The district of Nitta under the jurisdiction of the Gunba-ken is watered by the river Hatarase, which now is very low. Squabbles have broken out between the farmers in several villages along the river on the subject of water rights. On the night of the 5th instant two parties met and fought on the banks of the river. Six men were mortally wounded and one was killed on the spot. The Governor at the head of a force of police interfered and the farmers returned to their homes on the following day.

THE *Nichi Nichi Shinbun* writes:—A riot between the police and some newly enlisted soldiers, consisting of shizoku of the Wakayama ken, broke out in Osaka on the 8th instant. One battalion of the soldiers had arrived in Osaka; and when they were passing, in a swaggering manner, through Sumiyoshi street on their way to the barracks, some of them were observed to have their arms naked. A police officer ordered the offenders to cover their arms with their sleeves. The latter complained "for being censured for such a very small thing." The police officer endeavoured to compel the offenders to obey his order, and took one of them to the police station because he refused to comply. About twelve soldiers followed the offender with the intention of rescuing him by force from the police. Meanwhile, hundreds of soldiers forced their way into the police station where only nine policemen were stationed. The latter seeing that they could not stand before the intruders, tried to leave the station secretly by the back gate; but they found out that this means of escape was cut off, as the station was entirely surrounded. On finding this they determined to defend themselves as long as their strength would last. There were only three swords in the station, and three of the police armed themselves with these, while

the rest protected themselves with their official clubs. The three swordsmen forced their way into the crowd of soldiers, and the others followed them closely. The soldiers became frightened at this exhibition of courage, and gave way before the brave policemen. The last of the latter however lagged somewhat behind the others and he was, unfortunately, seized by the soldiers. About sixty policemen soon arrived to render him succour, being headed by Oshida, Keibu of the 4th class. The result was that a conflict took place, in which four men were wounded more or less severely on both sides. The enquiry into the circumstances of the case has not yet terminated.

THE *Akebono Shinbun* publishes the following regarding the condition of the Island of Sado:—

Most of the islanders maintain themselves by fishing. Large quantities of cod and cuttlefish are annually dried and exported to China. The town of Aigawa is the most prosperous in the island, where a branch office of the Kobusho is established. Since its foundation 500,000 yen have been expended in supporting it. Many vessels of Japanese and foreign construction are anchored in the good harbour of Ogi. The population of the island is about 10,000. There are twenty-five primary schools, which are attended by from 30 to 150 pupils. No Buddhist sect exists among the islanders; neither are there any Christians.

THE *Mai-nichi Shinbun* writes:—At eight o'clock A.M. on the 15th a soldier, newly enlisted in the Miyagi-ken, was waiting for the train at the Yokohama railway station. His face wore an expression of care. He bought a third-class ticket for the Kawasaki station, and took his seat in carriage of No. 13, which was unoccupied. There he committed *harakiri* before the departure of the train which was delayed for a few minutes. The dying man was removed from the train, and asked why he had attempted his life. He replied that he was a shizoku, named Onuma, of the Miyagi-ken, and arrived in Yokohama on the 15th inst., in order to embark on board the *Kumamoto-maru* for the seat of war. Very unfortunately for him he was a little behind-hand in arriving at the rendezvous; so his commanding officer ordered him to be dismissed from the corps. He was, consequently, deprived of his arms. The same evening all his companions embarked on board the *Kumamoto-maru*, leaving him alone behind. When he left his home, he was determined to fight till the last for the Mikado. He could not endure to return to his home in disgrace. This had excited him to commit *harakiri*.

He was sent to hospital, but is not expected to survive.

THE following figures are from the official returns of the census taken this year in the Osaka-fu.

Houses	-	-	-	159,242
POPULATION:—				
Males	-	-	-	272,188
Females	-	-	-	270,092
Total	-	-	-	542,280

THE *Seishin Shinpo* says that a rumor is current that meetings of the provincial governors and nobles will be held in Osaka.

One battalion of infantry, enlisted by the Kaitakushi in Yezo, left for the drill-ground of Narashino on the 17th inst. This corps will shortly be sent to the South-West.

259 policemen, newly enlisted, arrived in Tokio from the North on the 16th instant.

PRINCE Arisugawa-no-miya will shortly return to Umanoseki in Choshu.

HIS MAJESTY THE MIKADO is expected shortly to pay another visit to the wounded soldiers in the Osaka hospital.

It is said that Oyama Tsunayoshi, ex-Governor of the Kagoshima-ken, has confessed his guilt; and that sentence has been pronounced upon him by the Nagasaki Saibansho.

Prince Higashi-fushimi-no-Miya left in the *Tokio-maru* for the seat of war, at the head of four battalions of newly enlisted troops.

A TELEGRAM has been received from Kioto, says the *Hochi Shinbun*, stating that His Majesty the Mikado is to leave for Tokio on the 26th instant.

THIS year no summer holidays will be given to foreigners in the service of the Japanese Government.

80,000 koku of rice will soon be exported to China from Osaka.

THE Tokio Saibansho has pronounced sentence upon Niki, shizoku of Kagoshima, as follows:—

"You supposed that Shimadzu Hisamitsu, ex-Sa-Daijin, resigned his post in consequence of difference of opinion between him and the ministry; and you have wished to assassinate the *Rio-Daijin* (Sanjo and Iwakura) and Okubo, *Sangi*, in order to please, as you thought, Shimadzu. So you are deprived of your rank of shizoku and condemned to hard labour for five years."

H. E. Samejima, Vice-Minister of Foreign Affairs, had an interview with H. M. the Mikado in Kioto on the 13th instant. He will probably leave shortly for France.

THE buildings of the National Industrial Exhibition in the Uyeno Gardens, Tokio, are now completed. Articles for exhibition are being classified and arranged. The exposition will be opened on the 21st of August.

THE *Nichi Nichi Shinbun* writes as follows on the subject of affairs in the Kochi ken:—

Itagaki Taisuke, (ex-Sangi) of the Risshisha, Nagahara Denzo, of the Seiken-sha, and Kido Komajiro, of the Hokoku-sha, are known as the *san ketsu* (three geniuses) of Tosa. The last was not known publicly till of late years; but he has now acquired great popularity, and the people both old and young in Takaoka, Harita, and other counties regard him as one of the *Kami* or *Hotoke*. Iwazaki Nagatake, President of the Chinritsu-sha Society, is a politic man. He is now going to establish a mercantile school. None of the associations mentioned are at all excited. The Kencho building lies at Kawara-machi, West of Kochi castle; and the residence of the ex-lord is now occupied by the Saibansho. The city of Kochi is twice as large as Takushima in Awa, and is not a fine city like Tokio. Takushima is like Osaka.

THE son of Prince Arisugawa-no-Miya, who lately visited the seat of war in the South-West, has returned to Tokio.

THOSE two political prisoners of the Kochi-ken, of whom the native papers have repeatedly made mention recently, were brought before the *Daishin-in* for preliminary examination on the 19th instant. Two *Hanji*, namely, Tamano and Iwaya, will conduct their trial.

THE *Hochi Shinbun* repeats the report that His Majesty the Mikado will leave Kioto for Tokio on the 26th instant, and that he will embark on board the *Nagoya Maru* in Kobe.

AKUMI, of the *Mondo Shinbun*, has been condemned to four months' imprisonment for having violated the press regulations.

ON the 19th inst. 165 shizoku of the Ishikawa-ken and 30 of the Akita-ken, newly enlisted, arrived in Tokio. 250 more arrived from the Aichi-ken next day.

THE new residence of H. E. Okuma, Minister of the Finance Department, is now completed. It is estimated to have cost about 30,000 yen.

It is rumored, says the *Akebono Shinbun*, that a new division of the army, consisting of 6,000 Shizoku, will shortly be formed.

Prince Kita Hirakawa-no-Miya, who recently returned from Germany, has left for Kioto to inquire after the health of H. M. the Mikado.

TAKAHASHI, of the late *Somo Zasshi*, has been condemned to be imprisoned for 30 days for having violated the press regulations.

A SMALL island, called Toshima, lies about 500 English miles South of Tosa, and is about 116 English miles in circumference. It is said that Tominaga, one of the Choshu insurgents, who rose in rebellion during the latter part of last year, was hiding in the island, and holding communication with Saigo. The latter is said to have crossed the channel to the same island. Meanwhile, another rumor states that, before Hitoyoshi castle was taken by the imperialists, Saigo left for the island of Toshima, where he had lived many years in exile during the Shogun's reign.

H. E. OKUBO, Home Minister, is expected to return to the East very shortly.

THE *Mainichi Shinbun* is responsible for the following:—

The discipline of the newly enlisted troops is, apparently, not of the strictest kind. They may be observed parading the streets, singing songs, and behaving generally in a very insolent manner. They wear swords about three feet in length, and if any one accidentally touches them they threaten to kill them. Citizens close their doors and hide from them; while the police give them a very wide berth, as they are looked upon as natural enemies by the soldiers. Their commanding officer, in denouncing their conduct one day, remarked that, if any attempt was made to stay the rowdiness of the men, they became worse and transgressed orders intentionally; and that it was very difficult to manage troops consisting of shizoku. Their return to the barracks from the city was always followed by hundreds of complaints.

ON the 16th inst., when the soldiers newly enlisted in Kagoshima had arrived in Hamamatsu on the Tokaido, a tumult broke out among themselves. A fight ensued, in which three men were killed on the spot, and many others were wounded.

THE Report of Home and Foreign Market Prices states that the time for the sale of silkworms' egg cards is approaching. 3,180,000 cards are to be issued by the government. More than one third will be sold to foreigners. The price is estimated at an average of 50 sen per card.

A TELEGRAM from Kioto, dated the 21st instant, announces that on the 16th the imperial army advanced on the Kaji and Ohara roads, destroying all the forts occupied by the insurgents thereabouts, and afterwards encamped in the mountainous region of Ugawa, Hiuga.

ON the 21st instant, seventy-seven shizoku of the Ishikawa ken, and two hundred and fifty of the Aichi ken, arrived in Tokio to join the 2nd division of the newly enlisted troops.

THE *Suminoye-Maru* of the Mitsu Bishi Company is expected to leave for Kiushiu on the 24th instant, taking 500 soldiers and 50 horses.

MR. TACHIGI, President of the Yokohama Saibansho, returned from Kioto a few days ago, and resumed his duties, which were, during his absence, discharged by Mr. Asaina Kansui.

LAW REPORTS.

IN THE U. S. CONSULAR-GENERAL COURT.

Before GEN. T. B. VAN BUREN, Consul-General.

Thursday, 12th July, 1877.

KANAGAWA KENCHO vs. J. D. CARROLL & Co.

The defendant was charged with tying a Japanese sendo to a post in front of his premises on the 21st of May last.

His Honour remarked that he thought there was no necessity to take the evidence of a number of witnesses in the case, because the defendant admitted having committed the act complained of. He then asked the interpreter, who appeared for the Kencho, if the sendo who had laid the complaint was present.

Interpreter.—No. He is not here.

His Honour.—Where is he?

Interpreter.—At the Saibansho.

His Honour.—Why is he not here?

Interpreter.—It was thought that only witnesses would be required to-day.

His Honour.—Well, I should think that he was the best witness of all, and therefore ought to have been present. However, we will take the evidence of Mr. Spooner and see what he has to say about the affair.

Mr. Spooner seemed to be somewhat embarrassed by the presence of reporters, and intimated that he preferred giving his testimony in the absence of those gentlemen.

His Honour.—Ah: I cannot help it. But I do not suppose the reporters are disposed to make the case worse than it is.

F. Spooner was then examined, and admitted that he had caught the plaintiff stealing, and tied him up in front of the door for about an hour. The man was caught stealing, and part of what was missing was found on his person. He was in the employ of the firm. Before this there was a loss from the godown to which he had access and consequently he was suspected. Having found a quantity of the goods on him and still more being missing, there was that feeling to punish him which prompted the act complained of. The object was, partially, to get him to confess where the remainder of the missing property was. The object was not to contravene the law; in fact the law was not thought about at the moment. He was tied up for some time and was then taken in. After this, an officer came, accompanied by Mr. Elmer, bringing a letter from the Consul-General, saying that he had heard there was a man tied up outside the defendants' premises, and requiring him to be released as his detention was contrary to law. Witness immediately called upon the Consul-General, and assured him that such a thing would not occur again, and that he had no intention of doing anything contrary to law or of offending the Japanese Authorities.

His Honour explained to the interpreter the substance of the evidence of the defendant, and said there was no doubt but that the act complained of was done while the defendant was in anger against the delinquent;

and he thought that a small fine would satisfy the law. He should therefore fine the defendant three dollars and costs.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, July 16th, 1877.

Mr. F. A. Cope was charged with obstructing George Hodges, H. B. M. Consular Constable, on the 10th of July, and with threatening to do him grievous bodily injury, while in the execution of his duty.

The accused denied the charge, which he said was false and malicious.

George Hodges was sworn, and stated that between four and half-past four o'clock on the 10th instant he went to Mr. Cope's auction room for the purpose of serving a judgment order for \$14.12½. When he arrived at Mr. Cope's office he found him in conversation with Mr. Jaffray. He had no intention of communicating his business to Mr. Cope until he was disengaged. But Mr. Cope said in an offensive way, "What do you want? Have you got a paper for me?" He did not answer at once, and the question was repeated, when witness replied that he had. Cope then said, "Give it to me!" Witness did so, and Mr. Cope deliberately tore it up, saying at the same time, "There, you can go and tell our Consul and your Judge that this is the way I serve their papers." Witness then told him that he had a distress warrant, and that he would have to put it into effect unless the amount mentioned in the order was paid at once. Cope said it was past four o'clock, and anything witness did would be illegal.

Witness told him he was responsible for his own actions, and proceeded in the usual way to take possession. Mr. Cope ordered his servants to close the office. Witness told him if he would not listen to reason, he would either have to place a man in charge to lock up the place and take the key himself. Cope said he could "do what he liked," but continued to close the place; and in the interval Mr. Bishop came into the office. Witness again said he would have to take the key, or place a man in charge, when Cope said if he did anything of the kind he would see what a shot he could do. After a short time witness told him that if he would promise not to take anything out of the office he would leave him in charge. Cope said he had no intention of giving anything out except two silver cups. Cope's conduct and language throughout were most ungentlemanly and offensive.

He then went to the Court.—The decree was shown to the accused, who tore it up.

Mr. Robert Bishop, sworn, stated that he had issued a distress warrant against Cope, and knowing it to be a very unpleasant thing to do, but being bound to do it all the same, it struck him he ought to go round to Mr. Cope, and so render unpleasant service unnecessary. He did so, and found Mr. Hodges there with the warrant. He told Mr. Cope that he had not come on official business, but that he could do for him he willingly would. Mr. Cope appeared to be somewhat nettled, but witness took no notice of it.

There was some talk over the warrant, and witness tried to reason with Mr. Cope, but he was unreasonable. Witness stated that he had not come there to interfere with Mr. Hodges. Mr. Cope replied in a bombastic way of shutting up the office and taking the key away with him. Witness advised him to come to some terms,

for if the seal of the Court were put upon the door it would not do for him to break it. Ultimately his promise was taken not to remove anything; and witness told Hodges that it was safe for him to leave the place.

To Mr. Hodges.—I do not think, from what I know of you, that you would be liable to give intentional offence to any one, unless it be by your exact, business-like, way of carrying out your duty.

To Accused.—You wrote a letter to me in the afternoon, saying that the affair had escaped your memory, and that you would settle it the next morning. Hodges was inside while you were on the steps.

Witness said he had forgotten to mention that from some remarks made by Mr. Cope he drew the inference that he, Cope, threatened Hodges with using a shot-gun in the event of his using force.

To accused.—The words about the shot-gun was directed to me.

Mr. Cope said that he could only deny what Mr. Hodges had said, with the exception of tearing up the paper, which he had a perfect right to do. He never obstructed him in the execution of his duty, but, on the contrary, left him in charge for ten minutes. He never made use of the expression that Hodges could "do what the ——— he liked," as he was not in the habit of using such language; and the reference to the shot-gun was made in a conversation with Mr. Bishop. He again denied most emphatically obstructing or threatening Mr. Hodges. That was all he had to say.

His Honour said he had a good deal to say. He considered the case fully proved; and then referred to it being a duty of the Court to defend its subordinate officers while in the execution of their duty. He should fine the accused \$10 and costs, with the alternative of fourteen days' imprisonment.

Friday, July 20th 1877.

W. HOWLES vs. E. C. KIRBY AND OTHERS.

A motion by the defendants, all of whom were represented by Mr. Dickins was heard this morning. Mr. Kirkwood appeared for the Plaintiff.

It will be remembered that this case was heard with a jury in May last. The verdict returned was for the defendants. Plaintiff appealed, and succeeded in obtaining an order to prosecute his appeal as a pauper. It was to upset this order that the motion was made to-day.

After considerable discussion His Honour upheld the motion in the following

JUDGMENT AND ORDER.

It is admitted that the plaintiff is in receipt of an income of \$150 per month, and I do not think that he is therefore in a position to say that he is not worth \$25, or that he is so poor as to entitle him to appeal *in forma pauperis*.

It is ordered that the order *ex parte* of the 5th of June, 1877, giving the plaintiff leave to appeal *in forma pauperis* be discharged, and that the plaintiff pay the costs of the motion.

Monday, July 23rd, 1877.

Charles Stewart, John Surrey, Alexander Jones, Oscar Benson, John McKibbin, Henry Pearce, Richard Hughes, James Peacock, Peter Troy, William Cocklin, August Petersen, and Charles Lissenden, seamen of the *Countess of Kintore*, were charged with refusal of duty.

The master, Thomas Norrie, on being sworn, stated that Pearce came to him about 11 o'clock this morning, and wanted to know if the men were not going to have liberty to go on shore. Witness told them they could go, but he should not give them any money. A little while afterwards all the prisoners came in a body and said that if they were not allowed liberty and money, they would all knock off work. They then went into the fore-castle, and witness afterwards sent for them and requested them to return to work. They one and all refused.

The evidence of the chief officer was then taken; and the prisoners being asked by His Honour if they were willing to return on board to duty, refused, and were in consequence ordered to be imprisoned for one week, and pay the expenses of substitutes required for carrying on the work on board the ship during that interval, and in the event of the ship leaving before the expiry of the term of imprisonment they would be sent on board.

IN THE JUDICIAL COURT AT KANAGAWA.

Before Mr. ASAINA KANSUI, Vice-President.

SCHULTZE, REIS & Co.

versus

TSUCHIYA YOITCHIRO AND ANOTHER.

Wednesday, July 18th, 1877.

The plaintiffs claimed that the defendant be compelled to deliver to them a certain document of which he was in unlawful possession.

His Honour informed the plaintiffs that a letter had been forwarded to them through their Consul to the effect that any native witnesses they produced would have to be paid so much per day for attending the Court.

Plaintiffs had not received the letter; and on His Honour intimating that they would have to pay 50 cents per day for each witness they expressed their willingness to do so.

Two Japanese witnesses were then examined at length, and their testimony amounted to this, that the document in question was a duplicate receipt for \$2,000, which was valuable testimony required by the plaintiffs, in order to enable them to prosecute another party. The defendant ascertained the value of the document to the plaintiffs, and refused to give it up unless he received some considerable compensation in return, stating that it was worth \$1,000 to him and he was not going to give it up except to the highest bidder. The two witnesses referred to ascertained that the document was actually in the possession of a person called Honjiro. They called on him relative to the document and pretended to enter into negotiations for the payment of a certain amount for the paper. He demanded \$500. They demurred to this and suggested \$300. This he finally agreed to take provided it was paid in cash at the moment of the delivery of the receipt. The witnesses declined to give cash, but offered him a chit for the amount, their chief desire being to get hold of the paper. Honjiro however was not to be put off with a promissory note, and so the negotiations fell through.

How the note came into the possession of the defendant did not appear in the evidence. The examination of the two witnesses occupied the time of the Court till noon, when His Honour adjourned further investigation until ten o'clock to-morrow.

Thursday, July 19th, 1877.

Mr. Reddelien, who appeared on behalf of the plaintiffs, was informed by His Honour that in the absence of the witnesses examined yesterday, evidence for the defence would be taken.

Tsuchiya and Honjiro were then examined. The former stated that in the 8th month of the 8th year of Meiji, ten documents were handed to him to use in conducting a certain case, amongst which was the receipt in question. But he produced a letter showing that he had ordered all those documents to be returned, and also a receipt showing that they had been given up. He denied having the document. During his absence in the country Honjiro had conducted his affairs. Honjiro stated that he knew of the existence at one time of the receipt, and had been asked to look for it by the witnesses produced by the plaintiff. He did look, but could not find it among any of Tsuchiya's documents. When the latter returned from the country, Honjiro asked him about the document, but he denied all knowledge of it.

The plaintiffs' witnesses were re-examined by the Court, and stated that they had no written proof of Honjiro saying that he had the paper; but there were three other Japanese present at the time.

His Honour said that there was not sufficient evidence for him to give a decision in the case, therefore he suggested that the plaintiffs should call the three witnesses. This Mr. Reddelien agreed to, and the case was then postponed till 10 a.m. to-morrow.

Friday, July 20th, 1877.

On the Court assembling this morning, His Honor announced that of the three witnesses, for the hearing of whose evidence the case was adjourned yesterday, two were present in Court; the other was prevented from attending through illness, but had promised to attend the Court as soon as sufficiently convalescent. In the meantime His Honor would examine the two witnesses.

The witnesses were then examined, and the result of their testimony was translated for the benefit of the plaintiff. It was simply corroborative of the evidence of the other witnesses produced by the plaintiff. His Honor then remarked that the deposition of the third witness was absolutely necessary, and the case would have to be further postponed.

Plaintiff said he would like to make a few remarks. The papers which the defendant said yesterday had been given him in connection with a case against Shiwoya by Kiwo Kosuke, and which he stated had been returned to Kiwo Kosuke, after having made use of them,—on examination he, plaintiff, found that those papers had nothing whatever to do with the case at issue. Furthermore, he found that all papers in the Shiwoya case were handed into the Saibansho, where they remained until the 21st of May, when they were returned. He further asked the Court if copies of documents handed into Court were taken, and received a negative answer.

The Court then adjourned till Tuesday, 24th instant, at 10 a.m.

Monday, July 23rd, 1877.

H. GRAUERT (as agent for the German ship *Madagassger*) vs. MIYAZAKI HAMPEI.

This was a claim for \$2,800. It appears that the defendant and others

chartered from the plaintiff the German vessel *Madagassger*, to proceed with general cargo to Hakodate, and from there to proceed to Shanghai with a cargo of seaweed, but they did not carry out the charter-party.

The defendant did not deny entering into the contract, but pleaded being an agent for other parties. He made a long rambling statement about a transaction in which he was concerned regarding the chartering of the *Roving Sailor*, but which had nothing to do with the case at issue. After the piece of business in connection with the *Roving Sailor*, defendant heard that the *Madagassger* was for charter. He had already been instructed by the firm of Maruoka to charter a vessel to Hakodate, as they had several hundred tons of goods ready to send. Consequently he went to the plaintiff in June about the *Madagassger*; and the result of the interview was a preliminary engagement to charter the vessel. On the 23rd of June the contract was to be signed by all parties; and the evening before a notice had been put up by Maruoka announcing that the *Madagassger* would sail for Hakodate at an early date. At the appointed hour plaintiff and defendant met for the purpose of signing the contract; but the other parties were not present. They waited but still the others did not turn up: and so, at the suggestion of the plaintiff, defendant affixed his signature to the charter party, being under the conviction that the others would have no objection to do the same. Something turned up however which interfered with the arrangements of Maruoka, and that firm consequently refused to complete the engagement for the charter of the *Madagassger*. Hence the present action against the defendant, who was the only person who signed the document.

His Honour intimated that it was necessary that the alleged principals in the transaction should be examined, more especially as the defendant had nothing of any value of his own. The case was consequently adjourned till the 26th instant.

IN THE DANISH CONSULAR-GENERAL COURT.

Before E. de BAVIER, Consul.

Messrs. KOLVIG AND VAN TORP, Assessors.

Saturday, July 21, 1877.

This was a case in which Kogi Tokijiro, a carpenter, sued Mrs. Stibolt as executrix of her husband, the late N. Stibolt, for \$831.75, the balance of an amount owing by the deceased at the time of his death, for work done and materials supplied.

Mr. G. P. Ness appeared on behalf of the plaintiff.

Mr. J. W. Hall appeared on behalf of the estate, as agent for Mrs. Stibolt.

His Honour said that it was his duty to attempt to bring about an amicable arrangement.

Mr. Ness remarked that he would only be too happy; but he had done his utmost to bring about an amicable arrangement, but had failed.

Mr. Hall said that he should be glad if some arrangement could be arrived at. But no demand had been made for payment until the case was entered in the Court, and no attempt at an amicable arrangement had been made by the plaintiff. The defendant pleaded not indebted.

Mr. Ness was surprised at Mr. Hall's statement. He himself had demanded payment, and

had also had three interviews with Mr. Hall upon the subject.

His Honour said the hearing would have proceeded; and Mr. Ness then opened up the case. He stated that the deceased Mr. Stibolt had been in the habit of taking contracts and afterwards subletting them to the plaintiff; and at the time of his death he was indebted to the plaintiff, who was the most respectable carpenter in Yokohama, in a sum he now claimed.

The plaintiff was then examined at length and his evidence was to the effect that he had considerable business transactions with Mr. Stibolt, and that sometimes large sums of money were owed him by Mr. Stibolt. It was customary to pay carpenters in advance, except when there were large contracts, and the parties had continued transactions one with the other. He had asked Stibolt for payment, but had always been put off with promises that when there was plenty of work he would be settled with altogether. He asked Mr. Stibolt for a promissory note, but Mr. Stibolt was too ill to give it to him.

A Japanese in the employ of defendant was examined, but he knew nothing of the transactions between plaintiff and Mr. Stibolt.

Mr. Hall asked when it was that the plaintiff found out that Mr. Stibolt owed him the amount he now claimed.

Mr. Ness replied for the plaintiff, and stated that he had called on him, Mr. Ness, a few days prior to the death of Mr. Stibolt; but Mr. Stibolt was so ill that plaintiff could not apply for the amount due.

His Honour said he thought the plaintiff's statement that he and Mr. Stibolt never balanced accounts, was a sufficient answer to the question.

To Mr. Hall plaintiff stated that he knew at the time that Mr. Stibolt died that he was indebted to plaintiff for a large sum. He remembered being present with Mr. Hall at an interview with Mr. Stibolt a few days before the death of the latter, and also telling Mr. Hall that the amount due to him, plaintiff, was entered in a small book which he showed at the time, telling him that Mr. Stibolt had signed for the amount mentioned in it, but that there was also another claim.

At this stage the proceedings were adjourned till Thursday next, 26th inst., at 10 a.m.

Before E. DE BAVIER, Esq., Consul-General's i.

Messrs. E. KRAETZER and O. VON TORP.

(Assessors.)

Monday, July 23rd, 1877.

THE GOVERNMENT OF JAPAN v.s. JOHN H. DORR.

This was a claim for arrears of ground-rent in Hakodate \$585.50. Defendant did not dispute the claim, but urged a counterclaim amounting to \$29,487.27 arising out of mercantile transactions with the late Tonami and Chosio's Trading Co.

Mr. Hill appeared for plaintiffs, Mr. Ness for defendant.

Mr. Hill observed with regard to a paragraph in defendant's answer, in which he said he had always been willing to pay the ground-rent, that he had been informed by the land officers that defendant had always offered payment in *satsu*, which were deducted as payment was stipulated in silver.

Mr. Ness said the lease gave defendant the option between paying in *rios* or in *Mence* dollars, and he had preferred to pay in *rios*.

Mr. Hill asked that the Court interpreter be ordered to translate the original lease in order to arrive at a correct interpretation. As to the counterclaim, he had received no instructions whatever. All that he appeared for to-day was to obtain judgment for the sum claimed in virtue of the lease.

Mr. Ness then proposed, as the plaintiffs were unprepared to enter into the defence against the counterclaim, to take judgment for the principal claim, but that execution of the judgment be stayed until the counterclaim had been decided upon.

Mr. Hill here put in two letters from the Danish Minister, showing that the said Minister had invited defendant to pay the rent.

Mr. John Duns said that all the inhabitants, English and Danish, of the new concession in Hakodate had now for years protested against paying ground rent at the same rate as hitherto. The matter was a subject of negotiation between the Foreign Ministers and the Japanese Ministry of Foreign Affairs, and was still in abeyance. He offered to bring a certificate to that effect from the Danish Minister.

The case adjourned until 2.30 p.m.

On resuming at 2.30 p.m.

Mr. Duns stated that he had seen the Acting Danish Minister who had told him that it had been agreed between him and the Japanese Ministry that the case had better be tried in court.

The Consul General said that he had not received a translation of the Japanese lease which he had reason to consider reliable. That translation said that ground-rent should be paid if in *rios* in silver *bus*, if in dollars at the rate of 311 silver *bus* per \$100 mexicans.

Mr. Ness said that he had made his answer to the petition relying upon the translation of the lease handed in by Mr. Hill, which translation now turned out to be erroneous. He asked permission to amend his answer.

With consent his answer was amended. The court then delivered the following

JUDGMENT.

1.—The court, considering that defendant does not dispute the claim made against him by the Japanese government, though he makes his exceptions concerning the rate of exchange, stipulated in the lease, decides that the defendant is liable to pay the arrears of ground-rent due by him to the Japanese government at the rate of 28 *rios* per 100 *tsubos* payable in silver *bus* or according to the option of the defendant 311 silver *bus* per 100 dollars payable in Mexican dollars, as the lease clearly expresses that if the rent is paid in *rios*, these must be paid in silver *bus*, if paid in dollars, these must be paid at the rate of 311 silver *bus* for \$100 Mexicans.

2.—The court taking into consideration the Danish Law on counterclaims which runs as follows:—"If the counterclaim is in no way in connexion with the principal claim then defendant cannot bring the same forward in the lawsuit brought against himself by plaintiff, but he shall pay plaintiff's claim, and may afterwards sue plaintiff for what he thinks is due to himself by plaintiff"—decides that these counter-claims cannot be used as set off against the principal claim. Nevertheless, considering that plaintiff does not come under the jurisdiction of this court, decides that the execution of the above judgment be suspended until defendant's counter-claims have been examined and settled by the Japanese Government. No interest allowed. Costs to be paid by defendant.—*Japan Daily Herald*.

THE GALE ON THE CHINESE COAST.

THE *North China Daily News* of the 7th instant gives the following account of the gale of the 3rd:—

None of the vessels that arrived yesterday report having experienced the gale on Tuesday; and it would thus appear that its area was not so large as its violence and indications here led many to expect. That it gathered in the South and travelled Northwards is certain; and from the reports to hand, Shanghai seems to have experienced its full force. Ningpo appears to have suffered with equal severity as ourselves; the steamer *Fuyew* encountered the storm further South, but escaped its full force by anchoring in the Haitan Straits; whereas the residents of Amoy apparently were in ignorance of it when the *Hochung* left on Tuesday evening. The *Ping On* was in the midst of it between the Saddles and the Lightship, and a detailed account of the damage she sustained appears below. Travelling northwards, the *Chintung* experienced the gale between Shawsheishan and the Promontory, and reports that the *Fungshun* would be able to keep ahead of it. In this locality the wind is spoken of as being less violent than it was further South; the difficulty was not so much with it as with the high and confused current. Westward, Soochow and Chinkiang both experienced it, and suffered considerably, but in an easterly direction it does not appear to have extended many miles beyond the Lightship.

Happily, no further disasters are reported than those we briefly mentioned yesterday. The *Ping On* has fared the worst of the steamers that have yet arrived. From her log it appears that she left Nagasaki at 2.10 p.m. on the 1st inst., and had light variable winds with occasional rain and fog until 10 a.m. on the 3rd. The wind was then S.E. and speedily freshened into a stiff breeze; and the Saddles bore South, four miles. At noon the barometer registered 27.70; the wind was increasing, and rain fell heavily. Half an hour later a course N.W. by W. half W. was was steered until half-past three in the afternoon. The barometer then read 29.68, and was still falling. A hard gale was blowing from the S.E.; the rain had increased, and a tremendous sea was running. Anchored in five fathoms of water, the steamer's draft being fourteen feet six inches. Fearful seas were shipped both fore and aft, and one of the native sailors was washed overboard and drowned. Ninety fathoms of cable were laid out on the starboard anchor, and 40 on the port anchor. The barometer was then 29.55, and still falling; and at 4.30 p.m. it registered 29.32. The gale appeared now at its height. The windlass gave way in two parts, the port side of it being jammed on the hawsepipe: the port bitt was also carried away; and the vessel was dragging heavily. Effective efforts to steady her were of no avail, owing to the windlass being broken. At five o'clock she held a little, and the wind slightly decreased. The Lightship was about half-a-mile distant, bearing S. W. by W. Attempts was made to work the engines, but unsuccessfully, owing to the fearful surge on the chains. The barometer at this time registered 29.45. An hour later efforts were made to heave in the anchors, but found it impossible to get them without a windlass; and the weather set in very thick, with squalls and torrents of rain: barometer 29.47. About 8 o'clock the vessel shipped a heavy sea, staving in port forward boat and

washing everything off the top of the house, carrying away hawser racks with the hawsers, bucket racks, and the skylight covers &c. At low water the vessel "rose up and down," sometimes striking the bottom, and towards mid-night the engineers reported that she was making water fast. The morning of the 4th broke with S. E. winds with heavy squalls, and at 2 a.m. the barometer registered 29.72. All hands attempted to take in cables with tackle, but failed; and at 2.30 a.m. it was found that the rudder head and tiller were jammed, the rudder post lifted, and the engineer reported something wrong with the shaft and propeller. At 8 a.m. the barometer read 29.74. The water fell until there were only $3\frac{1}{2}$ fathoms round the vessel, and as it was feared she would bump her bottom out if it got lower one of the cables were slipped and the steamer worked out into four fathoms. Her rudder and rudder post were then found to be missing, and her stem carried away. The lightship bore N. W. by W. quarter west; distant four miles. A jury rudder was made, and the anchor with great difficulty hauled in, but the force of the wind was too great for the rudder to steer the vessel, and she was anchored for the night; barometer 29.75. At 7 a.m. the next morning the steamer *Fuyew* was signalled, and she came alongside and took the *Ping On* in tow, arriving at Shanghai at six p.m. the same evening.

HONGKONG.

The Chinese intend opening trade between Hongkong and Port Darwin, and the steamer *Charlton* has been chartered by a native firm to proceed hence to the latter port and Cooktown.—*H. K. Daily Press*.

The Chinese in Hawaii seem to have suffered severely from the great Pacific tidal wave. Mr. Manley writes to *The Times* from the Hawaiian Consulate, London:—"I cannot receive for a fortnight authentic accounts of the great wave which has washed over one of the Hawaiian islands and devastated the shores of others, a telegraphic report of which has appeared in your columns. Hilo is a pretty, smiling village on Hawaii. There is no such place as Coconut Island, and, certainly, no hospital on it. We must, I fear, read "Molokai," in which island is the leper establishment, necessitated by the presence of Chinese coolies, cultivators of the sugar and coffee plantations. In a spot there, rivalling the happy valley of Rasselas, 600 or 700 of these unhappy sufferers are secluded. If the island or this valley has been submerged the sufferings of its prisoners are now past. The great abnormal waves which have at irregular intervals swept the shores of Hawaii are dependent on some cosmic convulsion, the nature of which is obscure; but these waves, the earthquakes, and the simultaneous volcanic eruptions are symptoms of its action. That it is very severe and extensive is apparent from its effects, which on this occasion are felt across the ocean, from the western shore of America to the Hawaiian Islands, 3,000 miles distant."—*Idem*.

MANILA.—The request of Mr. C. I. Barnes, the local agent of the Hongkong Bank, for the coining of \$350,000 in the Manila Mint, previous to the reparation and installation of new machinery, has been refused.—*Manila Paper*.

Shipping.

ARRIVALS.

June 11, Brit. ship *Caroline*, Turnbull, 987, from London, General, to Gütschow & Co.

July 12, Jap. str. *Saikio-Maru*, Vroom, 2,145, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.

July 12, Am. bark *Sarah*, Atkins, 618, from Newcastle, N.S.W., Coal, to Walsh, Hall & Co.

July 13, Ger. frigate *Elisabeth*, Captain Von Wickedo, 2,000 tons, 21-guns, from Kobe.

July 13, Brit. barq. *Semantha*, Moinsey, 950, from Aberdeen, Coal, &c., to H. Ahrens & Co.

July 13, Brit. 3-ms. schr. *Ching-too*, Baikie, 304, from Hakodate, General, to Carroll & Co.

July 16, Frch. str. *Tanais*, Reynier, 1,010, from Hongkong, Mails and General, to M. M. Co.

July 19, Jap. str. *Hiroshima-Maru*, Burdis, 1,870, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.

July 19, Brit. str. *Lorne*, McCulloch, 1,614, from Hongkong, General, to Jardine, Matheson & Co.

July 21, Brit. str. *Malacca*, Briscoe, 1,709, from Hongkong, Mails and General, to P. & O. Co.

July 22, Brit. str. *Oceanic*, Parsell, 3,700, from San Francisco, Mails and General, to O. & O. Co.

July 22, Brit. str. *Lotus*, McNail, 1,407, from Hongkong, General, to Walsh, Hall & Co.

July 22, Brit. str. *Gaelic*, Kidley, 2,756, from Hongkong, Mails and General, to O. & O. Co.

July 23, Italian corvette *Cristoforo Colombo*, Count Napoleone, 2,500 tons, 5-guns, from Kobe.

July 23, British sloop *Egeria*, Comd. Douglas, 894 tons, 4-guns, from Hakodate.

DEPARTURES.

July 11, Jap. str. *Tokio-Maru*, Swain, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

July 12, Am. str. *City of Peking*, Berry, 5,079, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

July 12, Am. str. *City of Tokio*, Maury, 5,050, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

July 13, Ger. 3-m. schr. *Juliane*, Oestman, 187, for Kobe, General, despatched by Van Oordt & Co.

July 13, Ger. brig *Otto*, Adamsen, 231, for Hakodate, Ballast, despatched by H. Grauert.

July 14, Am. schr. *Ocean Pearl*, Grinnell, 196, for Hakodate, General, despatched by Walsh, Hall & Co.

July 16, Brit. str. *Glenorchy*, Hogg, 1,777, for New York via China, General, despatched by Jardine, Matheson & Co.

July 16, Jap. str. *Saikio-Maru*, Vroom, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

July 14, Jap. str. *Genkai-Maru*, Hussey, 1,917, for Kobe, despatched by Government Service.

July 15, Am. barq. *Harriet N. Carleton*, Harkness, 872, for Honolulu.

July 17, Italian corvette *Cristoforo Colombo*, Count Napoleone Canevaro, 2,500 tons, 5-guns, for Kobe.

July 16, Russ. corvette *Haydamak*, Captain Tirtoff, 1,100 tons, 7-guns, for Hakodate and Vladivostock.

July 18, French Ironclad *Atalante*, Captain Galliard, 3,000 tons, 12-guns, for Hakodate.

July 18, Brit. str. *Sunda*, Reeves, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.

July 19, Brit. 3-ms. schr. *Ching too*, Baikie, 304, for Hakodate, Ballast, despatched by Carroll & Co.

July 19, Brit. barq. *Glamis*, Key, 1,150, for Great Britain, Rice, despatched by E. Fischer & Co.

July 20, Brit. barq. *Cynosure*, Hutton, 769, for Great Britain, Rice, despatched by E. Fischer & Co.

July 20, Jap. str. *Hiroshima-Maru*, Burdis, 1,870, for Kobe, despatched by M. B. M. S. S. Co.

July 20, Dan. 3-ms. schr. *Aarhuus*, Stolling, 257, for Hakodate, Ballast, despatched by Kingdon, Schwabe & Co.

July 21, Swed. barq. *Adolf Landgren*, Andries, 602, for Kobe, Ballast, despatched by Walsh, Hall & Co.

July 23, Brit. str. *Oceanic*, Parsell, 3,700, for Hongkong, Mails and General, despatched by O. & O. Co.

MEN-OF-WAR.

Cristoforo Colombo, Italian corvette, Count Napoleone, 2,500 tons, 5-guns, from Kobe.

Egeria, British sloop, Comd. Douglas, 894 tons, 4-guns, from Hakodate.

Elisabeth, Ger. frigate, Captain Von Wickedo, 2,000 tons, 21-guns, from Kobe.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

Since the date of our last report the import market has shown little change. Stocks of Yarns and Shirtings are small, particularly that of the former which is reduced to about 3,000 bales, in the hands of very few holders who are firm in prices. The opening of the silk season does not appear to have created any demand for imported goods, and the Cotton Piece Goods and Yarn market is in a most unsatisfactory and inanimate condition. Quotations are nominally the same as before. The Woollen market shows a slight improvement in Mousselines and Cloth.

The Steamers *Glenorchy* and *Lorne* from London via Hongkong, and the ship *Caroline* from London, all with general cargo, and the barque *Semantha* with Coal from Aberdeen, have arrived. Transhipped cargo ex *Indus* and *Nepaul* from London, *Peiho* from Marseilles, *Atalanta*, *Bellona*, and *Galatea* from Hamburg, is also to hand.

ARTICLES.	PRICES.			REMARKS.
COTTON PIECE GOODS.				
G. E. Grey Shirtings—				
7 lbs., 38½ yds. 39 in. per piece.	\$1.30	to	1.75	} Very dull.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—A fair amount of business has been done, settlements amounting to upwards of 800 Bales: arrivals during the same period being 950 Bales. Dealers have been enabled to advance prices \$20 to \$30 per picul. Buyers did not respond freely, and at the close rates are somewhat easier. On all sides native Silkmen complain that prices realised here do not cover cost in the producing districts.

Total settlements this season are 1,050 Bales against 1,700 Bales same date last year.

TEA.—Business has been fairly brisk during the interval since the departure of last American mail, settlements amounting to Piculs 9,300, whilst arrivals barely supply their withdrawal. All Teas below the grade of "fine" shew an advance of fully \$2 per picul: added to this the falling off in quality of many Parcels would make them stand in fully \$1 per picul dearer. Supplies are mostly now second crop Teas, the balance of first pickings unsold being poor and undesirable. Our total export from this to date, including approximate cargo of *S. S. Gaelic*, is about 5½ million pounds against 5,553,059 lbs. same period last season; but a check to shipments is likely shortly to occur, and unless the United States market shews symptoms of a marked recovery both in demand and quotations, the general appearance of affairs points to a decidedly decreased export from all Japan in comparison with that of last season.

BIRTH.

August 2nd, at No. 85b., Main Street, the wife
of CHAS. J. STROME of a son.

August 8th, at No. 82, Main Street, Mrs. J. A.
STEWART, of a son.

DIED.

On the 15th July, at Mr. Gribble's bungalow,
Nagasaki, CAPTAIN BONHAM WARD BAX, R. N.,
late commanding H. M. S. *Sylvia*, aged 39.

On the 29th July, at his residence, No. 66,
Main Street, THOMAS DAVIS, aged 39 years.

Summary.

OUR last MAIL SUMMARY was dated the
24th ultimo, for despatch by the
O. & O. Str. *Gaelic* for San Francisco, and
the M. M. Str. *Volga* for Marseilles, both of
which vessels sailed on the following day.
Since then we have received the under-
mentioned mails:—

Per M. M. *Tibre*, M'seilles, 17 June, arrd. 29 July.
" O. & O. *Sunda*, London, 22 June, " 3 Aug.
" P. M. *China*, S. Fr'caso, 14 July, " 8 Aug.

And despatched the following:—

Per P. & O. *Malacca*, for Southampton.....1 Aug.
" M. M. *Tibre*, for Marseilles8 Aug.

Latest telegraphic advices from London
are to the 9th instant.

AFTER an absence of just six months from
his new capital, an absence so far in excess of
that which was at first intended as to cause
some question whether the centre of Govern-
ment might not again be established in
Kioto, the Mikado has returned thence to
Tokio. He arrived in the M. B. M. S. S.

Hiroshima-Maru (formerly the P. M. S. S. *Golden Age*) in this harbor from Kobe on the 30th ultimo. He was accompanied by the Empress and a number of his personal attendants. The debarkation was effected with very little ceremony; and almost immediately on landing the imperial party repaired to the Yokohama Railway station, and were conveyed by special train to Tokio, whither the Emperor has been followed or preceded by all his ministers and the remaining members of his household. Since His Majesty's return, the first meeting, this year, of the Gen-ro-in, or Legislative assembly, has been held; and the subject under debate is said to have been that of how to deal with the insurgents; but whether with the insurgents in the field, or those taken by the imperialists, whether there is any chance of an endeavour to terminate the struggle by conceding certain much needed reforms, or whether the war is to be fought out to the bitter end, is not stated.

TELEGRAMS of a somewhat alarming nature having been received by the Government from the Japanese Consal in Amoy relative to the spread of, and mortality caused by, cholera in that port, the question of quarantine regulations has been vividly brought to the notice of the officials. There is a considerable trade between this port and Amoy, and the fear of the seeds of an epidemic being imported from the latter place has induced Nomura, Governor of Kanagawa-ken, a gentleman always eager for sanitary reform, to take steps for the erection of a quarantine hospital on Mississippi Bay, at a short distance from Yokohama, and to put himself into communication with the Consular Board on the subject, with a view to the framing of such quarantine regulations as should be approved by the Japanese Government and the representatives of the foreign nationalities. Despatches have, however, been received in answer to one from himself, by H. B. M. Minister from the Governor of Hongkong, stating that recent advices from Amoy were more favorable, and that it had not been deemed necessary to establish quarantine regulations in Hongkong. Hence we may hope that they may not be necessary here; but it is to the credit of the local authorities that they should be anxious to be prepared for any emergency.

On the 26th July a heavy circular storm swept over this settlement and the neighboring coast. In the harbour of Yokohama the damage done to shipping was slight, being confined to the wreck of one small Japanese steamer and the stranding of another. Near a spot known as the Mila Ledge, however, in Soshiu, about seventy-five miles from Yokohama, three vessels, *Roaring Sailor* (American) *Madagascar* (German) and *Catherina* (Danish) were wrecked, with some loss of life. Odawara, Numadzu, and other

coast towns on the Tokaido, suffered severely, persons being drowned and houses and bridges carried away by the inundation. One feature of the cyclone was that it travelled from a Northerly to a Southerly direction: another the very high tide which accompanied it.

AMONG other transfers of foreign vessels made, on completion of purchase, to the Mitsu Bishi Company, is that of the old P. & O. Steamer *Massilia*, which recently hoisted the flag of the new owners at Kobe. The *Montgomeryshire* in this port was formally transferred a few days ago, and is for the present to ply on this coast. In a short time the *King Richard* will be taken over by the same company, which, if, as now appears not altogether unlikely, the insurrection in the South is suppressed or at least restricted to a very limited area, will have a good number of ships available for other than merely coast traffic. What the Mitsu Bishi Company may do with them is very uncertain; and several schemes are alluded to by rumor as probably to be attempted. Among others are a European and an Australian line of steam transit.

ON her passage hence to Hongkong, for which port she left this on the 23rd ult., the *Oceanic* lost her propeller. The loss was reported in Kobe by the *Tamaura Maru* of the M. B. M. S. Co. which encountered her; and the O. & O. Co.'s General Agent in this port, being informed of the accident by telegraph, chartered the *Tanais* and went in search of the *Oceanic*, to fall in with and assist which steamer, an English and an American gunboat had been despatched from Kobe and Nagasaki respectively. Unassisted, however, the big steamer made her way out of the Inland Sea under sail, and anchored off the Saddles, whence she communicated with Shanghai, and the *Amoy* was sent to tow her down to Hongkong, where she has arrived safely. Her departure from this port is advertised for the 28th instant.

THE U. S. S. *Alert*, which left this port in May last to look for some white people who were said to have been shipwrecked on one of the South Pacific groups of islands, has returned to Hongkong and thence to Nagasaki, on her way to this port. She has been unsuccessful in her search; or, rather, the rumor which caused her cruise turns out to have been unfounded.

SOME of the native journals have published what they affirm to be regulations for the treatment of political prisoners in Kiushiu. A translation is given within. Torture, which was said to have been abolished by the jurisprudence of the Empire, is there said to be allowed only in the examination before the Courts in Kiushiu of these unfortunate prisoners.

RNE TREATY.

ly desires to instruct his readers, he would do well to inform self thoroughly on any subject on which he may intend to treat. Before writing at this present time, on postal subjects generally, and especially on the mutual relations of Postal Union Powers, a writer should make himself familiar with all the provisions of the Treaty of Berne. It does not suffice to quote a line here and there from a document which should be considered, as it is, one very harmonious whole, or not considered at all.

It has been very weakly objected to what we wrote on the inaction of Great Britain in the matter of the admission of Japan to the privileges of the treaty: first, that the English Government was too much absorbed in the great Eastern Question to pay any heed to a comparatively unimportant one to Great Britain, which has, however, much importance here; and, secondly, that in finding fault with our Government we were pursuing an unpatriotic course. The frivolity of this latter objection is only equalled by its want of morality. We will pass it over with the simple remark that the course which it would commend would be a contemptible one for any journal to pursue,—one to which we at any rate have no desire to be committed. The former objection is almost equally unworthy of notice. Apart from the absurd assumption which it makes that the British Government is so absorbed, so paralyzed, in watching the progress of the strife between Russia and Turkey, as to have no time or ability to care for anything of minor import, it ignores the fact that the authorities of the General Post Office have not been removed from St. Martins-le-Grand to watch the Danube or the Bosphorus, and that it is their province to cope with any postal question, domestic or international, which may arise.

We had no wish, for the present at least, to revert to this subject; and, being in a measure forced to do so, we will dismiss it in as few words as possible. It is true that the Treaty of Berne stipulates that "Countries entering the Postal Union do so subject to an ulterior understanding on the subject of sea conveyance;" and that, "whenever a transit takes place by sea over a distance exceeding three hundred nautical miles within the district of the Union, the office by or at the expense of which the sea service is performed, shall have a right to a payment of the expenses attending the transport." This is true; but it by no means follows that before Japan was allowed to enjoy her treaty rights, an arrangement should necessarily be made in London. What should have followed from the treaty, what should have been indispensable, is that every country forming part of the Union should have instant and full enjoyment of all the privileges guaranteed by the treaty. Every thing else resolves itself into a mere matter of arrangement and detail, the adjustment of which is provided for by the treaty. It is particularly worthy of notice that the cost of conveyance of mail matter is not paid to the company whose vessel carries the mails, but to the Government of the nation to which the mail boat belongs. Mutual accounts are made up and adjusted every six months, in conformity with a tariff of charges fixed by the treaty, and which, by so much, can hardly give rise to much discussion.

We have said that the treaty must be considered as a whole. The extracts which we have cited above, and which had been

previously cited elsewhere with an improper application, should be read with the following one, being the tenth article. Not having the official English text before us, or within reach at this moment, we translate literally from the French version:—

"Freedom of transit is guaranteed through the entire territory of the Union.

"Consequently there shall be *full and entire freedom of exchange*" (our italics) "the various postal administrations of the Union being able to forward reciprocally, in transit, through intermediate countries, both closed despatches and unclosed communications, according to the requirements of the traffic and the convenience of their postal service.

"Closed despatches and unclosed communications must always be forwarded by the most rapid routes at the disposal of the several postal administrations.

"When several routes offer the same conditions of celerity, the forwarding administration has the choice of the route to be adopted."

A HUMANE SOCIETY.

WE had no very great sympathy with the martial movement which was set going among foreigners in this settlement shortly after the outbreak of the Satsuma insurrection some months ago. The formation of a Volunteer Corps would have certainly been harmless enough, and would, for a short time at least, have furnished those foreigners who have sufficient leisure with a certain amount of amusement. But that an armed force of foreigners could be permanently maintained here, formed as it must have been of persons of half a dozen different nationalities, we never believed, any more than we thought such a force necessary to aid the local administration in the preservation of order, or to protect the lives and property of foreigners, in the present condition of public feeling in this country, or in any eventuality of the civil war. Had, however, a corps been organized and established, having for its main object the salvage of life and property in the event of fires or other common calamities, we should have hailed the fact with pleasure; and should certainly have had no objection to the acceptance by the corps of military drill as part of their system. It appeared, however, that such a scheme was not seriously contemplated by the organisers of the original project, whose martial ardour would be satisfied with nothing less than a Volunteer Regiment pure and simple. Under the circumstances, then, we were not sorry to see that the warlike flame, kindled with a great deal of apparent enthusiasm, after a dubious flicker expired under the gentle blast directed against it by Mr. Nomura.

Still, if a Volunteer Military Corps has been proved by the common sense of the community, evinced it is true in a negative manner after the apparently earnest inception of the movement for the formation of such a body, to be out of place in and quite unsuited to the necessities of this settlement, that does not prove that other organizations, having purely peaceful and civil objects, might not do good service to foreigners and natives alike. A Salvage Corps for instance, such as we proposed before, would be a standing boon and protection, in the event of fires, to the entire community. The events which occurred on the

of the 26th instant, show what efficient service rendered by a Humane Society during the prevalence of those storms, without a visit from one of which at least during each summer this port rarely escapes. Indeed, it appears to be almost an evident duty of foreigners here to show the Japanese how to form such societies as humanity has made so common at home, and whose purpose is to save life from shipwrecks and drowning. From what we know by experience of the natives, we can assert without hesitation that they would eagerly follow an example once set; and would, further, co-operate, to the best of their ability, by aiding in the supply of the necessary life-saving apparatus, in the formation of a parent Humane Society by foreigners.

An organized body of men, working well together, and furnished with the proper ropes, life-buoys, drags, and hooks, would have rescued all the men from on board the dredge within ten minutes from the moment of commencing operations. As it was, the rescue was not completed for more than two hours, in the course of which Mr. JOHN PITMAN risked his own life to save that of a drowning Japanese, a risk which the presence of the most simple apparatus would have rendered quite unnecessary, or have greatly reduced in extent. The gallantry displayed was admirable; but it was really deplorable to see, in a place like Yokohama, the whole work and peril of the salvage devolve upon a few private individuals, who toiled heroically for hours, and with no mechanical aid, but that of a line, in effecting and maintaining communication between the dredge and the shore. Fortunately no lives were lost, thanks, under Providence, to the efforts of those few Europeans; but the salvation of those in peril might have been effected with much greater ease, and less peril to their saviours, were such a system as is really a prime necessity, in the present advanced state of general civilization, of life in a sea-port, established here.

By a Humane Society such work as had to be done the other day would be done decently and in order, and with all possible despatch. On such an occasion as that of this last gale we should not witness, as we did then, a large amount of work and good will thrown away because unorganized and misdirected. Willing bystanders might aid the society; but that body would have charge of operations, and casual volunteers would be happy to work under their direction. There would be no excuse for a purposeless rushing to and fro, and a vociferation on the part of everybody of confusing and contradictory orders to everybody else. Presence of mind, harmony, union, and united effort would prevail. In short, while we cannot but admire the zeal displayed by a number of residents, which we are bound to say contrasted favorably with the apathy or positive levity of others, we cannot but remark how much more valuable that zeal would have been if properly directed; and, in the hope that some steps may be taken so to utilize it on future occasions, we commend to the consideration of our readers the idea of the establishment and maintenance of a Humane Society in Yokohama.

THE native papers mention the recent discharge of a number of workmen from the Koishikawa Arsenal; and draw therefrom the inference that the final suppression of the insurrection is approaching.

CHINESE COMMERCE.
PETITION.

NOT the least of the disadvantages labor-
ed under by foreign merchants in the
East, in maintaining a commerce which they
have founded, is the competition of Chinese
rivals. The circumstances in favor of the
latter are so obvious, and have been so often
dwelt upon, as hardly to need recapitulation.
It is certain that they have been turned to
so much account that several branches of
trade have, in these far Eastern ports, fallen
almost entirely into Chinese hands. Perhaps
they do not always turn their advantages to
the most signal profit; but they prevent
other persons who might improve the trade
they have appropriated from having any-
thing to do with it. Thus, the Amoy
and Formosan sugar trade, a case for
example, is conducted by Chinese houses, who,
if they often find it disastrous to themselves,
at least have the satisfaction of knowing that
their mismanaged monopoly is sufficient im-
pediment in the way of foreigners, to hinder
the latter, for good or ill, having any part
in it except in the most exceptional of cases.

In matters of commerce China is not
wholly conservative. She holds to old custom
so long as that suits her book; but when the
contrary is the case, when self-interest points
the road to innovation, she can be more
radical in her reforms than the most radical
of her foreign friends would wish her to be.
Not only in this country, which is only as
much open to Chinese as to foreigners of any
other nation, not only in Shanghai and the
other treaty ports of China, where the Chi-
nese merchant is in his own country, have
his Western competitors cause to groan at his
contentment with wonderfully small profits,
or his ability to live by a loss. Hongkong,
now a British Colony if it was formerly part
of Chinese territory, ascribes the depression
of its trade to the ramifications of Chinese
business firms, the thoroughness with which
these have learnt the lessons taught them by
their foreign masters, and their ability to
undersell all competitors. Now-a-days we
have Chinese Steam Ship Companies, Chi-
nese Marine Insurance Companies, Chinese
Banks, all well organized and well con-
ducted. If Chinese importers in China
and other ports, as far South as Singapore,
and as far North as Tientsin, have occasion
to avail themselves of the services of middle-
men for the purchase of their foreign goods,
they have no need, unless they choose, to go
to the foreign commission agent or merchant
on the spot to make their purchases. Their
credit with European houses is often suffi-
ciently good to enable them to make their
importations direct from the manufacturer or
his metropolitan agent. Where this is not
done, they can purchase through the agencies
established now by their own countrymen in
London and other great commercial towns of
Europe. China is having her revenge for
the armed enforcement of foreign relations
and foreign commerce upon her people.
She has carried, in a way which was never
foreseen, the war into the enemy's territory.
In return for the warlike invasion of her
shores by the trading soldiers of the West,
she has sent out her armies, armed with the
negative but potent weapons of cunning,
frugality and thrift. What impression is
produced by these forces is apparent from
the accounts which reach us of the countries
which they overrun. Everywhere they are
looked upon with a curious mixture of sur-
prise, aversion, envy, and contempt. In the

colonies of the British dominions, where the
principle, at least, of free trade even in labor
is held sacred, they are comparatively un-
molested, even by the most ignorant of the
people; or, if as happens in very rare in-
stances, they are molested, those who inter-
fere with them are rigorously punished.
The Chinaman in America is not so favored.
There the doctrines of protection would pro-
tect even labor; and though offenders against
any kind of property or person are nominal-
ly subject to severe penalties, yet there can
be no question that violations of the law, in
the property and persons of Chinamen, are
not so heavily dealt with as they would be
did they occur in regard to citizens. Are
not offences against Chinamen caused by
the importation of Chinese labor, and so, to
a certain extent, vindications of the glorious
doctrine of protection?

The latest instance of the supplanting of
foreigners by Chinamen, the beating of free-
handed ESAU on his own ground by far-
reaching and servile JACOB, comes to us from
Saigon. The *Hongkong Daily Press* notices
a report of Mr. Consul TREMLETT on the trade
of that port for the past year. From that
report it is apparent that there, as in the
Treaty ports of China, as in Japan, the Chi-
nese have been gradually undermining for-
eign merchants, until at last it begins to
appear probable that they will eventu-
ally secure the larger share of the trade. In
Saigon, which to them is an essentially for-
eign port, the Chinese have succeeded to a
great extent in ousting European merchants.
How fully this is the case may be gathered
from Mr. TREMLETT's assertion that during
1876 the Chinese shipped nine-tenths of the
entire rice crop, and the whole of the other
articles of produce. Cochin China has for
several years past been decreasing in
value to European merchants. The Chinese
enjoy several advantages over these latter
in their greater ability to deal with the
natives, while their inexpensive establish-
ments enable them to reduce their charges
and commissions proportionately. In addi-
tion to the bulk of the export trade being
carried on by them, the import trade is en-
tirely in their hands. The colony, therefore,
is kept up chiefly for the advantage of the
Chinese, a result which can hardly be gratify-
ing to the French Government and people.

It must be consolatory to British ship-
owners to know, however, that, though the
trade of Saigon is mainly conducted by
Chinese, British vessels are chiefly employed
in carrying the produce; for out of a total of
317 vessels, aggregating 234,299 tons, load-
ed at Saigon, about two-thirds were British.
Manchester merchants, who so bitterly com-
plain of the falling off in their commerce,
may, also, find a crumb of comfort in the
facts that Manchester fabrics still continue to
supply the entire native population, and that
the demand for these goods was larger than
ever in 1876. Still these advantages are but
small off-sets against the grand *per contra*;
and there is no foretelling how long they
will be left in the undisputed possession of
those who, for the present, enjoy them.

The remainder of the *Daily Press'* *précis*
of Mr. TREMLETT's report is only interesting
in that it shows that Cochin China is at pre-
sent little more than a great rice field, and
that its surplus goes to feed the hungry
millions of the Middle Kingdom. The pro-
duction of rice, the staple of the colony,
for 1876, exhibits an increase on any pre-
ceding year, and reached the large quan-
tity of 5,700,000 piculs, of which 4,256,119
piculs were shipped to Hongkong, 167,500
piculs to Swatow, and 60,200 piculs to Amoy.

The balance was distrib-
uted to the Straits, Java, Mal-
acca, America, England, and
other ports. The quantity exported to Europe
might be expected, utterly
that Japan, in her newly developed
Government-fostered rice export, has little
fear from the competition of Cochin China
European markets.

The whole question of Chinese rival-
ry in fields which Western commerce
thought it had made its own is one of in-
creasing moment to the foreign trader. Every
year renders more patent the fact of the
ability of the Chinese, in many instances,
already to undersell and out-trade their for-
eign rivals. It is for the latter to consider
how long the strife is to last, and where it
is to end: whether it will only terminate
when the Chinaman has, by almost impercep-
tible advances, appropriated all the resources
of commerce which the Western trader open-
ed, and all of whose mysteries he has taught
to the dwellers in the East.

NOGÉ NATIVE HOSPITAL.

EVER since the date of the commencement
of the earliest foreign relations with
Japan, the natives have had a great respect
for Western systems of medicine and sur-
gery. In the healing art, at least, they have
always been willing to admit the excellence
of European methods. It was not, however,
till the comparatively recent great impulse
given by modern civilization, after the open-
ing of the country to foreign intercourse, to the
pursuit of science in Japan, that the phar-
macopoeia and medical treatment of their for-
eign guests was commenced to be definitely
adopted into every day practice. The
greatest of all debts owed by suffering
humanity in Japan to the presence of for-
eigners in the country is the establishment
of hospitals founded and conducted on Euro-
pean principles, modified to suit the require-
ments of Japanese modes of life.

A short time since we took an opportunity
to inspect the Native Hospital at Nogé, and
found the arrangements for the treatment
and accommodation of patients so complete,
and the establishment so well conducted,
that we left with the conviction that an ac-
count of the institution would not be un-
interesting to our readers.

The native authorities of this ken some
years since formed the project of founding
a General Hospital under their jurisdiction,
and availed themselves of the services of Dr.
D. B. SIMMONS in the arrangement of a pre-
liminary scheme. Their choice was a very
judicious one, Dr. SIMMONS in the course of
a long residence in Japan having made him-
self familiar not merely with the native
language, but with what we may call the
inner life of the Japanese, whose manners
and customs, modes of thought and feel-
ings even, are singularly familiar to him.
His private practice is very extensive among
natives, with whom his quiet manner and
his admirable diagnosis have made him a
universal favorite.

The JUZEN-BIO-IN, or Complete Hospital,
was first opened in August, 1873, in Otamachi,
where a building was hired for the purpose,
pending the erection of a suitable permanent
structure. The site chosen for the latter
was on a commanding, picturesque, and salu-
brious spot at Nogé, overlooking the Bay of
Yedo, and commanding fine and unobstruct-
ed views of Kanagawa, Yokohama, part of
the Tokaido, and a large section of surround-

a two-storied building substantially built after by Dr. SIMMONS, who had been Surgeon-in-Chief and Director; in 1874, the personnel of the hospital, and the patients then under treatment, were transferred thither. The new hospital, though as we have just said erected in European style, is furnished within *à la Japonaise*, the rooms being covered with *tatami*, the Surgeon-in-Chief having wisely decided that it would be a false step to introduce, for the use of all classes of Japanese, totally unaccustomed thereto, the beds, bedding, chairs, tables, and other furniture of a foreign sanitary establishment. Indeed, as little change as possible is made in the usual habits of life of the patients, who are taught to consider themselves as much at home as possible; and are, in all cases where such a course is practicable, allowed the constant company and attendance of their nearest relations or friends, who for a moderate sum, while waiting on the patients, are allowed their share of the food provided by the hospital, where in many instances they are permitted to reside and sleep until the convalescence or discharge of their friends. The rooms are well lighted and well ventilated, models of cleanliness and order, and are arranged for the accommodation of fifty in-door patients. Those of the first and second classes are each provided with separate apartments. Third and lower class patients are, also, in all cases when such an arrangement is possible, kept in single rooms; and only when the hospital is crowded are two invalids of those classes put into one room. Under no circumstances is one chamber allowed to shelter more than two inmates.

The prices of accommodation and treatment, food, medicine, and attendance included, are remarkable for their moderation. They are fixed on the following tariff:—

1st class.....	1 rio per day.
2nd ".....	40 cents "
3rd ".....	30 " "
4th ".....	20 " "

There is a fifth or "charity" class, to participants in the benefits of which, all the accommodation of the hospital is rendered free; but it is, owing to the excellent system pursued by the authorities of the ken, a very small one. To belong to it a patient must be virtually destitute and friendless; as the circumstances of the very limited number of applicants for admission as absolute paupers, are the subject of rigid investigation under a system of police which, of its kind, is unequalled in the civilised world in the facilities which it possesses for obtaining minute information of the affairs of those in whom it may happen to be interested. The diet prescribed varies of course according to the condition and habits of the patients, and is in general Japanese. Beef-tea, milk, and eggs are given, however, to all whose condition requires such nourishment, without distinction of class; and the medicines are all of the best quality which can be procured in Europe, America, or on the spot.

The ward for the insane contains eight cells, which are usually full. Those who are interested in the comparative analysis of the subject of insanity, may be glad to be informed that fifty per cent. of the insane patients are discharged cured, while five per cent. improve under their treatment. When we visited the hospital two men and one woman were the only tenants of these melancholy cells. The latter was a gibbering, repulsive, maniac, with none of the attractions of poor Ophelia. One of the men had been brought in during the previous night, and was an example of

the insensibility to pain evinced by certain persons suffering from a mania of self destruction or the infliction of self punishment. His body was bleeding from the effects of wounds inflicted by his own nails: he had torn locks of his hair out by the roots, and battered his head against a wall; but showed no symptoms of suffering. When the Surgeon and his assistants approached he saluted them with the utmost politeness, and suspended his occupation of playfully pinching himself. The third patient was a mischievous madman, whose astounding strength and cunning, and the herculean pranks he indulged in, were a source of constant wonder, not free from dread, to his keepers. He could draw iron bolts with his teeth, and twist or break wooden and iron bars as easily as Du Chaillu's gorilla would double up a rifle barrel.

Two additional buildings are in course of erection and are intended for the accommodation of fifteen more first and second class patients, the present space available being found quite insufficient for the increasing needs of the hospital. An amphitheatre for operations is also being built, and is much needed for the convenience of operators and patients, and the instruction of the native medical assistants who walk the hospital.

On a rise above the JUZEN BIO-IN is a small-pox hospital, a two-storied building capable of accommodating at least fifty patients. The upper story is partitioned off into small apartments for the reception of first and second class patients. On the occasion of our visit these rooms, and indeed the whole of the hospital, were untenanted except by fleas, those lively and very obtrusive squatters in deserted houses. The ground floor is arranged for general wards. By an enactment which can hardly be too much commended, all native persons, of whatever rank and position in Yokohama and the immediate neighbourhood, who may have the misfortune to be attacked by small pox, are obliged to enter this hospital, the expenses of those who may be unable to pay for their maintenance and medicine being borne by the Government. The law was passed, at the very commencement of the last severe epidemic, principally through the earnest representations of Dr. SIMMONS, from whom we understand that it was rigidly enforced, and, contrary to what might have been expected, caused but little dissatisfaction even among those of the better classes who were afflicted with the complaint. So far as we are aware, no such law exists in any other part of the world, nor indeed, however desirable it might be, could compliance with it well be compelled in Western countries. In connection with the subject of small pox we may mention that vaccination is compulsory in this district; and a fee of three cents is charged for each inoculation. The operation is performed once a week, on Wednesdays, when crowds of children are brought to the hospital. Clean and well dressed, the weekly muster affords a pretty and an interesting sight. A visit to the Nôgô Hospital on Wednesday morning might tend to dispel a mistaken notion, that diseases of the skin, especially manifested in the head, are very prevalent among Japanese children. The clean and wholesome looking heads of the great majority of merry infants who assemble to be vaccinated, seem to prove the contrary.

The hospital staff consists of the Surgeon and Director, Dr. SIMMONS, who is the sole foreigner employed, an Assistant Director, and four Assistant, or House, Surgeons. These latter are paid a merely nominal sum, being glad to avail themselves, without much

facilities afforded by the studying systems of medicine, surgery, and learning the mysteries of hospital practice, under the superintendence and instruction of a competent practitioner. Dr. SIMMONS has now been in charge of the hospital for four years; and his engagement has just been renewed for another term. He has never experienced any of that "trouble" with those above or under him, of which other foreign officials so frequently complain. His relations with the Japanese have always been pleasant ones, owing no doubt in great part to his knowledge of their language and character, and his happy tact of "getting on" with them. His intimacy with the higher officials of the ken, in whose families he acts as private physician, may also be for something in the causes which have produced so agreeable a state of things, on which the prosperity and good management of the institution under his control so largely depends. Mr. NOMURA, the Governor of Kanagawa, who is much in favor of sanitary reform, takes a great interest in the well-being of this hospital.

Out-door patients are seen daily from 9 a.m. to noon. Every patient is carefully examined and prescribed for by the Surgeon-in-Chief. No fees whatever are taken for advice; but, in accordance with Japanese custom, a charge is made for medicines, which are all compounded in the hospital, and so calculated as to bring a small profit to the establishment, which also derives an income from the sums charged to in-door patients. The revenue thus obtained is found almost or altogether sufficient to pay rent, and the wages of the apothecary, the assistants, and servants. In fact, with the exception of the salary of the Surgeon-in-Chief, the institution may be pronounced self supporting, no small matter when we bear in mind that all similar establishments in Japan are a serious source of expense to the Government. The satisfactory position, in financial, as in other matters, of Nôgô Hospital, is chiefly due to the foreign Director, whose presence, owing to his long residence in the country and his extensive and well earned reputation among the Japanese, is sufficient, as above mentioned, to command the services of competent aids for nominal pay and the advantages of being under his instruction. In other hospitals the pay of native surgeons is from \$25 to \$150 per month, whereas his assistants are none of them paid more than \$10 per month, and would probably be glad to serve for even less than that. Another expense to the Government is saved by his familiar knowledge of the language, which enables the authorities to dispense with the services of an interpreter.

So favorably is the treatment given in the hospital regarded by the Japanese, that most of the officials of the local Government, as well as many of the leading native merchants, send the members of their families to the hospital for out-door service for slight illness; or even to enter as in-door patients when afflicted with more grievous ailments. The advantages of this institution are becoming so widely known, that they are not merely availed of by inhabitants of the town and neighborhood. Persons troubled with all kinds of complaints, and the victims of every imaginable kind of accident, come to the hospital from long distances. The benefits of civilization are not without their attendant evils; and the introduction of machinery has been the fruitful cause of fractures and contusions unknown before. We saw in the hospital a man patiently waiting to have a leg set which had been broken on board the

steam dredge, and another who had been seriously injured by molten iron. In fact the service is particularly rich in surgical cases; and hardly a day passes in which the Surgeon-in-charge does not perform some operation of greater or less importance. We have no intention of harrowing or disgusting our readers by detailing any of these; and will merely mention that the photograph shown us of a man taken on his entrance into the hospital, and the original as we saw him some time afterwards, were much more unlike, than portraits and sitters usually are. The picture represented a man with what might have been a second head growing on the left side and under the skin of the first: there was nothing very extraordinary about the man of whom the picture had been taken, except a fast healing scar on the left cheek, which testified to the successful performance of a difficult and perilous operation. Not many days ago some operations of a very trying and serious nature were performed by Dr. SIMMONS, who was then kindly assisted by some of the foreign surgeons resident in Yokohama. Indeed, they were such as could hardly be undertaken, with a fair chance of success, unaided, by any one practitioner however skilful; and the Japanese assistants have neither the coolness nor the experience requisite to ensure their being efficient fellow-workers with a foreign surgeon in difficult cases. This being so, and that it should be so in the present transition state of the healing art in Japan is no matter for wonder, it is a pity that the foreign surgeons here do not take a larger interest than they appear to do, in Nogé Hospital. Apart from the service they would render to others by their occasional attendance at the hospital, the gain would be by no means light to themselves. They might take it in turns to attend for stated periods, and would thus improve their theoretical knowledge by the best of all guides, practical experience. Constant practice is indispensable to the practitioner who would always be ready for the performance of delicate operations; and the value set upon opportunities of keeping, not only knowledge always bright, but hand and eye always in activity, by the profession, is best demonstrated by the fact that the oldest and busiest surgeons of the world, in almost every case, retain their hospital practice until they seriously entertain the idea of final retirement from the active pursuit of their calling. One more advantage which would be gained by foreign surgeons in their occasional visits to the native hospital, is that they would be aware in good season of the approach and progress of any epidemic, or the prevalence of other dangerous diseases: would have practical experience of their treatment; and be ready to apply the best method of cure to their foreign patients, should the disease or epidemic invade the dwellings of the latter.

But of Nogé Hospital, with the good it has effected, that it is daily working, that its promoters and directors have in prospect, and that of which it might be made productive, we must now take leave, with the remark that its foundation and maintenance are a credit to the local Government, and a proof that they are earnest in their search after something better and deeper than the mere veneer of civilization.

The Japanese Consul in Amoy telegraphs to his Government that the spread of cholera in that port is becoming more extensive and alarming.

TO THE WRECKS AND BACK.

(From our Special Reporter.)

ON intelligence being received in Yokohama on Monday morning (30th ult.) of several casualties to shipping having occurred at No-Sima; or somewhere in that locality, and hearing that the German corvette *Elisabeth* would start for the scene of the wrecks at 10 A.M., I, having armed myself with a letter of introduction from the German Consul, proceeded on board, presented my credentials, and asked permission to accompany the *Elisabeth* on her errand, a request very kindly and courteously granted by the commanding officer. I was handed over to the care of an officer and taken to the wardroom, of whose mess I was the hospitably entertained guest until the return of the vessel to Yokohama. Mr. Zappe, H. I. G. M.'s Consul was on board, as well as the chief officer of the German barque *Madagascar*, which vessel had been totally wrecked on the rocks at No-Sima during the gale experienced on the 26th.

It may not be uninteresting, before proceeding with my narrative, to give a short outline of the history of the *Elisabeth*, for particulars of which I am indebted to the kindness of an officer whose courteous attentiveness throughout the trip will be long gratefully remembered. The *Elisabeth* is a three-masted, full-rigged corvette. The first nail was driven into her on the first of May, 1866; and on the 18th of October, 1868, she was launched at the Royal Dockyards, Dantzig. Her length is 224 feet, breadth 44 feet, depth 23 feet, draught, forward 16 feet, aft 18 feet; tonnage, 2,026; horse power, 2,400. She has four boilers. For general purposes two only are used; but at times when speed is very essential all four are brought into requisition and then, at full speed, she steams from thirteen to fourteen knots an hour. Her complement of men, including officers, is 400; and she carries twenty-one Krupp guns—nineteen steel of fifteen centimetres, and two brass of eight centimetres, all breach-loaders. Eighteen of these guns are on the middle deck. From the time when she was launched to the present the *Elisabeth* has been on active service. Her present commission commenced on the 1st October last year, and a fortnight afterwards she sailed under the command of her present Captain from Kiel to Plymouth, from Plymouth to Madeira, St. Vincent, Capetown, Singapore, Labuan and the Sooloos. While at the latter place the disturbance between the Spanish Authorities and German traders, which occurred last year, was settled amicably through the instrumentality of Captain Von Wicked, whose arguments, doubtless, carried double force from the circumstance of their being backed by four hundred stout hearts and twenty-one Krupp guns. At all events the result of the conference was favourable to the German merchant vessels, who may now trade with the Sooloos without any fear of interruption on the part of the Spanish Authorities. After a stay of twenty days the *Elisabeth* started for Manila and from Manila to Yokohama. Everything on board is remarkably trim; and the men—a fine looking lot—seem to be well drilled, in the manner in which they go through their exercises may be taken as a criterion. Some ten months ago a band was formed from among the men, which now plays very creditably.

At a quarter past ten o'clock we steamed out of Yokohama. The weather was fine,

and nothing of any particular moment occurred until we reached our destination at about four o'clock in the afternoon. The Corvette was anchored a mile or so from No-Sima Lighthouse; and the rugged appearance of the coast convinced me that a lighthouse was never more required than at that spot.

Immediately after anchoring, the barge was lowered and several officers, Mr. Zappe, his Japanese interpreter and myself, started for the shore. After proceeding something like half a mile, we met a sampan being sculled towards the ship, from the occupants of which we learned that several vessels had been wrecked in the immediate neighbourhood. Mr. Zappe ordered the sampan to return and show us a landing place; and a small inlet between the rocks, just sufficiently large to allow the boat to pass in, was pointed out as the most suitable spot. On passing this narrow entrance we found ourselves in a huge basin, the rim of which was a mass of rock. The barge was brought close to the side and we stepped on shore without any difficulty. Mr. Zappe now asked for the head man of the village, and was informed that that functionary was at the spot where the *Madagascar* had gone on the rocks. The question now arose as to what had better be done. The Lighthouse-keeper and the Captain of the *Madagascar* were, also, both absent, having gone to the wreck of an American barque which lay some miles further along the coast. It was finally resolved however that we should proceed to the wreck of the German barque and see what was to be done there. An enquiry for jinrikishas resulting in ascertaining that such an innovation in vehicles had not reached this part of Japan, there was nothing left but to "foot" it. Relieving ourselves of all superfluous clothing we started. The sun was blazing hot; and the perspiration streamed from our bodies as we trudged along beneath his scorching rays. Several paddy fields were passed; and all manner of vegetation apparently grew in profusion. Crowds of natives, the majority of whom were in an almost complete state of nudity—Turkey Reds, Grey Shirtings and other Manchester goods are evidently not in great request in this part of the country—gathered to gaze on their unexpected visitors. After an hour's hard walking we came in sight of the reef on which the *Madagascar* struck first. It just protruded above water; and had the vessel remained there nothing short of a miracle could have saved any of the crew. Half a mile further along we came to where the remains of the German barque lay. A more complete wreck could not be well conceived. Not a whole plank was to be seen anywhere. The masts were broken into several pieces, and lay tossing about on the water. Two anchors, a quantity of cable, rigging, spars &c. were lying full fifty yards inside of the outer edge of the reef; and a quantity of wreckage was strewn about the rocks. Here we met the Kocho of the village, whom Mr. Zappe informed that the visit of the *Elisabeth* was to render assistance to any wrecks along the coast, and also to thank him and the natives generally for their assistance and kindness to the shipwrecked crew of the *Madagascar*. He promised to report the facts of the case to head-quarters, whence he had no doubt their humanity would be substantially rewarded. After remaining in the vicinity of the wreck half an hour, we turned our steps towards the boat, which was reached about half-past seven, all hands being thoroughly tired; and twenty minutes afterwards we were safe on board the *Elisabeth* quite

ready to do ample justice to the substantial repast awaiting us.

From a native officer in connection with the lighthouse, I ascertained that the inhabitants of No-Sima are very poor but exceedingly honest. He said that they subsist chiefly on fish and vegetables; though a little rice is grown, but is a luxury which only the most wealthy are able to indulge in. Fish are dried and exported in large quantities to Tokio and Yokohama. Gold and silver coins are unknown among the primitive people, their currency being paper ranging from ten cents to a *rio* and *tempos* and cash. They are evidently Shintoists, as we passed a number of Shinto shrines.

From this officer I also learnt that lower down the coast an American barque, a Danish barque, and a Japanese steamer were on shore; also that during the storm on Thursday no less than sixty native Junks went to the bottom, or were broken up on the shore, and 150 lives lost. His story was easy to believe from the amount of wreckage strowed along the coast, which was sufficient evidence of the terrible destruction to the native crafts by the storm.

Early on Tuesday morning the master of the *Madagascar* came on board, and informed the Commandant that the captain of the Danish barque, which I ascertained was the *Catharina*, and several of his crew, together with the captain of the American barque *Roving Sailor* were about fifteen miles to the North-East. It was then resolved to first pay a visit to the Lighthouse and thank the keeper, Mr. Dick, for his kindness to the shipwrecked mariners and afterwards to proceed to the wreck of the Danish and American vessels. At a quarter-past seven the boat was manned and the Lighthouse was visited.

No-Sima Lighthouse is situated about S. S. E. fifty-five miles from Yokohama. It is built on a rock: the lower part is of brick; and its height to the summit is 123 feet. It was first lighted during January 1870. The lenses are excellent; and the light may be distinguished in fair weather at a distance of $17\frac{1}{2}$ miles. In justice to Mr. Dick, I must say that the compliments bestowed upon him by Mr. Zappe and the officers of the *Elisabeth*, for the good order in which the Lighthouse was found, were well merited.

While the boat was away, crowds of eager natives came round the man-of-war to inspect her, for never before had such a ship anchored in the neighbourhood. When the band struck up, their astonishment was unbounded; and they kept about the vessel until we left, which was about a quarter past nine. After steaming an hour and a quarter signals were observed on shore off Chikura, and a gun was fired as a signal for the Danish and American captains, with their crews, to come on board; and shortly afterwards a native boat was seen bringing the shipwrecked mariners off. In all there were nineteen persons, including Captain Bryant's wife and three children. They were very scantily clad as they lost everything when the vessels were wrecked. During the passage from the Lighthouse accommodation had been provided aft for the reception of the lady and children; and when they came over the side they were at once conducted to their quarters, where wine, food, and clothes were supplied to them. Indeed the kindness of the officers and the attention of Mr. Zappe were only equalled by the gratitude of the recipients. The unfortunate people were profuse in their thanks to Mr. Dick, to whom they were indebted for most of the few clothes they had.

The *Elisabeth* now proceeded cautiously towards the scene of the wrecks. The coast was dangerous, and the Commandant remarked that the charts of those waters were not to be relied upon. Men were stationed at each gangway with leads, and soundings were taken every minute. At length the wrecks hove in sight, opposite a village called Ibemouri, and even at that distance pieces of the Danish barque were easily distinguishable on different parts of the rocks; and the bulk of what was left was eight or ten feet above the sea. It was about high tide then. A more inhospitable looking coast could not well be conceived. Reefs of jagged rocks, over which the spray sportively leapt, fringed the shore for miles; and it seemed almost an impossibility to find a landing place. But here and there were small passages through the rocks, in and out of which the native boats were dodging. The barge and cutter of the *Elisabeth* were lowered and manned, and then we proceeded to the wrecks. After rounding a point of the reef, one of those narrow passages was observed, through which the boats gently glided, though there was scarcely room for them to pass without coming in contact with some of the rugged points which projected. The *Catharina* was the first object to attract our attention; and by bridging chasms here and there with pieces of the wreck we reached what remained of the ill-fated barque. She had, to all appearances, first struck a protruding rock with her bow, and then veered broadside on to the reef, where almost immediately she broke in half, the rending of her timbers being heard above the almost deafening roar of the breakers. The captain and crew, all told numbering fourteen, when she went broadside on, made efforts to save themselves. Captain Fischer was tossed about the rocks at the will of the waves until he was rendered almost senseless. A wave kinder than the others at length cast him upon a high rock, where, for the time being, he was in comparative safety, though in a sadly bruised condition. Out of the men four were lost, but the others scrambled or were washed on the rocks. It was about eight o'clock when the vessel struck and the tide was high; by nine o'clock the fury of the gale began to abate, and the tide to recede, for which the shipwrecked mariners were thankful, as it was plainly evident they would have to remain on the rocks all night. In the morning the storm was over, and two of the men swam on shore, and the others were shortly afterwards rescued by the natives and tenderly cared for. Captain Fischer was so badly bruised that he could scarcely move, but the hospitable people among whom he was thrown did all that lay in their power to relieve his sufferings. A swift-footed messenger was despatched with news of the disaster to Mr. Dick, at the lighthouse, some eighteen or twenty miles away, and as soon as he heard of the wrecks—for the American barque went ashore at the same time as, and about a quarter of a mile from, the *Catharina*—he took a stock of provisions and clothes, and started to aid and comfort the unfortunate people as much as possible. When he arrived he found them in a most deplorable condition and sadly in need of the clothes and creature comforts he had brought. Further on I append reports obtained from the captains of the vessels, which deal with their experience before going on the rocks, and will, I am sure, be read with interest.

While we were inspecting the wreck the chief of police arrived with an interpreter, and to him Mr. Zappe explained the object

of the visit of the *Elisabeth*, and thanked him for the attentions shown to the shipwrecked people. Shortly afterwards we proceeded in the boats to the shore and walked along it until the *Roving Sailor* was reached. All along our way, the beach was strewn with Hakodate fish, deer hides and other things, which produced a most offensive smell. The *Roving Sailor* was found driven on the shore head first between two rocks, and was perfectly upright though her stern was under water. As I said before, she came on shore at the same time as the *Catharina* went on the rocks, about eight o'clock in the evening. Captain Bryant, as soon as the vessel struck, turned his attention towards saving his wife and three children, and by means of a rope contrived to get them on shore one by one. When the last one was rescued his own strength failed him and he fell exhausted into the surf, which fortunately washed him within reach of a rock, to which he clung tenaciously until he had somewhat recovered his strength, and then scrambled on shore and rejoined his wife and children and the crew, all of whom were saved.

It had been thought possible by the captain to haul the *Roving Sailor* off, but the Commandant and officers of the *Elisabeth* were of the opinion that it would be useless to try, for it was evident that her stern was washed away; and there was every probability, also, from the force with which she must have been driven on the rocky shore, that a large hole had been knocked in her bottom. That Captain Bryant should cling to every straw of hope of saving his vessel—which he describes as as fine a craft as ever floated—was nothing to be surprised at, when it became known that he was chief owner and that the vessel was not insured for a dollar. He estimates his loss by the disaster at \$28,000. However, it was resolved to leave the *Roving Sailor* where she lay, for the present, in charge of the chief officer. But the first rough weather will evidently finish her, as she must now be greatly strained. On the shore lay the dead body of a retriever dog. Captain Bryant relates a pathetic story of this animal. When the storm was raging, the faithful creature kept close by the side of the children, of whom he was very fond, licking their hands and whining. In the confusion of getting on shore, the dog was forgotten, though Captain Bryant says it was his intention to rescue him after saving the children. The next morning he was seen on the deck, and when he saw the children he manifested great joy, and capered and barked as if he were mad. All of a sudden he rolled over, and, a moment after, was dead.

As no service could be rendered the *Roving Sailor*, we strolled back to the boats, accompanied by crowds of Japanese, and proceeded on board. The man-of-war was an object of great interest to whole families of natives, some of them decrepit old folks, whose remaining animation was lighted up to an indescribable intensity—their gesticulations and ejaculations being ludicrous in the extreme. The playing of the band afforded them infinite amusement. The *Elisabeth* now steamed back to the lighthouse, for the purpose of landing Mr. Dick, who had accompanied us to the wrecks, which was reached between four and five o'clock. A native boat came off for the lighthouse keeper, who returned on shore loaded with the congratulations of the officers of the ship and Mr. Zappe, and the hearty thanks of those to whom he had been so

kind. Any further reward was stoutly declined. And now the man-of-war having accomplished her errand, her head was turned towards Yokohama and she was soon steaming away at the rate of twelve knots an hour. The Japanese vessels which had been wrecked we saw nothing of; for of the barque that went ashore near the *Madagascar* not a vestige was to be seen, except some spars which the natives had hauled on shore. The native steamer (whose name I have since ascertained to have been *Setsu Maru*) had gone on shore some miles North of the wreck of the *Roving Sailor*; and from the statements of the natives it was evident the *Elisabeth* could accomplish nothing if she went there.

Before Mr. Dick left the ship, he kindly furnished me with the following particulars in connection with the storm, and also with the barometrical readings from nine o'clock in the morning until evening. He said that on the 25th he felt confident there was heavy weather to the South, from the fact that, though it was perfectly calm, a most unusual swell came from that direction. During the day the wind was East, but the swell from the South continued to increase, and a strong current set in from the same direction. By eight o'clock the following morning the barometer began to go down fast. At ten o'clock it was blowing a gale and by two o'clock such a typhoon as has not been witnessed in that neighbourhood for many a long day. In fact, he informed me that the weather during the past two months had been such as had not been witnessed before within the recollection of the oldest inhabitants. Mr. Dick was of the opinion that the centre of the storm was some distance to the South; an opinion backed up by Captains Bryant and Fischer, who stated that they considered the centre of the storm was about 40 miles South. Captain Bryant said that he was never more surprised in his life than when he found out the part of the coast on which he had been cast. When it blew so hard he took bearings carefully and concluded the wisest course to pursue was to lay the vessel to, which was done and she was riding out the storm beautifully, as he thought, many miles from land. But a treacherous current, running, he surmises, at five knots an hour brought his vessel into the neighbourhood of No-Sima. The following are the readings of the barometer taken at the light-house on the 26th:—

9.00 A.M.	29.81
10.00 "	29.77
11.00 "	29.70
12.00 M.	29.75
1.00 P.M.	29.59
1.30 "	29.52
2.00 "	29.46
2.30 "	29.46
3.00 "	29.44
4.00 "	29.43
5.00 "	29.40
6.00 "	29.48
7.00 "	29.52

Captain Spiessen, of the German barque *Madagascar*, furnished me with the following particulars in connection with the wreck of his vessel. The *Madagascar* sailed from Hakodate on the 17th of July, with general cargo. Fine weather with calms and fogs was experienced until Inaboye Saki was reached. After passing this point a fresh breeze sprang up from the South-East. This was in the early part of the morning of the 26th. About eight o'clock the wind wore round to the East, and a heavy swell came

from the south. At ten it was blowing so hard that it became necessary to reef the smaller sails. The barometer was fast going down and there was every indication of a heavy blow before the day was over, and preparations were made to meet it. Shortly afterwards the wind increased greatly and rain fell in torrents. The watch below was turned up to reef sails, but the task was no easy one for the wind was increasing every moment, and some of the sails were entirely blown away. At this time the storm was blowing from the N.N.E., but afterwards it veered round to the East, and then to the South-East. The head of the vessel was still kept to the South. Some of the remaining sails were blown into shreds and replaced by new ones. No sooner were the fresh sails set, however, than they were rent in pieces. It was now about noon and blowing a perfect hurricane. The vessel shipped a sea which swept her deck cargo and water-casks overboard. At two o'clock the topsails were split into ribbons and the *Madagascar* lay to under lee sheet topsails. The Captain now concluded that he was near the centre of a great typhoon. The barometer was as low as 28.94. An attempt was made to put more sail on the vessel, but the sheets were no sooner unfurled than blown away. At four o'clock the Captain and his officers went below to ascertain from the chart the actual position of the ship, and concluded that no land was near and that there was no apparent danger of running on shore. An hour afterwards, to their great surprise, high land was discovered about three miles off. Again efforts were made to set sail, but, as before, they were futile; and within half an hour the first breaker swept the deck of the doomed vessel and carried away the wheel. Rocks were all round and nothing was left to be done but to make the helm fast by a rope, jump into the rigging and commit themselves to the care of Providence. A moment afterwards and the vessel struck the rocks with a fearful crash, and heeled over towards the shore. Captain Spiessen remembers that the breakers washed him and three others out of the rigging and then all became blank until he found himself being dragged on shore by the natives, who were fishing for the men with long bamboos, hooked at the ends. By the exertions of the people four out of the twelve were saved. They were taken, more dead than alive, to the neighbouring houses and tenderly cared for. The next morning they were so sore as to be scarcely able to walk. Mr. Dick, hearing of the disaster, brought provisions and the best clothes he had to the unfortunate men, and afterwards took them to his house, where Captain Spiessen says he could not have been better treated had he been the brother of the gallant lighthouse keeper.

The experience of Captain Fischer of the Danish barque was something similar to that of Captain Spiessen, but I will tell his story in his own words as near as possible.

On the 19th of July, the *Catharina* left Hakodate for Yokohama, with a general cargo. Fine weather, with light winds from the South, and calms was experienced till the morning of the 26th. At 4 o'clock in the morning of that day Inaboye light bore N. by W., distant about fifteen or sixteen miles. The wind at that time was light from the N. N. E. About eight o'clock the wind veered to the East, and a heavy swell came from the South. Steered S. S. W. Between nine and ten, as the wind was increasing, the topgallant sails were furled. At eleven it was blowing a strong gale from the

S. E. All sail was made fast, except the lower maintopsail. Soon after the lower foretop and staysails were carried away. It was blowing a fearful gale, and the barometer was steadily going down. Bent another fore and main topmast staysail; unbent fore lower topsail and got another ready for bending. The gale continued to increase till between five and six o'clock, when the barometer went up a little, and the wind veered to the S. S. E. Land hove in sight bearing about S. W. by W., which was reckoned to be Mela Head. Bent the jib and foretopmast staysails. Wore the ship round. Jib carried away. The ship was now heading about East under fore mizentop and spanker sails. Foresail carried away. Set the foretopsail and flying jib. The foretop gallant sheet then went to pieces and the jibboom was carried away as well as the top gallant mast. There now being no head sails on the ship, it was found impossible to steer her. By this time it was nearly eight o'clock and heavy seas swept the deck at short intervals. In a few minutes after this the *Catharina* struck heavily on the rocks and, in a comparatively short space of time, broke in two amidships and every man was washed out of her. Ten managed, after a great deal of buffeting by the breakers, to scramble on the rocks, where they remained all night. Four were drowned.

The *Roving Sailor*, of Boston, sailed from Hakodate for Yokohama with a general cargo on July 16th. Lay becalmed off the light at the entrance of the straits until the morning of the 19th. The light then bore N.N.E., distant 20 miles:—

July 20th.—Light breeze from the South and fine weather.

21st.—Wind S.W., South, and S.S.E.

22nd.—Light variable winds, with calms.

23rd.—Thick fog. At 10 a.m. wind veered to the S.W. When the fog cleared away made land about ten miles off.

24th.—Thick fog and variable winds till noon, when a breeze came from the S.S.W. Worked along inshore until eight o'clock p.m. Cape Inaboye bore west about three miles. During the night light breezes and calms.

25th.—At 5 a.m. Cape Inaboye bore W.N.W. distant about seventeen miles. The wind was S.W. by W. During the day light breezes prevailed. The weather was most lovely and there was no appearance of a storm.

26th.—At 1 a.m. Wind S.E. moderate, and fine weather, but about two o'clock it began to blow strongly from the S.E. and the sky became overcast. A heavy swell was also coming from the S.S.E. The wind then veered round to the E.S.E., and carried the vessel along at the rate of thirteen miles an hour. At five o'clock the log showed the *Roving Sailor* to be ninety-two miles from Cape Inaboye. Had a man aloft looking out for the light. Steered West. The weather now appeared threatening. Descried land, but did not recognise it. At 12 o'clock it was blowing a strong gale from E.S.E. At 2 o'clock the wind veered from the S.E. to N.E., and then to E.S.E. At 4 o'clock wind S.S.E., and the centre of the gale must have been some miles to the S.W. The vessel afterwards lay to and land was thought to be a long way off. About 8 o'clock she ran on the shore, and fifteen minutes afterwards the *Roving Sailor* was full of water. All hands rushed forward and remained there till about midnight, when a rope was attached to the jibboom, and a sailor swam or was washed on shore with the end of it, and by this means all were safely landed.

The above are the main particulars supplied to me by Captain Bryant. He testified to

the kindness of the natives, especially the officials, and to the great relief afforded by Mr. Dick. By the time I had received all this information, the *Elisabeth* had neared Yokohama, and at half-past nine o'clock anchor was dropped in the harbour. Scarcely had the vessel stopped than a boat was challenged, and an officer of the *Modeste* came on board with the captain's compliments, and enquired if anything had been heard of the loss of two Danish vessels, as a report of their loss had been taken on board the *Modeste*; and the captain intended to start at daylight to look for them. The Commander of the *Elisabeth* informed the officer that it would be useless going in the direction he had been, as he had brought away all shipwrecked persons.

In concluding without paying a tribute to the kindness of Mr. Zappe and the officers of the *Elisabeth* to the rescued men and myself, I should be neglecting a pleasant duty. No sooner were the unfortunate men brought on board, than the officers came with clothes from their private out-fits; and the best of everything was supplied them. I may add that the remains of the *Madagascar* were sold to a Japanese for \$150. No offer could be obtained for the *Catharina*.

THE INSURRECTION.

[From the *Japan Gazette*, July 24th.]

A telegram from Osaka announces that at about 6.30 a.m. on the 17th instant a large rebel force marched for Takahara from the castle of Miyako-no-jo, and suddenly attacked the imperialists commanded by Lieut.-General Miyoshi. A desperate battle was fought and lasted many hours. In the afternoon of the same day the imperialists were strongly reinforced, and in their turn attacked the rebels, who fled in disorder. The victors pursued them as far as Takasaki. It was 3 p.m. when they arrived there. Sixty-four imperialists were killed or wounded, while the insurgent loss was much greater; and four of the rebels were taken prisoners. Another despatch, sent by Lieut.-General Miura, says that at 8 a.m. on the 19th inst., about 800 insurgents attacked his troops on Takachio mountain (Hiuga) on the left, and another division from Nabeno and Kuboyama on the right. A severe battle followed, and lasted till noon. At length the insurgents retreated by the Kono road, and were pursued by the imperialists until night-fall. Thirty-four soldiers of the government troops were killed or wounded in this action.

July 26th.

A telegram, from Kokubu, despatched at 4.30 p.m. on the 24th, announces that on the same day the second, third, and fourth divisions of the imperial army and one battalion of the first division, marched for the castle of Miyako-no-jo (Hiuga) by various roads. At 3 a.m. the imperial troops encamped at Kuritani commenced to march and entered Takanahe victoriously at 6 a.m. A despatch sent by Lieut.-General Yamada, and received in Osaka at 8.9 p.m. on the 24th, says that at dawn on the 2nd a battle was commenced at Uchiyama, and lasted until the following day. At dawn on the 22nd the imperialists made themselves masters of Haragoe and Uchiyama. The routed rebels retreated as far as Uruchi-no-hara, where they are making ready for another stand.

A few days ago Aibara, one of the rebel leaders, surrendered with 230 of his soldiers

According to one rumour, the insurgents are not yet short of food and fire-arms. But, as has been repeatedly mentioned, they are deficient of missiles. All utensils made of iron, copper or other metals, belonging to the people, are collected. Only one iron pot to boil rice in is left to each household. About 1,000 laborers are daily at work digging tin in the mines of Kirishima.—2,000 police will soon leave for Kagoshima, where great disorder is said to prevail.

The following items are reported by a man who returned from Kagoshima a few days ago:—The imperial troops who were formerly besieged in Kagoshima have marched about 6 ri to the North-East, and are encamped on the mountains of Kirishima, Hiuga. It is not known where Saigo is, and none of those who have been taken prisoner or have surrendered know anything about him. Shimadzu is still in the island of Sakurajima, which is occupied by naval forces. It is expected that the insurgents will be totally dispersed within the next month.—One battalion now in Osaka will shortly be despatched for Bungo.

July 27th.

A telegram from Kioto, despatched at noon on the 26th instant, announces that, as had been decided, the imperial armies in Kokubu marched for Miyako-no-jo by several roads. The troops entered the castle between noon and 2 p.m. on the 24th. Details will follow. Prince Arisugawa-no-miya left Kumamoto on board the *Thabor* the same day for Kagoshima. Despatches from Higeoka say that at dawn on the 23rd instant, the insurgents attacked the imperial troops at Akamatsu and Kuragino; but were driven back. Colonel Horiye was wounded and six others were killed and wounded. Since Saigo-Takamori raised the siege of Kumamoto, he is said to have repeatedly endeavoured to commit harakiri. He is always guarded by six or seven men, whose duty is to prevent him laying hands on his own life. A rumor is current, however, that Saigo has committed suicide. General Saigo, now in Kioto, will shortly leave for Kumamoto, and visit the seat of war.

July 30th.

A telegram from Kajiki, Hiuga, received in Tokio at 5.10 p.m. on the 28th, announces that at 9 a.m. on the 24th the detachment commanded by Lieut.-Genl. Tanabe, entered the castle of Miyakonojo. This was the first corps to effect an entry. The routed insurgents fled in disorder, leaving a number of their sick and wounded men in the hospital. Twenty-four imperial soldiers were killed or wounded. The number of killed and wounded rebels is not known. On the 25th, pursuit was commenced on the Tera-dzumi and Kajiyama roads. At 9 a.m. the advance guard arrived at the village of Todoroiki, and the main body encamped on Kajiyama. Captain Yagi and five or six soldiers were killed or wounded.—Another telegram, sent by Murata, *Daikeibu* in the Owake Ken, at 4.30 p.m. on the 28th instant, announces that on the morning of the 23rd the insurgent army attacked the imperial forts at Kuragi, Nogushi, and Gohonmatsu. In a few hours the rebels were driven back from the two former places. But, in spite of considerable loss, the rebel troops at the last place desperately stood their ground till 3 p.m. the same day. At length they were obliged to retreat; but they left no dead behind them. About sixty of the imperialists were killed or wounded.

The *Nichi-nichi Shinbun* says:—The insurgents seem much discouraged on the Bungo

road, where they have collected more than half their troops. Mere skirmishes are fought day and night; and the rebels are thought to be waiting for a change to advance. It is estimated that they have about 13,000 troops in Nobeoka, Hiuga. The imperialists on the Bungo road number about 8,000, and they will soon be joined by the newly enlisted troops.

August 1st.

The *Nichi Nichi Shinbun* says:—A telegram from Kioto, despatched at 8.40 a.m. on the 29th ultimo, announces that on the previous day Lieut.-General Oyama advanced in a North-East direction from Miyako-no-jo, and that two battalions had already entered victoriously into Yoshi, where a number of insurgents, well armed, and provided with six large cannon and a quantity of military stores, surrendered. The division commanded by Lieut.-General Soga has joined the imperial troops at Tano, and marched with them close to Miyazaki.

A telegram from Osaka states that, on the 29th ult., the 2nd division commenced to march for Takaoka at 3 a.m. and stormed the rebel forts at Hashidani, and Munese. They pursued the insurgents as far as Takaoka, which the victors entered at 8 a.m. The 3rd division removed its head quarters to Takagi on the 28th. A detachment from this division crossed the river Sarigawa and the mountain Kunimitoge and followed the 2nd division to Takaoka. Another division marched on the Ayasa road and seized the village of Morinaga, encamping afterwards on the banks of the river Ayase-gawa. In the battle of the 29th, 24 imperialists were killed or wounded; while many more dead rebels were found on the roads. At 10.30 a.m. on the 27th, the advance guard of the 3rd division entered the city of Yohi, and were followed by other detachments. A telegram, sent by General Torio from Kioto, says that, on the 27th, the imperial troops attacked the insurgents on the mountains Itado and Oki. The rebels fled in disorder, leaving many things behind them, and reassembled on the Adzusa mountains.—A despatch, dated the 29th, announces that the two second divisions united and marched on the foot of Toka during the night of the 28th. On the following morning they stormed the rebel fort at Kamiyama. The victors then separated into two parties: one marched two ri through the rebel batteries on the Shinmachi road, the other entered Takaoka.—Prince Higashi-fushimino-miya, commanding the newly enlisted 1st division, left for Kagoshima in the *Kumamoto Maru*, at the head of a large number of troops, on the 26th July.

August 3rd.

A telegram from Sashiki, dated the 31st July, announces that Lieut.-Colonel Tanaka left his camp at Kajiyama, (Hiuga) on the 26th and arrived in Itaya without fighting a single battle. He entered Igura on the 28th. Up to the 29th eight bands of rebels, each consisting of 80 men, have surrendered to the imperialists, with about 6 cannon, 500 rifles, and many other important things. The 4th division has marched as far as the river Sarigawa. They are encamped on one side of the river, while the other side is occupied by the rebels.

A telegram from Bungo, sent by Lieut.-General Tani (the famous defender of Kumamoto) dated the 1st August, announces that on the 27th ultimo, an attack was commenced upon the insurgents on Itadoyama. The imperial troops began to ascend the mountain to assault a rebel battery on the

summit at 3 a.m. Three rebels were instantly put to the sword, and the others fled in disorder, offering no resistance. Our troops pursued them hotly and seized the four batteries. A rebel fort was standing on Shironokoshi on the opposite side of Itadoyama. It was destroyed by bombardment, and the insurgent troops on Kuroto-toge retreated to Adzusa at 9 a.m. on the 27th. All the positions left by the routed rebels are occupied by the victors. Only eight of our soldiers were wounded.—Another telegram, sent by General Yamagata, War inspector, says that the Imperial divisions on the roads from Kagoshima to Hinga captured Takaoka. The 3rd division arrived at Mukasa, and proceeded victoriously to Miyazaki, and the 2nd division was expected to appear before Sadowara.—The Imperial head quarters in Kumamoto were removed to Kagoshima on the 28th ultimo.—The Imperial body guards, or *Shiuseitai*, left the palace in Kyoto for Tokio on the 30th.

August 4th.

A telegram from Miyazaki, despatched by Lieut.-Colonel Tanabe, announces that at 3 a.m. on the 31st ult. Lieut.-Generals Miura and Miyoshi and Lieut.-Colonel Tanabe marched for Miyazaki. At 7 a.m. they crossed the river Sayagawa, when they were encountered by the insurgents. In a few minutes, however, the latter were dispersed, and the victors found themselves masters of Miyazaki by 8.30. The insurgents fled towards Sadowara.—Another telegram from Osaka, dated the 2nd instant, says that the united troops of three divisions marched hastily against Sadowara on the 31st ult. in order to arrive there before the rebels could put the place in a state of defence. They entered Sadowara victoriously at 7 p.m. The routed insurgents were encamped on one side of the river Chunchi and the imperial troops occupied the other side. A credible rumour is in circulation to the effect that Kirino was severely wounded in the left arm in the battle of Kirishima; and that Itsumi has, likewise, been wounded.

Hundreds of insurgents, who have deserted their detachments, are seeking refuge in the district of Kajiki, where they spread various idle reports in favour of the rebels. All the natives, both men and women, have been taught to consider the imperialists as their enemies. But recently they have changed their opinion, owing to the kind treatment they have received from the imperial authorities, and have given information of the whereabouts of some rebel ammunition and military stores. They are simple in character and have been sadly deceived by the rebel leaders.

August 6th.

A telegram from Osaka, dated the 3rd instant, announces that the entire rebel garrison vacated the city of Sadowara, during the night of the 31st. Part of the second division completely routed the insurgents on the Kuratani road, and marched to Tsuma-machi, where they were joined by the right wing of the same division. The insurgents were encamped on the bank of the river Isseigawa, which runs before Sadowara. On the following night they endeavoured to recross the river, and to retake the city, and a battle, which lasted till dawn, was fought. The rebels were driven back, and the imperialists on various roads pursued them, and entered Takanabe at 10 a.m. on the 2nd instant.

The *Akebono Shinbun* says:—Quiet is being restored in Kagoshima, by the efforts of the Kencho; and one third of the inhabitants of Kagoshima, who left their homes for Sakura-

jima and other places, have returned to the town, where they found their homes destroyed by fire. Shimadzu and his son are among them, and they were accompanied by a small number of retainers. The Kencho officials have commenced to visit the villages under their jurisdiction. They are finding out how many men have joined and followed Saigo from each district. Satsuma is divided into 120 districts;—from each of which from 200 to 700 men have joined the rebels. Taking the lowest average, 200 men to each district, gives a total of 24,000 men in all who have followed the rebel leader.

A telegram from General Torio, at Osaka, announces that at 6 a.m. on the 2nd, a large insurgent army recrossed the river Imatsuo and attacked the imperialists in the villages of Hoshino, Fudagi, Kuuchi, Okusu, and Hitobio. It was a foggy morning. The imperial troops broke ground and retreated before the insurgents. On the afternoon of the same day the imperialists were reinforced; but they did not recover their lost ground till 5 p.m. At 8 a.m. on the same day the insurgents marched on the Niigawa road, and appeared before the imperial army in Shishika, Nishi-no-uchi, and other places. Details of the encounters are to follow.—A despatch from the Owake-ken, dated the 5th inst., says that, on the morning of the 2nd, the imperial forces, consisting of soldiers, police, and newly-enlisted shizoku, attacked and seized the forts on Sankaku, Katazari, Maruo, and other mountains. At 5 p.m. those insurgents who occupied the strong and commanding fort on Matsuo retreated. 23 or 24 of the imperial soldiers were killed or wounded. Prince Arisugawa-no-Miya left Kagoshima for Miyakonojo (Hinga) on the 4th.

August 7th.

A telegram from Osaka, sent at 3.20 a.m. on the 6th instant, announces that, according to telegrams from Takanabe (Hiuga), the two second and the 3rd divisions stormed Sadowara and marched directly thence to Takanabe. At the same time, the 4th division attacked the castle of Takase, and, having dispersed the rebel garrison, entered Takanabe, whither the "newly enlisted" division has followed the victors. The latter commenced to march for the harbor of Mimidzu, which is strictly guarded by the insurgents. On the 4th instant the imperial army marched as far as the river Mimidzu, the opposite side of which was lined with rebel forts. The imperial divisions are encamped as follows:—The first division, commanded by Lieut.-General Takashima, at Takaguma, Osumi; the 4th division, commanded by Lieut.-General Soga, at Fukuyama; one third division, commanded by Lieut.-General Oyama, and the other third division, commanded by Lieut.-General Miura, at Kuniwake. Thus, these four divisions form a line between Takaguma and the mountains of Kirishima. The second division, commanded by Lieut.-General Miyoshi, is encamped at Nojiri, and Lieut.-General Yamada touches his left with his division consisting of about 5,000 soldiers. Lieut.-General Nodzu, commanding the first division, and Lieut.-General Tani, at the head of the Kumamoto garrison troops, are on the Bungo road.

The *Futsu Shinbun* says that Kirino and Kishima, the notorious rebel leaders, are in Miyazaki, Hiuga, while Saigo is in Takahara. The insurgents are fortifying the harbor of Satsu in Hiuga.

THE RETURN OF THE MIKADO.

At six a.m. on the 30th ult. the *Hiroshima Maru* arrived from Kobe, having on board His Majesty the Mikado and his imperial consort. The vessels in harbor were soon gaily decorated, and the men-of-war and the Kanagawa fort woke the echos by their salutes. Their Majesties, contrary to all expectation, left the vessel about a quarter to seven, and landed at the Port Admiral's Office, Benten, where they were received by the Daijin, Sangi, and other high officials. The band of the Kiododan played while their Majesties were proceeding from the vessel to the Port Admiral's Office; whence, after a few moments' rest, the imperial party went in carriages to the Railway Station, and were conveyed by special train to their capital. Owing to the hour of the departure of the *Hiroshima Maru* from Kobe not having been telegraphed in good time from that place, probably through the press of business on the re-establishment of communication, the time of the vessel's arrival was not known beforehand; and no foreign officials were present at the landing. A crowd of Japanese, however, assembled; and the inhabitants of the native town keep holiday, and have decorated their houses with flags. Their Majesties were received with great state on their arrival in the capital, which has been the scene of festivity and rejoicing. All the Government Offices were closed during the day, in honor of the safe return of the Emperor and Empress after a six months' absence.

THE GALE.

INDICATIONS of an approaching blow were apparent soon after sunrise on the morning of the 26th inst. About 10 a.m. rain began to fall accompanied by gusts from the North, which in a few hours settled into a brisk gale. The sea rose; and during the afternoon broke fiercely over the Bund.

The men-of-war in harbour had steam up, and H. M. S. *Egeria* found it advisable to move to the outer anchorage. The American ship *Charter Oak* dragged considerably.

It is not often that such an exciting scene is witnessed in Yokohama as occurred on the Bund. Shortly after three o'clock the gale had reached its height, and a large junk, anchored off the French hatoba, dragged its anchor or parted its cable, which of the two is not very clear, as some say one thing and others another, but the result was the same, for the vessel drifted on to the hatoba, and was beaten against it by the merciless waves until she was broken into a thousand pieces. A few foreigners witnessed the catastrophe, and three, Dr. Wheeler and Messrs. Glennie and Pagden, instantly rushed to the rescue of the crew of four terrified men who were on board. By great exertions on their part the men were saved. By this time attention was called to the fact of the large Government dredge, which has occupied a berth at the mouth of the creek for some months past, drifting towards the Bund. Messrs. Wheeler, Pagden, Fischer, Pitman, Ford, and others at once set about making preparations for the rescue of the men on board. Ropes and small grappling irons were got ready as speedily as possible. On came the huge craft, slowly but surely; and the closer she got to the shore, the greater the excitement became. A large crowd of foreigners had collected, the majority of whom were utterly regardless of the waves breaking over the bund and drenching them

to the skin, in their anxiety to be of assistance in rescuing the poor fellows from their perilous position. At length the men on board the dredge fixed a stout rope to a *saké* tub and flung it into the water. The waves soon brought the tub within reach of the grappling irons; and connection with the drifting vessel was then established. By this time the craft was within twenty yards of the shore, but the task of crawling along the rope that distance was sufficiently perilous to make the men hesitate. In a few minutes, however, there was not more than twenty feet of space intervening, and a hundred willing hands were hauling on the rope to keep the vessel in its position whilst the men got on shore. Still they seemed frightened to venture, but finally one fixed a small rope round his body, committed himself to the connecting rope, and reached the shore quite easily. The want of knowledge of the value of time, which is such a manifest and characteristic feature in Japanese, was very conspicuous at this juncture; for three men could have reached the shore during the time in which the second man was preparing himself for what he evidently thought was no slight undertaking. Finally he ventured; and was no doubt surprised to find himself safe on *terra firma* a few seconds afterwards. Another was rescued, and then an unfortunate accident occurred to the main rope, which became unfastened on board the dredge. This evil was remedied as speedily as possible, but nearly half an hour elapsed ere the fourth man thought it sufficiently safe to venture across. All this while the dredge was drifting towards the French hatoba, and every now and then would increase the space between itself and the shore, so that the process of getting the men to land was rendered all the more dangerous. One or two had very narrow escapes from dropping into the water; and if they had done so it would have been impossible to save them. Ultimately the dredge became unmanageable and drifted a long way out; and eventually the buckets on one side were broken off and fell into the water. This naturally destroyed her equilibrium, and she heeled over to seaward. The waves broke over her, and she soon filled and sank in shallow water. Seven or eight men were still on board, and now the task of reaching the shore was rendered doubly dangerous; for, in the first instance, the dredge was thirty or forty yards from the nearest land; and, secondly, the timber of the broken junk was tossing about on the angry waves. However, the men soon perceived that it was no use staying where they were, and three essayed to crawl along the rope. The first one came within reach of willing hands, and was speedily placed in safety. The second and third got fatigued and casting an imploring glance towards those who were helpless to assist them, dropped into the water and were soon tossing about like the timber by which they were surrounded. One of the two scrambled or was thrown by the waves to within reach of succour; but the other was soon submerged by the surge and evidently drowning. Excitement had reached a high pitch, and Mr. John Pitman, regardless of the risk of losing his own life, leaped into the foam and made towards the drowning man. He just contrived to clutch him when the ruthless waves tore him from his grasp and he himself was in great danger of drowning. Assistance was rendered as soon as possible and he was dragged on shore in a not very ceremonious fashion. In the meantime the waves had brought the Japanese within reach of those on the hatoba and he was speedily landed, though in a senseless condition. Drs. Eldridge and Wheeler were not long, however, in restoring animation to the almost lifeless man, and we record

with pleasure the fact of his being able in a very short time to walk away with the assistance of his friends. Others now ventured along the rope, and though all dropped into the water before reaching the shore, every one was finally rescued; and the crowd then dispersed, leaving the craft to its fate. The conduct of Drs. Wheeler, Eldridge, and Tripler, and of Messrs. Pagden, Pitman, A. H. Dare, McGregor, E. Fischer, Fourcade, Loxton, and others, was highly commendable.

Most of the vessels in harbor appear to have dragged their anchors more or less. As we mentioned above, H. M. S. *Egeria* at an early period of the storm shifted her anchorage, finding that her berth among the shipping might be dangerous to herself or her neighbours. At about two o'clock the Italian corvette *Cristoforo Colombo* commenced to drag, but steam being up on board, she was enabled to let down other anchors, and to ride out the storm in perfect safety. A small China-rigged yacht, formerly a pilot-boat, was completely wrecked near the French Hatoba. The small paddle-wheel steamer of the Mitsu Bishi Company, the *Tsusho-maru*, went ashore close to the sea wall of the Mitsu Bishi Ironworks, where she now lies, apparently but little damaged. She will probably be got off at next high tide. The *Hamana-maru*, formerly the *Augusta*, a native owned steamer, which used to ply between Yokohama and Shimidzu, took the ground near the canal which enters the bay close to the present Suibansho at Bentsen, and soon became a total wreck. The large sheerlegs which had only very recently been erected, on a new wharf constructed for the purpose, by the Mitsu Bishi Ironworks Co., were, with the wharf itself, washed away. The Iron-works were partly invaded by the sea, and a quantity of timber, which will, however, all be probably recovered, was carried away. These, with the loss of the junk and the stranding of the big steam dredge above narrated, are the only casualties of any magnitude, which have been reported from afloat. We regret, however, to have to record that Mr. Pagden, in addition to the bruises and cuts which he received from the stones of the Hatoba, had his hand transfixated by a nail projecting from a beam with which he came in contact while swimming to the rescue of the men wrecked in the junk. Fortunately none of his hurts are dangerous.

Ashore the usual amount of damage which supervenes from a heavy blow was done to roofs, plaster, fences, and gardens; but the Bund, owing to the very high sea running during the storm, has been almost ruined; and will need a great deal of repair. From the Grand Hotel to the East end of the French Hatoba, and between the other side of that and the English Hatoba, the sea wall has been in great part destroyed, and the metal of the Bund loosened, torn up, and piled in heaps, which, with the masses of seaweed disgorged by the sea, and which the reflux forgot to carry away, completely impede traffic. The waves rolled in some cases up to and through the gates of the compounds on the Bund.

Judging from the number of hours taken by the wind in this place to veer from E. N. E. to S. S. E., the circuit of the storm must have been of very great extent. We subjoin the readings of an Admiral Fitzroy barometer, at about sea level, ashore, hourly from noon to 5 p.m., and the readings taken at the U. S. Naval Hospital, 115 feet above the sea level, of a mercurial barometer, and attached thermometer, with the direction of the wind from noon to 7.30 p.m. inclusive. At that spot a well tested Aneroid barometer commenced to rise at 6.30 p.m.

MISCELLANEOUS.

MR. NOMURA, Governor of Kanagawa, is always very solicitous for the preservation of the public health, and a prime mover in all measures of sanitary reform in the district under his jurisdiction. He has now instituted, and is in conference with the Consular Board for the carrying into effect, of a very important and indeed necessary measure. We have before alluded to the more than advisability of having some effective quarantine regulations devised and enforced here. The outbreak and prevalence of cholera in Amoy, and the fact that a considerable trade is carried on between this place and that, have directed the Governor's attention to the matter in a very marked manner. Under his direction a quiet and secluded spot, somewhere on the borders of Mississippi Bay, and sufficiently far removed from the foreign settlement and foreign drive to preclude all possibility of infection spreading beyond its limits, has been selected as a site for a Quarantine Hospital.

ABOUT thirty gentlemen assembled in the Oriental Hotel on the 23rd ulto. to witness Professor Carme's exhibition at billiards, and we venture to say that not one went away with a feeling of disappointment. The game between the Professor and an amateur lost much of its interest through the play of the latter contrasting too unfavorably with that of the professor, as will easily be seen from the fact that his highest break during the game was seven. Professor Carme's opponent won the break in the string but failed to score with his first shot. Mr. Carme then made a break of twelve. Several trifling breaks succeeded this; and at length the Professor settled down to play in earnest. By a careful manipulation of the balls in one corner, where they rolled at his will, he made a good break of fifty-six cannons. His opponent failing to score, the Professor again took the cue, and, by like gentle nursing to that he had employed in his previous break, soon put together a score of sixty-six, missing the next stroke by a hair's breadth. The Amateur then contrived to add three or four to his number and again collapsed, when the Professor went in and made fifty-three; thus scoring one hundred and seventy-four—out of three hundred points of the game—in three breaks. From this to the finish no large breaks were made; and in an hour from the commencement of the game, the Professor laid down his cue; his opponent during the hour scoring thirty-seven. After a few minutes interval, Professor Carme again took his cue in hand to show the spectators a few of his fancy strokes, some of which were indeed remarkable, such for instance, as cannoning

from the table on to a ball placed on the top of a boy's head, causing his ball to leap through a paper hoop into a hat raised fully two feet from the table, as well as placing the white and red balls simultaneously in two separate hats. The part of the exhibition most appreciated, however, was that in which the professor took ten balls and made them run round the board altogether three times without striking each other, and then roll gently within a small circle made in one corner of the board. But the last feat of all was decidedly the best. Placing fifteen bottles on the small table the Professor took six balls and caused them all to traverse the board three times, in and out of the spaces between the bottles without touching one, and then all roll into and remain in one corner. This brought the exhibition to a close, when Professor Carme received the well merited compliments of the company.

That amateur player who contested a game of 300 points at the French game of billiards in the Oriental Hotel next evening with Mr. Carme, made a much better fight, than he who served on the previous occasion as foil to the professor. Still, though he is probably one of the best players in Yokohama, he was, even with his 150 points given, greatly overmatched, Mr. Carme, at an early period of the game, scoring one break of 91 consecutive cannons, and soon getting the lead, which his opponent never recovered. The amateur scored only 59, the game at the close standing 300 to 209. The tricks showed by Mr. Carme after the conclusion of the game were very cleverly executed, and evinced a really wonderful command of the cue and nicety of calculation.

A SUBORDINATE official in the Navy Department, named Shimamura Kageshige, accidentally killed his female servant on the night of the 24th of June. The girl had entered his service that very day, and being unacquainted with the premises could not find her apartment in the dark, and stumbling about the house led her master to suppose that a burglar had effected an entrance. He attacked the supposed robber with a spear, with a fatal result to the unfortunate girl. Shimamura was tried for this mishap, and having satisfactorily proved that the girl's death was purely accidental, he was fined forty yen, which sum was handed over to the family of the deceased.—*Japan Mail Daily Advertiser*.

NATIVE accounts of the effects of the recent gale at Odawara and the adjacent villages on the coast, speak of a disastrous inundation, such as has not been experienced for many years, and the destruction of many houses and the loss of some lives.

A GENTLEMAN, who returned from Miyano-shita on the 29th ult., reports that all the bridges in the neighborhood of Odawara have been washed away, and that great destruction has been wrought among the houses between the main street and the sea beach. He confirms the report that the inundation was accompanied with considerable loss of life. Both rivers and sea rose most alarmingly during the recent gale. The *Mai Nichi Shinbun* states that about forty houses have been destroyed near O-iso, and that a Japanese junk was wrecked somewhere on the coast in that neighborhood. Out of eleven sailors on board only three were saved.

ADMIRAL RYDER, in command of the British Squadron in China and Japan, will return to Hongkong by the end of November, when he will probably resign his command to his successor, Admiral Hillyar.

A COMMUNICATION kindly made to us by H. M. Consul may tend to allay what apprehension may have got abroad relative to the importation of an epidemic of cholera from Amoy. It is to the effect that Sir Harry Parkes has, in reply to a telegram sent by him to Governor Hennessey, at Hongkong, received a reply that he (Governor Hennessey) had not established Quarantine Regulations at Hongkong, and that the latest news received from Amoy was favorable.

THERE is much logic in the argument of a letter sent us recently by an esteemed correspondent who takes the *nom de plume* "Minerva's Owl." With sharp beak and talons the wise bird lays bare the truth. On the principle that "he who drives fat oxen should himself be fat," the fowl argues that a Court which punishes a want of punctuality in others, and especially in a Japanese suitor, should itself be punctual. We have before now, and more than once, condemned at the frequent waste of time of all those concerned in certain cases, caused by the absence of attention to what should be the politeness not merely of princes, but of the potentates who preside over Courts of Justice. We thank "Minerva's Owl" for directing our attention once more to the matter; and regret that obvious—perhaps selfish—considerations forbid our publishing the letter. Did we do so, we might furnish an occasion for the display of a punctuality which would be in no wise agreeable to ourself.

A CORRESPONDENT, writing from Hakodate, informs us that H. M. S. *Audacious*, with Admiral Ryder and the English Consul at that place on board, left for Vladivostok on the 22nd July.

At 8.55 p.m. on the 28th ultimo there was a slight earthquake.

THE *Choya Shinbun* and other native journals argue, more hopefully than the occasion warrants, in favor of the early suppression of the insurrection, on the ground that the rebels have been driven out of Miyako-no-jo. They assume that a final battle will be fought at Yochi, or Nobeoka, in Hiuga.

LEAVE has been given to the Counsel for Captain Colomb R. N. to appeal against the judgment of the Acting Law Secretary as regards the jurisdiction of the Court in the case of *Chiri Maru v. Captain Colomb (Audacious)*. On the other hand a new suit will probably be instituted, on the part of the Mitsu Bishi Company, in the first port at which the *Audacious* may touch having a British Supreme Court or branch thereof.

THE German barque *Madagascar* left Hakodate on Tuesday, 17th ult., for Yokohama. Delightful weather was experienced until the morning of the 26th, when the barometer began to fall. By ten o'clock the wind was blowing a gale. The watch was turned up from below to take in sail, but it was blowing so hard that two hours elapsed ere the sails were reefed. A short time after that the vessel became unmanageable; and about five o'clock was three miles off the land. Just about that time a terrific breaker swept over the ship and carried the wheel, and the man who was at it, overboard. Between six and seven o'clock the vessel struck on the rocks, and within an hour from that went to pieces. As soon as she struck, the crew endeavored to save themselves, but out of twelve hands only four got safe on shore, viz: the

Captain—who was unable to swim but be-thought himself of the life buoys and seized one—the Mate, a German seaman, and a Chinese boy, who were washed up by the surf. The nearest rock above water was only about seven feet from the doomed vessel, but through her rolling and the waves washing over her, the men could not succeed in reaching it.

When those who were saved from the *Madagascar* had time to look about them, they found that they were not the only victims of the elements. About twenty yards away lay a Japanese barque, or rather what was left of her, which had gone ashore two hours previously. Out of sixteen hands on board, only four were saved.

Two other vessels, we regret to say, were also wrecked in the same neighbourhood on the same day, viz: the American barque *Sarah* and a Japanese steamer, particulars of the loss of which have not yet come to hand, though we understand the *Sarah* lost two men. The locality of these disasters is said to be between Mila Ledge and Inaboye. The *Madagascar* and Japanese barque went ashore at Osima. At 10 a.m. on the 30th ult. the German Corvette *Elisabeth* sailed for the scene of the wrecks; and at the kind request of the German Consul her Captain courteously accorded a passage to our reporter.

An accident occurred to the *Oceanic* on her passage hence to Hongkong. During the night of the 25th ultimo the *Oceanic*, then about twenty-five miles from Cape Chickakoff, or between five and six hundred miles from Yokohama, lost her propeller. On the morning of the 26th she was under sail, when she fell in with the *Tamaura-maru* bound for Kobe, and asked to be reported. Shortly after the arrival of the latter vessel in Kobe, the U. S. S. *Kearsarge* was despatched to overtake and stay by the *Oceanic*. That vessel has a spare propeller in Hongkong, where, on her arrival, it will be fitted with all possible despatch. The British gunboat *Lily* left Nagasaki at noon on the 30th in the hope of falling in with the big steamer; and the M. M. steamer *Tanais* was chartered by the Agent of the O. & O. S. S. Company to go to the assistance of the *Oceanic*, and left this port in quest of her at midnight of the 30th-31st ult.

It is so seldom that one gets a chance of seeing Japanese fencing, that it is worth while to inform our readers that some is going on now, and is well worth a visit. The performance begins soon after noon, and finishes between 6 and 7 o'clock. The fencing is good, though not first class. In some of the bouts very pretty play is made; so much so that it is difficult for the uninitiated to score the hit; while in others it is mere "slogging" from beginning to end, making it difficult for the judge sometimes to decide. There is now and then a regular "rough-and-tumble," when the referees have to come in and part the combatants. Three or four women are with this troop, and one of them is no mean antagonist. In one assault which we witnessed she was apparently quite a match for her male opponent. Two other women go through a few stagey evolutions; but the best stage fight is that of a woman armed with the short spear (*nagi-nata*) versus a man with a sword—or rather two swords, for he has them both drawn at one time. The most amusing bout is the sickle versus sword. In this sham fight the sword is nowhere. We noticed no long spear (*yari*) exercise, nor was there, at the finish, that free fight which usually terminates such performances.

It appears, from an article in the *Hochi Shinbun*, a translation of which will be found in our Nippon Notes, that the disgraceful and cruel practice of torture, after being nominally abolished in the administration of justice in the Criminal Courts of this country, has been revived for the benefit of the unfortunate political prisoners in the South, whose "examination by torture is allowed only in the 'the temporary courts of justice' (established expressly for the trial of the captured insurgents) 'in Kiushiu.' A government guilty of the barbarity of inflicting torture, to extract confession, on political offenders, can hardly expect to command the sympathy of its own subjects or those of other nations. A just cause will not be advanced by the information given in confessions so obtained; and a bad one will be doubly damned by such measures. Torture in the Courts—a worse than "bloody assize" in fact—in Kiushiu, and the ingenuous provision that those prisoners who, "after investigation, have been found not guilty," shall be discharged, go a long way to show how much the system of jurisprudence in Japan requires improvement, and how far the present Government is from the mere likelihood of ever obtaining at the hands of Treaty Powers the coveted boon of jurisdiction over people of their nationalities.

According to the *Hochi Shinbun*, one Ikuzawa, formerly a lieutenant in the army, has been detected in a scheme for the assassination of a prominent member of the Government, whose name, however, is not mentioned by the native journal. The intention of the would-be assassin was betrayed by a police officer to whom he had confided it, and who had expressed his willingness to share in the attempt. Ikuzawa was arrested at the end of last June in Kyoto, whither he had proceeded with his companion. A letter to his parents divulging his project, and expressing willingness to die, was found on his person. After his arrest he refused to make any confession; but simply expressed his conviction that the Government had really ordered the assassination of Saigo.

H. E. Okubo, Home Minister, and a number of high officials, and members of the imperial family and suite, arrived on the 1st inst. by the *Tokio Maru* from Kobe.

BLUFF residents, who have not been unpleasantly and practically made acquainted with the fact, are warned that a gang of thieves is pretty constantly engaged in the work of depredation. Several complaints have reached us of petty thefts from halls and verandahs. All is fish that comes to the net of the marauders. On a recent night they carried away, unobserved and unobstructed, a very large foot scraper from the door of an occupied house on lot 124, situated in a closed compound opening on to one of the most frequented of the Bluff roads, and one, too, where a policeman is almost always on beat.

A GENTLEMAN who is making an overland trip to Osaka, writes to us from Numadzu, on the Tokaido, under date the 31st July, on the state of the country through which he has passed, as affected by the recent gale and inundations:—

As promised, I write you a few lines about the state of the coast in this direction. I arrived here at 6 p.m., having left Yokohama, or simply "Hama" as it is often called here, at 3.15 p.m. yesterday. I stopped last night at Odawara. I, of course, called at the "Shakespeare" on my way. Mine host came out to receive me in true bucolic style, and recom-

mended the cool shade of the garden, where he had been weeding. I treated myself to tonic, and mine host treated me to his personal experiences of life and character since his abode at the rural hostelry, touching on the jolly appearance and sprightly conversation of his guests when bound for the country, and their subdued appearance when returning. In the first case it is, "Ha! ha! ha! 'come along! isn't it lovely?' In the second, 'Well! after all, there is nothing to 'equal the old country.'"

But to arrive at the subject which is interesting to you.

At the Banniu-kawa there were two crossings instead of one. Considerable skill was required to ferry the boats across, as the current was still very rapid. All the bridges have been carried away as far as I have come, and some are to be seen hundreds of yards from their former position. At Shibomi and Hashiba we had to cross on the backs of coolies. Out of 15 junks (large and small) it is said that only one escaped. The loss of life is said to be very great, especially in the direction of Cape Idzu. There are five or six deaths in every village. Only a few of the bodies have been recovered; and the sendoes say that numberless sharks, prowling in the waters of the coast, have eaten their dead comrades. Everywhere are to be seen the debris of houses and branches of trees. Gigantic trees have been cleanly uprooted; and those which are left standing are almost reft of their branches. It is said that there has been no such disaster in the memory of the now living inhabitants.

I took a jinrikisha at Mishima and came on to Numadzu. The roads were almost impassable from the amount of soft mud deposit. The bridges appear to have been carried away by the weight of obstructions against the uprights. One curious effect of the gale I noticed near the Kissegawa, where a telegraph pole had been clean blown away; and nothing was left but the insulators, hanging to the wires. Most of the lower part of the town of Numadzu has been three or four feet under water from the floods of the Kanagawa. Many houses are destroyed, and the people in those which are left standing are busy exposing furniture and mats to the air to be dried.

I am writing this under a great disadvantage as you may imagine, but trust you may draw from this description some slight idea of the disastrous effect of the late gale along this part of the coast.

THE *Echo du Japon* has been called to order by H. E. the French Minister for the publication of an article in its issue of the 27th ulto. We may remark, parenthetically, that a reference to the article in question gives no clue to the author who wrote it or the publication in which it first appeared. In brief, it is published without any acknowledgement whatever, and only when the Minister had taken action were the subscribers of the *Echo* informed that it emanated from the able pen of Mr. Edmond About and was published in the *XIXme Siècle*, a piece of information which, but for the attention of M. de Geofroy, would never have been imparted. At the same time we cannot but think that the reproduction of the article at so great a distance from France was not likely to be productive of any serious inconvenience to the Government; and that His Excellency need not have interfered. His action will certainly be incomprehensible to Englishmen, the rather that Mr. About's article from first to last is nothing but a piece of smart satire upon the administration of the present President of the French

Republic. The following translation of a short notice in the *Echo* will best explain the "situation" as between that sheet and the French Minister; and may furnish English journalists and their readers with matter of congratulation for the much larger freedom enjoyed by the Press under British than under some other authorities:—

Some of our readers have occasionally reproached us with not reproducing in our columns the interesting articles contained in the French newspapers on political events. On one of those rare occasions when we have happened to do so, we have had very bad luck. A few days ago we thought we might, without compromising ourselves, publish an article borrowed from a sheet which has never passed for being subversive, and is edited by a writer who is certainly not a dangerous man. We were wrong to have such an opinion of the *XIXme Siècle* and Mr. Edmond About. The French Minister was much moved by our extract of Friday last, entitled "*Un petit mal pour un grand bien*," and has notified us officially, that is to say through the Consulate, that we must henceforward abstain from publishing or reproducing articles of the nature of that to which we have just alluded. Our readers will understand that, in the presence of an invitation of this kind, which is tantamount to an order, we have nothing to do but submit, since we can do no other, at the same time as we aver that we do not enjoy in Japan even the limited liberty allowed the Press in France, and that for having republished an article which has not been indicted in France, we were on the point of being indicted here. Therefore, henceforth and until fresh orders, people must not be angry with us for a reserve which is imposed upon us, under pain of seeing the *Echo* suppressed, or of making to Saigon a little trip which would only be tolerably to our taste. Later as things may turn out! (*Plus tard comme plus tard!*) All the same, having under one's eyes the blessed privileges enjoyed by the English press, one cannot fail to make certain hardly consolatory reflections.

THE *Herald* the other day quoted the greater part of an article on the insurrection in Japan from the *Pall Mall Budget*, all, in fact, but the last paragraph, which is the very part which most concerns us here. The writer in the London paper is evidently in the dark as to the real aims of the insurrection, and is quite wrong in assuming that the leaders of that movement, if successful, would restore the feudal system, and close the country. It is the cause they are fighting for, namely, the establishment of representative institutions which are hardly compatible with feudalism, and the well founded belief that Saigo and his party would, if in power, extend the opening of the country to foreigners, that have commanded the measure of sympathy accorded by the latter to the insurrection. It is not so strange as it seems, that the cause of progress should be safer in the hands of the conservative remnant of the old aristocracy and gentry, than it has turned out to be in those of the present Government of *parvenus* who have made themselves irresponsible.

"There is also another point to which attention should be directed. The foreign press in Japan, with the sole exception of the *Tokio Times*, is taking up in connection with the insurrection a tone too palpably friendly or tolerant to the rebels. It is, of course, natural that a state of things which brings trade to a standstill should be unpopular among the English merchants in Japan; but for men, who in their own country would not condescend to parley with rebels in arms, to suggest continually that a compromise should be made with the insurgents, that Ministers should be dismissed &c., is regarded as a breach of hospitality. If the insurgents have the sympathies of the foreigners—which it seems difficult to imagine—at least an appearance of neutrality should be kept up. But there is another consideration which should also have its weight with our countrymen in Japan. It appears probable that if the insurrection were to succeed the country would relapse into its former state of feudalism, that the central Government would disappear, and that all hopes of a general opening of the country to foreign enterprise would be indefinitely postponed."

**BRITISH CONSULAR TRADE REPORT
FOR HIOGO AND OSAKA, FOR
THE YEAR 1876.**

H. B. M.'s CONSULATE HIOGO AND OSAKA,
Hiogo, June 28th, 1877.

Sir.—I have the honour to furnish you with a Report on the Trade of the ports of Hiogo and Osaka for the year ending 31st December 1876.

HIOGO.

The trade of Hiogo for the year 1876 has been as follows:—

Imports	dol. 3,748,967
Exports	dol. 3,401,230
	dol. 7,150,197

showing a decrease of dol. 1,017,822 on the trade of 1875. The comparative tables for the two years give the following figures (exclusive of Treasure).

IMPORTS.

In 1875	dol. 5,364,917
In 1876	dol. 3,748,957

Decrease of	dol. 1,605,950
--------------------	----------------

EXPORTS.

In 1875	dol. 2,813,102
In 1876	dol. 3,401,230

Increase of	dol. 588,128
--------------------	--------------

The Import trade has thus continued to diminish. The Export trade on the other hand shows a fair increase, which is attributable to an increase in the chief articles exported from this port, principally in Tea, which has been exported considerably in excess of the previous year. I append a comparative Table of the Trade of Hiogo as rendered by the Custom House Returns, shewing the principal items of Import and Export for the years 1875, and 1876, by which it will be seen where the decrease in the Imports and increase in the Exports have occurred.

**COMPARATIVE TABLE OF TRADE OF HIOGO SHEWING
PRINCIPAL ITEMS OF IMPORT AND EXPORT FOR
THE YEARS 1875 AND 1876.**

Description of Article.		1875.	1876.
IMPORTS.			
Cotton Manufactures...	dol. 1,359,256	dol. 1,167,641	
Woollen do. ...	916,004	885,175	
Woollen & Cloth do. ...	870,367	222,580	
Metals	333,437	184,207	
Arms and Ammunition	2,058	—	
Miscellaneous Foreign	1,112,753	762,557	
Miscellaneous Local, or Eastern Produce }	761,045	526,807	
Total	dol. 5,354,918	dol. 3,748,969	
EXPORTS.			
Silk	dol. 12,129	dol. 40,464	
Tea	1,645,998	1,695,483	
Copper	208,218	127,424	
Wax	93,277	131,119	
Tobacco	38,018	20,418	
Camphor	56,119	121,846	
Dried Fish	121,314	107,423	
Miscellaneous	635,029	1,096,959	
Total	dol. 2,813,102	dol. 3,401,230	

Following upon the plan adopted in my former Reports on the Trade of Hiogo, I add a Table of the Imports and Exports (exclusive of Treasure) as shown in the statistics of Trade compiled in the Hiogo and Osaka Chamber of Commerce and which comprise the business done at the two ports.

IMPORTS.

In 1875... ..	\$5,726,897
In 1876... ..	4,675,900
Decrease of... ..	\$1,050,897

EXPORTS.

In 1875... ..	\$3,095,405
In 1876... ..	3,464,400
Increase of	\$ 371,995

which denotes a decrease in the business done at the Ports in Imports of \$1,050,897 and an increase in Exports of \$371,995, as compared with the business done during the previous year.

The cause of the difference in the figures as given by the Returns furnished by the Custom House and the statistics of the Trade of Hiogo and Osaka as published by the Chamber of Commerce has already been explained in my reports for the two previous years, and I will therefore but repeat that the Imports as stated by the Chamber of Commerce give value of the goods which have been disposed of during the year, whereas the Customs Returns give with fair correctness the quantity of goods which have been laid down during the same period. In Exports, also the excess as shown by the Custom House Returns over those of the Chamber of Commerce is to be accounted for by the fact that a quantity of goods are shipped coastwise by Japanese only, of which of course the Chamber of Commerce has no cognizance.

Tea to a considerable quantity which finds no market in Hiogo, or which is not offered for sale on the spot, is shipped by native merchants to the Yokohama market, and thus tends to augment the quantity of this staple which passes through the Custom House. This will also explain the contradiction in the figures rendered by the Custom House Returns and those of the Chamber of Commerce statistics in the exportation of Tea. The first states that this article was exported in 1876 to the value of \$1,795,583, and the latter renders the same article as having been exported to the value of \$1,496,000 only.

According to the Custom House Returns, goods to the value of \$3,748,967 were imported into this port during the past year, showing a decrease of \$1,605,950, as compared with the previous years. Cotton Manufactures show a decrease of \$191,615 as compared with the previous year; Woollen Manufactures a decrease of \$647,787*; Metals a decrease of \$149,220; Miscellaneous Foreign a decrease of \$350,196, and Miscellaneous Local a decrease of dollars 234,237.

As stated in my report of last year, the numerous steamers running under Japanese flag between Osaka and Yedo, continue to bring down large quantities of foreign goods which find their way into all parts of the district, and are a serious source of competition with the goods imported by foreign merchants direct from Europe and America, and who cannot afford to dispose of their goods at so cheap a rate as the Japanese importers are able to do, whose goods are chiefly purchased at clearance sales, etc. The Chinese also continue to remain formidable competitors with the foreign import trade: they purchase goods generally at auctions in China and are thus able to effect sales to native purchasers at a lower rate than can be obtained from the foreign importer.

Before proceeding to comment upon the items of the trade of Hiogo for the year 1876,

* This considerable decrease in the Cotton and Woollen Manufactures is explained by the fact that in the Customs Returns of 1875 Mousselines de Laine were entered under the head of Cotton and Woollen, whereas in 1876 this article, together with Lustres, appear in the Returns under Woollen Manufactures, their proper heading. The apparent decrease in Cotton and Woollen is therefore much less than a comparison of the Returns for the two years would show, viz., — \$423,224 instead of \$647,787 as stated above.

I would remark that I have as upon former occasions availed myself of the Returns compiled by the Chamber of Commerce which have been courteously placed at my disposal. These refer to the quantities of goods delivered to the consumer, and afford when compared with similar statistics of former years, a somewhat more exact estimate of the business actually transacted during the period under review, than can be gathered from the Custom House Returns, also appended to my report, which include stocks that have not yet been disposed of.

The Import trade that passed through the hands of foreigners during 1876 shows a very serious decline in the quantity and value of almost every description of goods. During the first seven months of the year, stocks accumulated to a considerable extent, especially as regards cotton manufactures, and the limited amount of business transacted, judging from the low prices current, must have resulted in heavy losses. In the latter part of August, however, an improved demand set in and importers were able to clear off a large quantity of goods at advancing rates. It soon became evident, however, that the native dealers had bought too heavily, as a reaction speedily took place, great difficulty was experienced in getting contracts fulfilled, and the temporary activity above alluded to was succeeded by less animation even than had previously prevailed. Towards the close of the year, political disturbances in some parts of the country aggravated to a marked extent the depression in the Import trade, by restricting the purchases of the natives dealers to the supply of their immediate wants.

Although the past twelve months have proved unsatisfactory to the resident foreign merchants, it appears, however, that the actual consumption of imported goods in this district has by no means diminished. The facilities now afforded by the numerous Japanese steamers plying upon the coast for the cheap transit of cargo, has led the native traders to avail themselves more extensively than before of the greater choice of goods in Yokohama, and they have bought largely in that market. These importations do not appear in any statistics to which foreigners have access, but I am informed that they have recently borne a large proportion to the purchases made from foreigners on the spot. It would appear, therefore, that the Yokohama returns must be considered as including at least a moiety of the goods consumed in this district.

The following articles have formed the most prominent items in the trade of the year 1876.

Grey Shirtings.—The consumption of these important goods continues to fall off, the figures being 254,865 pieces, against 360,358 pieces in 1875, 485,507 pieces in 1874 and 565,000 pieces in 1873. It is difficult to account for this remarkable decrease, unless it be that country people are becoming more prosperous and able to afford the use of silk and other fabrics. The greater part of the goods sold has been imported from Shanghai by Chinese and has consisted of inferior cloth; in fact there is now scarcely any demand for the better, qualities which at one time were readily saleable. The market has been exceedingly dull throughout the year, with the exception of a temporary activity in October, during which month 80,000 pieces were disposed of.

Turkey Red Cambrics.—The deliveries amount to 50,700 pieces, showing a slight decline only upon the previous year. Of these

13,800 prices were sold during the month of October. Prices upon the whole have been eminently unsatisfactory and importers of good English made cloth have sustained serious loss.

Black Cotton Velvets.—These goods form an exception to the general rule to which other imports have been subject, the deliveries amounting to 22,340 pieces against 16,500 pieces for 1875. Increased consumption has not, however, had the effect of improving the market value, which has averaged throughout the year at least one dollar per piece less than that ruling during the previous twelve months.

Victoria Lawns.—The consumption of these fabrics has also increased, representing 61,690 pieces against 44,600 pieces for 1875, although a considerable decline is shown as compared with 1864. Prices declined steadily throughout the year.

Mousselines de Laine.—Total deliveries for the year are returned at 185,225 pieces, valued at \$1,041,000, showing a decline of 16,114 pieces, and \$48,671 as against 1875. The business in these goods is still confined to German and French houses, and plain colours have been most in demand. The value of staple quality reached its highest point of 21 cents per yard during the month of October, after which date a rapid decline took place until the end of the year.

Black Orleans.—The demand shows a great falling off as compared with last year, and prices have been correspondingly unremunerative. A large proportion of the supplies has consisted of very common manufacture imported by Chinese from Shanghai.

Cloth.—The market for this commodity has been exceedingly depressed, and holders have been able to effect sales only by submitting to a considerable sacrifice. A large quantity is undoubtedly used for the clothing of the police and troops, but this is imported by the central Government under special contract and appears therefore in the Yokohama returns.

Iron.—A fairly large business has been done, the deliveries of all descriptions of Iron being returned at 44,520 piculs. Prices have, however, ruled upon a low basis throughout the year. The value of small nailrods which was at dol. 4.25 per picul in January, gradually declined until the limit of dol. 3.35 was reached in September. Since that date a slight advance has been obtained, but at the close of the year dol. 3.70 was the highest quotation current.

Sugar.—This has continued to form an important article of trade, the deliveries for the year being 54,170 piculs, or 11,500 piculs more than during 1875. The business has been entirely in the hands of Chinese, and the importation has been almost exclusively confined to Formosa produce. Judging from the low prices current during the greater part of the year the trade cannot have been of a remunerative character.

Kerosene Oil.—A falling off in consumption is to be noticed in this commodity, deliveries being 58,333 cases against 73,872 for the previous year. This may perhaps be attributable to an advance which took place towards the end of the year, when prices, which had previously been steady at dol. 2.40 to dol. 2.60 per case, went up to dol. 3.90 in sympathy with increased cost of production in America.

EXPORTS.

The business of the year shows an increase of dol. 371,995 as compared with 1875, the figures being dol. 3,464,400 for 1876 and dol. 3,092,405 for 1875. The prevailing articles exhibit a larger value—Wax, Cau-

phor, Rice, Mushrooms, Isinglass and Curios, whilst a decrease may be observed in Tea, Tobacco, Copper, Seaweed, and Cattle.

Tea.—This continues to form by far the largest article of produce from this district, and contributes the sum of dol. 1,496,000 to the total value of Exports. Direct shipments registered at this port were 6,470,624 lbs., in addition to which 7,700 piculs were forwarded to Yokohama to be packed and shipped thence, giving a total weight of 7,497,224 lbs. against a total weight of 7,648,960 lbs. in 1875. This, however, does not represent the total produce for foreign consumption, as the native dealers have in addition shipped a considerable quantity for sale in Yokohama, the returns of which cannot at present be procured, and which form a portion of the statistics at that port.

A much lower range of prices has ruled throughout the year than was current in 1875.

The following table shows the comparative value of good medium Tea for the past three years.

Month.	1874.	1875.	1876.
	\$ per picul.	\$ per picul.	\$ per picul.
January... ..	34	35	26
February... ..	34	35	26
March... ..	34	34	26
April... ..	34	None	None
May... ..	None	35	30
June... ..	35	33	19
July... ..	36	32	20
August... ..	36	31	19
September... ..	37	31	21
October... ..	37	29	22
November... ..	36	28	21
December... ..	36	27	20

It will thus be seen that, with the exception of a temporary rally when the new season's crop came in, there has been a constant tendency towards lower prices since July 1875. This is attributable entirely to the fact that the Formosa Oolongs, which are somewhat similar to Japan leaf, are now entering into competition more largely with the latter in the American market. The consumption of Tea in the United States, although increasing, does not keep pace with the production on this side, and unless some fresh outlet is speedily discovered, prices must continue to decline.

A very limited business was done between the beginning of the year and the advent of the new crop, purchases during this period not exceeding 5,000 piculs. The first arrivals of new Teas took place on 4th May, and for a few days afterwards high prices were paid. These were not, however, long maintained, the market being very fully supplied, and during the remainder of the year purchases were made at rates showing a decline of from \$7 to \$13 upon those ruling for the corresponding period of 1875. The bulk of the crop was brought up before the end of October, after which date the selection of the leaf was poor, and the demand in consequence languid. The quantity of Tea brought to market was considerably less than had been generally expected, the deficiency being due either to a partial failure of the third crop, or to the fact that the prices offered in the interior were not sufficiently remunerative to induce the farmers to pick the leaf late in the season.

Copper.—Shipments for the year amount to 5,823 piculs only against 11,898, piculs in 1875, 17,532 piculs in 1874 and 24,428 in 1873. The decline in the export of this metal is remarkable, and points towards its entire disappearance from the list of exports. A large proportion of the produce of the district is doubtless absorbed by the

Mint, which has during the year been issuing a quantity of copper coin, but this alone cannot account for the fact that foreign purchases have fallen from 1,470 tons, to 345 tons within three years. Prices have ruled between dollar 22.25 and dollar 24.50 during the twelve months, giving an average of the equivalent of dollar 80 per ton; when to this figure has to be added duty, freight, and other charges, it is clear that under ordinary circumstances no export of the metal to any European market can take place.

Tobacco.—The demand for this article likewise continues to fall off, the export for 1876 being 2,576 piculs against 5,416 piculs in 1875 and 9,649 piculs in 1874. The heavy losses sustained by foreign merchants consequent upon the careless preparation of the leaf by the native growers, to which I have drawn attention in my previous Reports, have had the effect of restricting the trade, although there continues to be a ready sale for sound Japanese tobacco in London at fairly remunerative prices.

Vegetable Wax.—A stimulus has been given to the export of the article, by a largely increased consumption in London and moderate cost on this side. Shipments are returned at 14,516 piculs, against 10,056 piculs for the previous year, and prices have ranged between dollar 8.50 and dollar 15.50 per picul. It is to be feared that the result of recent operations may not be satisfactory, as advices from home report heavy stocks and declining prices towards the end of the year.

Camphor.—The supply of the article has remained very steady during the last three years, the export for 1876 being given at 8,050 piculs. It is now usually bought under contract before arrival, and is chiefly produced in the province of Tosa. Prices have advanced during the year from dollar 12.50 to dollar 15.50 per picul.

Rice, which was entirely absent from the statistics of 1875, has again taken its place amongst the articles of export, having been shipped during the past year to the extent of 160,828 piculs or nearly 10,000 tons. The business, however, although passing through the hands of foreigners, is said to have been solely on native account, and there are consequently no means of ascertaining its value with any degree of accuracy. The nominal quotations of from dol. 2.30 per picul which have ruled throughout the year, show a loss as compared with corresponding London values.

Mushrooms and Isinglass show an increase of value to the extent of dol. 137,500 as compared with 1875. These commodities are however, almost entirely in the hands of Chinese.

Dried fish was exported to the extent of 9,240 piculs, valued at dol. 167,423.

Seaweed has been shipped off to China to the amount of 24,361 piculs, valued at dol. 71,296.

Sulphuric Acid has been exported to a large amount for sale in China, 6,415 piculs, valued dol. 34,442, in 1876, against only 537 piculs and dol. 3,004 in 1875. This sulphuric acid is obtained from the Mint in Osaka and is exported entirely for the China market.

Fans.—The trade in Fans at this port during 1876 shows an increase upon that of previous years as regards quantities, the export reaching to close upon 4 millions, but the value not exceeding much that of 1875, say dol. 95,000, by far the larger portion of these goods consisting of Fans costing from ninety cents (Mexican) to two dollars per 100.

Notwithstanding, however, that the goods cost much less than in 1875, the trade in the main was unsatisfactory to foreigners, the American market being largely overstocked, and the position of importers being weak.

Contracts for 1877 have been placed at some 30 o/o reduction on former prices, and it is probable that there will be a large falling off in the number of Fans sent away.

This gradual collapse in this branch of trade must be solely attributed to the fact of the Japanese dealers underselling their own contracts; at the time enabling them to dispose of larger quantities of Fans, but ultimately recoiling upon themselves, as foreigners have consequently, in order to protect themselves, only been able to enter into new contracts at extremely low figures or leave the business alone.

From this suicidal way of doing business the Japanese have reduced their receipts quite one half during the last three years. And this heavy reduction must either point to extraordinary profits having been made in previous seasons, or else to the price of labour having declined very much in the country.

The Fan trade is still almost exclusively confined to American firms, there being but a small market for these goods in Europe.

The chief remaining articles exported comprise Drugs to the value of dols. 10,830; Ginseng, dols. 31,517; Lacquer Ware, dols. 18,186; Porcelain, dols. 15,391; Fat and Lard, dols. 8,998; Flour, dols. 6,901; and Sundries to the value of dols. 57,152.

Shipments of cattle continue to fall off, and it is probable that the increasing native consumption of meat has commenced to affect the supply in this district.

SHIPPING AND NAVIGATION.

British vessels to the number of 125, showing a total of 127,891 tons, entered and cleared from the port of Hiogo during the year 1876. This gives an increase of British shipping as compared with the previous year of 16 vessels and 41,309 tons. 34 British steamers of 49,936 tons entered in, and cleared from, this port during the past year. Two were bound with rice cargoes for the United Kingdom and one with tea to the United States direct.

Three British sailing vessels cleared for the United Kingdom direct, with cargoes of rice, and three with general cargoes. It will be observed that the number of British steamers generally of large tonnage, which visited this port during 1876, is equal to nearly one half of the number of sailing vessels which entered and cleared during the same period.

American shipping shows the entry and clearance of 67 vessels and 114,199 tons, being a decrease of 97 vessels and 56,269 tons, as compared with the previous year. The above number of vessels and tonnage for the past year includes the numerous calls at this port of the steam-ship *Nevada*, which gives a total, of 53,500 tons.

German shipping shows a decrease of 6 vessels and 716 tons against 1876. 18 vessels of 4,744 tons entered and cleared during the past year.

One Russian steamer of 408 tons visited this port in 1876, and two Chinese steamers of 3,180 tons entered and cleared from this port during the past year.

No other foreign merchant vessels touched at this port in 1876.

The visit to this port during the year of the yacht *Sunbeam*, R. Y. S., owned and commanded by Mr. T. Brassey, M. P., is an interesting fact to be recorded, as being the

first yacht from home which has visited this port.

Currency.—The following Table of the amount of all coins produced at the Imperial Mint in Osaka for the year ending 31st December 1876, has been courteously furnished me by the Commissioner of the Mint.

Denomination.	Weight in Ounces Troy.	Number.	Value in Yen.
Gold	41,334.97	149,442	771,384.00
Silver	4,193,348.63	28,166,889	4,823,718.35
Copper	23,334,918.55	88,158,954	1,018,302.85
Total	27,569,608.15	116,475,285	6,613,404.20

Trade Dollars included in the above Table ... 1,325,672.08 1,514,932 1,514,932.00

Exchange.—Sterling exchange here is influenced almost entirely by the rates ruling in Yokohama, the difference greater or less never being more than one half per cent; that being cost of transferring coin from one port to the other.

During 1876 the fluctuations in sterling were more sudden and severe than has been the case for many years; Bank Bills, six month's sight, ranging from 3s. 9½d. to 4s. 6½d. per dollar, a difference of about 20 per cent. The great rise which took place in August was in consequence of an unexpected demand for silk, consequent on the failure of the crop in Europe. Although such a sudden rise may be often beneficial to such Importers as have large stocks on hand, I am of opinion that business generally is better when Exchange keeps steady, merchants then being able to work on a solid basis.

On Shanghai exchange is regulated chiefly by the sterling value of the tael there, as against the sterling value of the dollar here, and during 1876 ranged from about 72¼ to 77¼ taels per 100 dollars, or say a difference of about 6¼ per cent. The average or general rate ruling is from 74 to 75.

As regards local currency I may mention that all the purchases of Exports, such as Tea, Camphor, Wax, etc., are made, though ostensibly by Mexican dollars, in reality by Japanese paper money, occasionally goldry silver *yen*, the custom being for the foreign merchant to give a cheque in Mexican dollars on one of the foreign banks here against produce when purchased, which cheque is immediately bought by one of the native banks for Japanese currency, most frequently *satsu* (paper).

The reverse process is adopted when natives buy Imports; then native bank-orders for Mexican dollars (purchased in exchange for *satsu*) are handed to the foreign merchant in exchange for goods.

The value of *yen satsu* (paper) alters every day; during 1876 it fluctuated from 4 per cent. discount to 5 per cent. premium (according as the rate was in Yokohama) against Mexican dollars. From its portability it is generally preferred by the natives to gold or silver.

Mexican dollars seldom or never find their way out of the Treaty ports, in fact I may say that even in Osaka they are now uncurrent.

Railways.—The railway from Kobe to Osaka and the branch line to Ajikawa (together 22 miles) was worked with regularity and freedom from accident, and the works maintained efficiently.

At Kobe moorings for vessels lying alongside the jetty were laid down, and some minor works completed. A dock was commenced at the Osaka Station for the accommodation of water borne traffic, which, when

completed, will enable goods to be transported by boat direct to and from that station, in place of Ajikawa as heretofore.

On the extension from Osaka to Kioto (27 miles), the works were rapidly pushed forward to completion in anticipation of the state opening, and the first portion from Osaka to Muko-matchi, within 4 miles of Kioto, was opened on the 24th July last, and the remaining 4 miles to a temporary station (Omiyadori) on the 5th September, the terminal station at Kioto (a large two storied brick building with granite dressings) not being quite finished.

The most important works between Osaka and Kioto are the fine large bridges over the Jusho, Kansaki, Ibaraki, Oda and Katsura rivers, which are all crossed upon wrought iron girders in 100 feet spans of the Warren type, and consist of 5, 13, 2, 1 and 12 of these spans respectively. There are also numerous smaller bridges, culverts and flood openings, and the works are generally heavy, consequent on the country passed through being subject to large floods at irregular intervals.

The whole of the works have stood well and give satisfaction, and will bear favourable comparison with work of a similar nature in other parts of the world.

No new works of any magnitude are at present contemplated. It is, however, much to be regretted that the line has not been continued to Otsu on the shores of Lake Biwa. The distance is but small, and the cost of construction would be amply repaid by the extensive traffic which the line would not fail to secure in the large quantity of produce arriving from the Western Districts, and which has now to traverse the distance about 10 miles from Otsu to Kioto on pack horses or carts.

The traffic carried over the Kobe, Osaka and Kioto Railway during the year 1876 has been as follows:—

The total passengers numbered 1,140,836 and the amount received for the same was *yen* 273,086. The sum paid for the carriage of passengers' baggage, parcels, etc., amounted to *yen* 9,675, and for goods freight, *yen* 21,869. There were piculs 274,948 conveyed.

The Railway from Osaka to Mukomachi was opened on the 24th July, and through to Omiyadori station for Kioto on 5th September 1876, for the conveyance of passenger traffic only. Goods freight was not carried between Osaka and Omiyadori during 1876.

On the 8th July the Railway Pier at Kobe was completed, so that vessels could moor alongside and load and unload their cargoes into and from the Railway trucks: since that date to the end of the year 118 vessels, mainly steamers of large tonnage of the Mitsui Bishi Company have been accommodated at the pier.

ROADS.

The old road between Kioto and Otsu on the shores of Lake Biwa, which probably was the worst road in Japan, has been converted within the past year into what there is little doubt is one of the very best. It is fully 30 feet wide and has been constructed at a cost of *yen* 35,000: a tax I am informed is to be levied on all vehicles to cover expenses. It is clear that the intelligent men of Japan have fully recognized the enormous advantages commercially and politically of good roads over bad ones, and it is to be hoped before long the Kioto and Otsu road will prove to have been but the first step in a system which shall gradually embrace the whole Empire.

GENERAL REMARKS.

The factory of the Japan Paper Making Company mentioned in my last report as being in course of erection, has been completed during the past year, and manufacture of "half stuff" or pulp for paper making has been carried on since the middle of October last.

Being outside of the settlement some difficulty was raised by the Governor of Hiogo to the introduction of gas in the factory, and the question remains still in abeyance, but it is contemplated, should permission to use the gas made by the Hiogo Gas Company not be shortly obtained, to erect apparatus on the Japan Paper Making Company's own premises for supplying the necessary light. The production of "half-stuff" will then I am informed be nearly three times the present return of $1\frac{1}{2}$ tons per day.

Employment is given to 89 women and 39 men, exclusive of foreign superintendents, and when the factory is working night and day about 200 women and 70 men will be in receipt of steady employment.

It was at first contemplated to export the produce of this factory, and the addition of 1,550 or 1,600 tons of stuff would have had to be made to my trade returns; but it appears that a new market for this material has been found in the country itself, as by taking "half-stuff" from this Factory the native owned paper mills can largely increase their outturn of paper, and a large proportion of the factory's production will therefore be sold to a mill in Osaka, and probably shortly to another in Kioto.

Some slight fault in erecting the machinery, etc., having been discovered during the first few weeks' work, the Factory is at present stopped.

The Recreation Ground alluded to in my last Report has been partly laid out in walks, and a large space has been covered with turf which is used for cricket and games of football, whilst croquet and other games are played on an adjoining piece of turf. Neat summer houses have been erected, and the ground so far as it is finished, has a very pretty appearance, and is much resorted to by the foreign Community in this port.

No public works of any importance have been undertaken here during the past year. This model settlement continues to be well lighted with gas at night; the streets are kept methodically clean, and the municipal police maintain efficient watch in the foreign quarter.

On the 5th February, 1877, His Imperial Majesty the Mikado, accompanied by the Japanese and Foreign Ministers, opened in state the Railway between Hiogo, Osaka, and Kioto.

The number of the British community at Hiogo, exclusive of children, amounted on the 31st December 1876 to 162 persons, which is about the same number of British residents as last year.

OSAKA.

The Foreign trade of Osaka continues to decrease, and chiefly so as regards exports, which in 1874 amounted to dols. 566,537, in 1875 to dols. 225,021, and in 1876 to only dols. 99,722.

IMPORTS.

In 1875	...	dols. 605,510
In 1876	...	406,089

Decrease of ... dols. 199,421

EXPORTS.

In 1875	...	dols. 225,021
In 1876	...	99,722

Decrease of ... dols. 125,299

The decline of the foreign trade of Osaka commenced from the opening of the Railway to Hiogo, which, as observed in my previous Reports has caused foreign trade to centralize at Hiogo. Almost all the foreign merchants who, previous to the opening of the Railway were established and carried on business at Osaka, have removed to Hiogo. There is not a single British firm left at Osaka. The Foreign residents have diminished from 79 in 1875 to 44 in 1876. The British Residents in Osaka, who in 1875 numbered 24, diminished to 16 in 1876.

No foreign merchant vessel visited Osaka during the past year.

INDUSTRIES.

The Japan Mill can manufacture 100 reams of paper per day of the size of the *Osaka Nippo Shinbun* (newspaper) at the price of two yen per ream. At present it is making paper for Government use only.

The *Glass Factory* continues to make glass articles of various descriptions, window glass, however, excepted.

Sulphuric Acid.—The Mint is now manufacturing about two and a half tons of Sulphuric Acid per day. Ink is also made at that establishment.

Shirtings of an inferior quality are manufactured at Kawachi near Sakai, and at Temma Wakamatsucho (Osaka).

Shoes are made in accordance with Japanese ideas of this article, viz., extremely cheap but of corresponding inferior quality. Boots and shoes imported from Europe can no longer find a market in Osaka.

Drawers and Singlets.—About 400 dozen of these articles can be made in Osaka, and are sold at about $2\frac{1}{2}$ yen per dozen. The importation of these goods is also lost to the foreign importer, owing to the cheap rate at which they can be locally manufactured.

Hats were made last year to a considerable extent, and sold at a low price, but they were so badly finished that the rim after a little wear fell down flat, owing to the want of stiffness, which could not properly be attained. Felts have been attempted, but as yet without success.

Indigo is manufactured on a large scale of 5 or 6 qualities. The prices range from yen 6.50 down to 30 cents per catty.

Slate pencils of chalk of a very white and good quality are made at Osaka at the rate of 1,000 boxes per day, price 6 cents per box of 120.

Soap is also made at Osaka but the quality is reported as not very good.

Saddlery and Military Equipments are made at the Arsenal on a large scale, and finished in a workmanlike manner.

No improvements worth mentioning have been undertaken at Osaka during the past year.

The Exhibition at Kioto, and the Museum at Osaka have again this year attracted a fair number of visitors.

I have the honour to be, Sir,

Your most obedient, humble servant,

(Signed) A. A. ANNESLEY.

SIR HARRY PARKES, K.C.B.

&c., &c., &c.

I have the honor to be

Sir,

Your most obedient, humble servant,

(Signed) A. A. ANNESLEY.

SIR HARRY PARKES, K.C.B.,
&c., &c., &c.

ABOUT SAIGO TAKAMORI.

(From the *Nichi Nichi Shinbun* of the 2nd August.)

EVERY time we read the telegraphic communications and letters from the seat of war in the South-West, we find that no insurgent forts, against which the imperial troops march with a power which breaks whatever opposes it as easy as the splitting of a bamboo, can stand before them. As the insurgent troops seem thus to become discouraged day by day, our men are thinking of where the last battle will be fought; and where Saigo Takamori prefers to draw his last breath. They are momentarily expecting to received some astounding information from the seat of strife. But our readers have become very anxious on account of the insurrection being prolonged. We answer, in a few words, that the insurgents will be destroyed gradually in the Northern part of Hiuga: and that it is unreasonable to expect that Saigo will fight any decisive battle.

Some persons may say:—"What a wonderful idea! Although Saigo is now the public enemy of Japan and a wicked man, he was formerly distinguished for his aid to the foundation of the present government, and raised to the position of Daijin of the imperial

Court. After his retirement into private life, he was still honoured with the high rank of Sho-sammi, and the office of commander-in-chief of the army. Not one of our men was equal to him in ability and talent. How will a veteran soldier like Saigo suffer himself to be arrested. He will positively find a good position in which to fight a last and glorious battle, when he is expected to do some distinguished deed which will hand his illustrious name down to posterity."

Such useless opinions are expressed by those who do not know Saigo, and are ignorant of the condition of affairs at the seat of war.

We were surprised at his ability when he appeared before Kumamoto castle at the head of ten thousand soldiers within ten days from the time when his men first seized the imperial arsenal in Kagoshima, and threatened to march victoriously to the East. But, contrary to our expectation, he was checked by a garrison of only 3,000 troops at Kumamoto, and lost the opportunity of penetrating further, just the same as the Tokugawa Shogun, Hidetada, lost a chance in the famous battle of Sekigahara, for the sake of a small castle occupied by General Sanada. Among Saigo's men, there is none of the ability and talent of Toda-Samon, who excited and urged his lord the Shogun to recommence the war when a favourable opportunity occurred. The ability of Saigo first appeared in the battle at Kumamoto. Has he since observed that, when he was routed in Kumamoto, his treacherous design was not to be consummated? If so, then why did he not fight a last battle at Yabe or Takemiya? Did he consider that the time for his death had not arrived; and that soldiers will gain a victory in one place and be defeated in another? He would have done right to die in the castle of Hitoyoshi, where he was again routed. But he fled, cowardly, before the imperial troops appeared. When his men were routed at Isoyama, Oguchi, and Iino, he ought to have fought a last and decisive battle. Now their lines become narrower from day to day. We are very sorry that Saigo should continue his mean contest. We and our countrymen expected that a final battle would take place in the strong and commanding position of Miyako-no-jo. But this place was seized by the imperialists in a single combat: and the defensive and strategic places of Yohi, Tano, Takagi, Sayamura and others were taken by the victors without much resistance. The mountains of Takaoka and the river Sarigawa are now of no use to the rebels. The insurgents are assembled on Adzusa mountains on the North. Miyazaki on the South, and Usukine on the West. If Saigo is a true samurai, he ought to have committed suicide on raising the siege of Kumamoto. How mean is his conduct! Is he expecting to recover his fallen fortune in the small position he occupies in Hiuga, which is not much larger than a cannon ball? If so, he is a fool. * * *

Saigo's men have become much discouraged of late as they have no place for advance or retreat. His poor followers will die here and there, till at length no rebels will be found to stand before the imperialists. Saigo Takamori is the commander-in-chief of the insurgent armies, and it is unreasonable to suppose that it is unknown where he has established his head-quarters. Yet no rebel prisoners seem to know where he is. He is really an excellent soldier, so he must have seen that when he raised the siege of Kumamoto and was routed at Oguchi and Hitoyoshi, his fortune could not be restored. So he has committed suicide and his remains are hidden somewhere. Such is a rumor from the seat of war. The

insurgents became lately disordered and no commander is observed among them. We shall be able to inform our readers shortly what has become of Saigo.

RELATIVE CONDITION OF THE IMPERIAL AND REBEL ARMIES.

(From the *Choya Shinbun* of the 21st June.)

The lines of the imperial army in the South-West extend diagonally from Kago-shima on the South to the coast of Bungo on the North, and is about 70 ri from one end to another. Notwithstanding our utmost endeavours to know the condition of the imperial and rebel armies, we receive only a few telegrams occasionally, which merely state the defeat or victory of the contending parties. We have therefore nothing of a reliable character whereupon to base our remarks in reference to the condition of the imperialists at the seat of war, our information being confined to rumours and the meagre intelligence we get from other sources. From what we can gather, however, the imperial troops extend along a line 70 ri in length, and the other side of this line the rebel army have built forts. Several skirmishes take place in mornings and in the evenings between both parties. But, generally speaking, it may be said that both armies are reposing. The imperialists have been victorious in each battle, and have driven back the insurgents into one province of Hiuga with a power which breaks whatever opposes it as easily as splitting a bamboo. The rebels, who are not yet disheartened, could not stand longer before the imperialists, if the latter should assault them simultaneously from three directions, viz., Kago-shima on the south, Higo on the west and Bungo on the north, for then the rebels would not be able to retain the castles of Miyakonojo and Nobeoka. But the Imperial troops are simply protecting themselves from attack. Are they waiting for the cool weather? What is the intention we ask, of the imperialists? The plan of the campaign is kept a secret, and is not known to us, and we can say nothing concerning it. According to what we have heard, the Government has decided that the imperial army in the South-West shall have a short rest from active service, while preparations are made to renew the war. Since the insurgents raised the siege of Kagoshima, and withdrew to the province of Hiuga, the imperial troops have frequently shifted their positions. Lieut.-General Takashima landed at Shifushi, Osumi, at the head of the 1st division, Lieut.-General Soga, commanding the 4th, advanced for Kokubu, Lieut.-General Oyama, commanding the 3rd, encamped at Kajiki, Lieut.-General Yamada with the 2nd division advanced for Kobayashi through Tino, Lieut.-Generals Miyoshi and Miura commanding the other 2nd and 3rd divisions, for Misobe, Lieut.-General Nodzu for Umamigahara and joined the imperialists on the Bungo road; and Lieut.-General Tani encamped at Higeoka; waiting for a chance to assault the castle of Nobeoka, in Hiuga. * * * On the 16th instant, Prince Higashi Fushimi-no-miya left for Kumamoto at the head of the newly enlisted soldiers. On their arrival in the South-West, a general attack is to be made, which will take place on or about the 10th proximo.

THE CIVILIZATION OF JAPAN.

(From the *Choya Shinbun* of the 29th July.)

WHAT is meant by the *kinhei* (olden manners) of which our countrymen talk so much? It means only the customs and

manners which prevailed during the reign of the Tokugawa Shogun. What do we mean by *kaiikuwa* (civilization)? It means the new condition of our people since the ports were opened to trade. The Tokugawa house usurped the reins of government for about three hundred years, during which time an oppressive administration prevailed. But the people of the four classes (samurai, farming, mechanic and trading) lived happily and in tranquility: and produced many learned and intelligent men. They were the founders of our present literature. Both men and women, high and low, throughout the country, admired the doctrine of respect and fidelity to their sovereign and their parents: many illustrious and virtuous men appeared among our countrymen. But no ideas of freedom and the rights of the people were yet introduced into Japan; and many customs and manners were most barbarous. Still we have no reason to say that all of them were barbarous and savage. It is true that some of our gentlemen, holding high positions in the government, appear to consider all native things in the light of *kinhei*. What they esteem as civilization, if we may judge by their own conduct, is anything wild, thoughtless, hypocritical or mean. We will give an example to show how injurious is their behavior. We know that to be benevolent and faithful is an olden custom. These men look upon obedience to superiors and parents as barbarous. Politeness and gratitude are not intended to be the guides of civilized man. Any one may appear before a nobleman wearing a nightgown, if he likes. Our countrymen in Japan consider these bad customs to be a test of a civilized condition. What white man would wish to have such men for his companions? We are very sorry to have to remind those who wear an English hat and French garments, that we have yet to learn that one who forgets what is right and honorable in order to push his own advancement is a civilized man. Still such a condition of affairs is deemed, throughout the country, to be one of civilization; and young children, in consequence, in our cities, towns, and villages become more and more ill-behaved. Before the spread of civilization pleasant and decorous conduct disappears. In a few words we will ask our countrymen whether they have any occasion for boasting. Thus, some people say:—"The Japanese make great progress in civilization. They sacrifice what is right so long as they can make a profit. Provided they can make money they are content to serve their very enemies, even in the capacity of slaves."

INUNDATIONS IN TOSA.

A CORRESPONDENT of the *Osaka Nippo*, under date of the 15th July, reports inundations of unprecedented extent in Tosa. He says:—

It began to thunder and rain heavily on the evening of the 9th July; and the rain fell continuously through the following night. At about 8 o'clock next morning the river Shiwoegawa, which runs South of the castle of Kochi, rose suddenly, and the banks for a distance of thousands of yards gave way. A rapid inundation followed, and reached as far as West of Segarigiri, lying one ri West of the castle. 509 houses were entirely destroyed, while many more were damaged, and the number of the drowned is not yet known. It is probable that more than one thousand lives have been lost. About one hundred men were rescued, close to the bridge Ohashi, which was also destroyed in the

afternoon. Five hundred buildings in the villages of Shiwoda and Otsudzuri, North of Segarigiri, were carried away. The site of the entire city of Kochi, and the neighbouring villages, appeared like an extensive lake. The water did not commence to recede till about 4 p.m. on the 11th, and the rain had even then not ceased.

THE EXPORT OF FANS.

(From the *Kinji Hiron* of the 23rd July.)

We made some remarks on the customs of Japanese merchants in our last issue, and we are now about to say something more on the same subject. The principal articles of export from this country are silk, tea, porcelain and lacquered ware, and none of our merchants seem to care much about exporting any other articles. Japan was the only country in which fans were manufactured in ancient times, and the manufacture has been brought to a great state of excellence. It was first introduced into China from Japan during the 1st year of Minei-raku. Since the opening of the ports from one to two million fans have been annually exported to Europe and America. In the 7th year of Meiji (1873) the trade became very prosperous, and 3,000,000 fans, of the total value of 100,000 yen, were sent to foreign parts. Some persons say that many other exported articles are worth more than 100,000 yen, such as dried fish, awabi, copper, iron, &c. These, however, are not manufactured goods. Fans consist simply of bamboo and paper, and may be made of high value by the bestowal of some labour upon them. They are worth from 10 to 30 yen per 100; and some good ones are worth five or ten yen each. Last year the export advanced considerably, attaining the total value of 136,646 yen, an amount larger than that of lacquered goods and porcelain. * * * We extract the following figures from the table of home productions, which shows the number of fans manufactured in Tokio and other cities:—

	No.	VALUE.
Tokio, Common Fans	58,320	4,863 yen.
" Round "	2,054,930	21,728 "
Kioto, Common "	2,094,400	77,584 "
" Round "	1,211,290	9,328 "
Osaka, Common "	5,924,200	111,089 "
" Round "	508,000	7,337 "
Nagoya, Common "	3,279,600	81,990 "
" Round "	653,600	2,562 "

Many other cities also contribute to this industry, which attains larger dimensions from year to year. Thus, it is correct to say that fans form an important part of our export trade.

JAPANESE FINANCE.

(From the *Kinji Hiron* of the 23rd July.)

MORE than one hundred and fifty days have already elapsed since the disturbances in the South-West first broke out, and the war expenses are estimated at many thousands of yen per day. Any one who takes the trouble to examine the finances of the country cannot be free from anxiety. We, having read the *Nichi-nichi Shinbun* of the 16th instant (the translation of which appeared in the *Japan Gazette* on the 19th instant) are much impressed, and can sympathise with the remarks of our contemporary. Now we will comment briefly upon the most important matters relative to this subject.

The home and foreign debt of the Japanese Government is 148,900,000 yen. The permanent pensions and the pensions for distinguish-

ed conduct on the part of the kuwashizoku and the pensions of the Buddhists and Shintoists, amount to 141,600,000. Besides, the Government has raised a loan of 15,000,000 yen from the Fifteenth National Bank, established by the Nobles' Club. The grand total therefore reaches 305,500,000 yen. Supposing that the Government pay 6 per cent per year on an average, the interest amounts to 18,000,000 yen; and this is one tenth of the Government income of 63,000,000 yen. But it will not be very difficult to pay the interest; because the money for the kuwashizoku's pensions will be used for this purpose. The unlimited and increasing amount of paper money is a matter of great trouble. 94,054,731 yen of paper money have been issued by the Government, and, on every occasion of the establishment of a National Bank, the stock of paper money increases. The bank notes in the various Fu and Ken amount already to 17,820,880 yen, so the total sum of paper money current in Japan, including that issued by the Government and banks, is 111,875,600 yen, viz., 3 yen 39 sen per head of the population of 33,000,000.

Is it not a heavy burden for our poor people to bear, this large debt? Nearly half of the population are young, aged, and sick people, who cannot work. * * * So this heavy burden has to be borne by one half of our countrymen, 16,500,000. Fifteen national banks have already been established by Government authority, each issuing paper money. The bank regulations have also been altered to the effect that coin equivalent in value to the bank notes issued need not be provided. So it is easy to open a bank, and we do not know how many banks will be established in the course of time. And the paper money issued by each establishment, will increase more and more the heavy burden already laid upon us. Is this not a great embarrassment for the country?

In turning our attention to affairs in the South-West, we observe that the insurrectionary spirit has not yet disappeared, though the insurgents have become much discouraged. But the strong positions they occupy enable them to bid defiance to the imperial forces. We can not yet tell when the suppression of the revolt will take place, and every day the Government expends a large sum of money. When we are fortunate enough to put down the insurgents, the Government will have to reward every officer and soldier and newly enlisted shizoku. The income for one year will not of course be sufficient to do this, and then how will the expense be met? Alas, that this great difficulty should have embarrassed the financial condition Japan. If we continue in such a state, disregarding what difficulties may follow, embarrassment will greatly increase, until it gets quite beyond our management. What is, then, a good thing for us to do? Shall we raise a home loan or foreign loan, or increase the paper money? None of these schemes should be undertaken without deep consideration. We have provided no gold coin or silver to exchange for paper money, and it is very fortunate for us that the paper money is current in equal value with coin. Only 20,000,000 yen in coin are provided by the Government for paper to the amount of 111,875,600 yen. Is this circumstance not full of danger? * * * As we have already mentioned above, the total amount of paper money is too great for a country with only a revenue of 63,000,000 yen. After the suppression of the rebels in the South-West the next most important business will be to decrease the amount of paper currency. How can we decrease it? Shall we raise a

foreign loan? The interest would be less than the interest on a home loan.

But further, in the present mercantile condition of Japan there is a great difference between the exports and imports. Gold and silver fly away from Japan to foreign countries year by year, and none will be left in our country in the course of a few years.

Our countrymen have now reached the utmost extent of poverty, and commerce is stagnant throughout the country. If we will saddle them with a heavy burden, they will have great difficulty in pursuing their business; and the circulation of money will become worse and worse. So we cannot raise a home loan. No other plan is advanced to rescue the country from its financial difficulties, excepting those referred to. And if none of the three methods are practicable, what is to be done? It only remains to call a national assembly, where all matters can be debated and decided by the representatives of people.

RINJI-SAI.

(From the new *Tokio Hanjoki*.)

In the last ten years a change has come over the rites of Matsuri, and that one which is called the Rinji-Sai, or temporary Matsuri, has been created. A few months before this festival takes place, a placard on a wooden board, notifying to the public the time and the place appointed for the new Rinji-Sai, is posted on every bridge and in every street, in the same manner as is done by the Buddhist Kaichō. At the Rinji-Sai, as well as at the Kaichō, indeed, the image of Shaka renews its brightness by the offerings of the cash of the Tokio people; and Amanosakahoko (an ancient spear revered by the Shintō sect, and now shown in the Matsuri in Ueno) has its heavy rust cleared away by presents from the Eastern provinces!

In the middle of the new shrine, before which a Rinji-Sai takes place, a sacred *gohei* is placed, a *sakaki* (a tree) stands on the left, while a flag of brocade flaunts on the right, making together quite an imposing appearance. Before these sacred articles, a pair of *tai*, and various vegetables are presented. Also, candles as numerous as stars are lighted, and countless *mochi* are heaped together on one side.

At the entrance to the temple, charms and consecrated *saké* are sold by individuals clad in ceremonial dresses, while drums are beaten as loudly as thunder, and cash fall in the collection box as plentifully as rain.

In one part of the shrine there is an old venerable looking mirror, placed on a special stand raised above another; and here a Shintō priest, attired in robes of office, takes his seat, and begins to preach about "veneration for the gods and love of one's country," while old folks in easy circumstances, little school boys, bantos, clerks, firemen, and farmers, take their seats in the building. The preacher, shaking a *gohei* in his hand, says slowly:—"Hear, brethren! Our Nippon is the holiest of all countries, because it is reigned over by the gods themselves! Now, when Izanagi and Izamani, our god and goddess, standing upon the bridge of Amano-uki, having stirred up the mass of chaos, with amano-nuhoko, (a spear) took the weapon out, the water which dropped from the point of the spear congealed and formed an island, shaped like the rush plant: hence it was named Unakoro-jima. Here the god and the goddess settled and created lands, mountains, rivers, and all creatures. This was the origin of the existence of our country. The god and the goddess had a daughter named

Amateras-omi-Kami, who afterwards reigned over the world at Takamagahara, but disgusted at the wild behaviour of her brother Sosano-Nomikoto, she shut herself up in Ama-no-iwato. Thereupon darkness came over the universe: so many gods and goddesses assembled before the rocks, in which the reigning goddess concealed herself, and danced sacred dances before a holy mirror, and the goddess opened the door of her cave to see them; and thus light was restored. This mirror is the very one which I have just spoken of. Come nearer and worship it!"

"Well," recommences the preacher after a short pause, "Oanamuji-no-Mikoto, and Suku-nahiko-no-Mikoto, during their reigns, greatly improved the country, loving the people, clearing away evils, and curing diseases, so that this country became rich and peaceful, with the unchangeable descendant of the ancient gods reigning as its sovereign. It is the gift of Amateras, that you live in happiness and bounty, therefore you must venerate your gods and love your country! When the ambitious Mongols invaded the western part of our country, the gods sent violent storms and destroyed all the invaders' ships. Also, when the Empress Jingo commanded in person an expedition into Corea, the mighty gods sent down their angel troops and annihilated the hairy foreigners. Oh! great is the power of the gods! Brilliant is the glory of our nation! Remember, your parents are the very descendants of the gods, and your dwellings occupy a part of the Empire; therefore, if you do not respect your parents, you do not venerate the gods, and if you neglect your work, you do not love your country. Amateras is watching your actions, and is sure to bestow rewards on the good, and to inflict punishment on the wicked.

"Be faithful to the religion of the holy country, and call upon Amateras-Omikami, whenever you are in affliction, and be sure her providence will come to your aid, and all the devils, which may come to tempt you, will flee away. But remember you must never say a Buddhist prayer!"

As soon as the preacher concludes, the loud voices of groups of the old women, rubbing their rosaries, are heard repeating *Namu amida butsu* (a Buddhist prayer) and earnest *Namumio horengekio* rise from the groups of old men, clasping their hands. A young fellow pulls the sleeves of some of these devout ones and says warningly:—"Why don't you say 'Amateras,' as instructed?" "Oh! it is all owing to the unseen help of Niorai," exclaim the old souls, "that we hear such a beautiful sermon." "You still talk about Niorai," says the other: "then you cannot escape the wrath of the gods, who will inflict punishment upon you, since you don't venerate them, and you will soon be blind and deaf, and your souls will take flight to Takamagahara, before long." Terrified at this, the old creatures recite their Buddhist prayers more loudly and earnestly than ever.

Thereupon the displeased preacher remarks, "Niorai is a difficult thing to deal with, for when I preach familiarly to its disciples, they blaspheme, and when I keep away from them, they increase in number."

The *Saikio Shinbun* says that the circulation of the principal Tokio newspapers is as follows: *Nichi Nichi Shinbun*, 10,080; *Hochi Shinbun* 8,500; *Choya Shinbun*, 4,580; *Akibono Shinbun*, 3,750; *Yomiuri Shinbun*, 19,800; *Yeiuri Shinbun*, 7,600; *Kanayomi Shinbun*, 5,300; *Sakigake Shinbun*, 2,500; *Meikoku Shinbun*, 900.—*Hiogo News*.

TORTURE IN KIUSHIU.

(From the *Nichi Nichi Shinbun* of the 4th Aug.)

Shall we do right in crediting foreign disputants with accurate knowledge? Or is their knowledge not worth our notice? We shall decide the question by proving a fact. Our readers! Please trouble yourselves to recall to mind the paragraph which appeared in the *Nichi Nichi Shinbun* of the 9th June, to the effect that 198 of the political prisoners had been released on the responsibility of others! A writer in the *Japan Herald* published a mistranslation, saying that 198 prisoners had been examined under torture, and spoke evil against our laws. So we sent a letter to the editor without losing a moment, stating that *sekifu* "to place in another's charge," did not mean torture. This letter was published in the *Herald* and *Nichi-Nichi Shinbun* of the 11th June.

How obstinate the *Herald* writer is! Instead of reading *Sekifu*, he read *Semetsuke*, and so arrived at the translation "torture." In order to cover his faults, he said that, although the Japanese Government had abolished the use of torture for the purpose of extracting confession, and ordered that verdicts in criminal cases should be given on the evidence alone, no definite notification of the abolition was issued; and, thereon, he turned the point of his pen against us. But, as we very well knew that torture was not employed in any of our judicial courts throughout the country, we did not want to discuss the matter vainly any further; and the editors of both the *Japan Mail* and *Tokio Times* bore witness to the correctness of our view.

Now our Government has issued regulations, for dealing with prisoners in the temporary judicial courts in Kiushiu, which are comprised under four articles: release, release on bail, confinement, and imprisonment. Further the use of torture is allowed "only" in the examination of political offenders. These regulations were first published in the *Hochi Shinbun* on the 1st instant; and we reproduced them in our next issue. But we endeavoured to ascertain whether they had really emanated from the authorities, before expressing any opinion; refraining from comment until the fact was beyond dispute. The writer in the *Herald*, considering that he had a good chance to take revenge upon us, published the following article in his paper on the 2nd.

(Here follows a translation of the short paragraph in the *Herald*.)

A writer in the *Japan Gazette* also expressed the following opinion on the same day.

(Here follows a translation of the *Gazette* paragraph on the subject of the recently issued regulations.)

They published such articles, filled with insolent and disgraceful terms, and spoke evil against our government, boasting of their own freedom of publication. How can we refrain from anger at such insults? We are not very much astonished at the obstinacy of the *Herald* writer, who does not know the Chinese characters and the law terms of our language, but we are astonished that, in reading, his eyes are not employed well. If the writers take the trouble to understand that torture is used "only" in the Kiushiu Saibansho in the examination of political prisoners, they will very easily understand that no torture is used in any other cases of examination. They are dull to understand the writings of another, but very sharp in exposing the mistakes of others. If the use of torture is found to be continued in the Dai-shin-in, Joto-Saibansho, or provincial Saibansho, they might talk as mentioned above.

The *Herald* writer still imagines that the native papers are submitted to the censorship of the authorities before their publication, and that all matter which appears in the papers must be correct. Sometime since, when the insurgent troops were very powerful, and the papers were publishing idle rumors tending to excite the people, the Government ordered the Police Department to examine newspapers previous to their publication; but this censorship ceased after the Kumamoto garrison was relieved.

Now, look calmly upon what Japanese writers say. We have said that it is rumored that the use of torture is allowed, but not that it had been publicly ordered by the authorities. Thus it is evident that we ourselves had no confidence in the rumor. What is the cause of the ill-will of the foreign writers who write so wickedly against us? On the one side, they sully the honour of Japan, and on the other excite other foreigners to hate us. Very bad must these writers be to try to break the friendship existing between Japanese and foreigners.

But the use of torture is of course not right; and, as we are much distressed at finding that foreigners speak evil against us, we are very happy to find that the rumor is false. If we can clear away all distrust on the part of natives and foreigners on the subject we shall not mind transgressing the press regulations.

DECLINE OF THE SHIZOKU.

(From the *Choya Shinbun* of the 7th August.)

THE shizoku, who used to be supported with rice without cultivating the land, and dressed without working a loom, and who drank the valuable sweat and ate the flesh of the common labourer, have been deposed from their station by the changes of time. Their pensions have been decreased through gradual alterations, and have at length been converted into government bonds. Very fortunately for them they have realized their very natural desires of freeing themselves from the reproaches of the heimin, who spoke of them as dependants or hangers-on, and have attained an honourable position of independence. But if their supplies, derived from the Government or heimin, shall at any time suddenly cease, and they be obliged to sustain themselves by their own labour, their condition will be as sad as that of a dog which has lost its master, or of an infant which has lost its kind mother. How many men of the rank of shizoku would be able to maintain their parents, wives, or children in a good position in future? They would not perhaps refuse to cultivate land for their maintenance, in spite of the heat. But how can they do so without land? Well, then, can they not turn their attention to mercantile business? How can they do so with their small capital in public bonds? The shizoku's families number more than 500,000. One-twentieth of them could hardly maintain themselves by trading or farming. How then are the remainder to maintain themselves in independence. According to our opinion, those shizoku who are employed in various government departments and the fu and ken are about 100,000; and the policemen in Tokio, in time of peace, are about 6,000. Besides, each fu and ken is estimated to have 500 policemen, numbering 18,000 in all. Nine-tenths of the Government employes consist of shizoku; and the number of those thus provided for is not more than 110,000. Those who are fortunate enough to sustain themselves by serving the Government as officials or police, or kucho or kocho, and by farming or trading, can be only about 200,000

in all. The rest, numbering 300,000, can in the future have no means of sustenance. Is not this wonderful?

To our great distress we have heard a rumour that the wives and daughters of shizoku in a certain ken have had to betake themselves to prostitution to keep themselves from starving. We have already made some remarks on this subject. Information, which we have recently received, states that most of the jinrikisha men in the South-West are shizoku, who now draw jinrikisha for those whom the poor shizoku formerly looked down upon as their servants or slaves. Their hands, which are cunning in the art of fencing, can otherwise earn no livelihood for them. Thus they keep body and soul together with great difficulty, acting in the place of horses or oxen. Who can avoid feeling sorrow for them. But even he, who maintains himself by drawing jinrikisha, is somewhat better off than others, who were foremost among the shizoku in past years. These latter have nothing to do, and thousands of poor men, having nothing to eat, will appear throughout Japan in the course of time. Will this not be the climax of distress?

Some trading societies in Tokio have positively decided by their rules that none of those who have become heimin, through relinquishing their rank of shizoku, shall be employed in their establishments. And should a shizoku obtain a situation through an Inquiry Office, he will not receive as high a salary as one of the heimin. This arises from the reason that the shizoku, who yet bear the sounding title of "Tonasama," seem to find much trouble in work or moving their limbs for the performance of labor. Thus, any newly made heimin may be very easily distinguished from the original heimin, however closely he may resemble the latter in his dress. The shizoku can not stand of themselves, and they are put to shame by heimin. Who will not feel pity for them?

Alas the shizoku have been taught the art of fencing and the use of the spear from their birth up; and they can talk of nothing but the condition of the country. Men of such a class will find it hard to pursue the business of traders or farmers, to which they are brought by the changes of time. They will meet a thousand difficulties and troubles without knowing how to overcome them. A man who has lost his property in his struggles to sustain existence may yet have some other chance to become rich. But if he spends his time in sloth he will fall from bad to worse; and such is the fate which is impending over the heads of the poor shizoku. Is this not fearful?

NIPPON NOTES.

THE *Hochi Shinbun* publishes the following items from the census, taken on the 1st January, of the 7th year of Meiji (1874).

Kozoku (members of the imperial families) 32. Kuwazoku (nobles) 2,891. Shizoku (high class of samurai) 1,883,265. Sotsuzoku (low class of samurai) 7,246. Buddhist priests, including their families and disciples, 198,435. Shinto priests 8,914. Buddhist nuns 7,680. Heimin (common people) 31,514,841. Population of Saghalin 2,374. Total 33,625,678. On comparison with the census of the previous year (1873) the males are found to have increased by 158,790, and the females by 166,211. Total increase 325,003.

THE prospects of the rice crop in the Island of Kiushiu, especially in Saiki, Bungo, and Tomitaka, Hiuga, are good, the weather being very favorable there.

THE *Mai Nichi Shinbun* says that an International Exhibition will be held in the Ueno Gardens in the 15th year of Meiji (1881.)

A BANQUET has been given in honor of Mr. Whitney, an instructor of the Commercial School in Kobikicho, Tokio, by Kusumoto, Chief of the Tokio-fu.

JINDAI, Chief Editor of the *Toyo Kiji Shinbun*, has been condemned to be imprisoned for one year and fined 100 yen, for having violated the 12th article of the newspaper regulations.

A TELEGRAM from Mr. Fukushima, Japanese Consul in Amoy, dated the 19th ultimo, states that about one hundred people die there daily from the effects of cholera.

THE 1st "newly enlisted" division, consisting of 5,000 shizoku, commanded by Prince Higashi Fushimi-no-Miya, left Kobe for the seat of war on the 23rd ultimo. When they first embarked on board the steamer in Yokohama, about seventy of them began to quarrel among themselves. When the steamer was off the coast of Hamamatsu, their dispute had become serious, and when they landed in Hamamatsu they fought. Five or six men were killed or wounded. The combatants, to the number of seventy, have been brought back to Tokio.

THE *Mai Nichi Shinbun* states that the Mitsu Bishi Company has purchased the British steamer *Lotus* for \$210,000.

LARGE quantities of silk are being brought from the various provinces to Yokohama; but only small purchases are made, and those at low prices.

On the 25th ulto. 106 newly enrolled policemen arrived from the Fukushima ken, and 234 from the Awomori ken.

THE trial of the five political prisoners, who were arrested in Osaka, has commenced before the Judicial court in Tokio.

THE second "newly enlisted" division has proceeded to the drill ground of Narashino in Shimosa.

SOME rich farmers in the northern provinces are now considering a project for a railroad between the coast of Tamba and Kobe.

On the 16th ultimo a fire broke out at the arsenal in Hakodate and caused an explosion of some gunpowder. Five men were wounded, and the building was burned down.

At 10 a.m. on the 21st ultimo, the Italian Minister, accompanied by four naval officers, presented himself at the Imperial Palace in Kyoto. The officials of the Shikibu-Rio, in Court dress, led him to an inner room, where Samejima, Vice Minister of the Foreign Office, and To, President of the Shikibu-Rio were waiting. The latter official led the Minister into the presence of the Mikado, who received the Envoy's credentials. On the same day Her Majesty the Empress admitted the wife of the Italian Minister to an interview. At 5 p.m. the same day a banquet was given to the Ambassador at the Palace of Katsura, where Their Excellencies Sanjo, Higashi Fushimi-no-miya, Okubo, Ito and many others were present.

A STRONG gale swept over the Shioya district in the Tochigi-yen on the 21st July. Heavy storms of rain and hail damaged the cotton and other crops. Many houses and trees were destroyed.

MR. IWANE, editor of the *Awaji Shinbun*, has been condemned to 20 days' imprisonment and a fine of 15 yen, for having published an offensive article in his paper No. 7.

SOME days ago Mr. Narahara, Karei of the Shimadzu clan, resigned his post. The reason of his resignation is not known.

THE two following notifications have been issued by Sanjo Saneyoshi, Prime Minister, to In, Sho, Shi, Fu, and Ken:—

"As H. M. the Mikado returns to the East, the Anzaisho will be closed, and all petitions and other communications to the Government must be addressed to the Daijo-kuwan in Tokio, as before the removal of the Court to Kyoto."

"It is hereby notified that on the return of H. M. the Mikado, the Tsuito Rikugun Jimusho (Bureau for affairs connected with the insurrection) will be established in Tokio."

(From the *Hochi Shinbun*)

Notification No. 68-B.

To Fu and Ken.

It is hereby notified that the expenses incurred, in the case of the shipwreck of any British vessel, in the rescue of those on board, will be divided according to the following schedule. The transaction of affairs, in connection with such rescue, will be the same as heretofore.

MAYESHIMA MITSU,

*Shoju of Naimu-sho,
Acting for the Home Minister.*

25th July, 1877.

When any British vessel happens to be wrecked on the coast of Japan all the expenses incidental to a visit to the spot by the local authorities, police, *kucho* and *kocho*, and for escorting the passengers, and other miscellaneous expenses incurred on the part of the Government, will be borne by the Japanese Government. Those expenses which will be paid by the shipwrecked people or the British Government, are as follows:—

- 1.—The wages of coolies employed in rescue, and pay for small boats and for the salvage of merchandize sunk.
- 2.—Wages for persons employed in watching the ship and cargo.
- 3.—Expenses for firewood, charcoal, candles, and building a watch house.
- 4.—The cost of food, clothing, and other things supplied to the shipwrecked people.
- 5.—Wages of an interpreter in case none of the authorities present can speak the English language.
- 6.—The travelling expenses of the shipwrecked to some open port, and for sending their effects thither.
- 7.—In case of drowning, for searching for the bodies.
- 8.—The expenses of interring the drowned, and tending the wounded.

THE *Hochi Shinbun* publishes the following items in reference to the condition of the Kochi ken (Tosa.)

All is quiet in this province, and the people in Kochi wonder when they read the newspaper remarks about the high excitement prevailing in the Kochi ken. The shizoku and heimin have formed many societies, according to their own particular views. Out of these the three societies of Rishshi, Seiken, and Chiuritsu, are the most powerful and influential. Some months ago, their members were all of one mind: then the three societies formed but one body. But they differed in opinion on the subject of memorializing the Government, and so were divided. The idea of the Rishshisha Society is to establish a representative assembly; that of the Seikensha to restore their former power and influence to the samurai, to return, in fact, to the feudal system; and the Chiuritsusha shares the views of the present Government. The first is the most powerful of the three; and the last consists of only about one hundred members. Various

other societies hold the same opinions as the Rishshisha. In June, 1877, the Rishshisha Society commenced to hold public meetings, where the members speak boldly about the rights and freedom of men, before large crowds composed of all classes. Hundreds of listeners attend these meetings, which are held twice a week. Therefore, in the absence of extensive accommodation, it has been decided to limit the number of the audience at any one meeting to 1,000 people, who are admitted by ticket applied for the day previous to that of assembly. Itagaki, ex-Sangi and President of the Society, attends each meeting himself, and impresses on the members the necessity of being moderate in their speech. Many government spies are said to be in the province, watching the movements of the associations. Muramatsu and Fujiyoshi of the Rishshisha, who were arrested in Osaka, have no influence, and their orders are not obeyed by the others. —As no steamers are running on the line between Osaka and Shikoku, the tea and silk dealers are much inconvenienced through being unable to send away their produce; and, of course, nothing can be imported.—Some of the shizoku maintain themselves by drawing jinrikisha; but as a general rule people of their class are well off and dress very nicely. Those shizoku, who had pensions of 300200 or koku of rice during the daimio's rule, live in large and splendid buildings. Flesh, vegetables, and fish abound in Tosa. Shizoku are easily distinguished from the common people by the difference of their language.—For the most part, people in Tosa are followers neither of Buddhism nor Shintoism. A few temples, belonging to one or other of those two religions, are found here and there. The deified ancestor, however, of the ex-lord Yamanouchi, is extensively worshipped, and temples, large and small, in his honor, are numerous throughout the Kochi ken.—The natives are very fond of dogs, which are to be found in almost every house. Notwithstanding the prohibition of such sports by the provincial law, dog fighting is a favorite and common amusement in Tosa. On a plain to the north of Kochi city dog fights take place every morning. Some dogs are worth from fifty to one hundred yen.—The principal productions are tea and paper.—Tea-dealers are introducing the Chinese style of preparation into their industry. Coral of good quality is taken off the coast of Tosa, and is generally sent thence to China.

THEIR Excellencies Sanjo, Daijo-Daijin, Ito, Sangi, Kokudaiji, Minister of the Imperial Household, and many other high officials returned from Kobe in the *Hiroshima-maru*.

THE *Hochi Shinbun* says that a telegram states that on the 28th ult. an imperial force stormed the castle of Takaji (Hiuga) and remained in possession.

ACCORDING to the *Choya Shinbun*, General Saigo estimates that the insurgents can hold out for two months longer; while General Yamagata thinks that four months will still be required to bring the insurrection to a close.

THE editor of the *Kofu Shinbun* was condemned to a fine of 12 yen on the 27th ulto.

FRUIT this year is said to be very plentiful throughout the country.

It is rumored, says the *Choya Shinbun*, that one battalion of troops will be stationed in each of thirty-six places throughout the country, after the complete suppression of the insurrection.

THE editor of the *Kofu Shinbun*, in Kofu was fined twenty yen on the 27th ultimo.

THE earthquake shock, which was felt here on the 25th ultimo, was much more severe along the coast of Shitachi, where, the native journals say, many buildings were thrown down or unroofed by the force of the shock.

On the 12th ultimo Shimadzu and his son, who have been for some time past in the island of Sakurajima, returned to their residence in Kagoshima.

A TELEGRAM from Numadzu on the Tokaido, sent at 3.35 a.m. on the 29th ultimo, states that, owing to the heavy rains of the 26th ultimo, the river Kise-gawa overflowed its banks; and five houses and the Kise bridge were destroyed. Three lives were lost. The river Karino rose about thirteen feet.

GENERAL SAIGO left Osaka for Kumamoto on the 27th July.

A WATER riot has broken out among the people of the agricultural class in the villages of Asada and Neimen, under the jurisdiction of the Osaka-fu. The farmers in Neimen, which is situated on the upper part of the river Toyoshima, drew off the water into the rice-fields belonging to their villages. Those in Asada on the lower part of the river have repeatedly insisted on their right to share the water for their own rice-plants, which were dying for want of water. The final result was that about 100 farmers in Asada, armed with bamboo spears and spades, assembled on the 24th ultimo, and marched for the village of Neimen, where about 300 men were waiting to receive them. One of the district officials in Asada was killed on the spot, and another was wounded. Many of the rioters on either side were more or less badly injured. About 100 policemen interposed between the combatants, and at length persuaded them to return to their homes.

On the 26th July H. E. Kuroda left Kobe in the *Genbu-Maru*, and arrived in Kagoshima on the 28th. The troops in Tokio, belonging to the Kaitakushi, will shortly, by his orders, be despatched to the South-West. General Saigo has landed in Kagoshima, and proceeded thence to Kokubu in Osumi.

ACCORDING to a letter sent to the Government by Matsumoto, Chief Surgeon in the Imperial Army, 3,734 wounded soldiers were treated at the Osaka hospital during the four months between March and June last inclusive. Out of these, 128 died.

THE *Hochi Shinbun* states that the examination by torture of political prisoners is allowed only in the temporary Courts of Justice in Kiushiu.

The following orders for the treatment of prisoners have been promulgated.

Art. 1.—Prisoners in confinement under the following charge will be released. 1.—Those who have entered the imperial lines by mistake, and without providing themselves with a passport. 2.—Those who have drawn jinrikishas for the insurgents, or have worked or acted as guides for them. 3.—Those who have sold food or other things to the rebels. 4.—Those who, after investigation, have been found not guilty of the charges laid against them.

Art. 2.—Prisoners of the following classes will be placed in the charge of private individuals: 1.—Those who under compulsion by the insurgents have acted as spies, and have themselves, of their own motion, reported the matter to the imperialists. 2.—Those who, under compulsion, have supplied the rebels with food and arms. 3.—Those who, through fear, have associated themselves with neutral societies; but have not worked in favor of the insurgents.

Art. 3.—The following will be subjected to simple confinement: 1.—Those who under compulsion have acted as guides to the insurgents, and have furnished information relative to the imperialists. 2.—Those who have supplied the insurgents with food and arms. 3.—Those who have joined the rebels but have not served them in the field.

Art. 4.—The next mentioned will be rigorously imprisoned, namely: 1.—Those who have willingly rendered to the cause of the insurrection any services mentioned in the former articles. 2.—Those who have joined the rebels, and carried arms for them in the war. 3.—Those who, during the disturbances, have set houses on fire, and have incited the insurgents and endeavored to raise their courage. 4.—Those who have collected bodies of men to aid the insurrection and have been their leaders. 5.—All members of the Shigakko in Kagoshima, and all those who have marched to the fields of battle.

THE *Hochi Shinbun* publishes the following, said to be the confession of Ota, a rebel, who came as far as Shimonoe by boat, disguised as a merchant, in order to examine into the condition of the imperialists. But, unfortunately for him, he was discovered and arrested:—

“By order of the insurgent leaders, paper-money, to the value of one yen each note, is manufactured at Hirose, Sadowara, and has been current since the 25th June. Kirino Toshiaki lives in what were the public buildings of the Miyazaki-ken, and Saigo is said to be at the Taizenji temple in Shimogita. I have not seen the latter for a long time. Gunpowder and arms are manufactured at Hirose. Kirino is constantly going and returning between Miyazaki and Hirose. A hospital is established in Takaoka. About 1,000 soldiers are stationed in the city of Miyazaki. Out of these only 300 are shizoku, and the rest are farmers and merchants newly enlisted. Most of the rifles are Enfields. Miyazaki is guarded by about 300 newly recruited men. A few days ago 1,500 soldiers were enrolled in Nobeoka. 200 of them were sent to the Bungo road. 500 men, who lately occupied Hosojima, have been sent out on the same road. The harbour of Minidzu is watched by 200. Some days past it was bombarded by a man-of-war. But as our soldiers did not return the fire the ship sent some marines ashore in a boat. They were taken prisoners on landing. The coast is guarded by about 1,000 men. But as Miyazaki and its vicinity are occupied by the badly armed and feeble of the rebels, it would be very easy for the imperial army to capture it. Many would be much pleased to lay down their useless arms before the imperialists, having been obliged by force to join the insurgents.”

The following statistics of the numbers of wounded brought to the Osaka, Nagasaki, and other hospitals, between February last and the 7th of July, have been published in the *Saikio Shinbun*.

	Wounded.	Died.	Discharged.
Officers	132	10	36
Petty Officers	459	21	69
Soldiers	2,336	168	290
Police Officers	87	5	40
Policemen	396	26	183
Physicians	1	1	—
Coolies	39	4	10
Servants	7	—	3
Gunzoku	13	—	7

SHIMADZU has distributed 10,000 yen among the poor and homeless in Kagoshima.

THE number of civil cases heard in the Tokio Saibansho from January to June last was 1,167.

It is said that the Lighthouse Department will be made a branch of the Home Department.

THE *Mai-nichi Shinbun* says:—

The citizens of Osaka deal generally in a niggardly and mean manner, as they did in olden times. Notwithstanding the order from the Osaka-fucho, no private individuals decorated their houses with flags and lanterns on the departure of His Majesty the Mikado on the 28th ultimo. They are much discontented, and murmur that, when the Mikado first visited his old capital, he distributed large sums of money among the citizens, but did not give even half a *zeni* to the people on his visiting Osaka.

H. E. KURODA returned to Kobe from Kagoshima on the 1st instant.

The damages sustained by the *Asama-kuwan* have been completely repaired.

This year silk-worms' egg cards are very plentiful in the interior. But no extensive operations seem to be likely; and producers are embarrassed as to how they shall dispose of their cards.

THE *Akebono Shinbun* remarks that a large female school house, in European style, was constructed at Sapporo and that two American ladies were employed to educate the female pupils. It progressed wonderfully well, but, to suit the convenience of the Agricultural Department, the school has been closed and its building is now used for the purpose of making nets, which is an extensive concern in the island of Yezo. The operation of manufacturing leather according to European and Chinese customs is also progressing; and the male portion of the population of Saghalin, after that island was exchanged with the Russians for the Kurile islands were taught to manufacture leather; and females from the same island were instructed to weave. The natives of Yezo were originally well skilled in working a loom. A quantity of *atsushi*, weaved by them, is expected to be exhibited in the Home Industries Exhibition in Ueno, Tokio. The cultivation of vines is progressing, and 30,000 *tsubo* of land are planted with beautiful vines for the purpose of manufacturing wine. Beer has already been exported twice to Tokio. It is manufactured according to the German mode.

A LETTER from the province of Shimosa, sent to the *Choya Shinbun*, contains the following:

In the pasture ground of Shimosa there are about 2,000 sheep. During last year 600 lambs were reared. It is expected that this number will be increased by a flock of 8,000 from China, which has been purchased by Mr. Kadoma. The land is cultivated according to the European system of farming, oxen or horses being employed to plough the ground. This year hundreds of oxen have died from some pestilential disease.

A PADOGA of several stories, and about 160 feet in height, has been recently built on the holy mountain of Koya-san, Ki-i.

His Majesty the Mikado is expected to visit the Paper Money Section of the Finance Department on or about the 15th inst.

It is rumoured, says the *Hochi Shinbun*, that the Government is going to make a fresh issue of paper money to the extent of 40,000,000 yen.

DR. DOENITZ, in the service of the Police Department in Tokio, will shortly be sent to the Nagasaki hospital, to take charge of the wounded policemen there.

THE *Mai Nichi Shinbun* states vaguely that an epidemic has broken out at Hatsunicho and Miharuchō, Ota, Yokohama, and that two or three persons affected have already died.

THE first number of the *Osaka Shinbun* appeared on the 3rd instant.

ON the morning of the 7th a fire broke out at Higashihama, Takamatsu, Sanuki, which was not extinguished until twenty houses were destroyed.

H. E. KURODA, Sangi, returned to Tokio, with his subordinate officials, on the 5th inst.

THE man-of-war *Riujo-kwan* and two others, which were then anchored in Kagoshima, left for Nobeoka (Hiuga) on the 28th ultimo.

A MEETING of the Gen-ro-in has been held; and the matter of discussion is said to have been the treatment of the insurgents.

TWO men have been tried and shot by the imperialists. One, Fukano, who had been employed by the Government, was captured by the rebels at the battle of Tori in May last. In July he was captured, in the act of serving as a spy, by the loyal troops. The other, Nagai, a Kaitakushi student, broke into the house of a shizoku in Kumamoto, and stole thence, by force of arms, 650 yen.

PRINCESS Seikan-in-no-Miya is on a visit to the hot springs in Hakone.

THE Buddhist priests of the Higashi Hongan-ji monastery have collected 80,000 yen for the relief of the poor in Kumamoto. This sum will be applied to the establishment of tea plantations, on which the persons for whom the charity is intended shall be employed.

THE imperial head-quarters have been removed from Kagoshima to Miyako-no-jo.

THE shizoku and heimin in the Yamaguchi ken, raised for service on the part of the Government at the seat of war, number 22,000.

A CERTAIN Hayazaka in the village of Furukawa, Miyagi ken, was condemned to hard labour for 40 days, for having buried his dead son according to his request with Christian rites; but his punishment has been commuted to a fine of three yen.

THE *Naniwa Shinbun* says:—Kirino Toshiaki appeared at the battle field of Hatagaeshi at the head of 3,000 picked soldiers. A numerous imperial army attacked him from three directions and he was obliged to retreat as far as Mikumitoge, where his troops were dispersed after a desperate resistance. The imperial victors found many rebel dead in the forts they captured. Among the rest, a stout man, who had been wounded on his face and body, was found to have committed *harakiri*. It is not certainly known who he was; but it is supposed that he was Kirino.

THE following figures are taken from a table of imports and exports, from and to five ports, during June last, published by the Finance Department.

Value of exports.....	yen 1,531,850
Duty	58,880
Value of imports.....	2,378,491
Duty	86,170

Thus the value of imports exceeds that of exports by about 796,686 yen. Besides, 441,730 yen worth of gold and silver were sent out of the country, while only 86,000 yen were brought in.—*Nichi Nichi Shinbun*.

THE S. S. *Massilia* has been transferred at Kobe from the British to the Japanese flag, having been bought by the M.B.M.S.S. Co. from the P. & O. S. N. Co. The price, we understand, was \$49,000.—*Hiogo News*.

CORRESPONDENCE.

THE ECHO DU JAPON AND REUTER'S AGENT.

To the Editor of the *Japan Gazette*.

DEAR SIR:—I have of late noticed the journalistic species of sparring which has from time to time taken place in the columns of your newspaper and that of the *Echo du Japon*, and which has had reference to the fact of the latter journal having discontinued to subscribe to Messrs. Reuter's subscription telegrams; and I can assure you that, while I have on more than one occasion observed my name in print in the French newspaper, still I have studiously tried to avoid entering into public controversy by replying to any remarks made by the Editor or his satellites; but, much to my regret, I at last find myself forced to break silence to refute the statement which appears in the following paragraph contained in the issue of this morning's *Echo*, and which reads thus, and is quite devoid of truth:—

“Désaccord que, paraît-il, il a eu depuis avec d'autres souscripteurs.”

Having now disposed of the above, to put the mildest expression, misstatement, I would remark that the *Echo* goes on to say (*plusieurs*) several, French subscribers to Reuter's telegrams complain that no news respecting events passing in France is contained in these telegrams. Will he kindly inform me who these *plusieurs* are; though I notice he has had a certain amount of cunning, inasmuch as, not having stated that they are in Japan, the *plusieurs* (unless he considers three, *plusieurs*) might be at the Antipodes. Certainly they are not in Yokohama or Yedo, my *plusieurs* French subscribers consisting of H. E. the French Minister, one French Bank, and one French Mercantile House. Perhaps now the enlightened Editor, if not too much trouble, will be good enough to inform himself, and afterwards the public and myself, through what source intelligence of such stirring events as the French Communist Rebellion &c., was conveyed chiefly to the East. I am inclined to think by Reuter's Company; and as, therefore, “bad news always travels fast enough,” French subscribers to Reuter's Telegrams, whether in Japan or the Antipodes, are I am sure content to think that “no news is good news,” and that the receipt of such sensational information as reached this in bygone days, while possibly contributing to the sale of the French newspaper, did not tend to gladden the feelings of many of its supporters. Thus, therefore, while telegrams issued by this Company in Yokohama are inserted by the *Echo du Japon* in its columns, though that journal is not a subscriber I shall myself, like doubtless all true Frenchmen, continue to hope that nothing of too sensational a nature may transpire in France; as, should such occur, I venture to believe that neither the subscribers to Reuter's telegrams, nor even those to the *Echo*, will have to cry out long that the news is not transmitted to this country.

I am, Dear Sir,

Yours truly,

E. L. B. McMAHON,

Agent, Reuter's Telegram Company.

Yokohama, July 27th, 1877.

To the Editor of the *Japan Gazette*.

DEAR SIR:—Having perused the comments contained in the *Echo du Japon* of the 31st in reply to my letter in your issue of the 27th

ultimo, it is with astonishment and regret that I have observed the following paragraph:—

“Nous aurions dû dire que c'était avec une autre personne qui désirait s'abonner aux télégrammes Reuter, et à laquelle il a cru devoir demander une souscription triple de celle payée par les autres, qu'il n'avait pu s'entendre.”

I beg to remark that the statement contained in the above is as entirely devoid of truth as was the other one, in reference to which, when the Editor was called to account for it, he contented himself by writing to the effect that, in making the assertion he had made, perhaps he was not absolutely “in the truth.”

What will the Editor now have to say in palliation of his second public misstatement? Most probably, if he has any excuse, it will be one similar to his last, and will not prove to his readers the veracity of statements contained in his journal, nor hardly do more than provide amusement for himself.

I am, Dear Sir,

Yours truly,

E. L. B. McMAHON,

Agent, R. T. Co.

No. 32, Yokohama, August 2nd, 1877.

PRECAUTIONS AGAINST INFECTION.

To the Editor of the *Japan Gazette*.

SIR:—A few days ago a telegraphic announcement by the Japanese Consul at Amoy warned the Government of Japan of the prevalence of cholera there: quarantine regulations were at once, and perhaps naturally enough, suggested for consideration by the foreign newspapers; and the English Minister sought for further information about the condition of affairs at Amoy, presumably with a view to obtain definite ground for action should that be required. The reply received seems sufficiently vague; and it is hardly likely that hearsay evidence, from however high an official living in Hongkong, should be so reliable as that of an officer living in Amoy, with special and direct opportunities of knowing what is going on amongst the natives. In a question as important to the 33,000,000 of Japan as to the few foreigners here, it is to be hoped that inquiries will be persisted in till definite facts are obtained. Cholera is now in the East; and has undoubtedly been spreading Eastward, so that the probabilities of its present existence in Amoy are quite considerable. The Hongkong reply seems to doubt not so much the existence of cholera in Amoy as its prevalence or virulence—surely officials ought to know by this time that that is by no means the practical question before them. Cholera may undoubtedly pass from one place where cases have been mild and few, and may then rage most violently in a new and more favourable soil to which it may have been transplanted. British officialdom at all events has already committed itself to a judicious and sound opinion, which I believe expresses the views of most authorities on this subject. In an official memorandum on “Precautions against the Infection of Cholera” drawn up by the Medical Officer of the Privy Council, Mr. John Simon, F. R. S. the following passage occurs:—“When a case of cholera is imported into any place the disease is not likely to spread, unless in proportion as it finds locally open to it certain facilities for spreading by indirect infection.” Then, after enumerating and describing these facilities, the memorandum goes on to say:—“when due regard is had to these possibilities of indirect

infection, there will be no difficulty in understanding that even a single case of cholera, perhaps of the slightest degree, and perhaps quite unsuspected in its neighbourhood, may, if local circumstances co-operate, exert a terribly infective power on considerable masses of population.

I am very far from being an alarmist in this matter; but my work has occasionally brought me into the homes of the poorer people of Tokio; and I somewhat fear that just such "local circumstances" exist now, and that their existence explains the terrible fatality of this disease in Tokio during the epidemic of 1855, where, on the authority of the *Kinse Shiriaku*, 30,000 lives were lost in about one month, while unknown multitudes throughout the country were carried away.

War, such as now prevails at least here, is far less destructive to life, than an infectious disease which is allowed to spread rapidly under favourable conditions.

A despotic oligarchy like that of Japan, which, besides shop-keeping in its various branches, superintends hair-cutting, &c., is under an immense responsibility if it fails to provide, amongst other things, ample sanitary machinery for the prevention of epidemic disease. But to do this effectively would involve a frightful addition to the taxation of a population already groaning under distressing and uncalled for burdens, which an unpopular government could hardly risk to increase. What practical measures have we to suggest, then, to minimise the evil if it should come? I would say, rely upon the educated self-interest—the trained common sense of the community itself. Let the people know the character of the danger, and what are the best means in their own power to avert it; and let them be called on by local unpaid but official visitors to help themselves. A general attention to the wide subject of cleanliness in all its varied aspects, and increased health of the community, would be the almost certain result. A few brief and readable hints too, drawn up by some of the responsible medical advisers of the Government, might be circulated in the newspapers; and, as in British cities when similar danger has threatened, a most valuable corps of educated visitors might be got from the large body of medical students in Tokio. It would be their duty to call systematically on the poorer people, and explain to them the danger of allowing filth to flow into wells, &c. Where special and culpable danger was found to exist, then the austere aid of the policeman might be wisely invoked to carry out alterations or improvements. The danger is real, or I would not have written: the character and course of cholera infection is practically understood; and the means to be adopted for its prevention are, to a large extent, within the reach of all. It does not spread by air; but does readily and rapidly spread by contamination of drinking water, &c., from excretions of cholera patients.

Now, fortunately, the means taken to avoid this alarming disease are perhaps equally useful in suppressing other diseases, such as tape-worm and enteric fever (typhoid), which are often spread in the same way. Cases have occurred in my dispensary practice illustrating this remark, in which for example, the illness of a single patient was traced to a well, into which the putrid filth of a densely peopled compound could be observed visibly trickling. Careful enquiries brought out the sad but interesting fact that deaths from enteric fever (?) were common here, and that in one family some five or six victims had fallen low with the same symptoms. Another illustrative case out of many—one of the most re-

markable I have ever known—occurred to me a short time ago.

A man, complaining of eye disease, was found, when examined with the ophthalmoscope, to have—what is rare enough—an encysted tape-worm in the interior of his eye-ball, behind the lens. The disease had first been noticed eighteen years before; and he had no suspicion as to how he might have got it, nor could he help me in the slightest even to a conjecture. At a second visit he recalled with great interest the fact that, just the year before his eye failed, he had lived in a compound in Shiba where 200 swine were kept (a large place set agoing just when the foreigners came.) He remembered distinctly—my enquiries having directed his thoughts to the subject—that the filth lay always about the well, and that nobody knew then that that would cause any harm. His eye began to trouble him just after that. The whole affair was now cleared up, and the history was henceforth known to be the common one of such cases. The British forces in India have, through astonishing official carelessness, been allowed to suffer to an incredible extent from this cause; but prompt efforts have been made by the medical authorities to alter such a scandalous condition of the potable water used by the troops. Cleanliness is esteemed by the Japanese as a great virtue; but they cannot yet be expected to know the scientific breadth and depth of this one simple word, to which nations more advanced are just beginning to open their minds. In a frivolous age, which pronounces Hegel *bosh*, and yawns over Spencer's preface, it would perhaps be futile to demand consideration of certain parts of the Mosaic code. Nevertheless, the notoriously greater healthiness and longer vitality of the Jewish people, who have had many depressing influences to struggle against, is not without its significance. However, if the facts of modern medicine be rightly read and honestly acted on, the results will not be greatly at variance with the sanitary teaching of that increasingly wondrous old Jew.

The suggestions I have purposely thrown out in so simple and crude a form are at least practicable, and have been already tried with minimum of expense and maximum of benefit. Grave reasons should exist for declining such a course modified as circumstances may require. It would be a greater triumph to the government to intercept cholera in its destructive march than even to be quickly victorious in a civil war; and even if, as may God grant, no such disease should ever seriously threaten these shores, the labor spent will not be thrown away, but must certainly lead to the marked diminution of a preventible fever which, perhaps in the long run of many uninterrupted years, may be quite as extensively fatal as cholera.

Your obedient servant,

HENRY FAULDS,

Medical Missionary
of U. P. Church (Scotland), Tokio.
August 4th, 1877.

NEARLY half the men on board the steamer *Glamis Castle*, which arrived from Yokohama on Thursday morning, are reported sick—twenty-two men out of about fifty—and eleven of them, including the Captain and other officers, have since been removed to the Hospital, suffering from heat apoplexy. Stokers die—far too frequently—in the Red Sea, but we remember no such previous case as this here. Surely some official investigation is called for.—*Hiogo News*.

LAW REPORTS.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Wednesday, July 25th, 1877.

Martin Hallighan, a sickly looking man, was charged with assaulting and threatening with a knife Richard Yeamon, Chief Officer of the British ship *Countess of Kintore*, on the passage from London to Yokohama.

The complainant was examined on oath and said that on the 1st of March at 6.30 a.m. he was washing down the decks by means of a hose, and some of the water went over the boots of the prisoner, who turned round and threw his scraper at him, striking him on the breast. Then the prisoner drew a knife and cut witness on the arm. The two men who were at the pump immediately went to the rescue and threw the prisoner down, took his knife away and threw it overboard. When the Captain came on deck the prisoner was ordered to be put in irons.

In answer to a question put by the accused, witness reasserted that he was cut by a knife.

To the Court he stated that the vessel left London on the 23rd of January. On the 1st of March the vessel was in the tropics. The prisoner was not in a fit state to join a ship when he left London. He did not throw any water over the person of the prisoner, only over his boots. He never had any words with him, and he could only attribute the assault to the fact of the water going over his boots.

Charles Stuart, an able seaman, was sworn, and testified to witnessing the assault on the Chief Officer on the 1st of March. Hallighan happened to turn round when the mate was washing down the decks and saw the hose pointed at him. He then moved on one side and afterwards sat down, and while in a stooping position the mate again pointed the hose at him and some of the water went over his boots. The prisoner then flung the scraper at the mate and afterwards drew his knife. Witness called out to the mate to "look out for the knife," and then went to his assistance. He did not think the mate was cut by the knife. After that the mate told the prisoner to get a grease pot and grease the mast.

John Sawrey was sworn, and gave similar testimony concerning the assault, and said that the mate told Hallighan to take a grease pot aloft; but he was hardly able to take it from the pains in his legs, as he was scarcely fit to crawl about. After breakfast the Captain asked some one if Hallighan was fit to be about without irons; and all hands replied that he was not, and so he was put in irons. For two or three days witness did not see Hallighan, and how long he was kept in irons he did not remember; though he was considered as a prisoner until he came to Yokohama.

To the Court witness stated that he could not say whether the mate was wounded with the knife. He considered that it was for the general safety of the ship that Hallighan was put in irons.

Thomas Norrie, Captain of the *Countess of Kintore* was sworn, and said that on the 1st of March he went on deck between 7 and 8 a.m. and looking up to the main topmast, he saw Hallighan greasing the mast. He called the chief mate and asked the reason of Hallighan being there.

The mate replied that he had drawn a knife on him, and showed a scratch on his arm. Witness said that was a very serious matter, and he ought to have been informed of the circumstance, and told the mate that he had no right to punish the man. Witness then ordered the irons to be got ready and then called the men and asked if they thought Haggan was fit to be at large after drawing a knife to his superior officer, and they one and all answered "no." The man was then put in irons and kept in a side-cabin in the saloon. There were two doors of access to this room, one of which witness caused to be thoroughly secured, and a hole cut in the other so that his victuals could be passed in or anything passed out without opening the door. He was kept in irons for three or four days; and then they were taken off during the day and put on again at night. After a while he began to complain of his wrists being so sore, witness ordered the irons to be taken off except when he was let on deck for fresh air. But after a while even this rigidity was relaxed in consequence of his complaining of illness, and ultimately the irons were left off. He had them on for about a month. Sometimes he got his meals when he was locked up and sometimes when on deck. The whole occurrence was in the log book. The statement was then read and two men stated that they had signed the log, but did not know what it was they put their names to.

Recess till 2 p.m.

On the Court re-assembling the chief officer was recalled and stated that he never illused the prisoner.

Captain Norrie was recalled and said that the prisoner was taken out of his room at least once a week and washed. Water was supplied to him once a week to wash with. He might have had salt water if he had asked. The allowance of fresh water was three quarts per day. The prisoner was in a filthy state before he left the fore-castle. The four months the prisoner was confined was a punishment for drawing the knife. If the prisoner had been well and strong he would have kept irons on him all the time when he was on deck.

The prisoner, who was rather deaf, was asked if he had heard the evidence, and replied that he had not, whereupon His Honour read over the evidence.

The prisoner said that he was suffering from rheumatics at the time of the assault; and that the Chief Officer threw the water over him on purpose. He threw his scraper at the mate, and then drew his knife and stood up, but the other two men closed with him and took the knife away. He was not badly treated after he was put in irons, though he did not get the food that a sick man ought to have got.

His Honour said that it was a pity Mr. Yeamon did not give his evidence more clearly, as he had led the Court to imagine that there had been a scene.

As regarded the whole charge he thought that Captain Norrie had acted too hastily, and had he taken more pains to enquire into the circumstances, His Honour thought that he would not have acted as he had done. He thought that the Captain had exceeded his power and that the prisoner had been more than punished. In regard to wages His Honour declined to allow any to be deducted for the time the prisoner had been confined; and ordered that he should not be punished any more in the same way.

The case was then dismissed.

Before H. S. WILKINSON Esq., Acting
Law Secretary.

Friday, July 27th, 1877.

JOHN HARTLEY v. NISBETT, master of the
British steamer *Teviot*.

The plaintiff claimed the sum of \$140 for damage done to a case of quinine on the voyage from London to Yokohama in the *Teviot*.

Mr. Reddelien appeared on behalf of Messrs. L. Kniffier & Co, Agents for the *Teviot*.

Plaintiff produced the bill of lading, invoices, and other documents in connection with the goods in question.

Mr. Reddelien, in answer to a question put by His Honour, said that he had not filed an answer to the petition. His defence was that the case had been delivered in the same condition as that in which it was received. He admitted the bill of lading produced.

The plaintiff was then examined. He said that on the sixth of June he went to the hatoba and saw the case marked X and 31, with the hoop iron broken in the corners, and the top of the case split. In the presence of the Captain of the *Teviot*, Messrs. Kniffier & Co's clerk, witness' own Japanese shipping clerk, and a Chinaman landing cargo from the *Teviot*, the case was opened and examined. The contents were counted, and 65 ounce bottles of quinine were found. It was the damaged end of the case that was opened, and then the deficiency in the bulk was manifest. The Captain asked for the invoice. Witness then called attention to the fact of three other cases being damaged. They were examined, but finding the damage done was insignificant witness made no claim. After the quinine case had been closed up again, Captain Scott came forward and demanded an explanation from his Chinaman in relation to the landing of a case so damaged. Witness then returned to his office and on the following day sent a letter to the defendants. On the 11th of June the witness received a letter from Messrs. Kniffier & Co. announcing that the Captain would not pay the claim, on the ground that the damage was not done on board the ship. Witness went personally, and demanded payment of the claim, first of Messrs. Kniffier & Co. and afterwards of the Captain, who was leaving port that day, but they both declined to pay the claim. He had imported several thousand ounces of quinine during the year, and all the cases were packed in a similar way to the one in question and all had arrived safely. It was neither necessary nor customary to pack such goods in tin lined cases. Tin lined cases were used only for goods liable to be damaged by sea water. The value of the quinine was \$4.25 per ounce: witness had sold 200 ounces on the 16th of June at that price. He had also sold 400 ounces from \$4.00 to \$4.15.

Plaintiff's Japanese shipping clerk gave similar testimony in connection with the damaged state of the box to that of the plaintiff.

Victor Roehr was sworn and stated that he resided at No. 54, and was employed by Messrs. Kniffier & Co. He recollected the case in question being opened in his presence and the presence of others. One of the hoops was broken; and there was a mark in the bill of lading that the case was insufficiently coopered. When the lid of the case was removed it appeared to be full to the top, but on examination it was found not to be full. The

case was packed in such a manner that no one from a cursory glance could see that it was not full. And from its appearance it seemed as if the case had been shipped in the same condition as it was landed.

To plaintiff witness said that he was not acquainted with the usual method of packing quinine.

Recess till two o'clock.

On the Court resuming its hearing of the case this afternoon,

D. Scott Sen. was sworn and examined. He recollected seeing the case in question. The hoop was broken in one corner and there was a split half way down one board. There was no appearance of any new nail having been put in. The hoop was very dusty and it might have been broken without being forced, and did not appear to have been recently broken.

To plaintiff witness said that a case could be broken open and the same nails used to fasten it again. He did not see the opening of the case but he saw it before. He did not ask the Chinaman why he landed the damaged case.

To the Court witness stated that the case was in the same state when brought on shore as when it was examined. It was an ordinary case and quite sufficient for the value it contained.

Gustav Reddelien, sworn, testified that on the 6th of June he had the same kind of quinine on hand and that up to the 18th of June no higher price than \$3.50 could be obtained. But on that date the Japanese Government purchased some for the army and prices went up.

To plaintiff witness said that he was not aware that the Bills of Lading of the French Company were different to the Bills of Lading of other Companies.

In giving judgment,

His Honour said:—In this case the plaintiff claims from the Master of the steamship *Teviot* the sum of \$140, the value of 35 ounces of quinine short delivery from that ship. It is admitted that the case originally contained 100 ounces and when delivered and opened it contained only 65. It was taken for granted throughout the case that the loss was caused by theft of some one. The defence set up is, (1) that the goods in question were insufficiently packed for goods of such value as quinine. (2) That the contents ought to have been declared so that proper care might have been taken. (3) That the case might have been plundered before it came on board, and that it was delivered outwardly apparently in good order. As to the first ground of defence, sitting as a jury, I find as a fact that the goods were sufficiently packed. As to the second ground of defence, the bill of lading contains a clause that "The owner of this steamer will not be accountable for gold, silver, bullion, specie, jewellery, precious stones, or precious metals, or beyond the amount of one hundred pounds for any one package unless the bills of lading are signed for such goods and the value declared therein." The master has fixed therein the limit of value beyond which he will not be accountable, and it is admitted that the package was not of that value, that it was for value considerably less than £100, and it is not one of the articles named in the exception. The master's own conditions having been complied with in this respect, he cannot complain that something more was not done. I am of the opinion, therefore, that the second ground of defence must

fail. As to the third ground of defence I find as a fact that the case was not delivered in apparent good order. This is abundantly shown by the refusal of the plaintiff's servant to receive it as in good condition and by the subsequent survey. The defendant having acknowledged to have received the package in good order externally, and having given no evidence of fraud or mistake in the procurement of the acknowledgement, is bound by it. And not having delivered it in good order externally, the only possible inference is that it was damaged while in the charge of the ship. And as the damage to the case was no doubt done at the time of the theft, I find as a fact that the theft was committed while the case was in charge of the ship. There is no exception in the bill of lading of loss by theft, and judgment must therefore be for the plaintiff. As to the value, I find that on the day the quinine ought to have been delivered the market value was \$3.50. The only evidence given by the plaintiff, that is, the only evidence I can receive as given at the proper time was that, on the 16th, eleven days after the day the case was landed, the price was \$4. Mr. Reddell's evidence is, "that we have the same kind of quinine and that up till the 18th not more than \$3.50 could be obtained," I take \$3.50 therefore to have been the market value on the 5th and 6th. That for 35 oz., makes \$122.50.

Let the defendant pay the plaintiff, within 10 days from this date, the sum of \$122.50 and \$9 costs.

Friday, 3rd August, 1877.

TOKIO FU vs. MRS. BLOCKLEY.

Mr. Lowder for plaintiff; Mr. Ness for defendant.

This case was set down for further argument on the question of the defendant's liability for interest.

Mr. Ness stated that he had received instructions to argue the point. He was not in a position to-day to consent to the case being decided, reserving the point, but would have instructions from his client on Monday.

The Court informed Counsel that the point to be argued is "whether the defendant, Mrs. Blockley, is liable under the stipulation in the lease to pay interest at 24 per cent per annum."

Adjourned till Tuesday, August 7th, at 10.30 a.m.

IN THE DANISH CONSULAR-GENERAL COURT.

Before E. de BAVIER, Consul.

Messrs. KOLVIG AND VAN TORP, Assessors.

Thursday, July 26, 1877.

KOI TAKAJIRO v. THE ESTATE OF THE LATE N. STIBOLT.

This case was resumed this morning from Saturday last, and is a claim by one Kogi Tokijiro, a carpenter, against Mrs. Stibolt as executrix of her husband, the late N. Stibolt, for \$831.75, the balance of an amount owing by the deceased at the time of his death, for work done and materials supplied.

Mr. G. P. Ness appeared on behalf of the plaintiff.

Mr. J. W. Hall appeared on behalf of the estate, as agent for Mrs. Stibolt.

Mr. Ness said that he had produced the little book which had been asked for at the last sitting of the Court, which was more in favour of the plaintiff than against him, though it was very incomplete.

The Court asked Mr. Hall if he produced any books, and he replied that Mr. Stibolt had kept no books.

His Honour said that at the last sitting he had sent for the defendant's cook, and that by the instruction of Mr. Hall, Mr. Butland left the Court and intercepted the cook, and took him on one side and gave him some instructions. This he considered was a reprehensible act.

Mr. Hall disclaimed all knowledge of the charge.

Mr. Butland said that when he met the cook he merely asked him where he was going to; and that he did not know that he was going to the Danish Court at the time he stopped him.

Mr. Ness commented very severely upon the circumstance, and said that Mr. Butland was present when the cook was sent for; and he did not see how he could reconcile that fact with the statement about not knowing that the cook was coming to the Court. He thought at the time, Mr. Butland's leaving the Court was strange; but did not think it possible that he would have tampered with a witness.

His Honour said he should send for the cook and question him as to what had been said.

Mr. Butland:—Then I must go home, for if the cook leaves the house there will be no one to look after it.

His Honour:—I will send my boy to look after the house.

Mr. Ness:—I cannot see what this gentleman has to do with Mrs. Stibolt's cook. It is very strange that he should say he has to take care of Mrs. Stibolt's house, and it seems to me that some explanation is required.

Mr. Butland:—It does not require any explanation. I have purchased the business, and the house is mine.

Mr. Ness:—That is the explanation required. The cook was then sent for.

Mr. Hall asked the plaintiff some questions about the payments tendered him by Mr. Stibolt, when Mr. Ness drew attention to the fact that the statements made by the plaintiff were in reference to work not mentioned in the present claim, and therefore had nothing to do with it. The plaintiff stated that the last payment of \$149 was made on the 30th of November, which was on account of a bill for \$170.

Mr. Ness remarked that this account also had nothing whatever to do with the case, as it was not entered in the claim.

Plaintiff said that a receipt produced for \$200 was not in payment in full of all demands up to date, and that Mr. Stibolt never said to him that it was intended as such. Mr. Stibolt told him that it was inconvenient to pay the remainder and he would be glad to have it held over, a proposition the plaintiff agreed to.

The cook was then examined, and stated that Mr. Butland spoke to him in English, and he could not understand what he said.

In answer to a question put by His Honor, Mr. Hall said that the estate was indebted to the plaintiff to the extent of \$55. Before Mr. Stibolt's death, he, Mr. Stibolt, called him in and told him the amount owing to the various creditors. Mr. Barry was present also at the time; but witness could not produce him in Court as he had gone to Kobé. He, however, produced a statement alleged to have been written by Mr. Barry, but which was not signed, and Mr. Ness objected to its being received as evidence. Mr. Hall stated that Mr. Barry's presence in Yokohama was not known to him until the night of his departure.

To Mr. Ness, Mr. Hall stated that he had no personal knowledge of the transactions between the plaintiff and Mr. Stibolt, and beyond the entry in the diary that the plaintiff was paid in full the books showed nothing. The plaintiff was present at the time of the conversation with Mr. Stibolt, and understood what was said, as it was told him in his own language. An office boy was also present at the time.

Mr. Ness remarked that it was very strange that none of the persons who were present at that conversation were produced at the trial.

The plaintiff denied that some statements, made by Mr. Hall relative to the amount owing to him at the time of Mr. Stibolt's death, were correct.

His Honour remarked that there evidently had been some misunderstanding between the plaintiff and Mr. Hall, which had probably arisen through Mr. Hall's limited knowledge of Japanese and the plaintiff's entire ignorance of English.

The plaintiff denied being present at any conversation between Mr. Hall and Mr. Stibolt when Mr. Barry was present.

Mr. Hall said plaintiff was present every day for about a week.

Plaintiff explained that he saw Mr. Hall, Mr. Stibolt and Mr. Barry together, but was not in their company.

Mr. Ness remarked that at the time of Mr. Stibolt's death the plaintiff was doing some work for him under a contract from Mr. Stibolt, and that he, Mr. Ness, paid him the sum of \$75 for it, which, if Mr. Stibolt had been alive, ought to have been paid to him. This showed that Mr. Stibolt had not paid the plaintiff in full.

Mrs. Stibolt said that she was present at the time of the conversation when Mr. Stibolt told Mr. Hall that he only owed the carpenter (plaintiff) \$35 and \$15, and that if those accounts were paid he would not owe him anything.

To Mr. Ness, Mrs. Stibolt stated that Mr. Stibolt spoke to the plaintiff in English and said that they were square.

Mr. Hall was then called to swear to the statement about Mr. Stibolt having told him that he only owed the plaintiff the sums of \$35 and \$15.

His Honour adjourned the case until Mr. Barry should return from Kobé.

IN H. I. G. M.'s CONSULAR COURT.

Before E. ZAPPE Esq., Consul.

Messrs. W. PARDUN AND R. REIFF, Assessors.

Friday, July 27th, 1877.

HENRY LOTZ was charged with having on the 17th June injured a machinist on board H. M. S. *Egeria*, by driving a vehicle against a jinrikisha, and throwing the complainant out of the jinrikisha, whereby he sustained severe injuries through the negligence of the accused.

Mr. George Chesham, the complainant, further claimed a sum of fifty dollars as compensation.

Mr. Lotz pleaded not guilty and was examined giving the same testimony, as to the nature of the accident as he did in the claim for damage brought against by the jinrikisha coolie.

The complainant was then examined, and stated that on the 17th of June he was riding on the Bluff in a jinrikisha. It was evening and the jinrikisha had a light. When close to

the gardens a carriage came in sight, being driven furiously. There was no time to get out of the way. There were no lights on the carriage. Within five seconds from the time of first seeing the carriage, he was lying under the feet of the horses and the carriage ran over him. He tried to catch hold of the horses to save himself but failed. There was a jinrikisha driving about 15 yards ahead of him, and if the occupant had held out his hand he would have touched the carriage as it passed. Witness, after the accident, was assisted into another jinrikisha by Mr. Hindman, and went after the carriage. He and Mr. Hindman then asked the occupants for their cards. They used some abusive language and did not seem inclined to give their names. The persons in the carriage were the worse for liquor. At the time of the accident, witness' jinrikisha coolie had stopped, and it was impossible for him to avoid the collision. The reason why the left wheel of the *jinrikisha* was injured and not the right, was that the traces had caught the shafts and twisted the vehicle round. Witness was taken to hospital and remained there seventeen days.

To defendant, witness stated that the coolie endeavored to save himself as far as possible.

—Hindman, also a machinist belonging to H. M. S. *Egeria*, then repeated his evidence as given in the preliminary examination. He stated that he and the plaintiff were journeying along the Bluff road on the evening of the 17th, and just before reaching a turn in the road, he saw a carriage coming in front. The witness' jinrikisha man got as close to the fence as possible and the carriage just shaved him. He went to the assistance of his friend; and then ran after the carriage which he overtook, and asked for the names of the occupants. He received some abusive language, and then Lotz told him his name, and said that he had driven the carriage, and was very sorry he could not help it, and that he had been thrown out of the carriage. During the time witness was getting the name the plaintiff came up and asked who they were. An Englishman came up and advised them to go to the police station, which they did, but as no one there could speak English, they were detained some time.

The witness was cross-examined at some length by the Court, but did not vary from his general statement.

Dr. John Lambert, R.N., Physician-in-Chief of the Naval Hospital, stated that the plaintiff was taken to the hospital on the evening of the 17th and was very much bruised. He was kept in bed for six days, and during the first four days he suffered a great deal of pain. Witness remarked that it was impossible for him to say whether he would be likely to be permanently injured internally or not.

The evidence of two jinrikisha coolies, taken at the preliminary examination, was read over to the defendant, who cross-questioned the witnesses upon it.

Carl Seitz was then examined by the Court in relation to the accident. He stated that he was one of the parties in the carriage and remarked that the jinrikisha was crossing the road at the time of the accident, and the horses struck and turned it over on its side.

The plaintiff asked leave to question this witness as to whether he was in the carriage at the time, but the Court refused the application on the ground that the witness had never denied being in the carriage, and that he was not the person against whom the complaint was laid.

The other persons who were with Lotz in the carriage on the occasion of the accident were called by him to establish the defence urged by him, namely, that the collision occurred through the coolie who was drawing the jinrikisha trying to cross the road when close to the carriage.

A Japanese policeman was called. He could not say much as to the accident; but was under the impression that the men in the carriage were under the influence of liquor.

The Court found the charge of culpable negligence proved, and ordered the defendant to pay a fine of \$5, or in default to undergo seven days' imprisonment: further to pay Mr. Chesham an indemnity of \$20, and to bear all the costs of these proceedings. Liberty to appeal within ten days from the date of this judgment was accorded.

Before A. SCHAEFFER, Esq., Acting Consul.

Messrs. C. ROHDE and W. PARDUN, Assessors.

Wednesday, August 8th, 1877.

REIMERS v. ROTHMUND.

The plaintiff, Mr. C. F. Reimers, claimed from Mrs. Mary Rothmund, as executrix of her late husband's estate, the sum of \$225, alleged by him to be due as remuneration for accountant's duties performed between the 6th and 16th May last, on nine working days, being at the rate of \$25 per day, the usual Public Accountant's fee in Yokohama.

The plaintiff appeared personally. Mr. E. Berger represented Mrs. Rothmund, who was also in Court.

The purport of the defence was that, admitting that certain work had been done by Reimers, it could not have occupied nine clear days, and that the charge was out of all proportion to the work. Defendant requested that the evidence of experts be taken on this point. She furthermore stated that her deceased husband had told her that the work done by Reimers was in consideration for the rent of rooms he occupied and other equivalents.

His Honor having asked the defendant whether it was impossible for her to come to a private arrangement with the plaintiff, and being answered in the negative, the case proceeded.

Mrs. Rothmund wished to put in some letters, which were refused as evidence, on the ground that, in compliance with the notice served on the defendant, she should have produced them at an earlier stage of proceedings. She stated that Mr. Reimers' charges were out of all proportion to the work. She had brought the books in which the plaintiff's work appeared.

The Court decided to refer the matter to two experts, Messrs. H. Andersen and O. Francke, who would be asked to answer the three following questions:—

1. Whether the work done by Mr. Reimers was the work of a public accountant?
2. How many days would be required to do the work?
3. What is a fair remuneration for the services rendered by plaintiff?

By consent of both parties the experts proceeded to make an immediate examination of the work, after which

The evidence of Mr. Andersen was taken. He deposed that the work done could not be described as that requiring the services of a public accountant. It could be done by any person who could write, as it was only stock-taking from dictation. He could hardly say how long the work would take, unless

he knew how long per day it extended over; but it should not have occupied more than eight or nine days. A fair remuneration would be at the rate of \$10 per day. Fifty dollars would, in his opinion, be sufficient pay for the work done by Mr. Reimers, if no arrangement had been entered into. Special arrangements for this kind of work were generally made.

Mr. O. Francke, in reply to the first question, said that the work was that which a book-keeper might do. Secondly, it might have been done in six days. Thirdly: It would be fairly paid at \$12½ per day. Fifty dollars was, he thought, sufficient remuneration for the whole job.

The Court then retired, and after some deliberation returned and delivered the following

JUDGMENT:—

The plaintiff has to consider whether without committing perjury he can take the following oath:—

"I swear that I made no agreement with the late Mr. Rothmund to the effect that the work I had to do for him was in consideration of the lodging I had in his house."

In the case of plaintiff taking this oath defendant has to pay him \$84.37½ with interest at 6% from the 15th June, plaintiff to pay two thirds of the costs, and defendant one third. In the event of plaintiff not taking the prescribed oath he is nonsuited with costs. The oath, if taken, must be taken within six weeks from date.

IN THE U. S. CONSULAR GENERAL COURT.

Before GEN. T. B. VAN BUREN, Consul-General.

Tuesday, August 7th, 1877.

ALEXANDER CLARK v. RICHARD CONNOR.

Plaintiff claimed \$150 on two promissory notes, granted by defendant to one William Anderson, carpenter, and given by the said Anderson to plaintiff. Defendant refused to acknowledge the bills on the plea they were given in part payment of a boat built for him by Wm. Anderson, which had not been properly finished.

Defendant did not appear, having gone down the bay on pilotage business.

Alexander Clark, sworn, deposed:—I am the plaintiff in this case. These are the original notes (produced). I am the owner of them, having received them from Mr. Anderson, of No. 113, on the 30th December 1876, their date. I had lent him \$200 a fortnight before, and on the 30th he gave me \$60 and these notes, the remaining \$140 being interest. Connor had given Anderson these notes as part payment of a debt of \$300. Connor had had a boat built by Anderson. It was finished before then, and was lying opposite Anderson's yard. After these notes had been given me, Connor took immediate delivery of the boat and has kept her ever since. The notes have never been in my possession. I asked Mr. Ness if the notes were correct, and he said, yes. \$150 had been paid in cash, \$150 by these notes. When I lent Anderson the money he said he had to pay his men and expected to get \$300 from Connor in a few days. I had demanded the money from Connor and he has refused payment.

Wm. Anderson, sworn:—I am a carpenter. I received these notes from the pilot Connor on the 30th December last in the British Consulate through Mr. White. It was part of the last instalment Connor owed me for

his boat. Connor wished to postpone payment of the remaining \$300 for three months, but I insisted on his giving me \$150 in cash, and a like amount in bills. As I owed plaintiff a little money I gave him these notes. Mr. Clark took the notes in part payment, but if they are not collected I suppose I am responsible. There was no dispute as to the finishing of the boat. The only dispute was with regard to the mode of payment. Connor has the boat now.

His Honour here adjourned the case till the return of defendant from his present cruise.

IN THE JUDICIAL COURT AT KANAGAWA.

Before Mr. SASAKE KAYENOSHI, President.

Thursday, July 26th, 1877.

H. GRAUERT (as agent for the German ship *Madagassger*) vs. MIYAZAKI HAMPEI.

This was a claim for \$2,800. It appears that the defendant and others chartered from the plaintiff the German vessel *Madagassger*, to proceed with general cargo to Hakodate, and from there to proceed to Shanghai with a cargo of seaweed, but they did not carry out the charter-party.

The case was resumed this morning from the 23rd instant.

On account of the illness of Mr. Asaina Kansui, Vice-President, Mr. Sasake Kayenoshi, President of the Court, took the chair and conducted to-day's hearing.

The case having been adjourned for the evidence of the alleged principal in the charter-party, Murakawa Yahei, head of the house of Maruoka in Yokohama, was examined. At first he pleaded total ignorance of the whole matter, but gradually it was elicited from him that he had heard of the *Madagassger*; that he believed some one wished to charter her; that a meeting had taken place at which the parties in the transaction met, but that at the time he did not know what their business was; and finally the admission was made that he had been present at the signing of the charter-party, as were also two other persons.

During the delivery of this evidence

His Honor said that it was a matter of fact that the contract existed, but wished to know if plaintiff could prove by his witnesses that it was signed by Miyazaki Hampei for Muruoka?

Mr. Grauert said he could; and remarked that a witness present in Court had said he was going to Hakodate in the ship for Muruoka, and had asked Mr. Grauert for an introduction to the captain.

This hearing occupied over two hours, but very little of the evidence was interpreted and an adjournment was called for the attendance of the two persons who were present with last witness at the signing of the charter-party. It was thought possible to find these men within seven or eight days.

Adjourned *sine die*.

Saturday, July 28th, 1877.

John McLean, alias Murray, was charged by Police Sergeant Loxton with being drunk and incapable.

The case being fully proved, and the prisoner having been before the Court several times for similar offences, His Honour sentenced him to seven days imprisonment, three of which to be on bread and water. In the meantime if a Mr. Cook, whom the prisoner alleged wished to employ him, should call and was willing to engage the prisoner he would be released.

Miscellaneous—Continued from page 12.

THE *China Mail*, through the courtesy of Lieut. Commander A. S. Barker, has been favored with the following account of the cruise of the United States Ship *Alert*:—Owing to information received from the U. S. Consul General at Shanghai, the U. S. S. *Alert* left Yokohama on the 12th May in search of a shipwrecked crew. The Consul's information was to the effect that the Captain of the British barque *Agate* had reported having passed through Dampier Straits last February, and by means of signs and broken English had been given to understand by the natives that nineteen white men and one woman were wrecked on one of the islands; but, as the *Agate* had been on a reef and her charts were very imperfect, the Captain had deemed it advisable to make the best of his way to Shanghai and report the matter to the proper authorities. The *Alert* went by way of Bonin and Ladrone Islands, and on arriving at King William's Island, they could hold no communication with the natives, who all took to flight as soon as the *Alert* hove in sight. The natives are addicted to piracy, and their timidity was doubtless owing to the fact of a Dutch man-of-war having been there very recently and made an example of some of their number. The *Alert* then went to Geby Island, which is a rendezvous for whalers, and they there found that the supposed shipwreck was a mistake, arising from the fact of the British Barque *Unanima* (Capt. Cain) having called there owing to the illness of the Captain's wife. A paper was found signed by Captain Cain to the effect that he had called at Geby Island owing to his wife being ill, and that she had subsequently died and was buried there. The *Alert* afterwards went back to King William's Island and made a thorough search; and Captain Barker and his officers are satisfied that the report arose from the natives having tried to make the Captain of the *Agate* understand that a white woman was buried on Geby Island. The *Unanima's* crew numbered 19. The *Alert* did some good service by making a survey of the Straits whilst there.

THE wrecks *Roving Sailor* and *Catharina* have been sold by auction, at Messrs. Bourne & Co.'s Auction Room. The former was bought by Captain Bryant, her late master, for the sum of \$2,000. The Danish barque *Catharina* was purchased by Japanese for \$725.

THE German Corvette *Elisabeth* has started on another errand of mercy. A German subject is lying ill somewhere up north; and the mission of the *Elisabeth* is to find and bring him to Yokohama.

INTELLIGENCE was received at the office of the O. & O. S. S. Company that the *Oceanic* was safely anchored off the Saddle on the 3rd instant, near Shanghai, and that she left the same night in tow of the *Amoy* for Hong-kong. She will sail hence about the 28th inst. for San Francisco.

In striking contrast to the intelligence allowed by the Government to be published relative to the progress of the civil war in the South, and especially in relation to the number of killed and wounded imperialists, are some striking facts which come to the knowledge of the lookers on, who are proverbially supposed to see most of the game. Thus, despatches

from the seat of war are of one accord in giving the numbers of killed and wounded, on the Government side, at figures ridiculously low; and, in the case of the wounded, are unanimous in reporting them "slightly" injured. On the other hand, it has come to our knowledge that a number of men lie badly wounded at Nagasaki, and will shortly be brought thence to Tokio for treatment. These unfortunate men could expose another fallacy, industriously circulated by the trammelled native press, namely, that the insurgents are short of ammunition. They seem to have plenty of rifles and cartridges, and, to the cost of their opponents, to know very well how to use them.

THE *Echo du Japon* writes as follows:—

Sincerity makes it our duty to recognize that we were led into error by the person who gave us the information which was the cause of complaint on the part of the honorable director of Reuter's agency. From explanations which have taken place between that person and Mr. MacMahon, and which have been communicated to us, it results that there was a complete misunderstanding, and that Mr. MacMahon in no way asked him, as his subscription to Reuter's telegrams, a price above that paid to-day by all the subscribers.

It is not so much obstruction on the part of the Japanese Government to the emigration of their people to Australian territory, as the unwillingness of the people themselves to emigrate, which is likely to prevent the fruition of the scheme of the South Australian Government to induce the settlement in their land of Japanese colonists. This unwillingness would not be removed by a change of Government; nor indeed is it advisable that it should. At present, and for years to come, this country has plenty of occupation for her own population in the development of her own resources, many of which are as thoroughly latent at this day as are those of any of the Australian colonies, and can offer as large a field in their working and development as can be offered by any country of the world.

THE seven German sailors, who have been detained in custody on board the *Elisabeth* on suspicion of being implicated in the attack upon the French man-of-war's men belonging to the *Atalante* on the 4th June last, which resulted in the death of one of the Frenchmen, are to be sent to Germany for trial. The German gun-vessel *Cyclop*, having the accused men on board, left on the 5th instant for Shanghai, where the prisoners will be put on board a German steamer for transport to their own country.

ON Saturday afternoon the Mitsu Bishi Co.'s steamer *Meiko-maru* (late *Bahama*) returned to this harbour from Yokoska, where she has been converted into a sailing vessel. She is intended to trade on the coast for the present, and will probably make her first trip, in her new capacity, to Sendai.

THE *Montgomeryshire* has assumed the flag of the Mitsu Bishi Company, and has been renamed the *Akitsu-shima Maru*. Captain E. W. Ward, who for two years commanded the *Tokai Maru*, belonging to the same company, has been appointed to the command. The *King Richard* will be handed over to the Mitsu Bishi Company in a few days.

A CORRESPONDENT writing to us, from the scene of the recent wrecks, Emimura, Chiba-ken,

about 18 miles E. N. E. from the Mila Ledge Lighthouse, informs us that the *Roving Sailor* is lying between two ledges of ragged rocks nearly the length of the vessel, and that the tops of the rocks are all washed over by the surf, making it every dangerous to stand on them. The distance from the ship to the rocks is about 8 feet on the port side and 6 feet on the starboard, while her keel seems to fit into a crack between the rocks, which hold her pretty steady. The fore-mast, main-mast, and the stump of the mizen are standing, as are also the after and forward house. The decks are gone abaft the foremast. The bottom is in good condition on the port side, as far as has been examined. The water washes the top of the after house at high tide. The bow is clear. The port anchor is on the rocks clear of the water. Nine spars in good order and about 100 fathoms of chain are clear on the beach. About 80 fathoms are lying under the starboard bow fast to the starboard anchor, which is lying under the bow with the ship's keel resting on it. The stock is broken off aft. On Sunday morning the ship was all loose from the rocks; and the Captain said if he could only get a couple of junks, or a few boxes made, he could have her afloat that afternoon. If any steamer had been near to render assistance the vessel would have been ready to return to Yokohama that same day.

So far, the bodies of twenty dead Japanese, one Chinaman, and a Java seaman, belonging to the Danish bark, and the mate, Mr. J. Holman, have been washed ashore.

The Japanese are doing all they can to help the Captain; but, as Emimura is only a village of farmers and fishers, it is hard to get anything that might be of use. The Kanagawa Ken has sent down an interpreter of the 6th class; and the Chiba Ken has two policemen and an inspector of police there to look after the safety of the cargo and other things on shore.

ANOTHER body, that no doubt of one of the men lost in the recent wrecks near Emimura, was washed ashore the other day about eight miles North of that place, and had been buried by the natives. The mark "C. P. 1849," tattooed on his left arm, may afford some clue to the identity of the deceased.

FROM private information we learn definitely that General Saigo, at the head of 900 men, landed at Kagoshima towards the end of last month from Kobe. The *Candia*, after remaining four days at the head of the gulf, returned to Kobe on the morning of the 31st ultimo. Kagoshima is now the principal base of imperial operations, only a few vessels being stationed at Inokutsu and Morisaki in the South of the Bungo Channel, North of Hiteimidzu, which is North of the insurgent line. It appears, according to our informant, that the rebels are being gradually brought to that point that they must either risk a general engagement or give in. Troops and coolies are constantly arriving from Kobe. The news published by the native papers, and reproduced by us, to the effect that the inhabitants of Kagoshima are returning to their deserted homes is confirmed, numbers of them with furniture and effects having come over from Sakura Shima, in which island they had taken refuge while the war was at their doors.

The published accounts of imperial successes are also confirmed. The insurgents seem to hold a strip of country between Noboka, North, to Miyako-no-jo, South, a position in which, if the approaches are well watched to the westward, they will find a difficulty in procuring supplies, whether of food or ammunition.

NOTICE

THE Partnership hitherto existing between the Undersigned carrying on business under the style and firm of ANNAND, SINGLETON & Co., has been dissolved by mutual consent as on the 28th February, 1877.

JAMES ANNAND.

T. A. SINGLETON.

Yokohama, July 27th, 1877.

WITH reference to the above the business will be carried on as heretofore under the name of ANNAND & Co. Outstanding claims against the late Firm, must be presented to the undersigned for payment.

JAMES ANNAND.

Yokohama, July 27th, 1877.

DEPARTURES.

July 24, Brit. str. *Lorne*, McCulloch, 1,614, for Hiogo, Nagasaki, and Hongkong, General, despatched by Jardine, Matheson & Co.
 July 25, Frch. str. *Volga*, Rolland, 1,503, for Hongkong, Mails and General, despatched by M. M. Co.
 July 25, Brit. str. *Gaelic*, Kidley, 2,756, for San Francisco, Mails and General, despatched by O. & O. S. S. Co.
 July 25, Am. barq. *Sarah*, Atkins, 618, for Puget Sound, Ballast, despatched by Captain.
 July 28, Jap. str. *Nagoya-Maru*, Conner, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

July 31, Brit. str. *Glamis Castle*, Greiz, 2,338, for New York via Kobe, etc., General, despatched by Adamson, Bell & Co.
 July 30, Frch. str. *Tanais*, Reynier, 1,735, for South Coast in search of *Oceanic*.
 July 31, Brit. ship *Countess of Kintore*, Norrie, 850, for Kobe, General, despatched by L. Kniffier & Co.
 Aug. 1, Brit. str. *Malacca*, Briscoe, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.
 Aug. 2, Jap. str. *Hiroshima-Maru*, Burdiss, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
 Aug. 2, Jap. str. *Takachiho-Maru*, Sekemeier, 1,407, for Hakodate, Mails and General, despatched by M. B. M. S. S. Co.
 Aug. 2, Brit. ship *Caroline*, Turnbull, 987, for Hiogo, General, despatched by Gillschew & Co.
 Aug. 3, Ger. frigate *Elisabeth*, Captain Von Wicked, 2,000 tons, 21-guns, for North coast.
 Aug. 5, Ger. gun-boat *Cyclops*, Capt. Von Reiche, 350 tons, for Shanghai.
 Aug. 8, Ger. schr. *Benedicta*, Jansen, 450, for San Francisco, Tea, despatched by Walsh, Hall & Co.
 Aug. 8, Frch. str. *Tibre*, de Girard, 1,009, for Hongkong, Mails and General, despatched by M. M. Co.
 Aug. 9, Am. str. *China*, D. E. Freile, 3,836, for Hongkong, Mails and General, despatched by P. M. S. S. Co.
 Aug. 9, Jap. str. *Tokio-Maru*, Swain, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

PASSENGERS.

Per Brit. str. *Lorne* for Kobe and Nagasaki:—Messrs. MacFarlane, and A. A. Meyer, 2 Chinese, and 53 Japanese.

Per Frch. str. *Volga* for Hongkong:—Mme. La Révde. Mère St. Mathilde, La Sœur Francoise and 3 children, Messrs. S. J. Elder, A. Duchanel, Hoaplain, L. Hostis, Coroleur, Mazé, Daniel, Barlier, and 4 Japanese in the cabin; 5 Chinese in the steerage.

Per Brit. str. *Gaelic* for San Francisco:—Mr. and Mrs. M. N. Wyckoff, and 2 children, Miss Clark, Messrs. Arnold Weinhold, T. F. Ballance, William Taylor, James Murray, S. Honda, K. A. Kawamura, J. Sato; and 4 Japanese, and 2 Europeans in the steerage. For Liverpool: Mr. and Mrs. Joyner.

Per Frch. str. *Tibre* from Hongkong:—Messrs. Van Casteel and servant, Jacot, Nockiah, Onubakawa, Mumbawa, and Vernede.

Per Brit. str. *Malacca* for Hongkong:—Captain McNabb, Miss McNabb, Messrs. Fry, Anderson, Sutton, Povey; and 22 Europeans, and 7 Chinese in the steerage.

Per Brit. str. *King Richard* from Hongkong:—Major Huskisson.

Per Brit. str. *Sunda* from Hongkong:—Messrs. Keswick and Grupe; and 4 natives on deck.

Per Jap. str. *Kumamoto-Maru* from Kobe:—Mrs. Bonger and child.

Per Am. str. *China* from San Francisco:—Mrs. M. Graham, Messrs. R. A. Robertson, J. Hoshi, E. Iroya, H. Takawa, William Heise, Vicomte de Richmond and O. Starick.

Per Frch. str. *Tibre* for Hongkong:—Miss Agnes Perry, Messrs. Guillemot, Story, Davis, T. Bick, Alex. Gordon and 4 Chinese.

Per Jap. str. *Nagoya-Maru* from Shanghai and ports:—Mr. and Mrs. Wheelock and child, Mr. Carmichael, Mrs. Corne, Miss Flow, Gen. Le Goede, Lieut. Comm'd. Goodrich, u.s.n., Lieut. Abbot, Messrs. Beel, Fowles, Morris, G. M. Wood, Fesefeld, H. J. Weston, J. D. O'Shea, Blackwall, Klein, Gundorph, Taylor, Miss Kudome, Miss Asa, and 2 Japanese in the cabin; 1 European, 6 Chinese and 336 Japanese in the steerage.

Per Jap. str. *Nagoya-Maru* for Shanghai and ports:—Miss Gulick, Mrs. Satow, Mrs. Ishikawa, Mrs. Ando and child, Mrs. Ando Matsui and child, Mrs. Abel, Messrs. Ford, Pitkin, Allion, Oki, Harukawa, Plummer, Seong Tsun Tong, A. H. Bodeker, Machida and Captain Boyd.

Per Jap. str. *Saikio-Maru* from Shanghai and ports:—Mrs. Nutt and infant, Mr. and Mrs. Yamaoka, Mr. and Mrs. Motoka, Mrs. Mano, Miss Sakuma, Dr. Mansvelt, Prince Yamauchi, Messrs. Tada, Seel, Ford, Cruickshank, Plummer, St. George, 2 Japanese and 1 Chinese in the Cabin, 2 Europeans, 5 Chinese and 476 Japanese in the Steerage. For America: Messrs. C. Blethen and Thomas.

REPORTS.

The American steamer *China* reports:—Sailed from San Francisco July 14th, at 0.30 p.m. Light variable winds and smooth sea throughout. Arrived at Yokohama August 8th, at 5.30 a.m.

The British steamer *Sunda* reports:—Left Hongkong on Sunday 29th July, at 2 p.m. Had moderate S.W. monsoon with fine weather throughout. Arrived at Yokohama on the 4th August at 11.30 p.m.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

During the past fourteen days the fluctuations in native exchange from $3\frac{1}{2}$ to 6 per cent against the native merchant, has materially interfered with business in imports, which has been further prejudiced by the small transactions in Silk at prices much below Japanese anticipations. The market generally is best described as dull and depressed, and all quotations here given must be considered more or less nominal and untrustworthy for prospective calculations. Velvets have been more in favour, but no real improvement has taken effect on the prices offered for some weeks past.

The barque *Sir William Wallace*, and the steamer *Atholl*, both with general cargo from London, and the ship *Messenger*, with kerosine from New York, have arrived. Transhipped cargo as steamers *Gange* and *Malwa* from London, *Patroclus* from Liverpool, and *Djemnah* from Marseilles is also to hand.

ARTICLES.	PRICES.	REMARKS.
COTTON PIECE GOODS.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—A longer interval than usual has elapsed since the date of our last mail issue, the 24th ult.; during which period a current business has been done in the article, settlements being estimated at 650 bales; deliveries to godowns have considerably exceeded this figure, but the daily rejections on inspection have been large.

Judging from European advices we conclude that a much smaller business has been done in the home markets during the same period.

A noticeable feature is that several of usually the largest operators have been almost entirely out of the market, whilst, on the other hand, others, it would appear, are of opinion that prices are safe and have acted accordingly.

Dealers have at length seen the impossibility of maintaining high rates and have met buyers, the result has been a decline of about \$50 per picul.

All descriptions of Hanks have been dealt in, and a few parcels of the higher classes have been brought forward.

Arrivals during the period under review amount to 900 bales, and the unsold stock on the market is about 1,000 bales.

TEA.—For the interval since departure of last American Mail on the 26th ultimo there are few points present to call forth comment in our tea market.

Operations have been almost paralysed by the unfavorable tenor of telegraphic advices from the American markets, many orders being cancelled or for the present suspended, and the balance left open having their limits so greatly reduced as to preclude the possibility of present execution.

Settlements amount to some 2,200 piculs, the bulk of which consist of second crop teas, and shew very poor value even at the prices paid.

The quality of most parcels is rapidly deteriorating, and it seems that the curing process this season has been carelessly and imperfectly carried out: we fear therefore late purchases will turn out anything but satisfactory on the Home markets.

Our Export from this port and Kobe to date amounts to 9,800,000 lbs an amount somewhat in excess of corresponding period last season; but it seems likely from the general feeling in the United States and the difficulty of obtaining suitable parcels that settlements for balance of season will be much under that of last year. To-day's prices close as under, but the figures quoted, in absence of operations, are almost nominal.

BIRTH.

On the 11th August, at No. 22, Yokohama, Mrs. E. B. WATSON, of a daughter.

DIED.

On the 15th August, at No. 82, Bluff, at 6 a.m., AUGUSTUS S. VERNEDE, aged 39 years.

At No. 6, Tanaieke, Reinansaka, Yedo, on the 20th inst., Surgeon Major THEOBALD ANDREW PURCELL, Principal Medical Officer of the Department of Public Works of the Imperial Japanese Government, aged 36 years.

On the 27th inst., at No. 244, Bluff, WILLIAM TULLOCH GAIR, of the Government Central Schools, Hongkong, a native of Caithness, of consumption, aged 30 years.

Summary.

OUR last MAIL SUMMARY was dated the 10th instant for despatch by the P. M. Str. *City of Peking* for San Francisco, which sailed at daylight on the 13th instant. Since then we have received the following mails:—

Per M. M. *Volga*, M'seilles, 30 June, arrd. 16 Aug.
" O. & O. *Belgie*, S. Fr'esco, 27 July, " 16 Aug.
" P. & O. *Bombay*, London, 6 July, " 19 Aug.
" P. M. *City of Tokio*, S. F., 8 Aug., " 29 Aug.
" M. M. *Tibre*, M'seilles, 15 July, " 30 Aug.

And despatched the following:—

Per P. & O. *Sunda*, for Southampton 15 Aug.
" M. M. *Tanais*, for Marseilles 22 Aug.
" P. & O. *Bombay*, for Southampton 29 Aug.

Latest telegraphic advices from London are to the 28th instant.

THE accident to the O. & O. Str. *Oceanic*, namely the loss which she sustained of her propeller on her last trip hence to Hongkong, has only delayed her departure on the present passage by a few days. Her spare propeller which awaited her in Hongkong was adjusted with the least delay possible. She has made the passage between the last

mentioned port and this in good time; and, barring fresh accident, will probably arrive in San Francisco about the same time as she might have been expected without the occurrence of her misadventure.

It must be matter for sincere congratulation on the part of all well wishers of this country that the sanguinary insurrection which has cost so dear is virtually at an end. Refusing all attempt at negotiation, reserving to himself no alternative but the complete fulfilment of his object or defeat, Saigo has battled to the last, until, hemmed in by superior forces, his troops have surrendered in masses, and he himself, at the head of a picked band who had determined to share their leader's fate to the close, has cut his way through the imperial troops which surrounded him, and gone no one at present knows exactly whither, though it is credibly supposed that he has taken refuge in the mountains of Kumada. The troops are returning to the capital, and being in great part disbanded. It remains for the Government now to grant what Saigo has fought for and what the people want—representative institutions. Until this concession is made to the popular wish Japan will never be free from internal commotions, the suppression of which will be a constant trouble, and the fear of them a constant anxiety, to the Government.

AMONG the passengers by this steamer, and certainly not the least distinguished, is General T. B. Van Buren, U. S. Consul-General here, who goes home on six months' leave of absence. On the evening of the 27th inst. the General was the guest of the community at a dinner held in the Grand Hotel, at which a party of between eighty and ninety gentlemen, by all of whom the guest was more or less well, and by all favourably, known, sat down to dinner. A full report of the proceedings will be found within. Such a testimony as was afforded by this dinner, and the speeches which followed it, to the universal esteem in which General Van Buren is held by all classes of residents, is the best refutation that can be offered to the unwarrantable and calumnious aspersions which have been cast upon his character by cowards, who availed themselves of the shield of anonymity to protect them, while they struck through the columns of an unbridled and unscrupulous press.

THE U. S. S. *Keursarge*, while out in search of the *Oceanic*, encountered a heavy blow, in which she lost a boat and sustained some other damage. She put into Hongkong. She is expected here shortly on her homeward route.

REAR ADMIRAL REYNOLDS, U. S. N., having returned home on sick leave, the command of the United States East-Asiatic Squadron devolves for the present upon Captain Young, U. S. N., in command of the *Tennessee*.

THE case of the owner of the Mitsu Bishi Company's steamers against Captain Colomb, R. N., H. M. S. *Audacious*, has been again brought before Her Majesty's Provincial Court here. The defendant through his Counsel appeals against the judgment given, and has made a motion for enlargement of time in which to file his appeal. An extension of four weeks from the 11th instant has been granted. Another motion in the same case, this time on the part of the plaintiff, has been heard. It was to have the case set down again for hearing, and the application was granted subject to the circumstances of vacation.

IN the case of Tokio-fu against Blockley, a claim for ground rent withheld on the plea of prejudice, judgment has been given in H. B. M. Court in favor of the Japanese authorities. This is exactly the reverse of the U. S. Court judgment in the case of Captain Batchelder.

THERE has been very tempestuous weather on the coast. The *City of Tokio* from San Francisco encountered a typhoon on the 25th-26th instant. About the same time the *Oceanic* from Hongkong, some distance to the South, also met with heavy weather. During the night of the 26th a storm, apparently the tail end of a typhoon, blew in Yokohama, where, when the wind was moderating, an earthquake of rather long duration was felt.

THE summary of the foreign trade of Japan for the year 1876, compiled from the reports of the Consuls in the various treaty ports, has been published by H. M. Legation in Tokio.

Mr. F. V. Dickens, an English Barrister admitted to practise in the U. S. Courts in this country, has sued a Mr. A. C. Dunn before the U. S. Consul General for \$2,400, being the amount of his retainer's fee in a case in which he was engaged for Mr. Dunn before the native Supreme Court in Tokio, and interest on the same for the time it has been unpaid. The Court gave judgment for the plaintiff.

Mr. NATHAN J. NEWWITTER, U. S. Consul at Hiogo, and till recently Chairman of the Municipal Council there, is supporting those of his nationals who decline to pay their ground-rent and police-taxes. He contends that the Council is an illegally constituted body. The matter is referred to the U. S. Minister.

A GROWING propensity is observed among Japanese traders to repudiate their contracts with foreigners. They bargain to purchase in hopes of a rise, and perhaps make small payments on account. If the market is favourable to them they complete their contract: if unfavourable they repudiate it on frivolous grounds. A number of cases, arising out of this custom, in which foreigners are plaintiffs, are occupying the attention of the native Judicial Court of Kanagawa.

THE COASTING TRADE OF JAPAN.

THE recent acquisition by the Mitsu Bishi Company of half a dozen new steam vessels shows a growing desire on the part of that influential body to meet the rapidly increasing demands of an internal trade, the importance of which we drew attention to in an article in this journal in June last. The *Hochi Shinbun* of the 10th instant, points out how faithfully this Company has served the Government by placing at their disposal the best ships of the fleet, for the conveyance of troops and stores from the capital to the seat of the insurrection, "but in regard to the conveyance of merchandise," continues the *Hochi Shinbun*, "corresponding inconvenience has accrued, and caused, naturally, more or less decrease in production." The key note of the article in the *Hochi Shinbun*, was first sounded by us, though in a much more pointed manner, when we wrote: "The service of the Mitsu Bishi Company, owing, no doubt, to the limited number and small carrying capacity of their vessels, is notoriously insufficient to meet the requirements of the grain producers of the country, who in consequence, are compelled to limit their transactions, not by the quantity of produce at their disposal, but by the limited means of transport the vessels of this Company place at their command." And we are willing to believe that the Company is not averse to the recognition of an inevitable principle of its existence, as a Company secure from that open competition which has done so much throughout the entire world to destroy the combination, by means of which freights were kept up to so high a figure that the production of the necessities of life was seriously prejudiced; the operations of the agriculturist restricted; the channels of national wealth impeded, and the beneficial results growing out of a judicious use of capital prevented, or confined to a small area and a limited population, by admitting the necessity of so increasing the number and carrying capacity of their vessels as to meet more fully the requirements of the people, and thus render opposition in the coasting trade a work of extra difficulty. Admitting that the increase of the Mitsu Bishi Company's fleet of steam vessels is calculated to supply a great national want, and to form part of the encouragement to home production which Japan so much requires, it is still a patent fact that a great evil remains which must in its operation be prejudicial to the mass of the people. Great Britain is a signal example of the value of maritime competition in compelling the carriers by sea to reduce their charges to the lowest figure consistent with a profit sufficient to remunerate the capitalists for their investments, and the officers for the duty performed. The monopolies exercised by some of the greater steam ship Companies, who, in addition to the exorbitant freights received, were supported by Government mail subsidies to an extent which open competition has cut down to one-fifth of the sums formerly payable in respect of the identical duties now performed, have been virtually extinguished; and the shipowner who can provide a first-class vessel, and perform the voyage undertaken in a satisfactory manner at a lower freight, will receive equal, if not greater, support than the public accords to the well-known and established lines, whether of mail or other steamers.

In Japan this wholesome element of competition is wholly wanting. The opinion long entertained that the so-called Mitsu

Bishi Company was, in reality, a Government undertaking in everything but name, was partially removed by the evidence of Mr. IWASAKI YATARO, in the *Audacious* collision case; we say partially removed, for a large number, if not a positive majority, of foreigners in Japan, still look upon the Company as a Government monopoly, as virtually complete as the rice export trade which has been discussed so recently. That the Company does possess a monopoly is apparent, and that they are determined to maintain that advantage seems clear from their recent purchase of ships. Their enterprise is praiseworthy; as traders they deserve to reap the profits of their undertaking; but as the Company consists of one or more private individuals, the eulogy applied to them by the *Hochi Shinbun* in the following words is misplaced: applied to the Government of the country the foundation of the compliment would have been truthful and the terms graceful: applied to a mere trading Company whose object is profit not patriotism, it is unmeaning and fulsome. The *Hochi Shinbun* says. "What is the purpose of the Company in purchasing these additions to their fleet? It may be easily known. It is only to promote facilities for transport, with the object of enlarging the sphere of home production." The true means "of enlarging the sphere of home production" will not be forwarded by the fostering care of the Japanese Government being wholly devoted to the interests of one steamship Company. The interests of the people would be immeasurably better served by the inauguration on a sound basis of one rival steamship association, than by the addition of many dozen new ships to the Mitsu Bishi line, for as competition is a keen incentive to work upon terms reasonable and uniform, its absence leads to innumerable abuses for which no other remedy exists.

With the recent purchases, we have no concern, beyond, in the Company's interest, pointing out the greater stability the Company would acquire by building vessels for their own purposes of a uniform class and description; and doing so by public tender in the cheapest markets in the world. It is in no spirit of captious criticism we remark that a steam ship Company will find old vessels, that is vessels not built specially for them, the dearest of acquisitions; and in conclusion we would add that the circumstances must indeed be urgent which would compel a foreign steam line, or mercantile firm, to purchase six second-hand vessels on the Yokohama market.

THE COMMERCIAL SITUATION.

PERSONS who recollect the halcyon days of prosperity in the ports of China and Japan, who shared, perhaps, in their glories and their joys, may well be pardoned for belonging to that most lugubrious of classes, the praisers of the good old times. And the old times in the Far East were good and merry. They made some rich, and afforded to nearly all who participated in them some chance of becoming so. They have passed away, it is true; but it would be the extreme of pessimism to say that no hope exists, if not of their return, at least of the revolutions of the wheel of time bringing round something very like them. Periods of prosperity and depression, with grades between the two extremes, are cyclical in the history of trade, seeming to be arranged and marked in degrees on a sphere which goes on rotating

through the ages. That, at this present time, the epoch of inactivity should be at the top of the ball, affords but the better reason for the trust that it must commence to trend downwards soon, and that a term of activity and prosperity shall find its way to replace it. "When things are at their worst they sometimes mend." Matters commercial are probably at their worst now; so there is some reason for a hope of their improvement.

Not one country, not one district, suffers. The foreign merchants in the Far East are not the only people who have to complain of hard times. On the contrary, their misfortunes, their want of success, both are shared by those engaged in every branch of legitimate business in every part of the world. Trade reports from all commercial centres at the close of last year spoke of the prospects of commerce as dark and unpromising. Their forebodings have not been belied. Every industry appears to be crippled, and on every hand reports are spread of deeper and yet deeper depression. For three years past the cry has been heard of "declining trade, stagnation, approaching ruin." For three years the dark shadow of adversity has hung over and obscured every industry. Manufacturers, merchants, traders have all been involved in a general loss; and impaired dividends on all kinds of investments have seriously reduced many classes of incomes, and especially in the centre of commercial enterprise, Great Britain. Latest accounts from home tell of the continuance of the depression, of mills working half time—often for the mere purpose of keeping open at all, and so finding some provision for their work people—of revenue declining, of the purchasing power of money diminishing, of the decrease in value of all kinds of manufactured articles. In America the condition of affairs is no better. Railway Companies, Banks, and trading establishments apparently as firm as rocks, have been swept away by the floods of adversity. Thousands of people of all classes are out of employment, and seem to have no chance of finding any. Numbers, indeed, of those unemployed who can pay for their passage back to the old country, return thither on the Ocean steamers, preferring to meet the ills they know at home, rather than encounter those they know not of which surround them in the land they have tried and found wanting. Every country of Europe echoes the same complaints of no work, no money, no trade. East and West Indies, Australia even, make the same moan. The period through which the commercial world is passing, is not one of those ordinary seasons of depression which at intervals visit certain countries, and involve the trading communities for a longer or shorter term in commercial calamity and distress. It is not one of those sharp disruptions and violent changes, involving loss and failure for a short season, followed by a natural and speedy adjustment, and which, while bringing a check upon the undue conversion of floating into fixed capital, and clearing away the abuses and excesses of credit, tends to widen the channels through which commerce should flow, namely, cheapness, expedition, enterprise, and the free circulation of money. It is lasting and universal. It has gone from bad to worse for several years, and extends through every country where trade is known.

Nothing would be gained by disguising a fact which is but too apparent. The hope remains that the tide of commerce has now fallen to its lowest ebb; and that it must soon by a natural reaction flow upward to the springfloods of activity and vigor.

AT CONSIGNEES' RISK.

FOR some years past advertisements have been published in the daily newspapers respecting the discharge and delivery of cargo from steamers lately arrived from London or other European ports; and as such advertisements are, we conceive, rather threats without bases, than *bonâ fide* notices entailing a legitimate penalty in their breach, it may not be out of place to pay them some passing attention. These advertisements run generally in this manner, "Consignees of cargo are requested to send in their bills of lading, duly endorsed, for countersignature, and to take immediate delivery of their goods from the English hatoba, where they will lie at the risk of consignees as soon as landed." It is to that portion of the advertisement we have italicised we desire to direct public attention, and to do so before any serious loss has arisen to complicate the question as it now stands. The rules and practices of fifty years ago, when voyages were performed in about as many months as the modern steamer now requires weeks; when freights were high, and with so little competition, that one round voyage to India, completed in eighteen months, was considered good work for any vessel, exist no longer, and it has become of the first necessity to the owner of a steam-vessel that her delay in port shall be reduced to a minimum, to secure which he is prepared to risk eventualities he would not accept under other circumstances.

The condition of the ordinary bill of lading provides, amongst other things, for the delivery, to the holder of that document, of the goods specified therein in good order and condition, certain declared perils, such as inevitable accident, of the sea, fire, &c., excepted, and the question to be considered is, whether an advertisement or notice such as that we have described, is sufficient to remove the obligation imposed upon the shipowner by the bill of lading; or, if it is not sufficient for that purpose, what remedy has the shipowner against those persons who will not take prompt delivery of their goods from the side of the vessel. An illustration will be the best explanation, and it may be stated in the form of a question thus:—A. master of a steamer, advertised by his agents in the manner already set forth, and proceeded to act in accordance with the notice. He landed a quantity of cargo on the English hatoba on Saturday afternoon, too late for passing through the Customs, on that day, even had the consignee been in waiting to take immediate delivery. Under cover of the Customs' shed the goods would have to remain until Monday at the earliest, except under very unusual circumstances. During the interval between Saturday night and Monday morning, the shed takes fire, or is destroyed by a typhoon, and the goods stored beneath it are either lost, or so damaged as to be no longer marketable. On Monday B, the Consignee, presented the bill of lading to A, the shipmaster, and demanded delivery of the goods therein specified. A pleaded that the goods were landed, and lost or injured by a peril, the responsibility of which he had disclaimed prior to their removal from the ship. Is the defence of A good in this case? We humbly think not. It is clear there has been no delivery under the bill of lading sufficient to discharge the master, and it is beyond all question that the ordinary policy of sea insurance is at an end when "the goods are there discharged and safely landed;" by whom discharged and landed being irrelevant to the point at issue.

The holder of the bill of lading would proceed against the ship in the usual manner, and we certainly do not exceed our province in expressing an opinion that the ship would be held liable to make good the losses sustained under the particular circumstances described.

If our view is correct, and we invite discussion and correction, the term "where they will lie at the risk of consignees" is a threat without a base, which neither stimulates the backward consignee, nor protects the shipmaster from the consequences of an act the commission of which the interest of himself and his owners often imperatively casts upon him.

Every mercantile firm in Yokohama knows well the great amount of labour entailed, and the scanty remuneration earned, by acting as the agents of inward bound ships; in fact so disproportionate are they that several good houses will not accept the burden, while others only do so to oblige or assist friends or constituents who place other business in their hands. To those firms who are parties directly by their signatures as agents to the advertisement, an additional responsibility attaches in event of a claim arising such as we have described; a responsibility not to be lightly treated or passed over when the chances of accident are taken into consideration. Of destruction by fire, of goods stored under a wooden shed close by the water side, there would not appear to be very much danger, though the fact should not be overlooked that Fire Insurance Companies, who fix their rates by the results of actual experience, consider one and one-half per cent a moderate charge for a solidly built stone godown, securely closed at night and where no fires or lights are allowed to be used; yet what prudent merchant will allow goods in a godown to remain uninsured for one single night? On the risk of damage by gales of wind; of typhoons accompanied by torrents of rain, too much stress can hardly be laid. The sheds at the Western or English Hatoba, though stoutly built and commodious can scarcely be called proof against such storms as that we had on the 26th July last, nor do we think it was ever the intention of the Japanese Government that they should be used for any other purpose than the merely temporary one of giving cover to goods while being landed and examined for payment of duty. There are certainly Government bonded warehouses—thoroughly good and secure buildings—where storage can be had upon moderate terms. The storage of goods landed by the shipmaster in a bonded warehouse will reduce his risk for loss or damage by fire or storm to a minimum, and in many instances the master would be repaid the charges so incurred, though we do not think he could enforce their reimbursement unless a clause to that effect be inserted in the bill of lading and be accepted by the shipper, as it would be by so large a majority, that the dissentients must perforce agree to the condition. We therefore earnestly, and with the best intentions, recommend this matter to all those firms who are interested as agents for steamship companies, or who accept the inward consignment of steam-vessels. By the insertion of an express clause, written or printed across the bill of lading to the effect that, "All cargo, when ready to be discharged from the ship will, if not immediately taken delivery of, be landed and stored in the bonded warehouses provided by the Government of Japan and be insured against loss by fire until delivery is taken. All expenses so incurred will form a lien upon the cargo to be paid before delivery."

This or a similar condition would relieve the shipowner and the agents, from the consequences of accidents, which though out of their control, they are now, so far as our judgment goes, responsible for; and it would have the double effect of compelling those consignees who not unfrequently materially retard the discharge of vessels to either send off promptly for their goods or else pay a reasonable and just charge to others who have properly performed the work they were too indifferent to do for themselves.

MUNICIPAL.

WHAT should be Municipal matters are perhaps not so badly managed in Yokohama as they might be, as, indeed, a person not living there but knowing generally the machinery employed for the Municipal control of the place, might reasonably suppose they would be. At the present moment they are no more defectively controlled than they were any time before a month or so ago, when the Foreign Settlement rejoiced in the possession of a full-blown Municipal Director, supposed to have supreme authority in matters which would come under the control of a municipality did such a body exist—to unite in his own person all the powers and privileges of so august a corporation. How those powers and privileges were restricted until they came to be but a shadow of what they really should have been, until in point of fact the late Municipal Director had become but a channel for communication between foreigners and the local government, must be well known to everybody who has taken the smallest interest in the matter. How instead of having control of municipal funds, and the authority to employ them in the proper maintenance in a state of order of the streets and roads of the foreign settlement, the Municipal Director's office at last fell into the position of that of a bill collector or compradore on rather a large scale is not unknown either. The one function of his post which was retained to the last in full vigor by the Municipal Director was that of collector of ground rents; but with the disposal of ground rents when collected, beyond lodging them in the possession of the Governor of the Ken, he had very little to do. We have heard that even his services as go-between in the matter of communications between foreigners and the native officials were of late but very sparingly availed of: that, for some reason or other, aliens having any claim to make on, or request to prefer to, the Kencho officials, preferred to make them through their respective Consuls rather than through the Municipal Director; and that, in availing themselves of the former channel, they thought they were more likely to obtain what they wanted than if they had employed the latter.

It is, on the whole, only fair to say that, if there is no marked improvement in many matters since no Municipal Director has held nominal sway in Yokohama, neither is there any retrogression. The streets are still kept remarkably clean in the foreign settlement, and to attain this end, now, as of yore, a gang of well grown guttersnipes or scavengers, armed with portentous besoms, patrol the streets every day and all day long, and sweep into small heaps, to be rapidly disintegrated by the breeze, such portions of the accumulated dust and rubbish as they do not project into the eyes or on to the clothes of the passers by. It is true that what is left

of the little heaps aforesaid—the more solid particles which are able to withstand the sweeping gusts which are better if less methodical sweepers than the sweepers—are in part carried away in baskets by coolies, whose load, too, keeps lightening as the carriers go jerkily along. The only difference in discomfort in walking behind a sweeper, and a carrier, of rubbish in the streets of Yokohama is one of degree. In the former case you have dust, in the latter gravel, blown into your eyes. In the matter of robberies we have hardly had sufficient opportunity in point of time to compare Yokohama without a Municipal Director, with Yokohama when blessed with and reigned over by one. So we will not say authoritatively that the thieves have the same happy opportunities to steal undiscovered, and that the police are at night as conspicuous by their absence, and in the daytime as apathetic, as they were before. We will stick to patent facts, the rather that as the days get shorter we shall have ample opportunity, no doubt, afforded by the thieves to compare by-gone with what will then be present times.

As regards lighting the streets of the Settlement we are no worse off now than we have ever been since the commencement of last year. In fact, as we are now probably better used to the anomaly of pitch dark streets in a civilized community than we were when the Gas Company or the Kencho threw us into the shade, and plunged the streets of Yokohama into an Egyptian obscurity, we are probably comparatively better off. We have made full acquaintance with the ill we have. The streets are no darker than they were before; and our feet are better used to the obscurity. The sensation of blindness to the newly blind must be very dreadful; but familiarity with blindness may breed a sort of *quasi* contentment with it.

Spasmodic attempts in the direction of street-watering have been made. Occasionally in remote spots one or two coolies may be seen running to and fro with buckets with some water in them, and holes somewhere through which the water flows as long as it can. This is not perhaps the best method of laying the dust; but as it is not employed very often in the same locality it would be a little hypercritical to grumble about it. It is good and charitable to have sympathy with the most childish efforts to please; and we think that the master who caressed with a cudgel the donkey who tried to demonstrate his affection by the same signs as the poodle was a trifle severe.

After all we are not the public of Yokohama. We are content to represent it. And so long as the public is content to pay, directly or indirectly, either as tenants to foreign landlords in the shape of an extravagant rent, or as tenants of the Government in the shape of a no less exorbitant ground-rent, and to have no return, to have a town without police practically, streets unwatered by day in the droughts, unlighted always, and the prevalence of a cheap and very nasty system of scavenging; if they are content to put up with all sorts of positive and negative inconveniences, while they know that they pay for and have a right to the provision of conveniences, well then it is the concern of the public, and we, as a unit of the easily satisfied whole, must put up with the pain which we have not wit or courage to remove, must let the Japanese authorities pocket our ground-rents, do as they like with them and with us, while we sit quietly on one side and watch them doing it.

COMPLIMENTARY DINNER TO GEN. T. B. VAN BUREN.

The gentleman who has for the last three years discharged so efficiently the duties of U. S. Consul-General, and has, besides, rendered himself so popular among all classes of society, was not likely to be allowed to depart from Yokohama without some token of the esteem in which he is held by the community. A farewell dinner was decided upon as a means of expressing that esteem, and was given on the 27th inst. in the Grand Hotel. Mr. J. J. Keswick occupied the chair; and eighty-five gentlemen in all sat down to dinner, but very few of the places which had been taken being vacant. The tables were laid in the large dining saloon, which was exquisitely decorated with ferns and flowers, and the repast was worthy of the *chef* who prepared it.

On the right of Mr. Keswick sat General Van Buren, the guest of the evening, supported by Mr. Nomura Yasushi, the Governor of the Kanagawa Ken, at the right of whom sat his interpreter, Mr. P. Osborne. On the left of the Chairman was Captain Young, U. S. N., of the U. S. S. *Tennessee*, and next to the latter was placed Captain Buller, R. N., H. M. S. *Modeste*. Among the other guests present were Baron Rosen, and Mr. Stevens of the Diplomatic Body, Messrs. Brennwald, Russell Robertson, Castelli, Bavier, Kraetzer, Van Oordt, Fischer, Denison, and Pelikan of the Consular Corps, Mr. Motono, Commissioner of Customs, Tachikoi, Judge, Messrs. Lowder, Dickens, and Kirkwood, Captains Young and Boyd, and Lieutenants Bronson and Augur, and Paymasters Barton and Smith, U. S. N., Messrs. J. G. Walsh, Bayne, Wolf's, Van der Pot, Fobes, and H. Allen, jr., General Le Gendre, Drs. Simmons, Wheeler, Tripler, Stont, Perkins, and Latham, Brooke, Pinn, House, Hay, Lévy, and Cole, with Col. Knox, the *New York Herald* correspondent, and Mr. Weiller, Messrs. Dodds, Center, Harman, Spooner, Heinemann, Stone, Farley, Wertheimer, Bennett, McDonald, Blakeway, Petrocochino, Beato, Batchelder, Terry, Pagden and F. Dunn.

The Band of the *Tennessee* played at intervals during dinner, and between the toasts.

After dinner, the glasses being charged, the Chairman proposed the health of "Our Monarchs and Chief Magistrates," and next that of the "Diplomatic Corps." This was responded to in a neat little speech by Baron Rosen, who understands the humor of the English language, as well as he understands the language itself. He apologised for what he called his inability to reply efficiently on behalf of the body, of which he was but one of the "hands," not one of the "heads."

Mr. Brooke, in proposing the toast of the "Governor of Kanagawa," alluded to the former services of that gentleman in the field; and complimented him upon the assiduity, urbanity, and thoroughness with which he discharged the duties of his present office, and his willingness to meet the wishes of the members of the foreign community. The labors of his position were neither few nor light, as in addition to ruling over his countrymen he had to deal with a lot of troublesome foreigners. He had gained the good opinion of the latter, and of the foreign press. The speaker alluded to the abolition of the office of Municipal Director, and the condition of the Settlement. He hoped that in time there would be light ground rents, that all persons would have their rights, and that all parts of

the foreign settlement would be lighted and watered. The toast was drunk with much enthusiasm.

The Governor, through Mr. Osborne, replied as follows:—

I thank you, gentlemen, for the kind and cordial manner in which you have drunk my health. I can only say I wish that I deserved half of the amiable things Mr. Brooke has said of me.

There are many of those present this evening whom I have had the honour of thanking thus on other occasions when there was no alloy to the pleasure of the evening. To night there is one drawback to my perfect enjoyment—the fact that we are about to lose from amongst us (let us hope only for a while) the presence of General Van Buren, in whom I have ever found a good friend and zealous officer; really always to do his utmost towards the smoothing away of difficulties, and towards making our official intercourse as agreeable as possible.

As however the privilege of proposing the health of the guest of the evening has fallen into abler hands than mine, I will not trespass further on that gentleman's ground, but content myself with allowing him to express what I know to be the sentiments of all of us, and with wishing General Van Buren a speedy return.

For your courtesy to me I thank you again most warmly.

The fourth health was the toast of the evening, that of the distinguished guest, General Van Buren, which was proposed by the Chairman, who was frequently interrupted by applause, in the following terms:—

Gentlemen:—The toast which I have now the honour to propose is one which by your presence here this evening you signify will receive at your hands a most enthusiastic reception; for, gentlemen, it is the toast of the evening, "The health of our guest, General Van Buren."

We are met together to-night to pay a compliment to an old friend, an old resident among us, who is about to take his departure to his own land, and we would not have him go from our midst without some expression of the regard which we have felt towards him. The name of General Van Buren is a household word in this mixed community of ours, and brings to mind pleasant suggestions of the kindly gentleman and his genial humour, of which we have had such agreeable experience.

Whether we consider General Van Buren as performing the duties of his office at the Consular Board, as dispensing justice from the Bench, or, as the social character, we shall be satisfied in our reminiscences of him, and declare him to have been in all these relations one meriting our respect and esteem, and of whom we daily feel that, take him all in all, we never may look upon his like again.

But, Gentlemen, it is too much to expect that we are going to give General Van Buren simply unqualified praise: that we are figuratively going to pat him on the back, and say that he is a paragon of perfection: that we are going to pay the very questionable compliment of saying that he has been all things to all men. Oh no! far from it. We will tell our guest that we have had differences of opinion with him: that in many things we consider our opinion was better than his: that we were right and he was wrong; but even if we do so, what is the result? It is this! We feel that we respect him the more; for when did man ever fully respect the man that always agreed with him? or when did the manly, straightforward, independent, decided disagreement with us, ever fail to astonish us into respect?

In discussions at the Consular Board, in questions affecting the community's interests, we have had his assistance or his opposition; and we can earnestly say that whatever view of a question he has adopted he has maintained nobly and conscientiously; and we know that whatever his hand has found to do he has done with his might!

It is unnecessary that I should detain you longer upon a theme eloquent in itself, but I, in the beginning of these remarks, said that we had met together to give a testimony of our regard to General Van Buren, but it is more than that: we wish the expressions of this evening to be a pleasant recollection to him for ever, a pleasant testimony to his family of their sire's worth, an agreeable record to his countrymen of his value, and an invitation to his enemies, if he have any, that they should remember the "quality of mercy" be kindly, and forbear!

And now, General Van Buren, on behalf of this company, I bid you God speed. Whether you retire

to the enjoyment of a well earned repose, or to devote your mature knowledge and experience to your country still, or only for a holiday before re-appearing among us, may you always remember our expressions towards you this evening, and may they throughout your life be a pleasant episode to cast your thoughts back upon. We one and all bid you a hearty farewell!

The health was drank with all the honors and half a dozen cheers more.

General Van Buren, who was received on rising with a tumult of applause, returned thanks thus:—

Mr. Chairman and Gentlemen,—It is in the experience, I doubt not, of every one of us that there are occasions when language seems utterly inadequate to express real emotion. My heart is throbbing at this moment to pour out the feelings of gratitude which your kind words, Mr. Chairman, and your generous response, my friends, have kindled. But, alas! my tongue refuses its office, and the words that come to me seem cold and formal. I can only say I thank you—with my whole heart I give you thanks for this warm, this generous greeting.

When I came among you, some three or more years ago, I was received with that same kindness and courtesy that has followed me ever since. In striving to worthily perform the varied and important duties of my position, I have, on almost every occasion, been cheered and encouraged by your sympathy and approval; and in the few instances in which some of you have differed from me in opinion, you have never assailed my motives or questioned my good faith. Nay more, when my character has been assailed by anonymous writers through the columns of newspapers at a distance, you have hastened to express your indignation at the outrage, and your confidence in me as a citizen and a magistrate.

In these modern days there appear to be two species or classes of privileged libellers whom the law refuses to touch. One is the exalted official who ventilates his envy, jealousy and hatred through reports to his Government; and the other is the nameless assassin who sends his poisonous shafts through the columns of a prostituted press. To both of these I have been a victim.

To the former when I occupied a position more conspicuous than that I fill at present; and then my neighbors and townsmen at home, those who knew me well and knew I was incapable of dishonorable acts, and the people of my State, without distinction of creed or party, took up arms in my defence, and indignantly scouted the base accusations of the functionary whose vanity and malice had made him a shameless libeller; and in the course of time my Government rejected his charges, and restored me to its confidence and esteem.

And now, when certain newspapers in the United States are loaning their columns to anonymous scribblers, hired to blacken and defame my character, you, my friends, without distinction of race or nationality, who have known me for the past three years, to whom my public and private life is an open book, have rallied to my support and condemned, in no uncertain language, the efforts of my enemies.

And as I am about to sail away from you into the dim mysteries of the future, hoping soon to return, but with the myriad uncertainties of life and circumstances surrounding my steps, you gather here, this distinguished, this enthusiastic, assemblage, to express to me in glowing words your friendly regard, and to bid me God speed.

It seems but a tame acknowledgement for all this to say, "I thank you." And yet, what language can I use? Are not those homely words, after all, laden as they are with the heart's deepest emotions, more eloquent in their simple earnestness than the most elaborate embroidery of speech?

I am conscious of having striven to do my duty faithfully, and to deserve your good opinion. That I have succeeded, as your presence here warrants me in believing, will be to me always a most grateful reflection. I shall leave you with deep regret, and did I think my departure final this would be a most unhappy moment.

But my hope is to return, and to take again by the hand the kind friends who now gather to bid me good-bye.

Great changes, my friends, have taken place since I landed on these shores. In this small community of ours, some, whose bright faces we loved to look upon, have gone to their long rest; others have journeyed to far away shores, and are mingling in other scenes. A period of commercial depression has succeeded to the active glowing prosperity of

the olden times, and now lawn tennis seems to absorb the surplus energies of the settlement. We are left without a Municipal Director: the BUND bears the appearance of being in a chronic state of typhoon: sheep pasture on the race course while grols are heard from the rival Race Clubs; PUNCH goes into the country, and on his return endeavors to inoculate the community with the dyspepsia he had contracted by the undue use of fresh air, unusual exercise, and plain food. The VOLUNTEERS, that were to have protected us from the dread ravages of men in arms, have vanished like the morning dew, and yet we are safe, and a sense of a peaceful dullness and security pervades the settlement. To take a wider view. Important events have taken place in the Empire of Japan within the time referred to. The native public press, although controlled by restrictive laws, has increased in numbers, circulation, and power, and its influence upon the future of the country can only be estimated by those who have reflected upon what the same agent has accomplished in other lands.

Courts have to some extent been remodelled, and systems of jurisprudence and of legal practice have been projected, which, when completed, will tend to the administration of justice, by the methods, and, as it is to be hoped, with the results to which we have been accustomed in our own countries.

The progress of these improvements must necessarily be slow. Nations do not change their habits of thought and modes of procedure in a day. I am certain, however, that each of us, whatever his views, prejudices, or opinions, gives to this Government his warmest sympathies in its undertakings, and will greet with joy every step of progress made and every degree of prosperity realized by the people of Japan. Civil war has of late raged within the Empire, but fortunately so remote from us that its horrors have not intruded on our daily lives, and but its echoes have reached us as from far distant shores. We are told that its end is near, and let us hope that, with returning peace, the Government, in the exercise of its greatly increased and well deserved strength, may use it with that wise discretion that should ever accompany such great responsibilities; and that the education of the people, which languished under the stern necessities of war, shall again receive the attention its importance demands. From other lands, also, come to us the news of dread conflicts, the extent and issues of which no man can foretell; and all Europe seems trembling on the verge of a war such as the world has never seen. May heaven avert such an awful calamity: may it so be ordered that whatever is evil in this conflict may be brought to naught: may the right speedily triumph; and the bright angel of peace be swift-winged in her flight over all lands.

But I fear I am exceeding the limits of a post-prandial talk.

To inflict a speech upon you at this time would be but a poor return for your exceeding kindness.

Before taking my seat, however, I must be permitted to tender to my colleagues, one and all, my acknowledgements for their unvarying courtesy. Our intercourse, official and personal, has been marred by no misunderstanding; but on the contrary we have worked together in most cases, in the greatest harmony: and when differing in opinion we have done so without resentment or ill will.

To all the Japanese officials, also, with whom I have been brought into contact, and especially to the most worthy and estimable gentleman, the Governor of Kanagawa, whose health you have just drunk, I must express my obligations for constant and unwearied kindness.

In fact, Mr. Chairman, from all classes and conditions of persons in this country, I have met nothing but kind and considerate treatment, of which I desire to express my deep appreciation. It is for this reason, Sir, (among a thousand others), that I entertain a most affectionate interest for the people of Japan, and a sincere desire for their welfare and happiness.

I have said I expected to return to this country. I go, for awhile, to my own land, in which perhaps greater changes are annually taking place than in any other part of the world; for our restless and energetic people are constantly at work wresting precious metals from the earth, turning the desert into a garden, opening new lines of internal traffic, struggling with new problems of government, and striving, by new methods and in new ways, to work out for themselves and their children a future of success and prosperity.

I trust when I do come again among you, I may find matters greatly improved, with trade revived, confidence restored, and every business element working in harmony.

I trust, my friends, I shall find each one of you highly prosperous, not, in the words of a distinguished citizen, by having "done ze public in ze eye"—but, (to quote the same authority) "by doing, very much, the businesses who make (what you call) the prosperities."

Again, my friends, thanks—a thousand thanks—and farewell.

"Farewell a word that hath been and must be,
"A sound that makes us linger; yet—Farewell."

The General resumed his seat amidst loud and prolonged cheering.

Mr. F. V. Dickens, in proposing the toast of "Our Armies and Navies," alluded to the fact of his having formerly served in the navy, and, as it happened, under the distinguished officer (Captain Buller) who, he understood, would have to reply to the toast, and who had been so long in Japan as to be almost entitled to be called a resident. With "Our Armies and Navies," he specially coupled "the Army and Navy of Japan." In concluding his speech Mr. Dickens briefly and happily alluded to the affectionate respect he entertained for the departing guest from whom he had, during the last three years, experienced the utmost official courtesy.

Captain Young and Captain Buller having briefly replied,

Mr. J. G. Walsh proposed "Our Consuls." He said that the Consuls had always endeavored to make our social and commercial positions as good as they could make them. He alluded pleasantly and appropriately to the good fellowship which prevailed among the Consuls, rejoiced that the Consul who was leaving would be succeeded worthily, and concluded by joining to the toast the healths of Mr. Brennwald and Mr. Russell Robertson.

After a few words from Mr. Brennwald, who excused himself from speaking more at length on the ground of his not being English, and said that the gentleman whose name had been coupled with his would do more justice to the subject than he could,

Mr. Russell Robertson rose and spoke as follows:—

Mr. Chairman, Mr. Walsh and gentlemen,—I beg in the name of the Consuls to thank you for uniting so kindly in drinking our healths, and I gladly take advantage of the occasion that is thus afforded me to bear testimony to the cordial relations that at present exist between the Consuls and the community generally. To say, gentlemen, that we endeavour to do our duty is simply to say that which can be equally well said of every one here present, but duties can be performed with a good grace, and with an ill grace. It is not to be expected that a Consul can make a drawing-room of his office, but what he can do is to import drawing-room manners into it, and discharge his duties with patience, good temper, and that amount of skill and experience which each of us brings to bear in a greater or less degree.

It is this that the Consuls claim to do, and, further, in their intercourse amongst themselves as colleagues, in their intercourse with their fellow countrymen and with the officials and people of Japan, never to forget that the interests, the honour, and good name of their respective countries are committed to their safe keeping.

I am desired by my colleagues, and indeed I require no prompting to do so, to express our sense of the loss we are about to sustain in the approaching departure of our esteemed friend and colleague.

It is very generally known, and our honoured guest has referred to it himself, that General Van Buren has been made the object in the United States of virulent personal attack directed against his private character.

These attacks have, I believe, taken the shape of anonymous writings in newspapers.

I have not perused these personally, in the first place because they have never been before me in any way, and in the second place curiosity has not prompted me to seek out that which vilifies my friend. I have however a very general idea of their tenor. And all I have to say in respect to them is this, that if to endeavor to appear happy and light-hearted in business and out of business, if to accept and respond to the generous hospitality for which

Yokohama is proverbial, if to shake by the hand and at times to break bread with those whose social intercourse with us is in a measure restricted by reason of those unwritten laws which govern the movements of society in all parts of the world, if, gentlemen, to do all this constitutes a crime, then is my conduct equally criminal with that of Gen. Van Buren, equally is my good name open to be aspersed, and equally with him am I unworthy to hold the commission with which my Queen has honoured me.

I utter these words, gentlemen, not prompted by feelings of idle sentiment, nor with any desire to have it recorded in print to-morrow that on the occasion of the farewell dinner to our guest, the British Consul said this and that of his colleague, the American Consul-General, I speak, gentlemen, not so much as a colleague, but as a friend and a fellow citizen of the General's at this port; and as one who if his own good name ever comes to be assailed with as little reason as there has been in the case of our guest, may I trust not be wanting in a friend who in the interests of truth, friendship, and justice will come forward and defend my fair name, as I have endeavoured, I fear but unworthily and with but a poor show of eloquence, that of my friend, General Van Buren.

D. Latham having proposed "the Bench and the Bar," Mr. Montague Kirkwood was called on by the Chairman to return thanks, both for the Bench, in the absence of Mr. Wilkinson, and for his own learned brethren of the Bar.

Mr. Kirkwood humorously demurred to being called upon to supply the place of Mr. Wilkinson, who, he said, was absent preparing a very painstaking judgment, showing why foreigners should pay ground rents. A sally upon the length and elaborateness of the learned Law Secretary's decisions caused much laughter, as did the modest expression of the speaker's hope that he might come to the Bench himself *some day*. The speaker, on behalf of the Bar, found that that body had not much to thank the public for. He deplored that "litigation was in decay," and suggested that the reason why there were so few lawsuits in Yokohama, which was in this respect a happy exception to most other places, might be found, perhaps, in the fact that attorneys were absent, and it was their business to encourage litigation. His speech was longer than he had intended, "owing to Mr. Wilkinson." He was proud to say that the guest of the evening was a distinguished member of the Bar: so, in a sense, was the manager of the hotel, who had provided them with a dish of which he (Mr. Kirkwood) had eaten with pleasure, and on which he made an ear-grating pun.

Mr. D. W. Stevens proposed "the Press," a toast which was replied to by Mr. House.

"The ladies," the last of the official toasts, was given by Captain Buller in highly eulogistic terms; and, in the unavoidable absence of Mr. Pearson, who had been intended to reply to it, it was answered in somewhat cynical but amusing style by P'aymaster Smith, who introduced a couple of recitations, the first, "The Coquette," being an effusion anything but complimentary to the fair sex.

Before the company separated some unofficial toasts were proposed, notably, the health of Mr. Denison, U. S. Vice Consul General, to whose industry and ability to discharge the duties of the post he himself was leaving General Van Buren feelingly testified. The subject of ground-rents having been more than once alluded to during the evening, the General again broached it, and in connection with it gave the health of a sinner in the matter, Captain Batchelder, who replied as follows:—

Mr. Chairman and Gentlemen:—I did not come here to-night expecting to be called upon to make any reply, but, as we sometimes say, every man is entitled to have his "put."

It affords me great pleasure to assist in doing justice to our esteemed guest. In the early days of San Francisco, more than a generation ago, I had the pleasure and honor to meet, among the pioneers of that enterprising city, as one of its prominent lawyers, our present U. S. Consul-General, whose many legal and equitable decisions during his residence here we have so generally approved. Japan cannot afford to lose so able a Judge; therefore let us hope our esteemed legist will speedily return to us again. We trust the full power of the O. & O. Co.'s *Oceanic* may be "cented" in giving its every revolution to the safe and speedy landing of one of Japan's true friends in the keeping of his Golden City friends, and that, during his visit East and quick return here, he may not be further annoyed by any more "Jay-Hawks."

In reference to the Tokio-fu ground-rent case against me, it should have been instituted against many others. I have never refused to pay just ground-rents. The Government have ample security for any rent on that property legally due them under the treaty land regulations. I have always claimed there were equities under their contract with the land-renters in our favour. The ex-Chiji of Tokio, under whom this suit was originally commenced, has made way for the present able Chiji, a man of greater progress. Now that the Government of Japan have this Tokio-fu contract between the Tokio-fu and the land-renters under investigation, I am confident it will be influenced by the able decision of our departing Judge, and concessions conceded in the near future. I have always been a firm believer in the future success of this nation under practical economy.

The Government has had plenty of work over the rebellion now nearly crushed. If we continue to be patient for a short time I am confident the Tokio-fu ground-rents, as well as many of our present difficulties under this Government, will be equitably settled.

At midnight there was a general move towards the door, and the guest of the evening having been hoisted on the shoulders of some of his friends, and carried in triumph through the room, the party broke up, after an evening which, unanimously and without reserve, they pronounced one of the most pleasant they had ever spent, wishing their parting guest good speed, and a safe and quick return to a place where he has made himself so sincerely and affectionately esteemed.

SUMMARY OF THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1876.

On summarizing the Foreign Commerce of Japan for 1876, as given in the Reports of Her Majesty's Consuls for the various Treaty Ports, the Total Trade of the year is shewn to have amounted to the following value.

	Dollars.	
Imports.....	24,087,515	
Exports.....	27,669,466	
Total.....	\$51,756,981	

This total was distributed in the following proportions among the various Treaty Ports.

	Imports. Dollars.	Exports. Dollars.	Total. Dollars.
Kanagawa.....	18,841,880	21,431,879	40,273,759
Hiogo & Osaka.	4,155,056	3,500,952	7,656,008
Nagasaki.....	1,063,199	1,959,673	3,022,872
Hakodate.....	27,380	776,962	804,342
Total.....	\$24,087,515	\$27,669,466	\$51,756,981

On comparing the Trade of 1876 with that of 1875, it will be seen that the Imports of 1876 exhibit a Decrease of \$5,379,552, while the Exports, on the other hand, increased to the value of \$9,654,576; consequently, the Total Trade of the year shews an advance in value on that of 1875 of \$4,275,024. Thus:—

Year.	Imports. Dollars.	Exports. Dollars.	Total. Dollars.
1875.....	29,437,067	18,014,890	47,451,957
1876.....	24,087,515	27,669,466	51,756,981
	\$5,379,552	\$9,654,576	\$4,275,024
	Decrease.....	Increase.....	Increase.....

IMPORTS.

On the examining the Import Trade of the year, the Decrease above-mentioned will be found to be apportioned among the various classes of goods to the amounts given in the following Table:—

Decrease.	Dollars.
Woollen Manufactures.....	402,142
Mixed Cotton and Woollen Manufactures.....	1,185,971
Metals.....	216,311
Miscellaneous, Foreign.....	3,225,736
Eastern Produce.....	435,446
	5,465,606
Increase.	
Cotton Manufactures.....	78,671
Arms.....	7,383
	86,054
Total Decrease, Imports.....	\$5,379,552

It will thus be seen that the Import Trade of the year has been characterized by those fluctuations which usually mark the course of the Foreign Trade of Japan. In 1875 the Imports (\$29,467,067) were more than five millions of dollars in excess of those of 1874; in 1876 they exhibit as great a decrease on those of 1875. The increase in 1875 was common to all classes of goods; the decrease in 1876 is equally general. It is chiefly observable, however, in Woollens, Mixed Cotton and Woollens, and Miscellaneous Goods,—these being the classes which exhibited the principal increase in 1875.

Woollen Manufactures declined from \$3,846,636 in 1875 to \$3,444,494 in 1876, while Cotton and Woollen Manufactures fell from \$2,026,532 in 1875 to \$840,561 in 1876. It is evident, therefore, that the heavy importations of those goods in 1875 were not met by a corresponding consumption, and that the stocks of that year had to be passed on to 1876.

Cotton Manufactures form an exception to the above remarks, as the total importations of this class of goods shew a slight increase in value (\$78,671) on those of 1875. The Transactions in the two staple articles Cotton Yarn and Shirtings—exhibit a satisfactory advance, but a fall occurred in the less important articles, as is shewn by the following Table:—

Quantity.	Dollars. 1875.	Quantity.	Dollars. 1876.
Cotton Yarn—			
137,253 picls.	4,057,850	147,099 picls.	4,151,514
Shirtings—			
46,637,309 yds.	2,616,723	56,387,194 yds.	2,997,536
Other Cotton }	2,299,464		1,903,599
Goods..... }			
Total.....	\$3,974,037		\$9,052,706

The class of goods which apparently experienced the greatest decline is that of Foreign Miscellaneous, the Imports of which in 1875 amounted to \$8,546,836 as against \$5,321,099 in 1876. It was shewn, however, in the Summary of last year that the first-named sum included importations on Government account to the amount of \$3,547,546, and that the value of Miscellaneous Goods imported in the way of Trade was therefore \$4,999,289. The importations of 1876 included articles on Government account to the value of only \$806,801, and those which entered in the course of Trade amounted therefore to \$4,514,298. This sum, when compared with the Imports under the same head in 1875 (after deducting articles on Government account) exhibits a decline of \$484,991, which shews that the actual trade

in this class of goods fell in 1876, as in the case of Imports, to nearly the amount of the trade of 1874, which was \$4,485,272.

The goods, which are classed under the head of Miscellaneous Foreign, are given in detail in the Consular Returns, but the following Table shews that rather less than half of the Miscellaneous Goods imported in the way of Trade in 1876 were composed of the ten under-mentioned items:—

	Dollars.
Kerosene Oil	455,792
Leather	248,129
Drugs and Medicines... ..	246,290
Provisions and Stores... ..	244,033
Machinery	235,454
Paper and Stationery... ..	202,833
Beer, Wines, and Spirits	200,939
Tea Lead	163,683
Clothing and Haberdashery	153,799
Watches	144,631
Total... ..	\$2,295,583

The heading termed Eastern Produce comprises the Raw Materials imported into Japan from China and neighbouring countries, the trade in which is almost entirely carried on by Chinese merchants.

As compared with the Imports of 1875 there has been a fall in Sugar and a rise in Cotton, to the amount shewn in the following Table, the result being a deminution under this heading in the Trade of 1876 of \$435,446.

1875.	Dollars.	1876.	Dollars.
Sugar—			
741,796 pcls.*	3,482,588	655,438 pcls.*	2,743,820
Raw Cotton—			
26,580 pcls.*	364,977	47,850 pcls.*	724,911
Other Eastern Produce—			
—	1,015,923	—	959,311
Total.....	\$4,863,488		\$4,428,042

* 1 picul=133½ lbs. av.

The experience of the Import Trade of 1876 furnished another proof of the limited character of the Japan market, and shews that no great extension of that Trade is to be looked for. The power of Japan to purchase must of course depend upon her power to produce, and a review of the Exports of the country during the last five years shews that these have not increased. Although, for some time past, Foreign Goods have been supplied to the Japanese at very low rates, and often at less than cost price, the average of the importations of the last five years proves that during that period there has been no increase in the consumption of those Goods. The following Table of Imports (from which Eastern Produce has been deducted) for the period above named shews that any advance in one year has been followed by a decline in the next, and that the average of the five years is \$22,198,485, or more than half a million less than the Imports of 1872. The average value of Japanese Exports for the same period is \$22,128,304.

Foreign Imports, exclusive of Eastern Produce.

	IMPORTS.	Dollars.
1872	22,827,521
1873	24,580,226
1874	19,321,628
1875	24,603,579
1876	19,659,473

Average for five years... ..\$22,198,485

EXPORTS.

Turning to Exports, we notice the gratifying result that these have been larger in

1876 than in any previous year, the total value being \$27,669,466 while the average of the eight preceding years—1868 to 1875—was \$18,652,610. This is chiefly owing to the large export of silk which in 1876 amounted in quantity to 26,684 piculs (including Noshi, Floss and Waste) and in value to \$13,775,504. The shipments of the other staple export, Tea, fell on the other hand considerably below those of 1875 and 1874.

The following Table shews that the Exports of Silk, Silk-worms' Eggs, Cocoons, Dried Fish, Rice, Seaweed, Camphor and Miscellaneous Articles increased in 1876 to the extent of \$11,511,069, while the Exports of Tea, Copper, Tobacco, Wax, and Coal declined to the amount of \$1,856,493.

EXPORTS.	
Increase.	Dollars.
Raw Silk	8,036,813
Silk-worms' Eggs	1,427,350
Cocoons	276,724
Dried Fish	258,941
Rice	793,669
Seaweed	344,326
Camphor	46,404
Miscellaneous	326,842
	11,511,069
Decrease.	Dollars.
Tea	1,488,474
Copper	135,452
Tobacco	117,652
Wax	8,846
Coal	106,069
	1,856,493

Total Increase, Exports..... \$9,654,576

The Export Trade of Japan may be classed under the three principal divisions of Silk (including Silk-worms' Eggs and Cocoons,) Tea, and Miscellaneous Produce; and the following Table exhibits the fluctuations in value which occurred under these general heads in 1875 and 1876.

	1875.	1876.
	Dollars.	Dollars.
Silk	6,467,834	16,208,721
Tea	6,915,692	5,427,218
Miscellaneous, or all other Produce.....	4,631,364	6,033,527

Total\$18,014,890 \$27,669,466

Thus the Export of Silk increased in value in 1876 to the amount of 150½ per cent., that of Tea decreased in value by 21½ per cent., and Miscellaneous Produce increased to the extent of 30½ per cent. The quantities of the Export of Silk and Tea in the two years are given in the following Table.

	1875.	1876.
Raw Silk.....	11,813.87 pcls.*	18,641.67 pcls.*
Noshi	1,229.03 "	1,539.93 "
Floss	357.54 "	588.58 "
Waste	3,006.60 "	5,913.81 "
Silk-worms' Eggs	727,463 cards.	1,018,525 cards.
Cocoons	3,755.50 pcls.	5,442.81 pcls.
Tea	212,870 "	203,351 "

* 1 picul = 133½ lbs. av.

The great demand for Japanese Raw Silk occasioned by the partial failure of the crops in France and Italy in the spring of 1876, gave the Japanese growers an opportunity, which had for some time been withheld from them, of realizing unusual profits. It may be hoped that this will have the effect of encouraging a branch of industry which is doubtless the most important one that the country possesses, and to which too great attention cannot be given by the Government and people. In 1875 the average value obtained by the Japanese for their Raw Silk was \$459 per picul; in 1876 it was \$708, or

an advance on the former of more than 54 per cent. Such an advance is of course exceptional, but it should induce the Japanese growers and dealers to study the subject closely, and to persevere in their efforts to produce silk of a quality which will continue to raise the reputation of the Japan product in the foreign markets. The demand for Raw Silk naturally effected the price of Silk-worms' Eggs and Cocoons. The average value realized on the former in 1875 was 65 cents per card; in 1876 it was \$1.86 cents. That of the latter was \$67.69 cents per picul in 1875, and \$97.55 cents per picul in 1876.

The decline in the value of the Export of Tea from \$7,792,244 in 1874 and \$6,915,692 in 1875 to \$5,427,218 in 1876 shews that there is a limit to the demand for Japan Teas, the market for which is almost entirely confined to the United States. This decline is partly attributable to faulty preparation, and it is evident that the Japanese must pay more regard to the quality of what they place upon the market, if they are to compete successfully with Chinese growers. Even if the taste for the Japan leaf should be maintained in the United States, it seems probable that the consumption there will not exceed twenty millions of pounds per annum. This demand has been exceeded during the last two years by the Exports, the total of which amounted in 1876 to 27,113,466 lbs. and in 1875 to 28,382,666 lbs. The English market is not only amply supplied from China, but is deriving an annually increasing stock from the plantations in British India, which appear to be steadily increasing in favor. Although it is only about 20 years since the cultivation of Tea commenced in that country, the Export has already reached the large amount of thirty-four millions of pounds.

The increase in the value of Miscellaneous Exports nearly two millions of dollars, as shewn in the preceding table, is chiefly traceable to the demand which exists in China for certain raw productions of Japan, such as Dried Fish of various kinds, Seaweed, Isinglass, Mushrooms, Ginseng, etc., and to large shipments of Rice which amounted in value in 1876 to \$810,760 against the trifling value of \$17,091 in 1875. In 1874 Rice was exported to the value of \$839,619. The dealings in this article continue, however, to be subject to so much official restriction, and so many uncertain influences, that it cannot yet be regarded as an ordinary commodity of export. The trade in the native industries such as Lacquered Ware, Porcelain, Fans, etc., does not increase as could be desired. It may be interesting to give the values of the export in 1875 and 1876 of some of the articles above referred to.

	1875.	1876.
	Dollars.	Dollars.
Seaweed	334,890	679,216
Mushrooms	222,700	343,231
Isinglass	201,483	307,165
Ginseng	177,303	181,212
Lacquer Ware	162,802	115,225
Porcelain and Earthenware	113,168	59,748
Fans	113,664	132,498

Total..... \$1,326,010 \$1,818,295

It is to be regretted that the export of Minerals exhibits a decline. Only two articles have to be noticed, Copper and Coal. The former fell from \$425,160 in 1875 to \$289,708 in 1876; and the latter during the same period fell from \$871,795 to \$765,726.

Thus the mining resources of the country, from which much was at one time expected, fail to exhibit any development, and the coal of Japan will now have to compete with the increasing yield which is being obtained in China, where a commencement has been made in Formosa in working the mines with foreign machinery.

The following table compares the total value of the Import Trade (including Eastern Produce and Articles imported on Government account) and the total value of the Export Trade for the last five years, and shews an average excess in the value of Imports of \$4,153,840. This excess has had to be met by an export of Treasure.

	IMPORTS. Dollars.	EXPORTS. Dollars.	TOTAL. Dollars.
1872	26,188,441	24,294,532	50,482,973
1873	27,444,068	20,660,994	48,105,062
1874	24,223,629	20,001,637	44,225,266
1875	29,467,067	18,014,890	47,481,957
1876	24,087,515	27,669,466	51,756,981
Total.....	\$131,410,720	\$110,641,519	\$242,052,239
			\$131,410,720
			110,641,519

Excess of Imports over Exports... \$20,769,201

Giving an average of \$4,153,840 per year.

TREASURE.

The Returns of the Japanese Customs under this head differ materially from those rendered by some of Her Majesty's Consuls, but it has been thought preferable to use the former for the purpose of this summary. According, therefore, to the first-named Returns, the following amount of Treasure was Imported from and Exported to Foreign Countries in 1876:—

	Imported. Dollars.	Exported. Dollars.
Kanagawa.....	6,214,684	8,673,979
Hiogo and Osaka	1,855,597	1,781,817
Nagasaki	244,547	241,851
Total.....	\$8,314,828	\$10,697,649

or an excess of Treasure Exported over Treasure Imported of \$2,382,819.

In view of the circumstance that the value of all the Goods Exported from Japan in 1876 exceeded the Total Value of the Imports by \$3,581,951, a somewhat different result to the above might have been expected.

It is satisfactory to note, however, that the above-mentioned excess of Treasure Exported is \$3,892,657 less than the average excess of the five years, as shewn by the following Table:—

	Treasure Imported. Value in Dollars.	Treasure Exported. Value in Dollars.
1872.....	12,204,891	9,577,169
1873.....	10,099,503	13,081,485
1874.....	1,018,589	15,278,256
1875.....	335,287	14,715,921
1876.....	8,314,828	10,697,647

Total \$31,973,098 \$63,350,478
Average excess of Treasure Exported, for the five years \$6,275,476

It has been shewn above that the average value of all Imported Goods during the last five years exceeded that of all Exported Goods by \$4,153,840, and it would thus appear that an average annual amount of Treasure over Two Millions of Dollars has been required to meet other indebtedness than that caused by the above-mentioned adverse balance of trade.

A.—GENERAL SUMMARY OF THE FOREIGN TRADE OF JAPAN, 1876.

Port.	1876.			1875.		
	Imported.	Exported.	Total.	Imported.	Exported.	Total.
Kanagawa	\$18,841,880	\$21,431,879	\$40,273,759	\$21,953,909	\$12,466,730	\$34,420,639
Hiogo and Osaka	4,155,056	3,500,952	7,656,008	5,960,427	3,038,123	8,998,550

TONNAGE.

The shipping returns shew the following large decrease in the total foreign tonnage of 1876 as compared with that of 1875.

	Tons.
1875.....	951,523
1876.....	680,557

Decrease.....270,966

This decrease is accounted for by the transfer from the United States flag to that of Japan of the line of steamers running between Yokohama and Shanghai. These steamers have consequently ceased to be entered in the foreign tonnage, although they are as largely employed as hitherto in carrying foreign freight. Owing to this transfer, the United States tonnage was reduced from 617,331 tons in 1875 to 286,995 tons in 1876, but the general tonnage—or that not employed in carrying mails—increased from 42,687 tons in 1875 to 51,264 tons in 1876. The British tonnage, on the other hand, rose from 252,146 tons in 1875 to 302,039 tons in 1876—or an increase of 48,893 tons; the amount of mail tonnage (included in the above total), being 26,659 tons, or nearly the same as that of 1875. The tonnage under all other flags advanced from 82,046 tons in 1875 to 91,528 tons in 1876, being an increase of 9,482 tons. The following Table distinguishes between the amount of mail steamer tonnage and general tonnage employed in the trade, and shews the difference of each in the two years:—

Mail Steamer Tonnage.

	1875.	1876.
American.....	574,644	235,731
British.....	26,232	26,659
French.....	45,694	44,355

644,570 306,745
Decrease in 1876.....337,825 tons.

General Tonnage.

	1875.	1876.
British.....	225,914	275,380
American.....	42,687	51,264
All other countries.....	82,046	91,523

Total.....350,647 418,167
Increase in 1876.....67,620 Tons.

The general result is thus shewn to be satisfactory, and British Tonnage, which has been second to that of the United States since the establishment of the Pacific Mail lines, exceeded the latter in 1876 and now heads the list.

NUMBER OF FOREIGN RESIDENTS.

The Return of Foreign Residents, when compared with that of 1875, shows an increase of ninety in the number of individuals (which includes most of the persons in the employment of the Japanese Government) and a decrease in the number of firms, shops, or commercial concerns of all classes,—some of which are very small,—of thirty-six.

	Residents.	Firms.
1875.....	2,583	257
1876.....	2,673	221

Increase.....90 Decrease...36

Twenty-nine English establishments, six German and five Dutch appear to have withdrawn from business in 1876; and four additional American establishments appear to have been opened. The following table compares the number of the Residents and

Firms of the various nationalities for the two years:—

	1875.		1876.	
	Residents.	Firms.	Residents.	Firms.
English.....	1,282	109	1,242	80
American.....	353	30	410	34
German.....	279	43	274	37
French.....	254	42	286	42
Dutch.....	142	12	126	7
Ten other nationalities..	273	21	335	21
	2,583	257	2,673	221

The following Table shews the distribution of the Residents and Firms between the five open ports, and Yedo.

	Residents.		Firms.	
Kanagawa (Yokohama).	1,521	...	158	
Hiogo & Osaka	379	...	43	
Nagasaki	232	...	10	
Hakodate	27	...	2	
Niigata	21	...	2	
Yedo	486	...	6	
	2,673		221	

It should be observed, however, that the means of making up a Return of all the Foreign Residents are too imperfect to admit of accuracy, and that the term "Firm" is liable to a different interpretation at different ports. All the Foreigners employed by the Japanese Government in the interior are probably not included in this Return. The Chinese have been omitted, for want of information, but it is probable that their number exceeds that of all the other Foreigners combined.

The Port of Niigata remains unvisited by foreign ships, and therefore only contributes to the annexed Tables a Return of Foreign Residents. The want of a proper harbour is the cause of the failure of this Port, which is to be regretted, as it is the outlet of some of the most fertile provinces of the country, the commercial capacities of which are clearly described in the comprehensive Report of Mr. Vice-Consul Troup.

H. B. M.'s Legation, Yedo.

July 31st, 1877.

ABOUT TORTURE.

(From the *Nichi Nichi Shinbun* of the 7th Aug.)

SINCE the report to the effect that the use of torture was only allowed in the examination of political offenders in the Special Judicial Courts in Kiushiu, first appeared in the native papers, foreign newspaper writers have greatly condemned it, as we remarked in our paper of yesterday. And even of our own writers some have expressed distrust about the matter, so that we cannot be silent. From the first our opinion has been against the use of torture; and we have repeatedly discussed the subject; but we did not make any remarks on the subject in our issues of yesterday and the day before, because we did not know whether the rumor of the application of torture was true or not.

The injury or benefits which may proceed from this matter not only concern political prisoners; but the consequences may impede the progress of improvement in our judicial laws on the one part, and sully the honorable name of our land in foreign countries on the other; and further may prevent us from recovering that judicial power over foreigners which now remains in their hands. As the matter is, thus, most important and weighty, we did not proceed incautiously to its discussion. Our

first duty to our readers was to assure ourselves whether the fact were true or not. We have endeavoured to inquire into the matter to the utmost of our power, and have learned something, which is somewhat worthy of notice. It is not known where the rumor of the use of torture originated; and we have become convinced that it was unfounded. Both the Editors of the *Hochi Shinbun* and ourselves were mistaken; and we are much ashamed to have published such idle stories in our paper.

Now we give below, for the information of our readers, what we learned, and especially for the instruction of the writers of the *Japan Herald* and *Gazette*, who endeavor constantly to speak evil against our political institutions and the Government, use their power to the very utmost for that purpose, and seem to desire to break up the friendly relations existing between the Japanese and foreigners. We have heard this:—As soon as Kawaji, President of the Police Department, had read through our article of the 4th instant, (the translation of which appeared in the *Japan Gazette* of the 7th inst.) he was much astonished, and immediately sent a telegram addressed to Kishira, Kenji-cho, in Nagasaki, inquiring whether what we stated was true or not. The answer was that "no torture is applied in the special Judicial Court in Kiushiu." We know that this comes from a good source, and, is not obscure like a rumor. Will not foreign writers be a little ashamed on reading this intelligence? What was their object in so gladly turning their pens against us in relation to the rumor published in the *Hochi Shinbun*? If they believed that the rumor was true they may be said to be ignorant of how to understand a sentence, and we should be right in saying that they are blind fellows having not enough knowledge to read the newspapers. But they knew the rumor was false; and still, as they are always desirous to talk ill of the Japanese, they took advantage of the good chance afforded by the rumor to have a fling at us. Thus, on the one part they have brought themselves into bad repute; and, on the other they are rightly reported to have acted contrary to the duty of newspaper writers. Every time when foreign writers decide selfishly upon matters, and speak insolently of our country, they lose their credit and increase the detestation in which they are held among our people. We are very much grieved for them. It is the duty of us newspaper writers to publish first what is current among us, and not to lose a moment in inquiring whether a rumor is true or not. If any important matter is rumored, we will mention it in our paper, and discuss whether it is true or not after due enquiry made. We are always anxious to be correct on every point. But foreign writers, who boast of their freedom and civilization, pay no attention to their duty in this respect. We will wait and see what comments are made on our information by both the *Herald* and *Gazette* writers.

In past years verdicts on criminal cases were given on the confession of criminals. At that time the use of torture was not abolished. But as its employment was found to be bad, the minister of the Judicial Department issued the following notification to every provincial Saibansho, on the 25th August in the 7th year of Meiji (1873). "Torture has been used in examination from olden times. But if one were obliged to implicate himself in a crime of which he is innocent, by confession induced by severe torture, this would be a grave mischance. So, hereafter, as far as possible no torture will be used. But in case of necessity it may be employed. Reports of every case in which torture has been applied must be made

to the Judicial Department at the end of each month." Even in those times in which verdicts were given on confession, the use of torture was (generally) prohibited, and in cases where it was necessary to use it the matter had to be reported to the Judicial Department. On the 10th June of the 9th year of Meiji (1876) the government amended the 318th Article of the *Kaitai Ritsurei* (amended Code), which states that "verdicts on criminal cases should be given on confession," to the effect that such verdicts should be given on the evidence. The use of torture has been found improper, and it is clearly known that the abolition of the question was completed between August 1873 and June 1876. Thus it is of course, not used in the special Saibansho in Kiushiu in the examination of political offenders. We are very glad to find that the rumour was false, and much pleased to make this known to our readers and the foreign writers.

THE MITSU BISHI COMPANY.

(From the *Hochi Shinbun* of the 10th August.)

THOSE who read our paper of the 11th June, 1877, should know how great service has been rendered by the Mitsu Bishi Company in the suppression of the South-Western disturbances, and how valuable a return has been made for the favor which the Government has shown to that same company. Since the commencement of the wonderful series of events which have taken place in the South-West they have afforded every possible convenience to the Government in the matter of transport of troops and stores. But in regard to the conveyance of merchandize corresponding inconvenience has accrued, and caused, naturally, more or less decrease in production. Our countrymen have been much troubled in this matter. But the Mitsu Bishi Company have devoted great attention to the same subject and have recently purchased many steam-ships, to the full extent of their power, wishing that our merchants shall not be incommoded for want of means of transport, and to extend those lines which they have already opened. We commend their conduct. At the present time, in which there are indices of a decline in our productions, this falling off would be increased if transport were obstructed, and would cause great damage to our finance. Increased production is all we have to look to for the restoration of prosperity when the war is ended. According to what we have heard, the Mitsu Bishi Company have purchased the following vessels from England. They will soon ply along the coast of Japan to the increased convenience of transport:—

Present name.	Old name.	Tons.
<i>Wakano-ura Maru</i>	<i>Candia</i>	1,340
<i>Sumi-no-ye</i>	<i>Duna</i>	852
<i>Kumamoto</i>	<i>Gadshill</i>	1,240
<i>Kokono-ye</i>	<i>King Richard</i>	1,133
<i>Akitsu-shima</i>	<i>Montgomeryshire</i>	1,146
<i>Takachiwo</i>	<i>Lotus</i>	1,407

These six vessels are firmly constructed and are none of them more than three years old. They are of large size and speedy. Besides these, the following were purchased some days ago:—

Present name.	Old name.	Tons.
<i>Atago Maru</i>	<i>Massilia</i>	1,650
<i>Tamagawa</i>	—	34
<i>Kanko</i>	—	318

These three vessels are not so well built as the first mentioned six; but they will all be serviceable for transport.

The cost of these purchases is estimated at more than one million yen. This sum was

raised by the Mitsu Bishi Company by a loan. What is the purpose of the company in making the purchases? It may be easily known. It is only to promote facilities for transport, with the object of enlarging the sphere of home production.

Now, the war in the South-West seems likely to be brought to a close. But we cannot know when the insurrection will be completely suppressed. At the end of the war we shall want a large fleet for coast traffic, as large a one as was needed before the commencement of the war. Some persons may say:—By the purchase from foreigners of these new vessels the Mitsu Bishi Company will possess too many ships. This is not right. On the return of tranquility, those vessels which have been employed during the struggles, will require repair, and many will be put out of service; so that the Company will find their vessels insufficient for the transport required. Even before the outbreak of the civil war we saw that the Company could not thoroughly transact their business on account of the smallness of their fleet; and that great inconvenience was in consequence experienced for want of the means of coast conveyance.

It is not many days, so to speak, since but little facility existed for transport between the various ports of Japan; and even now traders are not content with the facilities afforded by the lines already open. The Mitsu Bishi Company, to meet this, have purchased many vessels by raising a heavy loan, in order to extend their lines, and encourage native productions. We hope and are sure that the Mitsu Bishi Company will become more and more prosperous through the assistance of the Post Office, and that the day on which our national flag will float on the wind in San Francisco Bay, on the opening of a Japanese Trans-Pacific line, is not very remote.

IS SAIGO TAKAMORI DEAD?

(From the *Kinji Hiron* of the 13th August.)

In February of the 10th year of Meiji (1877), Saigo Takamori, Commander-in-Chief of the Imperial Army, determined to go to Kioto at the head of 15,000 picked soldiers, in order to ask a question of His Majesty the Mikado. When he had proceeded as far as the province of Higo, this wonderful news was first received at the old capital, where an expedition was ordered by the Government. The rebel commander besieged the castle of Kumamoto, which General Tani, the Governor, obstinately defended. No communication was made with the defenders for more than fifty days. At length the imperial troops arriving by various roads joined the Kumamoto garrison, defeating the insurgents on their way to the castle. Then the rebel Commander spoke to his first General Kirino Toshiaki to the following effect:—"All is ended. Don't let us kill the soldiers by the sharp swords of the imperialists! Two or three of us will commit suicide to preserve their lives." Kirino endeavoured to the utmost of his ability to dissuade him from his design and to preserve his life; but Saigo would not listen to him and died by committing *harakiri*.

Some of our writers may positively dispute this, saying:—Saigo is a man of great wisdom and penetration. How could he have committed suicide through the discouragement of one or two defeats? When he raised the siege of Kumamoto, a brisk discussion is said to have occurred between him and his assistants. He was in favour of committing suicide, while the others were desirous of continuing the contest till the last. The result was that Saigo was

silenced. Such is the rumour among the imperialists where nobody talks of his suicide. In spite of a hundred defeats, the insurgent troops yet make a desperate stand before the imperialists. This could only be done if they had Saigo at their head. Is Saigo really dead? If so how can his men stand before our troops even to the present day!

People who argue thus do not know Saigo. He would not be content to see his men killed and wounded in every battle. Looking at the past and present condition of the insurgents, we find many and various points of evidence which warrant us in attaching some faith to the death of Saigo. We will refer to them now.

Men now in Kumamoto say that when the rebels raised the siege of the castle Saigo was carried away in a box like a *nagamochi* (a long chest in which clothes are kept). When the rebels were going to leave Hitoyoshi and Ikebe, the first leader of the Higo insurgent troops wished to have an interview with Saigo. Kirino positively refused his request. When we first heard this we had some suspicion. Not one prisoner out of many hundreds know aught of Saigo, and yet he is their Commander-in-Chief. Is it not strange that a Commander, in whom his troops have every confidence, should be kept constantly concealed from them? The condition of the insurgents, since their retreat from Kumamoto, has been much changed, though they had no lack of provisions of food and military stores, and no dearth of commanding strategic military positions, such as Hitoyoshi. Withal they were unable to retake Kagoshima. And in one campaign, they were routed at Miyakono-jo, Miyazaki, Sadowara, Takanabe, and other strong places, where staunch resistance was expected from them. Now the unfortunate rebels are encamped on the mountain ranges which lie between the provinces of Hiuga and Bungo. Thus they, having really no Commander, have fallen into disorder; and Kirino, Murata, Etsumi, Ikebe, and other distinguished leaders, combat here and there without concert among themselves, and just as may seem proper to themselves individually.

What kind of man is Saigo? He is a rebel to-day, it is true. Was he not, however, marshal of the imperial army of Japan till but as yesterday? If he were alive his soldiers, the imperial troops, though they are powerful, could not overcome him as easily as they would split bamboos. These are the reasons we have for believing in the suicide of Saigo. The report, which says that Saigo left Kumamoto in a box may be correct. Kirino and a few others keep his death secret, wishing to persevere in their enterprise till the last. So it is not at all strange that the rebels have been routed in each battle. But we do not know whether our countrymen share our opinion or not. In the course of a few days we shall be able clearly to pronounce upon the question.

EXCITEMENT IN TOSA.

(From the *Mai Nichi Shinbun* of the 11th August.)

THE day on which the turbulent whales in the South-West will be caught by the fishermen from the East, is approaching, and yet there are no signs that the enormous birds in the Island of Shikoku will spread their wings to go to the assistance of the whales. Rather contrary to what we expected, however, the huge birds seem now not to be quiet in their nest, and indications are said to have appeared among them that they would like to resist the authorities. According to information received from Tokio yesterday, Hayashi Yuzo, a notorious member of the Risshi-sha Society,

lately came to Tokio and was arrested and imprisoned on the 8th instant. In a few days, he will be examined before ———, *Hanji*. According to a letter on "the condition of Tosa" from Osaka, a lively movement in favour of raising militia, which was stopped by Government order, has again been taken up by the Risshisha society. The ability and talent of Itagaki (ex-Sangi, and president of the same society) have been insufficient to induce them to be peaceful and they are going to raise a militia. It is not known whether they have sent a petition to the government or not. During this state of affairs, all the men and women, aged and young, are trembling with fear and ready to leave their homes. The brows of some of the members were wrinkled on receiving a telegram announcing imperial victories in the South-West, and they rejoiced on hearing any account of the courage of the insurgents. They talk in favour of the latter publicly before the Enzetsu-kai, a meeting of men of various classes, where any kind of matter is discussed. The subjects of debate by the members are always found to be the mismanagement of ———, and the bad conduct of ———. Mr. ———, a member of the Risshi-sha, who arrived lately from Osaka, is a man of eloquence. His speech before the meeting reminded one of Patrick Henry when he re-appeared at the meeting in Virginia. Is it not laughable to learn that some Kencho officials have joined the Risshi-sha? In the morning they transact public affairs in the Kencho, and in the afternoon they declaim before the meeting against the local laws. Thousands of men assemble to listen to the debates. The members are secretly providing military stores; and the power of ——— has no influence with them. It is quite true that they have held communication with the rebels in Kiushiu. A number of the Kochi ken shizoku were arrested in Kagoshima. The Government is much troubled, and Hatagori, the western corner of Tosa, which is close to Hiuga, and Mitsugahama, Matsuyama and Uwajima, are guarded by police forces, while Marugame, and Kashiwa-jima are occupied by troops. This excites the members more and more. An idle rumor has been spread that Itagaki was coming to attack the troops at the head of 5,000 men. The imperialists were ready to receive them in the field, when they received a letter from Itagaki, stating that the rumor was unfounded. It is not unlikely that the sad condition of things prevailing in the South-West may be reproduced in the island of Shikoku.

REVISION OF THE TREATIES WITH FOREIGN POWERS.

(From the *Kinji Hiron*.)

There is nothing of greater importance or more required than the revision of the treaties with foreign powers. From the time of the opening of our ports, we have been unable to compete with foreigners. Day by day and year by year we fall behind them, until there seems no limit to our retrogression. This necessarily causes a great difference between the exports and imports; and the amount of gold and silver which leaves the country is beyond our comprehension. But it is sufficiently large to produce a measureless injury amongst our people. Have we nothing to fear in the future from allowing this?

The cause of our gold and silver pouring out of the country is to be found in the difference which exists between the imports and exports, and because we have not the power

of taxation; and until we obtain this power it will be impossible to prevent our money from flying to foreign nations. The treaties which exist between Japan and foreign countries have been made entirely by the foreigners. And we know from past experience—and so does everybody—that this has caused us great inconvenience. We have lost our independence and are no longer able to regulate our import and export duties as we should like to do, which is a great grievance. When we do obtain a revision of the treaties which will enable us to impose our own taxes without the interference of foreigners, our independence will be restored and the imports and exports will be equalized, and the vast sums of money which now leave the country will be retained in it. Thus, then, the revision of the treaties should not be delayed one day longer. This we urge now as we have done before.

We extract the following figures, showing the difference between our exports and imports from the report published by the Finance Departments:

Exports.....1,581,805 yen.
Imports.....2,378,491 "
Excess of Imports... 796,686 "

These figures show the relative value of imports and exports during June last. Now, supposing that the monthly average of the difference between the exports and imports is 796,686.344, the aggregate difference in the course of a year would be 9,560,236.128 yen. Then by taking this as the yearly average from the time of the opening of the ports we find that the value of imports over exports reaches the sum of 191,204,722.56 yen.

But on the first commencement of trade with foreigners, the requirements of the country for foreign articles was small, and the value of imports therefore was not great. During the first year of Meiji (1867) the imports amounted to 15,555,472.87 yen, and exports to 10,693,071.84 yen. Thus in this year the exports were exceeded by imports by 4,862,401.03 yen. Owing to the failure of the silk crops in Italy and France in the 9th year of Meiji (1876), the market value of Japanese silk rose to unprecedented prices, and large quantities were exported. But as the Government has not yet published the returns, we cannot say what they amount to, but in all probability, we think, the exports will be slightly above the imports. It has been customary with us to publish once a year a comparative table of imports and exports for the previous seven years; and following up this custom we again give a brief epitome of the foreign trade for the last seven years.

Meiji		Value of Exports.	Deficiency of Exports as compared with Imports.
		Yen	Yen
2nd Year	(1869) ...	12,908,978.02.0	7,874,655.15.5
3rd "	(1870) ...	14,543,012.59.9	19,198,624.97.4
4th "	(1871) ...	17,968,608.71.5	3,948,119.02.7
5th "	(1872) ...	17,026,647.21.6	9,148,167.73.1
6th "	(1873) ...	21,142,014.77.9	6,475,249.27.9
7th "	(1874) ...	18,780,078.79.7	4,144,500.29.2
8th "	(1875) ...	18,077,838.83.6	7,665,275.33.4
Total		120,447,178.96.2	58,454,591.79.2

Meiji		Value of Imports.	Increase of Imports over Exports.
		Yen	Yen
2nd Year	(1869) ...	20,783,633.17.5	7,874,655.15.5
3rd "	(1870) ...	33,741,637.56.8	19,198,624.97.4
4th "	(1871) ...	21,916,727.74.2	3,948,119.02.7
5th "	(1872) ...	26,174,811.94.7	9,148,167.73.1
6th "	(1873) ...	27,617,264.05.8	6,475,249.27.9
7th "	(1874) ...	22,924,587.08.9	4,144,500.29.2
8th "	(1875) ...	25,743,114.17.0	7,665,275.33.4
Total		178,901,778.71.9	58,454,603.79.2

Now, gold and silver is obtained by the sweat of the people, and the strength of the nation lies in the people. If the finances of the country are not properly regulated, there will be nothing left to support the nation, which will crumble away like the dust. Alas! this great difference between the exports and imports is calculated to cause very serious injury to the nation; and we cannot sit down and view with contentment the present condition of trade; and we think it necessary that some alteration in the tariff should take place as quickly as possible. But before this can be done we must have a revision of the treaties. It is now five years since the revision of the treaties should have taken place. What is the reason the Government has not set about it? The authorities have probably been prevented from doing so by the disturbances which have occurred at home and abroad. First, difficulties occurred with China and Corea, and the insurrections in Saga; then followed the Hagi and Kagoshima insurrections. We hope and believe however that, on the suppression of the rebellion, the Government will immediately take up the question of the revision of the treaties.

ORIENTAL EMIGRATION TO RUSSIA.

(From the *Tōyō Kiji Shinpō*.)

It is a well known fact that Russia is ever scheming to extend her territory towards the East. We are now in possession of information which may seriously effect this country. It is this: that the Russian Government is resorting to every means to encourage emigration from the adjoining countries into those sparsely populated regions of Vladivostok, Saghalien and along the Ameer. Every emigrant desirous of becoming a naturalised Russian, is given a certain amount of Capital or land. This has the effect of inducing such people as the Koreans, who are oppressed by their own despotic Government, to leave their country, for which they have little sympathy, and swarm into Russian territory and become subject to Russian rule. Indeed, the Korean Government having taken no measures to alleviate the distress of the starving multitudes during the terrible famine this year, more than a hundred thousand have left for Russian territory: and a considerable number of Chinese have done the same.

The number of people of various nationalities who have migrated to Saghalien, Vladivostok, Nicolae and the Ameer, from the first to the tenth year of Meiji, have been found to be as follows:

Corean	-	-	-	135,000
Chinese	-	-	-	40,000
Other Orientals	-	-	-	25,000
Total	-	-	-	200,000

Now Russia is considered by all the nations in Europe as the most despotic and arbitrary nation: and some Asiatic nations entertain the same opinion. But we can scarcely agree with this view when we observe so many persons, in order to free themselves from the oppression of their own governments throw themselves upon Russian protection. Therefore it is our firm belief that the Russian Government is a thousand times better than all the Asiatic nations, whose governments are cruel and despotic and pay no heed to the peoples' rights—our own just and wise government excepted.

But it was the ambitious design of Peter the Great, the Emperor of Russia, to conquer every country on the surface of the earth, and dictate commands over the whole world, and

it is still considered as the sole obligation of the Russians to conquer other countries by the force of arms, so they took Afghanistan in the south, destroyed Poland in the west, and exercise authority over the entire Siberia at the north; thus the Russian army must be as powerful as the wild wind, when it sweeps the enemy before it like leaves in autumn; and it must be a great delight, and intensely satisfactory, to the Muscovites to see so many people swarming into their territory to be governed. We are sorry indeed to see so vast a difference between the wise Europeans and the simple Asiatics!

Now Russia is at war with Turkey, and it is pretty clear that the latter is no match for the former, therefore the final ruin of Turkey is almost certain. And it is also clear that when Russia comes to have power over Turkey, she will turn her energy further East, where she will, whenever opportunity offers, take hold of the Korean Kingdom, and then her dreadful hands will be stretched over—where we know! Indeed when she comes so far as to siege Corea, it is of the gravest importance to us: and what shall we do to prevent her encroachment? The answer is: "let us strengthen our national power." But how shall this be done? "Let us unite all hearts for the common cause." But again how shall this be accomplished? The final answer is: "extend the peoples' rights!"

MISCELLANEOUS.

THE *Echo du Japon* states that the typhoon which passed over Yokohama on the 26th ultimo was violent in the neighbourhood of Fuji-yama the same day; but much more serious destruction was wrought on the morrow. Enormous stones were hurled from the top of the mountain, and fell like hail in the country. Three persons who had taken shelter in a shed on the side of the mountain were killed by the fall of stones which crushed their refuge. East of Fuji large trees have been uprooted, and thirty houses carried away. The bridge over the river Fuji-kawa was borne off by the inundation. On Mount Toka nearly all the pines were broken or hurled to the ground. Fortunately no houses were destroyed.

By the arrival of the American barque *Benefactor* we learn of the total loss of the British barque *Christian McAuslin* of Glasgow. It appears that the *Benefactor* was boarded by the chief officer, boatswain, cook and five seamen, belonging to the unfortunate vessel in sight of Anjer Point. Captain Hayden offered them a passage to this port, but they preferred to go on to Anjer and report to the British Consul there. The statement of the shipwrecked men was to the effect that their vessel was bound to Kingston for orders from Manila, with a full cargo of hemp and sugar; and on the night of the 12th July she struck heavily on a reef in the neighbourhood of the Thousand Islands. She got off again, but commenced sinking rapidly, leaving the crew scarcely sufficient time to get into the boats. The vessel disappeared in 26 fathoms of water. The crew left the ship in three boats, one in charge of the chief officer, and the other two in charge of the Captain and second officer respectively. The *Benefactor* saw nothing of the other two boats, but the weather being fine they will doubtless have reached land in safety, or have been picked up by some passing vessel.—*China Mail*, July 31st.

AN ingenious piece of special pleading is the article in the *Nichi Nichi Shinbun*, translated elsewhere, "About Torture." In its praise-worthy anxiety to remove from the Government the stigma of barbarity of the worst kind, reversion to a cruel and practically useless custom which they professed to have abolished, the *Nichi Nichi* publishes an unworthy excuse which is by no means tantamount to a denial. Had the regulations for the treatment of the political prisoners in Kiushiu not been really issued, they would hardly have appeared in the official organ, which is altogether too late in its repudiation of them, and the doubts it endeavours to cast on their authenticity. It is for the Government to deny these regulations if they are not authentic, or to repeal them if issued unadvisedly and without reflection.

HAKODATE, July 31st, 1877.—In harbor, French Ironclad *Atakute*: Russian war vessels *Gornostay*, *Vostok*, *Yermak*, *Tungoose*: the Danish barque *Aarhuus*, and the German brig *Otto*, loading for Yokohama: British barquentine *Chintoo*, steamer *Dragon*, and barque *Hilda* loading for Shanghai.

The thermometer yesterday registered 85°. The weather has lately been changeable, very warm, with occasional rain. Prevailing winds have been from S. and S. W. The gale of the 26th was not felt here. The steamer *Dragon* reports H.M.S. *Audacious* at Vladivostok on the 27th ultimo, awaiting the arrival of the *Vigilant* with mail from Nagasaki, shortly after the arrival of which, the flagship would return to Hakodate. At the latter place the French flagship is awaiting the *Talisman* and *La Clocheferie*. When these vessels join her, she will proceed to Castries Bay and other ports on the coast of Russian Manchuria.

AN accident has happened to the British barque *Semantha*, at Yokoska. While some boilers were being discharged from her the mooring chain broke, and she went ashore close to the Arsenal. She was hauled off when the tide rose.

THE U. S. S. *Kearsarge*, while out in search of the *Oceanic*, encountered a severe blow, in which she lost one of her boats and sustained other damage. She is expected to arrive in Nagasaki in the course of a week. After that she will visit this port on her route homeward.

REAR-ADMIRAL REYNOLDS, in command of the Asiatic U. S. Squadron, has left for home on sick leave. He went on board the *City of Peking* on the 12th instant, and on his barge leaving the *Tennessee* he was saluted with a discharge of fifteen guns from the flag-ship. As the *City of Peking* steamed out of the harbor, a salute was fired from H. M. S. *Modeste*.

THE second display of fireworks on the Sumidagawa offered no features of novelty. Numbers of visitors, native and foreign, were present, and the exhibition passed off successfully and without accident. The fireworks, however, were inferior to anything which we have yet seen on the Sumida. In other respects the scene was much the same as upon past occasions.

AT nearly the same time as the gale of the 26th July was felt here in Japan, storms swept along various points of the coast of China. The *Foochow Herald* reports that on the 25th ultimo an unusually heavy squall and thunderstorm passed over the settlement of Foochow.

At 9.32 p.m. on Saturday the 11th instant, a slight shock of earthquake was felt.

GENERAL T. B. VAN BUREN, U. S. Consul-General at this port, has obtained six months' leave of absence, and will leave for San Francisco by the next American mail steamer. General Van Buren has well earned this respite from his arduous labours, and we trust the trip to his native land will prove a pleasant one, and will have a beneficial effect upon his health, which has not been good for some time past. During the General's absence Mr. H. W. Denison, Vice Consul-General, will act as Consul.

In another column we publish a judgment of His Honor Mr. Wilkinson, the Visiting Judge of Her Majesty's Court here, on a motion brought forward by the defendant in the *Audacious* case. It would appear that this case promises to be interminable. The present motion is for an enlargement of time to file the appellant's petition of appeal, and the judgment allows the defendant four weeks from date.

We learn that there was another motion on Saturday made by the plaintiff's counsel to have the case sat down for hearing. The application was granted subject to the circumstances of vacation. To uninitiated readers it would appear strange that a case that had been once heard and disposed of should be again set down for hearing; but this is a common practice with cases in which juries have disagreed in their verdict. We confess that our limited knowledge of law does not quite enable us to explain this apparent anomaly in the administration of justice. The difficulty that presents itself to our mind is the absence of the defendant in the case, and if judgment should be entered for the plaintiff, it will be interesting to know who is to satisfy it within the jurisdiction of our Court.

THE following particulars of a collision between the *Hiroshima Maru* and a large Japanese junk have been forwarded to us by a native passenger on board the steamer:—

"The *Hiroshima Maru* left the harbor at 4.30 on the afternoon of the 2nd. All went well for some hours; the sea was smooth and atmosphere calm. About 11.30 p.m., when off Cape Idzu, I was awakened from a sound sleep by confusion among the passengers, who were asking each other the question of 'What is the matter?' and then, as nobody could give a satisfactory answer, there was a general rush for the deck. I went with the rest, and soon ascertained that a collision had occurred between the *Hiroshima Maru* and a large junk. So severe was the collision that the junk was cut clean in half. I saw the two halves quite distinctly, and could hear the crew crying 'Save us! save us!' The engines were at once stopped, and boats were lowered with every despatch and sent to the rescue of the men. By this time both halves of the junk had disappeared, but the crew, eleven men in all, were saved through the promptitude with which the boats had proceeded to the wreck. The junk was known as the *Mioyei Maru*, 1,000 koku burthen, and the property of a merchant at Yokkaichi, Ise, which port she left on the 31st ult., bound for Kanagawa, with 40 barrels of oil and 2,250 bags of rice. The crew say that the junk had the regulation lights up; and as it was a bright moonlight night it is difficult to account for the accident, unless, as is most probable, the junk attempted to cross the bows of the steamer when she was so

close as to render it impossible to avoid the collision. The passengers treated the unfortunate men very kindly.

"The *Hiroshima Maru* had a large quantity of ammunition on board, some of which was landed at Kobe and the remainder taken on to Nagasaki."

MR. DEGRON, French Postmaster here, has collated the subjoined comparative table of rates of postage hence to Postal Union Countries, on letters and printed matter, for transmission in mails made up for the P. & O. mail boats at the English and French Post Offices, and for the M. M. boats, at the French, English, and Japanese Post Offices. The desirability of one responsible postal management, and one tariff of rates, is here made very practically evident:—

RATES OF POSTAGE.

POSTAL UNION COUNTRIES.

LETTERS PER P. & O.

Vi Brindisi, through British Post Office,	16 cents per ½ oz.
" " " " " " " "	12 " " "
" Brindisi, " French " " "	8 " per 15 grms.

Via Marseilles, through French Post Office,	8 c'times p. 50 grs.
" " " " " " " "	2 cents each.
" " " " " " " "	4 " per 4 oz.

SOME days since we republished from the *Hochi Shinbun* a rumor that the Government were about to sanction the issue of an additional forty million yen in paper currency. Now, and not for the first time, the *Hochi Shinbun* eats its previous statement, paper, ink, and all, and affirms that the new issue contemplated is merely one to take the place of old and damaged notes which are to be recalled from circulation.

TROOPS are returning in large numbers from the seat of war. This very naturally may be taken to mean that the strife is coming to a close. In what way this desirable end is being consummated is not quite apparent; but it is certainly not with the subjection of the rebels. It is by no means unlikely that some compromise has been come to: as for instance that the rebels shall be unmolested in their return to their homes and occupations on the condition of their refraining from further warlike operations. This is only surmise of course; but it is the only surmise on which the return of the forces, with the war yet unfinished, can be explained.

THE *Hochi Shinbun* says that all the foreign employes of the Kagoshima-ken have been transferred to the service of the Central Government, and that the latter have presented them each with the cost of their passage to Europe. This is certainly a polite way of discharging servants. There is probably more in the measure than meets the eye, a desire perhaps to show impartiality, and by the dismissal of others to excuse the suddenness with which the services of one valuable foreign servant were dispensed with in the same ken.

FROM time to time intelligence of further damage wrought by the gale of the 26th instant on the coasts of Japan is received, and shows that the blow was felt with some degree of equality on the East coast. On the shores of Shimosa eight or ten junks, with an aggregate lading of 4,500 koku of rice and some other cargo, have been lost, together with two vessels of foreign construction. Thirty-seven

sailors are said to have been drowned; and fourteen vessels besides those known to have been wrecked are missing and unaccounted for.

The sale by Messrs. Bourne & Co. of the wreck of the *Roving Sailor*, took place on the 14th instant, when the vessel was knocked down to Mr. A. Clark for \$500.

The Japanese man-of-war *Tsukuba-kuwan* left the harbor of Kagoshima on the 6th inst. and arrived in Yokohama on the morning of the 11th. She is the first guard-ship of the Navy Department. Ten officers, ten petty officers, 130 marines, 12 engineers, and 30 men for temporary service, and many students are on board. Captain Matsumara, Director of the Naval College, is the commanding officer, and Captain Fukumura his immediate subordinate. During the time when she was anchored in the harbor of Kagoshima, the latter fell ill, and his place was supplied by Captain Igatsu, who has been trained on board a British man-of-war. The *Tsukuba-kuwan* went to America during last year in order to afford her officers and crew an opportunity of studying the art of navigation. On her return from San Francisco she was docked in Yokoska for repairs. Before the repairs were completed she was ordered to the South-West, where she rendered good service in the suppression of the insurrection. She is the first of all the war ships in the South-West ordered to return to the East by the Naval Vice-Minister. She is to be docked and repaired in Yokoska Dockyard.

Those who feel an interest in acrobatic feats, should not lose the opportunity now afforded of witnessing a Japanese troupe performing in the native town. The best time to go is about three o'clock in the afternoon; and, though the intervals between the pieces are somewhat long and tedious, the following three hours can be spent very pleasantly. There is the usual motley crowd of course, but the unpleasant odour which arises from this source in a native theatre, is not experienced to any disagreeable extent, as the performance is held in an ordinary mat-shed well ventilated. The horizontal bar is apparently ignored by the athletes; but the slack rope walking and balancing is excellent; as is also the performance with a barrel with which the entertainment is commenced. Two artists appear on the stage, heralded by music and the declamation of the conductor. Lying on their backs, each on a roughly-put-together bench covered with a mat and red blankets, a good sized cask is placed on the soles of the feet of one. This he manipulates round and round, over and over in an astonishing manner, and then, with a jerk, throws it to his companion, some four yards away, who catches it on his feet and goes through a similar routine. The paraphernalia used is speedily removed and a light line fastened across the stage at an elevation of a dozen feet. A youth, agile as a monkey, makes his appearance most gaily attired. After the customary salutation to the audience, he partially disrobes, then mounts a ladder to the slack rope, carrying his gaudy trappings with him. Once on the line he maintains his equilibrium with as much ease and grace as if he had a path five feet wide underneath him to walk upon, instead of a piece of slack cord not a quarter of an inch in thickness. On reaching the centre of the line he commences to dress himself. Having accomplished this feat, he puts himself into different postures and skips from one end of the rope to the other, umbrella in one hand and a fan

in the other, with the greatest *sang froid* imaginable. Finally he drops the umbrella; and the dictator of his movements letting go one end of the line, the youth falls lightly on a mat placed underneath him, bows to the audience and disappears. A foreign audience would greet the daring boy with marked approbation, but not so the Japanese; they look on evidently intensely delighted, but not a murmur of appreciation escapes their lips, except an occasional spasmodic exclamation. The third part is different. A stalwart young man appears on the stage, accompanied by a little boy of some nine or ten summers. The man lies on his back, throws his legs into a perpendicular position, and two men place a ladder, some twenty feet long, on the soles of his feet. The little fellow then leaps lightly into the rungs and climbs to the top. At this elevation he throws himself into sundry postures, such as standing horizontally on the side of the ladder, hanging with his head down, and so forth. The next part of the performance is a Japanese dance to the music of the band; then some more slack rope feats; and the entertainment is finally brought to a close by a very clever demonstration with five ladders, joined together. The athletes are few in number, but go through their respective parts with an ease and grace scarcely to be expected.

A few months ago a Japanese woman was found strangled in the native town. Suspicion rested on a certain individual, and he was subsequently arrested. Almost every day he was brought before a magistrate and examined, with little results. On the 13th inst. the prisoner framed an excuse for getting into the yard of the prison, and on liberty being granted, he adroitly contrived to give his keepers the slip, and has not been heard of since.

EARLY on the morning of the 16th the United State gun-boat *Alert* arrived from Nagasaki, which port she left on the 10th instant with instructions to proceed to the wreck of the *Roving Sailor* at No-Shima. Moderate head winds were experienced during the passage; and on the morning of the 14th the *Alert* was abreast of the wreck. The commanding officer soon ascertained that it would be useless to attempt to get the barque off the rocks, as one of her sides was knocked in, and her back broken. Moreover, the gunboat was unable to get sufficiently close to the wreck, on account of the rocks, to render any assistance even had there been a possibility of the vessel floating after being got off. The *Alert* again started for the wreck about eleven o'clock for the purpose of bringing away effects belonging to Captain Bryant.

THAT a large number of Japanese are under the impression that Saigo is either dead or has escaped to some other country is most probably true. A gentleman travelled recently in the company of a Japanese who had returned from the seat of war, and who stated that, when the imperialists captured Miyako-no-jo, strenuous efforts were made in order to ascertain for certain whether Saigo was in the land of the living or had departed this world without the assistance of the ruling powers. All enquiries resulted in nothing, as the prisoners taken could give no satisfactory solution to the problem. At length a newly made grave was found in a remote corner, evidently containing the remains of a distinguished person, and it was thought to be Saigo's. The grave was opened, the body exhumed, but none could recognise anything which would identify the corpse to be the remains of the renowned general, though they were generally supposed

to be his. However, presuming that this discovery turns out to be a mare's nest after all, the imperialists at the seat of war are of the opinion that Saigo must have escaped to Loo-choo, for they are positive that he is not leading the rebels.

By last American mail the report arrived that Mr. J. A. Wood, for many years Chief of the Consular Bureau at Washington, has been appointed United States Consul-General at this port. This rumor has been stated to be inaccurate.

THE acrobats in the native town are now performing day and night. The performance in the evening commences at 6.30 and concludes at midnight, during which large numbers assemble to witness the balancing and slack-rope walking. A gentleman present last evening, informs us that an athlete balanced seven ladders at once, while a little boy danced on the top of the uppermost ladder. The other feats were equally good.

In consequence of information supplied to the German Minister, at Yedo, of a sick person, Doctor Hermanauz, being at Morioka, Ebaragiken, Mr. Gebauer, interpreter at the Legation, received instructions to come to Yokohama and proceed in the corvette *Elisabeth* to succour the invalid and bring him to this port. Accordingly, the *Elisabeth* started on her mission on the 3rd instant, and went to a port known as Yamada. From there an expedition, consisting of the ship's surgeon and other officers, and Mr. Gebauer, was despatched overland to Morioka, a distance of nearly a hundred miles. The party started on horseback, but after journeying some distance jinrikishas were obtained; and as the roads were good, notwithstanding the mountainous nature of the country, Morioka was reached on the third day without much difficulty having been experienced. Every attention and kindness was shown the travellers on the route by the natives. A yakunin rode in advance of the party and made preparations for their comfort at the various towns and villages; and the kocho at each of these places came to meet them. The best of everything that could be obtained was provided, and the members of the party say they could not have received more attention and kindness. Doctor Hermanauz was found in a small hospital, which has been erected and is maintained at the expense of the people residing in the ken. The Kenrei expressed surprise at a man-of-war being sent to the relief of the sufferer; and apologised for the poverty of the hospital in not being able to supply the invalid with foreign food. The doctor was found in an emaciated condition, suffering from high fever and sores on his back. Without losing any more time than was absolutely necessary, a kago was obtained and the sick man placed in it, and he was carried by six stalwart coolies. The party did not go back to the point from whence they started, but to Kamaishi, which was much nearer. On the way a very high range of mountains had to be crossed, and it was found necessary to increase the number of kago bearers to nine. After two days' journeying Kamaishi was reached, the party having the satisfaction of seeing the *Elisabeth* riding at anchor awaiting them; and on the afternoon of the 13th the man-of-war steamed away for Yokohama, arriving here at 7.30 on the morning of the 15th inst. Doctor Hermanauz is in a very precarious condition.

Yamada is reported as a very beautiful harbour; and the country between there and Morioka as exceedingly fertile—rice, wheat, barley and every kind of vegetable growing in abundance. The mountains are well wooded

and interlaced with streams; and in the neighbourhood of Morioka is a very fine river, navigable for small craft. There is also a huge mountain nearly as high as Fusiama, and almost the same shape, it evidently being an extinct volcano. While the party was away in search of the doctor, the *Elisabeth* proceeded to explore the bays in the neighbourhood; and it was ascertained that the charts are very incorrect. For instance: on the chart, Kamaishi is put down a distance of eight ri North from where it actually is; the point indicated as Kamaishi being Odzutsu. This latter port is a much better one than the former. Sketches of the bays were also taken. Four or five ri from Kamaishi is an iron mine on which several foreigners are employed; and a tramway is laid nearly all the way from the city to the mine, but is not yet completed.

It appears, at last, that aquatics are to be represented on the Sumida River. A short time ago steps were taken by several gentlemen in Tokio to get up a boat club; these we now hear have resulted in the formation of the "Tokei Rowing Club." We can only say that we heartily wish the new club success, and hope that we may have the pleasure of seeing it represented here in the autumn.

In Tokio, besides the stock places of resort for entertainment and amusement, such as the gardens, tea-houses, theatres, temples, suburban retreats, &c., the ingenuity of the showman proper is unceasingly tasked to provide shows, "new and original," for the troops of sight-seers who daily throng the different show quarters of the great city, and a constant and ever-changing succession of sights is the result. Now they flock to Shimabara to see the fencers; presently the monotonous boom of the big drum will call them to Rikogoku to witness the wrestlers; and anon there will be new attractions in other directions. Of the all different quarters frequented by pleasure seekers, Asakusa is the one *par excellence* for shows. Here we have them all,—from the great wax-works' exhibition to the modest "peep show;" and here it is, in the Temple of Hachiman, that we may see the last candidate for popular favor, in the form of a colossal image of a woman, for the nonce literally towering above and casting into the shade all others.

This image is worth seeing if only as a curious idea. It is made, or rather built of lath and plaster, and is about sixty feet in height. Leading up through the inside of the body to the head is a narrow, winding staircase; the space not filled up by this stair-case is occupied by what is supposed to represent the internal organs of a human being. These are made of tubes and vessels of cotton cloth, stuffed with some substance and coloured; the veins, fat, and fibres being represented by threads of raw silk; and the whole is far less objectionable than it would have been had it in any degree approached a perfect imitation, nevertheless, as it stands it is decidedly anything but pleasing. The head itself is a small chamber capable of containing ten or a dozen persons. The windows to this little room are the eyes and ears. A rather curious effect is produced on nearing the figure by the approach to the Temple, by the heads of the people looking out of the eyes; these appear to be eyeballs, and as they move from side to side in contemplating the view, complete the effect by giving them life.

On the opposite side of the Temple stands a small theatre the company of which is entirely composed of women; this also is quite worth the trouble of entering.

A RUMOUR is current that a vessel, name not mentioned, belonging to the Government, laden with provisions for the imperial troops, has been lost on the coast of Hiuga.

THE Chinese question is causing almost as much commotion in Australia as in California, and a motion has been tabled in the Queensland Assembly, proposing to co-operate with the New South Wales Government in obtaining a modification of the Chinese treaty. The tone of the newspapers in Sydney and Brisbane is against the Chinamen; and the universal cry is to stop the flood of emigration of "moonfaces" which has set in during the past few years. The modification of the treaty, if carried out, will no doubt deal satisfactorily with the difficulty, but as that desirable end will probably take some considerable time to bring about, there seems, in the meantime, a likelihood of serious collisions between the white and yellow men. Already a fracas has occurred near Capeville, Queensland, in which the Europeans threatened to shoot the Chinamen. There are estimated to be 27,000 Celestials in Queensland alone, a large number of whom are in an almost starving condition, which is scarcely to be wondered at, as the population of whites is but small, and the Chinese take no capital when they emigrate.

From a telegram published in the native papers, it would appear that Saigo has, at last, been seen, having appeared in person at the head of his troops.

If the item which we extract from the *Mainichi Shinbun*, relative to the insurrection, is correct, it would appear that the great battle so long expected has at length taken place, and the back-bone of the insurrection may be considered broken. The rebels are reported to have fled, breaking through the imperial ranks; and thousands to have laid down their arms. What became of Saigo, Kirino, and other rebel commanders, said to have been watching the strife from the summit of an eminence, does not appear; but it may be taken for granted that they did not surrender, as such an important event would not have been omitted in the telegram.

An accident happened on the 24th inst. off the mouth of the Creek, in the capsizing of a rather large Japanese fishing boat. Happily no lives were lost. The boat was soon righted by the boatmen's friends, who immediately went to their assistance, but owing to the water being rough their efforts to bail the boat out were unsuccessful, and so she was towed into the Creek, where she was soon put to rights again. The fish that were in the boat, the men's chow and one *kimono* were lost.

MR. VERTELLI gave his promised exhibition on the tight rope on the evening of the 23rd instant to an enthusiastic, if not admiring, mixed audience of something like two hundred persons. We would recommend Mr. Vertelli in his next performance to observe more punctuality in commencing; avoid such long and dreary intervals, unless they can be charmed away with something more amusing than the strains of an accordion, and to take better precautions for the prevention of a conflagration. Madame Vertelli's walking on the rope was admirable.

THE difficulties Orientals experience in acquiring the English language are numerous, and it is but very seldom that an Oriental

student ever thoroughly overcomes all obstacles, and succeeds in mastering the language. As an illustration of this, we reprint a paragraph from the *China Mail*. This specimen of orthography was the result of an examination of eleven candidates for the position of third clerk in the Magistrates' Office at Hongkong. As the post was an important one, it is not surprising that the Examiners found themselves unable to recommend any one of the applicants. The Editor of the paper quoted, is of the opinion that the difficulties experienced by the students are partly through an inability to grasp the sounds of the English language, partly through the intricacies and arbitrary character of their own language, and partly to the absurd practice foreigners have adopted of importing their ideas and wishes to the Chinese in "pidgin English." The following is the extract:—

"The dictation papers afford the best instances of the vague ideas of some of the candidates as to the pronunciation and spelling of English words. The dictation consisted in reading aloud by one of the Examiners of a short deposition in English, which had been taken at the Police Court in the ordinary course of business, and which the candidates were requested to write down as it was being slowly read out. The words "Cosmopolitan Dock" appear to have been a fearful stumbling block for the Chinese candidates. The first candidate got over the difficulty of spelling the words by writing "C. M. Dock;" another wrote "Cosmopolitan Duck;" another, "Castmopolitan Docks;" another, "the dock;" another, "Cosmopolian Dock;" another, "Cosmopoligon Docks;" another, "Cosmotropen Dock;" another, "Cosmopolation Docks;" and the last "Cosmolotive Dock." Two of the eleven candidates appear to have spelt the words properly, but they were probably not Chinese. The word "deposeth" also seems to have been a poser for the majority of the candidates. Most of them sought refuge in the rendering "deposit" but this was varied with "deposife" (which was not so bad); "deposited;" "deposed;" "despoiled;" and "deposit." The "th" is evidently too much for John. Some most ludicrous mistakes were also made in the words "copper sheathing,"—a word by no means of uncommon occurrence in the Colony. The first started with "cupper shilling;" the next rendered the words "copper shielling;" the next, "copper shealing;" the next, "copper sheeting;" the next, "copper shitting;" and the last "copper ceiling!" The word "divers" was varied with "dyevers" and "dyvers," while one last candidate struck boldly into "dairies."

It is announced in the native journals, that a telegram has been received in Tokio, from the Governor of Kagoshima, stating that cholera had broken out between Shunokoski and Nakahama-mura, in Kagoshima Ken, and that 40 persons have been carried off by the dreaded visitation, the victims rarely surviving three hours from the first symptoms of attack. This is serious news; and it is to be hoped that the authorities will exercise great vigilance in preventing the epidemic from spreading. A quarantine hospital has been erected recently at Tomioka, from which we may conclude that all vessels arriving here will be submitted to a rigid inspection, and we trust this will be the case.

THE following is a translation of His Majesty the Mikado's address delivered on the occasion of the opening of the National Industrial Exhibition on the 21st instant:—

"This is the day appointed for the opening of the National Industrial Exhibition. I have

come here in person for the purpose of performing the opening ceremony. I think that the order in which the buildings have been constructed is good: and the excellent show of articles is a manifestation of the great improvement which is taking place day by day, and month by month, in the nation's industries. And the services rendered by the Government authorities in their promotion are deserving of high commendation. I congratulate you very much, and trust that this Exhibition will assist the people in the development of the resources of the country, and so increase its wealth by promoting their own prosperity and happiness."

Eleven thousand one hundred tickets are reported to have been sold on the day of the opening of the International Exhibition. The price of admission on Sundays is fifteen cents, Saturdays four cents, and on each of the other days of the week seven cents is charged.

Troops are continually arriving from the south. On the 16th the *Genkai-Maru* brought some hundreds.

The ceremony of the official opening of the "National Exhibition" at Ueno was performed on the 22nd inst., as had been arranged. The weather all day was a succession of clouds, glimpses of sunshine, and slight showers; amply compensating, however, for the loss of brilliancy by a coolness as delightful as unexpected at this time of year. From a very early hour the streets, decorated with the national flag, showed that something out of the common was going to take place; the approach to Ueno and the avenue leading to the Exhibition buildings, lined on the left side with the Imperial Guard, were filled with the throng of officers and exhibitors and sight-seers. These former had been summoned to attend from 6 o'clock, and were now, decked in full splendour "of swallow-tail" and "tile," as is *de rigueur*, hastening on in the fear of arriving late. The latter gay, joyous and eager, with just a touch of wonderment in their faces as has ever the Japanese populace on such occasions, came trooping along in jinrikisha and on foot. At about half-past seven the Minister and Vice-Minister and Officers of the Home Department were in waiting; at the same time the Emperor and Empress with their suite commenced their progress from the Kunaisho. At about half-past eight the Foreign Ministers arrived, and at nine the music of the Imperial Japanese Band, stationed within the gates, announced the approach of their Majesties. A few minutes later the Imperial cortège arrived and passed in.

In the building set apart for the ceremonial was the dais bearing two thrones; in front of this, on the left, stood the Ministers and high Officials, and on the right, the Foreign Representatives. In front of each of these again, stood the representatives of the different Ken and the exhibitors.

The Imperial carriages having drawn up before this building, the Emperor and Empress alighted and proceeded towards the dais; when they had arrived between the Foreign Representatives and the Ministers, Sir Harry Parkes stepped forward and delivered an address. They then took their places on the dais and the Emperor, standing, read a lengthy address. The Naimukio, Okubo, now advanced to the body of exhibitors on the left, and received from them an address; with this he approached the throne, and, after having read it, retired again to his former position. The Officer chosen to act

for the representatives of the different Ken then advanced and read another address.

The ceremony now being concluded, Their Majesties, escorted by the Ministers and Foreign Representatives, proceeded to the pavilion in which refreshments had been prepared, and, having partaken, re-entered their carriages and returned. A cold Lunch was provided for the Officers of the Naimusho at the Sei-yo-ken Hotel, to the total exclusion of other guests.

The public were now admitted to the Exhibition by tickets, and during the remainder of the day a constant flow of visitors was passing through the turn-stiles; this latter part of the business appeared to be badly managed, for a very considerable delay took place before people could get through.

It would be impossible to do justice here to the Exposition itself, we shall therefore, now only remark that it appeared to us to be far superior to anything which the Japanese have hitherto attempted in this way, and shall leave to a future day a description in detail.

In the evening the crowd increased and gradually became denser and denser towards 7 o'clock, the hour when the display of fireworks was to take place in the lotus pond beneath. The circumference of the pond presented one vast mass of human beings, which, backed by the numberless coloured lanterns on the encircling tea-houses, and lit up in front by the fireworks, formed a scene brilliant and deeply impressive.

According to a native newspaper, Oyama, ex-Governor of Kagoshima, received his sentence on the 9th instant, and was perfectly satisfied with it. What this sentence was, does not appear. It seems very singular however that out of all the native newspapers published, only one should announce that sentence has been passed upon the rebel Governor, the rest being, apparently, unaware of such an important event having taken place. The statement that the prisoner was satisfied with the result of his examination, would lead one to suppose that he has been virtually acquitted.

The *Choya Shinbun* gives the following figures as the actual disbursements on the imperial side in the suppression of the rebellion during the months of June, July, August and September. There must be a discrepancy somewhere, however, as the total given is much larger than it ought to be according to the sums mentioned. Our readers must take them for what they are worth.

The imperial head-quarters	2,000,000 yen.
Transport office at Nagasaki	250,000 "
" " " Kobe	150,000 "
Salaries at Osaka	150,000 "
Miscellaneous expenditure	4,000,000 "
Total	12,450,000 "

In view of the present factions and litigious state of the Church of England, a project is being set on foot by means of which it is hoped to cement the band of the faithful, and to recruit the ranks of the Protestant party. Lord Harrowby and some of his friends have got up a society for facilitating the training of protestant clergymen at our universities, and "have made it look like a church within a church." Their object is to establish, a hall, or college, at each university, for theological training. It appears that graduates only will be admitted to residence, though under-graduates will be admitted to the

theological lectures. "But," says *The Spectator*, "the peculiarity of the plan is, that the leading men on the councils of these halls, are to be bound over to protestantism by peculiar tests. They are not only to accept the thirty-nine Articles, but they are to declare that they accept certain favorite articles of the protestant party amongst the thirty-nine, 'in their plain and literal sense'; such articles being, for instance, the 2nd and 31st (which concern atonement), the 11th (which concerns a justification by faith), and the 6th (concerning inspiration of the Scriptures)."

It would be well, perhaps, to remind the projectors, of an anecdote told of one of the examining chaplains of a certain Bishopric—a favorite Bishopric with certain men, on account of the facilities afforded for entering orders. The examining chaplain, newly appointed, and renowned for his scholarship rather than his orthodoxy, was putting a batch of candidates for priest's orders through a stiff examination in the "Fathers"; when one of the dismayed candidates told him that they were quite unprepared for such an examination, so different from what his predecessor expected from them; "And what kind of test did the Rev. Mr. — require?" "Why he generally asked us if we believed in justification by faith? and if we answered yes! he would pass us." "Humph, and well he might," replied the chaplain, "for then you would believe anything."

A NUMBER of motions and applications were heard and disposed of in H. B. M.'s Court on the 24th, before H. S. Wilkinson, Esq., Visiting Judge. They had reference to cases now very well known to the public, viz: the cases of *Howles vs. Kirby and Others*, the *Audacious* collision case, and the somewhat worn-out litigation of St. George B. Lockyer. There were two motions in the first named case, in the first of which His Honour granted an extension of time—within which the plaintiff to file his petition of appeal—till the first of October next, the conditions as to deposit for security of costs not to be interfered with; and in the second the defendants' application for their costs was also granted, but in view of an appeal having been granted to the plaintiff, security was demanded for the amount of the judgment recovered by them for costs. In the *Audacious* case the defendant's application for leave to appeal against the order permitting him four weeks further time to prosecute his appeal was granted, subject to the rules governing such applications. It does not appear that there is any likelihood of the last case being ended. One of the defendants now moved that certain sums of money, paid into the Court several months ago, pending the decision on an appeal then before the Acting Chief Judge of the Supreme Court, be returned to her. The hearing of this application was adjourned until the 20th of September.

The German brig *Carl Ludwig*, from Foochow to Australia, having sustained damage to her rudder and other injuries, put into this harbor on the afternoon of the 26th for repairs. On Saturday afternoon the German brig *Oceanus*, which had left on the previous day for Hakodate, put back to replace her foretopsail yard which had carried away. The voyage will be resumed when the damage is made good.

AFTER two days of greater heat than had before been experienced this summer, a storm of wind and rain set on the evening of the 26th at about half-past six o'clock, and raged with considerable violence till morning, the gale blowing from the South-West. At 2 o'clock it

had reached its greatest violence—a force of 9 by the Beaufort scale. At 3.47 a.m., when the wind was still high, an earthquake shock of strong vibrations, and lasting in all about one minute, was felt. By dawn the storm had abated, and the next day was very fine but hot.

NIPPON NOTES.

H. E. OKUBO, Home Minister, resumed the duties of his office on the 7th instant.

THE newly enlisted policemen number about 10,000.

THE Daijo-kuwan have removed to the imperial palace in Akasaka.

OUT of 120 shizoku of Saiki, Bungo, who joined the insurgents, more than half were killed, and the rest seem to desire to desert their party. But they find no good opportunity of leaving their camp. Four of them were observed as they were in the act of deserting, and were hotly pursued by the rebels. Two were shot, and the third committed *harakiri* on the road side, when he saw that he could not escape. The fourth managed to reach the imperial lines. The insurgents on the Bungo road have built several forts in a mountainous and well wooded region. 150 sawyers were sent out by the imperialists to cut down large trees, and so to unmask these forts; but most of the poor sawyers are said to have been captured by the rebels, as only eight of them returned to the imperial camp.

IKEDA, a famous shizoku in Kagoshima, says the *Choya Shinbun*. was prayed to take the part of his countrymen by Saigo and other distinguished rebel commanders, before they left Kagoshima at the head of their army. He positively refused; and did not answer any letters from the insurgents. Some of the latter at length forced their way into his house and brought the faithful shizoku before Kirino and Etsumi. They tried again to induce him to aid in their attempts. He laughed, looking upon them with contempt, and saying that he had no right to assist in their unlawful designs. Etsumi bounded with rage; and struck off his head on the spot.

THE five islands, known by the general name of Goto, under the jurisdiction of the Kagoshima ken, produce fine sugar, large quantities of which are exported to the mainland. But very few of our countrymen know anything about this production. The Goto, viz., Oshima, Kikai, Okinaga, Tokuno, and Yoron, were governed by their own respective sovereigns in the olden time, who were feudatories of the Da-zaifu (Governor) of Kiushiu. Since the Goto were united to the Shimadzu's dominions, the islands have been governed by officials of that house. On the foundation of the present Government, the islanders were allowed to sell their production at any prices to buyers. But they are not so entirely free under the jurisdiction of the Kagoshima ken. The new Governor, Iwamura, of the revolted Ken has lately established a bureau in each island, with a view to the good government of the islanders. Regulations are to be framed, and numbers of books have been sent for educational purposes. The five islands produce about 15,000,000 kin (pounds) of sugar, to the value of 800,000 yen, per annum.

A TELEGRAM from Sashiki, dated the 6th inst., says that one battalion of *Dondenhei*, "men enrolled by the Kaitakushi," were the first to cross the river Issegawa and marched directly on Takanabe, where they completely routed the rebel garrison troops; and the main body of the

imperial army followed them. As the insurgents are discouraged, no more troops are wanted in the seat of war; and the victors returned to Kagoshima the same day and re-embarked for the East. Besides these, all the imperial forces which are composed of policemen, are said to have been ordered to return to the East, because the war will soon be brought to a close.—It is reported that Lieut.-General Takushima was wounded in the severe battle of Iwami on the 24th ultimo, and is now in the hospital of Kagoshima.—The insurgents are driven into a small corner of North-Eastern Hiuga; but they are reported to be still about 14,000 or 15,000 strong.

It is uncertain whether Saigo-Takamori has committed *harakiri* or not. Among the insurgent leaders, Murata, Kishita, and a few others only survive. Beppu is wounded and is said to appear in the field in a kago. Murata is also severely wounded, and was in the hospital in Miyakono-jo. When the imperial army entered that place, he narrowly escaped, leaving various effects and medicines in his room. If the victors had arrived a few minutes sooner he would have been captured, because his bed was still warm. Of the above mentioned commanders, Ikegami is a man of high ability and talent. When the insurgents first arrived before the castle of Kumamoto, he saw that that fortress could not be captured within a few weeks; and warned Saigo and the others that their large army had better march for the East before the imperial troops landed in Kiushiu, leaving about 2,000 soldiers for the siege of Kumamoto. But Kirino and others did not harken to this good advice, and were obliged to retreat before the large imperial army from the East.

ON the 8th instant Their Excellencies Sanjo and Iwakura visited the Nobles' School at Nishiki-machi, Tokio.

ON the 1st instant the Finance Department sent three million yen to the seat of war.

THE *Hochi Shinbun* states that H. E. Mori, Japanese Minister in China, who is now in Tokio, will shortly leave for Peking.

THE *Nichi Nichi Shinbun* states that the amount expended in the suppression of the insurrection up to July last, was 26,600,000 yen.

THE Finance Department sent old silver *bus* to the value to 150,000 yen, to the Osaka Mint, by the *Tokio-maru*.

TEN Loo Chooans in Nagasaki, having been discovered in sending provisions to the insurgents, have been placed in charge of the district officials.

A TELEGRAPHIC line has been carried to a place as far as one *ri* South of the river Yokogawa in Osumi, ten *ri* from Kagoshima and thirty *ri* from Kumamoto. The line is now open for Government communication only.

THE *Nichi Nichi Shinbun* says that His Majesty the Mikado may shortly visit the hot springs of Atami.

THE Russian Minister visited the Finance Department on the 10th instant and talked for some hours with Mr. Okuma.

HAYASHI Yuzo, a famous shizoku of the Kochi-ken, arrived recently in Tokio. On the 8th instant he was brought before the Tokio Saibansho, where he is now imprisoned. The reason for his detention is not known.

THE insurgents in the northern part of Hiuga are encamped in a small area, which is only about ten *ri* in length and five or six *ri* in width. The city of Kumamoto and every town and village to the South-East of their positions are strictly guarded by imperial troops. No officials or private persons are allowed to pass the lines without passports issued from

the imperial head-quarters. A holder of the passport when challenged by a sentinel must produce it. If a challenge, given three times, is not replied to, the sentinel is legally authorised to fire. Three or four men have been killed in Kumamoto through not replying to the sentries when challenged. About 300 families of rebels in Kagoshima, who have no means of sustaining themselves through their heads having been killed, will shortly be brought to Tokio by the Government and put to some kind of work.

THE five political prisoners, namely, Ma-wari, Beppu, Enatsu, his brother of the Kagoshima shizoku, and Itabashi of Tokio, who were arrested in the Ueno Gardens, Tokio, are imprisoned in the Tokio Saibansho, where their trial commenced on the 11th inst.

DURING two days fifty men were brought to the Police Station in Tokio, for going about indecently or insufficiently clad.

H. E. IWAKURA, *U-Daijin*, is expected to visit the drill ground of Narashino, on or about the 20th instant, to inspect the second division of newly enlisted troops.

A FESTIVAL, in honor of the ancestors of the Shimadzu clan, will be held in Kagoshima in April, 1878. All the karei and other retainers of the house now in Tokio have been summoned to return to Kagoshima by February next year. Shimadzu's residence at Hamamatsu, in Tokio, is said to have been sold for 33,000 yen.

THE second battalion of the 3rd division and 400 policemen, commanded by Kawaji, Daikibu, and Kato, *Chuukeishi*, of the Police Department, returned from the seat of war on board the *Korio Maru*, which arrived at 7 a. m. on the 12th instant. The man-of-war *Chikuba Kuwan* has also arrived in Yokohama from the South.

ON the 10th instant the Italian Minister visited the Home and Finance Departments.

3,300 insurgent soldiers had surrendered to the imperial forces up to the end of last month.

THE imperial forces in the South-West consisting of shizoku, are to be sent back to the East on the 18th inst.

THE following figures in relation to the numbers of patients in the Osaka hospital between the 1st and 31st July, have been published in the *Osaka Nippo*:—Remained from June, 2,739. Discharged, 58. Removed, 7. Died, 15. 445 wounded brought in. Of these, 14 came from Umanoseki on the 16th, 136 from Nagasaki on the 8th, 102 from Tsurusaki on the 12th, 75 from Nagasaki on the 13th, 113 from Tsurusaki on the 22nd.

A TELEGRAM from Lieut.-Colonel Tanabe, on the 12th inst. announces that that officer had left the village of Nakamura on the 5th inst. and entered Tonoura on the northern coast of Hiuga. He said that he would embark with his troops, on the arrival of a vessel sent to take them on board by order of the War Department. The *Jorio Maru* arrived in the harbour of Tonoura the same day, and the first battalion of infantry and a body of swordsmen embarked on board that vessel, which left immediately for Yokohama. Other troops will be sent back to the East according as ships may be ready to take them.

A SEVERE earthquake was felt in the provinces of Owari and Mikawa on the 8th inst. Many houses were shaken down. Details will follow.

DURING the 26th and 27th ultimo, a brisk gale broke over the Northern provinces. The following junks, anchored in the harbor of Ishimaki, were wrecked, and many of the poor sailors on board were drowned and lost:—The

Wayo Maru of 750 koku burden with 14 sailors. The *Koku Maru* of 700 koku with 13 sailors, only one of whom was saved. The *Hosho Maru* of 500 koku with 8 sailors, half of whom were drowned. The *Hosei Maru* of 750 koku with 13 sailors, who were all rescued. The *Katoku Maru* of 750 koku with 13 sailors, only one of whom succeeded in reaching the shore. The *Yamata Maru* of 600 koku with 10 sailors, of whom nothing is known yet. The *Kanei Maru* of 400 koku with 10 sailors; and 14 other junks, each having 10 or 12 sailors on board, are missing.

14,304 SHIZOKU were enrolled up to the 22nd ultimo. Out of these 4,108 have been in the South-West. 4,273 compose the newly enlisted second division.

NOTIFICATION.

To In, Sho, Shi, Fu and Ken.

Notice is hereby given that on the 15th instant, the Daijo Kuwan will be removed to the temporary Palace (at Akasaka.)

SANJO SANRYOSHI,
Daijo Daijin.

13th August, 1877.

ABOUT 1,000 troops returned from the South-West by the *Sumida Maru*, which arrived in Yokohama on the 14th. 3,000 more soldiers, now stationed at Tonoura in Hiuga, are expected to return shortly to the East.

A TELEGRAM from Osaka, despatched at 7.25 a.m. on the 11th instant, announces that the 2nd division of the imperialists had marched on the Kishino road and crossed the river Mimidzu. Hosojima is occupied by imperial troops, and a large army is also marching thither. Heavy rain falls day by day, rendering transport very difficult.

THE villages in Kurihara county, Rikuzen, which are now under the jurisdiction of the Miyagi-ken, are troubled with the presence of wolves. When this region was under the jurisdiction of the late Iwate ken, a great wolf-hunt was annually made by the natives. Lately the dangerous animals have greatly increased in numbers and commit serious ravages among the flocks. Men are afraid to go out of doors after 4 o'clock p.m. The Miyagi Kencho has offered rewards, on a liberal scale, for their destruction. Any one killing a she-wolf receives 7.50 yen, a he-wolf, 7 yen, and a cub of either sex, 2 yen.

THE Hiogo National Bank in Hiogo received its license from the Government on the 8th instant, and is expected to be opened in a few days.

PRINCE Arisugawa-no-Miya left his headquarters at Miyakono-jo, Hiuga, on the 9th instant, and visited every imperial camp.

THE arsenal in Kagoshima, which was destroyed by order of the Mikado's Envoy Yanagiwara, has lately been restored to its former condition.

THE *Mainichi Shinbun* says:—Machida, a distinguished rebel leader, and the second son of the ex-lord of Sadowara, Hiuga, was routed at Midzumata, where he fought desperately, as well as at other places. After his retreat from Kumamoto he felt much ashamed at the disasters which befel him, and having no desire to live any longer, committed *harakiri*. Some months ago, his father, who resides in Tokio, is said to have sent a message to his rebel son desiring him to desert from Saigo, but the bearer returned without effecting the object of his errand. According to the *Kumamoto Shinbun*, Saigo is said to have promised his men that, as long as the castle of

Miyakonojo was his, they should be retained in his service, but on the loss of it, they could remain or otherwise, as they pleased.

Notification—No. 57.

It is hereby notified that the official opening of the Industrial Exhibition in Uyeno, Tokio, will be performed by His Majesty the Mikado, in person, on the 21st instant.

SANJO SANRYOSHI, Daijo Daijin.

15th August, 1877.

ALL the government officials, who remained in Kioto, when the Mikado left for the East, have returned to Tokio.

THE *Nagoya Maru*, brought back 1,104 policemen from the South West. expected to arrive to-day, with troops on board.

THE *Yomiuri Shinbun*, published a few days ago, states that the imperial head-quarters in the South West have issued a notice to the effect that:—"Any one, who brings Saigo Takamori, the rebel commander, before the Imperial camp, as a prisoner, will receive 1,000 yen and any one, who informs the imperialists where Saigo is, will receive 100 yen."

5,826 policemen were sent to the seat of war up to Aug. 16th; and 8,995 newly enlisted policemen.

On the 17th instant, the second newly enlisted division was reviewed in the imperial garden Fukiage, Tokio, when the Mikado is expected to be present.

OUT of the policemen newly enlisted, about 500 have been dismissed for having violated the military rules.

THE *Mainichi Shinbun* says:—Muramatsu and Fuji, two members of the Rissishsha society in the Kochi Ken, (Tosa) who were arrested and brought from Kioto to Tokio, have been repeatedly examined before the Tokio Saibansho. The former did not answer any of the questions asked by the judge, but remained mute: while the latter, on the contrary, spoke very freely, telling the judge what matters have occurred among the members,—such and such is the opinion of Itagaki, (ex-Sangi and president of the Rissishsha) such and such is the desire of Goto (ex-Sangi). He also confessed that he accompanied Matsumura to Hiuga, in order to interview Kirino-Toshiaki, by the order of Hayashi, Vice-President of the Rissishsha society. And he was supposed to have confessed all he remembered. The judge then called back Muramatsu before the Court, and ordered him to confess, telling him that Fuji had already done so, and read what he had said. The obstinate Muramatsu was not staggered at all, and replied that he knew nothing about what Fuji had confessed. Then the judge decided to bring both Muramatsu and Fuji together before him. When the latter was brought, the former looked savagely upon him and said, scornfully:—"You speak nonsense, and your conduct is unworthy of a shizoku." Fuji acknowledged this with thanks, and then replied that no further answer would be given to any questions asked him by the judge. After this nothing could be got from them.

THE *Hochi Shinbun* states:—Owing to the confession made by Fuji, Hayashi and others are arrested in Kioto. They will shortly be brought to the Tokio Saibansho for trial.

THE *Hochi Shinbun* writes in reference to the condition of Kioto as follows:—

Kioto is one of the three Fu, viz., Tokio, Osaka, and Kioto; and it is surrounded by beautiful hills and abounds with clear streams. It has been celebrated from ancient times, as a city, where learned men assembled. Not-

withstanding that, but few of the citizens are found reading newspapers, which come into existence in the morning and are closed in the evening. The *Kobun-Shinshi*, which was the first paper published in the capital, ceased to exist on the 9th instant; and the *Seishin-Shinpo*, which was born about a month ago has already ceased its publication. The publication of the *Min-kai-Sankoron* was lately prohibited for having violated the peace of the country. Only two or three numbers of the *Kokai-Chinshi* and *Tsusan-Chinshi* appear in the course of a month, and the *Haikio-Shinbun* is the only newspaper at present published in Kioto; and its subscribers are very small in number. The cause of the decline of newspaper enterprise in Kioto is very curious and is said to be as follows:—Some time ago, an editor of some newspaper in Kioto wished to remove to a different part of the city, but he could not find a house, as nobody would rent him one. He became very anxious and endeavoured to ascertain the cause; and he found out that the citizens do not like to live in the same street with editors and reporters, because the most of them talk evil against the government and people, and are summoned repeatedly before the Saibansho, giving trouble to *Kucho* or *Kocho*, in the charge of whom the transgressors are usually placed.

THE following intelligence, referring to the condition of the insurgents in the South-West, which was brought by a soldier of the 3rd division, who returned in the *Nagoya Maru* on the 7th instant, is published in the *Mainichi Shinbun*.

The 3rd division of the imperial army, consisting of policemen, was encamped at Miyazaki, Hiuga. They were ordered to return to the East, leaving their position to the newly enlisted policemen in the northern provinces. The insurgents have become much more discouraged lately than was expected. When the imperialists penetrated to Miyazaki, they encountered no insurgents to check their march but what were dispersed as easy as the wind scatters leaves in Autumn. The victors pursued them threatening to kill, as they are strictly ordered by our commanders that no rebels are to be killed, except in sheer necessity. We used to exclaim loudly, as we followed the routed rebels:—"We don't want to kill you. Turn to our side!" Some of them deserted the insurgents and laid down their arms. They are very poorly clad with only a dirty and torn thin cloth, and their legs and arms are left quite bare. They are generally observed to have a melancholy countenance, and their complexion is of a livid colour. When we enquired of one as to the state of his health, as he seemed very ill, he replied that he was very hungry. Two or three *nigiri-meshi*, made of wheat, are given them per day. Provisions have become quite exhausted. They express great thanks when given some food. In short they seem like beggars. They are not even aware of their commander's name. The insurgent officers are dressed in a sort of uniform. The entire troops number about between seven and eight thousand men, and, out of these, three or four thousand only are expected to be able to fight. They now occupy a limited part of the North of Hiuga.

A LETTER from Kumamoto, sent to the *Hochi Shinbun*, runs as follows:—

The main streets in Kumamoto have been repaired; but very few of the citizens have returned and commenced to build their houses. Nearly the entire portion of the city is inhabited, but no trees or plants are to be observed. Owing to this lack of population, all manner of filth and rubbish have accumulated, from which arises a most offensive and injurious

smell. It is calculated that to restore Kumamoto to its former state would take fifteen or 20 years. The rearing of silk worms became more extensive and much improved in Kumamoto during the past few years, and mulberry trees in consequence have been planted. This year the war has destroyed this business. Fifty or sixty of the imperial and rebel soldiers have been buried in one place during the siege of Kumamoto. The stench from this is unbearable. In the battle of Daruma and Masugi on the 20th April, the imperialists lost 300 lives. Out of these, 125 were buried together in a grave belonging to the monastery of of Kenseiji, Kumamoto. During the end of the last year, the Kencho sent many coolies to dig them out and to re-bury them on the hill of Takida. The coolies were forced to turn from the offensive smell, but they completed the work on being supplied with sake, as no man sober could approach the place.

A BRANCH Office of the Kagoshima Kencho is established at Miyazaki in Hiuga, and was opened on the 3rd instant.

ALL the newly enlisted troops, who are in the extensive drill ground in Narashino-hara, have been ordered to return to Tokio.

A LARGE number of workmen in the arsenal at Koishi-kawa have been dismissed.

THE Mint in Osaka sent 1,500,000 yen to the War Department on the 11th inst., and 1,000,000 yen on the following day.

WE extract the following paragraph from the *Hochi-Shinbun*, which appeared in its issue of the 16th instant:—

Out of the Shigakko-to of Kagoshima, consisting of 3,000 shizoku, no one lays down his arms before the imperialists, but they seem to resist obstinately to the last. Such is the rumor we have heard, but we do not know whether it is true or not. Sudowara, Takanaabe, Ohi and Miyakonojo have been taken by the imperialists one after another on one side, and the imperial troops on the Bungo road are approaching to Nobeoka on the other. Notwithstanding their repeated defeats, the entire rebel troops number yet between eight and nine thousand, among whom good order is still observed.

OUT of the third division of the imperial army, 5 officers and 36 policemen were killed from the 24th June to the 30th July, and 8 officers and 88 policemen were wounded.

A TELEGRAM sent from Osaka, on the 19th instant, says that a despatch forwarded by Major General Yamagata, War Inspector, announces that on the 17th instant, all the imperial troops marched for the insurgent lair at Kumada and stormed it. Saigo, Kirino, and other distinguished commanders, ascended to the summit of Enotake, which lay between the first and second divisions of the imperial army, at the head of a hundred picked soldiers. The insurgents fled, rushing through the imperial lines, and the victors pursued them. Thousands of the rebels surrendered to the imperialists.—*Mainichi Shinbun*.

EVERYTHING is very dear in Kagoshima:—One sho of rice, 12½ sen. One sho of saké, 30 to 50 sen. One toguwan (winter-melon), 50 sen. One squash, 10 sen. One water-melon 30 to 70 sen. Three egg-plants, 10 sen. One salt plum, 1 sen. One small cup of ice water, 6 sen.

SHIMADZU-TADAYOSHI, son of the ex-Sadaijin will shortly leave Kagoshima for Tokio.

ON the 18th instant the imperial headquarters were removed from Miyako-no-jo to Miyazaki, in Hiuga, where the branch offices of police and temporary judicial court in Kiushiu are to be established.

THE Kochi Ken (Tosa) is much excited, and about ten shizoku were brought to Tokio for examination on the 22nd inst., on account of their suspicious conduct.

PRINCE ARISUGAWA-NO-MIYA, commander-in-Chief of the Imperialists in the South-West will shortly return to Tokio. Prince Yamano-shi has left for Kioto, in order to meet him.

THE following number of persons in the asylum at Uyeno, Tokio, is published in the *Hochi Shinbun*:—Out of a total of 391 patients, 49 men and 32 women are sick; 75 persons, of both sexes, over 70 years of age: 49 men and 17 women, infirm; 28 men and 5 women, deformed; 13 men and 11 women, blind; and 43 (men and women) mad.

200 wounded policemen returned from Nagasaki to Tokio in the *Hiroshima-maru*, which arrived in Yokohama on the 23rd instant.

THE *Akebono Shinbun* says that any letter or manuscript, written by Saigo, the rebel commander, is regarded of great value. A person offered 1,000 yen for one of his writings, but the owner refused to sell it for 1,000 or even for 2,000 yen.

THE *Saikai Shinbun* says that Oyama-Tsumayoshi, ex-Governor of the Kagoshima-ken, is satisfied with the verdict pronounced by the temporary judicial court in Kiushiu on the 9th instant.

It is rumored, says the *Mainichi Shinbun*, that after the suppression of the insurgents in the South-West, a meeting of the Provincial Governors will be held in Tokio. The subject for discussion will be the advisability of establishing permanent garrisons in all the Fu and Ken.

WATANABE, editor of the *Saikio Shinbun*, has been summoned before the local Sai ban sho, and condemned to pay a fine of 25 yen for having violated the law against slander.

THE *Akebono Shinbun* says that recently His Majesty the Mikado presented himself in person before the newly enlisted policemen at the Fukiage garden, as a recognition of their loyal and faithful services. They were then ordered to return to their homes. They number 6,950 in all.

H. E. Okuma, Minister of Finance, has left for Atami hot springs, accompanied by his wife. During his absence Matsukata, *Daijin* of the Finance Department, will officiate in his stead.

THE imperial hospital at Miyazaki, Hiuga, was removed to Hosajima on the 17th instant.

THE *Mainichi Shinbun* says:—At the same time that it was mentioned in a telegram from Kagoshima, that cholera had broken out in that Ken, the same dreadful visitation was observed in the town of Kisaratsu, Katsusa. The Chiba Kencho authorities, under the jurisdiction of which the town lies, issued an order to the effect that fruit should not be eaten in excess. Many junks and fishing boats go daily between Yokohama and Kisaratsu. Some persons in Yokohama petitioned the Kencho that the sailors and passengers arriving from that town, should be examined on landing.

ELEVEN distinguished shizoku of the Kochi ken, (Tosa) including Kataoka of the *Risshi-sho* society, the bearer of the famous memorial to the imperial palace in Kioto, were arrested and brought to Tokio on the 23rd instant.

MAJOR GENERAL SAIGO arrived in Osaka on the 20th instant.

The insurgent troops, who are now encamped in a small portion of Hiuga, are said to have been divided into two parties by conflicting opinions. One is called Hisshi-to

(fight till the last), and the other Kobuku-to (surrender to the imperialists.) They are so highly excited that a severe contest is expected to take place amongst themselves.

A telegram from Kagoshima, which was received in Tokio on the 21st inst., announces that 6,000 insurgents have laid down their arms, surrendering themselves to the imperialists in Kagoshima. About the same number of the rebels have surrendered at Nobeoka, and 6,000 at Miyazaki.

THE *Hochi Shinbun* states that the three distinguished rebel commanders, namely, Beppu Shinsuke, Hemmi Jurota, and Kishima Kiyoshi, have committed harakiri in their camp at Sado-wara, which was set on fire.

The following items were published in the *Mai-nichi Shinbun* of the 25th instant:—

A telegram from Owake, dated the 23rd instant, announces that the insurgents appeared at Mitai and stormed Kosho, which was occupied by the imperialists. As they seemed to be marching for Umamigahara, half a battalion of the Kumamoto garrison troops was despatched to meet them, and Lieut.-General Soga established his head-quarters at Oita (Bungo).—The insurgent troops, who are determined to fight to the last, are not at all discouraged, in spite of their fatal defeat at Nobeoka.—An imperial soldier, who returned recently from Higeoka (Bungo) to Tokio, gave us the following account:—The mode of warfare between the imperial and insurrectionary troops, has recently become quite changed. No heavy bombardment nor discharge of fire-arms takes place. On attacking a rebel battery, the imperialists fire upon it for a few minutes, and then rush for it with swords and spears. The fighting always commences at night time and finishes before dawn.—It is everywhere heard that the *Chindai-hei* (garrison troops, consisting of various classes of men) are feeble and unable to make a stand before the insurgents, and that the *Shizoku-hei*, newly enlisted, consisting only of shizoku, are very strong. But this is not right. The latter are of course brave, but as each is anxious to distinguish himself he acts repeatedly against the orders of his commander, and thereby causes much annoyance to the imperialists. The *Chindai-hei* at first hesitated to take the field from cowardice. Now that they have overcome their fear, a good officer in command is only wanted to make them good soldiers, for they are well skilled in the use of the rifle. The insurgents, who consist only of shizoku, stand repeated attacks from the imperialists, who are six or seven times their number. We are much astonished at their bravery. All the imperial men-of-war, which have been anchored off the coast of Nobeoka (Hiuga) have gone to Saiki (Bungo). Large numbers of small steamers form a connecting line between Saiki and Saga-no-seki. The Oita Kencho and branch office at Oka, Bungo, are strictly guarded by our army. The inhabitants of Kumamoto, who commenced to rebuild their houses, again became much excited on the approach of the insurgents, who are now marching towards the North-West.

THE *Mai Nichi Shinbun* states that the headquarters of Prince Arisugawa-no-miya were removed from Miyazaki to Hosojima on the 24th instant. An explosion has taken place in the Government Magazines at Nishizaka, Kumamoto, where large quantities of gunpowder and arms were kept. Great damage has been wrought; many lives have been lost; and many people wounded. The cause of the explosion is not yet known.

A DESPATCH sent by the authorities of the Kochi Saibansho and the branch office at Fokushima, announces, according to the *Futsu Shinbun*, that the shizoku in the country of Hata, Kochi Ken, are much excited.

THE *Nichi Nichi Shinbun* says:—Cholera has broken out in the district of Nagne-kori, Kadzusa, under the jurisdiction of the Chibaken, and is spreading to the neighbouring districts. Twenty-eight persons have already died from the epidemic. The local authorities are taking the utmost precautions to prevent the further course of the dreaded visitation. Notwithstanding this, a curious and superstitious custom finds great favour among the poor people. These imagine that anyone afflicted with the disease may be cured by drinking a hot infusion of the leaves of the *Sasaki* (a tree) which grows on one side of the temple of Juniten in Morimura in the same district, where many people are prostrated, and that any one not affected will be preserved from the epidemic by drinking the infusion. Both men and women, aged and young, are seen in groups round the temple, in a state of great anxiety to obtain the sacred leaves, all of which seem to have been stripped from the trees. On the other side of the temple, bamboo trees grow luxuriantly, and their leaves are also taken for the same purpose as are those of the *sasaki*. The greatest endeavors on the part of the authorities to prevent the epidemic from spreading, can be of but little avail in the presence of so absurd a superstition.

THE *Hochi Shinbun* says that a telegram, despatched by Colonel Ozawa in Hiuga on the 24th instant, announces that Saigo and Kirino had cut their way through his troops at the head of about 300 picked men. They crossed the river Mafurigawa, and took up a position on the summit of the mountain known as Tsurayama. As they are thought to be likely to try to make a rush on the Higo or Bungo road, each of these has been occupied by large bodies of troops. When the imperialists stormed and seized Nobeoka, Hanayama, a distinguished rebel commander, and formerly an officer of the 3rd class in the Judicial Department, was taken prisoner by the victors.

A TELEGRAM from the Mission for Japan in Corea, dated the 24th instant, addressed to H. E. Terajima, announces that an agreement, for the proper treatment by either country of the shipwrecked subjects of the other has been signed.

LARGE quantities of ammunition and 20,000 rifles have been sent from the Arsenal in Osaka to Bungo.

MEETINGS of the Finance Officials have repeatedly been held on the subject of taxation in the island of Yezo. It has been decided that, from the commencement of September next, taxes will be paid only by the fishermen. The total annual revenue to be derived from this source is estimated at 400,000 yen.

THE *Toyo Kiji Shinpo*, the first number of which appeared in Osaka in last month, has been suppressed on a charge of having injured the peace of the country. The petitions for the publication of the *Hiji Shinpo* and *Kansei Mai Nichi Shinbun* have not been granted by the Osaka Fu.

THE second division of "newly enlisted" troops has been ordered to return home at the close of the war. 903,650 yen have been sent from the Finance to the War Department to defray the travelling expenses of the troops.

It is now rumored in Tokio that the late Ikedo, ex-Daimio of Inshiu, who died suddenly some days ago in Kioto, was assassinated. He was the brother of the ex-Shogun Keiki.

THE Keishi-Kioku (Police Bureau) has expended more than 1,431,000 yen in enrolling the "newly enlisted" divisions, consisting of shizoku; but this amount does not include the expenses of sending them to the South-West.

WE take the following from the *Osaka Nippon*:—Owing to the exhaustion of their ammunition and food, on the part of the insurrectionary troops, they became much discouraged, and Saigo, Kirino, and other distinguished leaders, retreated to the mountainous region in the north of Hiuga, whither they were followed by about 500 picked soldiers, to fastnesses which no man had visited for many years past. They are expected to starve to death or commit harakiri. Since the imperialists captured Miyazaki, about 3,000 rebels, wounded more or less severely, were found scattered here and there and groaning in pain. They had received no medical treatment at all, for no medicine was provided by the insurgents. They were brought to the imperial hospital, but unfortunately for them, most of them were discovered too late for cure. On entering Miyazaki, the imperial victors found a large arsenal, where various machines and engines were in good working order. Large quantities of gunpowder and about 30,000 Japanese guns were stored there. On the night of the day following that on which the imperial army marched to Nobeoka, Saigo assembled all his chiefs before him, and is said to have addressed them to the following effect:—"All is ended. But owing to our active and brave men, we have made a desperate stand before the enemy. As, however, we cannot continue the contest any longer, our men may disperse whither they like." Only 500 or 600 men followed Saigo to the last; and all the rest laid down their arms before the victors. No great battle was fought in Miyako-no-jo; but insurgents to the number of between 270 and 280 were found dead on the field, and the victors lost eighty soldiers during the attack. The insurgents are said to have issued paper money to the value of more than 240,000 yen; but out of this amount only 140,000 yen were current, and the rest was found piled up in their camp. Some of the principal merchants in Kagoshima, who are well known throughout Japan, were ordered by Oyama, ex-Governor of Kagoshima, to supply 700 koban, 3,000 silver coins, 500 futons, and 850 koku of rice for the use of the Kencho. Many other merchants and farmers were compelled by his orders to make contributions to the kencho.

THE two nephews of the late Eto-Shinpei in Saga, namely, Tokukin and Ishii, were said to have been killed during the war between their uncle and the Government. When Eto was arrested and decapitated, the two nephews took refuge in Kagoshima, where they were favoured by the Shigakko-to. When Saigo raised an army in January, they followed him to Kumamoto each at the head of about 1,300 men.

THE rice harvest is expected to be good throughout the country this year.

THE branch office of the Kagoshima ken in Miyazaki will be removed to Sadowara.

SHORT ANECDOTES.

From the Japanese.

QUAINT JUSTICE OF NARUSE.

No. 1.

When Hayato Naruse was appointed to the governorship of a certain town, there was a rice merchant living there who had acquired immense wealth through the use of false mea-

sures; but finding it impossible to continue his dishonest practice, or even to conceal his guilt under the new governor's rigid and penetrating administration, he, one day, appeared before the Court of that official, and confessed all his crimes, for which he prayed that he might receive some light punishment. "Your crimes are very great," said the governor, "but since you have had honesty enough to come and confess them, and considering that they were committed during the late governor's administration, I order you, as a punishment, to use different measures in your trade for full seven years,—that is, you shall employ a smaller measure in purchasing your rice and a larger one in selling it."

The merchant obeyed the order gratefully, glad to have escaped from the heavier punishment which he anticipated; and, after a few years, he was surprised to find himself richer than ever, his customers having increased, through the cheapness of his rice.

A JOKE BY OKUBO.

No. 2.

AFTER a feast, in which stork soup (*tsuru*) was the most esteemed of all other delicacies, was held in the Court of the Shogun Iyeyasu, Hikozaemon Okubo presented himself before his lord, who graciously ordered him to partake of the celebrated soup; so Okubo was led by pages to another room, where dinner was served to him. Having finished it, he came back before his lord and thanked him for the good dinner. "But allow me, my lord," added Okubo, "to tell you that I have plenty of the delicacy, of which the excellent soup consisted, at my house."

"Impossible, old man," said the Shogun, "how can you, who have but a small pension, enjoy such a luxury?" "Pray do not be amazed, my lord," replied the old man, "I will take the liberty to present it to you, tomorrow."

The next day, the Shogun saw his old servant, carrying before him respectfully a large wooden tray, upon which a mass of green cabbage was heaped up, like a little hill. The old man said gravely: "This, my lord, is the very delicacy which your lordship was so good as to entertain your servant with yesterday; but this is called by us 'cabbage,' while it is called in your lordship's Court, 'stork!'" The Shogun received it with a smile, but punished the officers of his kitchen, who had behaved so dishonestly.

THE MOTHER OF HACHIYA.

No. 3.

Hannojo Hachiya, one of the bravest men in Iyeyasu's army, having found himself a little behind others in charging the enemy at the battle of Yoshida, got angry with himself, and rushed headlong upon the enemy's column with his big sword above his head. Encountering an enemy's officer, who defended himself with a gun, he cut off the muzzle of the gun, while he himself was shot through the breast. When the sad news was conveyed to his house, his mother said to the bearer of the intelligence, "I am prepared for it; but tell me how he died." "Why, madam," replied the man, "he died bravely facing the enemy." "Very well then, I am satisfied!" exclaimed the mother; but retiring into another room, she threw herself upon the floor, and wept bitterly for her beloved son.

LAW REPORT.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Act. Law Sec.

Saturday, 11th August, 1877.

IWASAKI YATARO vs. PHILIP H. COLOMB.

JUDGMENT.

This is a motion for an enlargement of the time allowed for filing a petition of appeal, and in support of that motion the counsel for the defendant has filed an affidavit in which he states that for the reasons there given it will be impossible for him to prepare the petition of appeal within less than six months. The reasons assigned may be stated as follow:—

1.—That the decision appealed against was partly founded upon precedents of which full reports are not to be found in Yokohama, and he is of opinion that the full reports of such cases would not warrant so much of the decision as is founded upon the mere rubrics of them which are cited at the hearing of the said demurrer.

2.—That he requires to consult his client, the defendant; that since the delivery of the judgment the defendant has in the course of his service, left this country, and that he can only communicate with him by letter.

3.—That the decision appealed against materially affects the interest of the British Admiralty, and of Her Britannic Majesty's Government, and that without reference to, and instructions from, the proper officers of Her Majesty's Government resident within the United Kingdom, it will be impossible for him adequately and completely—and so as duly to show and defend the rights of Her Britannic Majesty's Government—to set forth and support by argument the grounds of appeal.

4.—That the questions of law and fact involved in the said appeal are numerous, and many of the questions of law are, in his opinion, of the highest importance and of an entirely novel character.

I think the motion cannot be sustained on the ground first stated. Unfortunately the reports of cases to which it is possible for the profession in this place to refer are very limited, but the embarrassment by reason of this is felt in nearly every case of any considerable importance, and the administration of justice would be seriously prejudiced if counsel were entitled to obtain time to refer to text books in England. However unsatisfactory the results may be, I am of opinion that counsel as well as judges must make the most of the materials at hand.

The second ground urged, it appears to me, cannot be sustained in the circumstances of this case. The only point upon which there is any appeal is a point of law, and on such a point it does not appear that any further consultation with his client ought to be necessary. It appears that the defendant has given instructions that the appeal be made; and beyond that it does not appear what instructions counsel should require. Counsel referred to the case of *Byng v. Clark* [13 Boarvan, 92], in which after two successive applications for additional time had been granted by the Master, three subsequent successive applications were granted by the Court. Of the three applications made to the Court two were on the ground of insufficient instructions having been received. But

there is a distinction between that case and the present one. In that case time was wanted to prepare an answer to a bill of upwards of nine hundred folios, and discovery was required in minute detail from the defendant. Information upon the facts was required by counsel to supply the particulars required. In the present case, as already stated, the appeal is on a point of law, and although it may be more desirable to have one's client at hand at all stages of the proceedings, Counsel has failed to show how communication with his client would aid him in arguing a point of law.

The third ground, moreover, cannot it appears to me, be sustained. Her Majesty's Government has not been made a party to the case, and has not sought to be made a party. Counsel who now moves, at the hearing declared in effect that Her Majesty's Government was not pecuniarily interested in the result; he has not stated that he has now any different instructions, and no way has been shown in which Her Majesty's Government can directly or indirectly be made legally liable to satisfy any judgment given. The only way in which it has been shown that Her Majesty's Government is interested in the appeal, is so far as it may decide the liability of Her Majesty's Naval Officers to be sued in Her Majesty's Courts in these countries. Counsel states that he is instructed by Admiral Ryder, the Admiral on the station, to watch the case on behalf of the Admiralty and of Her Majesty's Government, but he admits that he is not authorised to enter any appearance on behalf of the Admiralty or on behalf of Her Majesty's Government. His application for time to consult the authorities at home is, therefore, an application for time to consult persons who have not appeared and have not authorised him to enter any appearance, and ascertain whether they wish to appear or to take any steps in the matter. I do not think that counsel watching a case like the present by direction of one of Her Majesty's officers, is entitled to ask proceedings to be stayed until such officer can communicate with Her Majesty's Government, and ascertain whether Her Majesty's Government wish to intervene. Such a principle would often work great injustice, while the public interests are, it appears to me, sufficiently secured by the provisions of the Act 3 and 4 Will. IV., c. 41, s. 4, by which it is enacted that it shall be lawful for the Crown to refer to the Judicial Committee any matters whatsoever as Her Majesty shall think fit. There is another object stated by counsel for applying to Her Majesty's authorities at home, which is to ascertain what the law or practice is in cases like the present. But this stands on the same footing as reference to legal books at home, and I am of opinion that counsel is not entitled to time for this purpose.

As to the fourth ground, it does not appear to me that there are numerous or any questions of fact involved in the appeal, but the points of law raised are no doubt such as do not ordinarily arise in practice, and any difficulty which counsel may experience on such grounds ought certainly to receive every consideration.

While holding, then, that counsel instructed to appeal is not entitled to have time enlarged to enable him to consult an absent client on the preparation of a petition of appeal when that appeal is against a decision upon a question only of law—a question raised and argued by the same counsel—and while holding that he is not entitled to have time enlarged to enable him to consult reports of cases in England, or to enable him

on behalf of one of Her Majesty's officers to ascertain whether Her Majesty's Government wish to intervene, I do think that he is entitled to have an enlargement of time rendered necessary by the nature of the question upon which he has to argue, and I shall therefore give four weeks' further time from this date.

Following what appears by *Daniell's Chancery Practice* to be the practice at home on a first application for time, the costs of this motion will be costs in the cause.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, August 13th, 1877.

Asaman, a Malay, was charged with stabbing Kitcho, another Malay, on board the *Sunda*.

James William Eakin, Surgeon, sworn, stated that a little after ten o'clock last night he went on board the *Sunda*. He was informed that a man had been stabbed. He went to see the man, and found him suffering from a punctured wound on the right side under the last rib, close to the spine. On examining the wound he found it apparently about two inches in depth, extending downwards. There was a complete loss of power and partial loss of sensation in the right leg. The wounded man did not appear to be suffering very much. Witness dressed the wound, which was so far dangerous as it effected the nerves of the leg. It had evidently been caused by a knife. The injured man would be sent to the hospital to-day.

Percy William Case, Chief Officer of the *Sunda*, was sworn, and said that about a quarter to nine last night he was sitting on the quarter deck and heard some one cry out. He thought some one was overboard. He went forward and found a man lying down by the pump having been stabbed. He gave orders to have the wound bandaged, and asked who had committed the deed. He was informed that the man who had done it had gone aft and down the gangway ladder. Witness ran aft, and saw the prisoner pulling away in a boat. He shouted to him to come back, which he did. Witness then caused him to be handcuffed. The prisoner had been fighting with his victim during the day.

The evidence was explained to the prisoner by Mr. Bishop, who acted as interpreter. The prisoner said he knew nothing about the crime he was charged with.

The proceedings, at this stage, were adjourned till Monday 20th instant at 10 a.m., on which day, owing to the inability of the prosecutor to attend through continued illness, was further adjourned.

Before H. S. WILKINSON Esq., Acting

Law Secretary.

Wednesday, August 22nd, 1877.

Messrs. STILLFRIED & ANDERSON v D. WELSH.

The plaintiffs in this case, who were represented by Mr. Anderson, sought to recover certain bills which had been placed in the hands of the defendant for collection, and monies which had been collected by him. Mr. Welsh defended his case in person.

His Honour asked Mr. Welsh if he had rendered a statement of accounts to the plaintiffs, and he replied in the negative. He stated that he had been employed by the plaintiffs first of all on a salary, but it was subsequently arranged that he should collect accounts, sell views &c. on commission. Last month he obtained a situation

and applied to the plaintiffs for a settlement, which they promised to give him but had not done so. He had made out a statement from which he believed that Messrs. Stillfried and Anderson were indebted to him.

Mr. Anderson informed the Court that he was willing to have a settlement but had been unable to do so through the perverseness of the defendant, who had collected monies and said that he had not done so. Consequently the plaintiffs were afraid to apply for payment to persons owing them money for fear they should have already paid the defendant. The defendant had informed him that an officer belonging to a British man-of-war, had not paid his account; but on application to the officer for payment, he produced a receipt showing that he had paid the money to Welsh.

At the suggestion of His Honour both parties ultimately agreed to an adjournment of the case in order to allow them the opportunity of exchanging accounts with each other. His Honour then made the following order.

It is ordered by consent that the defendant within one week from this day deliver to the plaintiffs an account of all monies that he has collected for them, and a list of all the invoices received by him from the plaintiff to the amount of which he has not collected, and that he return such invoices not so collected to the plaintiffs, and that the plaintiff within the same time deliver to the defendant an account of all commissions due by them to him, and that the further hearing be adjourned until Wednesday the 19th of September 1877, at 10 o'clock.

IN THE U. S. CONSULAR-GENERAL COURT.

Before GEN. T. B. VAN BUREN, *Consul-General.*

Thursday, August 16th, 1877.

(Continued from Tuesday, August 7th.)

ALEXANDER CLARK v. RICHARD CONNOR.

Plaintiff claimed \$150 on two promissory notes, granted to defendant by one William Anderson, carpenter, and given by the said Anderson to plaintiff. Defendant refused to acknowledge the bills on the plea they were given in part payment of a boat built for him by Wm. Anderson, which had not been properly finished.

Frederick White, sworn, stated that Mr. Anderson called upon him some time ago relative to getting some money, the sum of \$300, balance due for building a pilot boat. At Mr. Anderson's request, witness went with him to Mr. Ness, who had sent for Anderson. Mr. Ness was acting for Mr. Connor, and he said that the money would be paid half in cash and half in two promissory notes. The money and notes were sent to witness the following day; Mr. Ness at the same time said that he would see the notes paid when due.

To Mr. Connor:—I remember speaking to Mr. Ness, but do not recollect taking the contract to him; won't swear I did not; don't think so. Mr. Anderson did not pay me anything. I guess the Consul does not pay me for giving other people advice. I advised him as a friend, because he was a poor man and in a difficulty.

To His Honour:—I saw the boat several times while building. The last time I saw her was two or three days before her delivery, but I did not examine her, and do not know what condition she was in. When I received

the notes from Mr. Ness I immediately sent word to Mr. Anderson and requested him to hand over the boat.

This concluded the evidence for the plaintiff.

Benjamin Robert Stanford, sworn, said that he was a shipwright. He had been engaged to superintend the building of the boat for Mr. Anderson. He witnessed the contract and understood its conditions. Mr. Anderson sublet the contract to a Japanese, who refused to obey witness' orders as to how the boat should be built and the material that should be used. The boat was to be galvanized fastened. Mr. Anderson said that galvanized fastenings were too dear. After that galvanized fastenings were not used. The Japanese contractor used iron staples, to which witness objected. The thickness of the deck varied from an inch and an eighth to an inch and a quarter. The boat was to have been launched, then beached and painted. Mr. Anderson refused to allow the defendant to beach the boat and would not do it himself. The boat was not completed when delivery was given. Sundry bolts and other things, too numerous to mention, were wanting. At the request of defendant witness did a lot of work to the boat after she was delivered. The repairs mentioned in the bill were all that were needed. They did not include the painting. It took about three days to finish the boat. The hawse-pipes used in the boats, both plaintiff and defendant said belonged to the defendant, and he was to be credited for them. Some bolts and other things were supplied by the defendant.

To the Court:—I know nothing about the notes.

R. Connor, sworn, stated that the contract produced was the one for the construction of the boat in question; and it proved that he had fulfilled his part of it. The sum of \$200 was paid on the signing of the agreement, \$100 when the boat was planked up, \$200 when the boat was launched; and the last \$300 were to be paid in three instalments. This was changed into two notes of \$150 each because there was a flaw in the contract and in consequence Anderson could keep the boat until all the money was paid. When witness took possession of the boat, she was not completed. Possession was taken on the 30th of December, 1876, and it was the 18th of January before the boat was completed. The boat was to be completed in 70 days, and when that time expired, witness wrote to Anderson and told him that he should charge \$5 a day for every day the boat was detained, according to the terms of the contract. When the promissory notes were given to Mr. Ness, witness was under the impression the boat was completed. The items mentioned in exhibit 3 Anderson agreed to do to the boat after she was taken over, but he did not fulfil his agreement, and witness had to get them done himself. Witness debited Anderson with \$5 a day for 18 days, which time was occupied in doing the work and in delay caused by Mr. Anderson. Several articles supplied by witness he was to have been credited for. Mr. Clark was well aware when the notes were given and the conditions, as he attended Mr. Ness' office at the time and was ordered out for interfering with the business. Galvanized spikes would last much longer than iron spikes, as the latter rust very quickly and the former do not rust at all.

To Mr. Anderson:—The hawse-pipes were not given to you in part payment for building a dingy.

The evidence of the plaintiff and Anderson, taken at a former hearing, was read to the defendant.

Defendant continued his statement, remarking that he had not a reasonable opportunity of inspecting the boat before taking delivery.

His Honour said that there were many difficulties in connection with the case. There was no question but what the boat was not built according to contract. But then the defendant evidently knew that, and then, after all, took delivery of the boat.

Defendant:—I did not know that iron spikes were used until after the boat was taken delivery of. There is a difference between spikes and bolts. When I went to see the boat, galvanized spikes were used, but after I went away, ordinary iron spikes were used.

His Honour:—There are some queer things about this affair; and some great fraud in the building of the boat, but I scarcely know how to get at it. The only thing to decide is whether Connor has not covered the matter up by taking possession of the boat. The subletting of the contract was a fraud in the first instance, then the using of iron bolts and spikes instead of galvanized bolts and spikes was another instance of fraud. The sole question was whether the defendant ought to be allowed anything in consequence of the spikes and bolts not being according to contract.

Mr. Clark made a statement to the effect that the remark of the defendant that he, Clark, had been turned out of Mr. Ness' office, was untrue.

His Honour reserved judgment.

Saturday, August 18th, 1877.

JUDGMENT.

The plaintiff claims to recover upon two promissory-notes of \$75 each, given by defendant to Wm. Anderson, and by the latter transferred to plaintiff.

The defence is that the notes in question were given in part payment for a pilot boat built by Anderson for defendant, which boat was defective and not according to contract, and that the notes were transferred to plaintiff after they became due, he having full knowledge of all the circumstances surrounding them.

The defendant also filed a bill of items showing the amount paid by him to complete the boat and the loss sustained by her non-completion by Anderson.

I am satisfied from the evidence that the plaintiff, Clark, if the owner of the notes at all, took them with a full knowledge of the circumstances under which they were given, and of the fact that the boat was incomplete and defective.

I find also that Anderson promised in writing at the time the notes were given, which writing was drawn by Clark, the plaintiff, to immediately make the necessary repairs and additions to the boat. This however he failed to do, although often requested by the defendant, and the latter after sustaining serious loss by the delay was obliged to have the work done himself.

I also find that the boat was not built according to contract, but that, in several particulars, the work done and materials used were in fraud of the defendant. Especially was this the case in the spikes used, being of common iron, while the contract called for "galvanized spikes."

The evidence shows that Anderson represented to his foreman that the galvanized

article was too expensive, and having sublet the contract to a Japanese, the latter carried about his person both the common iron and galvanized spikes, the latter of which he used only when the defendant happened on board the vessel. The iron spikes used were concealed by paint and it was not until after use and exposure to the air, that the fraud was made apparent.

The defendant testifies that the use of these iron spikes is a very serious damage to the vessel. The exact amount of such damage in money, it is, however, difficult to arrive at. The boat was to be built according to the terms of a written contract and to be completed within (70) seventy days from date of the writing—the builder to forfeit \$5.00 per day for every day after the seventy during which she should remain incomplete. The seventy days expired on the 19th of December 1876. The vessel was not delivered to defendant until the 30th of that month, and when delivered she failed, in several particulars, of filling the terms of the contract. These deficiencies however in so far as they were apparent, and the forfeiture of the \$5.00 per day for non-completion within the 70 days, were condoned by the defendant's acceptance of the boat, and giving the notes upon which this action is founded.

The contract called for several payments to be made by defendant during the building of the boat, amounting to \$500, and the balance in three monthly payments after she should be launched. The \$500 was duly paid and receipted for, but Anderson refused to deliver the boat unless the defendant paid \$150 in cash and gave the notes now in suit. To obtain possession of the boat, and save the \$500 already paid, defendant felt compelled to comply with the terms dictated. By so doing however he condoned, as I have said, for everything except concealed defects, and such apparent ones as he provided for by an additional agreement on the part of Anderson.

Under this state of facts I am strongly inclined to dismiss the complaint and declare the notes of no value, but upon consideration have concluded to allow the defendant seventy-five dollars (\$75.00) for the damages and expenses proven.

I do therefore adjudge that the plaintiff recover of the defendant the sum of seventy-five dollars (\$75.00), being the balance of the sum claimed, with interest at 10 per cent. per annum from the 1st day of March, 1877, and costs of suit.

Tuesday, August 21st, 1877.

F. V. DICKINS vs. A. C. DUNN.

The plaintiff claimed the sum of \$2,400, retainer's fee, and interest.

Mr. Dickins opened his case by saying that he had done all he possibly could to settle the affair without bringing it into Court, but had failed. While conducting a case for Mr. Dunn in the Ts'kidji Saibansho, some Japanese witnesses were required, but they refused to attend unless the Saibansho ordered them. The Saibansho refused to do this, and the end of the affair was that it was referred home to America. A great deal of correspondence took place, which was carried on by him, Mr. Dickins. Eventually all witnesses that were required were summoned to the Joto Saibansho, and the case was heard and occupied fifteen sittings, and resulted in favour of Mr. Dunn for some \$15,000. The petition had been at first for something like \$50,000, but on a new peti-

tion having to be presented to the Joto Saibansho, he, Mr. Dickins, thought it would be better not to claim such a large amount, and advised Mr. Dunn to take off \$25,000 which was accordingly done. At the same time he advised that a smaller claim for \$700 should not be included in the case for damages, as the two claims would be better separate. When the case was taken into the Joto Saibansho, different arrangements were made with regard to his, Mr. Dickins', fee, as he could not foresee all which afterwards transpired when he accepted the sum of \$500, and it was ultimately agreed that \$1,500 should be paid as retainer's fee if the case was successful, and in the event of its failure \$800. Mr. Dunn did not carry out this arrangement, and so he, Mr. Dickins, made out a bill of costs according to the rules of the profession in the English Court, and the sum he now claimed was the amount of that bill. After the demand in the petition being claimed, Mr. Dunn admitted that something was due him, and, as to how much, it was resolved should be settled by an arbitrator. The arbitration however fell through on account of Mr. Dunn claiming the sum of \$700, the amount of the claim which he said ought to have been filed in the petition in the main case heard in the Joto Saibansho. This Mr. Dickins could not agree to.

Mr. Dickins was then sworn and said:—In 1874 Mr. Dunn employed me to conduct a case against the Petroleum Company, in which he was plaintiff, demanding \$50,000 damages for wrongful dismissal from their service, and \$700 odd dollars, a debt alleged to be due from the Company to him. After his first interview, at which I did not understand whether I was retained or not, the Petroleum Company called upon me and wished to engage me. I refused, considering myself, in honour, bound to Mr. Dunn, although they were willing to pay me a good sum down. On the 15th of April, I wrote to Colonel Dunn the following letter: (Letter produced and marked A, Mr. Dickins reading it, and the substance of the document was objecting to Mr. Dunn having drawn out a petition without first consulting Mr. Dickins; and also informing Mr. Dunn that the other side had been to him requesting him to undertake their case.) In consequence of that letter I was formally retained by Mr. Dunn and the sum agreed upon was \$500. In answer to the offer on the part of Mr. Dunn I wrote a letter dated April 24th, 1875. (Letter produced and read, and marked B, the purport being that he, Mr. Dickins, accepted the terms offered, but that he declined to undertake the claim for \$750.) I then attended the case in the Ts'kidji Saibansho, three days altogether, when the case came to an end through the refusal of the Court to call certain Japanese witnesses who would not come without being summoned. On this point of the summoning of witnesses, I made representations to the Court, had numerous interviews with Mr. Dunn and the American Minister, conducted a long correspondence with the latter concerning it, and prepared statements and other papers for transmission to the U. S. Government. This ended in the case being again brought on in the Joto Saibansho, which had been created in the interval. A new petition was drawn up by me and filed, by which, in accordance with my advice, Mr. Dunn reduced the claim contained in the original petition drawn up by himself, from \$50,000 to \$25,000, and omitted, by my advice, the claim for \$750. Between the

petition in the Joto Saibansho being settled, filed and heard, numerous conferences took place between Mr. Dunn and myself and his witnesses; and evidence of one witness, after considerable trouble, was procured beforehand. On the 16th of Jan., 1875, in pursuance of negotiation relative to costs, I wrote a letter to Mr. Dunn. (Letter read and marked C, and was to the effect that the terms proposed could not be accepted, and proposing the sum of \$1,500 in the event of success and \$800 in the event of non-success.) The terms of this letter were agreed to by Mr. Dunn, both verbally and in writing, and I accordingly conducted the case in the Joto Saibansho. The hearing commenced on the 14th of January, 1875, and after many adjournments terminated about the 12th of April, 1875, some fifteen sittings having taken place. Judgment was pronounced in favour of Mr. Dunn on October 30th, 1875. In the meantime the Court was frequently pressed by me to render judgment. During the trial the charge of incompetency against Mr. Dunn was repeated by the oil company and much insisted upon. From this accusation, Mr. Dunn came out vindicated in every respect, and the charges of disobedience were shown to be as frivolous, and were by judgment of the Court, accepted as being as frivolous as the charge of incompetency. When the judgment had been obtained, I considered it my duty, under the letter of the 16th of January, 1875, at an end, and during 1875 and 1876 I pressed Mr. Dunn for payment at least of my disbursements. I also pressed him for payment of, or security for, my costs, and I mentioned the consignment of his judgment, with which I would be contented as security. Not a farthing was paid me. (Letter produced read and marked D certifying, that within two days, if some arrangement was not arrived at, he, Mr. Dickins, would sue Mr. Dunn. A bill of costs was included in the letter). The statements contained in the bill of costs are true, and the items of it are reasonable and fair, according to the practice of the profession in Yokohama. In answer to that letter, I received one from Mr. Dunn, dated 30th of September 1876. (Letter produced, read and marked E. The contents were objecting to the bill of costs; and with regard to the disbursements of Mr. Dickins, Mr. Dunn would pay as soon as possible). I then wrote another letter to Mr. Dunn. (Letter produced and marked F, proposing to submit the account to some gentleman.) Nothing came of the correspondence, my offers being refused both verbally and in writing. (Letter, dated Oct. 6 1876, from Mr. Dunn, produced and read and marked G, acknowledging that the offer to refer the matter to a countryman of his was fair and honourable. A letter was also read dated July 1876, and another without any date, marked H and I respectively.) In consequence of the correspondence between Mr. Dunn and myself, it was determined that the matter should be submitted to the arbitration of Mr. Boissonade I had previously commenced this action in this Court against Mr. Dunn. When the agreement to arbitrate was made, the Court made an order to that effect. On the 12th of January, 1877, I received a letter from Mr. Dunn, with a copy of my bill of costs. (Letter read, marked K, stating that Mr. Dunn was anxious to have the matter settled by arbitration.) An agreement of arbitration was then drawn up submitting to Mr. Boissonade my claim against Mr. Dunn. To this agreement additions, were added by both parties, which

I propose to produce in evidence. (Agreement of arbitration read, put in and marked L). The arbitration fell through owing to Mr. Dunn's demand that the arbitrator should arbitrate upon a counter claim, put forward by Mr. Dunn, demanding payment from me of the sum of \$750 odd dollars, and denying me any remuneration whatever, on the ground that I had forfeited my right to it by not tacking on his claim of \$750 odd dollars in his claim for wrongful dismissal. The bill of costs put in is upon which I sue.

Recess till 1.30 p.m.

On the Court resuming its sitting this afternoon, Mr. Dunn cross-examined Mr. Dickens.

Mr. Dickens:—I furnished documents to Mr. Bingham. There were letters sent to Mr. Mitchell and to several others. The reason I sent Mr. Hall to copy the correspondence at your house was because you had it altogether.

This concluded the plaintiff's case.

Ambrose. C. Dunn was then sworn and said:

May it please Your Honor:—I have made a brief of this case which I wish to read. I, the defendant, commenced action by filing my petition through the Consul in Yokohama against the Japanese Petroleum Company on the 24th of March 1874, as per documents 1 and 2. (Letter produced dated March 28th, 1874, to the U.S. Consul, marked 1. The purport was that Mr. Dunn intended to take action against the Petroleum Company.) I call particular attention to the items \$556.50 and \$200, being my own funds disbursed in 1873, or thereabouts for the said Oil Company, as stated in my bill in exhibit 1. I received a letter from Mr. Dickens, dated 18th April, (plaintiff's exhibit A). I have never disputed employing the plaintiff as my attorney in the prosecution of my claim against the Oil Company. I employed him on the 23rd of April 1874, but I deny employing him in September 1874, as set forth in the petition.

Mr. Dickens remarked that he wished to amend that part of the petition, which was done.

Defendant then read a letter, in which he had offered Mr. Dickens the sum of five hundred dollars and five per cent. interest on the \$750. Mr. Dickens' answer was then read accepting the proposal with the exception of conducting the claim for \$750 odd dollars.

Defendant continued:—Mr. Dickens agreed to accept the \$500. By a miscarriage of justice my case was thrown out of the Ts'kidji Saibansho, at which time plaintiff had obtained all my papers and then refused to carry on the case in the Joto Saibansho. On my demanding them, Mr. Dickens refused to deliver me the papers, unless I paid him \$500 or made a new agreement. To save time and expense I was forced to make a new agreement (plaintiff's exhibit C.) My petition to the Ts'kidji Saibansho had been prepared by myself. Mr. Dickens had not prepared a single paper at that time or given any legal advice whatever. The only work done by Mr. Dickens was to attend two days at the Ts'kidji Saibansho, and the writing of a short letter to the Minister in regard to my case. So the plaintiff really did nothing; and he refused to carry on the case unless I paid him \$500 or made a new agreement. By the new contract plaintiff bound himself to conduct the case to a final issue in the Joto Saibansho, and not until the final issue is plaintiff entitled to demand payment for his services; and on

my refusing to pay until the final issue, Mr. Dickens decided to retire from the case and instituted a suit against me in the U. S. Consular Court. The case against the Petroleum Company is still pending. On the 30th of October, 1875, judgment was rendered in my favour for about \$20,000, including interest. The Company then appealed, and on December 26th, 1876, a final decision confirmed the first decision, less \$1000 for house rent. Then it was sent to the Tokio Saibansho to be executed. I was notified on the 11th of June last to appear before the Tokio Saibansho, for the purpose of enquiring into the individual responsibility of the shareholders in the Company, and there the matter rests. Mr. Dickens left the case in October, after the decision of the Joto Saibansho. I not only represented my case myself in the Joto Saibansho, but also in the Daishi In, on account of Mr. Dickens leaving the case.

Witness produced the copy of a letter written by him to Mr. Dickens on January 18th, 1875, and several other documents bearing upon the statement that Mr. Dickens had retired from the case. Mr. Dickens' letters to defendant were to the effect that he could not dance attendance at the Japanese Court without seeing a glimpse of some compensation, as every day he left his office was a loss of from \$50 to \$75; and complaining of defendant writing as if he were the injured party instead of him, Mr. Dickens. The Bill of costs was then read.

His Honour asked Mr. Dickens why it was that he claimed more than the \$1,500, to which he replied that it was on account of Mr. Dunn not complying with that agreement.

Defendant then read the following statement which was got up on purpose to present to the arbitrator; and the marks of the exhibits in which are defendant's own and not His Honour's.

1st.—I, the defendant, commenced action by filing my petition through the U. S. Consul at Yokohama on the 24th day of March, 1874, in the Shihosho, Tokio, against the Japanese Oil Company as per enclosures marked Nos. 1 and 2.

2nd.—Attention is particularly called to the items 556.50, and 200 Mexican dollars, being defendant's own funds disbursed by him in 1873, or thereabouts, for the said Oil Company as stated in bill or petition, as per enclosures marked No. 2, amounting to the sum of 756.50 Mexican dollars, without interest, and by the filing of said bill or petition, it brought forth enclosure marked No. 3 from the plaintiff, Mr. Dickens, bearing date April 18th, 1874.

3rd.—Defendant has never disputed the employing of Plaintiff as his attorney in the prosecution of his claim vs. the Japanese Oil Company before the Shihosho, on the 23rd day of April, 1874. But defendant does deny employing him during the month of September, 1874, as set forth by plaintiff in his sworn petition before the U. S. Consul-General, as per enclosure marked A. By reference to enclosure marked B., of date April 23rd, 1874, to the plaintiff, it will be seen defendant submitted his proposition for plaintiff's employment and remuneration, and by enclosure marked C, bearing date April 24, 1874, will be found plaintiff's answer accepting defendant's proposition for 500 dollars fee to conduct defendant's case to a final issue in the Shihosho, but refusing defendant's offer of 5 per cent. on the aforesaid sum of 756.50 Mexican dollars, as it really required no legal proceedings. These documents, or agreement defendant considered equally binding on plaintiff and defendant, and

by the express terms of the enclosures B and C nothing can be more clear, than that plaintiff faithfully bound himself, and did undertake the carrying on of defendant's case before the Shihosho to a final issue, and upon said final issue, plaintiff was to receive 500 dollars.

4th.—By a miscarriage of justice, defendant's suit on the 2nd day of trial was thrown out of Ts'kidji Saibansho,—a court of the Shihosho—at which time plaintiff obtained possession of all defendant's papers &c., in the case, and he, thereby, took advantage of the situation by breaking his agreements as stated in enclosures B and C and emphatically refused to conduct the defendant's case in the Joto Saibansho, Shihosho which court was the first to try the defendant's cause, as the Ts'kidji Saibansho had refused a trial, all of this in violation of plaintiff's solemn agreement aforesaid with defendant. And on demand of defendant the plaintiff refused to deliver up to defendant said papers, etc., that defendant might forward them through the U. S. Consul to the Joto Saibansho unless defendant paid the plaintiff 500 dollars, or by making a new agreement. With these remarkable proceedings on the part of the plaintiff, defendant consulted a friend, and after said consultation, it appeared defendant would have to proceed against plaintiff in the English Court, to recover his papers &c. that were illegally held by the plaintiff. And defendant to save himself time and expense, after an elapse of a few days was forced to the making of a new agreement as per enclosure marked D, bearing date January 16th, 1875.

5.—Defendant's petition before the Ts'kidji Saibansho, had been prepared by defendant himself, and forwarded through the United States Consul at Yokohama, to the said Ts'kidji Saibansho, as per enclosure marked 1 and 2. The plaintiff had not prepared a single paper in defendant's case at that time, or given defendant any legal advice whatever, see enclosure marked No. 3 received from plaintiff after defendant had filed his petition. The only work plaintiff did under the agreement as per enclosures B, and C, before the Court or elsewhere, was part of two days' attendance on the trial in said Ts'kidji Saibansho, a short interview with the U. S. Minister, this interview, being part of said two days' attendance at said Court and the writing of a short letter to the U. S. Minister in regard to defendant's case in the Ts'kidji Saibansho. So the plaintiff really did nothing, but to break off his agreement with defendant, and refuse to further carry on defendant's case, without defendant paid him 500 dollars for doing almost nothing, or make a new agreement.

6.—Now in regard to said new forced agreement of the plaintiff with the defendant as per enclosure marked D, and defendant's answer, see enclosure marked E, said plaintiff sets to work again and binds himself to conduct proceedings in defendant's behalf in the Shihosho to a final issue, and here take notice, in all of plaintiff's and defendant's agreements made, see enclosures B, C and D, Plaintiff is to prosecute defendant's case to a final issue in the Shihosho. There is no particular Court of the Shihosho named in said agreements, and nothing is more clear but that plaintiff was bound to prosecute defendant's case in any and all Courts of the Shihosho, until finally settled, and not until that final issue was plaintiff entitled to demand from defendant payment for services. And by the refusal of plaintiff's demands to the defendant as pay for services, as n

being in conformity with the plaintiff's and defendant's agreement, he the plaintiff retired from the case, and instituted suit against the defendant, in the U. S. Consular-General Court, as per enclosures marked A, G, and H, when defendant was summoned, and a day fixed for the trial. This said new agreement, see enclosure marked D. And, mark you, plaintiff also ignores, violates and neglects to carry out, and the plaintiff point-blank refuses to conduct further proceedings in defendant's behalf, and this, mark you, whilst defendant's case is still pending in the Shihosho, and the plaintiff actually withdraws from defendant's case, see plaintiff's notices to defendant, as per enclosures marked F, I, and K, thereby placing defendant's case in great jeopardy, and leaving defendant to prosecute his own case, to a final issue before the Shihosho. But before said notice of plaintiff's withdrawal from defendant's case, the plaintiff's neglect of defendant's interests, was such that defendant was compelled repeatedly to seek the advice and assistance of the U. S. Minister to aid him in the prosecution of his cause before the various courts of the Shihosho, for the reason it was impossible to get the plaintiff to advise with or come to Tokio, in defendant's interest. Some proofs of this will be found marked "Miscellaneous papers," showing that defendant was prosecuting his own case before the courts previous to the withdrawal of the plaintiff from defendant's case.

7.—Attention is further called to other extraordinary and remarkable demands of the plaintiff and his persistence in ignoring his new forced agreement of enclosure marked D, using plaintiff's words "before devoting further time to defendant's interest &c."

8.—The plaintiff complains in many of his letters, (as per enclosures accompanying this answer) and in his sworn petition as per enclosure A, of the great length of time taken in defendant's case, and of the serious loss plaintiff sustained in devoting time to it. The defendant admits the great length of time taken. We, plaintiff and defendant, could not foresee how it would be possible that much time could be taken over so plain a case. The defendant denies, however, that plaintiff sustained any considerable loss in devoting time to defendant's case, to the detriment of other business coming into plaintiff's hands. Defendant refers the honorable arbitrator to the records of the case in the hands of judge Numa, who presided at the hearing of the case, to the fact that plaintiff did from time to time, ask and receive the adjournment of the court from day to day, and even week to week, in order that plaintiff might attend to other business in Yokohama and elsewhere. This frequent adjournment was against the earnest protest of the defendant, and oftentimes of the judge of the court. The defendant complains that he suffered much loss of time, as well as great expense from the hands of plaintiff by said delays.

9.—The plaintiff claims he acted as Counsel for defendant from September 1874, to June 1876, and claims as fees, disbursements &c. the sum of \$2,490, as per his bill of costs, see exhibit marked W. The defendant states the trial commenced on the 14th of January 1875, and terminated on the 12th of April 1875,—15 days only being occupied in the trial. Judgment was delivered by the Joto Saibansho, Shihosho, on the 30th day of October 1875, (not the 29th as plaintiff states,) this being about five months after the hearing of the case. Now

between the time of the court concluding the hearing, and the rendering of the said judgment, the plaintiff did nothing in the case; the plaintiff was not even present at the rendering of the judgment of the Joto Saibansho, in defendant's case. Defendant had to appear and receive the judgment, which judgment was appealed against by the said Oil Company, to the Daishi-In, Shihosho; and from the 30th day of October 1875, the day of delivering the judgment, by the Joto Saibansho, up to this present time, plaintiff has done nothing but make one visit to Tokio, calling on the U. S. Minister, and the writing of a short petition to the Tokio Saibansho.

In regard to another of plaintiff's extraordinary demands in his claim for \$2,490, as per exhibit W, I have only to say, it is perfectly absurd and ridiculous, and at variance with his agreements, see enclosures B. C. and D.

10.—Enclosures marked R.H.S.N.G.O.P. and No. 4, defendant submits as important evidence bearing on the case, as they speak for themselves.

11.—Defendant particularly calls the honorable arbitrator's special attention to the receipts amounting to \$756.50 (referred to in article 1 of this statement) with interest to date, will amount to over \$1,200. This money was paid out of defendant's own private funds, for material, &c., for the use of and by the order of said Oil Company. These said receipts are still held by the plaintiff. On defendant filing his claim and petition through his U. S. Consul to the Ts'kidji Shihosho, see enclosures marked B.C. No. 1 and 2. This claim of \$756.50 was included, in the claim, forwarded by the U. S. Consul to the Joto Saibansho. But in the commencement of the case before the Joto Saibansho, the plaintiff asked the Court's permission to strike out the \$756.50 from defendant's claim, in doing so, plaintiff stated he desired to make a separate action for the said \$756.50, which the Court allowed the plaintiff to strike out. This defendant complained of to plaintiff at the time, as the Court had made no objections whatever to the claim as it stood. The plaintiff has taken no steps whatever to recover this \$756.50 with interest, up to the present time, although defendant at various times, before the delivery of the Joto Saibansho's decision in defendant's favour, as rendered October 30th, 1875, requested plaintiff to do so. The defendant refers the honorable arbitrator to his Honour judge Numa, who presided at the hearing of defendant's case in the Shihosho, to the fact that if the plaintiff had not withdrawn this claim, judgment would have been rendered on it on October 30th, 1875, by the Joto Saibansho. This is a heavy loss to defendant.

Defendant therefore prays, in view of all facts set forth in this case, that instead of defendant being indebted to the plaintiff, plaintiff is clearly and strictly indebted to the defendant, and the defendant prays that your honour may award to him, such relief as the nature of the case requires.

Mr. Dickens then summed up his case, and explained that the \$1,500 included the \$500 first arranged about. He had no doubt but what Mr. Dunn did not know what trouble he had been put to. He dwelt upon the circumstances relating to the hearing of the case in the Joto Saibansho, and stated that Mr. Dunn was evidently under the impression that he (Mr. Dickens) had to wait until the case was appealed or taken through all the various courts, even to the suing of the various members of the Company. It

was not necessary for him to go to Tokio on all occasions, and he did not see why he should kick up his heels in dancing attendance upon the Japanese unless he was properly remunerated. He had offered to take up the case again providing the defendant paid what money had already been disbursed by him, Mr. Dickens, and on his giving security for the amount of his fee. From a business point of view it would have been a piece of absurdity on his part to continue paying money out of his own pocket. The reason why he wished the \$750 not being included in the main claim, was because, from his experience of Japanese Courts, he was under the impression that the Japanese would take advantage of the smaller claim, give judgment for that and leave them out in the cold with regard to the larger sum. He did not wish to push Mr. Dunn for immediate payment, except for what money he had already paid away, and would be content with security for any further amount the Court should award him.

The defendant asked the Court for permission to have the case adjourned until the return of Mr. Bingham and Mr. Boissonade.

His Honour declined to grant the request, and said he would reserve judgment.

Friday, August 24th, 1877.

JUDGMENT.

The plaintiff, an attorney and counsellor of this Court, brings this action to recover of the defendant the sum of \$2,490 and interest at 12 per cent. per annum from the 28th September, 1876, on account of legal services rendered and disbursements made in and about the prosecution, in certain Japanese Courts, of a cause in which the present defendant was plaintiff and the Japanese Petroleum Company were defendants.

The answer sets up that plaintiff was employed upon an express agreement at an amount stated to conduct the cause referred to in the Japanese Court until the final disposition, but that he has withdrawn from the cause and the same remains pending and unsettled. It also claims that defendant is entitled to no compensation for the reason that he withdrew from the petition in the Japanese Court a claim of some 756 dollars, which it is asserted was a good and valid claim.

The evidence shows that the defendant employed the plaintiff on the 23rd of April, 1874, to attend to his cause against the Japanese in the Ts'kidji Saibansho, Tokio, and agreed to pay him for his services the sum of \$500 and disbursements, on the final settlement of the cause in that Court, whether in favour of Mr. Dunn or against him.

After hearings on three different occasions the cause came to an end in the Ts'kidji Saibansho by reason of the Court refusing to order the attendance of Japanese witnesses required by Mr. Dunn, and whose evidence therefore could not be obtained. About the time of this occurrence the Joto Saibansho, a new Court of the Shihosho, was created, and the plaintiff was advised that said new Court was the proper one in which to prosecute Mr. Dunn's action. Accordingly a new petition was prepared and filed in the Joto Saibansho and a new contract entered into in January 1875 between plaintiff and Mr. Dunn, by which the former was to receive for his services in conducting the case to a successful termination in said Joto Saibansho, the sum of \$1,500. In case the recovery however should be for a small sum or nothing at all, Mr. Dickens was to receive the sum of \$800. In either case his disbursements were to be repaid to him in-

dependent of the above sums. The former contract for services in the Ts'kidji Saibansho was merged in this one of the 16th of January, 1875.

The evidence shows that Mr. Dickins took immediate steps through the U. S. Consulate and the U. S. Legation and finally succeeded in securing a settlement of the question of the duty of Japanese Courts to summons Japanese witnesses when required by either party. How it is possible that a doubt as to such duty should have ever arisen in the breast of a Judicial officer, it is difficult to conceive. In the Joto Saibansho Mr. Dunn's cause dragged its slow length along, but finally through the strenuous exertions of Mr. Dickins, Mr. Dunn and the U. S. Consul. Judgment was rendered therein on the 30th of October, 1875, in favour of Mr. Dunn, for \$20,000. Mr. Dunn then believed himself very near the realization of the amount due him, but alas, for such hopes! At about that time another new Court, the Daishin-In, was erected, and to this the Japanese Petroleum Company appealed.

After a year's delay, during which Mr. Dunn, through the U. S. Consul-General, and by his own personal appeals, urged upon the Appeal Court the justice of his claim, the Daishin-In confirmed the judgment of the Joto Saibansho, striking out the sum of \$1,000, and making the amount of the judgment \$19,000.

This judgment was sent to the Tokio Saibansho to be executed, and this latter Court, although the contract with Mr. Dunn is signed by the individual members of the Petroleum Oil Company, is hearing at long intervals explanations and denials on the part of these members of their personal liability, and Mr. Dunn is now beginning to fear he is as far from his dues as before he brought his action.

After the judgment referred to had been rendered in the Joto Saibansho, Mr. Dickins applied to his client to be paid the sum of \$1,500 and disbursements in accordance with the contract of January 16th, 1875. This was refused on the ground that the amount was not due until the final termination of the cause in the appeal Court. I am of the opinion that the fair construction of the contract of the 16th January, 1875, is that the amount therein guaranteed to Mr. Dickins was to be due when judgment should have been rendered in the Joto Saibansho. That he should conduct appeal proceedings under that agreement, it is clear was never contemplated by either party, from the fact that the Daishin-In, or Appeal Court, was not in existence at the time of making the contract, and was not in fact created until after Judgment was rendered in the Joto Saibansho.

On the other hand I am of the opinion that the plaintiff in this cause cannot repudiate the contract of January 1875 and sue upon the *quantum meruit*, because the defendant puts a construction upon the contract not warranted by law and claims that the amount mentioned in it is not yet due. The contract being a legal one—the services provided for having been performed, the amount agreed to be paid for those services was due and could have been sued for immediately after the judgment was rendered in the Joto Saibansho.

It is therefore adjudged and decreed that the plaintiff recover of the defendant the sum of \$1,500 for services and \$260 for disbursements, making the sum of \$1,760, with interest at the rate of ten per cent. per annum from the 30th of October 1875, and costs of suit.

Shipping.

ARRIVALS.

Aug. 12, Am. str. *City of Peking*, Perry, 5,079, from Hongkong, Mails and General, to P. M. S. S. Co.
 Aug. 12, Jap. man-of-war *Tsukuba-Kan*, Captain Matsumura, 1,133 tons, from Kagoshima.
 Aug. 12, Jap. str. *Kivorio Maru*, Haswell, 674, from Tanoura, Kinshu, Troops, to M. B. M. S. S. Co.
 Aug. 12, Brit. 3-ms. schr. *Ching-too*, Baikie, 304, from Hakodate, General, to J. D. Carroll & Co.
 Aug. 13, Ger. schr. *San Francisco*, Lamoken, 263, from Taiwanfoo, Sugar, to Jardine, Matheson & Co.
 Aug. 13, Ger. 3-ms. schr. *Caroline*, Paulsen, 274, from Takao, Sugar, to Chinese.
 Aug. 13, Jap. str. *Sumida-Maru*, Gorchach, 896, from Tano-ura, Kiushiu, Troops, to Government Service.
 Aug. 12, Ger. brig *Otto*, Adamsen, 231, from Hakodate, General, to H. Grauert.
 Aug. 14, Dan. 3-ms. schr. *Aarhus*, Sölling, 257, from Hakodate, General, to Kin don, Schwabe & Co.
 Aug. 15, Ger. frigate *Elisabeth*, Capt. Von Wickedede, 2,150 tons, 21-guns.
 Aug. 15, Am. corvette *Alert*, Comd. R. Boyd, 541 tons, from Nagasaki.
 Aug. 15, Ger. brig *Sophie*, Binge, 210, from Taiwanfoo, to Jardine, Matheson & Co.
 Aug. 16, Jap. str. *Nagoya-Maru*, Conner, 1,914, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.

 Aug. 29, H. B. M.'s gun-vessel *Thistle*, Comd. Hon. Francis R. Sandilands, 465 tons, 4-guns, for Kobe.

PASSENGERS.

Per Am. str. *City of Peking* from Hongkong:—Messrs. John Forbes, K. B. Karney, Dr. M. Stout, Edward Center. For San Francisco: Capt. H. S. Barker, Geo. Baffey, Capt. Davies, H. Krohn; and 3 Europeans, and 191 Chinese in the steerage.
 Per Am. str. *City of Peking* for San Francisco:—Rear Admiral Reynolds, U.S.N., Mrs. Reynolds, Mrs. Carmichael, Miss A. Preston, Lieut.-Comdr. E. White, U.S.N., Captain Lawrence Ching, Sir David Wedderburn, Mr. W. Wedderburn, Mr. and Mrs. W. H. Doyle, and 2 children, Mr. and Mrs. T. Wheelock, child and servant, Dr. and Mrs. W. E. Tarbell, and child, Messrs. J. C. Myers, W. M. Strachan, Percy Wigram, W. Webster, J. F. Ruckholtz, H. B. Armstrong, C. P. Blethen, W. R. Butcher, E. Storror, T. M. Thomas; and 12 Europeans in the steerage.
 Per Brit. str. *Sunda* for Hongkong:—Dr. Wells, R.N., Messrs. J. C. Reid, G. W. Reid, Blenkinsop, Fennell, Rand, Coyle, Whyte, Birlson, Chivers, Langdale, Yamake, Kamei, and 16 Europeans, 2 Arabs, and 15 Chinese in the steerage.
 Per Jap. str. *Saikio-Maru* for Shanghai and ports:—Mrs. Thompson and 2 children, Capt and Mrs. Walker and family, The Hon. J. L. Catwallader, Miss Brown, Professor Carme, Messrs. Okamoto, Peyton Jaudon, W. H. Metcalf, J. S. Abbott, U.S.N., C. H. Haswell, Takatsuka, Sakurai, Harada, Fujita, Yamaguchi, J. E. Noel, U.S.N., Ferada, Otono, E. Center, J. M. Forbes, Tskekoshi, Wala, and Pohl.
 Per Jap. str. *Takachiho-Maru* from Hakodate:—Mr. E. Kinoh.
 Per Brit. str. *Belgie* from San Francisco:—Mrs. E. Lockyer and daughter, Messrs. A. L. Smith, B. F. Blachford, Kanabro Yaye, W. H. M. Ilwait, T. Siguta; and W. King in the steerage.
 Per Frch. str. *Volga* from Hongkong:—Messrs. C. Levy, Thompson, and A. Dousdebos.
 Per Brit. str. *Belgie* for Hongkong:—Mr. Long, Sum Toy in the cabin, and Jos. Germain and 251 Chinese in the steerage.
 Per Brit. str. *Bombay* from Hongkong:—Messrs. Markham, Fowler, 1 Japanese, and 7 Chinese in the steerage.
 Per Frch. str. *Tanais* for Hongkong:—Mr. and Mrs. Jouslain, Miss Takatsu, Messrs. Blanc, Spesen, Kumasaki, and Chey Chew.
 Per Am. str. *City of Tokio* from San Francisco:—Mr. and Mrs. G. W. Wells, Mr. and Mrs. O. Denny, Revd. and Mrs. W. F. Stevenson, Miss. Viele, Miss Fletcher, Messrs. E. Zimmerman, C. Dawson, W. M. Long, U.S.N., J. F. Kelly, U.S.N., Wm. Lee, Geo. E. Haight, M. F. Keefe, W. H. Thompson, F. Swett, and W. S. Treat. For Hongkong: Mr. and Mrs. C. C. Williams, Messrs. H. S. Loring, and F. Bewden.
 Per Brit. str. *Oceanic* from Hongkong:—Messrs. Alfred Lister and F. C. Marshall. For San Francisco: Mr. Marcus Samuels; and 88 in the steerage.
 Per Brit. str. *Bombay* for Hongkong:—1 European, and 3 Chinese in the steerage.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

In imports a decline is perceptible on all classes of goods, and a disposition on the part of holders to realise for the purpose of making returns in Silk, has caused a rather larger business than has been reported for sometime past. A good demand exists for the medium qualities of 28/32 yarn, of which there are but few bales on hand, the remainder being of the best grades, which are not required by consumers.

The stock of yarn of all numbers unsold does not exceed 10,500 piculs or 3,500 bales; but contracts to arrive to the extent of about 2,200 bales are reported, principally 16/24. For Shirtings there is little if any demand; and the prices offered are so low that no trustworthy quotation can be given.

For other goods specified below, the quotations represent the prices at which a rather limited business could be done; but the general tone of the market is depressed without any prospect of early improvement. Exchange has seriously interfered with the transactions of the past fortnight. Sugar shows a slight decline, and transactions are limited.

The barque *Cremona*, with kerosene from New York, the steamer *Burmese* and the barque *Eme*, with general cargo from London, and the barques *Undine* (British) and *Christine* (German), with coal from New South Wales, have arrived. Transhipped cargo ex steamers *Stentor* from Liverpool, *Iraouaddy* from Marseilles, *Euphrate* and *Mongolia* from London, is also to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Our last issue bore date 10th inst., since when an active demand has been experienced for Silk, settlements being about 1,100 Bales, export to date, including the P. & O. Steamer hence yesterday with 539 Bales, amounting to 2,654 Bales, against 8,499 Bales same date last year.

Native dealers appear to have fairly realised the position of the market, and to induce the above business, a large proportion of which is supposed to be in the shape of remittances, have met buyers freely, and a decline of \$40 per picul has been established, the market during the past week having been steady at the above decline.

Hanks have been almost the only Silk which has commanded attention, though occasionally a few Oshius and Filatures have been placed.

Arrivals have been about on a par with sales, and the unsold stock on the market is about 1,000 Bales, included in which are 400 to 500 Bales of old Silk.

TEA.—Our Tea market has been depressed, and prices ruling very irregularly since date of last mail issue, influenced greatly by general tenor of advices from the United States.

The American markets seem to require Teas "for price only" without consideration of quality either in appearance or goodness in the cup: 20 to 22 cents for Medium Grades and 26 cents for Good Medium grades being at present the current rates in the U. S.

It cannot be expected that wholesome palatable Teas can be laid down at such figures; and the bulk of export at present going forward is common washy leaf disguised under a facing of indigo and gypsum, with poor flavorless water and little or none of the refreshing benefits of a cup of genuine tea.

While prices remain so low in America there is only one alternative left, i.e. to suspend shipments and enable the overstocked market to recover, as prices now ruling in the United States pay neither the growers nor shippers at this side.

Our business for the interval since last mail amounts to Pcls. 3,500 settled, and arrivals of Pcls. 10,600, leaving an unsold stock in first hands of over Pcls. 14,000.

BIRTH.

On Saturday, 1st September, at No. 4, Yamato Yashiki, Tokio, the wife of ROBERT J. BEADON, Esq., Barrister-at-Law, of a son.

On the 6th September, at her residence, No. 100, Bluff, the wife of CAPTAIN J. DRUMMOND, of the steamer *Kumamoto-Maru*, of a son.

On the 7th September, at No. 98, Bluff, Mrs. J. CABET, of a son.

Summary.

OUR last MAIL SUMMARY was dated the 30th ultimo for despatch by the O. & O. Steamer *Oceanic*, which left the same evening for San Francisco. Since that date we have received the following Mail:—

Per P. & O. *Malacca*, London, 20 July, arrd. 2 Sept.

And despatched the following:—

Per M. M. *Volga*, for Marseilles.....5 Sept.

THOSE who imagined that the insurrection headed by Saigo was completely suppressed, had reckoned without their host—or without Saigo. At the end of last month nothing definite was known of the whereabouts of that daring chieftain. At the head of a number, by none estimated at more than three hundred, of the *élite* of the Gakko-to, he had cut his way through the imperial forces which had surrounded and defeated his army in their last stronghold of Nobeoka, and was supposed to have taken refuge in some of the mountain fastnesses of Hinga, known only to his followers. As things turned out he was far otherwise employed. Making forced marches, and his ranks swelling as

he went, he traversed rapidly the distance of one hundred and fifty miles which separate Nobeoka, on the Eastern, from Kagoshima, on the Western coast, of Kinshin, and, appearing before the walls of the latter place, which was left unguarded by soldiers and police, easily made himself master of it. The Governor and his officials appear to have had wind of his coming; for they went on board a vessel of the Mitsu Bishi Company and withdrew to Nagasaki. What has happened subsequently is chiefly matter of surmise. The men-of-war in Kagoshima harbor are said to have shelled the place; and if Saigo is still there, he will shortly be invested by the armies which his men have so often encountered during the late campaign. This last daring exploit cannot but add to his *prestige*, and may be the means of renewing the almost extinguished flame of insurrection. Police forces have been sent in haste to Kagoshima, but if it is firmly held its capture by assault will be matter of great difficulty. We fear that the troubles of the Government are not yet ended, as rumors of open disaffection are again arriving thick and fast from various districts. Once more the question how far the Government, by withholding concessions which might stop the revolt, are responsible for its continuance, is forced upward for consideration.

H. E. MORI ARINORI, Japanese minister to China, who has been for some months in this country on leave of absence, returned recently to his post.

THE Austrian Princes, Liechtenstein and Montenuovo, who have spent some weeks in Japan, left by the last French mail steamer for Europe. An interview which they should have had at the Imperial palace with H. M. the Empress prior to their departure, had to be foregone in consequence of the Court being in mourning for the death of H. I. H. the Princess Seikanin-no-Miya.

The deceased Princess, who died at the the baths of Tonosawa, succumbed to an access of *kaké*, a species of dropsy, from which she had been for some time suffering. She was a lady, by birth and marriage alike, right royal. Daughter, sister, and aunt of Emperors, her marriage with the fourteenth and last but one of the Tokugawa Shoguns, was permitted by her brother, the father of the present emperor, with the intention probably of conferring a favor on the Tokugawa house, and binding its destinies more firmly to those of the imperial line. The last Shogun, Keiki, who now lives in retirement the life of a private gentleman, was the adopted son of the deceased Princess, whose obsequies, which will be celebrated in a few days, will most likely ensure his attendance, and withdraw him for a brief period from the seclusion which he courts.

MR. LISTER, Postmaster General in Hongkong, has paid a visit of inspection to the branch British Post Office in Yokohama, whence he has proceeded to Kobe, returning by that port to Hongkong. During his stay in Yokohama he visited the Imperial Japanese Post Office, and expressed the highest satisfaction with the efficiency which has been attained by that Department. A short period will witness some important changes in foreign postal arrangements in Japan.

IN referring to Postal matters it is necessary to notice that, while the official notification by Great Britain of the admission of Japan into the Postal Union, has not yet been received, the Postal authorities in London and Paris approve the action taken by the Acting Superintendent of Foreign Mails, on the fact of such admission under the treaty of Berne becoming known to him. The fact is that no trouble should have arisen at all, and that, had the Japanese Postal Officials sent their foreign mails direct to the English Office for transmission by steamers of the P. & O. Company to Postal Union countries, those mails would have—indeed must have—gone forward. The withdrawal of the British Post Office from Yokohama is only contingent on the successful termination of certain negotiations.

AN extended notice will be found in these pages of the National Industrial Exhibition at Tokio. This is a very interesting, and bids fair to be a highly useful, institution. It is largely attended, as many as ten thousand visitors per day having passed the gates on more than one occasion.

THE case of the Tokio-fu vs. Blockley, alluded to in our last summary as having been decided in favour of the Japanese, has excited considerable interest; and the sense of the community is altogether with the finding of the learned judge. Probably, had the Japanese availed themselves of foreign legal assistance in the Batchelder case, and adduced such evidence as they brought forward in the one more recently decided, the difference, which has now to be deplored between the decisions in H. M. and the U. S. Consular-General Court, would not have occurred.

THE volcano on Oshima (Vries Island) is again in active eruption.

THE U. S. S. gun-boat *Monocacy* is now in this port, where she arrived from Nagasaki and Kobe on the 1st September. Captain Fyfe, in command of her, is senior officer on the station.

The silk business in this port, which has languished so far this season, has experienced a sudden access of vitality. The price of rice, too, has risen, Chinese speculators having entered the market, and bought large quantities for export to Hongkong, thence, no doubt, to be forwarded to ports of districts where there is a scarcity of the article.

TOKIO-FU v. BLOCKLEY.

IN a long and elaborate judgment, not perhaps too long considering the length of the pleadings, the arguments of counsel, and the importance of the case, Mr. Wilkinson has decided in the case of the Tokio-fu v. Blockley that the proprietors of land in the Ts'kiji concession are not excused from payment of ground rents, by the failure of the Japanese Government to carry out the stipulations, whether real or imaginary, contained in their grant of the said land.

As a question of English law, decided in an English Court, no other decision could be expected, whether we regard the Imperial Government as a landlord in the ordinary meaning of the word, to whom rent is payable in consideration of occupation of the land, and in terms of the conditions of the lease, or as the lord paramount, to whom service is to be rendered by his vassal in accordance with the laws of feudal tenure. The covenant to pay rent is absolute and binding on the covenantor on his taking possession: he can only be excused therefore by breach of condition precedent on the part of the covenantee. And so the vassal was bound to perform his service, although the lord failed to give him the stipulated protection: his remedy was by abandoning the land and seeking service under a more liberal or more powerful lord. We have instanced the case of the feudal vassal and his lord, as we are inclined to think that the tenure by foreigners of land in the treaty ports of Japan is more akin to that kind of tenure, than to the relation of landlord and tenant. The terms of the grant itself excludes this relation, "Sugura Tokei Shosanfu leases in perpetuity to A, his heirs and assigns." The chief incident in a lease as distinguished from a grant in fee, is that the lease should have a certain termination, that a day certain, or ascertainable be fixed by the agreement between the parties on which the tenure is to end; and further that a lease and the benefits thereof descend to the personal representative of the tenant and not to his "heirs." No visionary has yet dared to assign, within a given day, a limit to perpetuity. We have referred to this point, not because we consider the distinction of any importance, as bearing on the decision of the particular case, but as showing how, through ignorance of the rules of the law of tenure, and laxity in dealing with the Imperial Government, the Ministers who arranged the various treaties, assisted by the founders of the settlements, while saddling us with land at an exorbitant rental, have in no wise provided for the fulfilment on the part of the Imperial Government of the ordinary duties of the landlord, and have left the question of the descent of land in such uncertainty, that probably it will exercise the diligence and research of our lawyers. Mr. Wilkinson has touched lightly on this subject, and has left it as dark as it was before, for the *obiter dictum*, as to "rights of eminent domain," (whatever that may be) not being cognisable in our Courts, cannot be said to throw additional light on the question, though it may afford an excuse for the enforced muddle into which the whole ground-rent question has fallen.

In giving judgment in favor of the plaintiff, the Tokio-fu, Mr. Wilkinson has arrived at a decision exactly opposite to that arrived at by the U. S. Consul, in the case of the Tokio-fu v. Batchelder; These two cases are precisely similar, the grounds alleged by the two defendants for refusal to pay the ground

rent are the same,—that the land was purchased by them on the understanding that Ts'kiji was set apart as a foreign concession, and that no foreigners would be permitted to reside outside the said concession: that foreigners are permitted to reside in Yedo outside the said concession: that, by breach of this implied covenant, the value of land was greatly depreciated; and that therefore the defendants were greatly damaged. The decision of Mr. Wilkinson, moreover, is opposed to that of the U. S. Consul in the conclusion of fact arrived at from the evidence and admissions in the case, and in the application of the law to such conclusion, viz., 1st:—Whether or not there is such an express or implied covenant as is alleged by defendant. 2nd:—Does a breach of such covenant by the landlord excuse the defendant from payment of rent? How then is it that the two Courts, each administering equal and concurrent jurisdiction, should have arrived at such opposite conclusions? To account for the difference in the decisions, at which the two Courts, each administering what is practically the same law, have arrived, we must consider the different course taken by the parties in conducting the respective cases. In the U. S. Court the Tokio Fu was represented by a Japanese who contented himself with claiming payment of rent against the defendant, whilst the evidence and argument were all on the part of the defendant, who produced a skilfully prepared mass of evidence, all tending to convince the Consul that the conditions under which the land sales had been conducted were such as to constitute an implied obligation on the part of the Government to carry out those conditions to the very letter, or to compensate the purchasers for any extension of the monopoly in land which might be afterwards granted to others. In the English Court the suit has assumed the character of a *special case*, argued upon a certain state of pleadings, documents, and admissions by counsel; and, moreover, the counsel for the defendant has practically abandoned as untenable the position, that breach of contract by landlord formed an adequate defence against a claim for rent; and, after the failure to convince the Judge of the validity of the technical objection which was taken to the whole deed of lease on the ground that, through want of the signature of the defendant, it did not satisfy the provisions of the Statute of Frauds, he contented himself with trying to establish an equitable case in support of his counter claim for damages. Judges are only mortal and must decide according to the strength or weakness of the case as it is laid before them; and it is thus that the U. S. Consul allowed himself to be carried away by what he considered the injustice suffered by the defendant Batchelder, and to forget, even if equity were synonymous with justice, that the principles of equity may be fettered by the law. Equity will relieve against an improvident contract, or will rescind a contract which has become burdensome through total failure of consideration on one side; but can it be said that in these cases there is a total failure of consideration? And though "there was a breach of an express or clearly implied obligation, which obligation formed the most material inducement to the defendant to enter into his contract, and the faithful observance of which on the part of the plaintiff was essential to make the said contract of any value to the defendant," in the case of a lease a court of equity would not grant relief, by maintaining the tenant in possession of the land, and absolving him

from payment of rent. There has been no case cited at the bar of either court in which equity has relieved against landlord, by absolving tenant from rent, and in fact the weight of authorities is against such a proposition.

Mr. Wilkinson has done his best to brush away the gloss of sentiment which has obscured the real legal point at issue:—"There is nothing alleged in the defendant's answer which could be construed into an allegation of any failure of a condition precedent to the plaintiff's right to recover. The claim set up by the defendant is by way of counter claim, and if the whole of that claim were granted, the plaintiff is nevertheless entitled to have the amount of the rent allowed. If it had been sought to set up such claim of the defendant as a bar to the plaintiff's right to recover I am satisfied that such attempt must have failed. The defendant was in possession of the land and continued, moreover, in actual possession of it up to the time of the commencement of the action; and under such circumstances the tenant, in the absence of express stipulation on the subject, cannot set up the landlord's breach of contract as a defence to his claim for rent." This is the pith of Mr. Wilkinson's judgment; but owing to the inordinate length to which the learned gentleman's judgments always extend, a surgical operation is almost necessary to extract the pith from the pulp.

It certainly appears from the articles of the conventions of 20th November 1867 and 4th May 1870, coupled with the fact that previous to 1867 foreigners had been jealously excluded from trading in Yedo, that it was at that time the intention of all parties that Ts'kiji should be set apart for foreign occupation; but there is no trace of implied or express stipulation that further concessions should not be made to foreign residents in Yedo or elsewhere. The purchasers of land in Yedo have speculated upon the Japanese continuing in the same foolish policy of exclusion which they have hitherto followed; and, like many other speculations upon the progress or retrogression of the Japanese, this has turned out to be a losing one. But can they sustain a claim for compensation against the Government; when, through an extension of privileges to the many, an injury is inflicted on a few? Were this so, it would be a legitimate deduction from such a proposition that, if in some dim period of the future the whole country be thrown open to foreigners for residence and trade, the proprietors of land at the ports opened previous to 1867, would be entitled to go for ever quit from ground rent.

Thus much for the legal aspect of the case, but there can be no doubt that, in justice, the residents in Yedo, as elsewhere in Japan, have a right to political redress from the weight of the oppressive ground rents under which they are labouring; and we should thank the defendants who, at great cost to themselves, have ventilated the subject. By Article 6 of the "Arrangements for formation of Foreign settlements at Hiogo and Osaka" it is provided:—"The Japanese government will be reimbursed the cost of preparing the said sites for the use of the foreigners above-named, by the sale of the lease of the ground, &c." This article was incorporated with the Yedo Convention: so that, whilst the Government has been reimbursed for the first expense of clearing, road-making, and draining, it still claims, and will claim to the end of time, a rent from foreigners, to whom it grants no corresponding privileges, far in excess of what is paid by its own subjects. The whole question of

ground rents, and municipal government of the foreign settlements requires revision. The *Tokio Times* suggests the abolition of extra-territorial jurisdiction as a remedy for the conflict of decision between the two courts. We should have been surprised if it had not done so, as that caustic journal has a rabid fancy for that remedy for all the diseases which it considers afflict Japan; but our contemporary should remember that Drs. Sangrado will only be tolerated in countries which are stricken with bigotry, ignorance, and oppression.

THE NATIONAL EXHIBITION.

THIS exhibition, situated in an enclosure in the Western part of the Uyeno Gardens, is strictly an exposition of national industries. Further, the native industries there so plentifully represented are all modern ones, the ancient art of Japan, being, as far as we were able to judge in the course of a visit necessarily shorter than we should have been glad to make it, entirely unrepresented. Indeed, the object of the exhibition is to foster and improve existing industries and manufactures, and to encourage the growth of new ones. The designs of the promoters are set forth in the introduction to the official guide published in Japanese and Chinese characters, where the benefits which should accrue to the people from a National Fair of this kind are briefly and judiciously enumerated. "In opening the National Industrial Exhibition in the Uyeno Gardens, Tokio, the Government have not been actuated by any desire of temporary ostentation. Their aim has been to prove in a practical manner the real value of such an institution to the people, inciting them to improve the present condition of their industries, to develop all kinds of manufactures in the future, and to open fresh channels for domestic and foreign commerce."

By what we are quite willing to believe was rather an oversight than a deliberate slight on the part of the Directors of the Exhibition, no invitations were sent to the foreign press to be present at the official opening on the 21st instant. Taking this view of the matter at the time, and not wishing to impute offence where none was probably meant, we procured from native sources, and published a short account of the ceremony. On the 24th instant, Mr. Kawase Hideharu, Director, sent us a season ticket with the request that we would visit the exhibition and report upon it, a task which we have willingly undertaken in the full assurance that on any subsequent similar occasions, formal invitations will be issued to the representatives of the foreign newspapers to be present at the official ceremonies, and that provision will be made for their accommodation. Another mistake made by the directors was the omission to send invitations to the Consuls, who, as the representatives of the commercial portion of the foreign residents, had the right to be bidden to so purely commercial an enterprise as this National Industrial Exhibition. It was not enough for the success of the opening to invite the heads of the Diplomatic Body: the Consuls and the foreign press should certainly have been afforded the opportunity of being present.

The prices of admission are very moderate. A season ticket, admitting the holder during the whole duration of the exhibition, a period intended to be one hundred days from the date of opening, costs five yen. The highest

fee is charged on Sunday, probably with a view, that day being a holiday, to limit the numbers of the crowds which might flock thither if the entrance fee were merely a nominal one. Last Sunday, however, the place was very fairly attended, the press being quite sufficient to render occasional delays in a careful survey of the exhibits a matter of compulsion and not of choice. Saturday is the "People's Day:" then three cents only are charged for admission, which costs on all other week-days a uniform sum of seven cents. These are prices which certainly cannot be found fault with on the score of exorbitance. Fancy a metropolitan exhibition in Europe, open to the select for seven pence half-penny: to the mob for three half-pence!

One very serious inconvenience to foreigners visiting the Exposition in Uyeno Gardens is the absence of any catalogue or guide to the contents of the buildings in a European language. Another, which especially weighs upon would-be purchasers, is that the prices of the articles—by far the greater part of those on view—for sale, are not given in foreign figures. The first inconvenience might have been avoided without serious expense or trouble. On the contrary the sale of official catalogues in English might have been made, if not a source of revenue, at least to pay the expenses of issue. The second is simply inexcusable. It is only fair to suppose that foreigners would be large purchasers of the things on view, and the prices in European numerals might very well have been put side by side with their Japanese equivalents, the rather that a description of the goods, the places they come from, and the names of the exhibitors, is written, both in Japanese and in perfectly intelligible English, on the tickets attached to each exhibit.

Above we quoted briefly from the introduction to the *Naikoku Kangiyo Hakurankai jo Annai*, or "Guide to the Domestic Industrial Exhibition." This pamphlet we find to be a mere general description, and not as we first supposed a catalogue, of the articles on view. However imperfect it may be, however, it must be a great aid to an intelligent inspection of the exhibition on the part of those to whom the information it contains is intelligible. It gives, first, the rules and regulations issued by the directors for the governance of the exhibition, then the prices of admission, and then some particulars of the dimensions of the grounds and buildings, and the relative positions of the latter. From this part we gather that the extent of the grounds covers an area of about 20,000 tsubo. The buildings are seven in number, which are thus enumerated. 1. Eastern Main Building. 2. Western Main Building. 3. Fine Art Gallery. 4. Machinery Hall. 5. Agricultural Hall. 6. Horticultural Hall. 7. Zoological Hall. The Eastern and Western Buildings are each 31 shiyaku high, and cover together 1,298 tsubo. The Fine Art Gallery is 42 shiyaku high, and has 75 tsubo of area: Machinery Hall covers 300 tsubo; and the Agricultural and Horticultural Hall, 707 and 120 tsubo, respectively. The names of five out of the seven departments are sufficiently descriptive of the nature of their contents. The Eastern and the Western Main Buildings do not by their names give any indication of what the visitor may expect to find within. One part of the former building is set apart for the exhibits furnished by various Government Departments, the Colonization, Navy, and others, while the rest of the hall is devoted to the productions of nineteen

Ken and the Riu Kiu Islands. The Western Hall is occupied by exhibits from the three Fu, Tokio, Kioto and Osaka, and from fifteen Ken.

Approximately, the total number of exhibitors is estimated at 18,000: that of the exhibits at 30,000; and the value of the articles on view at 175,200 yen. Exact statistics will be furnished after the close of the exhibition.

At the foot of the hill, leading into the gardens, is a small stall for the sale of tickets. Another, and in all respects a similar one, is found at the entrance to the exhibition. Tickets must be obtained before arriving at the fair, into which we enter through turnstiles placed in the main entrance, each one watched over by a servant of the establishment in uniform, who, as he takes the ticket, drops it through a slit into a till between the stiles. Having made an entrance we find ourselves in an enclosure formed by six out of the seven buildings or departments previously enumerated. Glancing round this enclosure we observe that it describes a hexagon, with three long and three short sides. The ground is neatly laid out with gravel paths and flower beds: a fountain adorns the centre. To our right is the Agricultural Hall, a building in the form of a carpenter's square. Adjoining it is the Eastern Main Building; and immediately opposite the entrance is the Fine Arts Gallery, forming one of the shorter sides of the hexagon. Left of the entrance, and in a line with the Agricultural Hall, stands the Horticultural Hall, a little to the left of and at right angles to which is the Machinery Hall, connected by a short gallery with the Western Hall, which is opposite to and corresponds with the Eastern, and is also connected with the Fine Arts' Gallery. From the Agricultural to the Machinery Halls the tract of the buildings can be made under cover, short roofed galleries extending between the halls. Outside the buildings to the north, and within the wooden enclosure which bounds the exhibition grounds, is a stretch of garden with a large pond, some small residences for the attendants, and one or two refreshment booths for natives. In the North-Western corner stands the Zoological Hall, with a gate leading to the outer world reserved entirely for the use, as the gate-keeper told us, of bettoes. The exit for visitors, who must go out this way and no other, is in the North-Eastern corner, and is a turnstile through which one can only get out and not in. As a full and careful inspection of the buildings will occupy at the least an entire day, it appears an oversight that there should be no place where foreigners could obtain some refreshment. As it is, a visitor, if hungry, has the choice of remaining so or of adjourning to the Uyeno Seyoken, a restaurant which, on Sundays, is so crowded with guests that any but the early arrivals are likely to have to wait for an hour before they can obtain a seat at the luncheon tables, and then for a time, always long, but more or less so according to the provisions in the kitchen and the willingness of the attendants, before they can get anything to eat. Probably the proprietors of the Seyoken would not mind paying something for the privilege of providing a luncheon room for foreigners within the precincts of the exhibition grounds.

The guide book informs us that the relative importance of the articles exhibited stands thus. 1. Manufactures. 2. Agriculture. 3. Mineralogy and Metallurgy. 4. Machinery, and 5. Horticulture. The Fine

Arts department is not included in this classification.

Turning to the right from the main entrance we come into the Agricultural Hall, the building in which we commence our tour of inspection, and have not advanced very far when we are forcibly impressed by the conviction that a thorough survey and comparison of the various articles exhibited would occupy more time than we can well spare, while a complete description would far exceed the limits of our space. The building is divided into forty-two compartments, representing the ken or departments exhibiting. The exhibitors hover round their stalls, and are perfectly willing to give any information as to price and, as far as they can, the processes of manufacture. Naturally, the Tokio-Fu occupies the largest extent of any of the divisions in this department. Its allotment stands at the inner corner of the building. Next in extent are the Kanagawa Ken, and the Agricultural Bureau. The Kaitakushi and the Geographical Department have also separate locations and occupy some space. The Shizuoka, Nagano, Ibaraki, Kioto and Niigata Ken, are probably the next largest exhibitors. Hiogo does not make much show either in respect of space or the objects displayed. Throughout, we find not merely articles which are the products of agriculture, and the tools employed in its pursuit, but the products of the sea and the chase. The Geographical Department exhibits a large and beautiful selection of the various woods of the country—probably an all but complete collection.

In a country whose agricultural productions are so limited as are those of Japan, the comparative sameness of the articles exhibited by the ken in which husbandry is the means of livelihood is hardly to be wondered at. Not the least striking of the objects in the hall are some of the inscriptions of the names of the ken, overhanging the entrances to the compartments. Some are elegantly worked in Japanese and English characters in colored, on a ground of white, beans. The Riu Kiu Han is represented in a small compartment to the left of the entrance, but so sparsely as hardly to be worth notice; and immediately opposite is the Kagoshima Ken, exhibits from which are sufficient to show that the resources of the province are large; while opportunity of doing them more justice has been either wanting or interrupted.

Visiting a few of the compartments in the order in which we reach them, we find, in the Fukuoka Ken, a kind of bread, cotton, persimmon, tortoise-shells of good quality and size, implements of husbandry, bees' and vegetable wax, several kinds of grain, seaweed and cuttle fish, white and tinted vermicelli, and the leaf of the indigo plant. The Yehimé ken shows some very good sugar, and tea in appearance resembling Chinese leaf. Here are several very creditably executed models, for instance of a water and bullock mill, a rice-husking and grinding mill, a loom, pictures of some very fine melons, a piece of plain coral priced \$6.24, honey, and useful looking rope made, some from pine bark, and some from fern. Yamaguchi exhibits a spade, which is certainly not a spade in the ordinary sense of the term, though it may be a digging machine, or more probably still a plough. Among other products we notice tobacco, samples of which by the way are exhibited by almost all the ken, some sandals and grass screens nicely worked, and starch made from the dog's-tooth violet. Shimane has little to show us. In the Ishikawa stall is a hempen jacket, cheap enough at \$1.10., awabi, dog's tooth-

violet vermicelli, bêche-de-mer, bamboo and grass hats, and tools, among which is a many-toothed sickle. Awomori, in rather a restricted space, shows some splendid skins of the sea-horse, bear, and other animals, nori (pressed seaweed) looking very much like dried pickled cabbage, a number of bottles of liquor, among which are some samples of brandy, from Mutsu,—color, labels, cork, and capsules, in fact every part of them which appeals to the sense of sight, remarkably like the outturn of James Hennessey's distillery,—mulberry wine, lily bulbs, tea, again an evident imitation of the Chinese article, cod-liver oil, and "cad'sko," (sic.) cod's roe, dried, and flour made from the dog's-tooth violet again. From Iwate we have saké, dried fish, matting, deer, bear, and sea-horse skins, plenty of tobacco in its various stages from the crude to the manufactured, awabi, and bonito flesh. In Miyagi, above whose division is one of the most artistic of those inscriptions to which we have above referred, we notice a very life-like stuffed animal, which the label calls a gazelle, but which is much more like a mountain sheep in shape and feature, and has a long, fine, hairy fleece. Here are some very excellent models of tight-looking fishing-boats, and a farm house with its inhabitants and servants moving about in the front. Nagano ken provides grass snow-shoes, with circular wicker soles or bottoms, the tops made to come well up the calves of the legs, and calculated, if the Irishman's dictum that no clothes are so warm as a hay wisp be correct, to keep out the cold from the snow, on which the bottoms will allow the wearer to travel without sinking. Besides these, there are a model of a water-wheel pump designed to force water to a height, some good skins, and samples of indigo and hemp. Aichi Ken shows a fine piece of cedar wood, a fishing picture, magnificent from a Japanese point of view, fishing nets, China-root, some very gorgeous horse furniture, with cruppers gay enough to dazzle the eye, and so large that the wonder is that any horse can find room for one of them under his tail, tea, saké, and several kinds of grain. Among the Chiba exhibits we observed a large picture, representing shoals of fish being dragged to the beach by a cordon of junks, and thence carried into large heaps and converted into manure. A maker of sweet liquor which is contained in exquisitely moulded porcelain gourds, bound round with green and gold cords of silk, boasts possession of the last Vienna Exhibition prize medal. Saitama sends little but silk-worms' egg cards and some tea and tobacco. Niigata has an excellent show of fish of all kinds, skins and *keyaki*, oiled paper rain-coats, indigo, and small quantities of rice and grain. The most noteworthy articles in the Nagasaki section are some cigars, which look very good, rather dark in color, but the excellence of which we should be content to take on trust. Tokio and Kanagawa, as they occupy the largest space have the most varied assortment of articles, many of which are familiar and some would be new to our readers. We will pass them over, for the present, however. After glancing into the Kaitakushi section where we find a plough and a harrow, of excellent and substantial workmanship, made under the auspices of the Department in distant Yesso, we complete our visit to this part of the exhibition with a walk round the well stocked show room of the Agricultural Bureau. Here we find two well arranged skeletons, of a horse and bull respectively, many samples of raw silk, straw-work hardly if at all inferior to the best Dunstable, ploughs, seed-sowers, hand-

reapers, and cultivators (harrows) with many other aids to the husbandman's toil, harness, skins of sea-otters and other animals, stuffed beasts, fishes, edible seaweed, tortoise-shells, and some very exact drawings of fishes. This is the last of the divisions in this department and from it we step into the covered gallery leading into the Eastern Hall.

In the first part of this notice we gave the area covered by the Eastern and Western Halls. We now enter the former, and inspect the articles exhibited by nineteen ken, the Riu Kiu Han (Loo Choos), the Finance, Educational, Navy, Police, Public Works and Colonization Departments, the Board of Health, the Museum, and the Hydrographic Bureau. Here again we can at least but give a cursory description of the articles on view, and shall probably leave unnoticed much that is worthy of mention. The Riu Kiu Islands contribute some coarse matting and cotton stuffs, wooden and earthen ware, common paper and whetstones. From Fukuoka Ken come some fine rock crystals, serpentine, and ink-stones, heavy earthenware, a handsome water bowl and saké jar (marked sold), adzes, hatchets, and other tools, some excellent gowns made of cotton but resembling silk. In the Ishikawa Ken the most noteworthy exhibits are found among the porcelain and bronze work. There are porcelain gourds; and the vases, many of them, show the grafting of Western upon Japanese art, especially in some cases which seem to have been copied from Greek and Etruscan models. Some of the prices marked are sufficiently startling. One small *cloisonné* dish in no way remarkable, is ticketed \$42. For two bronze vases, handsome certainly and displaying a great deal of skill and labor in their design and make, the curious figure of \$798 is asked. There are also some models of native made sewing machines, a mirror in elaborately carved frame, silks and cottons, and cocoons. Kumamoto is represented, in spite of the fierce struggles which have been raging round it. Sulphur is not an inappropriate exhibit. It sends besides some good coal, whetstones, grey marble, and building stone. Awomori shows building stone as well, silk, from raw cocoons, manufactured silk, and cloth made from the cotton of the flowering fern. Fukushima is principally strong in its hanks of raw silk. Miyagi has some fine columns of dark-grey—almost black—building stone. One piece is a slender column twelve feet long, and five inches square. Gifu Ken exhibits a large assortment of cutlery, Japanese and European, paper of all kinds, porcelain clays and pottery, silver, silver-lead, copper-lead, and copper ores, and other ores which are not classed, white marble, some magnificent rock crystals and smoky quartz. Nagano Ken has crapes and silk-cloth. Ehime Ken boasts, in the person of one of its exhibitors, of the possession of the Vienna prize medal for paper, samples of which are here exhibited, with various models, among others one of a steam engine. Wakayama Ken has cloths and artificial flowers, and, probably the earliest productions of the fleeces of the but recently introduced sheep, some flannel of really excellent texture. Akita Ken shows gold, silver, and other ores, rock crystal, manufactured silks and cottons, and a piece of beautiful cabinet work. The Navy Department contributes models of the dock at Ishikawa-shima, and of a full-rigged frigate. The Home Department has some excellent models of bridges, among others the Surubashi, a structure thrown across a chasm, wild and picturesque, with its sides seamed with water-falls. There are nicely adjusted scales with

weights from the Osaka mint, building stone and brick, various minerals, aniline dyes, porcelain and lacquer ware, and, as it seemed to us, very much out of place in an exhibition of native industries, some trifles imported from England and France. The Educational Department sends from its schools some plaster casts, an electric machine, a perimeter, and other scientific instruments. The Hydrographic office has some surveying instruments, cements, and well executed charts of various parts of the sea coasts. The Museum has sent some samples of plants and "products of the animal kingdom," some wall paper made on the designs of Dr. Dresser, a fair collection of insects, some instruments, and, why we hardly know except it be to stimulate native enterprise in these manufactures, European cloth and Bohemian glassware. The Kaitakushi has fine coal from the mines of Yezo, tiles and paper, and wool from the pastures of the island. It has also a native-made ice cream machine and a refrigerator. On the whole we should say that the mineralogical portion of the exhibition in this hall is the most important. It indicates that the mineral resources of the country have not been overestimated and gives them the opportunity, with their dumb mouths, to call for the employment of that foreign enterprise and capital without which their development is, to all appearance, impossible.

From the Eastern Hall we pass into the Fine Arts' Gallery, a room where we would gladly linger; but our notice of which must necessarily be short, as we have already exceeded the limits we had assigned to this notice. Above the glass cases which line the walls, are hung the pictures, as a rule too high for a good view, and in a light which in no way tends to soften the rigidity of some of the drawing. In the glass cases at the sides, and in smaller glass cases placed on tables ranged down the centre of the room, are displayed the articles on Exhibition. These consist for the most part of those exquisite specimens of cabinet ware for which Japanese workmen in this *genre* are unequalled. Beautiful screens of all sizes, embellished with ivory, silver, gold and bronze are here in profusion. So are cabinets, bookshelves, flower-vases, work-boxes, trays and whatnots. We priced one pair of screens, and could not pronounce them dear at one thousand dollars. The pose and arrangement of a pair of magnificent peacocks are singularly artistic and true to nature. A collection of the gold and silver coins of Japan, now current, is exhibited by the Osaka Mint. An opportunity of comparing very ancient with more modern potter's art is afforded by the Museum, which shows some very old vases and bowls, in addition to one of those flint arrow heads which testify to the once existence in Japan as in other countries of pre-Adamite man. The Fine Arts' School has in one corner two busts, executed under the direction of the Italian professors of the school, both highly creditable to the establishment whence they come. One is a bust—and a striking likeness it is—of an amiable gentleman and true friend of Japan, Count Fédostiani, while the other is labelled "Bust of a European woman." Some of the painted porcelain vases are gems of art. But the most striking feature of this branch of the exhibition is the paintings, more care in the hanging of which should have been shown. Some of the portraits, though hard and rigid, are strikingly life-like, and show the aptitude of Japanese to learn the European style of painting. More study will soften the touch and broaden the tones of the native artists.

The portrait of a Chinaman standing on a verandah may be harsh, but is still a marvellous piece of work. A careful and artistic painting of tea-houses at Oji deserves special attention, and beside it, to the left, hangs a charming bit of landscape. A picture of Enoshima is stiff. Sketches of two monkeys, one asleep, show that Japanese students can seize the humorous side of foreign art. Candidly, and all defects apart, the samples shewn in this department reflect credit alike on teachers and taught.

The Western Hall is the counterpart of the Eastern, which it faces. Tokio, Osaka and Kioto Fu, and Kanagawa and 14 other ken are here represented. Such exhibits as come from Tokio and Kanagawa may, for the most part, be seen in the shops of Benten-dori and the Ginza, so we will not dwell upon them, and will merely mention a few special objects. There are some excellent boots and shoes of native (Tokio) make, a quantity of cosmetics and toilet water. (We asked the price of a small bottle of "Cologne" water in a booth outside. Ten cents would have been enough for it, but a dollar was asked!) We see the Vienna prize medal again, this time in the possession of an exhibitor who has a magnificent pair of bronze vases. Kioto Fu has some fine brocades and silks: Osaka is rich in lacquer, and Shidzuoka pre-eminently so in minerals, while Nagasaki is principally represented by its splendid collection of Hizen porcelain. Several kinds of oil are among the exhibits, and come from various districts. The Gifu-ken contributes one made from chrysales, and another extracted from the water in which rice has been washed. Soap and matches of native manufacture are shown from several localities; and we must not omit to mention the large assortment of paper made from European patterns, exhibited by the Oji Paper Mills, and the fine display of Karatz coal. With the completion of the circuit of the Western Hall our task is virtually at an end.

Machinery Hall is a large and airy structure, but contains little worthy of notice. A small six horse-power engine, with a cylinder six inches in diameter, and a stroke of sixteen inches, is more than sufficient for all the requirements of the lathes and other machines, which are now and then at work. It is surely a mistake on the part of the Agricultural Department to make so large a show of American made instruments, the use of which in this hall is simply to fill up a gap. Possibly they are so employed, because, however well made they may be and useful under proper conditions, they are, for practical purposes, useless in this country.

The Horticultural Hall will hardly repay the trouble of a walk through it. It is a tasteless structure, and contains little but "a beggarly array of empty" flower-pots. Nor is the shed-like building set apart for zoological specimens much more worthy of notice. It conveys little but the idea of size and vacancy. There are a few sheep and goats, some indifferent poultry, and cages of singing birds, and one fine American bull. The prettiest animal in the place is a chestnut mare, one if we mistake not imported in the *Gaelic* from San Francisco in May last. A rough looking, long eared, hammer-headed, goose-rumped colt, by an American sire out of a native dam, does not tell in favor of the cross.

In concluding our notice we will not dwell upon the mistakes of arrangement, which are so evident that in the next exhibition they will, probably, not occur. Their presence suggests the necessary corrections. On the whole the exhibition is one which shows, far better

than words can tell, the resources of this empire; and we doubt not that it will realise the object of its promoters, expressed in words which we quoted at the commencement of this article, and with which we are content to close it. "In opening the National Industrial Exhibition in the Ueno Gardens, Tokio, the Government have not been actuated by any desire of temporary ostentation. Their aim has been to prove, in a practical manner, the real value of such an institution to the people, inciting them to improve the present condition of their industries, to develop all kinds of manufactures in the future, and to open fresh channels for domestic and foreign commerce."

REVIEW.

Little more than two years ago the all-absorbing topic of conversation was the expedition then fitting out in England, for the further investigation of the regions lying North of the 80th parallel of latitude. The magnitude of the preparations, the appliances, scientific and mechanical, the reputation of the chief commander, the selection of officers and crews, the knowledge gained from the experiences of former navigators, and the enthusiasm of those who were to follow in their footsteps and strike out new paths for themselves, all combined to point to a great and successful termination to the Arctic Expedition of 1875. One year and five months from the departure of that expedition, the result was communicated to the English Government by Captain Nares, in a report* which, until refuted by other more determined and more successful voyagers, demonstrates the present impossibility of entering that mysterious region bounded by the north pole.

The subject is one of more than usual interest to men of all nationalities, and the apparently insurmountable difficulties encountered by the late explorers are, we sincerely hope, much more likely to be the moving cause of fresh attempts, to be continued until science and human force shall conquer, than to put an end to those voyages of discovery which have served to develop qualities in men of such heroic character that the fame of the greatest commanders, naval and military, pales before that of the simple-minded but dauntless mariners, who, having but little to depend upon except their own courage and endurance, have encountered, and in many instances overcome, a relentless foe.

The sanguine anticipations formed in Europe and America as to the probable result of the voyage of the *Alert* and *Discovery* have, now that the cause of the termination of the voyage is known, given place to a feeling of keen and openly expressed dissatisfaction. The outbreak of scurvy, particularly amongst the sledge parties, was a contingency of such grave importance, and so much to be apprehended, that any omission of even the slightest precaution to guard against it, constituted a serious dereliction of duty. Upon whom the responsibility for the scurvy which practically closed the late expedition rests we know not; but we are painfully aware that an expedition equipped regardless of expense was put an end to by the unexpected appearance of a disease which, had it broken out on board an emigrant ship during an unusually protracted voyage, would

* The official Report of the Recent Arctic Expedition. By Captain Nares, R. N., Commander of the Expedition. London: Murray: 1876.

have been made the subject of a searching Government investigation. True, a Commission of Enquiry has examined into the matter, and we now know that "their lordships regret that Captain Nares saw fit to disregard "the recommendations of the Medical Inspector General of the forces." Beyond this, the public know nothing of the errors of omission which caused the failure of an expedition of such noble promise, and of such scant performance.

The Official Report of Captain Nares appears to be a carefully exact diary of the events of the voyage, with some particulars of the sledge journeys made by the officers. The route determined upon as the most likely for open navigation, was Smith Sound, and Kennedy and Robeson Channels, lying between the west coast of Greenland, and the coast of Grinnell Land. Much consideration had been given to this subject; and Lieutenant Payer, while abstaining from discussion concerning the navigability and nature of those portions of the Arctic Ocean, which have not hitherto been seen by anyone, remarks that the success of an expedition sent out to obtain the highest possible latitude depends largely upon the route selected, and adds

The plan of penetrating through Smith Sound, which has been advocated in England, appears to offer most advantages in these respects.

This route was also strongly recommended by Mr. C. R. Markham, C.B., F.R.S., who gave several reasons for believing that a well-commanded expedition would be able to proceed as high as Robeson Channel, from whence extensive discoveries might be achieved. Consequently it must have been matter of intense congratulation when Captain Nares had safely carried H. M. S. *Alert* to latitude $82^{\circ} 24'$ North, and had moored her for the winter under shelter of some friendly floe-bergs off Cape Sheridan. The formation of a floe-berg is thus described:—

The projecting point of a heavy floe would first ground in from ten to twelve fathoms of water; then the outer mass, continuing its course, unable to stop its progress, would tear itself away from its cast-off portion. The pressure, however, still continuing, the severed piece was forced, and frequently by the parent mass itself, up the steeply inclined shore, rising slowly and majestically out of the water ten or twelve feet above its old line of flotation, and remaining usually nearly upright. The motion was entirely different to that produced when two ordinary floes some four or six feet thick met together: then, the broken edges of the two pieces of ice, each striving for the mastery, are readily upheaved and continually fall over with a noisy crash. Here, the enormous pressure raising pieces, frequently 30,000 tons in weight, in comparative silence, displays itself with becoming solemnity and grandeur.

With the intention of moving into a more sheltered position, Captain Nares despatched Commander Markham and Lieut. Aldrich on the 5th September to report upon a bay about eight miles to the westward; it was found to be a well-sheltered harbour, but the grounded floe-bergs prevented any possibility of entrance; and, as at this time the temperature was steady and ranging between 12° and 22° below freezing point, preparations were made for the winter, though not without precautions being taken to enable the ship to be readily moved into safer quarters. The *Discovery* had been left a few miles south of the position taken up by the *Alert*, Lieut. Rawson and seven men of the former vessel having been transferred to the latter. On the 10th September,

The sky being fairly clear, this was the first day on which we were able to pronounce decidedly concerning the northern land reported to exist by the *Polaris*. After a constant watch, and carefully noting the movement of the darkened patches, I was now with much reluctance forced to admit that

no land existed to the northward for a very considerable distance.

On the 16th September, the pack reached the shore-ice and effectually closed in the *Alert*. On the 25th Commander Markham, and Lieutenants Parr and May

Started with three sledges to establish a depot of provisions as far in advance to the North-Westward as possible. Lieut. Aldrich left four days previously to pioneer the road round Cape Joseph Henry for the larger party.

On this occasion Lieut. Aldrich succeeded in reaching the summit of a mountain 2,000 feet high, in latitude $82^{\circ} 48'$ north, and

Discovered land extending to the North-Westward for a distance of sixty miles to latitude $83^{\circ} 7'$, with lofty mountains in the interior to the Southward. No land was sighted to the Northward.

An unsuccessful attempt was made to communicate with the *Discovery*, and Lieut. Dawson arrived within nine miles of the ship, when he was stopped by unsafe ice and accumulated snow-drift. These autumn journeys were undertaken with the temperature between 17° and 54° below freezing point, and cases of frost-bite were numerous; but the real difficulties were encountered by the spring sledge parties which left the *Alert* on the 3rd April, 1876. Captain Nares gives so few details of the spring journeys that it is necessary to turn to another work* for enlightenment upon a subject we consider of greater importance than the whole of the matter treated of in the Official Report.

The chief object of the expedition being to approach as nearly as possible to the North Pole, we purpose to follow the movements of Commander Markham in charge of the detachment selected for this most important duty.

The *Marco Polo* sledge, commanded by Mr. Markham, with a crew of eight men, and the *Victoria*, commanded by Lieut. Parr, also with a crew of eight men, provisioned for 70 days, commenced their adventurous journey on the 3rd April, 1876. The first night was cheerless, and the want of proper rest somewhat disheartened the men for the tremendous labor of the 4th. The great weight of the sledges necessitated a division of the loads, all the men of two sledges dragging on one for a short distance and returning for the other, thus traversing double the distance. The temperature on the 6th was 67° below freezing point, and the only sign of animal life was the track of a solitary wolf. On the 11th the western exploring party separated from the rest, and Dr. Moss, in charge of a supporting sledge, returned to the ship, all the officers and men being in good health and spirits, suffering from nothing worse than frost-bites and snow blindness. By this time Commander Markham's party left the land and entered upon the real difficulties of the journey.

The surface snow on the floes sparkled and glittered (in the sunlight) with the most beautiful iridescent colors, the ground on which we walked appearing as if sprinkled with bright and lustrous gems, diamonds, rubies, sapphires, and emeralds being the most prominent. In spite of all this beauty "standing pulls" were the order of the day—a phrase we must explain, as we hope few of our readers will ever know by experience what they are. When the ice or snow is level, hard, and smooth, the sledges are hauled along without stop, and the work is pleasant. When there are hummocks or snow drifts, all the men have to stand, grasping the ropes firmly: then the words of command, "one, two, three, haul!" are given, at the last of which all pull, thus advancing the sledge a couple of yards, then another standing pull, and so on. This was what our party had to experience

* The Arctic Expedition of 1875-6. Compiled from Official Sources, with a Summary of Previous Adventures in the Arctic Seas. By R. Johnstone, F. B. G. S. London: Frederick Warne & Co.

for many a weary day to come, and the history of one day is, with little variation, the history of all. On the 12th, though nine miles were travelled, the distance made good was only a mile and a half.

The obstacles which mainly interfered with their progress were the ice hummocks piled, one on the other, to the height of sometimes twenty feet, through which paths had to be cut with pickaxe and shovel; and loose snow which almost buried the sledges and in which the men sunk to their waists.

The 13th April was a sort of red-letter day, as the party came on a floe nearly a mile in breadth, across which the travelling was excellent. But at 2 o'clock they were brought up by enormous masses of ice piled, piece on piece, to the height of 20 feet. There was nothing for it but pick, axe and shovel; and Lieut. Parr, who acted the part of engineer-in-chief and labourer combined, set his men a worthy example. Thus the distance actually achieved due north was only two miles. * * *

On the 15th and 16th there was a north-westerly gale, a considerable drift, and the temperature minus 67° . * * * The wind subsiding towards the evening of Easter Sunday, they determined to proceed but Shirley being unable to walk, had to be placed upon the sledge, thus increasing the weight and diminishing the dragging strength.

On the 17th of April, Porter of the *Victoria* sledge became helpless, and the narrative continues:—

The invalids were no better, nothing but rest, fresh food, and lime-juice could be of service to them, and none of these were to be got even had the nature of the disease been known. Porter had now to be carried on a sledge as well as Shirley. On the 18th having got further from the land, a change was experienced in the nature of the ice. Hitherto the floes were comparatively flat, surrounded by hummocks; now they appeared to have got on the veritable palaeocrystic floes massed together, squeezed one against the other, but with no hummocks between. They were of gigantic thickness, of uneven surface, and covered with deep snow. This made the travelling so tedious that, though 10 miles were marched, only 1 mile was made good in a journey of 10 hours.

This terrible labour was continued each day under increasing difficulties until the 7th May, when

Only 10 men and officers remained to pull the sledges, which, in addition to their regular load, had five invalids. The changes and rest prevented more than $2\frac{1}{2}$ hours marching, during which only one-quarter mile was made good. On the 8th four of the dragging party suffered from snow blindness.

On the 10th May, Commander Markham came to the conclusion that the limits of his journey were reached. The average rate of progress for some days past had not been a mile per day; the state of the ice showed no signs of improvement; five of his men were suffering so much from scurvy, that not only were they unable to aid, but were a drag upon their companions. Four more showed decided symptoms of the same complaint; and only 31 days' provisions remained.

The return being decided upon, Commander Markham resolved to stay two days to make observations, and at noon of the 12th a good altitude was obtained showing the exact latitude to be $83^{\circ} 20' 26''$ N. $399\frac{1}{2}$ miles from the North Pole. The return journey was most melancholy: disease rapidly spread, and the appalling impression gained among the men that unless speedy relief came to them all would perish. May passed and June came in witnessing a little band of crippled men toiling unceasingly in the assistance of their companions. On the 4th they reached the first depot near which traces of human footsteps were observed. Here they were subjected to a great disappointment: Captains Nares and Fielding had been there the day before! On the 6th it was obvious that assistance must be obtained, or there was no chance of reaching the ship.

A few were pulling, a couple of them evidently in the last stage of exhaustion, and expected to drop out every moment; others struggling on behind, obliged to lie down and rest every 30 or 40 yards; the remainder helpless and powerless on the sledge—such was the aspect of the party which

had started in high hope, health, and spirits on the 3rd April. Under these circumstances Lieut. Parr volunteered to go by himself to the *Alert*, a distance of forty miles, and bring back speedy relief to his suffering comrades.

On the 8th Porter died, and on the 9th the sufferers were saved from a similar fate by the arrival of assistance; and at half-past one on the 14th June the party got alongside the *Alert*, having been absent 72 days.

The first appearance of the disease which so nearly caused an awful termination to this adventurous sledge journey was on the 13th April, ten days after starting, when

John Shirley, of the *Marco Polo* sledge, complained of pain in his ankle and knee, both of which exhibited slight symptoms of puffiness.

This was scurvy, against which they were provided with absolutely no remedy whatever, and which spread so rapidly and with such fatal effect that a gallant company of fine men were eventually compelled to abandon their undertaking and return to the ship mere wrecks of their former selves, and under circumstances which show that their return at all was little short of miraculous: it need not be matter of surprise, therefore, that a large number of men are utterly unable to agree with Captain Nares that the much to be deplored outbreak of scurvy, which certainly shortened the journey to the extent of 10 or 20 miles, in no way affects the conclusions to be derived from it.

Whatever those conclusions may be we must make the best of the fact that the appearance of scurvy, which by proper precautions might altogether have been prevented, rendered further sledging operations impracticable, necessitated the return of the ships, and assured the failure of the whole expedition. Possibly some scientific results of value may accrue to the knowledge of the world, and it is also possible that nothing further could have been gained by another season passed in the eighty second parallel without improved means of travelling over the rugged ice-fields extending to the pole. So far as a vessel is concerned the highest point appears to have been reached, and Captain Nares concludes his narrative of the voyage in the following words.

In a very exceptional season a ship might be carried nearer towards Cape Joseph Henry than Floeberg Beach on the west shore; and probably into Newman Bay on the east shore of the entrance to Robeson Channel; but from the experiences we have gained, I most confidently report that no vessel will ever round the promontory of Cape Joseph Henry, or pass beyond Cape Brevoort in navigable water.

We cannot close this notice without referring to an event of a very touching character. In 1871, Captain Hall, of the United States steamer *Polaris*, and of Arctic reputation, penetrated to latitude 82° 16' North, in Robeson Channel, so called by Captain Hall in gratitude to his warm supporter, Mr. Robeson, Secretary of the Navy; and returned to winter quarters in latitude 81° 38' on September 3rd. On the 10th October Captain Hall started on a sledge expedition as far as Cape Brevoort, and on his return was taken ill and died on the 8th November, his remains being laid in the very midst of his discoveries. On the 10th May, 1876, Lieut. Archer's party discovered the cairns known to exist some miles north of *Polaris* Bay; and, when they arrived on the shore of *Polaris* Bay,

A piece of a cabin door caught their eye, and on approaching they found upon it the following inscription:—

In memory of
CHARLES FRANCIS HALL,
Late Commander U. S. Steamer *Polaris*,
North Pole Expedition.

Died Nov. 8th, 1871, Aged 50 Years

I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live.

Here then, in these ice-bound regions, where an awful silence, interrupted only by the cry of a solitary wolf or snow-owl, or the furious blast of the winter storm, reigns supreme over the vast expanse, had a brave and accomplished navigator and discoverer found his rest. While the little band of kinsmen in the noble cause gathered round the grave, feelings of deepest emotion were excited, each man pondering over his own possible fate. On the 13th May Captain Stephenson and a large party crossed to the place, and in solemn silence reared the American flag above the grave. They then erected at its foot a brass tablet brought from England for the purpose, bearing this inscription:—

Sacred to the memory of
CAPTAIN C. F. HALL
of the U. S. ship 'Polaris,'

Who sacrificed his life in the advancement of science, on the 8th November 1871.

This Tablet has been erected by the British Polar Exhibition of 1875, who, following in his footsteps, have profited by his experience.

Very little more need be said on this subject. The Arctic Expedition of 1875, disguise the fact as we may, has failed in the great object it was meant to achieve. Captain Nares has expressed his decided opinion that it is humanly impossible to reach the North Pole, and therefore the solution of the great problems in natural science dependent upon the successful issue of the attempt, must remain in abeyance. Are we to rest here? Thanks to that indomitable spirit of enterprise which is stimulated by fresh difficulties, we are not. Even now the question is not whether a new expedition shall be fitted out, but whether America, Germany, or England shall have the honour of first planting the national flag on the ninetieth parallel of North latitude.

THE INSURRECTION.

From the *Japan Gazette* September 4th.

UNDER the heading "Important from the South," the *Herald* of the 3rd inst. published the following:—

"From Tokio we have received from a well-informed authority the following telegram:—

"Tokio, September 3rd, 9.30 a.m.

"Entirely reliable news has been received here that Saigo has forced his way to Kagoshima, where there are no Imperialist troops at present. The *Kenrei* fled to Nagasaki, and Saigo is engaged in enlisting a new army."

The importance of this news, if it is well founded, cannot be overestimated; but it requires full confirmation before it can be accepted as true. The *Hochi Shinbun* evidently attaches some measure of credence to it, and, in its issue of the 4th instant, gives the following two versions of the entrance of Saigo into Kagoshima, and of subsequent events. From the first account it would appear that the occupation of Kagoshima by the force of the insurgent chieftain was of very brief duration. From the second it may be inferred that he is still in possession:—

"Saigo and other leaders, with about 200 men, the flower of the Gakko-to, after cutting their passage through the lines of the imperialists, made their way in the direction of Yoshida. The division of Lieut.-General Miyoshi encountered them, and a skirmish followed which lasted till the close of the day; but at night the insurgents withdrew by

stealth, and, after traversing a distance of about 60 ri from Nobeoka, suddenly and unexpectedly attacked the Kencho at Kagoshima. As the Kencho and other civil officers had sailed in the M. B. S. *Takachiho-Maru* for Nagasaki previously, the insurgents set fire to the Kencho buildings and committed other havoc. The men-of-war in harbor opened a fierce fire upon the rebels, who, it is rumored, finding it difficult to hold the town any longer retired to some other place."

"It is rumored that a telegram has been received, stating that Saigo and other leaders whose whereabouts have hitherto been obscure, have appeared in Kagoshima at the head of 1,500 troops. The Kencho officials, unable to provide the means of defence, retired to Nagasaki. Ammunition and other valuable stores must have fallen into the insurgents' hands."

Various rumors have been circulated during the day, and the authenticity of the first report has been gradually gaining credence. What chiefly seems to confirm it is that Nakagawa and Kato, *Keibu* of Police, in command of 1,200 policemen have sailed for Kagoshima. Saigo is now said to be at the head of 4,000 men. A negative, but none the less ominous, indication of trouble is the absence of all official information, denying or confirming the matter.

September 5th.

News confirming the authenticity of the first reports of Saigo's daring raid into Kagoshima continues to arrive. Iwamura, the Governor of the place, clearly anticipated some such event as has occurred. The *Hochi Shinbun* publishes a letter purporting to be from him, dated Sashiki, August 21st, and despatched from Kagoshima on the morning of the 31st. In this he says:—

"As the insurgents are forcing their way between Mizobe and Kachiki, and directing their course towards Yamada, I, fearing their immediate attack upon this place, communicated with Lieut.-General Ito with reference to some plan of defence. The reply I received was a negative one. The General said that he could not comply with my request, as he had not enough troops for the protection of the public. Under these circumstances, I cannot but order my people to quit their homes, and direct the officials, with their families, to repair on board the *Takachiho-Maru*. I myself intend to remain in the Kencho as long as I can, but I will not do so if I judge that circumstances compel me to leave it. I deeply regret that troops have not arrived, in spite of the application which I have made for them three times."

This letter explains how it was that the rebel chieftain met with little or no resistance in his capture of Kagoshima; and shows both how dangerous an antagonist he is, with all the disadvantages under which he labors, and how premature were the government announcements that the revolt of which he is the head, was stamped out. Detailed accounts, which must be taken for what they are worth, of the circumstances of the occupation of Kagoshima are received by the native journals.

A telegram from Nagasaki, dated the 2nd instant, says:—The insurgents, after defeating Miyoshi's division at Yokokawa, entered Kagoshima at about 11 a.m. yesterday (the 1st.) About 300 policemen and 600 of the Riodan (newly enlisted troops) having thrown up a shelter formed of bags of rice, are fighting with great resolution, their rear being protected by the *Kasuga-kuwan*. The *Kenrei* and other local officials retired in the *Takachiho Maru* with the papers and treasure of the Kencho.

Two of their number were killed. (How and where is not stated.)

Another telegram from Nagasaki, despatched by Kitamori and Ishizawa, police officers, dated 11.35 a.m. on the 3rd inst., states:—According to Mr. Iwamura's account, it appears that, on the evening of the 31st, Watanuki and other police officers with 400 policemen, kept their ground against the rebels at the rice godown near the Kencho, and are engaged in erecting batteries and making other preparations for defence. Admiral Ito and Captain Nirei, with about 100 marines, were with them. Outside the godown yard are stationed about 700 men of the Shinsen Riidan. On the morning of the 1st instant, Lieut.-General Miyoshi, at the head of a large force, arrived in boats at Kagoshima from Kachiki, and left for Yoshida immediately. After visiting the rice godown and witnessing the engagement, the Governor, at about 11 o'clock a.m., returned to the Kencho, and thence went on board the ship. At the time the despatch was sent the sound of guns was heard, and it is surmised that Miyoshi's forces had turned back and met with and engaged the rebels.

A despatch from War-Inspector Kawamura, dated Kumamoto, Sept. 4th, states:—"I arrived in the Kagoshima Gulf at 3 a.m. yesterday. On the 2nd instant at 11 a.m. the insurgents suddenly entered the city of Kagoshima, and invested the imperialists at Moto Kanegura. From their inferiority in numbers, our troops for a time fought at a disadvantage, and earnestly desired the arrival of reinforcements. Shortly afterwards, the division under Colonel Atamura landed at Wakiyomura, Tani-yama, and effected a junction with them. The roads to the beach are open. It is thought that the imperialists in the neighborhood will concentrate there, and attack the city. The insurgents' strongest foothold is at Tamukakemoto (*sic*), Shiroyama, where the Shigakko stood, and captured the batteries erected by the Imperialists, who are now replying to their fire. Further details to follow."

September 6th.

A telegram from Osaka, despatched on the 4th instant, says:—According to the account of War-Inspector Yamagata, the insurgents, passing through Yoneyoshi-dami and Kobayashi, made their appearance at Yokokawa, and a battle commenced, at about 10 a.m. on the 30th ult., with the force of Lieut.-General Miyoshi, who had landed at Kochiki. As one division of the rebels hurried in the direction of Yamada the following day, the General withdrew his force and re-embarked for Kagoshima: thence he advanced to Yoshino in the hope of checking the insurgents' progress; but he was disappointed, as they entered the city at 11 o'clock a.m. on the 1st by another road.

1,530 boxes of gunpowder have been sent to the South West by the *Tokio Maru*.

According to a telegram sent by the correspondent of the *Hochi Shinbun*, nearly the whole of Kagoshima city was burnt by the insurgents on the 1st instant.

The *Hochi Shinbun* gives the following rumors which are current in the capital, but the editor disclaims all responsibility for their truth:—The Imperialists have retired as far as Shiroyama from Kagoshima; and the vicinity of Kagoshima and even Taniyama are in the possession of the insurgents. It is thought that to land troops from the sea will be a work of great difficulty.

September 7th.

A telegram from Nagasaki says that Shimadzu and his son have again retired to Sakurajima.

A correspondent of the *Choya Shinbun* telegraphs from Yoshino, on the 6th instant:—Instead of moving on Ijiuin, the insurgents still remain at Kagoshima. They are besieged on all sides. Now all the preparations for an attack having been completed, one will be made shortly.

Mr. Ishii, of the Home Department, leaves again shortly for Kagoshima.

It is telegraphed that three rebel leaders, namely, Taniguchi Soda, Ishii Takenosuke, and Tokuhisa Kojiro, were arrested at Kumamoto on the 5th instant. The first two held high positions under Yeto during the Saga rebellion. Since the suppression of that revolt they lay concealed somewhere till the outbreak of that of Kagoshima.

The *Akebono Shinbun* publishes a telegram, dated Nagasaki, 6th instant, stating that a rumor is now current in that place to the effect that the whole of the province of Hiuga has fallen into the insurgents' hands, and that Miyakonojo has been suddenly attacked by some of their forces.

THE RISSHI-SHA SOCIETY.

(From the *Nichi Nichi Shinbun*, Aug. 27th).

Is the Government desirous of preserving tranquility in Tosa, and of placing its hand upon the members of the Rissshi-sha Society? Has the Government decided upon making an official investigation into the conduct of those members, who manifest signs of an approaching outbreak? Now, in glancing back upon the war in the South-West, it is easily seen that the Kagoshima insurgents are very much discouraged, and are surrounded in Hiuga, like a whale which has been caught in a net and cannot move tail or fins. They have even been obliged to evacuate Nobeoka. Notwithstanding the great abilities of Saigo and Kirino and the bravery of the few hundreds of picked soldiers whom they lead, their efforts must prove ineffectual. Although they have succeeded in cutting a bloody path through the imperial lines, still they cannot possibly achieve their treacherous aspirations, and can only preserve their lives for a few days at the longest, and will meet the fate of the ancient General Takekida Katsuyori, who encamped on Tenmokuzan and fought to the last. We are sure that no one expects that Saigo and his followers will be able to effect anything wonderful now.

And now we turn our attention to the disturbed condition of Tosa. We are anxious to know in what light the shizoku in that province look upon the present state of affairs; and also what provisions the Government has adopted to counteract the growing disaffection.

Several years ago the Kochi ken shizoku were divided into several political parties, each faction differing in opinion from the other, and collisions between themselves were frequently threatened. And when the Kagoshima insurrection broke out they manifested great excitement, but, fortunately, the presidents of these factions used their influence to maintain peace, and volunteer companies were formed which had considerable influence in preserving tranquility; and ultimately the shizoku were somewhat appeased by the presentation of their famous memorial to the Government. But in the course of a few months two members of the Rissshi-sha Society were arrested, and brought to trial for holding communication with the Kagoshima insurgents. On the examina-

tion of these men the treacherous designs of the Society became clearly apparent. This circumstance gave rise to a number of idle rumours, among which was the report that a number of persons had been arrested in Osaka, their intention being to assassinate the *Daijin* at the request of the Rissshi-sha Society. But this is not credible. After this Kataoka, a prominent member of this Society, was summoned to appear before the Saibansho on suspicion of having sent two persons as messengers to the insurgents, but, to our great relief, he was acquitted and permitted to return to his home.

In the course of a few weeks after the acquittal of Kataoka, a number of prominent members of the Rissshi-sha Society were arrested and brought to Tokio for examination. This again caused excitement, as the Government expressed its determination to strictly investigate the conduct of these men, regardless of such a course probably causing an outbreak. At the commencement of this month, Hayaashi, a member of the Society, was brought to Tokio, and eleven others, viz: Kataoka, Iwazaki, Hiroda, Ikeda, Tani, Nozaki, Ogasawara, Ikezoe, Midzuno, Maeno and Yamada, also arrived in Tokio on the 23rd instant. It is well known that these arrests have been made in consequence of the confessions of Muramatsu and Fuji. Itagaki, the President of the Society, still remains undisturbed at his residence in Tosa. We are anxious to know what will become of him. All matters in connection with political offences are kept secret by the Government: therefore, after the arrival of the prisoners in Tokio, nothing will be learned about them. If they are found not guilty of the crimes of which they are accused, we shall be very happy; for no conspirators will be able to escape the meshes of the net which the Government will draw over the Kochi Ken. We cannot help looking forward to the development of affairs in Tosa with some anxiety.

SUPERIORITY OF JAPANESE WORKMANSHIP.

The *Akebono Shinbun* says:—The Japanese Government is going to construct a small man-of-war, of 250 horse-power, at the Yokosuka Arsenal, which is to be called the *Ogou-kuwan*. It is to be constructed under the superintendence of Uyeda Tarakichi, *Kochō* of the 1st class. All the vessels which have hitherto been built at the same arsenal, were constructed under the direction of foreigners in the service of the Government. But this time no foreigners will give any instructions concerning the construction of the *Ogou-kuwan*, which is left entirely to the care of Uyeda. This has provoked discontent among the red bearded employes at the Arsenal, who became very angry, stating that no native workmen under them should be employed by Uyeda in the construction of the *Ogou-kuwan*. He does not heed their selfish conduct, and is pursuing his great work in good order without any assistance from foreigners. Besides, he was also engaged to construct the *Iwaki* and *Jinkei-kuwan*, which were launched during last year. Kobayashi Kikutaro, *Kochō* of the 2nd class, is engaged to construct an anchor, for the use of a vessel of 250 horse-power, which is expected to be completed in a few weeks and it will be shown in the National Exhibition in Utsunomiya. Some days past a discussion broke out between Kobayashi and a foreigner, in the service of the arsenal, in relation to the tempering of iron. The question was resolved to be

decided by each making an anchor for a 50 horse-power vessel. The two anchors, one manufactured by Kobayashi, and the other by the foreigner, were brought, when finished, before Admiral Nakamuta. The foreigner remarked contemptuously that "the anchor made by Kobayashi, was not so hard as his." His competitor at this became angry and said that the anchors should be cut in two before the Admiral, to decide which of them was the better tempered. It was done. The one made by the foreigner was found to be inferior to the other. He seemed to be much ashamed, and said that this was not the anchor which he had constructed. All the persons present at the time laughed at this. The result of the test was, that Kobayashi was soon promoted, while the foreigner was discharged.

THE TOKIO-FU AND THE FOREIGN CONCESSION OF TS'KIDJI.

(From the *Hochi-Shinbun* of 3rd September.)

THE Tokio-fu, appearing as a plaintiff in a claim for arrears of ground-rent, in the Ts'kidji Foreign Concession, withheld by Captain Batchelder, brought their complaint before the United States Consular General Court, and sought to recover five years' ground-rent, and the consequent damages as laid down in the title-deed. On the other hand, Mr. Batchelder strongly asserted that he saw no reason to accede to the demand of the Japanese Government, on the ground that, as they allowed foreign settlers to reside out of Ts'kidji, many of them had removed to other quarters, thus greatly reducing the original value of the land. At last the judge dismissed the plaintiff's petition. This case was first opened in October, 1876, and judgment was delivered on the 4th December of the same year. As the case excited much interest among foreigners and ourselves, we fully commented upon the decision, and expressed our opinion that the rights of our country were always violated, by the foreigners. However, it was in the month of January that we heard that the Government, dissenting from the decision, had petitioned for the rehearing of the case; but since that time we have learned nothing further on the subject.

Another case of altogether similar nature—that of the Tokio-fu v. Mrs. Blockley—has come before the English Consular Court, whose decision was the direct opposite of that of the American Court—the defendant was apprised that she had no right to withhold the ground-rent. We cannot refrain from wondering that two exactly similar cases should result in two contrary decisions, the only difference being in respect of the Court in which they were heard. Be those concerned Englishmen or Americans, according to the ex-territoriality clause, there is no difference in their duties towards our people: just as the privileges enjoyed by an American in our country are also the rights of an Englishman. And, although the Courts and the laws (of the two countries) may differ, the same principle should guide the decisions arrived at in similar cases. If we say the one is right, we must say that the other is wrong; if we submit to the decision of the English Court we must dissent from that of the American. One or the other must necessarily be right; and consequently the other must be wrong. Under these circumstances, can foreigners boast that people cannot be well controlled unless under their special laws? Will our people be satisfied to accept their laws at their

hands, and take existing laws out of the hands of the Government? And will foreigners, on their side, insist upon forcing upon us such disagreeable laws? Surely this question affords matter for uneasiness.

The editor of the *Tokio Times*, with his as usual able pen, maintains that the time is gradually approaching when the anomaly of ex-territoriality will disappear. This is quite true. How is it that the Courts of nations, having equal rights one with the other, can arrive at such opposite decisions as those we have noticed? The case (of the Tokio-fu) was not a difficult or involved one: it was not even a case surrounded by circumstances difficult of understanding, or hard to be explained on both sides. Thus, we wonder that it has produced different decisions in different courts. What would have been the result had it really been a cumbrous one? Is this a matter in which we should be free from anxiety? Is the object of the ex-territoriality clause to place the people in a state of suspense, or for mutual convenience and advantage? Foreigners themselves are unwilling to be subject to the laws of other countries, and firmly adhere to their own codes; yet they apply their laws when other people are concerned in a different manner to that employed when their own people are concerned. If they are conscious that distrust is injurious to their happiness, they should admit the same feeling in other people.

From the first we have not presumed to comment upon the judgment according to the principles of jurisprudence; but all we say is, that, seeing the contradiction of these two Courts, and knowing that there is injustice somewhere, we find that it is not committed by our law, and contend that ex-territoriality has proved a failure. We cannot put much reliance upon the judgment of those who boast of their civilization and laws, which they are so proud of that they would have them control other people. They are too good for us barbarians, to whom they could not be adapted. Judging from the experience gained by these recent events we advise foreigners to relinquish the ex-territoriality clause in the treaties.

THE KOZAN SHIMPO.

The following is the prospectus of the *Kozan Shimpō*, intended to take the place of the late *Toyo Kiji Shimpō*, Osaka, which was suppressed some time ago for violation of the Press Laws:—

When the clouds are thick, the moon can not shed its beautiful rays on the earth, and when the public is corrupted, truth can not prevail, and it is always the patriots who, at such a time, stumble and fall in the attempt to move the cloud of corruption; but they rise again more determined than ever to attain their purpose. It is almost impossible for our pens to reform national affairs, and make plain the great roads of progress, because our people, having been in an abject state of slavery for thousands of years, regard the Government as gods, and fear its officials as demons; they obey whatever is ordered, but never take any interest in the welfare of their nation.

Now let us see what the Japanese empire is. It is a little group of islands, breathing feebly among other great nations, which are as numerous as the stars. She has powerful England towards the west, and ambitious Russia in the north; so in case any misunderstanding arises in our international relationship, it is too evident that Japan must play the second part of India or Poland; yet our people are so lazy

and powerless, and satisfied to remain in this slavish state! Truly it is lamentable to think that this empire, which has preserved its independence for more than two thousand years, may become the prey of others at last!

Animated by patriotic feelings, though not skilled in the use of the pen, we published the *Toyo-kiyo Shimpō*, but, before many months had passed, that journal was adjudged injurious to the interests of the nation, and was suppressed by the present Government. This, however, was a small misfortune which we do not mind; and, in fact, it encourages us to go on more energetically than ever, and now we publish this small periodical, under the title of the "*Kozan Shimpō*." Oh! if such a small work can render any slight help in clearing away the gloomy clouds, and sweeping away the detestable corruptions, we shall be very well satisfied; but as to the reform of national affairs, and making plain the roads to progress, we shall resort to other means: therefore it is unnecessary for us to assist in these works with our feeble pen.

SAIGO'S LATE EXPLOIT.

(From the *Nichi Nichi Shinbun*.)

Since the intelligence announcing that the rebel leaders Saigo and Kirino, with the boldest of their followers, made a successful raid upon Kagoshima, has been made public, it has given rise to much speculation and many similes. Some liken their exploit to the sudden influx of a tidal wave, which will recede as suddenly as it came; or to the bursting out of a flame from the smouldering remains of a fire. Those who employ such metaphors are ignorant of the tactics of war. We obtained telegrams on the morning of the 3rd instant, and, although they were not on official authority, we have not hesitated to insert them in our paper of yesterday, as we had no doubts as to their truth. We trust to supply our readers with further details before long.

The insurgents, after cutting their way through the riodan at the battle fought on the 18th August, hurried in the direction of Mitai with all possible speed; and, notwithstanding the pursuit of the Imperialists, made their sudden and unexpected appearance in Kagoshima after a journey of ten days. Our opinion is that they kept on their way without touching at Mitai, and, after traversing Nasu, Iino, and Yoshida, reached the province of Satsuma. As to their numbers, some estimate them at 200 or 300; others say they are more than 700; but we put them down at 400 or 500. According to some accounts the rebel leaders, at the time they retired to Kumada after having been driven out of Nobeoka, being fully aware that there was no alternative but to strike a final blow, ordered their followers to do as they liked—to disperse or follow; but the loyal Shigakko-to declared their intention of following their leaders to the last. These are the flower of the insurgents, and have among them Saigo, Kirino, Beppu, Henmi, Kijima, Murata, and other leading spirits. Considering the leaders' talents in military affairs, it is not surprising to learn that the insurgents escaped through the Imperialists' lines, and made their way into the city of Kagoshima. The insurgents, surrounded on all sides, determined to buy with their blood the lives of imperialists as long as they could; and, observing the weakest part of the imperialists' lines, pushed forward. The troops found themselves unable to prevent the impulsive attack, although they probably exerted themselves to the utmost in the pursuit. We

cannot impute to the imperialists neglect, at least until after we have obtained full particulars of the occurrence.

The rebel leader's attack on Kagoshima amounts to no more than a game coolly played in which the stake is death: a resolution to die rather in Bungo or Hiogo than when invested by the imperialists. Resolving to die after achieving a brilliant victory, they made a rush upon Kagoshima. Their burning of the Kencho and committing other havoc show that they have no other motive than to keep their hold upon their lives as long as possible. They could not raise thousands of troops by liberating the rebel prisoners in that city, and they could never succeed in persuading Shimadzu and his son to aid them. It is clear that they cannot be able to defend the place, as the war-vessels keep up a constant bombardment from the sea, and the land forces besiege them from all other quarters. Do they intend to escape anywhere? If any one should gloss over their actions, and say that they choose to die in their native land for mere love of it, we will ask him why they should not have died at the time when they besieged the Imperialists at the place? Granting that the fathers of Kagoshima do not glare at Saigo for causing the death of their sons in his pursuit of the objects of his individual hatred, with what face can Saigo look upon those fathers? He used to be called a person who was free from shame. To know no shame, in such a sense as may be applied to him now, is no other than to be tempted by distress.

MISCELLANEOUS.

No sooner is one trouble off the hands of the Government, than another comes to vex them. The insurrection in the South-West is barely suppressed, when the flame which has been smouldering in Tosa bids fair to be fanned into active blast. The *Nichi-Nichi Shinbun* says:—Some days ago the annual festival of the tutelary *kami* was celebrated in Kochi, Tosa. The entire city was thronged with people and decorated with lanterns and various devices. The gate of the Risshi-sha Society's Hall was lighted with hundreds of lanterns, each of which was painted with curious and ridiculous caricatures of the Government authorities. Among several effigies of men, two were specially remarkable, one being meant to represent — and the other —. Two or three young Samurai, armed with swords, cut these two figures into pieces and hurled them to the ground. Others crowded round the fragments and trampled them into dust, laughing and saying contemptuously "What we do now in sport we shall be doing in earnest in a few days!"

An extract from a private letter dated Hosojima, Hiuga, 20th August, would make it appear that however near the Government may think the final suppression of the insurrection, the rebels are not at the end of their resistance. It runs thus:—

"The place where we are now is full of dead and wounded Imperial troops, and it is said there is no room to bury them. When the man who died was taken on shore" (the writer is on board one of the vessels in the harbor) "the house to which he was carried was full of dead soldiers. People go on shore every day to see the fighting. Heaps of dead are to be found in all directions."

DURING the Indian mutiny a gallant regiment of Highlanders, who never turned their

backs to mortal foe, were ignominiously discomfited and put to flight by a swarm of bees, the sanctity of whose privacy they had recklessly invaded. Japan, which has held her own hitherto against foes, within and without, is likely to succumb to an invasion of insects, and from insects which come from China at that. This is very humiliating, especially after Mr. Okubo's successful diplomacy brought the Formosan question to an issue so creditable to his country at the expense of her gigantic neighbour. The *Mai Nichi Shinbun* is horror-struck; and thus records the inception of the invasion:—"A poisonous insect named the 'Nankin-mushi,' or Chinese insect, has begun to swarm and spread in Yokohama. It resembles a dog-tick in shape and colour, and the effects of its bite are fearful. If anyone is so unfortunate as to be bitten by this insect, his body swells, he experiences great pain, and is seized with severe fever. This dangerous plague made its appearance first in the Chinese quarter, where it now swarms, and whence it has spread gradually to other parts of the town. Some days past, numbers of the insect were found in the cells at the Police Station at Sakai-cho, where many of the prisoners were injured by them. Prompt attention on the part of the authorities, however, has happily extirpated the pests in that place. But, a day or two ago, a man in the service of the Gas Works at Hanazaki-cho was bitten by the insects. It is not too much to say that the offensive heaps of all kinds of dirt to be found in the Chinese quarter are the cause of the visitation of such poisonous creatures."

Our readers need not be very much alarmed by this harrowing description. The "Nankin mushi" is a nasty and offensive insect enough, certainly; and its advent into Japan, where until recently it has been unknown, is much to be deplored; but the most ordinary precautions of cleanliness will keep our houses clear of it. Nor, though a night passed in a bed room infested by them must to a person of sensitive organization be one of horror, to which the torments of the musical mosquito and the ferocious flea are comparatively delightful, are any serious ill effects the result of their bites. In entomology the "Nankin mushi" is known as the *cimex lectularius*: in plain English as the "bed-bug," an uncleanly, hard biting, evil smelling, rest destroying little tormentor, the growth of bad ventilation, overcrowding, and, above all, dirtiness, whose invasion is much more easily prevented, than its extirpation is effected when it has once selected a choice crevice and made there its home.

MR. LISTER, Postmaster General in Hongkong, is now on a tour of inspection of the branches of the Hongkong Post Office in Japan. One of the objects in view in connection with his visit is to decide the question, whether or not to withdraw the British Post Offices from Japan, and, if the withdrawal is to be effected, to arrange with the Japanese Postal authorities the terms on which the latter will undertake the responsibilities of the service. We are unable to state at present whether Mr. Lister is empowered to set right that misunderstanding, or mistake, or neglect, on the part of the British Government which has till now delayed the recognition by Great Britain of Japan as a Postal Union Power.

EARLY on the morning of the 31st ultimo, a girl of about sixteen years of age was found drowned in the Ooka canal close to the bridge Hanazono. The body was taken to the police station.

THE fourth concert of the Amateur Dramatic Club's series of Promenade Concerts, could not, in any respect, be pronounced as successful as any of those which have preceded it. The performance consisted solely of a selection of pieces played by the Band of the *Tennessee*. For the singing of the Amateurs, was substituted an exhibition of fire-balloons; and the rather stiff breeze which was blowing from the South-West was unfavorable to a good view of them from the gardens, carrying them, as it did, almost out of the range of vision before their final explosion. Judging from a "captive" ascent, however, the effect of these balloons on a still, dark evening, should be very fine. The number of the public present showed a marked falling off from the attendance at previous concerts.

A TELEGRAPHIC despatch has been received at the Imperial Japanese Post Office, to the effect that the Notification of the 20th June has been approved in London and Paris, directing its re-issue, and stating that mails are to be made up at the Japanese Post Office, by steamers of the P. & O. Company, at sea postage rates.

THE only answer which it is worth our while to make to a paragraph in the *Daily Advertiser*, impugning the information published by us on the subject of Mr. Lister's visit to Japan, is that that information is correct in every particular, and will be proved to be so by the changes which will take place in the postal services here in the course of the next month or two. It is the merest chopping of logic to argue that, because Mr. Lister is a colonial servant, he can have nothing to do with a question which must be decided between the Imperial and the Japanese authorities. We repeat that the objects of his visit, besides the ostensible one of inspecting the British Post Offices here, which are branches of his (a colonial) office, are what we have stated. The correctness of the opinions we have enunciated on postal questions has been thoroughly borne out by events so far; and the final results to which these events are all so evidently tending will prove that we have, throughout, taken the right point of view in our consideration of the question.

WE have seen some boxes of new matches made by the "Japan Safety Match Company," and bearing the old railway train trade mark. The causes of objection to the matches hitherto manufactured in Japan have been removed by the makers. The boxes are neatly, lightly, and strongly made, and the phosphor composition on the outside is more than sufficient for the ignition, one by one, of all the contents of the box. The matches themselves take fire easily and surely under gentle friction, and without any of those startling phenomena, the probability of the occurrence of which used to render the striking of a (Japanese made) match an experiment accompanied with all the excitement of latent danger. As a matter of plain fact the matches shown us are quite equal to the best imported article. As the secret of making "safety" matches, which really deserve the name, and are not a species of torpedo and a terror to insurance agents, is evidently in the possession of the Japan Safety Match Company, it is to be hoped that the Company will make such good use of its knowledge as to develop so thoroughly a native industry, that it may, without protection, set all outside competition at complete defiance.

PRINCESS SEIKANIN-NO-MIYA, (Katzu-no-Miya), Nihon Shinshi Naishinno, widow of the late Shogun, died at Hakone on the 2nd instant. She had for some time been suffering from *kaké*, and was on a visit to the hot springs of Tonosawa, Hakone, where she grew gradually worse until her complaint terminated fatally at about 5 o'clock p.m. on the above mentioned date. Her remains were conveyed to Tokio on the 5th instant.

THE negotiations for the sale of the *King Richard* to the Mitsui Bishi Company have terminated, and that vessel hoisted the Japanese flag, for the first time, on the 4th instant. This steamer will be known henceforth as the *Kokonoya Maru*, and in the course of a few days will be despatched South under the command of Captain Hussey.

INSTEAD of 1,200 policemen who were first intended to sail on the 6th for Kagoshima, 1,700 were sent, or five hundred more than the number originally detailed.

WE do not say that the judge presiding in the Yokohama Saibansho in those civil cases in which foreigners are concerned, is like that colonial magistrate whose decisions were excellent, while his reasons for them were abominable; but we do find that very often the only intelligible part of some of his judgments is the few words at the end. As this is the vital part, however, like the postscript to a lady's letter, there is not very much to complain of.

REPORTS from Bungo state that that province was visited by a heavy gale on the 24th of last month. In the neighbourhood of Tateishi the rivers overflowed their banks, and flooded the country, doing considerable damage to life and property. Houses, telegraph poles, and bridges were washed away, and seven persons and some cattle drowned.

VRIES ISLAND, which has been in a state of repose for a few months, broke out into active eruption about ten days since. The flames are now issuing from a new crater to the Westward of the old one, which seems to be quite extinct. As seen from Cape Sagami, the volcano presents a magnificent sight these dark nights. The pilots say that at present it is by far the best light on the coast.

THE *Snap*, formerly a British Gunboat, and the schooner *Reindeer*, have been purchased at Nagasaki by the enterprising Captain Walker of this port. The vessels are already fitted out and are bound for Yokohama, the *Reindeer* having already sailed.

THE *Akebono Shinbun* denies, by authority, the rumor that a war vessel was captured by the insurgents when they made their entry into Kagoshima.

THE Chinese traders in this port are speculating largely in rice. The last steamer of the Pacific Mail Company, and the M. M. steamer *Volga*, hence for Hongkong, were full. The P. & O. steamer *Malacca* and the French Mail boat to follow are fully engaged for a similar cargo.

THE M. B. barque *Meiko-maru* (late steamship *Bahama*) with rice from Sendai Bay, passed Yokohama at 2 p.m. on the 7th inst., on her way to Shinagawa.

WE are informed by the Agent of the Great Northern Telegraph Company, that communication by the Amoy cable is interrupted.

MR. PAGDON, who with other residents so gallantly distinguished himself during the gale of the 26th July, in rescuing Japanese from a junk wrecked and the steam dredge stranded near the French Hatoba, has, through his Consul, received the thanks of Japanese belonging to Yokoska, whom his exertions were instrumental in saving. We subjoin the correspondence which has passed between Mr. Pagdon and the Acting U. S. Consul-General on this subject:—

No. 2326.] U. S. CONSULATE-GENERAL,
Kanagawa, (Yokohama), Sept. 6th, 1877.

H. PAGDON, Esq., No. 31, Yokohama.

SIR,—I am requested by TOTAKE HIDZUKE, Kaigun-no-Chuisa, and Zosenjo-no-cho, at Yokoska, to thank you for your brave and generous aid in saving life during the storm of July 26th.

I am, Sir,

Your obedient Servant,
H. W. DENISON,
Vice-Consul General.

No. 31, YOKOHAMA, Sept. 7th, 1877.

H. W. DENISON, Esq.,

U. S. Vice-Consul General, Yokohama.

SIR,—In answer to your kind letter of yesterday's date, conveying to me the thanks of the Japanese gentlemen at Yokoska, for my exertions in saving life during the typhoon of July 26th, I would say that, although it cannot but be pleasing to me to be the recipient of such expressions of gratitude, I beg to assure those gentlemen that, not looking forward for any such acknowledgment, I feel not only pleased but highly flattered that my simple services were so appreciated, while, at the same time, I consider that it was only an act of humanity on my part, after all, the performance of which is binding on all men, one to another, of whatever nationality.

In this connection (the saving of life), I would suggest one thing entirely overlooked and very much needed, namely, the establishment of life-boats and rocket apparatus, which would, if placed at different stations, lighthouses, fishing buoys, &c., be the means of saving many lives. On no coast in the world is the life-boat and rocket apparatus more needed than on the treacherous coast of Japan. Had the light-keeper of Komina (Mr. Dick), had such apparatus, it might have been the means of saving those lives that were lost when several unfortunate vessels went on shore near the lighthouse of which he is in charge, during the above-mentioned gale.

I am, Sir,

Yours obediently,
H. PAGDON.

NIPPON NOTES.

THE *Nisshin-kuwan*, which was anchored off the coast of Hiuga, returned to Kobe on the 22nd ultimo. The *Shidzuoka*, *Kaiten*, *Banrio*, and *Tsukei Maru*, which have been cruising in the channel between Hiuga and Shikoku since June last, will soon return to the East.

Koto, *Chiu-keibu*, of the Police Department, is expected to leave for the Kochi ken at the head of 300 policemen on the 20th instant.

A NUMBER of officials of the Hakubutsu-Kioku (Exhibition) of the Home Department, have left for the province of Yamato, in order to collect antiques for the French exhibition of 1878.

A TELEGRAM from Kumamoto, sent by the Governor on the 27th ultimo, announces that the insurgents fled in confusion for Hitoyoshi through Gomayama, hotly pursued by the imperialists.

SERIOUS atmospheric and marine disturbances are reported to have occurred in Echigo on the 22nd ultimo. After a fine day, at five p.m. the sky was suddenly clouded, a pitchy darkness set in, and there was a heavy thunder storm, accompanied by torrents of rain

and enormous hail-stones. Some of these weighed as much as forty or fifty momme: they broke the tiles on roofs, and beat down plants and vegetables. Thirty fishing boats were swamped by enormous waves on the coast between Kuroi and Unibe. Three men were killed and two others injured by lightning.

On the 27th August, a banquet was given by H. E. Sanjo, *Daijo Daijin*, to ministers and other high officials, civil and military, at the imperial palace of Ohama. It commenced at 5 p.m. Their Excellencies Iwakura, Okubo, Oki, and Kuroda were present.

THE island of Kiushiu was visited by a strong gale on the 26th ult. On the following day, an extensive damage was wrought by a heavy storm in the Yamagata ken (Uzen.)

THE wooden railway bridges, Shibaguchi and Kanasugi, between the Shinbashi and Shinagawa stations, will shortly be replaced by iron structures.

THE *Osaka Nippo* publishes the following statistics of the population of Osaka in three years.

8th year of Meiji (1875)-	- - -	535,035
Males	269,986	
Females	265,049	
9th year of Meiji (1876)-	- - -	549,280
Males	272,188	
Females	277,092	
10th year of Meiji (1877)-	- - -	555,565
Males	275,368	
Females	280,197	

THE *Hochi Shinbun* states that each of the newly enlisted soldiers in the North-Eastern provinces has received 500 yen (?) from the Government for his service. The men are now returning to their homes with smiling faces, each having at least 200 or 250 yen in his pocket.

THE visitors to the National Industrial Exhibition in Tokio numbered 23,362 during the week ended the 28th ult.

H. E. MORI ARINORI, Japanese Minister at Peking returned to China in the *Hiroshima-maru*.

THE *Hochi Shinbun* has the following: A telegram from the seat of war, despatched at 11 a.m. on the 29th ult. announces that a reinforcement of 1,000 policemen is required as soon as possible.—On the 30th Fujizaki, *Chiu-keibu* of Police, left for Oita (Bungo) at the head of 150 policemen.—On the 25th, 2 cannons, and 162 cases of rifles, each containing 20, were sent from the Arsenal in Osaka to Hiuga.—A telegram from the South-West, sent at 3.15 p.m. on the 29th, says that insurgents had appeared between Mikado and Kishiue, Hiuga. They are entirely surrounded by the imperialists.

THE *Choya Shinbun* says that Ooi, the Agent of the Mitsui Bishi Company at Yokkaichi, Ise, absconded with all the money (about \$690) then in the office, during the night of the 19th August.

THE *Mainichi Shinbun* says that the Government has sold Japanese silver coins to the value of 200,000 yen to the Chartered Mercantile Bank.

ON the 15th August, the garrison troops stationed at Umajima in Iyo and at Tokushima in Awa, suddenly and without previous notice, occupied the city of Kochi, one body from the East, and the other from the West. This surprised the inhabitants, who prepared to leave their houses; and a general excitement prevailed. It was then that Kataoka and ten other prominent members of the *Risshisha* Society were arrested and sent to Tokio.

Yesterday they were brought before the Daishin In for examination.

THE *Mai Nichi Shinbun* states that cholera prevails in the Awomori Ken.

DURING the night of the 28th ultimo, one hundred and three houses were broken into by robbers in Tokio.

ON the 30th ultimo, the first silk-worms' egg cards of the season arrived in Yokohama, namely: from Iwajiro, 2,046; from Yonezawa, 50; and from Bushin, 144. Total 2,240.

ELEVEN shizoku of the Kochi-ken were examined before the Daishin-In on the 29th ultimo. Mr. Oki, Minister of the Judicial Department, was present.

MR. Gilbert will shortly start for the Kumagai-ken for the purpose of superintending the construction of a telegraph line.

As the expenditure of the Kagoshima Kencho is enormous, another sum of 100,000 yen has been sent from the branch office of the Finance Department at Nagasaki.

A TELEGRAM from the Owake-ken, despatched on the 29th ultimo, states:—As the sound of guns was heard in the direction of Bungo, the Imperial forces, land and navy, have prepared for an attack, and guarded every road from which the insurgents may appear. Peace is near.

SEKOTA and Kondo, of the Police Bureau, have assembled a number of detachments of police under their command, and arrived at Kagoshima, whence they will embark for Tokio as soon as transport is provided.

THE Daijin, Sangi, and nobles were entertained at luncheon in the Imperial Palace on the 30th ultimo.

GENERAL SAIGO, who arrived at Yokohama by the *Tokio Maru* on the 29th ultimo, left for Tokio in the 10 a.m. train on the following day. On arriving at the Shinbashi Station he was received by Lieut.-General Ida and Prince Fusumi, and the party at once proceeded to the Imperial Palace, where the General had an audience of His Majesty the Mikado.

A TELEGRAM has been received by the Government, announcing that Kabayama, one of the insurgent leaders, and who was lately an officer of the third-class in the Judicial Department, has been taken by the troops under Lieut.-General Oyama.

ABOUT ninety of the Kumamoto shizoku, who have participated in the insurrectionary movement, were pardoned by the Temporary Court at Kiushiu on the 16th ultimo.

A TERRIBLE tragedy, committed by a woman, is narrated by a person who has lately arrived from the Tochigiken. The story runs thus:—Kin, wife of a farmer named Sukeschichi, living at Higashi Kawauchi-mura, Shimotsuke, after murdering her husband and mother-in-law, and severely wounding her brother-in-law, set fire to the building in which the carnage took place, and leaving two of her sons in the flames, ran away. As yet no trace as to her whereabouts has been discovered.

HIS MAJESTY the Mikado reviewed the Kaitakushi troops at the Fukiage Gardens on the 3rd instant.

ON the 1st inst. a signalman was killed by the 8.46 p.m. goods train from Yokohama near the Tsurumi station.

KURODA NAOTASU, a noble, has been detained in custody since the 24th July, but now, his confessions having been completed, he will be handed over to the proper authorities in a few days. It is rumoured that his crime is that he contracted a lease with a foreigner, giving his government bonds as security.

THE Mitsui and other banks are now endeavoring to collect fifty sen and other smaller satz, to the amount of 100,000 yen. It is said that they are intended to be sent to the South-West.

THE *Osaka Nippo* states that about fifty of the patients in the Temporary Hospital in Osaka, are suffering from fever, and, to prevent its further spreading, a temple has been selected as a hospital for the treatment of those afflicted with the disease.

THE *Hochi Shinbun* says that a "great battle" was fought among the frogs, numbering some thousands, on Saturday at about 4 p.m. at the Tameike, Tokio. The combatants used the leaves of the lotus as "floating batteries" and the struggle lasted some time.

THE *Hochi Shinbun* states that Mr. Lister, Postmaster-General at Hongkong, had an interview with Mr. Mayeshima and other officers of the Post Office Department on the 1st instant. He expressed his gratification at the improved condition of postal affairs in this country.

WE translate the following items from the *Akebono Shinbun*:—A telegram from the imperial head quarters at Oka, on the Bungo road, dated the 29th August, announces that the insurgent troops have crossed the mountain pass of Adzusa-toge, in Bungo, and threaten to force their way to Higeoka.—On the 23rd ultimo, the Arsenal in Osaka sent 20 cannon and 3,000 snider rifles to the imperial camp at Oka, whither 600,000 yen were also sent from the Finance Department on the following day.—The imperial army was encamped at the fort of Higeoka for forty days, during which no contest nor skirmishes took place between them and the insurgents, who were encamped opposite to the imperialists. The latter became weary of remaining in idleness for such a length of time. They were also surprised to find that Nobeoka, the last fortress held by the insurgents, had been set on fire, during the night of the 14th ultimo. The rebel troops, suddenly fell into disorder and commenced to retreat toward Kumada, leaving ammunition and other articles in the batteries. They could not remain long at Kumada, and so fled as far as Nagai. The imperial army from Kagoshima and Higo pursued hotly, taking about 2,000 prisoners; while about 1,300 rebels laid down their arms at Higeoka. Now the ground, where all that remains of the rebel troops commanded by Saigo, Kirino, and others, is not more than 35 cho in length and 17 cho in width.

A LETTER from the Kochi-ken says:—At the moment the members of the Risshi-sha Society were arrested, intense excitement prevailed among the people, but now all signs of disquietude have disappeared. A New President and Vice-President have been elected to the Risshi-sha, and regular weekly lectures resumed as usual. The people of Hata-gori are still agitating, but no fears are entertained of their appealing to arms. Most of the people wish early payment in money of the government bonds, and its free circulation among themselves.

THE Yamaguchi, Owake, and Kumamoto-ken were visited by a severe gale, accompanied by torrents of rain, on the 26th ulto. It wrought considerable damage to the houses; and many bridges were carried away.

THE robber who broke into the house of Uyesugi, a noble, and carried away with him 5,700 yen, has recently been apprehended. It appears that he was a carpenter, and lived in the yashiki from which he stole the money.

THE expenditure of the Imperial Household Department is to be reduced by about 70,000 yen per annum, on a recent scheme of retrenchment.

A TELEGRAM from the Imperial head-quarters at Nobeoka, dated 17th ultimo, states that the insurgents, determined to fight to the death, show a disposition to force their way into Shigeoka by the Kaba Pass. Every road is strictly guarded, and the preparations to receive the rebels were completed at 1 o'clock that same day.

No theatrical or other musical entertainment were allowed, in any locality of the Empire, during three days, counting from the date of the announcement of the death of the Princess Seikanin-no-Miya.

It is also said that the proposed interview of the Austrian Princes with the Empress, which was intended to take place on the 2nd instant, has been postponed from the same cause.

THE Army Department has ordered 100,000 rifles from France, at a contract price of 350,000 dollars.

DURING the gale of the 26th ultimo, the *Riu-jio Kuwan*, which was anchored in Kagoshima harbour, after cutting two cables, was stranded on the Gion bank. The *Kwantsu Maru* foundered, and five or six of those on board were drowned. Other damage was wrought among the men-of-war and transports in the harbor, but no further loss of life is reported.

THE body of Princess Seikanin-no-Miya has been brought to Tokio, and, it is said, will be buried about the 11th instant, near the tomb of her late husband, Iyemoshi, 14th Shogun of the Tokugawa dynasty, in the temple of Zojoji, Shiba.

MR. IWAMURA, Governor of Kagoshima, who arrived at Nagasaki with his subordinates prior to the arrival of Saigo in the former place, left Nagasaki to return to Kagoshima on the 4th instant.

A DASTARDLY murder is reported in the *Hochi Shinbun*. About 3 a.m. on the 6th inst morning two ruffians forced their way into the house of Ohara, a noble, and Sho-Shoki-kan of the Foreign Office, at Mukoyanagiwara. On entering his bedroom, they sprang upon him. He rose and was escaping into the adjoining room, when he received two blows from their swords and fell. Aroused by the disturbance his wife, who is a daughter of the noble Shirakawa, contrived to run into the garden, but here she was seized by one of the assassins and received a severe wound in her breast. Returning to Mr. Ohara the murderers hacked him until he drew his last breath, when they made good their escape. As nothing was missing from the house, it is thought they acted under feelings of resentment. Mrs. Ohara now lies in a precarious condition.

AMOY.—Writing on the 14th Aug., a correspondent says:—The cholera seems to be dying out. While it lasted it was very severe and of the most virulent form (cholera sicca.) During July four Europeans and five Japanese and Malays died. Of the Europeans two were residents and two sailors. The death-rate amongst the Chinese is variously estimated at from 30 to 200 per diem, but it is generally considered that the true average was about 70 to 80.

From the 5th to the 8th ult., we had a very strong N.E. gale with a steadily falling glass. All the ships and steamers on this coast ran into the nearest place of shelter, and business was at a standstill for three days.

CORRESPONDENCE.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

AT CONSIGNEES' RISK.

To the Editor of the *Japan Gazette*.

DEAR SIR:—Feeling some interest in the subject upon which you have made some remarks in your last issue, under above title, I venture to add my views upon the value of the particular clause in the advertisements to which you refer. I have in my possession a great number of bills-of-lading for goods shipped in steamers; and on referring to them I find in the P. & O. Company's form the following clauses:—

"The Company shall have the option of making delivery of the Goods under this Bill of Lading either over the ship's side, or from Lighters, or from a Storeship, or Custom House or Warehouse at Merchant's risk."

"Consignees or their Assigns must be ready to take delivery of Goods as soon as the ship is ready to discharge them, otherwise the Company shall be at liberty to land and Warehouse or discharge them into a Store ship at the Merchant's risk and expense, and shall have a lien thereon for such expense."

The Messageries Maritimes Company has a clause in its bill-of-lading to the same effect, which may perhaps be good in French law.

A number of bills-of-lading by various private steamers are generally in the same form, and contain, in reference to the discharge of goods, the following clause:—

"The goods are to be discharged from the ship as soon as public intimation is given that she is ready to unload, and if not thereupon removed without delay by the Consignees, the Master or Agent is to be at liberty to land the same, or, if necessary, to discharge into hulk, lazaretto, or hired lighters, at the risk and expense of the Owners of the Goods."

This clause is contained in the form of bill-of-lading of the *Elgin* lately in Yokohama harbour, and an advertisement of the kind you refer to appeared in the newspapers, but you will observe that there is nothing in the clause authorizing the agent or captain of the steamer to bring the goods and leave them on the hatoba, (as they, or he, would find to their cost, if they left any goods of mine there, and they were damaged in consequence.) They are bound to put the goods in a place of safety, and to take reasonable care of them as long as the goods remain in possession of the captain or agents of the ship, no matter from what cause, neglect of consignee or otherwise.

And also, in discharging into hulk, &c., although it may be at the expense of the consignee, it will not be at his risk, and the ship will be liable for any loss or damage occurring during the transfer or discharge, if performed by order of the captain or agents.

Consignees do sometimes probably annoy agents of ships by not sending promptly for their goods, but on the other hand, I have been frequently, and repeatedly, annoyed by receiving imperative notifications that my goods were ready for discharge, and were impeding the discharge of other goods &c. &c., with a request that I would send boats immediately to take delivery, or will land at Hatoba, lie at your risk and expense &c., &c. Moved by these desperate threats, I have often sent boats and my man has been told on reaching the ship that the goods will not be ready for discharge for two or three days, and that word will be sent when ready, and perhaps the next thing I hear three or four days later is, that the goods are landed at the hatoba, and on going there I find some-

times they are, and sometimes they are not, and sometimes they are not in the ship at all. So you see there are two sides to every question.

I have no hesitation in pronouncing the hatoba clause in the advertisements by agents of steamers, &c., as a piece of impertinent rubbish, and not worth the ink expended in its printing, but on that account no one need mind it any more than

Your obedient Servant,

FLANEUR.

Yokohama, Aug. 22nd, 1877.

"SPORT" OUT OF SEASON.

To the Editor of the *Japan Gazette*.

DEAR SIR,—Permit me through the columns of your paper to bring my hard case before the public.

I was ushered into this world about the beginning of July last, and was informed by my mother that, owing to the "shooting licence" issued by a paternal government, I should be free from the persecutions to which my family have been usually subjected from the hands of unscrupulous foreigners in the pursuit of "le sport," until I had attained to my full growth, and was able by flight on my full fledged wings to give myself a chance of escape.

Fancy my terror, my dear Mr. Editor, when, on one Sunday afternoon, I, with my five brothers and sisters, whilst sunning our half fledged bodies on a grassy bank near our birth place where we had been left by our fond mother, with strict instructions to return home before sunset, and on no account to stray away from the spot she had brought us to, we were suddenly startled from our grassy couch by a report like thunder; and, on lifting up my head to ascertain the cause, I saw three of my brothers and sisters lying on their backs in the agonies of death, and found myself unable to escape through having one of my legs broken. In this helpless condition I lay until discovered by an animal called a dog, who seized me in his mouth, and carried me to two foreigners, one of whom "kindly" put me out of my misery, by beating my brains out against the barrel of his gun, and consigned my quivering carcass to a pouch at his back, where I found the bleeding bodies of my brothers and sisters, and the stiffened corpse of my fond mother, whilst the foreigner, turning to his companion, laughingly said,

"Vive le sport mon frere!"

Cannot these atrocities (which I think almost equal those in Bulgaria) be put a stop to, Mr. Editor, or is it fair that we should be persecuted in our tender youth by these mis-called "sportsmen?"

I think we are now in the Kanagawa Ken, and surely the Governor of Kanagawa, who I hear is always ready to listen to the complaints of the oppressed, can take some steps to stop this "slaughter of the innocents."

I am happy to be able to inform you that my murderer was not an Englishman.

The remaining members of my family are at present seeking shelter with some relatives in the depths of some strong bamboo cover, impenetrable even by the dogs of our foes.

I am, dear Mr. Editor, apologizing for trespassing so long on your time,

THE GHOST OF AN UNFLEDGED PHEASANT.

Ashinoyu, August 29th, 1877.

ROAD MAKING IN JAPAN.

To the Editor of the *Japan Gazette*.

SIR,—The letter extracted from the *Higo News* and published in your issue of yesterday, treats upon a subject the importance of which every foreigner is cognisant of, viz: roadmaking in Japan.

The object of my troubling you, however, is not to demonstrate the utility of making more roads than already exist in these sunny isles, but to point out errors in, and offer suggestions relative to, the system of macadamising at present in use by the Japanese.

It is obvious to the most uninitiated observer, that a vast difference exists in the character of the macadamised roads here and in foreign countries, though every person may not be acquainted with the reasons for this difference.

Let us take the Bluff road leading from the U. S. Hospital to the Race Course as an example, as I believe it is a fair sample of the roads existing in and about our Settlement. In summer the dust lies, in places, from two to three inches thick, and during the wet season it is a perfect slough; in fact, both in summer and winter, this road is anything but pleasant for pedestrians. This is very much to be lamented, as everybody does not possess a pony and carriage; and as there are no paths on which pedestrians might walk. As a matter of fact it is an impossibility for a gentleman to take a lady for a walk along the Bluff for fully six months in the year, unless an utter disregard is paid to dust or mud.

Now what is the reason of this? The Japanese authorities would probably say that the evil is only the natural consequence of traffic on the road. But this kind of argument is untenable upon investigation. The traffic is of such a light nature, that on a good road its effects would scarcely be noticeable. Suppose that the Bluff road had to support a continual traffic of heavy wagons, each carrying five or six tons weight, how long would it last, let me ask? Before a month was over it would be full of holes, almost large enough to engulf a jinrikisha, coolie and all.

From the specimens of road-making which have come under my observation in this country, I am led to the conclusion that, in the first place, the road in question was never properly formed; in the second place that the metal was pitched on in any fashion, and, thirdly, that the stones were much too large. The result is that the road is never in good order. Every now and then gangs of coolies are employed to pick up the hard surface because it has become rather uneven; their next move is to place a thin layer of stones over it; and, then, a layer of about three inches of blinding—and it is blinding, with a vengeance, in more than one sense,—is the finishing touch, and the road is supposed to be in good order.

I do not wish to criticise too severely the attempts at road-making by the Japanese, but I do think that the hint thrown out in the letter referred to at the commencement of my communication, that the services of foreign employés on the railroads, whom the government have been to great expense in bringing out here, and whose engagements have expired, might be turned to account in the making of roads:—some, at least, understand the process. Of course I do not advocate setting men to superintend work which they do not understand; but I am confident that, from an economical point of view, it would pay the Japanese to employ foreigners who practically understand the art

of road-making, as the continual repairing now being carried on, would be almost entirely done away with, and good highways would necessarily follow.

The forming of a road, the quantity of stone to be placed on it, the size of the stones—the last layer should not contain a stone larger than would drop through a ring two inches in diameter—and the quality of the material, together with the amount of blinding used, are only to be understood by those who have had some experience of the work, and who know a good road from a bad one.

I am, Sir,

Faithfully yours,

X.

Yokohama, September 4th, 1877.

LAW REPORTS.

IN HER BRITANNIC MAJESTY'S COURT AT YEDO.

Wednesday, August 29th, 1877.

Before HIRAM SHAW WILKINSON, Esquire,
Her Majesty's Vice-Consul.

KUSUMOTO MASATAKA, } Plaintiff,
Chiji of the Tokio-fu, }

and

BRIDGET BLOCKLEY, Defendant.

And

BRIDGET BLOCKLEY, Plaintiff,

and

KUSUMOTO MASATAKA, } Defendant.
Chiji of the Tokio-fu, }

JUDGMENT.

In this case the plaintiff, the Chiji of the Tokio Fu, sues the defendant for three years' rent of ground held by the defendant as assignee of a lease in perpetuity granted by the plaintiff's predecessor in office and for a penalty at the rate of two per cent. a month during the time such rent has remained unpaid. The allegations of the petition are:—

1.—The plaintiff is the Chiji or Chief Municipal authority of the City of Tokio which City was formerly known as Yedo.

2.—The Chiji of the Tokio Fu by deed of which a copy is hereto annexed sold to Wilhelm Patow his heirs and assigns the lease in perpetuity of the lot of land known as No. 17 in the Foreign settlement Tokio subject to the conditions in the said Title Deed set forth.

3.—Afterwards all the estate of the said Wilhelm Patow in the said lease vested in the defendant by assignment as and for her separate estate.

4.—The defendant is now the assignee in possession of a portion only to wit of 302.22 tsubo of the said lot or land.

5.—The annual ground rent payable to the plaintiff under the said Title Deed in respect of the said 302.22 tsubo computes to yen 113.333.

6.—The said Wilhelm Patow by acceptance of the said Title Deed for himself and his assigns covenanted with the Chiji of Tokio Fu to pay him the said annual rent in advance on the 1st day of July in every year and it is a condition of the said Title Deed that in case of non-payment of rent the Japanese authorities shall be entitled to a judgment for the amount found due and also to a penalty of two per cent. per month on the said amount.

7.—The ground rent upon the said 302.22 tsubo is due and unpaid for one year commencing on the 1st July 1873, and for one year commencing on the 1st July 1874, and for one year commencing on the 1st July 1875.

8.—The said ground rent became due and payable by the defendant *dum sola* and subsequent to the passing of the Married Woman's Property Act of 1870.

The prayer of the petition is:—

1.—That the defendant may be decreed to pay to the plaintiff the sum of 113.333 yen, together with a penalty for non-payment thereof at the rate of 2 per cent. per month from the 1st July, 1873, to the date of judgment.

2.—That the defendant may be decreed to pay to the plaintiff the sum of 113.333 yen, together with a penalty for non-payment thereof at the rate of 2 per cent. per month from the 1st July, 1874, to the date of judgment.

3.—That the defendant may be decreed to pay to the plaintiff the sum of 113.333 yen, together with a penalty for non-payment thereof at the rate of 2 per cent. per month from the 1st July, 1875, to the date of judgment; and

4.—For further relief.

To this petition the defendant puts in the following answer:—

1.—She denies that she is indebted to the plaintiff in the three sums of 113.333 yen or any other sum or sums.

2.—She admits that the document referred to in the second paragraph of the petition (and the copy of which as put in by the plaintiff is admitted) was issued on behalf of the Japanese Government to Wilhelm Patow his heirs and assigns, and that all the interest of the said Wilhelm Patow was transferred to her and became her separate estate.

3.—She alleges that she occupied the land in question in virtue of a contract which is contained not only in the said document, but in the said document, and in the treaties agreements and conventions between the Government of Japan and Great Britain, and other foreign powers relative to the settlement of foreigners in Japan, and in certain land regulations and conditions therein referred to.

4.—She alleges that the said contract has been violated by the plaintiff in respect that more than three-fourths of the foreign residents of Yedo have been permitted to reside outside of the limits there prescribed whereby she as the occupier of No. 17, Ts'kidji, Yedo, has suffered great loss and she therefore prays that judgment with costs may be given against the plaintiff (and for further relief.)

5.—She admits that she has not paid ground-rent in respect of No. 17, Ts'kidji, since July, 1873.

The defendant has also filed a petition by way of counter-claim in which she alleges:—

1.—That on the 20th November, 1867, the Japanese Government entered into an arrangement with the Foreign Ministers relative to the settlement of foreigners at Yedo.

That it was thereby agreed that foreigners should only be allowed to hire houses and reside within the limits coloured red on a plan thereto annexed and should only be allowed to lease land for building purposes within the limits coloured blue on the said plan.

That on the 4th May, 1870, a further arrangement was entered into between the Japanese Government of the one part and the Foreign Representatives of the other part, and it was thereby agreed that foreigners should only be allowed to hire houses and reside within the limits defined by a red line on the plan thereto annexed and should only be allowed to lease land and build houses within certain limits defined by a blue line on the said plan.

That the said further arrangement entered into as aforesaid provided for the sale of the leases of the said land to foreigners and the conditions were therein referred to and thereto annexed.

That on the 2nd day of June, 1870, the leases of certain lots of land within the prescribed limits were sold in pursuance of the said further arrangement and subject to the terms thereof and subject to the conditions of sale thereto annexed duly put up for sale by public auction.

That lot No. 17, now in the possession of the plaintiff, was duly sold to Wilhelm Patow for the sum of six hundred and six Mexican dollars (\$606), and the said sum of six hundred and six Mexican dollars (\$606) was duly paid as the purchase money for the same.

That the plaintiff is now in the possession of the said lot.

That since the purchase of the lease of the said lot of land, No. 17, buildings and premises have been erected, and improvement effected on the said lot to the value of eight thousand dollars (\$8,000).

That now, and for the last four years the greater part of the foreigners from time to time resident in Yedo have not resided or hired houses within the limits defined by a red line on the plans above referred to, but have, on the contrary, hired houses and business premises, and resided without the

limits so defined by the said red line, and that the plaintiff is and has been fully aware of and has permitted the same.

That the chief inducement to the defendant to purchase the interest of the said Wilhelm Patow in the said lot was the condition in the said arrangements mentioned that foreigners should only be allowed to hire houses and reside within the limits defined by a red line as aforesaid.

That owing to such breach by the defendant of the conditions and agreements under which the said lot was sold and purchased at the said sale by auction, the plaintiff feels herself much aggrieved and has sustained considerable loss and damage thereby, and claims in respect thereof the sum of five thousand dollars (\$5,000).

This petition concludes with a prayer that the defendant in the counter-claim (the plaintiff in the original action) may be ordered to pay to her the sum of \$5,000 and the costs of the suit, and for further relief.

To this counter-claim the plaintiff in the original action demurs, assigning, as matter of law, want of privity, and further that this Court has no jurisdiction to entertain the counter-claim. The case is to be tried on this record and on certain admissions made by counsel on both sides which will be afterwards more particularly referred to, and it is agreed that the question of the amount of the damages to Mrs. Blockley—if entered upon at all—be considered at an adjourned hearing after the other questions have been decided.

The lease upon which the petition is founded is in the following words:

FOREIGN SETTLEMENT, TOKIO.
Lot No. 17.

In consideration of the sum of 2,366.75 Bus, the payment whereof is hereby acknowledged, the undersigned Sugiura Tokei Shosanfuji acting on behalf of the Japanese Government hereby leases in perpetuity to Mr. Patow, North German subject, his heirs and assigns, the lot of land numbered and described in the official plan of the foreign settlement at Tokio, as No. 17, and containing 391.30 tsubos more or less, on the following conditions.

First,—That the said Mr. Patow, his heirs, or assigns shall pay in advance on the 1st day of July in each year the sum of 586.75 bus as rent, being at the rate of one bu and a half per tsubo, as provided by Article III of the Arrangement concluded between the Japanese Government and the Foreign Representatives on the fourth day of May, one thousand eight hundred and seventy.

Second,—That the said Mr. Patow, his heirs, or assigns, shall pay annually to his Consular authority such charge for the maintenance of a Police Force in the said settlement, not exceeding half of a Bu per tsubo, as shall be determined in the manner provided by Article VI. of the aforesaid Arrangement.

Third,—That every transfer of the said Lot No. 17, or any portion thereof shall be made to no other person than a subject or citizen of a Power having a treaty with Japan, and shall be executed before the Consular authorities of the parties concerned, and shall be registered by the local Japanese authorities.

For non-performance of any of the aforesaid conditions proceedings may be instituted against the said Mr. Patow his heirs or assigns before his or their Consular authorities; and in case of non-payment of rent the Japanese authorities shall be entitled to a judgment for the amount found due, and also to a penalty of two per cent per month on the said amount, and to the costs of suit, and the judgment shall bear the same rate of interest by way of penalty until paid.

Done in duplicate, one copy being given to the lessee and the other being filed by the Japanese authorities, this 1st day of July in the year one thousand eight hundred and seventy.

SUGIURA TOKEI SHOSANFUJI.

There is a counterpart in the Japanese language written on the same paper. This Japanese counterpart is by the officer of the Japanese Government whose name appears in the English version, and it is sealed with the seal of the Tokio Fu. The English version has the half seal of the Tokio-fu on it, and the lease may therefore be considered as a deed poll.

On this lease two questions arise.

1.—Is the plaintiff entitled to recover from the defendant rent for the premises, and, if so, how much?

2.—If the plaintiff is entitled to recover from the defendant rent for the premises, is he entitled to recover the penalty of two per cent a month or any part of it, and, if so, for what period?

As to the rent, the liability of the defendant can scarcely be said to be seriously contested. In order to support his contention that the documents hereafter referred to form an integral part of the agreement upon which the land is held Counsel argued that the plaintiff could not recover on the Title Deed for want of compliance with the fourth Section of the Statute of Frauds. I am of opinion, however that the fourth section does not apply; that the section which does apply is the first section, and that the provisions of the first section have been complied with. But, however this may be, the tenancy is admitted, and, although it is not stated in express terms, there is sufficient in the pleadings from which it may be inferred, that the defendant has been in occupation during the whole time for which rent is claimed, and the correctness of the amount of the yearly rent claimed in the petition is not disputed. Then as regards the defendant's counter-claim, the granting of it would be no bar to the plaintiff's right to recover the rent. There is nothing alleged in the defendant's answer which could be construed into an allegation of any failure of a condition precedent to the plaintiff's right to recover. The claim set up by the defendant is by way of counter-claim, and if the whole of that claim were granted, the plaintiff is nevertheless entitled to have the amount of the rent allowed. If it had been sought to set up such claim of the defendant as a bar to the plaintiff's right to recover, I am satisfied that such an attempt must have failed. The defendant was in actual possession of the land, and continued moreover in actual possession of it up to the time of the commencement of the action, and under such circumstances the tenant in the absence of any express stipulation on the subject cannot set up the landlord's breach of contract as a defence to his claim for rent, but must proceed by way of cross action. This doctrine is approved of in *Hart v. Windsor*, 13 L. J. Exch 129, and any other doctrine would lead to the inconvenient consequence that by proving a breach of contract on the part of the landlord the tenant might retain the land rent free. The answer to the first question must therefore be that (subject to a set off of any sum that might be found due on the counterclaim) the plaintiff is entitled to recover from the defendant the sum of 340 yen for rent of the premises from the 1st of July 1873 to the 30th of June 1876.

The question of the penalty of two per cent however depends upon different considerations. I have directed it to be re-argued, but it has been agreed that judgment should in the meantime be delivered on the other points. The next question to be now considered is therefore the defendant's counter-claim. As bearing upon this counterclaim copies are admitted of the following documents:

1.—Treaty between Great Britain and Japan dated 26th August, 1858, as set forth in a Book entitled "Treaties and Conventions, &c.", and the following documents also set forth in the same book, namely:—

2.—London Protocol, dated 6th June, 1862.

3.—Convention of 29th December, 1866.

4.—Arrangement for establishment of Foreign Settlement at Hiogo and Osaka, dated 16th May, 1867.

5.—Arrangement for Settlements of Foreigners at Yedo, dated 26th November, 1867.

6.—Further Arrangement relative to the Foreign Settlement at Yedo, dated 4th of May, 1870.

7.—Conditions of the public sale of the leases of land.

8.—Form of title deed for Foreign Settlement, Yedo.

It is also admitted:

1.—That the plaintiff stands for the Japanese authority or authorities referred to in the title deed and above documents.

2.—That a large proportion of the foreigners in Yedo have, during the past four years, as a matter of fact, resided out of the foreign concession at Yedo, although this has not been rendered necessary by want of accommodation inside the concession; and this with the knowledge of the plaintiff.

Upon this counter-claim two questions are raised:—

1.—What is the agreement which the Japanese Government has entered into with respect to the residence of foreigners in Yedo as contained in the documents before mentioned?

2.—Is the defendant entitled to sue upon that agreement or to set it up by way of answer?

As to the first question, the construction which is contended for on behalf of Mrs. Blockley is that it is an agreement that foreigners should not be allowed to hire houses or reside in Yedo outside of the limits of the foreign concession. Counsel for Mrs. Blockley admitted that there is no express agreement to this effect, but he argued that there was such an agreement by implication, that is to say that the Japanese Government, in agreeing that foreigners might live within certain limits, impliedly promised that they would not allow any foreigners to live outside these limits. I am of opinion that the construction here contended for cannot be sustained.

Counsel referred to certain facts as supporting his contention, but he did not show how they supported it. We are therefore left to conjecture in what way these facts might be supposed to favour his views. He argued that in accordance with the maxim *expressio unius est exclusio alterius* the mere fact of fixing limits at all was in favour of his contention. But it seems to me that to state this proposition is to refute it. The proposition is this, that the Japanese government by promising to allow foreigners to live within certain limits impliedly promised not to allow foreigners to live outside those limits. This contains a palpable fallacy. The implication is that the Japanese government did not promise to allow foreigners to live outside those limits, but this is a very different implication from that contended for. He then referred to the historical fact which appears clearly on the documents admitted, that until the limited permission was given no foreigner could reside in any part of Yedo. But how this supports his contention I am at a loss to discover. The only construction I can put upon it is totally opposed to this conclusion. It would appear to me that such a conclusion could only have been supported on the ground that the object of the treaties and arrangements was to impose restrictions upon foreigners while the fact alluded to shows that the object was to confer privileges upon them. What is the position of the Japanese government in view of this historical fact? It appears to me that, before entering into the Treaties of 1858 and subsequent years the Japanese government, like every other

government, had full power to allow foreigners to live freely within any part of its dominions. It did not choose to do so, but allowed only a Dutch settlement at Nagasaki. By the Treaties it conceded to the subjects of the Treaty Powers the right to live in certain definite places, and by the same Treaties it agreed separately with each of the Powers that if at any future time other concessions were given to one power the same should be enjoyed by each of the others. So far there is nothing whatever to indicate that the Japanese Government had abdicated its right to allow foreigners to live in any city, port, or place outside the cities, ports, or places named in the Treaties:—all it had agreed to was that, if the subjects of one nation were allowed to live elsewhere the subjects of all other nations having Treaties containing the "most favoured nation clause," should enjoy the same privileges. This view is confirmed by the provisions of the London protocol of 1862, which are sufficient to show that the opening of new ports and cities was considered a privilege to be gained for foreigners from the Japanese Government, and in no way, either there or anywhere else that I know of, is the keeping of them closed looked upon as a right which foreigners had acquired. And as the Government, after the conclusion of the Treaties, retained the right to allow foreigners to live in other cities, ports or places than those named in the Treaties, so it appears to me that after making the arrangement for the Settlement of Foreigners at Yedo, and after fixing, in concert with the Foreign Representatives, the limits for the foreign settlement, it still retained the right to allow foreigners to live outside those limits, subject only to the condition it had imposed on itself by the most favoured nation clause. We are asked to imply that it had surrendered that right. But I have failed to find any ground whatever for such an implication. There seems to me no more reason for coming to the conclusion that the Japanese Government by agreeing to allow foreigners to live within certain limits within which they could not before have lived, had surrendered the right to allow them to live outside those limits, than there is for the conclusion that, by agreeing to allow foreigners to live at certain ports and cities at which they could not before have lived, it had surrendered the right to allow them to live at other ports and cities. Counsel then referred to what he assumed to be a fact that at the present day (except in Yedo) no foreigner is permitted or does live outside the concession in the other ports of Japan open to foreigners. But this fact is not admitted, nor is it to be deduced in any way from the documents put in, and I may add that, if I were allowed to make use of my own knowledge, I do not know it to be true. It does not appear to me that it would support the conclusion for which Counsel contended, but it is not necessary to take it into consideration.

Counsel then referred to the concluding paragraph of Article II of the arrangement of May 4th, 1870. That paragraph is:—

When all the ground within the blue line shall have been occupied by foreigners, the settlement shall be extended to the canal marked D. D. D. on the annexed plan.

Counsel contended that this paragraph, coupled with the general tenour of the other documents put in, plainly indicated that the settlement was not to be extended until all the ground assigned for the use of foreigners was occupied by them. Counsel was not specific as to whether this indicated that the Japanese Government had promised that it

should not be extended, or only an intention on the part of the Government that it should not be extended. So far as a promise is concerned, I have already spoken as to the general tenour of the documents. Let us consider the paragraph. It is to be observed that the ground there spoken of as being within the blue line is thus referred to in the arrangement of November 26th, 1867:—

Moreover as the Japanese Government are willing that foreigners of those nations having treaties with Japan should enjoy at Yedo the same facilities for leasing ground and building houses that are secured to them by Treaty at the ports, the Japanese Government are prepared to lease to foreigners for building purposes that portion of the land on the same plan which is coloured blue.

Here the leasing of the land in question is spoken of as a facility given to foreigners, and, as I have already said, I can find no implication from the giving of a facility not previously enjoyed, that the grantor has bound himself to give no more facilities.

But, perhaps, Counsel only meant to say that the paragraph and the general tenour of the documents indicated an intention on the part of the Japanese Government, and it may be an intention too on the part of the Foreign Representatives. But if so, what legal obligation has the Japanese Government come under in respect of such intention? An expression of intention to be gleaned from the tenour of documents or from a particular phrase in one of them without any promise expressed or implied to adhere to that intention creates no legal obligation to adhere to it.

The learned Counsel also alluded to the fact that Mrs. Blockley's occupation of the ground was a matter of bargain and sale, that a consideration was paid for the purchase of the lease and for the use of the land. In order to consider the bearing of this fact, it may be well to look at some of the particulars of the arrangement. We find in the arrangement of the 26th of November, 1867, a provision for leasing of two sorts. Foreigners were to be at liberty to rent houses from Japanese subjects, and there was to be a settlement, the ground of which was to be let by the Japanese Government, and it is in this settlement that the land now in question is situated. But we find from the further arrangement of the 4th of May, 1870, that the sale of the leases of this latter ground was not to take place until the 2nd of June, 1870, so that, until June 1870, foreigners living in Tsukidji were living in houses hired from Japanese subjects. So far we have come to the conclusion that the Japanese Government had entered into no undertaking in favour of these lessees, that other foreigners should be prevented from hiring houses outside of Tsukidji. Does the circumstance that the Japanese Government leased the ground make any difference, or is there anything special in the arrangement for the leasing of this land which would create any obligation in favour of the lessees of this land that the lessees of houses elsewhere in Tsukidji did not enjoy? Counsel has referred to no express provisions in the arrangement concerning this land, which would create on the part of the Japanese government any greater obligation towards the holders of it than towards the other residents in Tsukidji. I have alluded to the words by which the arrangement concerning this land is introduced, that foreigners

might enjoy the same facilities for leasing ground and building houses that are secured to them by treaty at the ports.

And I have stated the inference I should draw

from them. Is there anything, therefore, in the circumstance that the Japanese Government are the immediate landlords to create such an obligation as is here contended for in favour of their tenants? I conceive there is not. It is difficult to find an exact parallel in ordinary life. But we may suppose the case of a private individual who had a park, or similar place on which no houses have hitherto been built; and he enters into an agreement with the inhabitants of a neighbouring town to lay out part of it in villa sites, and puts these sites up for sale to them. Would any covenant or promise be implied in a bare lease or grant of those sites that the landlord would allow no other buildings in their neighbourhood? The present case is different, but the difference is not in favour of the lessee. What we should here have to imply would be that the Japanese Government had, by making a grant or lease of land to which it had an absolute right, covenanted or promised with respect to the disposal of land in which it had only the right of eminent domain, and it appears to me too clear for argument that no such covenant or promise is to be inferred. Whether we look, then, at the Japanese Government in the light of ordinary landlords or in the light of a Government letting a part of the public domain, it seems to me that it cannot be considered to have made any such covenant or promise as is contended for.

And this brings us to the next question, —Is the defendant, even if the agreement is such as she contends for, entitled to sue upon it or set it up in this court?

Having arrived at the conclusion at which I have arrived in regard to the construction of the agreement, it is not necessary to consider this question. But I may say that it appears to me that an agreement by a Government to allow or not to allow foreigners to reside on ground over which that Government has only the rights of eminent domain is unquestionably an act of state, and the cases are clear that such an act of state of a foreign Government is not to be adjudicated upon in an English Court.

The counter-claim being disallowed, it follows that the plaintiff is entitled to recover from the defendant the sum of \$340, and it is adjudged that it be paid within ten days from this date. There will be no costs, as the plaintiff has disclaimed them.

I ought to say something of the delay which has taken place in delivering judgment. The questions here decided do not appear to me to present any great difficulty in principle; but they had been decided differently in the United States Consular Court at Yokohama,—a Court whose decisions, although not binding on this Court, are entitled to every respect,—and some time has been taken by me to consider whether I may not be mistaken in my conclusions. But the greatest delay has arisen upon the question of the penalty of 2 per cent., which was scarcely touched upon at bar, and which has been reserved for further argument.

IN H. B. M.'S COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., *Consul*.
Thursday, August 30th, 1877.

Suriman, a Malay seaman of the P. & O. Str. *Sunda*, was brought up on the remanded charge of stabbing one of his fellow-seaman named Ketchill.

Owing to the indisposition of the complainant, the examination had to take place at the General Hospital.

Ketchill, warned to speak the truth, said: I remember Sunday, the 12th instant. I was on shore on that day. I was not in company with the prisoner. I returned on board at 6 p.m. I did not see the prisoner. I attended to the awnings. I was thirsty and had pumped some water to drink. While pumping this water I got a stab in the back. The accused stabbed me. I turned round and saw him. I fell down and saw accused running away. I had had no quarrel with him. I went on shore by myself and returned by myself. I don't know why I was stabbed. I cannot make it out. I cannot account for the Chief Officer stating that I had been fighting with the prisoner during the day. I have had no quarrel with any one on board the *Sunda*. I neither drink nor smoke, and live quietly, have no enemies, and have been on the *Sunda* a year and a half. I am a Lascar. There was nobody else near me when I was stabbed. I called out *Serang! Serang!* I am a dead man." The stabbing occurred at ten minutes to 9 o'clock. Probably it was in consequence of my cries to the *Serang* that the mate came to where I was. I had by this time been put on a box in the fore-castle. The doctor came at 10 o'clock. I cannot explain how accused came to stab me. I never had a quarrel with any one before. There was a lamp close by the pump, and it was shining enough for me to identify the prisoner after I had fallen as the person who had stabbed me. It was a dark night; there was no moon. Accused has been a year and a half on board the ship. All this time we have been friends on the whole: there has been no disagreeableness between us; we have shared and shared alike in food and in other allowances. I am paralysed and cannot eat anything and am likely to die here, and never return to Java. I only went on deck to get a drink: it was very hot. After that I would have gone down below. Accused said nothing after he had stabbed me, but ran away. I did not know that accused had afterwards left in a boat. I fell down after being stabbed, and was helpless. I cannot give any reason for this affair. I went on shore after him and returned after him. I cannot say whether accused was drunk or mad. When I returned on board at 6 p.m. I saw the assistant quartermaster. I spoke to nobody. I did nothing. When I returned it was raining. Nobody told me that accused had stabbed me. I saw the knife in the hands of accused after I fell down. It was bright enough for me to see the prisoner, and bright enough for me to see the knife. I received one stab in the back.

The prisoner declined to examine the witness, but denied having stabbed him, and asked for the knife to be produced. He was then sworn, and adhered to his statement that he had not stabbed Ketchill.

The prisoner was then committed for trial.

IN H.B.M.'S PROVINCIAL COURT.

Before A. A. ANNESLEY, Esq., *A. Consul, Judge*.
Hiogo, 25th August, 1877.

HENRY LUCAS and WILLIAM GREGORY SANDS,
(Assessors.)
L. KNIFFLER & Co. *versus* WILLIAM SINCLAIR THOMSON, Master of the British steamer *Atholl*.

Hiogo, August 22nd, 1877.

This was a claim for \$5,524.65 and Survey Fees, for damage to cargo; the contention of the plaintiffs being that certain sheet brass which they had sold to arrive at 30c. per lb. had been damaged by the fumes of chloride of lime.

Mr. Cruchley appeared for the plaintiffs and Mr. H. St. J. Browne for the defendant.

The Court desired it to be placed on record that the above suit was directed against the captain personally, and that the steamer, if now in port, was so entirely at the option of the Master.

This was endorsed by the attorney for the plaintiffs.

Mr. Browne made a remark in opposition.

The Court therefore called on the Master.

William Sinclair Thomson, sworn:

To Court:—When I came into the Consulate yesterday you informed me that my vessel was at perfect liberty to leave this port and that the suit was directed against me personally, and that the vessel need not be detained. You also informed me that if I found proper bail or security for any other person to conduct this case I was at perfect liberty to leave the port. I preferred to remain and defend the case myself. My Chief Officer holds a Master's certificate of competency.

Mr. Cruchley opened the case on behalf of the plaintiffs.

Carl Christian Bernhardt Ludwig Illies, sworn:—On Monday I requested the Captain and the Agents to attend at a survey on the brass sheets in the casks. The Captain and Mr. Macpherson, of Browne & Co., appeared; at the outset the Captain refused to have a survey held, saying that the outward appearance of the casks was all right. On further remonstrance on my part the Captain admitted that the one cask (marked No. 58) had lost the tin from the bung-hole. He would allow this to be opened and if the contents were found to be damaged by chloride of lime, the rest of the cargo (there are ten more) should be opened. Accordingly the one cask was opened. The contents, which should have been bright brass sheets, were found to be stained and spotted. After this we left the Custom House. In the presence of Mr. Macpherson I then again asked for a corroboration of the arrangement as to opening the rest of the casks, which the Captain and Mr. Macpherson gave. I at once sent for Mr. Sim, to come to the Custom House. He came, and having surveyed the contents, took eight pieces of the brass sheets home to examine them. He gave a written report and is here to give evidence.

To Mr. Cruchley:—Mr. Sim is a chemist at this port. The Agents of the S. S. *Atholl* are Messrs. Browne & Co. Mr. Macpherson is employed in the office of Messrs. Browne & Co. at this port.

Mr. Browne objected to the press copy of a letter, dated August 21st, from Illies to Browne & Co. being handed in by the plaintiffs.

The Court ruled that the original in the possession of Mr. Browne be handed in. (Original handed in by Mr. Browne and read by plaintiff's attorney; also net weights, bill of lading, and invoice handed in to prove ownership of goods.)

Examination continued:—The Captain refused opening the casks, because he said that the casks were in good condition,—no other reason.

Defendant had no questions.

To Court:—We have not taken delivery of the casks as yet. I did not examine the casks. I asked the Captain to examine the casks in my presence. I asked Mr. Sim to examine only one cask. The rest are not yet examined or opened. The goods have been sold to arrive at 30 cents per pound. I have documentary proof of this. The buyer is in

Court. The remaining ten casks were not examined because the Captain refused to do so.

To Mr. Browne, through the Court:—After receiving the report from Mr. Sim I did not ask the Captain to have the other casks examined.

To Court:—I only received the survey report at 11 a.m. and as all claims were advertised to be in before 2 p.m. I considered that I had not the time to consult with the Master.

To Mr. Sands:—The contract has not expired, by reason of a clause contained in the contract.

To Court:—The only reason that I consider the casks damaged by chloride of lime is by Mr. Sim's report on the one. I am quite willing to have the whole of them surveyed and take over the sound part.

Alexander Cameron Sim, sworn:—I have surveyed some brass sheets, by request of Mr. Illies, of Kniffler & Co. I surveyed them at the Eastern Custom House at Kobe. In examining the cask containing the sheets of brass I found that the bung-hole was quite open. On taking home the pieces of brass I submitted them to several chemical tests, and I found that the action of chloride gas produced the identical appearance upon a bright piece of brass as the samples which I found in the cask.

To Mr. Cruchley:—Chlorine gas and lime form chloride of lime. I am a chemist.

To Mr. Browne:—I can produce what I did to the brass, that is, I have my memorandum at home and I can bring them.

Mr. Sim retired to produce them.

Francis Tillman Hugo Kniffler, sworn:—I know about the consignment of brass sheets per *Atholl*. I am a party concerned. I am the contractor to purchase them. If the plates are according to sample I will take delivery. I have not yet taken delivery, because Messrs. Kniffler & Co. informed me that the goods were apparently damaged. I suppose that was the sole reason. I do not know of my own personal knowledge that the goods were damaged. I was present at the survey of one cask. I noticed that some of the sheets were damaged,—spotted. The Captain of the *Atholl* expressed his willingness to open the remaining ten casks if one was found damaged by chloride of lime. I was not present when the Captain was asked to do so after the one had been opened.

To Mr. Browne:—I saw the commencement of the opening of the one cask. The cask was tin-lined and packed in shavings. Part of the tin was soldered. The upper part was not soldered, I think; it was bending over. The lower part was soldered. In fact, to get at the brass we would have to open the solder. We had to cut through solder to open the case. I contracted at 30 cents per pound to supply the goods. The limit of Messrs. Kniffler & Co. was to the 10th of this month. In point of fact the contract had expired, but I have sworn that I would take delivery of them. I have compared the goods with the sample I bought from. I compared them on the 20th, when the goods were opened. My contract is for the goods to be delivered at the Osaka Station. I found that they were not according to sample. I have not examined any of the other casks. I have had one previous transaction in this article. The packages were exactly the same.

To Mr. Cruchley:—This is the sample. (A sample exhibited.) The cask I examined was not equal to sample produced. This is the sample that I was purchasing by. There is another sample. There are two. This is one of them. I am sure that the upper part

of the tin in the cask was soldered, but as to the lower part being air-tight I could not say, I am sure. (Witness exemplified his meaning with a piece of paper and an ink-bottle.)

To Court:—I do not know how the damage was done. The other ten casks were apparently in good condition. I saw no damage on the tin lining.

Alexander Cameron Sim, examination resumed:

To Mr. Browne:—I cannot find the little notes I had, but from memory I will explain as near as I can. When I first received the brass I placed it for some time in a box with chloride of lime, but thinking that the chloride of lime was slightly old I placed the same pieces in another box and applied the fumes of chlorine gas to the metal. I allowed it to remain all night and in the morning I found similar spots and discolorations as to what I found on the original specimen.

To Mr. Browne:—These were the only tests. Mr. Illies and myself took pieces out of the cask. I tested some of the original sample and also some taken from the cask. I did not try any experiment to find out whether anything else had damaged the brass. For the first test with chloride of lime it had little or no effect. I concluded the gas had evaporated. It is possible that something else might have damaged the metal. I did not try anything else to see if any other material would produce the same effect. Mr. Illies, I think, asked me to survey a cask of brass which had been opened and found discolored *ex ship Atholl*. He also told me that there had been chloride of lime in the ship. My endeavors were entirely confined to testing for chloride of lime, because I could see that damage had been done by gas of some kind. Chlorine gas is present in many other substances besides chloride of lime. It is possible, all chlorine gas is likely to come from any other chloride as well as chloride of lime,—chloride of sodium, for instance—sufficient to spoil any brass work. In sea water there is a large proportion of chloride of sodium. There is a certain quantity in sea air. Bright metal, if exposed to the sea air, might present the same appearance, but not, I think, to the extent that this had. It would have to a certain extent. There is chlorine gas, though not in the form of gas, in sea water; it requires some other process to bring it out, though. If you were to make chlorine gas in this room, it would find its way all through the house. To take the case of a cask of chloride of lime stored at one end of the ship, 240 feet long, and metal at the other end, with bulkheads and cargo intervening, I should say if the hatches were left open and a wind was blowing I consider it quite likely that chlorine gas would find its way to the metal. Some goods are not susceptible to it so much as others. Metals are corroded by sea air. The brass was merely discolored, not corroded. I made out a survey report and charged a fee of \$10.

To Mr. Cruchley:—The discoloration would, I think, impair the market value. Kerosene would not affect metals in the same way; hydrate of chloral, sulphuric acid would not either. No effect would appear of the chlorine gas on the outside of the cask; if it came into contact with unpainted wood it might bleach it. I do not know whether the casks were painted. I am not interested in this case.

To Court:—I am positive that salt water would not cause the damage in this case, the shavings and packing being perfectly dry. I have not experimented upon the wood. I

did not particularly examine the cask. I found the copper so damaged in my opinion as to be unsaleable: that is, if I made a contract to take copper as the sample, I should refuse this, as in some places it is perfectly black. I examined eight pieces from one up to five pounds weight. I took some from the middle of the cask. I have seen the other casks. They are in good condition to all appearance. I only examined the one cask. The Captain was not present. Mr. Illies and Mr. Oestmann were there.

To Mr. Lucas:—The cask was opened before I arrived. Opposite the bung-hole and upon the tin of the cask I noticed a little white crust. I did not see the tin which had been over the bung-hole; the others are all tinned over the bung-hole.

To Mr. Sands, through the Court:—It is quite possible that the stains may have been on the brass when shipped in London.

To Court:—The fumes would have little effect on the wood, but a slight hole in the cask would do for the gas to enter.

To Mr. Browne, through the Court:—What I mean by unsaleable is I do not think it is worth the contract price. It is quite possible the contents of the remaining casks may be in good condition.

Edward Byrne, sworn:—I am a marine surveyor and broker. I have seen eleven casks marked J. B. & Co. I considered them to be in good condition. They bore no marks of exterior damage. Ten were new casks, one was an old dilapidated cask, but there was no appearance of any damage having accrued to the casks during the voyage.

To Mr. Cruchley:—I do not know to whom the casks J. B. & Co. belonged. I held a professional survey upon the casks but not upon the contents. I consider that the casks were landed in good order and condition. I do not know what tendency the one cask being old would have upon the contents. It shewed no signs of undue pressure during the voyage. I do not know what effect chlorine gas would have on metals. I held a survey at the instance of the Master of the *Atholl*. I made a written report. I handed it in to the Captain of the *Atholl*. (Report called for by plaintiffs and handed in and read.) I have no chemical knowledge as to the effect of chlorine gas upon metal.

To Court:—I know nothing about one case being opened.

Matthew Townsend Bethune Macpherson, sworn:—I recollect going to the Custom House about a cask of brass sheeting. Messrs. Kniffer said they wanted them opened and examined, and I said that I would ask the Captain to do so, at the same time saying that I thought he would not, as they were in perfect order. The Captain agreed with me as to their being in perfect order, and refused to open them. Nothing further passed except that I said to Messrs. Kniffer & Co. that I considered that the goods were in perfect order and ought not to be opened. I never made any arrangement for the opening of any of the casks. I strongly objected to it. I certainly did not ever make arrangement that if Mr. Sim pronounced one cask to be damaged by chloride of lime to have the remainder opened.

To Mr. Cruchley:—I certainly did not agree that the casks should be opened if found to be damaged by chloride of lime. Mr. Illies did not request it in my hearing. I saw the one cask casually—not particularly—I was not there to examine it particularly. I was at the Custom House only to look at the

casks. When I say that the casks were in good order, my judgment was based on the outside of the casks only. My casual opinion as to the state of the casks is that they were not damaged at all. Mr. Illies said he meant to have a chemist's opinion upon the condition of the cask. This was the last he said. He did not say that he intended to have a chemist's report upon the remainder of the casks. I made no answer. I do not know the effect chlorine gas would have upon metals. From what I have seen of the metal I could not say that the metal was not damaged by chloride of lime.

To Court:—I should have taken delivery of the casks certainly from their outside appearance if I had been a merchant.

To Mr. Cruchley, through the Court:—I did not hear the Captain promise to have the remainder of the casks opened, if one were found to be damaged by chloride of lime.

The Court then adjourned till the next day, and the Captain having decided to take the *Atholl* on her voyage, Mr. Browne gave the required bail bond.

23rd August.

Mr. Cruchley called for the bail bond. (Produced.)

Mr. Browne addressed the Court on behalf of the defendant.

Mr. Cruchley addressed the Court on behalf of the plaintiffs.

The Court then adjourned.

JUDGMENT.

Finding.—The Court is not satisfied with the results of the hearing in this case. The hurried way in which the case was set down for hearing no doubt precluded further and more conclusive evidence from being adduced. Therefore the Court, in accordance with Rule 100 of the Order in Council, 1865, hereby directs that a new trial of this case shall take place, and that the best scientific evidence procurable be placed in the possession of the Court, and that this scientific evidence (which should consist of at least two competent witnesses) be extended to the whole of the contents of the eleven casks mentioned in this case.

The Court would, however, at the same time suggest to the plaintiffs and to the defendant that this is a case which might very properly and speedily be settled by arbitration.

The assessors assented.

Mr. Browne, on behalf of the defendant, prayed that the order for a new hearing may be delayed for three or four days, to enable him to decide what he may do in the matter.

His Honour pointed out to Mr. Browne that the proper course to pursue would be for him to file a motion, supported by an affidavit, which could come to be heard so soon as he choose.

The plaintiffs, by Mr. Cruchley, consented to delay in filing their new petition for the space of four days, in order that the defendant may file his motion.—*Hogo News*.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Acting Consul-General.

Saturday, September 1st, 1877.

H. MILLS vs. —. HAGARTTY.

This was an enquiry into the circumstances attending the claim of the plaintiff for damage done by the defendant.

It appears that, on the night of the 23rd of August, defendant, in company with an-

other person, entered plaintiff's house and called for drinks. An altercation took place, and Hagartty threw some tumblers about, breaking a bottle of liqueur, a pane of glass, five tumblers and a mirror. For this damage plaintiff sent in a claim the following morning to the U. S. Consulate for \$43.

Defendant is a machinist on board the *Alert*; and on the claim being presented to him by the Deputy Marshal, he immediately paid it, though, he said, he knew nothing of the affair. During the day it came to the knowledge of Mr. Acting Consul Denison that the mirror had been broken before, and the result of this was the enquiry to-day.

George Henry Thompson was sworn, and testified to the damage done by defendant. The mirror, he said, was a large one and had been cracked before, but defendant knocked a large piece out of it.

William Cockland gave similar testimony, only that he did not know that the mirror was previously cracked.

G. W. Elmer, Deputy Marshal of the U. S. Consulate, was sworn and said that, on instructions received, he proceeded to Mr. Mills' residence on the 24th of August, to enquire into the particulars of the damage alleged to have been done the previous night by the defendant. He was shown the mirror, which had a crack across it from the right hand corner at the top to the left corner at the bottom. This crack he noticed some two years ago, and it was always covered over with a piece of ribbon. In the centre of this crack a piece had evidently been recently knocked out. The part broken was about seven inches by three.

His Honour said it was plain the mirror had been damaged before defendant threw the glass at it, a circumstance which had not been mentioned in the plaintiff's petition.

Judgment reserved.

Friday, September 7th, 1877.

J. GARGAN vs. NORMAN WIARD.

The plaintiff claimed the sum of \$202.15. Defendant admitted owing \$2.15.

John J. Gargan, sworn, said:—I am the plaintiff in this action, and am an engineer by profession. I was engaged by defendant on the 10th of May. He said that I was to hold myself in readiness to proceed to Yokoska with him at any moment, and not to engage with any one else. He said he was daily expecting an order from the Navy Department, but did not know when it would come; that they were preparing a house for him; and that as soon as it was ready he was expecting to go into it. Previous to his going to Yokoska, Mr. Tanaka, the interpreter, came to me, and said that there was some misunderstanding about the furniture, and that was why the defendant was delayed in going to Yokoska.

Defendant objected to this evidence.

Mr. Wiard told me that he was obliged to get some furniture to take with him. A few days before he went to Yokoska, plaintiff was engaged looking about the place for furniture. He was to see if he could procure it and pay for it by the month. He even went to Mr. Moss, but Mr. Moss would not let him have any unless he paid cash for it.

Mr. Wiard again objected to this evidence.

Witness continued:—For three days before going to Yokoska I was engaged looking about for furniture for defendant. On the 26th of May I returned from Yokoska, and

on that and the following day, I went to Chinamen to see if any furniture could be obtained on loan. On the following Monday morning, seeing that he could not get any furniture, defendant asked me if I could not let him have some until he could get some elsewhere. First he said he had \$300, but afterwards contradicted himself and said he had no money. Seeing him in such a fix, I told him I would speak to Miss Gargan, as she would be better able to attend to that than myself. He expressed his gratitude, and said that he would not take the furniture unless he paid for the use of it until such time as he could get other. On that day and on the following he took what furniture he wanted, which he still retains in his possession, and has refused both verbally and by letter to return. Relative to the rent of 52 Bluff, there are \$50 due from the 9th of June to the 9th of July, and defendant told me I could go and do my worst with regard to it. From May 10th to June 8th I claim salary at \$5 per day. I told defendant that, as the wages were not forthcoming, I could not afford to waste my time. He said he would see and get some money in the course of a day or two, and would give me all he could. On the 12th of June I went to Yokoska again about the money, and he again promised to let me have some in a few days. On the 14th or 15th I again saw him, and he said he expected money on that day and would give me some. I left the bills against him at Mr. Langfeldt's, and saw Mr. Langfeldt give them to defendant. He admitted to me that he had received the bills, and made no objection to them, except with regard to the furniture, the price for which he thought rather high; but said he could not part with the furniture under any circumstances just then. On the 16th of July defendant answered an application that I had made for payment. (Letter put in). When I engaged myself to defendant I did so under the expectation that I should be paid every month.

To defendant:—The contract you made with me for my services as an engineer was a verbal one. After I left I asked that the contract might be reduced to writing. There was a written contract after I left. Only one copy of the contract was made. (Contract put in.) That contract was written after my first engagement terminated. The first day I entered the dockyard to perform service for you was Monday, the 20th of May. You had me at your service if you wanted me. I was not of course in the dockyard while I was looking for furniture for you, but I was in your service and engaged to go there. Our relationship was always friendly. A portion of the furniture you took to Yokoska belonged to the house you rented from me ready furnished. I believe you had a dining table valued at \$5, and some chairs which did not belong to the house you rented—Miss Gargan can tell you better. The toilet set of four pieces was taken down for myself, but when I left it was left behind for the use of Mr. Reimers. The four pieces were not made up by one with a piece broken out. I valued the toilet set at what it cost me. I rendered that bill (produced) with others to you.

Mr. Wiard said that he wished His Honour to understand that he had had some ribs broken a few days ago, and was unable to deal with the case as he should like.

His Honour:—You can have it adjourned if you like.

Mr. Wiard:—Thank you, but as it is

troublesome for me to attend, I prefer going on with the case.

His Honour:—You can take a seat, Mr. Wiard.

Cross-examination of Mr. Gargan continued:—The labours I had to perform at Yokoska were not laborious. I was at your service to do what you required me, and volunteered to go inside boilers if necessary. I went in one boiler, but could not get to the far end as it was too small. A native engineer also went into the boiler. You communicated with the native engineer through me. I did the work to your satisfaction. The native engineer understood some English. I might have been impatient with him, but did not call him a monkey in Japanese.

His Honour:—What does all this tend to, Mr. Wiard?

Mr. Wiard:—I wish to show your Honour that the reason Mr. Gargan left Yokoska was in consequence of his calling the officers foul names; and that he was therefore not in favour with them.

Cross-examination continued:—I am not aware that the engineer complained to you about my conduct. I have, perhaps, as high an opinion of the abilities of some of the native engineers as you have. I don't recollect ever giving my opinion in writing relative to their abilities, and I don't see what such a question has to do with my case. I never apologised to you for having done so—I think you must be dreaming.

Anna Teresa Gargan, sworn, said:—I was present when Mr. Wiard engaged my brother, which was on the 10th of May. Defendant said he wished my brother to accompany him to Yokoska. My brother said that he was about to apply to the Mitsu Bishi, and defendant said that he did not want him to make the application, as he wished him to be in readiness to accompany him to Yokoska. My brother said:—"Well, if you call it an engagement, all right, I would as lief work for you as any one else." Defendant said he should go to Yokoska in two or three days. A few days afterwards defendant came to my brother, and said that he had been put to some trouble with the Japanese, as they promised to furnish him a house, but now the Japanese told him that he had to furnish the house himself. A short time afterwards he came again, and said that he was put about with regard to the furniture, and asked my brother if he knew where he could get any by the month. My brother said he would go and see Mr. Moss, as he was the only person he could think of.

Mr. Wiard:—Your Honour, is it proper to take testimony relative to a written contract?

His Honour:—It is for you to object.

Mr. Wiard:—I do object.

Witness continued:—Defendant took the upper part of No. 52 from me at \$50 per month, for three months, the rent to be paid in advance. Defendant in his answer says that he has been refused admittance to the house, but this is not true. Two months' rent has been paid, but I had to wait to near the end of the second month before he paid that month's rent. I spoke to him about re-engaging the house; and he said he would have to re-engage it. He said that a certain person owed him \$300, and when he got that he would pay Mr. Gargan \$200. With regard to the furniture, some of it was taken by him from the ground floor. Mr. Wiard said he was willing to pay handsomely for what furniture he required.

Recess till 1.30 p.m.

On the Court resuming its sitting,

Anna Theresa Gargan was cross-examined, and, in answer to questions put by defendant, said:—I am interested in this case, but am not the plaintiff—merely a witness. You and I and my brother were certainly very friendly at first, though you were a perfect stranger, I never having seen you but once. We are still friendly so far as I know. I have not used any expressions towards you which would indicate that we were not friendly. I went to Yokoska to demand my furniture from you. I asked permission to take charge of the furniture which I had lent you.

Defendant (rising from his seat):—Now, Miss Gargan, I desire you to tell in a categorical manner, in what way you demanded the furniture.

Witness:—Very well, sit down please, and I will. I informed you that I had come down with a right to take away the furniture. I told you that, as I wanted to relet my house, I wanted the furniture. I have a power of attorney to act for Mr. Gargan in his absence.

Defendant:—Produce that power of attorney.

Witness:—I have already produced it to the General, and it is not necessary to reproduce it. It is at my house.

Defendant:—Your Honour I must see that power of attorney.

The power of attorney was sent for.

Cross-examination of witness continued:—I went to Yokoska on the 30th of July.

His Honour:—What has all this to do with the case?

Defendant:—I wish to show that this lady came down to my house and began to fling my furniture about as if—as if she were not in the most sober condition.

Witness:—Oh! Mr. Wiard. How can you say so? Did not I ask you for the furniture?

Defendant:—You are not questioning me.

Witness:—O, but I am.

His Honour:—The plaintiff will have the opportunity of asking Mr. Wiard any questions by and by.

Cross-examination of witness continued:—You took what furniture you wanted from the lower story. You were told this before, and I don't see what you want to be told it again for. I don't know how often you were in the house. I had nothing to do with your occupying the rooms. You hired them from me, and I had nothing to do with your occupation of them. I have been in your rooms during your absence, as you desired me to air your clothes, and they would be rotten now if I had not done so; and I dare say you will find them all right when you want to take charge of them. I don't know how many nights you slept in the house.

Defendant:—What do you mean by saying that you had a right to take these things from Yokoska?

Witness:—What do you mean? You have too many "rights;" if you will explain yourself I will answer the question. I informed you on that occasion that I had an order from General Van Buren to take the furniture.

Defendant:—Your Honour, I demand that this order from General Van Buren be produced.

Witness:—I did not tell you that General Van Buren had given judgment against you. There was no one in the room with us: I don't know who was in the house. When I went to Yokoska I went for the rent or the furniture.

Miss Gargan's power of attorney from her brother was here produced, and the defendant said that he wanted to see if Miss Gargan had exceeded the limits of that power of attorney by letting the house to him.

Cross-examination of witness continued:—I don't know when you frequented the rooms last. I never informed you on the 14th or 15th of July that the house had been re-let. You preferred to take the large dining room table to the small one.

Plaintiff recalled:—I did not say anything to your servant prior to the 19th of July, that you no longer occupied the house. Mr. Reimers came to me, but I told him that I did not want to have anything to do with him.

Plaintiff here put in a document from Mr. Moss, the statements in which defendant said he was willing to admit.

A Chinaman was called by plaintiff for the purpose of proving that he, plaintiff, went to look for furniture for defendant, but as the latter admitted this the witness was not examined. In answer to a question put by defendant, witness stated that a better toilet set could be purchased in Homura for two dollars than the toilet set sent from No. 52 to Yokoska.

Norman Wiard, sworn, said:—I am the defendant in this case, my name is Norman Wiard and I reside at Yokoska. As to the month's rent, I had a lease of the house, 52 Bluff, at \$50 per month. In the meantime I entered into a contract with the Japanese Government, under which I was to be furnished with a house at Yokoska. I learned that the house was not a furnished house. I caused enquiries to be made as to what it would cost to furnish the house. Being very much occupied at the time with matters of greater consequence, and having the most intimate relations with Mr. Gargan, he, Gargan, volunteered to ascertain the price by paying which I could obtain the lease of furniture. His report to me was to the effect that the furniture could not be leased, as all the parties had it only for sale. The result was that Gargan agreed to let me take part of the furniture from No. 52, Bluff, if I continued to pay the rent for the house. Mr. Gargan was at this time quite familiar with the terms of my contract with the Japanese Government. He is an engineer and machinist, and as capable of ascertaining the time that would be required in fulfilling that contract as I was myself. In course of the negotiations, Mr. Gargan agreed to wait for payment until I had completed my contract at Yokoska. At this time Mr. Gargan hoped to make a contract to enter my employ as an engineer. I did, afterwards, close a bargain with him to enter my service, subject to one condition, viz: that he would be employed if Mr. Barry did not return, as I had made a previous bargain with Mr. Barry. Mr. Gargan became warm or cold towards me just in proportion as he thought the prospect of entering my employ was good or bad. When it was finally determined that Mr. Barry could accept the situation, Mr. Gargan intimated to me his great disappointment at the failure of our scheme, so I informed him I would engage him also. We had both agreed that it would be a great advantage for him to have this engagement with me, as during the time I was engaged at Yokoska, in designing, constructing and applying the invention in my contract with the Japanese Government, he, plaintiff, would become so familiar with the machine that he could take charge of it after I had left for the United States; and I agreed

with Mr. Gargan to do my best to get him such employment after my absence, to which condition he seemed to attach great value. In making my bargain with him it was finally agreed I should pay him \$5 per day. It was understood between us that he should remain till the end, or else his services would be of no value to me whatever, and I should have all my trouble in giving him instruction for nothing. Mr. Gargan was in my employ at the Yokoska naval yard 13 days altogether, less three days of absence without notice to me; and the only excuse he made for his absence was that he could not afford to work for me any longer and wait for his pay. I had the expectation of keeping the rooms at 52 Bluff, under the arrangement I made with Mr. and Miss Gargan, until the completion of my work in the dockyard. I thought that if I occupied the house and took some of the furniture to Yokoska, it would justify me in paying so much rent. I was not sorry that Mr. Gargan ceased to be in my employ at Yokoska, as I found him ill-natured and continually grumbling. The Japanese officials at the yard, who looked upon him to some extent as an assistant to myself, frequently complained to me that he addressed them in the most contemptuous manner: sometimes calling them "monkeys" in the Japanese language. One day the interpreter complained of him three times, and asked me to request him to address the officials in English, so that I might understand what he said. I requested him frequently to speak in English.

Plaintiff.—You are on your oath, mind, Mr. Wiard!

His Honour:—He knows that. What is the use of you making such remarks?

Defendant continued:—A day or two afterwards, Mr. Gargan apologised and said that he was very sorry, and it should not occur again. If Mr. Gargan charges me rent for the furniture and rent for 52 Bluff, he charges me twice over for the furniture. Mr. Gargan was not in my service at Yokoska before the 9th of June, when the contract was written.

Defendant remarked that he felt exhausted and would be glad if the case could be postponed.

Mr. Gargan asked that the case might be finished to-day, as he came all the way from Kobe to attend to it, and did not want to risk the possibility of losing his situation through remaining in Yokohama for a long time.

Adjourned till Wednesday next, at 10 o'clock.

IN THE DANISH CONSULAR-GENERAL COURT.

Before E. DE BAVIER, Esq., *Consul-General*.

Messrs. KOLVIG and VAN TORP, *Assessors*.

Monday, August 20th, 1877.

KAJI TAKIJIRO. *vs.* THE ESTATE OF THE LATE N. STIBOLT

On Saturday last Mr. Hall and Mr. Ness, addressed the Court on behalf of the parties they represented, and to-day was given the following

JUDGMENT.

The plaintiff in this case, Kaji Takijiro, a Japanese subject, claims to recover from the defendant, as executrix of the late Mr. Stibolt, the sum of \$831.75, alleged to be due to him by Stibolt for work done as a carpenter. The defence is non-indebtedness except in the

sum of \$55. The only proof produced in favour of plaintiff's claim, is a note book in which are set down different amounts making up the aggregate of the claims. There is no other proof whatever either verbal or documentary to show that the amount is really due except the statements of the plaintiff himself. In contradiction of these we have the statement made by Stibolt just previous to his death, that only the amount of \$55 was due. Under these circumstances, considering that it is impossible to have the evidence of Stibolt in full, that of the plaintiff cannot be received as satisfactory of the truth of his claim. The Court is therefore compelled to reject the claim and to give judgment only for the amount of \$55, admitted to be due. The Court therefore adjudges that defendant to pay the plaintiff within one week from date the sum of \$55 and costs of suit.

IN THE JUDICIAL COURT AT KANAGAWA.

BEFORE ASAINA KANSUI, Vice-President.

Wednesday, August 29th, 1877.

MESSRS. BUSCH, SCHRAUB & Co. *vs.* NISHIMURA KIMBEI.

Mr. Schraub represented his firm.

This was a claim for \$189, value of 30 pieces of cloth sold to defendant last April, or for an order compelling him to take delivery of the goods.

It appears that defendant purchased these goods and was to take delivery in a few days. He did not come, however, for some time afterwards, on which occasion he promised to send for the goods. Still it was the old story, he failed to fulfil his promise. About a fortnight ago defendant called on plaintiff and said he was willing to take delivery of the goods. He was conducted to the godown, and as soon as he saw the goods, he said they were spotted and so damaged that he could not take delivery and went away. Plaintiff did not deny that the goods were spotted when inspected on this last occasion, but asserted most positively that they were in good order when sold to defendant, and were in every respect equal to the sample supplied to defendant, and whatever damage they afterwards sustained was in consequence of defendant not taking delivery at the time the contract was entered into. Plaintiff stated that this was not the first occasion in which he had been served badly by defendant, and that he was determined not to let him off this time.

On the Court sitting His Honour asked plaintiff for the original contract, which was produced. Plaintiff said that the goods were sold on the 17th of April, when they were in perfect good order and condition. He was ready to deliver the goods. Defendant did not take delivery, and after the filing of the petition in the German Court, he came and said that he would take delivery and asked permission to inspect the goods. It was then found that the goods were stained, which had been the result of their being kept in the godown so long. Plaintiff maintained that he was not responsible for the damage, as the goods were lying in his godown at defendant's risk. Afterwards defendant offered to take the damaged goods at a reduction of \$1 per piece, which plaintiff refused. The statement in defendant's answer that plaintiff had offered to make allowance was untrue. The goods were not more liable to damage than other goods.

Defendant was now examined.

His Honour said that according to plaintiff's own statement the goods were not liable to more damage than other goods: consequently if they got damaged it showed they were not kept in a proper place. Moreover, it was always surmised in the case of a person selling goods to another who did not take delivery, that the seller agreed to the delay until such time as he filed a petition. And if any damage occurred to the goods in the meantime the seller was responsible.

Plaintiff argued that when he sold the goods to defendant they were in good and perfect order, and were lying at his own risk.

His Honour said that he would give judgment later, and if plaintiff did not like it, he could appeal.

Plaintiff said he was quite aware of that; and then complained because defendant's testimony had not been interpreted to him.

Defendant's evidence was then read, showing that he admitted that the goods were in good order when bought, so far as he knew. But he had not examined them, as plaintiff had not offered to let him see them.

Friday, August 24th, 1877.

G. W. MILLER v. NAKAYAMA GONJIRO & ANOTHER.

The plaintiff claimed the sum of \$500 damages sustained by the defendants not fulfilling a contract to supply lighters to ballast the steamer *Duna*.

From the plaintiff's statement it appears that the defendants are lighter agents, doing business at the English hatoba. On the morning of the 6th July, plaintiff paid to defendants the sum of \$17.50, being payment in full and in advance for lighters to carry one hundred tons of ballast from Oota to the M. B. S. *Duna*. He agreed, further, to pay for any detention that might occur when the lighters were loaded, as the M. B. Company usually paid the highest price for work done quickly, expense was no object and the defendants were aware of this and it was with malicious intent to deprive him of the work of the Company that defendants did not carry out their agreement to put the ballast on the *Duna*. When the \$17.50 were paid, it was with the understanding that the lighters would proceed to Oota immediately. Plaintiff engaged coolies and ballast on the morning of the 6th, and they remained idle all that day, waiting for lighters to go to Oota. On the following day defendants promised faithfully that the lighters should go to Oota, and coolies were again hired, but no lighters went. The next day plaintiff went to see why it was the contract was not fulfilled, and told them that the *Duna* was hourly expected from Shinagawa. They again promised as on the previous occasions, with the same result. This was on a Saturday, and on that evening the *Duna* arrived and plaintiff had no boats ready with ballast to send alongside owing to the deception of the defendants, and the result was the *Duna* had to take in cargo, as she could not wait for ballast and had to proceed on her voyage without any. A responsible person in the M. B. Company guaranteed that lighters should be engaged to ballast the *Duna* and the *Kumamoto Maru*. These lighters were obtained from the defendants and the person referred to is ready to pay for them on the settlement of this action, according to the decision of the Court. Plaintiff said that for the loss sustained to his reputation as stevedore, and the actual loss sustained through not completing his engagement to supply the *Duna* with

ballast, he claimed \$500, though he ought to have assessed the damage at \$1000, as he had lost the patronage of the Company. The defendants had not only broken their contract with him, but had used every possible means to prevent other boats being engaged.

As the plaintiff had more evidence to produce, the case was adjourned till the 30th instant at 10 a.m.

Thursday, August 30th, 1877.

On the case being resumed to-day, the plaintiff produced some documents showing his engagement with the Mitsu Bishi Company. A Japanese witness was also examined on behalf of the plaintiff, but he really knew nothing of the case, and eventually it turned out that he was not the right man. After some time, during which the plaintiff and his interpreter, the Court and its interpreter, became mixed up in a web of misunderstandings, it was arranged that two other witnesses should be called on behalf of the plaintiff. Another person was also required, but as no one knew his name it was thought there would be some difficulty in producing him.

Several witnesses were examined for the defence. Their evidence was to the effect that at 6 o'clock on the evening of the 7th they got an order to go to O-ota to load ballast. They went. One boat was loaded with 13 tons of ballast, when Mrs. Miller came on the scene and informed them that the ballast was not required. In consequence of this the other boats did not load. Next morning, they went to plaintiff and received the same answer to their enquiries as they had received the night before, viz. that the ballast was not required. They then claimed that they were entitled to some consideration for having loaded the boat, but did not get any and had to pay for getting the boat emptied.

Mr. Miller explained that when Mrs. Miller went to O-ota, only about 2½ tons of ballast were in the boat said to have contained thirteen tons, and that it was then too late as the *Duna* was going away early the next day.

Plaintiff's interpreter was then examined.

J. McGregor, was called and said that, on the 6th of July, he heard plaintiff and defendant making a bargain about some ballast for the *Duna*. This was about 10 o'clock, and defendant agreed to send one boat at once and five more boats at one o'clock. The amount to be paid was to be 17½ cents per ton; and if the boats were detained at night, double that amount was to be paid. Miller then went and engaged twenty odd coolies to load the lighters when they arrived at one o'clock. Witness was at O-ota till three o'clock, and the boats had not arrived up to that time. The following day witness was there and still no boats came. On Saturday afternoon Miller bought some ballast from a Chinaman, but the *Duna* went away without her full complement of ballast, and the captain was very angry. Miller paid the defendant \$17.50 in advance.

The case was then adjourned till Sept. 3rd.

Monday, September 3rd, 1877.

The Court explained to the plaintiff that the defendants were unable to attend the Court to-day, and so had appointed an attorney as their representative.

Mrs. Miller was then examined and stated that she had written the petition. The lighters that had been engaged were lying

loaded at the English Hatoba; and when requested to proceed to Shinagawa the coolies refused to go that day, as they had received no orders from their employers, the defendants. Witness went to one of defendants' houses for the purpose of ascertaining the cause of this, but he sent his servant to say that he was not at home, though witness knew that he was. About 60 coolies had been engaged and had already been sent to put the ballast on board the vessel. Captain Eckstrand and a Japanese Captain called at plaintiff's house about eleven o'clock at night, saying that they had received instructions by telegraph that the ballast was to be sent to Shinagawa. The next morning the lighters were unloaded, and about 9 o'clock they left the hatoba for Shinagawa, to ballast the *Kumamoto Maru*. The witness' testimony relative to the ballasting of the *Duna* was corroborative of plaintiff's evidence, with the addition that ballast had been purchased from a Chinaman, and was alongside that vessel on the Sunday morning.

Some Japanese witnesses were then called to support the statement made by plaintiff that Jiukichi and Gonjiro had prevented him from obtaining other boats; and that the lighters were not ready on Saturday night at 6 o'clock. Their testimony was contrary to what was expected by the plaintiff.

His Honor announced that, if possible, he would give judgment on the evidence already adduced; but if he felt perplexed on any point it might be necessary for plaintiff to attend the Court again.

Saturday, 25th August, 1877.

H. AHRENS & Co. vs. NODA SHIKODZO.

The plaintiffs claim the fulfilment of a contract on the part of the defendant, in which he had engaged to take delivery of one hundred lamp-posts, valued at \$2,300, but had failed to do so.

This case was brought before the Court last May, and it was then arranged that the defendant should have time given him to come to terms with the plaintiffs, and in the event of his not arranging the case satisfactorily another sitting was to take place. He did not exert himself to have the matter settled out of Court, hence the continuation of the case to-day. Defendant being a poor man, and really unable to take over the lamp-posts, the plaintiffs are anxious to have the decision of the Court in order that they may have a claim on the defendant's surety, a person in connection with the Tokio Gas Works. Defendant offered, in the interval, the sum of \$200. But as lamp-posts are not an article for which a market can be found every day in Yokohama, the offer was not accepted.

Plaintiffs stated that they had had several conversations with the defendant, but could not come to any arrangement with him. The order of the Court was made on the 10th of May, and as defendant did not call upon the plaintiffs, they wrote him a letter expressing surprise at his negligence, and a few days afterwards he called. They asked the Court that judgment might be given to-day, ordering the defendant to take delivery of the posts within a short time, and if he did not do so, that he might then be adjudged bankrupt.

The defendant having been briefly examined, His Honour said he would give judgment on the 5th September.

Wednesday, September 5th, 1877.

H. AHRENS & Co. vs. NODA SHIKODZO.

The defendant in this case contracted with the plaintiffs for a number of iron lamp-posts, but failed to fulfil his obligations: hence the present action.

The first hearing took place in May last, and was continued on the 25th of last month.

When the Court assembled to-day, His Honour announced that the defendant had been notified to attend, but had not done so. However, judgment would be rendered, notwithstanding his absence. The interpreter then read the following

JUDGMENT.

Defendant declares that Plaintiff is aware and recognizes himself that the goods arrived at a much higher price than what had first been estimated. However when the first writing was exchanged between the contracting parties the defendant declares having received from Plaintiff a written estimation, but that he, Defendant, can not find the document, and has unluckily no proof to show this, having returned it to Plaintiff.

Defendant further declares also that although he states that the price has decidedly augmented a great deal higher than the former estimation, this is only a verbal declaration, which he is not able to corroborate by written proof; but taking in consideration Defendant's statement and considering the documents handed by Plaintiff to Defendant, viz: Documents 1 to 3, it seems to be clearly shown that at that time Defendant was in want of these goods, and that consequently he engaged himself in contract to take delivery of same even in case of their arriving at a higher price than the first estimation. Thus whereas according to the above is supposed to be higher than the first estimation, Defendant has certainly a right to make any objections against the carrying out of this transaction.

The case being as above stated, Defendant is hereby condemned to pay without any delay to Plaintiff the amount still due as mentioned in document No. 1 being \$2,168.04 cts., and also the interest due thereupon according to contract.

In consideration of certain conventions existing between our two countries there are no process fees.

5th September, 1877.

YOKOHAMA SAIBANSHO.

Monday, August 27th, 1877.

ABDEL KADER vs. HASEGAWA HIKOTARO.

The plaintiff claimed the sum of 200 yen, money held in trust by defendant, who did not attend the Court to-day.

It appears from the evidence, that the plaintiff resides in Tokio. For the last twelve years he has been acquainted with the defendant and often transacted business with him and his father, who was formerly Mayor of a village near Yokohama. From time to time plaintiff, who was on the most intimate terms with defendant, deposited with him certain sums of money, giving him the right to use it free of interest, on the understanding that the money was to be returned when plaintiff wanted it. By October, 1874, plaintiff had deposited with defendant as much as 200 yen, and received a document, signed and sealed, from the defendant acknowledging having received that amount. On the 25th and 26th of January this year, plaintiff had four documents stolen from him,

and amongst them was the receipt for 200 yen. On account of this, plaintiff went to defendant and informed him of his loss and requested him to give another receipt. This defendant agreed to do, but said that owing to changes having taken place in the business, he was not in possession of his seal. Plaintiff requested him to give a document acknowledging the debt and to seal it with his thumb nail. This was done; and plaintiff at the same time informed defendant that he should require the money at the end of sixty days. Shortly after that, plaintiff was taken ill, and before he became convalescent defendant called upon him and gave him a proper receipt for the money, with his seal attached. Plaintiff noticed that the seal was a red one, while on the former occasion it was black, and he mentioned this circumstance to defendant, who said it was of no consequence, but if plaintiff liked he would put some thirty cent stamps upon it, which would make it all the more valuable. Plaintiff agreed to this, not thinking that defendant was designing to injure him. He afterwards applied for the money, taking a Japanese as witness. Defendant on that occasion acknowledged the debt, but pleaded inability to pay.

The witness referred to was then examined by the Court, and substantiated plaintiff's statement concerning defendant having acknowledged the debt in his presence.

His Honour remarked that, as the defendant was not present, it would be as well for plaintiff to leave his documents and they could then be shown to defendant if he called. If he did not call, judgment would be given in favour of plaintiff.

Shipping.

ARRIVALS.

PASSENGERS.

Per Frch. str. *Tibre* from Hongkong:—Messrs. Chiatellino, De Cristoforis, Foudra, Malfaza, Rossi, Hill Wurin and Sekie.

Per Jap. str. *Tokio-Maru* from Shanghai and ports:—Dr. and Mrs. Dönitz and child. Mr. and Mrs. Lilley, Mr. and Mrs. Jones, Mrs. Parrie, Miss K. Brown, Miss Brown, Mrs. Yoshida, Messrs. H. Kniffier, Lucas, Churchill, Robertson, Brown, Haswell, Metcalf, Vorwers, Pohl, Kog, Kirby, Prince Kaminomiya, General Naigo, 46 Japanese in the Cabin and 761 Japanese and 2 Chinese in the steerage. For America: Messrs. Reid, Thompson, Dunn and Rodewald.

Per Jap. str. *Hiroshima-Maru* for Shanghai and ports:—Mrs. Gould and infant, Mrs. Moriyama, Master Moriyama, Mrs. Otaki, Miss Oii, Mrs. Kato, Col. T. W. Knox, Mr. and Mrs. Hagi, and child, Messrs. Fujisaki, Hagi, Kajikawa, Kikumura, C. Dawson, U. M. Long, F. Keefe, Hatori, Aba, Matsudaira, Kitagawa, Uchida, Yngiyama, Masumura, Hayami, Furuga, Ohnaka, W. Lee, and G. E. Hagt.

Per Brit. str. *Oceanic* for San Francisco:—General T. B. Van Buren, U. S. Consul General, Mrs. Goodrich, Dr. Wills and ward, Capt. Lord, Messrs. J. Hadley, Marcus Samuels, Armstrong, J. F. Rodewald, A. F. Thompson, Frank Reid, and J. Dunn; 1 European and 87 Chinese in the steerage.

Per Am. str. *City of Tokio* for Hongkong:—Mrs. W. F. Gair, Mr. and Mrs. C. C. Williams, Messrs. S. Loring, F. Bowden; and 225 Chinese in the steerage.

Per German barque *Tai-Lee* from Hakodate:—Mr. A. Malcolm.

Per Brit. str. *Burmese* for Kobe:—Mr. Gaspar.

Per Brit. str. *Malacca* from Hongkong:—Lieut. C. E. Colahan, and 8 Chinese in the steerage.

Per Frch. str. *Volga* for Hongkong:—Prince de Montenuovo, Prince von Lichtenstein, Mr. Korbel, Revd. P. Vigowroux, Messrs. Rayment, Donsabés, Coler, H. B. Carnegie, E. Martin, Dupont, J. Lyons, C. Owen, and Maecel.

Per Jap. str. *Tokio-Maru* for Shanghai and ports:—The Hon. and Mrs. G. Wiley Wells, Judge and Mrs. Denny, The Revd. and Mrs. Fleming Stevenson, Mr. and Mrs. Davison and two children, Capt. and Mrs. Frank Dunn, Colonel Murier, Messrs. Alfred Lister, Marshall, Morris, Burns, M. Sameshima, Ando, Tripp, and H. Kniffier.

Per Jap. str. *Saikio-Maru* from Shanghai and ports:—Capt. and Mrs. Walker and 3 children, Mrs. Hussey and 5 children, Mr. and Mrs. S. Oku, Mr. and Mrs. M. Oku and 2 children, Messrs. Heits, Poate, Place, Glennie, Kelly, Davidson, Wilcox, Livingstone, Myers, Gargan, Roach, Ullmann, 25 Japanese and 2 Japanese Medical Officers; and 1 European, 1 Chinese, and 278 Japanese in the steerage.

Per Am. str. *China* from Hongkong:—Mrs. E. McLean, Miss F. McLean, Miss E. McLean, Mr. H. McLean, Major Emerson, Miss C. Grimstead, Mrs. Stephens, and Mr. Jacob Bell.

REPORTS.

The U. S. S. *Monocacy* reports:—Left Nagasaki on Tuesday, 28th, and Kobe on 30th ultimo, at two p.m. Experienced fine weather throughout the passage, arriving in Yokohama this morning at 4 o'clock. When the *Monocacy* left Nagasaki the *Kearsage* was there. H. M.'s S. *Egeria* was lying at Kobe; and the M. B. S. *Akitsu-shima-Maru*, was loading there for this port.

The German barque *Fetish* reports:—Left New York on the 12th of April. Crossed the equator on the 16th May in long. 23° W.; had moderate S. E. trades; passed the meridian of the Cape on the 21st of June in lat. 40.10 S. Had strong westerly gales while running the Easting down, and one hurricane during the first three days of July. Passed an American barque on the 5th of July in lat. 37.50 S. long. 76 E. with rudder damaged. Made Amsterdam Island on the 6th July; thence to Java Heads had strong easterly trades. Passed Anjer on the 24th July, and came up through Banca Straits with fine weather, and in the China sea had fresh S. W. winds to 21° North. On the 25th August when near Kurosima, experienced a typhoon from E. S. E., wind veering by East to North, lasting 20 hours. Ma o Rock Island on the 1st September, and arrived in port on the 2nd instant, making the passage in 142 days.

The American steamer *China* reports:—Sailed from Hongkong August 30th at 3 p.m., had N. E. winds and fine weather throughout, and arrived at Yokohama September 7th at 7.20 p.m.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

Imports remain actually without movement, and no change has taken place since the quotations given in our last. The barques *Fetisch*, with kerosene from New York, and *Parmenio*, with coal from Sydney, N. S. W., have arrived. Transhipped cargo ex steamers *Indus* and *Lombardy* from London, *Hesperia* from Hamburg, and *Tigre* from Marseilles, is to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—On the 30th ult. we quoted the market steady, and about that time a few purchases were made on easier terms than our last quotations; since the 1st instant, however, all is changed, buyers acting freely on a badly supplied market, the result has been a continued advance amounting to upwards of \$70 per picul.

The better classes of Hanks have been the most sought after, chiefly for the Continental market. Oshius have also commanded some attention.

The unsold stock does not exceed 700 bales, upwards of two-thirds of which are old silk.

Settlements for the period under review amount to 700 bales, arrivals being about 500 bales. Actual shipments to date amount to 3,152 bales, against 9,690 bales same date last season.

TEA.—Business during the interval since our last issue has been much restricted, settlements only amounting to some 2,200 piculs. Prices shew no change, but native holders are only offering inferior qualities, all desirable Teas being for the moment withheld from the market.

Our export from Japan now begins to show a falling off in comparison with last season, and unless injudicious and inflatory telegrams be received from the American markets, we expect that the export for the season 1877-78 will not equal more than 20 million pounds.

DESCRIPTION.								PRICES PER PICUL.	REMARKS.
SILK :—									
Mayebashi	Hanks 1	to 2	\$ 540 to 570	} Excited and higher prices demanded.
and	" 2	510 to 530	
	" 2½	480 to 500

DIED.

On the 10th September, at No. 9, Bluff, at 3 A.M.,
DAVID SCOTT, JR.

On the 14th September, at Shinbashi, Tokio,
JOHN ENGLAND, M.I.C.E., Principal Engineer, Imperial Government Railways, Tokio, aged 54 years.

Summary.

OUR last MAIL SUMMARY was dated the 8th instant, for despatch by the P. M. Steamer *China*, which left on the following (Sunday) afternoon. Since then we have received the following mails:—

Per O. & O. *Gaelic*, S. Fr'isco, 21 Aug., arrd. 11 Sept.
„ M. M. *Tanais*, M'seilles, 27 July, „ 11 Sept.
„ P. & O. *Sunda*, London, 3 Aug., „ 15 Sept.
„ M. M. *Volga*, M'seilles, 12 Aug., „ 27 Sept.

And despatched the following:—

Per P. & O. *Malacca*, for Southampton12 Sept.
„ M. M. *Tibre*, for Marseilles.....19 Sept.
„ O. & O. *Belgic*, for San Francisco20 Sept.

LATEST telegraphic advices from London are to the 27th instant.

As the interval between the departures of the *China* on the 9th, and of the *Belgic* which sailed on the 20th instant, was so small, we did not print a Summary for despatch by the latter vessel.

Owing to the change in the monsoon, and the consequent annual alteration in the dates of sailing hence of vessels of the P. & O. and

M. M. Companies, no mail has left this port for Europe this week. The P. & O. steamer *Sunda*, sailing on Tuesday, the 2nd proximo, resumes the service hence *via* Hongkong.

THE matter of most absorbing interest to foreigners during the past three weeks has been the outbreak of epidemic or Asiatic cholera. Official medical intimation of the visitation was first given on the morning of Monday, the 17th instant, and was not the mere thoughtless expression of one man's opinion, but the result of careful deliberation among several medical men practising in the Settlement, who came to the conclusion that to withhold the fact from the community would be, at least, imprudent. For some days before the notice was given, ample opportunity was afforded, in cases which had declared themselves among Japanese, of coming to a correct conclusion on this important subject. When once the fact was made known, prompt measures were taken by the Kencho authorities to disinfect the native town, to provide accommodation and treatment for native patients, and by sanitary measures generally to prevent as far as possible the spread of the epidemic. The foreign Consuls met; and, after consultation with the Governor of Kanagawa, a Board of Health was formed to look after the safety of the foreign Settlement. All necessary provisions have been made and precautions taken. Settlement and Bluff have been portioned out into districts, each submitted to the inspection of members of the Board of Health selected by lot; and the danger of the propagation of the disease among foreigners is reduced to a minimum. Some doubt having been expressed among the foreign community as to the reality, not of the existence of an epidemic, but of the name by which it should be called, owing perhaps to the undisguised incredulity of one practitioner, and the want of opportunity of two surgeons of foreign men-of-war to give an authoritative opinion, ten medical gentlemen, including the experienced Surgeons in charge of the British and American Naval Hospitals, have addressed a memorandum to the foreign community, stating in temperate language that the epidemic is no other than Asiatic cholera. The percentage of deaths among Japanese is not comparatively large, varying from six to thirteen daily; but this may certainly, in part, be ascribed to the excellence and completeness of the precautionary measures taken. Only four foreigners have, so far, been attacked, and only one case has proved fatal.

WHATEVER ravages may be made by cholera, and they bid fair to be restricted by medical precaution, they will be more than counterbalanced by the effects which returning peace, after a long half-year of war and bloodshed in Kiushiu, will bring with her.

There really seems to be no room to doubt now that the Satsuma insurrection has been brought to a close, with the final defeat and death of the leaders at Kagoshima. On the 24th instant official telegrams were received by the Government in Tokio, announcing that a battle had been fought at daylight, and that Saigo, Kirino, and Henmi had been killed. Comparatively few details have come to hand; but we glean from despatches and letters sparsely published in the native papers that but a small number, probably only some three hundred men, had succeeded in entering Kagoshima after their daring march from Nobeoka. Subsequent operations on the part of the Imperialists seem to have been confined to a bombardment, from the vessels of war in harbour, of the citadel and portion of the town occupied by the insurgents, and a close investment of the place; so that the last remains of the Satsuma army were really caught, to use a favourite expression of the imperialists and their supporters, "like a ~~rat~~ in a bag." At length a final assault was made, and those of the insurgents who did not fall, surrendered to their foes. The head of the warlike chieftain is said to have been cut off and carried away by a small band of his retainers, but subsequently recovered. With the close of the Satsuma insurrection, an era of peace may, if its rulers will endeavour to meet the wishes of the people, be in store for the country. Without that, tranquillity cannot be permanent. At present, some chance exists of a return of vitality to business, which has long been languishing.

POLITICALLY matters are quiet in the provinces. The success of the Government in Kiushiu will probably have the effect of allaying open disaffection elsewhere.

THE rate of interest, which has hitherto been arbitrary and exorbitantly high among Japanese, has been legally fixed at rates, which for this country are not excessive.

THE funeral of the Princess Seikanin-no-Miya, to whose decease we alluded in our last, was celebrated with great pomp on the 13th instant. Her remains were laid beside those of the Shogun, her husband.

TS'KIDJI, Tokio, ground-rents have been readjusted. Land-renters in the Concession have had their rents reduced by twenty-five per cent., or from 37½ sen to 28 sen per tsubo. The history of the new arrangement will be found within, in an article on the subject. Individual foreign land-holders on the Yokohama Bluff are now agitating for a consideration of their claims for an abatement.

A PRINCE has been born to one of the *Shoji*. As the Empress has no children, this boy may be considered heir presumptive to the throne.

THE CLOSE OF THE INSURRECTION.

WITH the deaths of Saigo and the other two rebel commanders at Kagoshima, notified to the Government in Tokio by telegraph, and published in our issue of the 24th, the rebellion, which had its active origin in Kagoshima nearly eight months ago, has now received its death blow. There seems to be no reason to doubt the accuracy of the information, although it is by no means full in detail. The morning native papers, published in the capital and Yokohama, give in effect nothing further than the same news as we have published, a thing which is somewhat to be wondered at, inasmuch as telegrams have been constantly arriving from the South addressed to the Government, and it is to be only reasonably supposed containing accounts of the action at the close of which the last remnants of the rebel army died or surrendered. The manner in which Saigo, Kirino, and Murata came by their end, whether they fell in fight, or, finding all future chance of victory hopeless, killed themselves, is not yet stated. Indeed there exists just a grain of uncertainty whether Saigo is actually one of the slain. In a short telegram supplied to the *Choya Shinbun*, it is stated that the head of Saigo Takamori has not yet been discovered. The same paper asserts that none of the rebels had escaped, those who were not killed having surrendered, and promises to publish fuller details. Even the date and place of the deaths of the three rebel commanders are not authoritatively stated. The *Hochi Shinbun* mentions, as a mere rumor, that the day before the final victory, or on the 23rd instant, "Saigo, Kirino, and Murata were killed at Iwazaki on Shiroyama." If a despatch said to have come from Prince Higashi Fushimi-Miya is to be taken as authentic, the last imperial victory was almost a bloodless one, and the hypothesis of Saigo and his two companions having committed suicide is strengthened. The Prince says that at 4 o'clock on the morning of the 24th instant his troops stormed the rebel position on Shiroyama in Kagoshima. At five what fighting there was had entirely ceased. Not a gun was discharged. No lives were lost on the side of the imperialists, and only eight or nine soldiers were wounded.

The Home Minister is said to have ordered the return to the East of the extra police forces stationed in Shikoku; so that it is evident that no trouble is apprehended in that island.

We have nothing but congratulations to offer to the Government upon their victory after a protracted struggle; but we do hope that the brave men whom they have conquered will not have fought and bled in vain: that the "cause" which those men put forward as the object and excuse of their revolt will yet triumph: and that the rulers of Japan will spontaneously grant that popular freedom after which the country's best and brightest spirits yearn. We are convinced that until it is granted the country will know no lasting peace and prosperity; and its rulers no permanent tranquillity and none but a delusive freedom from apprehension.

Since writing the above we learn from a reliable source that one of the telegrams received by the Government states that, after six hours' fighting, some of the imperial soldiers surrounded Saigo, who, finding escape hopeless, and that his enemies wished to capture rather than kill him, endeavored to shoot himself. Before he could

adjust his pistol, it was wrenched from his grasp: he was pinioned, and the soldiers were proceeding to bind him, when some of his own followers dashed them on one side, and, to a blow from one of their sabres, Saigo's head fell to the ground. It was seized by his retainers, who fought their way clear of their foes, and bore it away. This accounts for the report above-mentioned that Saigo's head had not been discovered. Our informant adds that the government have received intelligence of its subsequent recovery through the capture of the small band who were endeavouring to save it from posthumous dishonour.

CHOLERA CONTAGION.

THE much agitated question concerning the contagion of cholera, whether, if it be considered contagious, it is spread by miasma or contagium, must be considered, under the light we now possess, as follows: that cholera can be spread only by contagion, i.e., by germs which are carried from a diseased to a healthy person; but that these disease germs infect only comparatively rarely by intercourse or contact with cholera patients, since they possess relatively but little vitality in the air of the sick room, and are present mostly in inconsiderable quantity.

On the other hand, a certain number of the germs and a given vitality are necessary for the propagation of the disease. And these conditions are better met in fluids than in air; hence contagion is more frequent when the germs are communicated through a fluid, than when transmitted through the air. Should the germs of cholera excretions fall into a closet, for instance, and from there find their way by filtration into drinking water, or subterraneous habitations, the individuals who had appropriated the most germs would suffer most severely. The danger of contagion in cholera, therefore, is relatively less from direct contact with cholera patients than from frequent contact with insidious and latent germs proliferated from these patients. Hence the great care which is necessary in seasons of epidemic to provide for proper drainage; and to take all possible precautions in so vital a matter as cleanliness, both personal and throughout and around habitations.

TS'KIDJI GROUND-RENTS RE-ADJUSTED.

WHETHER, when he rendered judgment for the plaintiff in the case of the TOKIO-FU *vs.* BLOCKLEY, as far as the claim extended to arrears of ground-rent only, and left the demand for interest to be decided, if necessary, after future arguments, Mr. WILKINSON merely shelved a question which he had reason to believe would soon adjust itself, is now matter of little moment. Indeed, as the whole question of the Ts'kidji ground-rents has at length been amicably adjusted for the present, or indeed until such time as the much needed work of revision of the treaties is completed, the waste of time and money expended in legal proceedings in two Courts in Yokohama, on a subject which might better first than last have been adjusted between the Foreign Ministers and the Japanese Government, forces itself upon public notice as cause for regret. In the diametrically opposite decisions which have been

rendered by two judges, neither of whom can be accused of lacking patience, or sparing pains, there is no comfort for this regret. The evidence adduced in favor of the TOKIO-FU before General VAN BUREN was of the most meagre kind, while the case for the plaintiff can hardly be said to have been conducted at all. Hence the U. S. Consul-General's decision excited little surprise, based as it necessarily was, most upon the mass of evidence of loss sustained by the defendant and his witnesses, and what were so strongly urged as the "equities" of the case. The suit against the BLOCKLEYS was conducted in a very different manner, by a barrister of ability, who adduced evidence which was omitted, and argued points of law which were untouched, in the BATCHELDER trial. Thus, there is far more reason than at the first glance meets the eye for the extreme divergence between the two judgments. Possibly the fact that an American court of *law* is, admittedly, more also of a court of *equity*, than is a British tribunal, should also be taken for something in any comparison.

The tangled skein which, in the hands of the legal fraternity, became during so many months more and more kinked and knotted, has been unravelled by common sense, aided by a sense of justice. The Japanese Government has long seen that "equities" existed by which the complaints of the foreign land-renters of Ts'kidji were in great part justified. So long ago as April, 1876, they admitted this, in so far as they had already at that time taken the alleged grievances into consideration. The Japanese often go slowly; but *chi va piano, va sano e anche lontano*; and in this instance they have gone both safely and far.

On the 14th October, 1876, or while the case of the TOKIO-FU against Captain BATCHELDER was being heard in the U. S. Consular-General Court, a "joint note," signed by all the members of the foreign Diplomatic Corps, was forwarded to the Japanese Government. It was to the effect that, as they had expressed in frequent interviews with the officials, the Ministers thought that certain equities were due to the foreign land-renters in Tokio, under the treaty regulations: and it suggested that the questions at issue would be well and satisfactorily solved by a reduction, to commence on the 1st July, 1876, of about one-half of the Ts'kidji ground-rents—from 37½ sen to 19 sen per tsubo. The note further proposed the abandonment of all claims for interest on arrears of rents which should be paid up to the same date.

From the time when this note was forwarded until a few days since, when the matter was finally decided, it has been, at intervals, under the consideration of the authorities, who, but for more urgent business on their hands in the shape of domestic trouble and civil war, would no doubt have adjusted it some months since. The departure of the Court for Kyoto caused an adjournment of the consideration of the foreign ground-rent question; and then came the Satsuma trouble, and the detention at Kyoto of the Mikado's Ministers, who necessarily put off a settlement until their return to the capital. Throughout, however, they have shown a determination to cope with the grievances of their foreign residents in Tokio. Since their return they have found time to settle the difficulty. After mature consideration they found that the reduction, by one half, of the Ts'kidji ground-rents would be excessive, but were willing to admit a reduction of, say, twenty-five per cent., or from 37½ sen to 28 sen per tsubo, which would put the Tokio tenants on much

the same footing as their Yokohama brethren. If this were agreed to, and arrears of rent paid to 30th June, 1876, the TOKIO-FU would withdraw all claims for arrears of interest, and the new rate of rental would be charged from the 1st July, 1876. This arrangement has been agreed to by the Foreign Representatives; and will, no doubt, be accepted cheerfully by the Ts'kidji tenants, pending, as we said before, the revision of the treaties. Captain BATCHELDER, for one, against whom proceedings were first instituted, has willingly accepted the compromise, paid his arrears of rent to the 30th June last on his Ts'kidji allotments, and obtained receipts bearing the stamp of the TOKIO-FU.

It is worth while noticing here, that the equitable concession, made by the Japanese Government, has been made, not on the advice of their own foreign advisers, not in accordance with any scheme sketched out for them by any self-constituted or subsidized foreign organ of their own, but at the mere suggestion of the Representatives of the Treaty Powers.

In the interest of the Japanese authorities themselves, and in the discharge of a peremptory but unpleasant duty, we must point out how unsafe and unreliable a guide to trust to in any respect would be a journal, leaving out of the question all considerations of its lack of the great quality which renders any journal respectable—*independence*—which is capable of such tergiversation as that displayed by the *Tokio Times* on this very subject which has now been settled. We have every reason to believe that with the sources of information open to them, whether by the front or back stairs of Legations and Government Offices matters little, the promoters of the *Tokio Times* were aware of the arrangement proposed in October last, and the consummation of which has been postponed through the unavoidable causes which we have indicated above. Certainly in an article, temperate and consistent, in its second issue (13th January, 1877,) that journal sketched the state of things at issue between the TOKIO-FU and its foreign tenants, alluded to the plan of adjustment embodied in the "joint note" which we have above quoted, and in conclusion commended that scheme, and censured the Japanese for not at once accepting it in its full bearing—including a reduction of *five* per cent in the rentals, *understand*—thus:—

If the information we have received in relation to both parties is correct, as we certainly believe it to be, the Japanese have placed themselves in a false position. They have resisted an effort to settle the affair in a manner that would have been entirely to their advantage. By accepting the proposal, they would have gained important political benefits, and the trifling pecuniary stake at issue, as well; and they would have saved themselves the trouble of a burdensome litigation, the first stage of which has been adverse to them while the ultimate result is obscure. Their rejection of the compromise—if that can be called a compromise in which they were offered almost everything, and called upon to surrender nothing of value—is in all respects to be regretted. Allowing the case of the Tokio Fu to be the strongest ever presented, it would still have been better to keep it out of Court. If the government win it, here or elsewhere, they get a barren victory, with none of the political gains they might have secured. Omitting all consideration of the merits of their cause—calling it either the best or the worst in the world—we are sorry that they failed to respond to the invitation given them. If it could be done without loss of dignity, we should be glad to see them accept it even now.

The divergence between the judgments of General VAN BUREN and Mr. WILKINSON is complete and striking. It is explicable, however, as at the commencement of this article we briefly showed. If no other ex-

planation were possible, it could be explained simply on the ground that two distinct individuals are, by the very differences of human nature, always liable to take the most extremely opposite views of a common subject. But what is inexplicable is that a journalist, the same man with the same mind, actuated by the same objects, impelled by the same hopes, restrained by the same fears, without any reason for changing his opinion, without offering any excuse for the change, should within eight months take views of the same theme, as opposite as those of Mr. FACING-BOTH-WAYS. Our readers are familiar with the old story of the two knights, looking at the same shield, but each from an opposite side, and the deadly quarrel which followed on each one insisting that the shield was as he saw it. But the wildest imagination can hardly conceive of one same, sane, knight, seeing the shield from two sides at once, and doing battle with himself about the difference. Yet, as nearly as possible, this is what the *Tokio Times* does. Poor knight! In its issue of the 8th instant it has an article on the Ts'kidji land cases as opposed to the former one, as would be an article on atrocities in the *Pall Mall Budget* to one in the *Times* on the same subject. To realize the divergence, it would be necessary to read as we have done the two productions one after the other. An idea sufficiently accurate, however, of the difference of spirit under which the two articles were written, can be gathered from a comparison of the subjoined extract with the one we have quoted above.

It has been frequently asserted that however the law might be against the defendants in these cases, their position was a hard one, and was rendered a hard one by the fact that the government had allowed foreigners to reside (not to lease land, it should here be parenthetically remarked) out of the limits of Tsukiji. Nothing can be further from the truth. Nine-tenths of the foreigners living out of Tsukiji are in the employ of the government, and the renters of land in Tsukiji cannot pretend to have bought their lots upon the chance of the government having a numerous staff of foreign servants who might require residences within those limits. The fact is that when a part of Tokio was thrown open to foreigners it was supposed by many that a considerable proportion of foreign trade would be there conducted, and under this supposition land was purchased within Tsukiji as a speculation. This had not been fulfilled and the speculation has proved a bad one. But for this the government is in no way responsible; the speculators have simply made a bad venture, of which they must take the consequences.

There is much more before and after this in the same strain; but neither in its issue of the 8th September, nor in its two subsequent numbers, is there one word on the adjustment of the Ts'kidji ground rent question by the compromise suggested by the Foreign Ministers last year, and approved by the *Tokio Times* on the 13th January. Possibly this may be accounted for by the Japanese Government having wearied of bad counsels, false intelligence, the inculcation of a pernicious domestic and foreign policy, and having come to the determination to trust no more to blind guides, and to withhold in future information from those unworthy of confidence.

A PRIVATE letter, received by a gentleman in Yokohama, states that Commander Pelham Aldrich, R.N., has been appointed to the command of H. M. surveying vessel *Sylvia*. Captain Aldrich was with Captain Nares in the *Challenger*, and accompanied him on his transfer to the command of the Arctic expedition. He was promoted to Commander's rank on the 3rd November, 1876.

REVIEW.*

THE term "Freedom of the Press" has now been a household word in England for almost two hundred years; and the great possession has been looked upon during that period by Englishmen as the chief safeguard of their liberties, the guardian of morality, and the one human power before which oppression quails, and prosperous vice slinks away and hides its head. That the press should be free in Great Britain, is a fact which at once astonishes and moves the envy of foreigners. It has long formed a favorite subject of comment by foreign writers on English subjects. Still, both English and foreign writers often fail to realize the fact that the freedom of which the former boast, and which the latter envy, has only really and fully been enjoyed in England, formerly in the time of the Commonwealth, and latterly within the memory of men who have lived long enough to recollect the press prosecutions during the time of the Regency. Only the other day, on glancing through a short account of the first balloon ascent made in England, an exploit which was successfully accomplished in 1784 by Mr. VINCENT LUNARDI, the Secretary to the Neapolitan Legation in London, who also wrote the report of his adventure, we find the most flattering comparisons between English and foreign institutions of that day. Still, some striking truths are apparent among the compliments. Mr. LUNARDI saw the real state of society in, and the condition of the institutions of, the country in which he was a guest, shrewdly, and below their surface, as clearly as from his floating sphere he saw the landscape beneath. On the subject which we are immediately called to consider he says:—

Though the English boast of the liberty of the press, they enjoy it with such exceptions, as are difficult to be understood by a stranger. Indeed it is not understood by themselves, for they are ever debating the subject. One of the exceptions to the liberty of writing and speaking, and which nearly annihilates it, is, that *truth* constitutes or is at least an aggravation of a libel. Satirists, therefore, in this country, are strictly confined to *falsehood*; and in this, it is very possible they may yield obedience to a learned judge's opinion of the law. It is possible, however, that this celebrated lawyer, being at the head of the King's Bench, may only aim to wrest from the press the adjudication and punishment of every species of delinquency; and that he considers reciprocal defamation and injury in the public papers, like duelling, an appeal from the laws to the passions of individuals.

Evident allusion is here made to Earl Mansfield, Chief Justice, whose rulings on the subject of libel were so earnestly impugned by Thomas Erskine.

When the power of the press as a political engine was first discovered in Europe, when rulers and sovereigns found how potent the new machine was for evil as for good, how easily it might be employed in unscrupulous hands to obstruct and disturb the functions of Government, and to assail, with or without sufficient motive, the sanctity of private reputation, a rigid censorship was established by all the European Governments, which allowed nothing to be printed without the *imprimatur* of the properly delegated officials. At a time when the Roman Catholic hierarchy had so large a share in the practical ruling of nations, as in the infancy of the great art in Europe, the priesthood claimed its share in this censorship, and

* Chapters in the History of Popular Progress, chiefly in relation to the Freedom of the Press and Trial by Jury, 1660-1820. With an application to after years. By James Routledge.

had an undisputed right to wield it, in so far as publications touched on religious questions. In England, at the time of the reformation, the whole control of the press became naturally vested in the Crown, which had assumed the headship in the Church as in the State, and the Company of Stationers, who had a monopoly of printing, were the servants of the Star Chamber. The rein kept upon the press was relaxed under the Commonwealth; but the curb was tightened again at the Restoration. In 1693, however, five years after the Revolution, the statute regulating the censorship of the press, by a special vote of the Commons, ceased to exist in England, and has never been revived. But if there are no official restrictions on what may and may not be printed in England, the statutory regulations for the punishment of those who publish seditious, libellous, or indecent works, are sufficiently stringent to protect the British public from unbridled license on the part of the press. Thus, it is now no idle boast to say that that institution in England, while it has greater liberty, displays greater purity, than the same power in any other country in the world. Indeed, as oppressive power has generally to make some concession with a view to prevent too active disaffection, the equivalent of what is subtracted in the matter of liberty from the press in many countries is added to its privileges in the form of license. And from license to licentiousness is as easy a descent in fact, as the connection between the two words is intimate.

But our purpose is not now to make comparisons between the relative conditions of the press in different countries, and under different institutions, a task which would occupy more time and research even than those employed by Mr. James Routledge in writing the valuable work now before us, and one which would be well served by his pen, but to notice briefly the valuable volume contributed, by a thoughtful author, whose very name is appropriate to his subject, and a sort of guarantee that it will not suffer at his hands, to modern English history considered from a special point of view.

It must not, we again insist, be imagined that before a very recent period the press in England was free in the sense of the freedom which it now enjoys: it must not be thought that England, whose main boast has for so many centuries been her freedom, enjoyed even two generations ago that almost perfect liberty which is her happy lot to-day. As our author says, if the eye of the observer rested specially, for instance, upon the year 1815,

He could not fail to find that Englishmen boasting of Magna Charta, Habeas Corpus, Bill of Rights, of a free press, of civil and religious freedom, were in reality living in a state of society in which men dared not express their thoughts openly, on the simplest political matters, unless they spoke in approval of a system of Government upon which the people of future and not necessarily distant times will look with amazement. He will find that no man who did not, as sceptics often did, profess the faith of the Church established by law, could serve his country as a Member of Parliament, a Justice of the Peace, or as Member of a Town Council. He would see that the supporter of innovations on liberties which were supposed to have been won ages earlier, and for ever, went by the good name of Conservative, and that persons who contended for the old laws, traditions and loyalty of the English nation, were persecuted, as firebrands, as enemies to social order, and by one of the strangest caprices of the human will, as contemners of the Divine law.

Commencing with the coronation of Charles the Second, Mr. Routledge follows his subject, "Popular Progress in England," through its many windings, through much

persecution, through grievous obstruction, until he leaves it when it has attained a robust vitality, and an assured future in the nation's life, a future to be defended if need be by the same means as those by which the present has been secured; but still assured by the success which progress has achieved in spite of ill-will and opposition. In his own concluding words:—

To imagine that all the dangers to constitutional Government are ended in England, would be as absurd as to imagine that all danger of disloyalty to the Crown is so ended. In both cases there are dangers that never pass away. To know that the Constitution is the best foundation and security for the Throne is one of the great lessons of English history. That the ark of liberty is precious beyond all price, and not even to be touched by a felonious finger, is worthy to be handed from father to son; to be bound "as a sign upon the hand," and "as frontlets between the eyes," and that "ye may teach it to your children, speaking of it when thou sittest in thine house, and when thou walkest by the way, when thou liest down, and when thou risest up; and thou shalt write it upon the door-posts of thine house, and on thy gates." And when the English child shall say—"What meaneth this?" thou shalt reply—"This is the truth maintained by our fathers, against many despots, in the face of cruel laws, in the old days; and this, if England need it, shalt thou maintain in the days to come."

The most interesting portion of the period of English history treated by Mr. Routledge, and dwelt upon at greatest length and pains by the author, is that eventful series of years comprised between 1789 and 1820. He shows the effect produced by the French Revolution in England, where, too, the rulers, in their fear of the propagation of principles of freedom and equality, inaugurated a reign of terror. He details at length that sturdy struggle of the friends of liberty, which, after many pangs and throes, through many sufferings and more triumphs, resulted in the establishment on a firm basis of that constitutional freedom which Englishmen now enjoy. Naturally, considerable space is given to the three trials of William Hone, the bookseller and parodist, resulting in three acquittals, three deadly blows to despotism, three victories for popular rights and the freedom of the press. But for the ill-judged and malicious prosecution of Hone, his parodies, which are always in the worst of taste—and at this interval of time there is no harm in saying, almost always, in a sense, blasphemous in fact if not in intention—would have fallen into the prompt obscurity which was their best reward and certain fate. As it was, they became the means on which hinged the establishment and recognition of a great principle in constitutional government, from which we must hope that Englishmen will never witness any departure. At the present date these parodies have hardly so much interest as to warrant quotations. The best thing that Hone wrote was a squib entitled "The Political House that Jack Built," published after his trials, and illustrated by the inimitable pencil of George Cruikshank.

To newspaper men, to newspaper readers, and to all who are interested in the history of journalism, that portion, ephemeral perhaps, but most important in its influences, of the English press, we can recommend Mr. Routledge's chapters upon that subject. They contain some new, and much carefully collated, information on the rise and progress of provincial and metropolitan newspapers. To the analytical student of our history during the two past centuries the volume before us will be an invaluable guide, written as it is from an impartial stand-point, and almost, if not altogether, without party bias. As an example both of Mr. Routledge's style and

to show how just and philosophical an estimate he forms of even contemporaneous questions, we quote, in taking leave of his work, the following passage on a subject, at this moment, of far more than ordinary or mere "parochial" interest:—

No sign of decrepitude, it has been clearly shown, marks the nations of Europe now. Hence history cannot repeat itself; and we shall err if we look for an exact repetition of anything in human affairs. But the cloud in the North is not on that account any the less dark. Russia is on the borders of China as well as on the borders of India. She is mistress of the Khanates. The Circassians and the Cossacks are of her armies. She has, it is often argued, possessions too vast to continue under one rule; an empire that must fall asunder of its own weight. It might do so if the races composing it were intelligent or possessed any basis of common action. They are mostly races to whom the Czar stands in the place of God, and to whom the promise of plunder would suffice as an ample incentive to any enterprise. In fact not only are the old conditions of warfare unaltered so far as they involve the relations of the barbarous or the uneducated to the educated or civilised man, but rude forces, with all the old, natural, unchanging conditions, possess an advantage never before possessed in exactly the same form. It is all but certain that Russia will, before very long, be able to arm vast bodies of wild levies as effectively for the purpose as she already arms her steady regiments of the line.

To predict from these conditions that this or that will occur would be absurd. To be alive to the fact that sundry things may occur is only common sense. In spite of the speeches made this year (1876) in England, the instinct of Europe will not easily be directed from the possibilities of danger from St. Petersburg. The idea of Russia at Constantinople is suggestive of a century of future wars, while the ill-omened rivalry of France and Germany offers to her an opportunity not unlike that which the rivalries of Greece offered to Philip of Macedon, to divide and conquer. To give Russia every help and sympathy is right and noble; to meet her, as her surveyors and ours meet, in true friendliness in the wilds of Asia, to the borders of China, is what she has a right to expect from an elder brother in the great work of civilisation. She is doing more in a year to bring within the domain of law and order wild savage tribes than our moral force would do in half a generation. But English patriotism is not yet out of date, or worthless as a cheap defence of nations. Europe is as a vast camp. Yet there are English workmen who still talk the old and now unjustifiable nonsense that patriotism is a folly; and there are other people who from different benevolent motives continue repeating the equally foolish idea that "it takes two to make a quarrel." Certainly if a nation like England were prepared to sacrifice her colonies, and with them the future of her people—many of them once English work-people, settled as colonists—she might avoid wars, as men have been known to escape ravenous wolves by the sacrifice of article after article, till at last the very horses upon which all chances of safety depended were thrown away. It is not likely that England as a nation will ever perpetrate the act which this not uncommon occurrence illustrates. To live at the antipodes, or in America, or Africa, or India, and still be under English laws, is something of which many a poor man bearing the English name has been proud. It is not too much to say, indeed, that no Englishman, however poor, ever went from the Thames to Bombay or Calcutta, especially by the Canal, or over the desert, and returned to talk about the folly of patriotism. To see the flag of his country waving from the rock of Gibraltar, from the ramparts of Malta, from the bleak cinder fortress at Aden, from the forts and ramparts at Bombay, at Galle or Colombo, from the Pilot Brigs at the mouth of the Hooghly, and from Fort William, with all its great associations, at Calcutta; to see the fleets of shipping under the same royal flag; to hear in every port the same language; to know that if the voyage could be continued eastward till it ended westward, by Australia, by New Zealand, by Canada, by the Cape of Good Hope, the scenes would be repeated only in a hundred or a thousand different forms, would be to convert many a man who talks of having no part in England and her glory into one of her sturdiest and proudest patriots.

The *Etta Loring*, which left on the 17th inst. for New York, took 14,112 packages of tea and 1,192 packages of general merchandize.

SWIMMING MATCHES.

The third and last of the series of swimming matches arranged by the Rowing Club during this season was held at the boat-house on the afternoon of Saturday, the 15th inst. The weather was all that could be desired, and a large number of visitors were present. To make a good day's sport, and to encourage the healthful and useful art of swimming, the Club had invited all comers to compete; but only two non members availed themselves of the opportunity.

The first event, 100 yards, for which four started, produced a good struggle between Barrett and Hunt, who came away from the others, immediately after the start. Barrett had the best of it all the way, but it was not until half the distance was accomplished that he got clear of his man: from this point, swimming strongly and in good style, though not steering a very straight course, he continued to gain, and won easily in 2 min. 14½ sec.

Five competed for the long dive. In the first trial J. J. Dare dived very wide, and although under water for 35 seconds, was beaten by Clarke and Dr. Eldridge steering straight from the boat. In his second attempt J. J. Dare went straight; and his track was keenly watched by the backers of the doctor, until—*surgit amari aliquid*—his head and shoulders, a yard in front of the doctor's mark; the others did not, in their second attempt, come up to their previous efforts, and Dare was proclaimed the winner.

A race of 50 yards for members of the Rowing Club who had learned swimming during the season, produced a plucky race between two "Griffins."

The other events in the programme did not fill. The conditions of the meeting—no handicap—had probably some effect in reducing the number of competitors, for, in the decay of the love of sport, every man, seeking merely his own pleasure or profit, looks to self gratification before the prosperity of the various institutions which provide amusement or recreation for the community. There is no thought for the success of the managers who have given their time to making up the programme and carrying it out. The issue of an event must be "reduced to a moral" in their favor to induce some men to try: all honor to those who came forward on Saturday to fill the list of entries to the number required by the rules laid down by the Committee. We are afraid that sport is decaying in the settlement. In the athletic meeting, the cricket field, and in the Rowing Club, we see only the names of those who have been the mainstay of those clubs for years past, and we look in vain for any coming men to supply their places when these few get old and fat. In shooting, the same thoughtlessness for future seasons, and want of consideration for the feelings and sentiments of others, is fast increasing. Monsieur adores "le sport," which fills his bag and his larder with small birds, or large, whether in season or out of season, and we have not been surprised to have complaints made to us on the appearance of the pheasant on the tables of certain restaurants during September; but we were surprised to hear that the members of the Y. U. C., a club owned, managed, and partly "committed over," if we may use that phrase, by prominent members of an association whose war cry has been, "*sport for the sake of sport*," have been regaling themselves with pheasants, young, flavourless, and out of season.

OUTBREAK OF CHOLERA.

A calamity which was not unexpected, and for the occurrence of which it is satisfactory to know that the Japanese authorities were thoroughly prepared, has fallen upon the native population. The Kencho authorities have declared Nogo Hospital the Sanitary Centre; and a Sanitary Commission, consisting of the Governor, the Chief of Police, Dr. Simmons, and the more intelligent of the native physicians, was appointed. The town was divided into districts, which were placed under the charge of different officers, who were instructed to search out, treat, and report upon, all cases of disease. As hygienic provisions have been the special care of the Kencho for some time past, and as careful arrangements have been made in view of a visitation of cholera, there need be no fear of anything like such devastation as was wrought by the epidemics of 1860 and 1861, in which Dr. Simmons gained a large and useful, if melancholy, experience.

Above all, no reason for much alarm among foreigners exists. At the same time it is the duty of each one of them, for the preservation of themselves, their families, and their neighbours, to take the utmost possible precautions. That they may know what to do we subjoin a table of rules, which we earnestly commend to their consideration, compiled by Dr. Stuart Eldridge, and by him kindly forwarded to us for publication:—

With no desire unnecessarily to alarm the foreign community of Yokohama, yet with the feeling that our present information as to the presence of cholera is quite sufficient to render precaution the duty of every citizen, I beg leave to call attention to the following simple directions which I think represent pretty fairly the advice of the best authorities in such matters. Supposing that the report of the appearance of *Cholera Asiatica* in the native town is true, and we hear that it is, it is most desirable that some action should be taken on the part of the foreign community as a whole, in order to secure effective measures to place the settlement in a proper sanitary condition. Unfortunately the machinery to be put in motion is so cumbersome that prompt action seems unlikely. Meanwhile there are certain precautions within the reach of every one by which much may be done to prevent the spread of an epidemic. These measures may be briefly stated as follows.

1.—Clean every compound in the most thorough manner. Remove every collection of filth or offal, and cut down any rank vegetation which may conceal such accumulation. Clean thoroughly all drains, sewers or cesspools, disinfecting them before the removal of their contents by the means hereafter mentioned. All filth removed should, if possible, be burned up, a process easily effected by a very trifling expenditure for fuel. If this is impracticable, the next best disposition of the removed filth would be to drop it into the bay at some distance from shore.

2.—Disinfect all cesspools or waterclosets daily and in the most thorough manner.

3.—See that the well or other water supply is in no possible danger of receiving drainage from any surface drain, sewer, or cesspool, and remember that, in the porous soil of this neighbourhood, drainage may percolate both deeply and far. Filtered rain-water is, undoubtedly, the best under the circumstances, but this, as well as any other water used, should be thoroughly boiled before drinking.

4.—A diet which is perfectly wholesome and proper at any time is allowable. In time of cholera, no violent or sudden change should be made in the ordinary habits of life, if these habits have been in accordance with the ordinary rules for preservation of health. Perfectly ripe and fresh fruits are not injurious in moderation, nor are fresh and usually wholesome vegetables, with the exception of salads or other vegetables eaten raw; for the materials and method employed in Japanese agriculture may easily cause these latter to become active carriers of cholera contagion.

5.—Enforce personal cleanliness upon each member of the household, and see that every building occupied, either of residence or stabling, is thoroughly ventilated.

6.—For disinfection make use of carbolic acid by preference: mixing the ordinary disinfecting acid with water in the proportion of 3 to 100, and distributing it when required by means of a watering pot, and in quantity sufficient to permeate the mass.

A solution of sulphurous acid, which is readily and cheaply prepared by any druggist, is also an admirable disinfectant, but should be used pure. After the foregoing, rank chloralum, chloride of zinc (Burnett's Fluid), sulphate of iron, and chloride of lime. Lime itself is, in the absence of the above, a tolerable disinfectant when liberally used.

7.—As the larger number of cases of cholera are preceded by diarrhoea, while in all epidemics many cases occur which never pass beyond the stage of diarrhoea, all such cases should be looked upon with the greatest suspicion, and at once placed under medical treatment. This is necessary, not only because in cholera time any diarrhoea, however slight, may be but the first stage of a fatal attack; but because any such diarrhoea may originate other cases of cholera as severe and fatal as though derived from the disease in its most virulent form. In this connection see that the Japanese or Chinese employed about the compound do not render useless all precaution, either by their filthy habits, or by concealing the occurrence of diarrhoea or slight cases of cholera among them.

8.—When a case of either diarrhoea or well-marked cholera occurs in any house, all the evacuations of the sick should be received in vessels containing a strong (5 to 10 per cent.) solution of carbolic acid, or a liberal quantity of some other disinfectant; and afterwards, if possible, destroyed by strong acids or by fire, and clothing or bedding worn by, or in contact with, the patient, more especially if soiled by his evacuations, should be thoroughly disinfected before going to wash. This can be effected by boiling or soaking in a solution of carbolic or sulphurous acid, by exposure, damp, to the fumes of burning sulphur in a close box, or by baking in an oven at a temperature of not less than 250 Fahr. These precautions are necessary, as a single infected garment may cause disease not only in those employed in its cleansing, but may infect any number of other articles coming in contact with it in the wash. The above measures may at any time be required before the arrival of a medical man, and should be carried out as quickly as possible.

It is hardly necessary to say that, when a properly appointed and intelligent Board of Health or Visiting Committee is acting, every good citizen should aid to the utmost in carrying out their orders and recommendations.

STUART ELDRIDGE, M.D.

REGULATIONS FOR THE PREVENTION OF CHOLERA.

NOTIFICATION 79B.

To Fu and Ken (except Tokio Fu).

It is hereby notified that the subjoined rules to prevent the inroads of cholera have been framed. It is not improbable that some alterations may be made at the time when it shall become necessary to enforce them; but in that case timely information will be given. As, however, the matter should receive some attention before the disease makes its way into this country, these regulations are promulgated beforehand.

OKUBO TOSHIMICHI,

Home Minister.

27th August, 1877.

1.—Should cholera prevail in any foreign country, and the Home Department give orders to enforce these regulations for the prevention of the disease, the principal local officer of any open port shall elect a committee from among the medical officers, directors of the board of health, and police officers, and concert with the consuls of the port, and then the committee shall be empowered to deal with the matter in accordance with the regulations.

2.—The committee shall board any vessel which may arrive from any port where the disease prevails, and obtain information from the captain or medical officer whether there is on board any one suffering, or the corpse of any person who has died, from the disease. Should they find any such case, the patient or body must be removed to the Quarantine Hospital; and even should the vessel have no case of cholera on board, it shall only be allowed to enter the port within a specified time.

3.—Quarantine Hospitals should be erected on an island or any other place distant from habitations, and shall be for the use of patients arriving on board any vessel, or, if necessary, for those on shore.

The hospital may be roughly constructed, but must have three stories or three separate apartments for patients, according to the nature and degree of their disease.

4.—At the Quarantine Hospital a flag showing a "Q" in black on a yellow ground shall be hoisted, and a notice-board erected on which shall be displayed a stringent prohibition of all but authorized communication with outside.

A servant shall be employed for the purchase of any article needed in the hospital; but he shall be rigidly excluded from the patients' wards, and prevented from handling anything that might be infected.

5.—When a patient in the Quarantine Hospital is convalescent, he shall be provided with a certificate from the surgeon to that effect, and, after undergoing the process necessary to counteract any germs of infection which may be in his clothing and other things, shall be discharged. No patients shall be allowed to go out of the hospital without the permission of the committee.

6.—The site of the burial ground for those who may die from the disease shall be decided upon by the committee; and great care shall be taken in the interment, which shall not take place except in the burial ground set apart for the purpose, and then only with the sanction of the committee, and after the remains have been disinfected.

[The six articles foregoing are to be put into effect at any open port, and in accordance with the medical regulations for the treatment of cholera: the following are generally for those places in which the disease may prevail:—]

7.—The local officer, on receiving information that any person is suffering from Asiatic Cholera, shall assure himself as to the truth, and, if he should find the case to be one of Asiatic Cholera, shall adopt the best mode in his power to prevent its spreading, and shall report the fact to the Home Department, and to the neighboring local offices.

8.—A physician should report, through kucho or kocho or chief physician, to the local offices on the state of every patient whom he may examine.

9.—The chief local officer, after collecting the reports from the physicians, and noting the number of patients and of deaths from the disease, shall forward them to the Home Department every Saturday.

10.—Should the disease be very violent in its ravages, the chief local officer must report every twenty-four hours the number of deaths in his jurisdiction.

11.—Owners of houses, hotel-keepers, ship-owners, school-masters and heads of manufactories, and all those who have control over a number of persons, on finding among their people a case of cholera, must report it to the committee, kucho or kocho, or physician-in-chief, within twenty-four hours.

12.—The commander of a garrison or a man-of-war, must report any case occurring among his men to the local officer within twenty-four hours.

13.—In the house of any cholera patient all persons other than the necessary attendants shall be excluded from his room. No person from such house shall be permitted to enter a school, until after the lapse of ten days from the date of the patient either having died or been disinfected.

14.—During the time of the prevalence of cholera the chief local officer shall prohibit festivals, the opening of markets, and other public assemblages.

15.—The chief local officer, according to the number of the population and extent of the disease, shall erect a temporary hospital in the town or villages under his jurisdiction in which sufferers from cholera shall exclusively be treated. He shall cause to be removed thither the patients from hotels, and other places in which many people reside together.

16.—The committee shall post, conspicuously, outside all infected houses and ships the notice, "Here is Cholera;" and shall endeavor to exclude all unnecessary communication with the interior.

17.—The committee shall insist upon such sanitary measures being taken, by the residents in houses in which there may be cases of cholera, as shall tend to prevent the spread of the infection.

18.—The committee shall take the necessary measures for the disinfection of houses, ships, furniture, &c., and shall burn or otherwise destroy such things as they think should be made away with, after obtaining the permission of the chief local officers.

19.—The committee, during the prevalence of cholera and in anticipation of its spreading to unaffected districts, shall provide for the cleansing of receptacles of sewage and rubbish.

As such cleansing may be dangerous at the time of the actual prevalence of the disease, at that time disinfecting processes shall be generally resorted to.

20.—The removal of cholera patients, the walking about of convalescent patients, giving or using things that have been in contact with patients or persons who have died from the disease, before in all cases the process of disinfection has been undergone, are prohibited; as are also all acts of carelessness which may cause the spread of the disease.

21.—In all localities proper methods must be adopted in accordance with these regulations in respect to the removal of the sufferers to the hospital or to their homes, so as to diminish as much as possible the risk of infection.

Nothing of public use shall be employed in such removal; and all things used shall subsequently be disinfected.

Proper precautions shall also be taken in the removal of infected articles to the place where they are to be disinfected.

22.—It shall not be allowed to carry the bodies of those who have died from the disease to any place other than the burial ground allotted for the purpose in the locality.

The vehicles used for conveying the bodies shall not be employed for the use of any living person.

The nearest road to the burial-ground shall be taken in all cases.

23.—Should there be any cholera patient, should anyone have died within ten days on board any ship coming into the gulf or harbor, the captain shall report, before anchoring, to the committee or kucho or kocho of the locality, and receive their instructions as to his place of anchorage.

No communication with persons on board shall be allowed, and the vessel shall not remove from its anchorage until after having been thoroughly disinfected, and furnished with the necessary permission to move.

24.—In any locality where cholera may prevail a convenient place shall be selected for the sale of disinfectants (either at a medicine shop, or, if such does not exist, at any place temporarily licensed for the sale); and the committee shall fix a tariff of prices, and instruct the buyers how to use the disinfectants. Poor persons may be supplied gratis.

CONDITION OF SHIZOKU IN TOSA.

(From the *Choya Shinbun* of the 15th Sept.)

As our readers may have read, in our issue of the 14th instant, a treasonable conspiracy has been discovered in the Kochi Ken (Tosa). Very happily for our countrymen, many of the ringleaders were arrested at various places in the same ken, and it is expected that they will be escorted to Tokio, in order to be examined before the Daishin-in. Several months ago rumours were current among us, on the subject of these Tosa people, and some of them made our blood run cold. A number of the members of the *Risshi-sha* are kept in prison and are daily brought to trial before the Daishin In. But as the shizoku in the Kochiken apparently remained tranquil, regardless of this imprisonment, our countrymen became free from anxiety on their account. We were, however, distrustful of their future conduct, and did our best to find out what was going on in their country. As we expected, we received a letter from Onuma (the translation of which was published in the *Japan Gazette* on the 15th instant); and now another letter, from Matsuyama, Iyo, dated the 3rd instant, to the same effect, has come to hand. We think we are right in giving faith to the contents of these letters.

If what we have heard in the street about the condition of Kochi should, unfortunately for us, turn out to be well founded, what must our countrymen think of the matter?

The *shizoku* in the island of Shikoku (Awa, Sanuki, Iyo, and Tosa) form various parties, each of which differs in opinion from the others. Those who have published a justification of their conduct wish to establish a representative assembly. They are powerful,

and some of our countrymen depend upon them to extend our freedom and rights. So, even at this critical moment when they may be on the point of rising in revolt, they are yet blinded by their justification. They say that the authorities have no right to distrust the shizoku in Tosa, and that they will not follow the example given by Saga and Kagoshima. Our own opinion is quite different from theirs. When the Kagoshima insurgents were at the highest point of their success in Kumamoto, the shizoku in Tosa repeatedly petitioned for leave to form volunteer regiments within the jurisdiction of their own province, to prevent the rebels from crossing the channel. But their real desire was clearly proved by their subsequent conduct. Notwithstanding the exceeding pressure of Government business, they have presented their famous memorial to the central authorities, discussing the administration of the past, and demanding the establishment of a representative assembly. They have only the appearance of tranquillity. They intended to provoke excitement within their jurisdiction. Besides, they hold a weekly meeting, called the "Yenzatsukai," where speeches, dilating on the independence of America and France, are delivered to crowded audiences, in the evident hope of making the people rise against the authorities. * * *

Now, they have just lost a good chance of revolting, and their leaders have been arrested and imprisoned before they could move one soldier under their command. The four *hans* viz., Saga, Yamaguchi, Kagoshima, and Kochi, which have been known as the founders of the Mikado's authority, have risen against it one after another. Immediately on the suppression of the third rebellion, the last mentioned *han* (Kochi) is going to follow the example of the others. Alas!

SKETCH OF THE LIFE OF OGURA-SHOHEI.

(From the *Akebono Shinbun*.)

Ogura-Shohei, an eminent partizan of Saigo Takamori, was born at Ohi in Hiuga. In his early years, he was distinguished for his high talents and proficiency both in literature and the military art. While he was a student, living in Yedo, the civil war broke out between the Imperial and Tokugawa parties. The Daimio of Ohi, the then lord of him who was but yesterday a revolutionist, recalled him from Yedo to his own country, and appointed him to a command in the army. Ogura took the field in person on the side of H. M. the Mikado. On the return of peace, he entered the Tokio Nanko (now the Kaisei-Gakko), where he was promoted to the rank of *Daigaku Gondaijo*. He was sent to London at government expense to pursue a course of study. On his return to Japan, after many years, he found the question of a Korean expedition a subject of lively discussion. Saigo and many others resigned their respective offices, and retired to their homes. Ogura shared Saigo's opinions, and followed him to the West, where he spent his time collecting arms, and waiting for the declaration of a Korean war. At this time the attempted assassination of — (Iwakura?), and the Saga rebellion, caused great perturbation. Eto Shinpei and other distinguished rebel leaders escaped to Satsuma after their defeat by the imperial troops, and were obliged by Saigo, quite contrary to their expectations to leave immediately. Ogura hired a boat for them. When the rebel commanders were arrested in Tosa, he was brought to trial for having given them a vessel wherein to cross

the channel to the island of Shikoku, and condemned to a term of imprisonment, from which he was released last year. When the news of the Kagoshima insurrection was first heard in Tokio, he left immediately for Hiuga. On his arrival in Ohi, he found the insurgents beleaguering the castle of Kumamoto, and determined to take Saigo's side against the Minister —. He assembled a number of shizoku in Ohi, and went alone to Kagoshima, where he held meetings with — (Oyama?) He was in favor of pushing on to the Bungo road at the head of the Hiuga men; but his proposal was not acceptable to Saigo. At length Ogura left Hiuga for the assistance of the rebels at Tawarazaka in Higo. On his way to Kumamoto, falling in with the insurgents who had raised the siege of that place, he returned to Hiuga. Thence he penetrated at the head of one battalion to Bungo, where he was wounded. He committed harakiri at the hospital in Nobeoka. Many of the Hiuga men laid down their arms before the imperialists after his death.

THE INFLUENCE OF SAIGO.

(From the *Osaka Nippo*.)

Kishima Kiyoshi, Saigo's eminent lieutenant, is dead. Kabayama Kihei has been arrested by the imperialists. Katsuro Emon, with 8,000 men, has laid down his arms and surrendered to our troops. Beppu, Murata, Kirino, and Henmi are wounded more or less severely. If these telegrams are true the Kagoshima insurgents find their partisans are few; and by losing his generals Saigo loses his arms and legs. In this condition, no ability or talent on the part of Saigo, or strength of his men can alter the natural course of events, and the suppression of the rebels is expected in the course of a few weeks. Who will not be thankful for this?

We and our countrymen have been anxiously expecting, from the very commencement of the rebellion, that one last great battle would take place between us and Saigo. Now, many of the distinguished rebel leaders have been killed or wounded, and we might not be wrong in saying that news of the entire subjection of the insurgents may shortly be expected from the South-West. But we can not yet say so for certain. When we reported the death of Shinohara at Yamaka, Higo, at the commencement of the war, we supposed that Shinohara was one of the three rebel commanders, viz., Saigo, Kirino, and Shinohara, and that he was much superior to the other two, both in his knowledge of literature and proficiency in the military art, and that his death would hasten the overthrow of the Kagoshima rebels. But a gentleman who is well acquainted with the general condition of the rebels, advances a different opinion to ours, and expresses himself to the following effect:—"Kirino, Shinohara, and other eminent partisans of Saigo, are individually thoroughly versed in military affairs, so much so that Son and Go, two ancient Chinese warriors, would be compelled to give way before them. And during the civil war in the first year of Meiji, (1867), they appeared repeatedly in the battle field in person. But at the present time, the Kagoshima insurgents have raised the standard of revolt against the government, and their actions are entirely governed by Saigo. The talent and ability of his partisans could effect nothing without Saigo; so the insurgents will not become discouraged so long as Saigo lives in their camp." We believe that the remarks of this gentleman are quite correct.

The death of one half of the rebel troops causes no discouragement among those composing the other half. We say that it is much better to endeavour to kill Saigo than to kill two-thirds of the rebel soldiers; or to capture one Saigo than to kill all his assistant leaders. Was it not after the death of Shinohara that the insurgents drove back the imperialists with heavy loss at Tawara-zaka and stormed the imperial forts on Torinosu? Was it not after the death of Kodama that the insurgents re-established their head-quarters at Hitoyoshi and penetrated to Bungo? Was it not after the arrest of Kahayama by the imperialists that the rebel troops stormed the imperial head-quarters at Mitai, and seized large quantities of ammunition? Was it not after the death of Kishima that they captured Kagoshima, and routed all the imperialists on their way to Kagoshima from Nobeoka, Hiuga? Notwithstanding their great loss of men, the insurgents are not yet discouraged, and they have repeatedly defeated the imperialists and forced them to retreat. Saigo will most probably fight his last battle at Kagoshima, where he was born, and where he is expected to commit harakiri.

SHORT ANECDOTES.

(From the *Japanese*.)

TAIKO FOILED.

Having entirely suppressed the power of the Hojo family, who had confined themselves in the castle of Odahara, and opposed his authority, Taiko proceeded on his expedition to the state of Mutsu. His army was stopping at the town of Utsunomiya, when Taiko suddenly issued an order to call to his presence Tadakatsu Honda, a most distinguished general in the army of Iyeyasu Tokugawa. The general was then in Kadsusa, suppressing numerous riots. On his arrival, Taiko assembled all his vassals, and taking a suit of splendid armour, said aloud. "This panoply once belonged to the illustrious hero, Shiro Tadanobu. Sato, and I wish now to bestow it upon whomsoever may most deserve it by loyal and brave actions, worthy to be compared to the exploits of that hero." As no one ventured to claim the distinction, he said:—"The only one who can wear this without impropriety, or with a clear conscience, is my friend Tadakatsu Honda, a vassal of Tokugawa. For when I received the intelligence that, at the battle of Nagakuto, he had killed three of my generals and defeated my whole army, I was vexed beyond measure, and at once started with 30,000 troops to restore the fame of my army; but I met a most determined resistance from my friend, who had under him only 500 men. During the fight I observed a cavalier wearing a helmet decorated with deer horns, giving drink to his horse at a river in the coolest manner possible; and on inquiry, I found him to be my friend Tadakatsu Honda, now before me. I could not refrain from exclaiming, with tears:—"Oh! gallant Tadakatsu, you have kept in check my 30,000 troops, with but 500, a feat which for an ordinary man to attempt would be madness as great as to attempt to break a stone with an egg. Truly, I admired his coolness and gallantry, and thought that I could gain nothing if I killed so brave a man, so I let him complete his glorious achievement, and retreated. Now of all the ancient heroes Tadanobu Sato is the only personage with whom to compare him; and therefore I have much pleasure in bestowing this armour upon my friend, Tadakatsu Honda." That very night Tada-

katsu was called to the private chamber of Taiko, and, after tea, Taiko said, "Tadakatsu, your courage and gallant demeanour are beyond praise; but you owe me much for making known your merits among so many of my vassals to-day." He continued slowly, and confidentially, "Perhaps you may have observed, how great a difference there is between my treatment, and your master's, of you." All this the cunning Taiko did, intending to buy the brave man over, but the other answered no single word, merely bending his head low. Being pressed for an answer, he said at length:—"Sir, your liberal consideration to me is greater than oceans and mountains; but to the house of Tokugawa my ancestors were hereditary vassals, and the relation between that house and myself is a most sacred one, which I cannot break for any consideration. No, your excellency, nothing can avail to shake me in my attachment to that house." Taiko was not very well pleased to hear this, and still less at the failure of his scheme.

A CURE FOR COWARDICE.

Daizo Iwama was a stout and well made man, whom Shingen Takeda picked out from among his musicians, and placed in the ranks of his army, but he was found to be exceedingly timid. Seven times, when compelled to go to the battle-field, he fled. Shingen, seeing that no ordinary treatment could cure this cowardly sickness, ordered his man to be bound with strong cords to a bamboo shield, and exposed to the enemy's fire during a fight. The frightened man was removed half dead when the battle was over, but he was not hurt at all. Impressed with his lucky escape, the man said, "one's life or death depends upon chance, and now I have no fear of missiles." After that he became very courageous and proved a brave soldier.

"CASK-BREAKING" SHIBATA.

When Nobunaga Ota expressed the wish to create Katsuei Shibata general of his army, the latter begged to be excused from that important office, but Nobunaga compelled him to accept it. On his way home from the presence of his lord, Shibata had the misfortune to come into collision with a proud samurai, who stumbled against Shibata in passing him. Seeing that the other did not apologise for his uncivil behaviour, Shibata cut him down on the spot, and went home as coolly as if nothing had happened. When the intelligence reached Nobunaga, he was angry, and summoned the new general before him to censure him for his rash action. The general said, with becoming pride, "Sir, this is why I begged to be spared the manifestation of your favor; for a general must have power enough to enforce his commands, and there is no reason why he should not kill a man who has insulted him."

In the 12th year of Eiroku, Shibata was commanding the castle of Chokoji, when it was besieged by the troops of Sasaki Shotei, who captured the outer works, but met a determined resistance to all further assaults. All supplies of drinking water were cut off from the castle, but still no signs of yielding were shown; so Sasaki sent a messenger into the castle to see what was going on there, under the pretence of arranging terms of peace. The messenger was received courteously by the brave general, who, on the other's request to be allowed to wash his hands, ordered men to bring a large tub full of fresh water, which, when the washing was over, he caused to be thrown away in the garden, without the least apparent reluctance. This astonished the messenger very much. He went away under

the impression that water was plentiful there. However, it soon became evident that there was no longer sufficient water in the castle to supply the garrison, so Shibata called his soldiers together, and made a hasty feast. He then called for the cask containing the last water, which was found to consist of only two to, and staved it in with his weapon, showing that he was determined to conquer or die. The order being given for the final charge upon the besiegers, the next morning the besieged darted out of the castle with loud cheers and attacked the half dreaming enemy, who, being taken by surprise, were unable to offer any resistance, and fled away in utter disorder, harassed by their victorious foes. In this battle Shibata took 800 heads of the enemy, which he presented to Nobunaga, who wrote him a letter thanking him for his gallant conduct. After that the general was known commonly as "Cask-breaking" or "Kame-wari" Shibata.

THE WIFE OF KAZUTOYO YAMANOUCHI.

When Kazutoyo Iemon Yamanouchi (the ancestor of the late daimio of Tosa), entered into the service of Nobunaga Ota, there came one day a horse dealer with a horse of superior breed to the town of Azehi, where Nobunaga was residing. The animal was admired by everybody, but no one was rich enough to buy it. Kazutoyo being also unable to get it went home disconsolate, and said to himself, "How painful is poverty! If I could have that horse, and ride before my lord, it would not only be to my own honor but to that of my lord!" His wife, hearing this, asked the price of the horse. "Ten rio in gold," replied her husband. "Then you may buy it," said the wife, and, producing the money out of her mirror case, laid it before him. He was exceedingly delighted, but said, reproachfully, "Why did you not tell me before that you had money, when you saw me poverty-stricken? you are cruel!" "I do not wonder to hear you say so," replied the wife, quietly; "I reveal my secret now. When I married you, my father put the money into my mirror case, saying that I should not spend it because my husband was poor, but use it for the most important purpose which might present itself to you; so now, as I hear that there will be a war soon, we may use it to buy this horse, which it is important to your honor that you should have." "This is a kind gift from you and your father," said the husband, accepting the money with tears. He at once bought the animal. Soon after this a war broke out, and Kazutoyo entered Kioto riding on the beautiful horse, which his lord saw with astonishment. "Hallo, Iemon! where did you get that animal?" cried Nobunaga. On his learning the particulars from Kazutoyo, he said, "I have many servants, none of whom could buy this horse, which was a shame to me; but you have managed to buy it in spite of your poverty and to my great honor;" and he at once increased his servant's annual pension of five hundred koku of rice to 1,000 koku.

In the German Consular Court on the 15th inst., Okama Susaburo, a native trader, sued Messrs. Schinne & Francke for \$150 damages for non-delivery of 150 pieces of *kameya goro*, alleged to have been purchased from defendants in February last, but never received. As the plaintiff did not produce proof of loss, and as the amount claimed in any circumstances was excessive—the difference between the price to be paid by plaintiff and the extreme Yokohama market price at the time being only ten cents—the claim was dismissed, and plaintiff was ordered to pay costs.

MISCELLANEOUS.

EXTREMES certainly met in the Gaiety Theatre on the night of the 8th instant, where and when lovers of the curious had an opportunity of comparing the striking contrast of Japanese and European music, and experiencing the differences between the false and the true gamut after hearing the strains of either alternately. The house was fairly well filled, though not crowded as it generally is when the amateurs give an entertainment. Possibly a portion of the public is a little shy of such innovations as fire-balloons at Promenade Concerts, and the singing of the amateurs as a subsidiary to the performances of Japanese acrobats. Be this as it may, however, the entertainment of last evening was a very agreeable and amusing one, and was thoroughly relished by the audience. Tomokitchi and Fukumatsu are extremely clever in their respective *genres* of balancing and rope-walking; the umbrella feat, the jar trick, screen-balancing, the dancing barrel, and the slack rope performances being wondrous exhibitions. The programme, comprising thirteen "acts" and songs, was worked through with commendable promptitude, and with none of that dawdling between the parts which tends to render Japanese and Chinese performances so tedious. Although the entertainment did not commence until half past nine, it was concluded at half past eleven. Messrs. Hyde, Pearson, and Townley were the amateurs who sang, the serenade from "Cox and Box" being given by the two latter gentlemen, instead of Smart's duet "When the wind bloweth in from the sea." As sung by Mr. Pearson, Barker's fine old song in which words and music are in such thorough sympathy, will always be fresh and pleasing.

If the *Echo du Japon* is to be believed some probability exists of another French banking establishment replacing the Comptoir D'Escompte in Yokohama. We read:—

There is serious mention, it appears, of the installation by one of the great financial establishments of France of several branches at different points of the Far East, and Yokohama would be one of these. The French colony would see with great pleasure this project carried into effect; for the closing of the agency of the Comptoir d'Escompte is prejudicial to many houses and residents to whom the nature of their business renders a French bank exceedingly desirable. We are well aware that the commercial situation is not of the most encouraging, and this it is which must have led the Comptoir D'Escompte to give way to the three English establishments, the Oriental Banking Corporation, Hongkong and Shanghai Bank, and Chartered Mercantile Bank. However, it seems to us that the export of silk, silk-worms' egg cards, and curios, made by or for French houses, represents a certain sum, and that that of the importations of our goods is also sufficiently considerable, with other possible operations, to leave a reasonable and lucrative part of the business to a French bank. We hope, then, with all our heart, that the inheritance of the Comptoir will find an heir, persuaded as we are that, in spite of the difficulties of the situation, a French bank, confided to the care of an active, intelligent, and sympathetic director, has still a *raison d'être*, and real chances of success.

THE *Tokio Times* appears to be falling in with the general opinion of the public in attaching neither weight nor meaning to its own utterances. It is difficult otherwise to explain the discrepancy between the two paragraphs, quoted side by side below, except on the alternative supposition that the severely taxed memory of the Editor is giving way under the strain placed upon it. If there is any meaning in words, we are correct in stating

that, in the paragraph dated 1st September, "the *Tokio Times* suggests the abolition of extra-territorial jurisdiction as a remedy for the conflict of decision between the two courts." However, on second thoughts, we are glad to learn on the authority of the *Tokio Times* that we were mistaken; that there is no meaning in words as our contemporary uses them; and that he does not suggest the abolition of extra-territorial jurisdiction.

Tokio Times, Sept. 1st.

Ever luminous, convincing and satisfactory to the human understanding is the operation of the beneficent system of "extra-territorial jurisdiction" in Japan. A case is brought against Captain Batchelder, by the authorities, before the United States Consul General, and, after long and patient reflection, is decided in favor of the defendant. An identical case, differing, we believe, in no one particular, is brought against Mrs. Blockley, in the British Court, and, after still longer and yet more patient consideration, is decided in exactly the opposite way—that is to say in favor of the plaintiff. At the present moment we will not enter upon the question as to which result may be right and which wrong. It is sufficient to know that both cannot be correct, and that when "extra-territorial jurisdiction" can show no better approach to unanimity of judgment than this, the sooner it hides its diminished head and confesses its inadequacy, the better.

SOME likelihood exists of ground-rents being withheld by foreign settlers in Yokohama, on the plea that there is no Municipal Director to look after the interest of alien land-holders.

THE *tu quoque* argument is always a weak one, even when some shadow of an excuse exists for its employment. It must have less than no force when there is no "*quoque*." The *Echo*, in its very unsuccessful attempts to excuse its malpractices in the appropriation of other persons' literary property, makes an assertion utterly false—though that to the *Echo* also would seem to be a matter of the very slightest moment—as to our shipping reports. As we give intelligence under this head to within half an hour of going to press, the charge of the *Echo* bears absurdity as well as misrepresentation on its face. In so many words we do not, and could not if we would, considering the time at which our paper appears, derive our shipping news from other than original sources. The *Echo* should really be more careful in making hap-hazard statements, if even it cannot abstain from literary pilfering. Our marine reporter is Captain DAVID SCOTT; and we think it would be hard to find one more efficient, or, from his position, better able to give the latest and best information on the subject of movements in the shipping.

THE following telegram was received from Tokio on the 24th instant:—

4.45 P.M.—Imperial victory at daylight, near Kagoshima Castle. Saigo, Kirino, Murata among the killed.

Tokio Times, Sept. 8th.

Our inventive little friend, the *Japan Gazette*, while discussing the recent judgment of the British Law Secretary in the Blockley case—a judgment directly adverse to that of the United States Consul General in a similar suit, states that "the *Tokio Times* suggests the abolition of extra-territorial jurisdiction as a remedy for the conflict of decision between the two courts." That is a very creditable flight of fancy for the *Gazette*. A newspaper, even in Yokohama, ought naturally to try to distinguish itself in some way, and if it cannot do so by telling the truth, it may gain at least a notoriety by achievements in the opposite direction. As a matter of fact, it is probably unnecessary to say that the *Tokio Times* did not "suggest the abolition of extra-territorial jurisdiction," either "as a remedy for the conflict of decision" or for any other purpose.

THE cricket match between the Settlement and Fleet and Visitors elevens came off on the 13th the play commencing about 10.30 A.M. The Fleet were the first to defend the wickets, and at the commencement it seemed as if their score was going to be infinitesimally small, as three wickets went down for less than half a dozen runs. But Havergall and Bain made a determined stand, the latter being ultimately bowled by Abbott for 26 runs. Wade was his successor, and retired after making one run. Havergall made some splendid hits, and with eight wickets down the score stood at 158. The last two men made no runs, and Havergall carried his bat out after making a splendid innings of 91, which, we believe, is the highest score ever made by one man on the Yokohama Cricket Ground. Messrs. Mollison and Dodds were the first to handle the willow on the Settlement side and commenced playing very carefully. The result of the match, ended in favour of the Settlement, who scored 205, including 26 wides, three byes and one leg bye, with only five wickets down. The bowling and fielding of the Fleet and Visitors was not first class at any time during the game, but on the free hitting of Messrs. Mollison, Dodds, Hamilton, and Kirkwood, both became utterly demoralised. The following is the score.

FLEET AND VISITORS.

THE *Kozan Shimpō* would apparently support the theory that killing may be no murder. Referring to a rumor in the *Osaka Shinbun*, that affairs in Corea are very much unsettled, owing to the constant attempts made by young men to assassinate members of the Korean Government, it has the following paragraph;—

"Shall we grieve at this news on account of the Korean officials? Certainly not. On the contrary, we rejoice for the Korean nation. Because, for a nation which tries to progress towards a state of more enlightenment, there are a thousand obstacles and difficulties to encounter and conquer. Remember twenty years ago, when the American flag first floated in the gulf of Yedo, when the officials of the Bakufu, struck with terror, advocated peace, while the provincial patriots indignantly declaimed against it, proposing war. What collisions then took place, and what numerous assassinations occurred! These, however, resulted in the overthrow of the Bakufu, and the

restoration of the Imperial authority, which has brought round an entire change in national affairs. Now, the action of Corea in shutting herself up from the rest of the world, closely resembles ours in the years of Ansei (1854 to 1859); and it is no wonder that there should be a great deal of bloodshed while she is opening her country to foreign intercourse, and changing all her national prospects: therefore we say we do rejoice at this news for the sake of the Korean nation."

MUCH proof is not wanted to establish the fact that Kirino and other rebel leaders had long contemplated, and been preparing for, the revolt, which has for eight months taxed all the energies of the Government to make head to it. Trifling occurrences of by-gone days, and old letters from one or the other of the conspirators, now and then come to light, and make doubly sure the assurance that the Satsuma insurrection is the outcome of a long fostered and well matured scheme. The *Nichi Nichi Shinbun* now quotes a private letter from Kirino to Oyama Tsunayoshi, late Governor of Kagoshima, wherein he begs for Fuchihe and Henmi each a grant of some land. The epistle is dated the 29th May, and so must have been written last year or the year before that. It concludes thus:—"I am very sorry to trouble you about a few patches of land, but I am in a measure compelled to do so, by the long continuance of peaceful days. Be good enough to guess my motive."

At a little past eight o'clock on the morning of the 16th, as a steam-tug in charge of Mr. J. W. Brown, while on her way to the *Belgie*, was passing the *Nagoya-maru*, she came into collision with a native boat, having two sendos on board. The boat was capsized and the men were thrown into the water, with the result that one sank almost immediately and was drowned, while the other was rescued by the crew of the steam-tug.

News from native sources was scanty on the 17th. Owing to the celebration of the festival of the Jiusho-sai (the presentation of the first fruits of this season's crop of rice to the gods) no Japanese newspapers were published; and all Government offices were closed. General holiday was kept; and the native town was gaily decorated.

In accordance with a wish expressed by the late Mr. John England on his death-bed, his mortal remains were buried on the 16th with masonic ceremony. The coffin arrived by train at half-past three in the afternoon from Tokio, and was met outside the Masonic Hall by about thirty of the brethren, who had previously assembled in Lodge. The party then marched in procession to Christ Church, and thence to the Cemetery, where the last honours were paid to the departed. A large number of friends of the deceased, native and foreign, from Yokohama and Tokio, accompanied the funeral procession.

THE following are the returns given by the *Osaka Nippo* of the imperialists killed, wounded, and in hospital, between the 22nd February and 30th June.

	Wounded.	d. Killed.	Died.	Discharged.	Remain
Officers	550	138	80	238	94
Petty officers	1,395	209	181	675	330

Men (class unknown)	387	7			31
Total	12,625	2,734	1,411	3,754	4,653

T. W. HOLM was charged on Monday, 17th instant, in the German Consular Court, before Mr. Zappe, by his late employers, Messrs. Copeland and Wiegand, with fraud and embezzlement. The charges brought forward were for misappropriation of funds to the extent of from \$300 to \$400. Several witnesses who spoke to the falsification of their receipts were examined. The Court announced that it would give its decision on the 27th instant, till which time the accused is allowed to be at large under police control. In addition to the charges adduced there are still a large number of equally serious complaints of fraud, making in all, a total of upwards of \$600 unaccounted for by Holm.

ALTHOUGH the Editor of the *Choya Shinbun*, as a faithful or fearful servant of the Government, publishes the intelligence, contained in the interesting letter which we translate above, not only with the fullest reserve but also with a caution against giving it credence, it is evident that important events were about to transpire in the province of Iyo; and that the whole of the island of Shikoku was in a fair way to be involved in a formidable insurrection. That the conspiracy alluded to has been discovered before its deep laid and widely extended schemes had matured is matter on which the Government may well congratulate themselves. Still, under the present system of rule, such schemes may be constantly expected: the dread of them must be an abiding source of uneasiness to those in power; and the talent and energy employed in forming them, be so much ability and force withdrawn from the service of the country. Something must be radically wrong with a system which produces so much active and latent disaffection as does the present form of government in Japan. If the advisers of the Mikado will be wise, they will hasten to meet that which everything goes to prove to be the wish of the country. Reform in the administration, the abolition of irresponsibility in the Government, the concession of representative institutions are what the intelligence of all classes in the empire clamours for. Such demands must be obtained in time if they are not granted. To grant them now would be to remove all real cause of disaffection, to stop open revolt and secret plotting, and to establish in the nation's life a healthy current which shall flow on to moral and material prosperity.

A CORRESPONDENT in Tokio has sent us the following particulars of the funeral procession which escorted to its resting place in the burial ground at Shiba, the body of the deceased Princess Seikanin-no-Miya. A more imposing spectacle, and a larger gathering of natives, have never been witnessed by foreigners in Japan:—

The head of the procession left Azabu at about 11 a.m. and reached Shiba at half past noon. Several hundred thousand persons had assembled to view the passage of the funeral party, and thronged the streets along the line of route in dense masses, through which the squad of mounted police which led the procession had at times great difficulty in clearing the way. In an English crowd of equal extent and under similar circumstances, some cases of injury or death would certainly have occurred. In Tokio, yesterday, (13th) owing to the good humour and respect for their neighbours which characterize the individuals forming a Japanese crowd, no casualties seem to have occurred.

Next to the mounted policemen, came a troop of cavalry, followed by a detachment composed of several hundred soldiers of the line, then another troop of cavalry, next another detachment of infantry, and then a battery of artillery composed of six howitzers. The rear of the military was brought up by a full brass military band, with a base drum draped in white. During the march to the Tycoon's temple this band played the Dead March in Saul.

Immediately following came the funeral *cortège*, which was thus composed:—First sixteen white lanterns borne aloft by priests walking, all dressed in the purest white. After them, seated in an elegant barouche, was the chief mourner, Matsudaira Kakudo. This gentleman was clad in white under-garments, and an outer dress of red and gold brocade. On approaching the gate of the temple he alighted from his carriage, and with a slow and dignified step walked to the entrance. Following the chief mourner came a number of priests, dressed like the others in white, and bearing white lanterns aloft, and after them came a flute band consisting of sixteen fluted fifes, supplemented by a dozen flutes from an army regiment. Next were two enormous lotus plants, borne on high by bearers clad in white. Then came a number of priests, walking slowly two by two some distance apart, some carrying censers of burning incense, and others a large openwork gold salver, containing, besides a fan, pieces of gilded paper, which they dispensed right and left to the eager crowd. Then other white-robed priests with more white lanterns, and then four mourners who marched immediately before the coffin, which was carried on a bier ornamented in four places with the imperial crest, and surmounted by a heavy canopy, borne up on each side by some twenty men on foot, all dressed in white. Afterwards passed four more mourners, behind whom came eight white dressed priests with white lanterns, followed by the bearers of two large clusters of splendid lotus flowers.

Next were two carriages, the first containing four, and the second two, of the ladies of the late Princess' household, all draped in mourning robes of white; and these were followed by more white-clad priests with white lanterns.

The funeral procession proper terminated here with forty-one private carriages, each occupied by some high official. Among them I noticed Sanjo, Iwakura, Okubo (Home Minister), Kuroda, Ito, Terashima, Oki, General Saigo, and others with names scarcely less well known. Following these carriages, and closing the procession as other military led it, came a battalion of infantry, a battery of six field pieces, and a company of cavalry. More carriages, which probably had arrived at Azabu too late to take their proper places in the procession, came last of all. Seated in one of them was Okubo, ex-Chiji. The best idea of the length of the procession can be conveyed in the statement that the passage of the whole, from the first mounted policeman to the last carriage, on any point of the route, must have occupied an hour's time.

THE Consuls met on the afternoon of the 18th inst. at five o'clock p.m. to discuss sanitary measures. They can, however, do little more than to give authority to a sanitary committee of medical men, to inspect and report on the tenements in the settlement. In the case of the condition of tenements being bad from a sanitary point of view, it will devolve upon individual Consuls to adopt the best means each one can to enforce such improvements as may be deemed necessary or advisable. Precautions observed, we repeat, the foreign settle-

ment is in small peril; and little danger exists of such measures as may be rendered imperative by a common danger being opposed by individual members of the foreign community, and still less by that body as a whole.

ABOUT one o'clock on the 18th a man in a sampan in the Creek was suddenly seized with cramp in his stomach and fell down in great agony. His complaint was presumed to be cholera, and his companion communicated with persons on shore. After some time a Japanese doctor and some policemen arrived, and the man was conveyed to his home. A bottle of carbolic acid was then produced by a policeman; and the boat underwent a disinfecting process.

THE *Kozan Shinpo*, recently published in Osaka, and the prospectus of which as well as some extracts from the paper were translated into the *Japan Gazette*, lived through a second issue, before it was stifled by the local authorities.

WE understand that shooting licenses will be issued for the season 1877-78, under the regulations promulgated by the Kanagawa Kencho and approved by the Foreign Ministers, in the early part of January last.

THE *Hochi Shinbun* says that the German Minister, having sent to his Government for instructions as to what action he should take on the broil between the men of the *Vineta* and the Japanese police, which occurred in December last and resulted in the death of one of the German sailors, has received a reply. He is instructed that, the Germans having been in the wrong, no demand for an indemnity shall be made upon the Japanese authorities.

MR. E. L. B. MACMAHON, Agent for the Chloralum Company, has handed us a little work, by Dr. Henry Blanc, M.B.C.S., Surgeon-Major, H. M. Indian Army, entitled "Cholera, how to avoid and treat it." Dr. Blanc, who, by the way, was one of the captives in Abyssinia, under King Theodore, has had, in his Indian experience, many opportunities of observing and treating cases of cholera. He recommends, under certain conditions, the internal administration of diluted chloralum.

EPIDEMIC cholera is reported to be very prevalent among the Japanese in Nagasaki.

ONE death from cholera is said to have occurred on board the U. S. S. *Ranger* in Nagasaki.

AN instance of the ignorance of the generality of Japanese in regard to foreign chemicals, as well as of their faith in the potency of such drugs, occurred last week. A gentleman had occasion to go into a well-known chemist's in Benten Dori, and while in the shop quite a dozen anxious looking natives came in and asked for "cholera medicine." The chemist seemed to know what was wanted as he quickly produced carbolic acid, and then asked each one what he was going to do with it. One and all expressed their ignorance of how to use it: they knew that it was thought to be an infallible remedy against cholera, and so wanted some of it, but whether it was to be taken inwardly or outwardly they knew not; and were somewhat surprised on being told it had to be sprinkled on the ground or in their houses. There has been such a call for carbolic acid in the native town within the last few days, that it has become very scarce and very dear.

THE *Hiroshima Maru*, which arrived on the 19th from Shanghai, Kobe, &c, brought up 169 rebel prisoners guarded by police. Our reporter was informed by Europeans on board that the men had been well treated though they were rather cramped for room. The prisoners left the vessel in squads of twelve, each party guarded by two policemen, and were landed at the English hatoba. They were tied together with small rope, passed round the shoulders and leaving the arms quite free. One or two of them certainly looked pale and ill, but the greater number did not seem to be any worse than most people are after a short voyage made in a vessel where space has been restricted.

Three hundred wounded imperialists were taken on board at Nagasaki, and landed at Kobe, for admission to the hospitals. Many of their wounds were very serious sword-cuts.

The crew and native passengers, on their arrival in Yokohama, were examined by Japanese doctors from the shore, before they were allowed to land.

On the evening of the 18th the members of the Consular Corps met in the German Club for the purpose of considering the best preventive steps to be taken against the spread of epidemic cholera. A Board of Health, composed, in the first instance, of Drs. Simmons, Eldridge, Wheeler, Goertz, Lambert, R. N., and Tripler was nominated, these gentlemen having power to add to their number, and to visit all tenements in the foreign settlement, and report to the proper consul in each case where sanitary measures may be necessary. A letter was drawn up and addressed to the Governor of Kanagawa, requesting his attention to the disgraceful condition of that part of the Swamp Concession which is occupied by closely packed masses of Chinese and Japanese, a locality which is specially likely to be visited by any prevalent epidemic, and to become a source of serious danger to the entire community. Prompt measures of disinfection of the whole neighbourhood were recommended, and the Governor was urged to provide a fund for the purchase of the necessary disinfectants. The medical men who have agreed to serve on the Board of Health have, also, it is hardly necessary to say, undertaken to render their services gratis. On the pecuniarily trifling matter of providing disinfectants, there can be no doubt where the responsibility rests. It is certainly with the Japanese authorities, to whose neglect in not providing drainage or insisting upon proper provisions being made for the public health, the disgraceful condition of the quarter is owing. We hope that Mr. Nomura Yasushi will see this. He seems to be really anxious to take every possible measure of precaution; and the disinfection of a densely populated, central, and most unsavoury neighbourhood will strike him as being a necessity of the first importance. Some of the medical men above mentioned have already visited, from house to house, in the district, and their reports show what prompt attention is necessary. At an adjourned meeting of the Consuls the Kencho authorities in a measure admitted their responsibility for sanitary provisions in that quarter. It is essential, however, that they see that these provisions are made under foreign medical supervision.

At a meeting, held on the morning of the 19th instant, of the medical gentlemen composing the Board of Health, Dr. Simmons was elected Chairman, and Dr. Stuart Eldridge, Secretary. To the latter gentleman all communications on subjects which should be

brought under the notice of the Board of Health, ought to be addressed.

FACE the truth manfully and honestly. Considering the very favorable hygienic conditions under which most foreigners in Yokohama live, and the preventive precautions which they have taken on the first word of alarm, comparatively little danger exists of the inroad of cholera into their habitations. Still, nothing can be gained by disguising what is too momentous a fact; and that is that a dire epidemic has declared itself among people who breathe the same atmosphere as ourselves, and are living at our doors. At the consular meeting, on the 18th, five foreign medical men were present, including Dr. Simmons. At the request of the latter, the others adjourned to inspect and report upon a case of sickness, which, on their return, they unanimously pronounced to be one of epidemic cholera. Of all the foreign practitioners in the settlement but one still expresses any doubt as to the identity between the present epidemic and true Asiatic cholera.

As the landing of the prisoners, brought up by the *Hiroshima Maru*, did not commence until eleven o'clock in the morning of the 19th, the reports which were circulated long before that time as to the barbarity displayed in their disembarkation, have no more substantial foundation than that of mischief or pure imagination. The men were landed in the way we have described above. Measures were taken to secure them and to bring them under the easy control, if necessary, of their small escort of police; but no cruelty was shown nor unnecessary indignity offered them.

BETWEEN two and three o'clock on the morning of the 20th a fire broke out in Idamachi, Kanagawa. It was not got under until about eighty houses had been destroyed.

WE cannot be surprised, though we are grieved, to hear that cholera has made its appearance in Tokio. On the 19th Mr. Kusumoto, Governor of the Tokio-fu, came to Yokohama to consult with Mr. Nomura, Kenrei of Kanagawa, as to the best preventive measures to be taken.

WE have been requested to notice that the Board of Health, which now consists of Drs. Simmons, Hepburn, Wheeler, Massais, Goertz, Coles, Lambert, Tripler, and Latham, and Messrs A. Brent, H. Allen, F. von Fischer, and H. Degron, are now ready to see and act upon any communication or complaints which may be preferred in reference to any sanitary matters. All communications should be addressed to Dr. Stuart Eldridge, Secretary, No 66, Yokohama.

From the 9th instant, when the first access of real cholera declared itself in Yokohama and Kanagawa, up to the 20th instant, ninety cases of the disease occurred; and of these thirty-two had a fatal termination. Owing to the prompt precautions taken by the Kencho authorities, a strong, and it is to be hoped effectual and permanent, check has been placed on the spread of the epidemic. Dr. Simmons is hopeful that it has been now, as far as this town and locality are concerned, brought under medical control.

THE British schooner *Beatrice*, M. Jordon, left Yokohama on the 29th of April last, for a cruise among some of the Pacific islands in search of sea-otters. Several other

schooners, the *Jupiter*, *Lottie*, *Caroline*, *Tori*, *Flying Mist*, and *Banner*, were cruising in the same neighbourhood. On the 12th of June the *Beatrice* and several others were in Jap Bay, Iturup island, when it commenced to blow very hard about nine o'clock in the morning, and the wind increased very rapidly, while the sea began to run mountains high. Some of the vessels commenced to drag their anchors; and it became evident that in order to save them it was necessary to beat out. The *Beatrice* got up her anchor and worked out, but not before the foresail was split, the davits were broken, boats filled with water, and a man, a Japanese sailor, was lost overboard. The *Tori* slipped her cable and got off pretty safely. The *Lottie* lost her bob-stay and fore-boom: the American schooner *Flying Mist* was at sea when the gale came on, but, before the wind began to blow very hard, a tremendous sea set in, which almost swamped her. However, with the exception of some slight damage the *Mist* got off pretty safely. Not so the *Banner*. This schooner attempted also to beat out of the bay, and in doing so lost her mainsail and jib, and before another sail could be set, she was among the breakers. Finding there was no chance of saving the vessel, Captain Leonard ran her aground on a sandy beach. All hands contrived to get on shore, but the sea beat the vessel to pieces. About the 20th of June, after the boats belonging to the *Flying Mist* had been out hunting all day, and were returning in the evening, on a sudden one of them capsized and her crew were immersed in the sea. The other boats and the schooner were some distance away, and could not render any assistance; and the result was that three out of the four men forming the boat's crew, one Englishman and two Americans, were drowned. The fourth man was rescued when in an exhausted condition. This sad event caused a gloom to fall over the little fleet. The hunting season has been the worst one known for years, owing to the extreme roughness of the weather. The *Beatrice* left the hunting ground for Yokohama on the 7th of September, bringing with her the shipwrecked crew of the *Banner*. The *Flying Mist* sailed for San Francisco on the 1st September, and the other vessels were left on the ground, hoping to retrieve their fortunes. The *Beatrice* experienced fine weather until the 15th, when a heavy gale blew from the South, and the schooner hove to. After that cleared away, fine weather was experienced till port was reached.

The following is the Captain's report of the loss of the *Banner*:

Jap Bay, June 12th, 1877.

At 8 a.m. hove up anchor and proceeded to the N. E. side of the bay for shelter. At ten o'clock it commenced to blow in heavy squalls from the South-East. The ship was carrying double reefed mainsail, and single reefed foresail and jib; while her head was N. E. by E. At 10.20 had to cut away the bulwarks. Barometer 29.00 and falling. Close reefed foresail. At 10.40 balance reefed mainsail and put a double reef on the jib. At 10.55 a heavy squall from the S. E. blew away the mainsail. Kept the ship close by the wind under foresail and jib, both reefed. A heavy sea was running at the time, and it was found impossible to steer the vessel. Held a consultation with the men as to what had better be done. At eleven o'clock kept off so as to run the vessel on shore, in order to save life, and ten minutes afterwards she struck the beach. At 11.50 she commenced

to make water; and by 2 p.m. all hands had landed safely on shore. Saved about half of the stores in a damaged condition. A portion of what was saved was put up at auction and sold to the highest bidder. Had a survey on the vessel four days after she went ashore, when it was found that she was a total wreck, her bottom being entirely gone.

THE triumph gained by the British Government after twenty hours' hard fighting over the obstructive faction of the Home Rule party in the House of Commons is very like a defeat. The faction did certainly, in the words of a London paper, "behave in a way calculated to try the temper and exhaust the patience of a much abler statesman than Sir Stafford Northcote, and it is not strange that he should have been wearied out by its insolent defiance, and should have at last endeavored to suppress it by violent means." The general opinion in England is that if permanent injury has not been inflicted upon parliamentary machinery, a blow has been struck at the present Parliament from which it is not likely to recover. For this the Government are fully as much to blame as are the "obstructives" themselves. Mr. Parnell, is a gentleman: he is really a man of talent; and he has an honest purpose in view. He is genuine in his determination to force upon Parliament attention to what he regards as a special grievance of Ireland, and a way to remedy it. The journal to which we have above alluded, and which is in no sense in favor of "obstruction," or of derogating from the traditional dignity of what is admittedly the most dignified legislative assembly in the world, has a word of sympathy for Mr. Parnell. It says judiciously enough:—"He and his scanty following began their crusade against 'Saxon tyranny' at the commencement of the session, and they have worked it with wonderful energy and perseverance. In no case, perhaps, could they have been silenced altogether; but had the Government treated them with prudence during the past half year, it would certainly have mollified them considerably, and rendered them almost harmless." So wise a course was not followed however; the "obstructives" have been alternately humoured and abused, and at last driven to fury. The Government should have prevented all occasion for such action as that they forced upon the angry faction; and, having failed to do so, must now share in the disgrace which has been brought upon parliamentary institutions in England.

We are happy to state that, according to the returns, furnished to the Kencho, of cholera cases, the epidemic appears to be on the decline. Six deaths and nineteen new cases were reported as having occurred in Yokohama and the neighbourhood during the twenty-four hours ending at midnight of the 23rd. Only one case is said to have, so far, declared itself among foreigners, and that has been successfully treated, the patient being now out of danger.

As, owing to the non-appearance of some of the officers from the *Modeste*, now at Yokoska, who were to play in the cricket match between "Professions and Trade," arranged to take place on the 22nd, that match was no longer possible, a scratch game, "Tall vs. Short" was got up after tiffin between those present on the ground. The fielding shewed a great improvement on that in previous matches, and some of the play was very good. Mr. J. P.

Mollison made the top score, with 42, for the "Shorts" and Mr. Abbott the next best, with 26, for the same side, which won in a match of one innings by 55 runs, the final score being "Short" 125; "Tall" 70.

As, of the nine or ten resident qualified and practising medical men in Yokohama, the very great majority have staked their professional honour and the value of their experience upon their conviction that the epidemic now prevalent is Asiatic cholera, we are compelled to admit a conclusion which it would be the extreme of rashness and folly on the part of any other than a professional man to doubt. On the 24th we alluded to a case of cholera which had declared itself in the person of a foreigner resident on the Bluff, and which had been vanquished. The following day we had to record another case, the termination of which did not, unfortunately, promise to be so favourable. Mr. M. Jordan, a pilot, who, when ashore, lives at Karafuto, was taken ill the evening of the 23rd; and, the following afternoon, his case was, on the evidence of at least four independent surgeons of high standing, declared to be one of Asiatic cholera and all but hopeless. While we would earnestly deprecate all unnecessary and puerile alarm, we conceive that nothing is to be gained by concealing or disguising such a fact as this. Indeed, an opportunity occurs of turning it to good account, in insisting, while quoting an example, of the imperative necessity of the greatest caution in this season of epidemic. Frankly then, and in the first place, this unfortunate man's surroundings both increased his chances of being attacked by the disease, and diminished, when he was once attacked, his hopes of cure. But this is not all. His first symptoms were those of simple diarrhoea, which, had he left nature to herself, or taken medical advice, would in all human probability have passed over without more than usually serious consequences. As unfortunately happened, however, he took a dose of strong aperient medicine, with the result of giving vigor to the germs of disease, which must have been in his system, and causing to supervene an attack of cholera, which, if even medical foresight should in his case prove mistaken, and he himself should recover, has, at least, laid him at the doors of death. We insist upon it that, with proper precautions taken, with their usually more generous style of living, greater physical robustness, and infinitely cleaner, healthier, and happier surroundings, foreigners are far more likely to escape the disease than Japanese are. To say that they are not liable to the attack of an epidemic which is around them is to say that they are not made of flesh and blood. Careful attention to the hygienic and dietary rules which are now familiar to us all, is what they have to depend upon. With these observed, together with calmness of mind and courage, foreigners have little to fear. (Jordan succumbed to the disease on the 24th.)

BETWEEN midnight 23rd and the same hour the following day, eleven fresh cholera cases, and six deaths from the disease, were reported at the Kencho.

FROM the number of cases officially reported there can be no reasonable doubt that cholera is prevalent among Japanese in Tokio.

As the sanitary condition of all neighbouring ports must just now be matter of great interest to residents here, we publish a tele-

gram which was received on Monday evening 24th instant, by H.B.M. Consul in response to one which he forwarded in the morning to Shanghai:—

From British Consul, Shanghai, to British Consul, Yokohama.

Shanghai, September 24th 4.10 p.m. Asiatic cholera, few cases amongst foreigners, more amongst Chinese. Disease now abating: has never been epidemic.

THE Bluff has now been, like the Settlement, portioned off among members of the Board of Health, who will visit the compounds in their respective districts, and make such suggestions to the proprietors as they may deem necessary.

DR. SIMMONS' report of deaths from cholera, from midnight, 24th, to the same time 25th instant, is six in the neighbourhood of Yokohama, and four in Yokohama proper. The reports of fresh cases forwarded to the Kencho are numerous.

THE Kencho publishes the following official returns of cholera cases:—

During the 24 hours ended 12 p.m. the 22nd inst.

138 cases from the previous day. 20 new cases.—Total 158.—20 recoveries. 131 under treatment.—7 fatal.—5 males and 2 females.

During the 24 hours ended 12 p.m. the 23rd inst.

131 cases from the previous day. 30 new cases.—Total 161.—14 recoveries. 141 under treatment.—6 fatal.—4 males and 2 females.

During the 24 hours ended 12 p.m. the 24th inst.

141 cases from the previous day. 15 new cases.—Total 156.—12 recoveries. 138 under treatment.—6 fatal.—5 males and 1 female.

If this return is to be trusted the disease is more fatal to male than to female patients.

THERE would seem to be a strong disposition on the part of Chinese in Shanghai to keep the price of silk from any further reduction. With this object no doubt in view we are not surprised to find that some Chinese merchants have repurchased about 175 to 200 bales of late sales at a price in advance of that realised by the original seller. The business acumen of the Chinese being proverbial, we may look for an important advance in price of the noble article; and particularly so should news arrive of an assured peace in Europe, an event apparently not far distant. The effect of a telegram advising a more settled state of European politics would be to send up this market hundreds of dollars per picul. The probability of a late though rich harvest reconciles the Japanese producer to the present dull times, he being perfectly aware that foreign competition will, ere long, fill his now impoverished coffers.

The stock of silk in Shanghai at latest advices was 15,500 bales; and the export amounted to.

A MEETING of the Board of Health was held on the 25th when it was decided to address the following statement to the community. We have been requested by the Honorary Secretary to make it public, and hasten to do so:—

As there seems to be an uncertainty in the minds of some of the community, as to the exact nature of the disease now prevailing, the undersigned, medical members of the Board of Health, deem it wise to state positively that the disease in question is, beyond the possibility of a doubt, Malignant or Asiatic Cholera.

In making this statement formally and publicly, the undersigned have no wish to alarm the people of Yokohama. On the contrary, it is their opinion that however great an epidemic may exist among the native population, the conditions surrounding foreign residents are such that its extension to foreigners generally is unlikely. Nevertheless, as experience has proved the value of certain precautions in preventing the advance of cholera, as the course of the disease once introduced is beyond human prediction, and as many are careless or reckless unless assured of present danger, it seems advisable that the foreign residents of Yokohama should realise their position.

Measures have quietly been taken, under the direction, or upon the recommendation of the Board of Health, which we believe have placed the foreign settlement of Yokohama in as fair a sanitary condition as is possible under the circumstances, and the Board will continue its action during the existence, of danger. Meanwhile it is hoped that every resident, trusting to the good intention and disinterestedness of those labouring for the health of the settlement, will assist to the utmost of his power in the work they have in hand.

A VERY pleasant addition to the pleasures of a day spent in the National Exhibition grounds at Ueno, is the music now occasionally provided. On certain days one of the military bands is in attendance, and renders at intervals operatic selections and popular airs. It is rather astonishing to observe how thoroughly the native performers have mastered what may be called the mechanical part of their profession. That they have become musicians (*didicerunt fideliter artem*) in the true sense of the word, is more than doubtful; and to speculate whether or no they ever will might lead on to the question whether it is advisable that they ever should. To a practised ear the music of a Japanese foreign-trained band has somewhat of an angularity analogous to that which is observed in the work of native students of another "ingenuous art"—painting. This may disappear in time; and the Japan of the future may produce its own Rossini and Le Cocq. In the meantime the military musicians of to-day do at least as much justice to the works of those European composers, as is rendered by many a band of English or American artistes. And, thus returning to the point whence we started, we recommend those who propose a visit to the Exhibition to try to arrange it for a "band day." The management has done wisely in substituting, for an entire day's, an afternoon, performance. When the innovation of music was first introduced, the band played from eight o'clock in the morn-

ing until six in the afternoon. In future the attendance of the band in the gardens will be from noon to six.

THE Osaka correspondent of the *Hiogo News* reports that there have been two fires on the neighbouring Nakanoshima, one of which is reported to have been on premises owned by Mr. Goto Sojiro, where damage to the amount of yen 15,000 was done.

The following extracts from his letter of the 17th instant will be found of interest.

A robbery by armed men took place last Tuesday week within a stone's throw of the Concession. The victim was Yamaguchi, the well-known butcher in the M'memoto-cho. The burglars, three in number, were armed with swords; they succeeded in carrying off no less than 800 yen, besides a quantity of clothing. As this is, I was told, the fourth time this unfortunate man has been robbed, I asked my informant how it was such a man did not keep a revolver on his premises, but this, it seems, would not be allowed. The fellows left their swords in a boat moored near the house. The stolen articles referred to in my last letter are still retained by the Saibansho, although it is now more than three weeks since they were recovered and sworn to.

About 400 wounded were landed here on Saturday last, of whom some seventy had lost limbs. I hear that sometimes the passage of these poor wretches through the streets can be tracked by the fetid smell from their wounds. Surely a liberal use of the antiseptic agency of carbolized dressings would prevent this dreadful state of things.

It is now so long since I travelled on a European Railway that I may be labouring under false impressions as to the relative comfort or discomfort of the East and West in this respect; but certainly, whether from an extraordinary percentage of sulphur in the coal or what not, the stench of the locomotive's smoke is something abominable on our local line.

Both East and West of Osaka the rice and cotton crops look capital; the earlier varieties of the former are nearly ready for the sickle; the picking of the latter commenced rather more than a fortnight ago.

The great relinquishment of Land Lots question has at last come to a head here, and at the next meeting of the Osaka Municipal Council the subject must be decided upon one way or the other. Already the title deeds of lot No. 5 have been forwarded to the Municipal Treasurer by the Consul of the land renter, and now Her Britannic Majesty's chief representative in this country has instructed H. B. M.'s Consul to give up to the local Japanese authorities Lot No. 8. Now for the latter lot there is an applicant provided beforehand, and one would have supposed that putting up the lot to Public Auction would have been the readiest solution of the difficulty. But unfortunately the title deeds appear to have been mislaid, though it seems to me that there should be no difficulty in getting duplicate ones issued, seeing who the registered owner is, and knowing that once a title is duly registered at the Consulate of the land-renter there can be no dispute as to whom it legally belongs.

NIPPON NOTES.

The extract the following items from the *Nichi Nichi Shinbun* :—

The insurgent troops are occupying the Kencho, Ninomaru, Shiroato and Shigakko on one side, and Shiroyama and Iwazaki on the other, of which positions command the entire town of Kagoshima. The imperialists are encamped at Komegura, which lies on the opposite side of the Kencho. Saigo and Henmi are at a yashiki in Iwagaki. The latter is said to have been mortally wounded. When the insurgent troops entered Kagoshima on the 1st instant, the prisoners, who had surrendered to the imperialists, rose against the policemen stationed at the gate of the prison and joined the invaders. The inhabitants of the town, who lived comfortably under our protection till that morning, have also taken sides with the insurgents. They

treacherously prevented our Kencho officials and policemen, who were in disorder, from running to the coast; and they killed any imperialists whom they met in the streets, or treated them most cruelly. The islanders of Sakurajima also obstructed the landing of the imperialists, and three or four sailors were killed by them. The man-of-war *Rinjo-kwan* was stranded in the storm which visited the South-West on the 26th of August last: the inhabitants of Kagoshima crowded on the coast, and not only laughed at the disabled condition of the man-of-war, but also stole articles belonging to her, which were in a godown in the coast. Soon after the insurgents became masters of Kagoshima they issued the following manifesto, dated the 1st inst., to each district throughout Satsuma:—"To-day (1st Sept.) we have victoriously entered Kagoshima, which was evacuated by the Kencho authorities, who escaped by steamships which were in the harbour. The garrison, consisting of soldiers, marines, and police, were totally routed, and they are expected to leave us sole masters of the town. It is ordered that police or soldiers found in any directed are to be arrested and sent to our headquarters in Kagoshima. Our troops, who were ordered to return to their homes, are ordered to reassemble in Kagoshima and the castle of Gamo." It is supposed that when the insurgent troops were beleaguered on Enotake by the Imperial army, Saigo ordered his troops to surrender to the Eastern army, and afterwards to wait his arrival in Kagoshima. At this critical moment he cut his way through the Imperial lines with a few hundred picked soldiers, and proceeded direct to Kagoshima, where he was joined by his men, who had bidden him farewell at Enotake about three weeks before, and who were brought back to Kagoshima at the expense of the Government.

The *Akebono Shinbun* says:—The Shimadzu-to, a party who assert they belong to Shimadzu Hisayoshi, are said to have joined the rebels. But Shimadzu and his sons have again left their homes for Sakurajima. An imperial physician, named Ishizaka, was captured by the insurgents, and sent back by Saigo, who addressed him as follows:—"We have arrived in Kagoshima, where we found a large supply of provisions, ammunition, and money. We are deficient in nothing. Now, you, fortunate doctor, go back and tell my enemies to make up their minds to fight a decisive battle." About 150 or 160 imperialists were killed or wounded at Kagoshima between the 1st and 5th September, but the number of coolies killed and wounded is unknown.

A letter from Tanoura (close to Kagoshima,) where the Imperial head-quarters are established, dated the 16th September, is published in the *Akebono Shinbun* :—

On the 9th instant two coolies, employed by the insurgent troops in Kagoshima, escaped to the Imperial camp at Tanoura. They gave us the following short account of the condition of the rebels. The provision of food is daily becoming very short among the insurgents, each one of whom receives only four or five *nigirimeshi* (balls of cold rice which are generally eaten only by coolies or people of the lowest class) per day. The coolies live on rice-gruel. There are only four kitchens in the rebel quarter, where about ten *koku* of rice are daily boiled. The number of the insurgents must be very small judging from this quantity of rice. Kirino and Henmi are at the foot of Shiroyama. The Kencho and other buildings lying near to it have been burned to the ground. On

the 11th, a messenger from Mr. Hogen, the *karei* of the Shimadzu clan, who was stationed on the Ninomaru, or second wall of Kagoshima castle, arrived in the imperial camp where he told the following story:—"About thirty women servants, belonging to the Shimadzu clan, are left in the castle. They are much frightened by the fire of the imperialists. If it is agreeable to the latter, the castle and all provisions of food will be set on fire and the *karei* and others will escape to the imperial camp." The messenger added that the castle would be set on fire with the aid of heaps of food and various things. Two days afterwards, or on the 14th September, another messenger was sent to us by the Shimadzu *karei*. He reported:—"No good chance of setting the castle on fire occurred owing to the strict watch kept on the part of the insurgents. But no food can be provided for these. The rebel commanders held a meeting on the 10th at Iwazaki, where Saigo is encamped. It is supposed that they have determined to fight their last battle in a few days.

Henmi took his gold watch, his money and other valuables to the *karei*, wishing him to send them to his family after his death, which, he says, is now approaching. Many others have followed his example. Each of the rebel partisans is dressed in new uniform and seems to have made himself ready to die." On the morning of the 15th a number of policemen arrived in Kagoshima by the *Shinagawa Maru*. On their landing at Iso, cholera was discovered among them, and the epidemic spread rapidly among the native inhabitants of the town. Out of twenty-five cases, three were fatal. On the 15th all the patients were sent to the island Kikaigashima.—The insurgents removed their head-quarters from Iwazaki to Kioku, which lies between Hommaru and Ninomaru. Since the 4th September, no great battle has taken place near Kagoshima.

A telegram despatched by Yamagata, War-inspector, from Kagoshima, and received in Tokio at 3.10 p.m. on the 22nd instant, announces that the preparations for a general attack are completed. At about 2 a.m. on the 20th the second and third divisions and the newly enlisted imperial troops attacked and stormed the insurgent positions on the Kagoshima side of Shiroyama. Our troops, who marched on the Shigakko and the old castle, stormed their camp and seized 500 cases of gunpowder and other spoil. Those of ours who advanced towards Ninomaru, were encountered by the insurgents encamped at the yashiki of Shimadzu. Nothing, however, was effected by them; and they retreated before dawn. The insurgents' fire is very trifling, and we cannot imagine what their intentions are.

PRINCE Hosokawa has been raised one degree in rank in recognition of his services during the war which has raged in his late dominions.

A CORRESPONDENT of the *Nichi Nichi Shinbun* says that a son of Saigo, after having been wounded, delivered himself up to the Imperialists. This was before the affair at Yendaki mountain on the 18th ult.

It is rumored that the insurgents have again taken Miyazaki, Hiuga.

KATZURA YEMON, one of the rebel leaders, has surrendered to Lieut-General Nodzu with 8,000 men, 3,000 of whom were more or less severely wounded.

THE Government have received information stating that twenty policemen of Kagoshima are missing.

A RUMOR is current to the effect that the island of Shikoku is again in a state of disquietude.

THE examination of eleven shizoku of Kochiken is going on daily. It is rumored that two or three gentlemen of the same ken have arrived in Tokio for the purpose of petitioning the Government with the aid of foreigners (? to accept foreign mediation.)

THE repairs to the aqueduct of Yokohama will shortly be commenced.

THE construction of a good road, *viâ* Hinozaka, between Yokohama and Kamakura, has been completed.

Two new newspapers have been started recently, one at Fukuoka and the other in the Ibaraki Ken.

THE temporary bridge on the Tenriu River, near Hamamatsu, on the Tokaido, will shortly be replaced by a more substantial one. The new structure will be the longest bridge yet constructed in this country, its length being 641 ken (about 3,820 feet.)

THE funeral of the late Princess Seikanin-no-Miya took place on the 13th instant, at 11 o'clock A.M. The ceremony was conducted according to the Buddhist rites.

WHEN the imperialists searched the insurgents' camp at Nobeoka, they found on a desk there, files of all the Tokio, Osaka, and Kioto newspapers. How these could have arrived at the camp is matter for considerable wonder.

IN a private despatch of Ishizawa, police officer in Nagasaki, he says that Police Inspector Watanuki is safe on board the *Kagoshima-Maru*. The imperialist headquarters were removed to the Tani mountain on the 6th.

A GENTLEMAN in the imperialist camp at Kagoshima, writing to a friend, states that Kirino was wounded at the battle on the 30th ult., and that thenceforth the chief command has been held by Henmi.

THE *Hochi Shinbun* says:—The opening of two ports in Corea, besides that of Fusan was agreed to be effected within twenty months after the signing of the treaty between Japan and Corea, but has been delayed owing to the South-Western disturbances. Now, many men-of-war have returned from the seat of war, and their services are available for peaceful purposes; so the *Nisshin-kuwan* will be despatched for Corea some time this month for the purpose of surveying the two new ports. She is now in Yokoska busily preparing for the expedition.

THE *Mainichi Shinbun* states that the Government has received a telegram from Admiral Ito, to the effect that the damage done to the *Ryûjo-kuwan* during the gale of the 26th ultimo in Kagoshima harbor is not so considerable as was at first feared. Repairs will be completed in a few days, and their estimated cost is 8,000 yen.

THE three Loochoans, whose examination has for many days been held in the Police Bureau, have been transferred to the Tokio Saibansho, where they have been examined.

TABLETS bearing the inscription of "Monument in memory of Saigo," all of which are surrounded by stone fences, have been found in six or seven different places between Hiuga and Bungo. On digging, some of them were found to conceal boxes containing fragments of paper money, and others the corpses of soldiers wearing clothes adorned with Saigo's crest.

MR. SOYEYAMA, formerly Minister for Foreign Affairs, who has been on a visit to China, left that country on the 7th inst.

THE Kagoshima Kencho has been temporarily transferred to Kachiki, Osumi.

THREE shizoku of the Kochi Ken have been handed over to the Shihoshô.

THE Daijo-kuwan was closed on the 13th instant from respect to the memory of the late Princess Seikanin-no-Miya, whose funeral took place that day.

HIS Majesty reviewed the Kaitakushi troops and the 3rd division of recruits on the 15th instant.

A NOTIFICATION has been issued by the Daijokuwan, limiting the rate of interest, which is classified under two heads—"promissory" and "legal." The former is to be agreed between the parties, and shall not exceed 20 per cent. per annum on sums under 100 yen; 15 per cent. over 100 and under 1,000 yen; and 12 per cent. over 1,000 yen. Any interest agreed upon exceeding these rates shall be reduced to the fixed scale by the courts. Legal interest is that which is incurred under no express agreement, and is to be decided by the courts. It shall be at the rate of 6 per cent. per annum without regard to the amount on which it is claimed. Claims for fees (*rei-kin*), will not be allowed in the courts; and the judge may reduce the amount of damages claimed for breach of contract to pay within a fixed time when he considers them exorbitant.

THE *Hochi Shinbun* says that commissioners and a man-of-war will be sent shortly to Corea to open two harbors suitable for trade. One will be on the gulf of Hoshiu, in the district of Kankio-do, the survey of which has been completed, and another at Shitzuboku or at Yokuko, in the district of Zenra-do.

THE *Mainichi Shinbun* says that, according to native merchants, business in imported foreign goods is dull in Tokio, but an active demand in Osaka is reported.

ANOTHER sum of 700,000 yen has been sent to the Kagoshima Kencho.

THE three Loochoans, who were mentioned in the native papers as having been transferred to the Tokio Saibansho, and examined before that court, are not themselves charged with any offence, but are demanding, in accordance with the rights of their Han, the rendition to them of one of their countrymen, who has been arrested with two Japanese accomplices on a charge of stealing, from their yashiki in Tokio, a quantity of cloth.

THE steamers *Sumanoura-maru* and *Awajishima-maru* sailed from Yokohama for Sendai on the 10th inst., where they are expected to load with rice for China.

THE plan of the new buildings of the Daijoku-kuwan, to be built within the precincts of the Akasaka palace, have already been drawn up, and the work will be commenced shortly. The structure will be in European style, and its cost is estimated at 30,000 yen.

THE *Osaka Nippo* says that Kirino received a wound in his left arm at the battle of Kumada, and narrowly escaped being taken by the Imperialists. Saigo is said to have been also wounded slightly on the forehead by the graze of a bullet, while he was on the way to Kagoshima.

A TELEGRAM despatched from Kumamoto the same day states:—Four or five hundred insurgents are at Shiroyama, and experience great scarcity of food and ammunition. The Imperial marines completely invest them, and strict guard is kept on the important passages by the three divisions commanded by Nakagawa, Kato, and Nagadani. Details will follow by post.

Six shizoku of the Owake-ken have been arrested in the Nagasaki-ken, where they are said to have acted as spies for the insurgents.

THE *Akebono Shinbun* gives currency to the rumor that some of the government departments have appointed a committee to consider and report on the Press Laws, and that a bill to reform the existing regulations has already been drawn up on a liberal and satisfactory basis. Still one department is said to have expressed opinions in favor of the laws now existing. It is said, however, that one of the Ministers insists that the matter shall be discussed fully before the civil war is brought to a close.

THE 17th instant, being an Imperial festival, a musical entertainment was given in the building of the Industrial Exhibition at Ueno, Tokio.

It is said that all policemen from the Kochi-ken are to be discharged from the force, and that men from Tokio will take their place.

MR. Ishii, president of the Kochi Saibansho, arrived at Osaka on the 8th instant, and immediately visited the Osaka Joto Saibansho on official business.

THE *Hochi Shinbun* states that a telegram is said to have been received from Nagasaki on the 12th inst., announcing that a free fight took place between some English residents of that port, who divided into two parties. On receiving information of the affair from one of their fellow countrymen, the police proceeded to the scene of strife and interfered, but, unfortunately, one of the officers was killed and many others were wounded. Instructions as to how to deal with the matter were demanded from the Central Government.

THE following letter appeared in the *Choya Shinbun* of 14th inst. It was sent by one Onuma Tokuzen, of Uwajima, Iyo, and is dated September 4th; but the Editor disclaims all responsibility for the truth of its statements, and requests his readers not to give credence to the story:—

"A police sergeant of this place arrested on suspicion, at Nakamura, a resident of that village, a shizoku named Kuwabara Heihachi, who, it is said, was a sanji of the former Miodo-ken. On searching his house many extraordinary documents were discovered, all of which clearly proved the existence of a plot. Among the papers was one, dated June, bearing the names and signatures of all the conspirators, who number over six thousand. An order to arrest the ringleaders was forthwith issued, and resulted in the arrest of over a hundred men in that village alone, where they are now detained. It is said that those who were arrested are to be sent to Tokio by steamer. In some of the documents it is stated that a large quantity of gunpowder had been manufactured, at a village unknown to me, and was stored in six godowns at Menoshita. The proposed plan of operations on the part of the conspirators was, first to attack the police forces stationed at Matsumaru and Shino Onoguchi, the entrance to the castle-city of Uwajima. After the police were overcome and their weapons and ammunition seized, a raid was to be made on the city. Here the conspirators were to massacre the police, to enrol the shizoku, and then attack the Kencho at Matsuyama. It is also estimated in one paper, that they would necessarily, owing to the vigilance of the Navy, take thirty days altogether in leaving the island of Shikoku. Kuwabara was to take the lead of the plotters in Nakamura, and to be paymaster of the rebel force. When he was first arrested, all his following submitted to the police without any

resistance or objection. The police sergeant said that he was much grieved by the lamentations of the wife and children of Kuwabara when he was binding him.

"The above was communicated by the sergeant to the Kocho of Ono the day before yesterday, and from him I have just heard it. I vouch that it is not an unfounded story.

"Although I am not provided with any detailed accounts of affairs in Kochi, I can say that, the ringleaders being in custody, no event of importance could take place; but had the matter escaped detection by the police, unforeseen misfortunes to the empire would have been the result, and our land would have been the first to suffer from the fire of rebellion, and its consequent misery. But happily the affair has ended as above related. I will forward any further intelligence on the subject as soon as I can gather it."

THE Government have ordered a photographer to take internal and external views of the Industrial Exhibition at Ueno. These are intended to be sent to foreign countries.

MURA, a shizoku of Kochi-ken, has been examined before the Daishin. He is said to have had relations with Fuji, Muramatsu, and other political prisoners of that ken.

THE Kagoshima Kencho was removed from Kachiki to Shirahama-mura on the 13th instant.

WE collate the following items from the *Choya Shinbun*:—It is rumoured that about 100 insurgent soldiers have crossed the channel to Amakusa, Hizen. Henmi, one of the rebel commanders, was discovered when trying to enter Kagoshima, previous to its capture by the rebels on the 1st instant. It was very fortunate for him that the rebels entered the town before he was arrested. Kishima, another distinguished insurgent leader, was also seen riding alone close to Kagoshima. He was mortally wounded by a shot and fell from his horse. On the approach of our men, he rose to his feet and killed one of the soldiers and endeavored to make a stand against the others, but he was now too much weakened by his wound, and again fell to the ground, where his last breath left him.

THE following statistics of the gold, silver, and copper coins, and paper money in currency at present, are given in the *Mai Nichi Shinbun*:—Since the commencement of the summer of this year, the total of paper money, issued by the Shihei-Kioku (paper money section), amounted to 9,261,360 yen, making the grand total 93,926,953.34½ yen of government paper money in circulation at present (this is exclusive of bank-notes). Out of 7,887,669.4 yen in various coin, which were minted at the Osaka Mint during the year ended the 30th June last, 1,065,667 were gold yen, 5,715,826.40 silver yen, and the remainder 2,106,275.64 yen copper coin.

MATSUKATA, Vice Minister of the Finance Department and Director of the Japanese Section of the International Exhibition to be held in Paris in 1878, will shortly leave for France.

LARGE numbers of soldiers and police have entered and are stationed in the Kochi-ken. The harbours and coast are strictly watched by the navy. The inhabitants are much excited in consequence. Notwithstanding the instructions issued to the contrary by the Kencho, the people are very busy sending away their aged and young to the country, with clothing and household effects.

At the commencement of this month, the editors of the *Aichi*, *Aigi*, and *Heian Shinbun* were condemned to be fined and imprisoned for having transgressed the press regulations. Digit

VISITORS to the National Exhibition at Ueno, natives and foreigners, numbered 27,289 during the week ending the 13th instant.

A FORCE of police stationed at Ishiu-in in the Kagoshima-ken, was attacked and dispersed by the insurgents; and retreated as far as Nagasaki.

A TELEGRAM, sent by the Governor of the Nagasaki-ken at 5 p.m. on the 18th inst., states that at the commencement of this month, cholera first made its appearance. Meetings of the physicians, native and foreign, had been held, and means for the prevention of the spread of the epidemic agreed upon. The disease is not wide-spread.

A telegram from Lieut.-Colonel Watanuki, sent from Kumamoto on the 6th inst., states: In observance of the instructions of War-Inspector Kawamura, our force made an advance on the Tani Mountain at about 10 A.M. the same day. On the way, when at Omonyushi, we saw some persons wandering on the Niwa Mountain. Although it was not known whether they were friends or enemies, we proceeded on our road and reached our destination at 1 o'clock. Here the people were excited, and we used our best efforts to restore tranquility. Ogura Hirosuke and other rebels have arrived in the district of Kawabe, and are compelling the inhabitants to enter their service, and send those whom they enrol to Shiroyama. We have obtained information that about 200 rebel recruits were marching from the coast of Wada-no-hama, but on hearing of our army's arrival they dispersed. We dispatched eight companies to Kawabe to watch affairs at Kawada and other neighbouring districts.

A correspondent of the *Choya Shinbun* telegraphs from Kumamoto to the effect that when the insurgents attacked Kagoshima on the 5th instant they routed the Shinsen Riodan, and got possession of eight guns and a large quantity of powder.

A telegram from Police-Inspector Watanuki, dated Tanoura, the 10th inst., says:—109 rebels fell in with the band of Otame and were instantly arrested. The prisoners, with 125 swords, 2 spears, and 2 Japanese rifles, arrived here yesterday (9th). Information has been received from Mada, in Imaidzumi, stating that he had captured eight officers and eighty privates of the insurgent army. Leaving them in charge of Yokonayouni (*sic*), he started in search of Kokura Keisuke and Higo Sonosuke, who try to seduce the people to enrol in the service of the insurgents. There is no one in the neighbourhood of Imaidzumi who answers to their call. The inhabitants, hearing of our troops being stationed in various quarters, live in a perfect state of tranquillity.

A telegram to Kawaji from Nagasaki, despatched by Ishizawa on the 11th, says:—Two police officers have arrived here from Kagoshima, en route for Tokio, whither they will sail as soon as transport can be provided, and report to the Government on affairs in Kagoshima since the insurgents' raid. Until their arrival, and so far as Inspector Watanuki concurs, you had better hold over the despatch of more troops from your side. The strength of the insurgents is now greatly diminished, and peace will be restored before long.

A correspondent of the *Choya Shinbun* telegraphs from Kumamoto on the 12th inst.:—The insurgents' camps are at the Kencho, Shigakko, and Shiroyama; and those of the imperialists are at the former

treasury, the Loochooans' yashiki, Jiokomioji Hill, and that neighbourhood, and are strongly stockaded with bamboos. They keep up a constant and fierce fire upon the insurgents. War-Inspector Yamagata and others have arrived. It is said that Henmi, one of the rebel leaders, has been wounded.

A telegram from Kagoshima, received on the 14th, says:—According to the statement of a member of the Osaka police force, who was a prisoner in the hands of the insurgents, and escaped last night, Saigo is in a hut, in the Shiro mountains, and Kirino is in command of the rebel forces. They are said to have only 200 piculs of rice.

A telegram from Police-Inspector Watanuki, dated Sashiki, 14th inst., says:—Higo Sonosuki, who had been inducing the people to enter the service of the insurgents, seeing there were no means of concealment, delivered himself up to the division of Otame, near Kawabe, on the 11th. Two of his comrades have since been arrested by other divisions. On seeing many prisoners arriving, those inhabitants who sought safety in the mountains, have returned to their homes and resumed their usual vocations.

Another telegram from Sashiki, despatched on the same day, says:—The imperialist army, having increased the number of their guns, keep up an incessant fire upon the insurgents, both day and night. The insurgents seemed to be much embarrassed, and only returned one shot.

A private telegram from Kumamoto to the *Choya Shinbun*, dispatched at 5 o'clock p.m. on the 16th instant, announces that the imperial army beleaguer the insurgents on Shiroyama, Kagoshima; and bamboo fences are constructed surrounding them, in order to prevent them from forcing their way out. Both naval and land forces bombarded the rebels day and night. The insurgent soldiers have lately become much discouraged. Henmi, one of their commanders, and others, seem to be ready to fight their last battle. They dress in uniform, newly made up, and are desirous of sending their money and jewellery to their respective families. Coolies and many others, who were compelled to take the side of the rebels on their entrance to Kagoshima, have left them one by one; and 40 or 50 of them come daily into the imperial camp. Each one says that, as the provisions are short among the insurgents, they live on rice gruel.

A telegram from the seat of war, despatched by Watanuki, *Shokeishi*, at 10 p.m. on the 17th instant, announces that all police inspectors and policemen have been assembled on Taniyama, from the various points where they were stationed in the Kagoshima ken. This is in consequence of the capture of Kagoshima by the insurgents on the 1st instant. A rebel commander (his name is not given) and many others have been captured and disarmed. All is quiet about Taniyama, where the poor inhabitants, whom the rebels compelled to work for them, received the imperialists with great protestations of welcome.—A despatch from Sashiki, sent by Ando at 8 a.m. on the 18th instant, says that Kagoshima was again bombarded on the 17th instant. The buildings of the Shigakko and the castle of Kagoshima took fire and were burned to the ground. The insurgents are closely pressed, and seem to expect to be attacked at any moment.

[From this it is evident that the insurgents are in possession of Kagoshima.]

The visitors to the National Exhibition at Ueno during the week ending the 20th instant, numbered 34,829.

The *Hochi Shinbun* says that one of the *Shoji*, named Yanagiwara, (a daughter of Prince Yanagiwara) had a son born to H. M. the Mikado, at noon on the 23rd instant.

The farmers and peasantry in Echizen are much excited and have risen in arms against the local authorities. About 1,500 men have met at Fukui.

On the 23rd the offices of the Kencho of Kanagawa and the Town Hall were kept open. The officials are very busy taking steps for the prevention of the spread of epidemic cholera.

A TELEGRAM from the South West, dated the 22nd instant, announces that the insurgents in Kagoshima are quite discouraged, and that the imperial troops keep up a constant fire upon them. It is said that numbers of the rebels have escaped to Amakusa, Hizen, from Kujima, Kagoshima, through the imperial lines.

A TELEGRAM from Kobe, despatched at 2.30 p.m. the 22nd instant, says that two cases of cholera, one of which proved fatal, have been reported in the Hiogo Ken.

A DESPATCH from Kajiki, dated the 21st instant, announces that epidemic cholera is reported to have broken out in Taniyama, Kawauchi, and Sakurajima. Twenty persons have already succumbed to the disease.

SINCE the opening of the Osaka Mint to December, 1876, coins to the value below enumerated have been minted:—Gold, 51,156,032 yen; Silver, 20,715,042.05 yen; and copper 2,330,903.52 yen.

A TELEGRAM from Taniyama, Kagoshima, sent by Colonel Watanuki, to Lieut.-General Kawaji, announces that on the 13th instant, epidemic cholera was brought there among the police force, commanded by Captain Nakagawa, who arrived from Nagasaki in the *Shinagawamaru*. It spread immediately on their landing. Eleven policemen have died and thirty-eight are down with the epidemic.

CHOLERA is reported to have spread to Odawara.

On the 23rd inst., a shizoku of the Chiba Ken, named Kadzuya, presented a memorial to the Daijo Kuwan, urging that the mere death of Saigo, Kirino, and others does not assure peace in future. Shimadzu and his sons, relatives, and retainers, all of whom aided the rebellion more or less directly, should be ordered to leave the country.

TAKATSUJI, the Mikado's Chamberlain, left for Kagoshima on the 26th inst., accompanied by three medical men, who are charged on the part of the Mikado to see to the health and comfort of his officers and soldiers.

On the 26th three police officers and nine policemen left Tokio for the Loo Choo islands.

NOTIFICATION No. 116.

The following returns of cholera cases and the numbers of deaths in Yokohama and Kanagawa town, between the 8th September and 12 o'clock p.m. on the 19th are published.

NOMURA-YASUSHI,

Kenrei of Kanagawa.

43 cases occurred between the 8th Sept., and 8 p.m. on the 18th. Out of these fourteen were fatal—4 males and 10 females.

91 cases from 9 a.m. the 18th Sept. to 12 p.m. on the 19th. Out of those affected 20 died—14 males and 6 females.—Total 134 cases.

DURING the prevalence of the cholera epidemic no theatres or other houses of public entertainment will be allowed to be opened in Yokohama.

A TELEGRAM from Kajiki, despatched by Ando at 1 a.m. on the 20th, announces that nothing important had happened during the 19th, and that cholera had not made its appearance in the imperial camp.

ACCORDING to a telegram received from the South-West on the 19th instant, only 500 or 600 insurgents are in Kagoshima. Nearly half of these consist of men who were compelled to take arms by the invaders on their entry into Kagoshima on the 1st instant.

THE political prisoners now confined in Nagasaki are said to number 1,271.

THE *Hochi Shinbun* says that a merchant in Yokohama was informed that carbolic acid should be sprinkled on the ground or in the house, in order to prevent the dreadful visitation of cholera. He thought that a cholera medicine, which would prevent infection merely by being sprinkled on the floor of the house, would be still more efficacious if drunk. He imbibed a large quantity of carbolic acid, and died a few days ago in great pain.

SINCE the commencement of the war in the South-West, says the *Choya Shinbun*, the Finance Department has paid 34,642,300 yen for the suppression of the rebels. Besides this, 270,000 yen will soon be sent to the Police Department to pay the salaries and travelling expenses of police to and from the Kagoshima and Owake ken.

A TELEGRAM from Kajiki, despatched at 5.50 a.m. on the 21st instant, announces that, during the night of the 20th, about 30 of our soldiers attacked and stormed the building of the Shigakko, which they set on fire. Three insurgent soldiers were killed.

A TELEGRAM, sent by the Governor of Hiogo on the 21st instant, states that no case of cholera has been heard of in the Hiogo-ken.

NOTIFICATION No. 68.

Notice is hereby given that the suppression of the insurrection in the island of Kiushiu has been reported to H. M. the Mikado by a telegram, sent by Prince Takahito, Commander-in-Chief, on the 24th instant.

SANJO-SANEYOSHI,

Daijo-Daijin.

25th Sept. 1877.

THE following return of silk-worms' eggs cards, received this season in Yokohama, is published in the *Mai Nichi Shinbun*:—

From 23rd Aug. to 18th Sept.....	56,757
On the 19th September.....	28,976
„ 20th and 21st Sept.....	23,251
„ 22nd and 23rd Sept.	28,440
„ 24th September	15,246

Total 152,670

THE Home Minister issued a notification on the 22nd Sept. to the effect that on and after the 1st October next the National Exhibition will be closed at 4 p.m.

CHOLERA cases are reported from Uraga, Sagami.

THE Kagoshima insurgents are said to have treated their prisoners in a cruel manner. During a struggle between the imperialists and insurgents, eight soldiers fell into the hands of the latter, who took them before a temple, and, having cut down a long bronze pillar and heated it red-hot with charcoal, made each one of their prisoners sit down upon it.

On the 18th instant, Okui, editor of the late *Heian Shinbun*, in Kioto, which was suppressed for having disturbed the peace of the country, was condemned to five months' imprisonment for having published an offensive letter in that paper. The writer was sentenced to twenty days' imprisonment and a fine of 15 yen.

ONE battalion of the Hiroshima garrison has been ordered to proceed to the Kochi Ken.

A TELEGRAM from Kagoshima, announces that a force of police has been sent into each district of Satsuma as a measure of precaution.

IKEBE-KICHIJURO, commander of the Higo insurgents, joined the Kagoshima men near Kumamoto in February and took the field in person. But he had no interview with Saigo. When the imperial troops after their victories had arrived at Nobeoka, he visited Saigo at his camp, wishing to have an interview with him. Saigo declined at first, but at last allowed the Kumamoto commander to be introduced to him. They met then for the first and last time. Ikebe said nothing further than this:—"We have no chance to retrieve our fortunes; and I will leave this world before you." Saigo tried his best to encourage him; but on the same evening, when he sent a messenger to his camp, he found that Ikebe had committed harakiri.

CORRESPONDENCE.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

COUNTRY TRIPS.

To the Editor of the *Japan Gazette*.

DEAR SIR,—I have been reading the account given by "A Victim," in the *Japan Mail*, of a trip in the country during the hot season.

I, long years ago, had my sufficiency of that kind of experience, but still, each successive year, I see quite a goodly number of our foreign residents and visitors, who, refusing to profit by the experience of those who have in times past offered themselves as *victims* upon this altar of fools, persist in keeping up the yearly pilgrimages in the broiling months of July and August.

Some who are strong and healthy at the outset take these summer jaunts for pleasure and recreation, and while they often suffer much fatigue and discomfort on the way, as did the *victim* who sent his lament to the *Mail*, still they are not all as honest as is this victim to acknowledge their sufferings. No doubt many thus go out to broil themselves in the hot summer's sun just because they see other people doing the same, and to follow the fashion seems to them the proper thing to do. But when one has watched this fashionable style of summer excursions for ten or fifteen years, and sees so many who go out with good health, coming back quite broken down and ill, so that it takes them months to recover the strength that they have lost, or in the case of invalids who have gone out in search of health, coming back often worse than they went, and some even dying on the way from over fatigue and lack of good food and comfort and rest, at last it is made plain to even the most unreflecting mind, that this is one of the foolish fashions of the age. It may be all well enough for those who have plenty of strength in their muscles, and money in their pockets, to spend some month or two rusticated in some of the quiet and cool

mountain retreats within our reach, but even so there are many discomforts which cannot be avoided, and the more quiet one keeps, and the less he scrambles up and down the mountains the better will be the final result of the summer vacation. The true enjoyment of travel amid the beautiful scenery of this country is better found in some of the cooler months of the year, and I think the very best time to explore the interior of the country is in the month of November, and the best mode of travel for that purpose is on horseback.

But for invalids, and for ladies and children, in July and August, a quiet sea-side home in some of the hamlets within treaty limits, along the coast of the bay, on some point exposed to the southerly breezes, is far more comfortable and beneficial and economical than any extended trips up and down the mountains. Here, within easy reach of Yokohama, one can have all comforts that the town affords, and the benefits of a cool summer retreat, and change of air, at about the same expense as that of staying at home.

Servants can go and come at an expense of four or five cents either way by boat; and, very good quarters can be had for a family of four or five from ten to fifteen dollars a month.

And then for variety an occasional sail by moonlight on the bay, or fishing, in addition to sea bathing, will help to pass the time agreeably, and when the two months are ended and the cooler days of September remind us that it is time to return, we find ourselves saying, "How quickly the time has passed away. I wish we could remain a few days longer." So we return home rested and invigorated in body and refreshed in spirit, and can again relish the comforts of home as in contrast to the summer's camp out.

I am Sir,

Yours faithfully

REST.

Yokohama, Sept. 7th, 1877.

GROUND RENTS.

To the Editor of the *Japan Gazette*.

DEAR SIR:—Having read with interest your very valuable article in Saturday's issue, allow me to call attention to a grievance of the Bluff ground-renters.

As you are very well aware, Bluff property is not now worth half the amount which was originally paid for it, and the houses thereon do not command one half the rentals which used to be paid for them. One reason for this depreciation is undoubtedly this: several foreigners hold land outside the concession, in the names of Japanese, where they run up houses and live in them. There are three or four such tenements opposite No. 220, Bluff, and four or five more facing No. 223. I could, if I chose, mention the names of all the occupants of these Japanese-foreign houses. Out at Nigishi a lot of land is rented from Japanese farmers, and there houses and cattle sheds have been built by foreigners, and are occupied by foreigners. At Tots'ka, in Kanagawa, and elsewhere foreigners rent land and houses.

Now this is really a perceptible grievance, bearing in no light measure upon those settlers who have property, whether in the Settlement or on the Bluff.

In connection with this subject, I also wish to draw your attention to the number of Japanese occupied shops in the Homura Road. Why, if such a concession, as is involved in this and the matter above referred to, is made or winked at, should not all foreigners be allowed to rent houses and carry on business in Japan-

ese town; as the Japanese are allowed to do in the foreign settlement.

I may as well exhaust my present budget of grievances; so, I will ask in conclusion whether it is not in the power of the police to put some restriction on the increasingly numerous *komban-was*, who now nightly infest the settlement?

Yours faithfully,

LAND.

Bluff, September 24th, 1877.

To the Editor of the *Japan Gazette*.

SIR:—As a renter of land both on the Bluff and in the Settlement, I beg to indorse every word of the letter which appeared in last night's *Japan Gazette* above the signature of "LAND." Further, I should be glad to draw attention to a subject untouched by that writer. Not only are some of the Japanese-foreign tenements to which he alludes inhabited by the foreign owners and builders themselves, but others are actually let by them to other foreigners, at a very much lower rental than a *bona fide* foreign land-holder could afford to let his houses for. The difference in the ground rent alone is so enormous as to give an immense advantage to the person who evades the regulations controlling foreign settlement over him who is governed by it and pays the rent decided upon for foreigners. So far, indeed, has the abuse to which "LAND" draws attention spread, that some of those who rent land outside the concessions have actually had the *check*, I can use no milder term, to apply to the Insurance Agents to have their tenements covered by insurance. Nay more, in some instances they have succeeded in obtaining policies on their houses and furniture outside the concessions.

All this being so, what are the owners of Bluff and Settlement property to do to ease their grievances. Go to law? Certainly not; if, as he would make everybody believe, the Editor of the *Tokio Times* has the ear of the Japanese Government and their advisers. There is hardly any injustice to foreigners which he would not justify. Refuse to pay ground rent? No; for however great may be the equity of your case, you have no legal right to withhold your rent. Complain to your Minister or Consul? Do so, certainly, if you please, and you will get an answer to this effect: "I am very sorry for you; but I really cannot interfere." One more resource is open. Will you call a public meeting of land-renters? *Cui bono?* Where is the committee appointed at the last meeting, held about one year ago? and what has it done? If I am not mistaken we were promised a report of its doings; but up to this date no such report has been published in the local press; nor do I think there is any chance of it being published now.

Since the late Municipal Director went out of office, or was put out, his successor appears to be very diligent in his endeavours to collect the ground-rents in advance. How, in the name of all that is mighty, can he expect us to pay, and pay in advance, our ground-rents in these hard times, with our houses standing idle, and foreigners who pay no, or a merely nominal, ground-rent, reaping all the advantage of houses let at cheaper rents than those at which we could let our houses, but at rates yet profitable to them?

Trusting that this matter will not be allowed to drop; but will be treated by an abler pen than mine,

I am, Sir,

Yours respectfully,

LAND-RENTER.

Yokohama, 25th September, 1877.

FLINT WEAPONS.

To the Editor of the *Japan Gazette*.

DEAR SIR:—In a report of the National Exhibition, published some days since in your paper, I noticed some things which seem to me to call for a comment or two.

The principal note which I would make is in regard to what your report says about "flint arrow heads," which are said to "testify to the once existence in Japan, as in other countries, of pre-Adamite man." When I tell you that I have seen these same arrow heads of flint in use among the American Indians, and that I have even assisted in their manufacture, I hope you will not put me down as a pre-Adamite man! Also, it is not yet twenty-five years since the flint arrow heads have been used to shoot birds in Japan, and doubtless also to some extent as weapons of war; and there are those yet living who know how to manufacture them.

So you see that, while perhaps they may have been in use before the time of Will Adams, as also Japan was inhabited by man before his day, still there is also proof that Japan, as well as America, has been inhabited by man and by makers of flint arrow heads in more modern days!

I should also like to learn by what process of alchemy, oil is got out of "the water in which rice has been washed?" Will you call the attention of the public to this, so that so valuable an industry may become known to the world.

Hoping, sir, that you will kindly allow these friendly comments a place in your columns.

I remain, Yours faithfully,

POST ADAM.

Yokohama, September 24th, 1877.

H I O G O.

Kobe, September 10sh 1877.

To the Editor of the *Hioغو News*. Sir,—The Judgment recently given in H. B. M.'s Consular Court at Tokio, by Mr. Wilkinson in the case "*Tokio Fu versus Blockley*," copies of which were brought down by the last mail from Yokohama, will no doubt have been read with much interest by land-renters generally. As the case is the first one of the kind which has come before the English Court, Mr. Wilkinson was no doubt quite right in giving judgment at such length. I suspect the only result, however, on the mind of the ordinary reader will be a conviction that it may now be considered settled, as far as British subjects are concerned, that the idea which some foreigners held that the Japanese Government had committed a breach of faith with the land-renters of Tsukidji, is no excuse for the said land-renters, whether right in that idea or not, retaining possession of the ground and withholding their ground-rent. Mr. Wilkinson has laid it down that land-renters must pay the rent named in their leases, and if the Japanese Government has done anything which it should not have done, and has in so doing injured the value of the property, the remedy is in an action for damages against the said Government; but any such action, he adds, being against an independent sovereign state, is one in which a British Court of law has no jurisdiction; withholding rent, he says, would be a power to live rent free on ground belonging to some one

else. This amounts practically to telling the land-renters that they have no redress whatever against the action on the part of the Government, of which they complain.

This being the case, I think Mr. Wilkinson went rather out of his way to try and persuade the land-renters that they had nothing to complain of; neither do I think the case he supposed in illustration a very good one or even correctly put. He says that if a man owned a park near a town and gave the townspeople permission to build on a certain part of his park, such permission would not be construed into an engagement not to permit "any other person" to build on any other part of it. Perhaps not, but I wonder that a lawyer of Mr. Wilkinson's acuteness did not see where his case breaks down. There is no "any other person." The townspeople represent all the subjects and citizens of the Treaty Powers; and had the owner of the park told them they might buy and build within certain circumscribed limits, and that should more accommodation be required after that ground was all sold, they could buy and build within certain additional limits—had he done this, and then, having sold all the ground he could at that spot, allowed all the townspeople to live elsewhere could they make better terms with his own laborers, the law might have given the original purchasers no relief—I am not lawyer enough to know—but he would have been universally regarded (in England) as a swindler. Which I take to be about the light in which the Government of Japan is regarded by the land-renters of Tsukidji.

Had this been all I had to say I should not have deemed it worthy of publication, but it seems to me that two very important considerations arise out of this case. First: as no power of redress exists for a British subject against the Japanese Government, what is the value of any agreement made with that Government? It would appear at first sight that an agreement with a Japanese subject would be better, but as a Government such as that of Japan can always interfere (it has already done so) to prevent the carrying out of such an agreement before it has been proved illegal, I return to the original question, and the answer must be that to make any agreement in this country with other than the subject of a treaty power is, for a private individual who can command no political influence, a greater speculation than to take a chance in a Manila lottery—in the latter case you know exactly the chance you run; and it is far better, in the interests of all foreigners, that this fact should be openly admitted and clearly understood. Second: I want to know if there be any obligations on the treaty powers to see that the treaties are adhered to by their own subjects and citizens—I mean, of course, except at the instance of the Japanese Government? Assuming me to be a British Subject and to be out walking with the British Minister on the borders of the treaty limits, and I were to deliberately cross those limits to pursue my peregrinations without a pass, would His Excellency say to me, "Mind! you are breaking the law, and I shall see that you are punished accordingly?" or would he say "Mind! you are breaking the law, and you run a chance of being punished accordingly, if the Japanese complain?" I profess I do not know, and it is precisely on that point that I want to be enlightened. To the question I have asked as to the obligation on the Ministers I am not sanguine enough to suppose that I should get a direct yes or no from any foreign Minister, for they are all

living in a state of open connivance with a continual breaking of the law, and the most I could hope for would be an excuse for this connivance—a connivance which I do not hesitate to assert is demoralising to the Ministers themselves and to Society, unjust in its operation and derogatory to the dignity of the Powers the Ministers represent. I believe a common excuse for the notorious breaking of the treaty provision as to residential limits is that the restriction is one which foreigners earnestly desire to get rid of, and that it is an excellent step to its ultimate abolition to wink at the breaking of it at the pleasure of the Japanese. Customs duties are a restriction which foreigners earnestly desire to get rid of; therefore, by a like process of argument, the Ministers would hasten to extend the same open connivance to certain merchants, at the pleasure of the Japanese, introducing goods duty free. The two things are equally law by treaty. By what right do the foreign Ministers assume that treaty provisions are only valid as against foreigners?—restrictions to be practically modified by the Japanese Government at its sole discretion in certain directions, in its own favor and to any extent? If the Japanese desire a greater influx of foreign goods, let the Customs duties be modified or abolished—if they desire resident foreigners all over their country, let the regulation against it be modified or abolished; but these are things to be settled at a revision of the treaties, and I protest against both the injustice and immorality of the present system of construing the foreign treaties by the Foreign Ministers.

Yours, &c.,

F.

LAW REPORTS.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON Esq., Acting Consul-General.

Wednesday, September 12th, 1877.

J. GARGAN vs. NORMAN WIARD.

The plaintiff claimed the sum of \$202.15. Defendant admitted owing \$2.15.

The case was resumed this morning from Friday last.

On the Court assembling, Mr. Wiard explained that he thought he had not understood a question put by his Honor at the last hearing relative to the employment of Mr. Gargan prior to the contract, or if he had understood it, he did not answer correctly. He should have said that Mr. Gargan was in his employment prior to the contract, but he was of no value to him, as he did not remain in his service until the time the contract was completed. Mr. Gargan had made himself so offensive to the Japanese officers that he, defendant, was obliged to remonstrate with him. Up to the date of the written agreement, there had been no rate of compensation agreed upon between Mr. Gargan and himself. The defendant had frequently broached the subject to him, but he invariably answered that he would leave it entirely to defendant, and would be satisfied with whatever was given him. At the date of the written agreement Mr. Gargan said to defendant, "We have never had any agreement, Mr. Wiard, about the rate of compensation, and I would like to have that matter settled. Besides, you have several times told me

that persons with whom you have dealings make improper demands upon you thinking you are an easy-going fellow; and don't mind much about money, so I would like to have the bargain entirely completed to-day and have it in writing. I don't want to have any misunderstanding in the future which will interfere with our friendly relations; and so, if you are agreeable, please come down to my room and see if we can't fix it."

Mr. Wiard said he would like to alter the word 'fellow' to 'person.'

Defendant continued:—I went to Mr. Gargan's room with him, and we sat at the table together, and I said, "Mr. Gargan, it is entirely your own fault that we have had no definite understanding in this matter. You have always insisted that I should fix the rate of compensation, and I have no wish to do that. I propose that you should name some sum yourself, and, if reasonable, I have no doubt we shall agree." He refused to do so and I proposed to leave it to Mr. Krebs, the manager of the Mitsu Bishi S. S. Company. I said I understand you have been in the employ of the company, and I will write him a note and ask him what his company would pay you as compensation as Assistant Engineer." To this Mr. Gargan, in an excited manner, objected; and I said, "Well, name a sum yourself and let's get through with it if we can." He said, "Well, will five dollars a day be too much?" I said, "I pay Mr. Barry only five dollars a day and he is a good draughtsman, besides being a skilful engineer. However, I will consent to the five dollars a day rather than have any conversation about it." He said, "Well, Mr. Wiard, that is perfectly satisfactory to me," and rose and procured the sheet of paper on which the contract is written and laid it before me, saying, "Will you please put it in writing," which I did, as you can see. I handed it to him, he read it over carefully and said, "That's all right, Mr. Wiard: much obliged." He then apologised to me for being absent a day without having asked permission, saying that he had a house being finished by Japanese who gave him a great deal of trouble; and added, "I will be down soon to resume work, if you want me," to which I made no reply whatever. I have now related all that ever passed between me and Mr. Gargan relative to the rate of compensation. In the course of the year 1876, I visited Yokoska to witness the launch of a steamer. I had not been to Yokoska from that time till the date of that note (note produced, dated May 23rd, 1877.) I believe I went the next day. Mr. Gargan charges me salary from the 10th of May. Mr. Tanaka wrote that note, which was the first intimation that I had to go to Yokoska on Government account. Mr. Gargan never visited Yokoska until this date (a bill dated May 26th produced) and on that occasion Mr. Gargan was my guest and not my employé, as he merely went down on a pleasure excursion at my invitation. I did intend that day to examine the house which had been assigned to me, with a view of its being furnished, but the hour was so late when we arrived that I could not pass through the dockyard to get access to it, or get the keys, and so we immediately returned without doing any business whatever. I never had any bargain—even oral bargain—with the plaintiff for services at Yokoska, but was binding upon me, so that it was settled the plaintiff should enter my employ, previous to the date of this telegram (June 1st, 1877) which announces to me the

return of Mr. Barry, and that he intended to enter my service.

Mr. Gargan:—That was after I left, was it not?

Defendant:—Ah: I have made a mistake. This is not the telegram. I have left it at home.

Mr. Gargan:—I am sorry I corrected you.

Defendant continued:—It was after the 10th of May that I knew of Mr. Barry being willing to enter my employ. It will be seen from this bill (produced) that Mr. Gargan acknowledged the rate of compensation as late as the 19th of July.

His Honour:—He acknowledges that rate now.

Defendant:—Yes, yes, namely the five dollars per day, but he claims at the rate of \$150 per month. There is a material difference in being employed by the month and by the day. I shall prove by witnesses that the payment was not to be made until the completion of my contract.

Cross-examined:—I first had a conversation about employment with you on the last of April or first of May. I don't recollect calling on you the day after you returned from Hongkong, and telling you that you expected a message from the Japanese navy. I may have done so but do not remember. I think I told you that when I received a message or telegram from the navy I should want your services. The message from Mr. Tanaka was on the 27th of May. That was the first and only message I received from the Navy Department. I did say to you that you were to consider yourself engaged and not to look for any other employment, but not that that engagement would commence from the next morning, 10th May. I did not agree to any engagement from which it might be inferred that the wages were to commence the next day.

Mr. Gargan:—Did you expect that I should work for nothing?

Defendant:—No, I agreed to pay you. You did go to Yokoska on the 20th May, but that was the first day you were in my employment.

Mr. Wiard:—Your Honor, I have no objection to this cross-examination, but it seems to me that Mr. Gargan is making my case all the stronger.

Mr. Gargan:—I want to make my case as strong as possible.

Cross-examination of defendant continued:—I did not require any manual labour from you. I merely wanted you to be present and ascertain the working of the machine, so that you might make yourself competent to do the same things in my absence.

Mr. Gargan:—Please answer my question. Did I do what work you required me? Say yes or no, can't you.

Defendant repeated his answer.

To His Honour:—Mr. Gargan was present during the number of days mentioned in my answer to the petition.

Mr. Gargan:—Did I not trace a drawing in pencil for you on the first or second evening I was at Yokoska?

Defendant:—You did make a tracing which occupied about an hour.

Mr. Gargan:—Did I not enter the boiler of the Yokoska Mine at your request.

Defendant:—The Japanese Government agreed to furnish me with—

Mr. Gargan:—Will you answer my question?

His Honour:—Let him answer the question in his own way.

Defendant:—Mr. Gargan volunteered on one or two occasions to do work for me, and one was to enter the boiler referred to. But he was unable to enter the boiler and merely took up a position from which he could pass orders to the Japanese. The work done by him to the plates was entirely unsatisfactory.

Mr. Gargan:—You had better retract what you said just now, as I will call Mr. ——— to prove its incorrectness.

Defendant:—I object to this cross-examination. I admit Mr. Gargan being in my employ, and he can get nothing more out of me.

Cross-examination continued:—I requested you to go for some instruments. Mr. Barry was making some drawings, and I sent for the instruments at his, Barry's, direction. From the first time you went to Yokoska till the 8th of June you were absent one, two, or three days, I cannot remember which.

Mr. Gargan:—You remember all these things well enough, Mr. Wiard. Its no use denying them.

Cross examination continued:—You told me you were much in want of money.

Mr. Gargan:—I don't want to press you for anything that is not true, Mr. Wiard.

Defendant:—It would hardly be worth while.

Mr. Gargan:—Did I not tell you that I could not remain and give my time for nothing?

Defendant:—Your Honour, I object to these questions as—

His Honour:—They are perfectly legitimate.

Mr. Gargan:—Did you tell me, about the 12th of June, that you were trying to get furniture at Yokoska?

Defendant:—Your Honour, he is asking me a dozen sentences of conversation expecting me to say yes or no, but if I am to answer them I must tell a long story in connection with them.

Mr. Gargan:—Your Honour I want to show—

His Honour:—Stop, Mr. Gargan. I want to get down the question.

Defendant:—I did desire to return Mr. Gargan's furniture, and purchase some so that he might have it. I do not owe one month's rent for No. 52, Bluff, as I did not retain possession of the house. I don't know that I have any other objection than this, provided I do not have to pay beyond the time I agreed to pay.

Mr. Gargan:—Did you not say in this Court on the last day of hearing that you had receipts for three months' rent?

Defendant:—In looking over my papers I found three receipts, but I find now that one of them was no receipt. I have known of you making yourself offensive to the Japanese officers and heard you use language which I did not understand, and which I was informed was that you were calling them "monkeys."

Recess till 1.30 p.m.

On the Court resuming,

C. F. Reimers was sworn, and said:—I am living at Yokoska, and am the defendant's Secretary and Agent, and attend to business of very great importance.

Mr. Gargan:—Be kind enough to look at the judge, please, and not at this gentleman.

His Honour:—Sit down Mr. Gargan.

Witness continued:—I saw Mr. Gargan at Yokoska.

Mr. Wiard:—Did you have any conversation with Mr. Gargan?

Mr. Gargan:—Is this evidence your Honour? Has the defendant a right to put into the witness' mouth what he wants him to say?

His Honour:—The question is a very proper one.

Witness continued:—I had a conversation with Mr. Gargan about some furniture. Mr. Wiard told me he was not particularly anxious to have Mr. Gargan in Yokoska. During the conversation with Mr. Gargan, I asked him when he would return from Yokoska and he said, "Well, there is very little to do now, and it is hardly fair to ask Mr. Wiard to pay me five dollars a day while I am doing nothing, but I may probably be back next week."

Mr. Wiard:—How do you fix the date.

Mr. Gargan:—He has already said the 12th of June.

His Honour:—Will you keep quiet, Mr. Gargan, or I shall have to request you to leave the room.

Witness continued:—I keep a journal for Mr. Wiard. I also had a conversation with Mr. Gargan on the 27th. He asked me how the work was getting on at Yokoska and I told him slowly but surely. We then talked about the furniture, and I said to Mr. Gargan that he must not ask Mr. Wiard for money at present. He said he was not going to press Mr. Wiard, but would do all in his power to assist him. He also said he expected to have to go to Yokoska in a few days to resume his work. I met Mr. Gargan near the Railway Station on that occasion. There is an entry in the journal on the 14th of June to the effect that defendant had been refused entry to the house on the Bluff. On the 17th of July I took a letter from defendant to Mr. Gargan. I know the contents of that letter. I had a conversation with Mr. Gargan on that occasion concerning the furniture, and asked him why he had changed his mind with regard to the arrangement made with his sister, stating at the same time that I was aware of the conditions of the agreement. Mr. Gargan said that he was building a house and wanted money himself. He always said that he intended to go away from Yokohama and did not wish to leave his sister to settle matters of the kind. Mr. Gargan was not very amiable on that occasion, in fact he was very reluctant to "volunteer" so much information to me. He said that he intended to go to Yokohama on the morrow and settle matters with Mr. Wiard, but he did not go. I saw Miss Gargan at Yokohama on the 20th of July. When she arrived Mr. Wiard was in the Dockyard. She sent her card to me and I sent for Mr. Wiard. When he came I went out of the room, but did not go far away and could hear all that was going on. I heard Miss Gargan request Mr. Wiard to deliver the furniture to her. She said she had an order and a judgment from General Van Buren. Mr. Wiard told her that the furniture was to be returned and the rent for the house paid as soon as his contract at Yokoska was finished. Miss Gargan got very violent and talked very loud, and commenced to help herself to the furniture. Mr. Wiard sent me to send a servant for a policeman to protect the house from Miss Gargan's depredations. I went out of the room for a minute or two, and when I returned Miss Gargan was about to depart. In passing Mr. Wiard she said to him, "You are no gentleman," and then left the house. When Mr. Wiard reminded Miss

Gargan of the stipulation regarding payment at the end of the contract she said: "I know that, but at the time that agreement was made we did not expect the contract would last so long, and we cannot afford to wait any longer." Miss Gargan seemed to be labouring under some excitement. She almost upset some water glasses when she seized the table cloth. She said she had six coolies ready to take away the furniture. In my capacity as secretary, I am frequently brought in contact with the officials of the yard. Mr. Tanaka complained of Mr. Gargan's conduct towards the Japanese officials, and referred to one of the engineers in particular, whom Mr. Gargan had called a monkey on several occasions.

His Honour:—I do not see what this evidence has to do with the case.

Mr. Wiard:—Your Honour I am engaged in carrying out a contract for \$80,000, and the slightest insult to the officers affects my interests materially, and that is why I did not want Mr. Gargan any longer at Yokoska, and also why Mr. Gargan did not want to stay there.

Witness:—Mr. Tanaka wrote that note. Mr. Gargan wrote a very insulting reply to Mr. Tanaka.

Cross-examination by plaintiff:—I was at your house on the 17th of July. I called in the morning and left a chit appointing to meet you at 1:30 p.m. I called in the afternoon, taking a letter from Mr. Wiard. When you read the letter you expressed your dissatisfaction. I don't recollect the words you used. You said once that you did not want to have anything to do with me. I don't think you got up from the table when you said that. Mr. Wiard told me the arrangements made about the furniture: that is how I came to know about it. I was not present at any conversation between Mr. Wiard and yourself. You had left Yokoska before I went there; and so I was not present at any of the conversations you had with the Japanese. All your expenses at the tea-house were to be paid by Mr. Wiard.

Mr. Wiard:—I will call Mr. Neale.

His Honour:—How much more evidence have you?

Mr. Wiard:—Only Mr. Neale.

E. N. Neale, sworn, said:—I never understood from Mr. Gargan that he was engaged defendant in the same manner as myself. There was no specified sum fixed between defendant and myself for my services. I know that both Mr. Gargan and Mr. Barry were engaged to go to Yokoska by defendant. Both Mr. Gargan and myself have complained about having very little to do.

Mr. Wiard:—Your Honour, I supposed that I should be able to prove that this witness knew on what terms Mr. Gargan was employed; I regret now that I cannot do that.

Witness cross-examined:—I drew the inference that Mr. Barry was to be paid.

Mr. Wiard:—If it well shorten the proceedings, I will admit that Mr. Barry was to receive five dollars a day.

Cross-examination of witness continued:—Mr. Gargan told me that the reason he was leaving was because he could not get his money. I cannot say that you ever insulted the Japanese officials, unless, perhaps, on one occasion, when it might be construed into an insult. Several of us were together on that occasion in the Japanese tea-house and were exhibiting specimens of our handwriting to each other, in the course of which Mr. Tanaka wrote something very insulting to all foreigners, what it was I can-

not remember. In reply, Mr. Gargan wrote on a piece of paper to the effect that, "when monkeys and fools acquired a little knowledge, they made bad use of it."

This concluded the evidence.

Judgment reserved.

Monday, September 24th, 1877.

The above case was given to-day the following

JUDGMENT.

In this action the plaintiff claims \$50 house rent; \$2.15 money advanced to defendant's servant; \$150 salary; rent for furniture at the rate of \$20 per month from the 26th May, 1877, to date of its return, and the return of the furniture; or, in the event of the defendant electing to keep the furniture rented by him from the plaintiff, the defendant be ordered to pay the sum of \$175 therefor.

The defendant in his answer admits indebtedness in the sum of \$2.15, which amount he deposited in Court. He denies that he is indebted to defendant in any other or further sum, for the following reasons: That plaintiff did not perform more than ten days' labour for him; that that labour was of no value to him because plaintiff did not continue in his service; that plaintiff agreed to wait for wages and rent until defendant received a certain instalment on his contract; that he was deprived of the use of the premises No. 52 Bluff, and is therefore released from the obligation of paying rent from June 19th to July 19th; and further that the furniture used by him at Yokoska was taken by consent of the plaintiff from the rooms rented by him from the plaintiff at No. 52 Bluff, and that, consequently, he should not be compelled to pay rent for the rooms, and at the same time be called upon for payment for the use of the furniture taken therefrom. The defendant asks that the case be dismissed at the costs of plaintiff, and that the Court determine a reasonable amount as rent for the furniture from June 19th to the date of its return.

The plaintiff testifies that defendant engaged him on May 10th, 1877, and told him to hold himself in readiness to proceed to Yokoska; that, on May 26th, he went to Yokoska with the defendant; that previous to this latter date he was employed several days in trying to obtain furniture for defendant; and that, on the 8th June, he informed defendant that he was going to leave because he could not get his wages; that the defendant rented rooms from him at No. 52, Bluff, on April 19th, 1877, for the period of three months, and that he was only paid two months' rent; that defendant took the furniture to Yokoska on May 28th, and agreed to pay for its use, and also to return it when he was able to obtain other furniture.

All this is admitted by the defendant with one exception. He denies that he agreed to pay for the use of the furniture.

Miss Gargan testifies that defendant was not refused admittance to the rooms rented by him, and that defendant still has the latch-key in his possession.

The only evidence opposing this statement is the testimony of Mr. Reimers, who stated that on July 14th he made an entry in a journal kept by him for defendant (which journal was not produced in Court) to the effect that defendant's servant had informed him that he had been refused admittance to the rooms. The averment of the defendant that plaintiff agreed to wait

for his rent and wages until the defendant received a payment on his contract is not borne out by the evidence; and, indeed, I am at a loss to discover exactly upon what grounds the defendant bases his defence.

The lease of the rooms No. 52 Bluff, which is an exhibit in Court, provides for the payment of rent monthly in advance.

The defendant attempts to prove in his evidence that the plaintiff was ill-natured, incompetent, and discourteous. These charges are not set up in the answer, and should not therefore properly be considered as a defence; but giving them due consideration, the fact remains that the plaintiff left defendant's employ of his own motion, and that subsequent to his so leaving, defendant gave plaintiff a writing to the effect that he had employed plaintiff.

From all the evidence I am of the opinion that the plaintiff is entitled to recover from the defendant:—for rent of rooms No. 52, Bluff, from June 19th to July 19th, 1877, \$50:

For salary during the time he was actually under defendant's orders, viz: from May 10th to June 8th, 1867, inclusive, less the four intervening Sundays and one day absent without leave, 25 days at \$5 per day \$125:

For rent of furniture from the date of the lease of the rooms at No. 52, Bluff, expired to date, viz: from July 19th to Sept. 24th, 1877, \$15 per month, \$32.50. And also that the defendant is entitled to the return of his furniture:

It is therefore ordered, adjudged, and decreed that the plaintiff have and recover from the defendant the sum of \$209.65 and costs of Court; and that the defendant return to the plaintiff at his own cost, within ten days from the date hereof, the furniture in his possession belonging to the plaintiff.

Monday, September 17th, 1877.

J. R. ANGLIN vs. NORMAN WIARD.

The plaintiff claimed the sum of \$129.35 for advertising, printing and subscription to the *Japan Gazette*.

Defendant pleaded not indebted.

Walter Brent, sworn, said:—I am manager of the *Japan Gazette* Office. The defendant has frequently acknowledged the account which I have rendered him, and of which this is a copy (produced.) I called upon Mr. Wiard when he lived at Curtis' Hotel, and he would not have anything to do with me—he wanted to see Mr. Anglin.

Mr. Wiard:—Your Honour, if I may interrupt the witness, I should like to ask for the books of the *Japan Gazette*.

His Honour:—You may ask for them.

Witness:—Since then I have frequently asked Mr. Wiard to settle his account, or at least pay something towards it. He has only done so to the extent of \$50 since I have had anything to do with the paper. He has repeatedly been in the office and asked for further time in which to pay his account. Defendant received the *Japan Gazette* until last month, when I stopped it. The prices charged for the work done are according to the schedule of the office, and not at all out of the way.

Mr. Wiard:—The prices might have been different then than now Your Honour, and this witness was not in the *Gazette* office at the time the work was done.

Witness continued:—Whenever I sent defendant the bill, he never objected to it on the ground of the prices charged for the work being exorbitant.

Mr. Wiard:—I can hardly cross-question this witness until the books of the *Gazette* are produced.

The books were sent for.

Plaintiff wanted to call Mr. Curtis, to prove that he had on several occasions called at the Hotel and had several interviews with Mr. Wiard about a settlement.

Defendant:—Ah: I will admit that.

Mr. Anglin:—Then I will call Mr. Gargan to prove that the *Gazette* was sent to Mr. Wiard up till last month.

Mr. Wiard:—I won't admit that. (After some slight consideration). Yes, I'll admit that the paper was sent, and will only dispute the price, and so you need not call Mr. Gargan.

Mr. Anglin:—I will call Mr. Smith.

Mr. Wiard:—I would like to know what you want to prove by Mr. Smith.

Mr. Anglin:—I want to prove that Mr. Smith refused to be responsible for any of your debts, and to my having called on you.

Mr. Wiard:—I'll admit the time of service of the paper.

Walter Brent, cross-examined:—I don't know if those are the original entries, Mr. Moss is here and will prove that. I have seen one copy of a pamphlet printed for you. I am only aware that there were two editions from the entry in the book. I have seen some work done for you at the *Japan Gazette* office. Personally, I presented the account to you once, at Curtis' Hotel, shortly after I became manager of the *Japan Gazette*. You would not have anything to say to me, but wanted to see Mr. Anglin. It was a bill of items. As you preferred seeing Mr. Anglin, I took away the bill. None of the items mentioned in the bill were executed since I became manager of the *Gazette*, except delivery of the paper. I don't know whom you paid the instalment to.

Mr. Anglin:—I can satisfy you on that point.

Witness' cross-examination continued:—You only had one copy per day from the 24th of June till July 24th, and then you ordered an extra copy on June 30 to go to Yokoska, and that, with postage, would be \$3.30. I stopped your paper and rendered you a corrected account on the 1st of September. The subscription should be paid in advance, and that is how \$6.30 was charged for August.

C. D. Moss, sworn, said:—I was connected with the *Japan Gazette* till February 7th, this year. Those entries on page 554 in the ledger are in my hand writing, with one exception, and that one is entered as I should have entered it. I have some knowledge of the work done for Mr. Wiard. He gave me the order for 500 books, and Mr. Anglin the order for 100 extra. He also gave me the order for that advertisement.

Mr. Wiard:—I am willing to admit all the items in that bill, with the exception of the books and two cents on subscription.

Witness:—I remember seeing Mr. Wiard about the books. The price entered in the ledger is what was agreed upon at the time.

Cross-examined:—I cannot say whether those books were sent to your hotel while you were absent at Nikko. Soon after the books were delivered, a bill of items was sent in. I remember you objecting to the price, and I told you to see Mr. Anglin about it. I don't know whether you returned the bill of items or not. You made a payment of

\$100 to me in January. You stated that the sum charged was very high, and I again referred you to Mr. Anglin. You asked for a reduction, but I refused to make any concession without the consent of Mr. Anglin. I have an idea that you asked for a separate bill for the paper. Those were the original entries as shown in the ledger. They were entered in the daybook by Mr. Anglin.

To Mr. Anglin:—When I was manager, there was, I should say, no standing price for book-work in the office. The price depended upon various things. I am not a printer, and generally referred to you on such matters. I told you at the time that I thought the price rather high. I think it was an extreme charge, though cannot say it was an over-charge.

Adjourned till 1.30 p.m.

On the Court resuming, Mr. Anglin produced the day book which had been asked for.

Mr. Wiard called

J. R. Anglin, who was sworn, and said:—There were two distinct editions of the pamphlet. The exact terms I cannot recollect, but it was agreed that you were to pay \$160 or \$168, but as you (defendant) pleaded poverty, I reduced the price to \$150. Mr. Moss never referred to me about the price, and when he said the price was high, it did not impress me that he meant it was above the price agreed upon. The price charged is under my usual charges and you never objected to the charge, and even said you were obliged to me for letting you off so easy. I cannot remember whether the whole of the 500 copies were included in the original price agreed upon. The first edition was to cost \$160 or \$168, I cannot say which. I made an arrangement with you for a certain figure. The price for 500 would be \$210, according to those rates. I don't recollect any conversation on the subject of stereotyping your book. I am not aware whether you used the 500 copies or not; I know you ordered them, read the proofs, and they were delivered to you, and that is sufficient for me. I am not aware that you visited Nikko between the time the type was set up and when they were delivered—I did not pay particular attention to your movements. I don't remember supplying you with proofs to take to Nikko. I know nothing about your going to Nikko or any other place. Nothing was said about the margin being too small. You were in a hurry for them, and told me the book was all right and to get on printing it. I have no recollection of seeing a bundle of the books lying in a corner in your room. You came to me and said that you had been flinging those books about so freely, that you wanted another edition printed, on thicker paper, to send to the high officials to "hoodwink" them into a contract. I told you it was a pity, as over half the book was in case, and it would cost as much as the first edition as the work had to be re-done. You said "Never mind, there are such glaring errors in the first, that I must get another edition printed." I did all in my power to dissuade you from doing it, as I heard that you were not paying your hotel bills, and said that it would be better to print an appendix and I would put it in the first edition. You insisted on having another edition printed. You said you were not out here for nothing, and went in for "high fishes." I did not tell you that all the type was in case. You said it did not matter about the price, the book had to

be printed, as you had something "good" on. I ought to have charged you for the first hundred, \$62, but as some of the book was in type, I agreed to do it for \$42. I made a bargain with you for \$148 and it ought to have been a great deal more.

Mr. Wiard:—Mark in this book the portion that was reset.

Witness:—I can't do that. You must be crazy to ask such a question. I have a man here to prove that. That book has been pressed. I don't know whether that book looks to be executed in a more workman-like manner than the other, but it is printed on more expensive paper.

Mr. Wiard:—I now insist that you shall point out the part of the book that was reset.

Witness:—I cannot do it.

Mr. Wiard:—Your Honour, how am I to get an answer?

His Honour:—Mr. Anglin has already answered the question.

C. F. Reimers, sworn, said:—On the 4th of September, I called at the *Gazette* office, and spoke to Mr. Anglin about these books in the presence of Mr. Brent, the manager. I told him that one of the objections Mr. Wiard had against his account, was that he charged the full price for the second edition of 100 copies printed on thicker paper, because it had not been set up again. Mr. Anglin said that all of it had to be set up again, as could be proved by all the men in the printing office.

Cross-examined:—You told me that you did not want to have anything to do with me, as you preferred transacting your business with Mr. Wiard. I am certain you said all the type had been distributed.

Norman Wiard, sworn, said:—In relation to the publication of the pamphlets, I agreed with Mr. Anglin to print the books, set up the type, furnish superior heavy paper, and print 100 copies for \$1.50 per page, which was the price, I told Mr. Anglin, I had paid in New York and Washington, for setting up type and making stereotype pages. Mr. Anglin agreed with me for this price, and he urged me to have additional copies printed, for which I was to pay him for the paper and press work only, as he said many times. When I told Mr. Anglin I was not a skilful proof reader, he said he would read the proof himself, correct all the errors, and make me a first rate book without giving me any trouble about it. I told him I should be very particular and should require the work to be done in a workmanlike manner. I gave him a modern pamphlet, showing the weight of the paper and its character, the weight of the cover and its peculiar tint, and the width of the margin, which I required to be very wide, much wider than either of the samples. I told him I wanted them all to be uniform. Soon after I received a proof of a galley, and on examining it I found a very large number of errors, considering that it had been set up principally from printed copy. One letter had been reprinted four times. Another was printed twice, and is in both the editions of the book yet. I scratched it out from the galleys and sent proof to Mr. Anglin, with a request that they should be removed. Next day I received another proof, with only two removed; and there still remain many typographical errors. I informed Mr. Anglin that I intended going to Nikko, that I would be obliged to him if he would be kind enough to get ready 50 copies of the book in advance, as I wished to distribute them before I went away, but to be sure and have all the errors corrected. He had previously

told me that he desired to make a very nice job of it, and said that if I insisted on having so many copies so quickly they could not be pressed, neither could the covers be prepared or the books bound. On the morning of the day I intended to leave for Nikko, I received a proof copy of the book paged, printed however only on one side. I found nearly all the original errors in this, too, and went and saw Mr. Anglin about it, and remonstrated with him. He said he had some peculiar trouble on his mind and had not been able to attend to it personally. He also said, pointing to the Japanese, "you cannot rely on these men. I will do it myself, Mr. Wiard," and immediately went away as if he were going to do the job himself. He also said "I'll get you 50 copies to-night: what time are you going away?" I told him I preferred not having fifty copies, that five would do. He then asked me how many copies I intended to print altogether, and said he would have them ready by the time I came back. I told him I preferred his not printing any copies until I returned from Nikko, as I could not distribute them before I went away. He discussed what they should cost and repeated four or five times they should be no more than the mere cost of paper and press work. When I proposed having a hundred he suggested 500, and I said I did not wish to determine until I returned from Nikko. He complained that it would keep the type up a long time. I told him that he had promised to correct the proof and had not done it, or I should have been ready to have given him my order before I went any. He then said, "You had better give your order for extra copies, as I have to get the paper and covers ready," I finally agreed that if the book looked well when I came back, I would order 500 copies, I returned after ten days, having left orders that no one should have access to my room, and found five hundred copies of the book stored there when I came back. I immediately went to Mr. Anglin and told him that the book would not be sent out at all, as I would not send out a single copy. I learned afterwards that a friend of mine had sent one copy to Mr. Krebs, of the Mitsu Bishi Steam Ship Company. I told Mr. Anglin that I must have another edition and asked him how much it would cost. I told him that I objected to these, both on account of the margin and errors. One error alone in the price would have prevented me from sending the book out. I ordered another edition from Mr. Anglin, but he said he could not print it as all the type was distributed. I said "Then you must set it up," and he replied, "Then I must charge you just as much as for the first edition." I asked him to proceed, set it up, and give it me as quickly as possible. I marked all the errors in the first book and requested they should be taken out, and they all were, with the exception of two, which were not very material. In course of time I received a hundred copies, and immediately made a special journey to Tokio to recover the copy given to Mr. Krebs and to give him one of these. Some I sent to the officers of the Navy and soon they were returned to me. About 80 were printed with the pages wrongly numbered. I have seen about 20 of them. I sent one to Mr. Anglin in answer to his demand for payment, to which he made no reply. Soon after the second edition was printed, a bill of items was presented. I immediately took it to the *Gazette* office and had a conference with Mr. Moss. I told him I had not expected to pay for the first 500 copies as they were of no use to me. He said, "I

must see Mr. Anglin, as he has sole charge of this work, and I have no doubt he will do what is right." I called several times before I could see Mr. Anglin, and when I asked him if he intended to charge for the first 500 copies, he said "Yes, Mr. Wiard; you have had the books." I said that he was to have charged me at the rate of \$1.50 per page. I was not, at that time, aware of the error in the second edition. Mr. Anglin repeated that he had reset every word of the second edition and consequently the charge was correct. I am able to prove that none of those pages have been reset, as there are some peculiarities on each page which show it.

R. Meiklejohn, sworn, said:—I am a practical printer. I have not seen either of those editions. I cannot tell whether those two editions are struck from the same forme. The book is not made up in the same forme, and there are broken or defaced type which might lead to the supposition that they were struck off from the same forme; though it is possible this resemblance might occur with an old fount of type. I should not like to swear that the type was not reset. From a casual glance I should suppose it had not been reset, but still it might have been. I should say that \$10 would be about a fair price for paper and presswork of 100 copies.

To Mr. Anglin:—I should charge for 500 copies of exhibit No. 1, at a rough estimate, \$150.

B. A. Klyne, sworn, said:—I was in the *Japan Gazette* Office when those two books were printed. I am a printer. I recollect Mr. Wiard being in the office about the books. I never heard Mr. Wiard complain of the work being bad. The type was lying three days, and then over twelve pages were put in the cases. You, (plaintiff) brought me the book and said that a second edition was required and that it would have to be reset. Mr. Wiard received some half dozen proofs. I saw Mr. Wiard take some of the books out of the office. It was the second, and part of the third, forme that was distributed. I superintended the setting of it. There are boys whose duty it is to distribute.

This concluded the evidence.

Judgment reserved.

Tuesday, September 25th, 1877.

Robert White, a seaman on board the American ship *Messenger*, was charged by the master of that vessel with using insulting and abusive language on board on the morning of the 25th.

Isaac F. Gilkey, sworn, stated:—I am Captain of the *Messenger*. Robert White is a seaman on board my ship. He shipped in New York. This morning he came aft and asked me to let the men have hash for breakfast on supper. I told him I should not give them any different provisions than they had been getting, unless I put them on the scale. He remarked that he would put a head on the steward. I told him he had better keep civil tongue in his head, and not try on anything of that kind; or otherwise he would get roughly handled. He replied he did not care a g—d— for me or any body in the ship; that he knew it was of no use to appeal to me, as I was a d— hog. He continued his insulting remarks as I went down the ladder. I told him I should take means to stop his tongue. My chief officer was called

by listening to the conversation. I have had no particular trouble with this man. He is anxious to get out of the ship. He has asked me to discharge him. He told me this morning that if he chose he could run away in spite of me.

Robert White, the accused, said:—The evidence of the Captain is correct. I abused him, but I had provocation. I did not wish to kick up a row, as I intend to get out of the ship. I have no objection to the food excepting the flour, which is musty. The rest of the provisions are very good.

The Chief Officer and Steward gave corroborative evidence of the Captain's statement, and

His Honour sentenced the accused to three days in jail, and fined him four days wages and \$5 costs.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Act. Law Sec.*

Wednesday, September 19th, 1877.

Messrs. STILLFRIED & ANDERSEN *vs.* DAVID WELSH.

The first hearing of this case took place on the 22nd of last month, when it was adjourned for the purpose of granting the litigants an opportunity of supplying each other with accounts; and also that they might if possible come to some amicable arrangement.

The plaintiff is that the defendant had been employed by plaintiff as an agent; and that while in that capacity he had to receive monies of which he had not rendered an account.

Defendant was willing to render an account, but as plaintiff would not render one to him he, defendant, did not see why he should do so to plaintiff.

On the Court sitting this morning, His Honour asked if the parties had settled as to the amount of accounts.

Mr. Welsh stated that accounts had been supplied one to the other. But after Mr. Andersen had furnished his account he charged him, defendant, with \$40 more. He admitted that when a settlement was arrived at he would be a little indebted to Mr. Andersen. He disputed the correctness of Mr. Andersen's account, as commission had not been allowed him on certain goods which he had sold. He, defendant, said he would be satisfied if an order was made on Mr. Andersen for \$75.

Mr. Andersen said that he would allow defendant \$40, commission. Welsh had brought him a long list of names of persons who had not bought anything, and wanted commission for so doing.

His Honour said, that as there was only a difference of \$35 he would suggest that the case was one in which the parties might come to a compromise. He would retire for a moment, and if they agreed he would return and make an order for the amount agreed upon. If they could not compromise the matter, the case would have to be heard.

His Honour then retired and in a few minutes plaintiff and defendant settled their dispute, the latter proposing to accept \$60 in settlement of his claim, which Mr. Andersen agreed to.

His Honour, having been notified of the settlement, returned and made an order that the defendant pay plaintiffs the sum of \$83.99, and \$1.50 costs on the 20th September.

IN H.B.M.'s PROVINCIAL COURT AT HIOGO.

Before A.A. ANNESLEY, Esq., *A.-Consul, Judge.*

Hiogo, Thursday, September 13th, 1877.

WILLIAM GREGORY SANDS, } *Assessors.*
HENRY LUCAS, }

L. KNIFFLER & Co. *versus* WILLIAM SINCLAIR THOMPSON, Master British str. *Atholl*.

Claim for damage to Brass Sheets *on* above steamer.

Mr. Cruchley appeared for plaintiffs.

This was a re-opening of this case, on the motion of the plaintiffs, for the production of further evidence.

Reports from B. W. Dwars, of the Osaka Chemical School, were handed in and read; also from A. C. Sim. Also a certificate from the Superintendent of Customs, Yokohama, certifying that there was chloride of lime on board the steamer, and one from Mr. David Scott to the same effect. Also, certificates from Mr. G. Reding, of Messrs. Kniffler & Co. of Yokohama, and from Mr. Richard Reiff, of Messrs. Gutschow & Co. certifying that they had received compensation from Messrs. Jardine, Matheson & Co., agents of the *Atholl* at that port, for damage done by chloride of lime to goods shipped to them by that steamer.

On Friday, the 14th instant, the Court rendered the following

Judgment.—The Court having heard and considered the further evidence adduced on a motion on the 13th instant (on the part of the plaintiffs, due notice of the hearing of which was given to the defendant's Agent), is of opinion that a new hearing of this case is now unnecessary. It has been shown to the satisfaction of the Court, in the further evidence brought by the plaintiffs, that the Brass Sheets contained in all the eleven casks which were consigned to the plaintiffs and landed at this port from the British steamer *Atholl* have sustained such damage from the action of chlorine gas emanating from bleaching powder (which it has been proved composed part of the cargo of the said steamer) as to render the same valueless to the plaintiffs for the purpose of their contract; and it having been shown to the satisfaction of the Court that the value of the Brass Sheets to the plaintiffs, if delivered in sound order, was the amount claimed—

The Court therefore orders that the defendant or his bondsman at this port pay to the plaintiffs the sum claimed, viz: \$5,524.64, instead of delivering to them the eleven casks containing Brass Sheets; and also pay the fees of the surveys held on the casks and contents, together with costs of Court.

The assessors assented.
—*Hiogo News.*

IN H. I. G. M.'s CONSULAR COURT.

Before E. ZAPPE Esq., *Consul.*

Messrs. SCHMIDT AND ROHDE, *Assessors.*

Saturday, September 22nd, 1877.

L. P. MOORE *vs.* Messrs. BUSCH, SCHRAUB & Co.'s Successor.

The plaintiff in this action claimed that defendant be compelled to take delivery of certain goods to the value of \$645.30. The petition stated that these goods had been ordered from America on purpose for the defendant, but the only testimony adduced was the plaintiff's own statement.

The defendant acknowledged having entered into an arrangement with Mr. Moore to the effect that if he could sell certain goods plaintiff was to order them; but as he did not sell the goods, no order was given for them.

The decision of the Court was that defendant must swear to the truth of his statement. In the event of his not taking such oath, he would have to pay \$645.30 and costs of proceedings. But if he did take the oath, plaintiff would be nonsuited with costs.

MESSRS. REIFF AND ROHDE, *Assessors.*

Thursday, September 27th, 1877.

SHIMIDZU SEIKICHI *vs.* P. BOHM.

This was a claim for \$202.09½ for work done and interest accruing on the sum claimed since completion of contract.

The Plaintiff was represented by Hama Kosuke, who entered into the details of the claim, which arose from building on lots 119 and 114, and for sundry repairs.

P. Bohm, the defendant, pleaded as his excuse for non-payment that the work was not properly done. In a long statement he enumerated the defects, such as paper falling off the walls, breakage of doors defectively hung, &c.

The Court proposed that the parties endeavour to come to a settlement out of Court, and adjourned the case indefinitely to give them time to do so.

It was arranged that in the event of the parties coming to an agreement the costs should be divided between them.

HONGKONG.

The Messageries Maritimes Company's new steamer *Yangtze*, under the command of Captain Rapatel, arrived here (Hongkong) yesterday morning (18th Sept.) with the French mail. She is a very fine looking boat, fitted with every modern appliance, built on the model of the *Djemnah*, excepting that the constructions on her upper deck are of mahogany instead of teak, and she is an acquisition to the Company's powerful fleet.
—*H. K. Daily Press.*

The British ship *Golden Spur*, Captain T. G. Farrell, which arrived here (Hongkong) yesterday (13th Sept.) from Tonron, brought amongst her passengers four men, part of the crew of a native junk which had been pirated on the coast of Hainan. One of the men had a shot wound in the left side, and he has been sent to hospital to have the bullet extracted.—*Idem.*

We learn, by private advice from Shanghai, that it has been definitely resolved to establish a Postal Department in connection with the Imperial Maritime Customs. It has not been ascertained whether they intend to join the Postal Union, but it is certain that the establishment of a Chinese Post Office would effect a great change in Shanghai by doing away with the local and national Post Offices. It would also be a great convenience at the outports.—*Idem.*

H. M. S. *Curlew*, Captain Church, which arrived here on Tuesday evening, left here on the 17th July last for the Sulu Islands to observe the execution of the protocol recently concluded between Great Britain, Ger-

many, and Spain. It was found that the treaty was being duly observed, and the British vessels were able to trade freely between the Sultan's ports and the Spanish port of Sulu. We understand that the *Curlew* went round to the south side of the island of Sulu to communicate with the British vessels there, and while there Captain Church communicated with the Sultan. The British steamers *Pontinnac* and *Fur East* were there and found no obstacle in the way of trade on either side of the island. There was no fighting going on, and trade was unrestricted. The *Curlew* on her return called at Labuan and Manila.—*Idem*.

In the *Peking Gazette* of the 24th August, the Imperial Agent at Hami reports the arrival of some 2,000 Mussulmen who had been carried off by the Mahomedan insurgents, and have been now released and returned from Turfan.—Reference is also made to a Princess of the tribe, who was carried off at the same time and whose whereabouts has not been ascertained.—One Mahomed, the Chief of the Hami tribe, lost his wife through the rebellion, and now begs to have a new consort, whom he has married officially, recognised. The memorialists recommend that this be done, as he is incapable of managing his own affairs and she will take care of him.—*Idem*.

CHINA TRADERS' INSURANCE COMPANY, LIMITED.—An extraordinary meeting of the shareholders of this company was held yesterday afternoon (12th) at the offices in Queen's-road for the purpose of confirming the resolutions passed at the special general meeting held on the 21st ult. There were present:—Messrs. H. Nelson, (in the chair), A. Coxon, J. Fairbairn, T. C. Hayllar, Q.C., A. McG. Heaton, A. Lind, L. Mendel, H. Nicaise, L. Staël, and W. H. Ray, Secretary.

The Chairman proposed that the following resolutions, passed at the special general meeting held on the 21st ultimo, be now confirmed:—

1.—Clause 5 of the Company's Memorandum of Association be altered by substituting for the words "Two Hundred Shares of Five Thousand Dollars each," the words "Six Hundred Shares of Sixteen Hundred and Sixty-six Dollars Sixty Cents (\$1,666.66) each."

2.—That Article 31 of the Company's Articles of Association be altered by substituting for the words "Two Hundred Shares of Five Thousand Dollars" the words "Six Hundred Shares of Sixteen Hundred and Sixty-six Dollars Sixty-six Cents, (\$1,666.66)."

3.—That Article 75 of the Company's Articles of Association be altered by substituting for the word "Five" the word "Fifteen," and for the word "Twenty" the word "Sixty."

Mr. Hayllar seconded the motion.—Carried. This was all the business before the meeting.—*Idem*.

Saturday's *Gazette* contains the following copy of a despatch dated July 17th, addressed by the Earl of Derby to Her Majesty's Chargé d'Affairs at Peking:—"I have had under my consideration your despatch No. 94 of the 25th of April last, upon the subject of your correspondence with Her Majesty's Consul at Amoy as to the amount of protection that should be afforded by a Consul in China to naturalized British subjects of Chinese descent; and I have to state to you, in reply, that under the Naturalization Act of

1870, such persons are not entitled to British protection in China, even if naturalized in England, unless by their naturalization they have ceased to be Chinese subjects. The same rule applies with still greater force to Chinese naturalized in the colonies, since colonial naturalization only operates within the limits of the colony which grants the naturalization. With regard to Chinese who are British subjects by birth, they can only claim British protection in China when they have complied with the regulations laid down in Sir R. Alcock's Circular of October 7th, 1868."—*Idem*.

THE UNION INSURANCE SOCIETY OF CANTON.

The following is the Report for presentation to the shareholders at the fourth ordinary meeting, to be held at the Society's Offices, at 3 o'clock p.m., on Wednesday, the 26th instant:—

The Directors have the pleasure to submit to the Shareholders the Report on the business of the Society for 1876, as well as for the six months ending 30th June last, and are glad to be able to call attention to the satisfactory results shown.

1876.—The net Premium collected from the 1st January to 31st December 1876, less Reinsurance and Returns, amounts to \$899,355, and compares favourably with the previous year's receipts, which were \$766,294.

It will be noticed from the annexed Statement that after providing for the distribution of \$104,000 to contributing shareholders and placing an equal sum to Reserve Fund, namely:—

1st Interim Bonus to contributors, 5 per cent. (declared 1st May, 1877)	\$40,000
2nd Interim Bonus to contributors, 8 per cent. (declared 3rd Sept., 1877)	64,000
	104,000

The balance of Working Account to date is \$119,006.38, against which there are pending claims estimated at \$25,000, leaving \$94,006.38 to be dealt with hereafter.

1877.—The position of the Society for the present year, as far as it can be ascertained, is as follows:—

Balance of Working Account for the six months ending 30th June, 1877, as per Statement	\$333,872
Add—Estimated Premium earned since, less allowance for Reinsurance, Return Premium, and Charges	190,000
	\$523,872

Deduct—Estimate of Losses known to the present time
 73,827 |

Credit balance.....\$450,000
as compared with \$221,214.60 at the corresponding period in 1876.

The Directors avail themselves of this opportunity to mention that in all probability the future apportionment of the undivided profits of 1876 (\$94,006.38 as already stated), will increase the Reserve Fund from its present amount of \$210,500 to \$250,000, and that consequently the proportion of profits to be given to Contributors from 1st January, 1877, will be 66.66 per cent., or Two-Thirds, in conformity with the Deed of Settlement, instead of 50 per cent. as in the previous three years.

AGENCIES.

Messrs. Falkner, Bell & Co., who have for some time acted as Correspondents at San Francisco, have recently been appointed Agents and authorised to issue policies on behalf of the Society.

DIRECTORS.

Messrs. J. P. Barnes and H. L. Dalrymple retire from the Board in accordance with the provisions of Clause 109 of the Articles of Association, but offer themselves for re-election.

AUDITORS.

Messrs. George O. Scott and J. H. Cox also retire, but it is recommended that they be re-appointed.

H. Lowcock, Chairman.

—*Idem*.

Our readers will be interested to learn that the Emperor of China has sent a gold medal to Captain Vandel, master of the Danish barque *Assens*, now in this harbour, for having saved the crew of a Chinese junk and taken them to Amoy, about this time last year. The medal arrived here three days ago. This is a gratifying recognition of a foreigner's humanity, and the medal will no doubt be highly prized by Captain Vandel.—*Idem*.

Messrs. Malherbe, Jullien & Co., in their circular dated Bangkok, 30th August, thus speak of the rice market—"The Siamese Government, in consequence of the bad prospect of the next crop, have decreed that after the 24th September the exportation of rice is prohibited throughout the kingdom for one year. This order may be rescinded before the expiration of the year if the harvest prove favourable, but at the present time the official estimation is that the yield will only be equal to one-fifth of an ordinary harvest, and the Government think that present high prices ought not to prevent their taking those measures with regard to the stocks of grain the want of which might cause serious embarrassment and perhaps famine. Since our last the market has been very active, the rate steadily advancing in consequence of favourable news from China and Singapore. The arrivals of paddy have been very abundant, and the effect of the publication of the prohibition of the export of rice will be to throw enormous quantities on the market before the 24th September. The tonnage in port and expected is considerable, and with such a situation the price has varied continually, even several times a day. At present we quote Nasuangs (garden) \$2.50 to \$2.55, and Namuangs (field) \$2.35 to \$2.40, in great demand. The bulk of the shipments has been for China, and latterly for Singapore. For Java nothing is doing."—*Idem*.

CANTON.—The river pirates keep moving. We are continually hearing of some of their doings. About a week ago a passenger and cargo-boat sailed from Canton to Sai Chew, a distance of thirty miles. When she had proceeded about half way she met three piratical junks, who at once commenced an attack upon her. A stout resistance was offered for half-an-hour, but in the end the pirates succeeded in possessing themselves of the cargo, which was of a valuable description.

On the night of the 7th inst. another encounter took place between a cargo-boat and two piratical junks, the result of which was opposite to that in the former case, the cargo-boat capturing the two attacking boats and four of the pirates, the remainder jumping overboard.

The gambling-houses in the Western suburb are as flourishing as ever. The inhabitants of the neighbourhood have petitioned the authorities, but can obtain no relief. It is said the gamblers pay heavy black mail to the petty officers under whose jurisdiction they are, and are protected by them.—*Corr. of the H. K. Daily Press, 13th September.*

From private letters from London we learn that the English passengers wrecked on the *Meikong* privately met Capt. Gulland of the *Glenartney* at Messrs. McGregor Gow's offices, and presented that officer with a silver tea service as a mark of their gratitude for the services and kindness shown to them while on board the vessel under his command. A balance of £55 was handed over to be distributed among the crew. We understand that to Mr. Thomson, manager of the Oriental Bank at Yokohama, was mainly due the credit of giving shape to the wishes of his fellow-passengers.—*China Mail*.

We note the arrival of the str. *Glenartney*, Captain Gulland, after a very rapid passage of rather less than 39 days from London, including stoppages of two days in Canal and two days in Singapore. She anchored at Green Island at 11 p.m. on Saturday, and came into harbour on Sunday morning. Captain Gulland has gained a most enviable reputation as the man who, through almost overwhelming exertion, succeeded in saving the passengers and crew of the ill-fated steamer *Meikong*.—*Idem*.

The U. S. S. *Kearsarge* (of Alabama fame), Captain McNair, left the Harbour on the 17th instant, on her voyage to Boston, via the Suez Canal. As the vessel steamed slowly from her anchorage, she fired a salute—or rather, as she is not strictly a saluting vessel, she gave warm expression of her regret at leaving us by a few parting “bangs.” The compliment was similarly acknowledged by H. M. S. *Victor Emmanuel*. The *Kearsarge* “boys” were loudly cheered by their English cousins as they passed between the *Curlew* and the Commodore's flagship. Seldom has the good feeling which exists between Americans and Englishmen been so fully and freely illustrated as it has been with the officers of the *Kearsarge* and the official and other residents of this port.—*Idem*.

We learn that on the arrival of the M. M. steamer *Iraouaddy* at Saigon, the Company's launch came off with a notification that the Agent had just received a telegram from home stating the *Anadyr* had seven days' quarantine at Marseilles owing to cholera being prevalent at Saigon, and advising that in future vessels were to stop at Cape St. James. The Captain of the *Iraouaddy*, accordingly turned to go back without communicating with the shore, when he was stopped by the Governor's launch, and ordered into port. The Captain refused to comply with this order, and stated as much in a note to the Governor, at the same time expressing his willingness to stop where he was for the time being. Upon this a reply came from the Governor protesting against his leaving. Finally the Company's agent came and talked to the Captain from his launch, the Captain standing on the ladder. After a hard fight the Captain was compelled to give way, and the vessel proceeded into port, with the prospect before it of quarantine at Marseilles and possibly other places. It is said the Governor had some friends proceeding to Batavia. Whatever his powers may have been for ordering the vessel into port, his action in subjecting a large mail steamer like the *Iraouaddy*, with her passengers, to quarantine possibly at more than one port on the voyage home, was such as would have drawn down upon him exceedingly severe criticism in other places, and possibly official censure from the Home Government.—*Idem*.

MANILA.—Yesterday evening (22nd Aug.) the semaphore at Restinga signalled to us that the British barque *Berwickshire* from Saigon was stranded on San Nicolas shoal, and that from here any assistance available had been applied for. This notice, thanks to the efficiency of the telegraph, set in motion the ever ready tug-boat *Mariposa*, which must have left the same evening for the scene of the mishap, for, to-day, at six a.m. the following was notified to us from the Manila look-out station:—“British barque *Berwickshire* which had stranded is afloat, thirteen miles S. W. of the anchorage in tow of the steamboat *Mariposa*.” This excellent service rendered by the said steamboat is valuable to a high degree, because had the port been unable to count upon such assistance the barque might have remained in that dangerous position for several days. Now that we are treating of San Nicolas shoal we ask how are we off for a lighthouse? If our memory is not unfaithful to us it was said some time ago that it would not be long before the lighthouse would be placed in position, and its light exhibited; but at present we see the aforesaid hidden rock as darkly as ever which brings about mishaps such as happened to the vessel yesterday, and which may take place again, particularly on evenings when its bearings as to the islands point out the nearness of the shoal to approaching vessels. As to this matter there is but slow progress. Such economy does not suit these days of steam and electricity.—*Straits Times*.

The *Java Bode* of the 25th ult. says:—“Yesterday there was brought to Batavia from Cheribon, by the *Baron Bentinck*, the murderer of Captain Baillie, of the British vessel *Black Prince*, from Nova Scotia. The said person did duty on board as ship's boy, and had been engaged as such shortly before by the captain. It is said that the crime was the consequence of ill feeling from having been found fault with. It is also suspected that he had formerly murdered somebody else at Acheen, the proofs of which could not, however, be got together at the time, so that he remained unpunished.”

The *Peking Gazette* of the 28th August contains a rather suggestive memorial from the Governor of Ahwei regarding a man who has ventured to appeal at Peking in respect of some alleged wrong suffered within the Governor's jurisdiction. Of course the matter was referred back from Peking, and the Governor now declares the result of his investigation to be the discovery that the appellant is an old conspirator, and as such worthy of death. “Lodging a complaint at Peking was a device to frustrate the ends of justice” and, “his allegations being disproved, he is sentenced to suffer death under the statute which provides this penalty in the case of all, whether principals or accessories, who are guilty of the crime of inciting to rebellion.” But this is not all. By the same merciful statute it is provided “that the wives and daughters of all such criminals shall be given as slaves to the officers or men of one or other of the provincial Manchu garrisons!” The wife of the guilty person in the present instance has disappeared; but search is to be made for her, with a view we presume to this sentence being carried out.—After we have done admiring the civilisation under which such a law finds place, the question will suggest itself, whether the Governor's verdict in this case is founded on fact, or whether it is intended partly to encourage other appellants.—*N.-C. Daily News*.

CAPE GUARDAFUI.

To the Editor of the *China Mail*.

Sir:—I observe it has been stated in your journal and other newspapers that the Captain of the *Meikong* in coming up from Ceylon mistook Ras Hafoon for Cape Guardafui. This is an error, as the former point is fully 82 miles south of the latter. The loss of the vessel arose from mistaking Ras Shenareef for Guardafui, the two being only about ten miles apart. Over and above the difficulties arising from their comparative proximity there are natural causes at work to increase the liability to err. Ras Shenareef is the termination of a prominent mountain range 2,500 feet high, and rises abruptly from the sea in three steps. It consists of dark limestone, while Cape Guardafui, which is only 900 feet high, is composed of light yellowish sand. During the S. W. monsoon, when mists are very prevalent, the land in this locality, as I have often observed, is usually shrouded in mist; and the lower portion of Ras Shenareef, owing to its dark colour, is more easily seen; while Cape Guardafui, being lighter and resembling a fog bank, is quite indiscernible—hence the danger of rounding this point in the night during these winds. Ras Hafoon is a prominent headland of from 400 to 600 feet high, bold to approach, and is nearly surrounded by water, having only a narrow slip of land connecting it with the mainland, and both forming a deep bay to the south of nearly 30 miles. This low neck of land is almost imperceptible at night, and the cause of Ras Hafoon being so dangerous.

If a powerful intermittent or flash light were placed on Cape Guardafui, it would be visible over an arc of 270 degrees. As all vessels, with perhaps one or two exceptions, have been wrecked within ten miles of this dangerous spot, it will be evident that had a lighthouse been placed upon this point (Guardafui) no shipwreck would have happened through mistake. Some have proposed a lighthouse being erected upon Abd-ul-Koori, an island 52 miles E.N.E. of Guardafui, and between the cape and which ships have to pass, but this would not be so useful, since it would necessitate running for a lee shore in thick weather. Ras Hafoon is not higher than Guardafui; any one locally acquainted with this portion of the coast knows the last mentioned is fully one-third higher than the other.

The *Meikong* being wrecked between Ras Shenareef and Cape Guardafui reduces the error to a few miles. Considering the deceptive fogs to which this coast is subject, the French captain's mistake is one into which the most experienced and skilful navigators might fall. Not many yards from where the catastrophe happened one can see the remains of several fine steamers, and unless a lighthouse be erected soon, the spot may prove fatal to many more. I have heard of a steamer which, a few years ago, ran aground in smooth water close to the place where the late disaster occurred, and was able to steam off before she sustained damage; had the monsoon been blowing she would most certainly have swelled the list of wrecks. Why should vessels pay for lights they never see—such as the Basses—and not have what are absolutely necessary for their safety?—I am, &c.,

W. A. GULLAND,

Master S. S. “*Glenartney*.”

Hongkong, September 17th, 1877.

GUESTS AT GRAND HOTEL.

Mr. J. F. Pinn, Mrs. Hubbard, Mrs. Geo. E. Baughman, Mr. A. Morton, Mrs. Frank Dunn, Doctor and Mrs. Tripler, Messrs. Major Goff (Coldstream Guards), W. P. Mitchell, W. H. Metcalf, J. Chapsal, and Major Emerson (H. M.'s 28th Regiment), Mr. and Mrs. Edmund Sharp, Mr. and Mrs. Charles Rickerby and child, Mr. and Mrs. H. V. Love, Captain Frank Dunn, Mr. and Mrs. J. D. Fitz Henry and two children, Miss Rémusat, Mr. and Mrs. D. H. Bailey, Messrs. Nathl. Bloom, Albert Dousdebés, George Main, W. P. Crake, and George Crake.

Shipping.

ARRIVALS.

Sept. 7, Am. str. *China*, Freile, 3,836, from Hongkong, Mails and General, to P. M. S. S. Co.
 Sept. 8, Ger. brigantine *Wilhelmine*, Buse, 281, from Hakodate, General, to Kingdon, Schwabe & Co.
 Sept. 11, Brit. str. *Gaelic*, Kidley, 2,756, from San Francisco, Mails and General, to O. & O. S. Co.
 Sept. 11, Frch. str. *Tunais*, De la Marcelle, 1,735, from Hongkong, Mails and General, to M. M. Co.
 Sept. 10, Italian corvette *Cristoforo Colombo*, Count Napoleone Canevaro, 2,500 tons, 5-guns, from Kobe.
 Sept. 13, Jap. str. *Nagoya-Maru*, Conner, 1,914, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
 Sept. 13, Brit. str. *Yorkshire*, Longley, 1,771, from Hongkong, General, to Jardine, Matheson & Co.
 Sept. 14, Ger. bark *Bernhard Carl*, Ludvig, 431, from Kobe, General, to Order.
 Sept. 14, Brit. bark *Cliften*, Graham, 350, from Antwerp, to E. Moulron.
 Sept. 14, Brit. ship *Lothair*, Orchard, 785, from London, General, to Messrs. Corne & Co.
 Sept. 14, Brit. 3-m. schr. *Ching-too*, Baikie, 304, from Hakodate, General, to Carroll & Co.
 Sept. 15, Brit. str. *Sunda*, Reeves, 1,704, from Hongkong, Mails and General, to P. & O. Co.
 Sept. 15, Jap. str. *Kokonoye-Maru*, Hussey, 1,133, from Kobe, General, to M. B. Co.
 Sept. 16, Brit. str. *Belgie*, Metcalf, 2,627, from Hongkong, Mails and General, to O. & O. Co.
 Sept. 16, Jap. str. *Akitsushima-Maru*, Ward, 1,146, from Hakodate, General, to M. B. Co.
 Sept. 18, Brit. str. *Loudoun Castle*, Marshall, 2,500, from Kobe, General, to Adamson, Bell & Co.
 Sept. 19, Jap. str. *Hiroshima-Maru*, Burdis, 1,870, from Shanghai and ports, Mails and General, to M. B. Co.
 Sept. 19, Ger. 3-m. schr. *Friedrich*, Höyer, 295, from Hakodate, General, to H. Grauert.
 Sept. 19, Brit. schr. *Beatrice*, Jordan, 96, from Kurile Island, Furs, to H. Cook.
 Sept. 20, Brit. schr. *Reindeer*, —, —, from Nagasaki, Ballast, to F. D. Walker.
 Sept. 21, Dan. ship, *Doris Brodersen*, Nielsen, 647, Coal from Nagasaki to P. M. S. S. Co.
 Sept. 22, Am. schr. *Ocean Pearl*, Grinnel, 196, from Hakodate, General, to Walsh, Hall & Co.
 Sept. 23, Dan. 3-m. schr. *Aarhuus*, Sölling, 256, from Niigata, Rice, to E. B. Watson.
 Sept. 26, Jap. str. *Tokio-Maru*, Swain, 2,119, from Shanghai and ports, Mails and General, to M. B. Co.
 Sept. 26, H. B. M.'s *S. Modeste*, Capt. Buller, 14-guns, 60 H. P., 1,913 tons, from Yokoska.
 Sept. 26, Am. str. *City of Tokio*, Maury, 5,050, from Hongkong, Mails and General, to P. M. S. S. Co.
 Sept. 27, Frch. str. *Volga*, Rolland, 1,502, from Hongkong, Mails and General, to M. M. Co.
 Sept. 27, Russ. corvette *Haydamak*, Captain Tirtoff, 1,000 tons, from Vladivostok.
 Sept. 27, Brit. str. *Strathairly*, Cassap, 1,991, from London via Hongkong, General, to H. Ahrens & Co.
 Sept. 27, Ger. brig *Oceanus*, Brorsen, 261, from Hakodate, General, to H. Grauert.
 Sept. 27, Russ. corvette *Boyan*, Capt. Boyle, 2,000 tons, from Kobe.

DEPARTURES.

Sept. 8, Brit. barq. *Sir Wm. Wallace*, Colville, 966, for Kobe, General, despatched by L. Kniffler & Co.
 Sept. 9, Am. str. *China*, Freile, 3,836, for San Francisco, Mails and General, despatched by P. M. S. S. Co.
 Sept. 10, Ger. barq. *Tai-Lee*, Stösel, 255, for Hakodate, General, despatched by Kingdon, Schwabe & Co.
 Sept. 12, Brit. str. *Malacca*, Smith, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.

Sept. 12, Jap. str. *Saikio-Maru*, Vroom, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
 Sept. 13, Brit. str. *Gaelic*, Kidley, 2,756, for Hongkong, Mails and General, despatched by O. & O. Co.
 Sept. 13, Ger. barq. *Tai-lee*, Bruhn, 312, for Hakodate, Ballast, despatched by Walsh, Hall & Co.
 Sept. 13, U. S. sloop-of-war *Alert*, Comdr. R. Boyd, 541 tons, 4-guns, for Hakodate.
 Sept. 16, Ger. barq. *Christine*, Weldfaug, 540, for Hakodate, General, despatched by Walsh, Hall & Co.
 Sept. 16, Am. barq. *Elta Loring*, Loring, 572, for New York, Tea and General, despatched by Smith, Baker & Co.
 Sept. 19, Frch. str. *Tibre*, De Girard, 1,726, for Hongkong, Mails and General, despatched by M. M. Co.
 Sept. 19, Jap. str. *Nagoya-Maru*, Conner, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. Co.
 Sept. 20, Brit. str. *Belgie*, Metcalf, 2,627, for San Francisco, Mails and General, despatched by O. & O. Co.
 Sept. 20, U. S. Flag-ship *Tennessee*, Captain Young, 4,200 tons, 23-guns, for Hakodate.
 Sept. 20, U. S. gun-boat *Monocacy*, Comd. Fyffe, 1,370 tons, for Hakodate.
 Sept. 21, Brit. str. *Loudoun Castle*, Marshall, 2,500, for Shanghai via Kobe, Tea, despatched by Adamson, Bell & Co.
 Sept. 21, Ger. frigate *Elisabeth*, Capt. Von Wickede, 2,150 tons, 21-guns, for Yokoska.
 Sept. 22, Brit. str. *Yorkshire*, Longley, 1,771, for Kobe, General, despatched by Jardine, Matheson & Co.
 Sept. 22, Jap. str. *Akitsushima-Maru*, Ward, 1,146, for Hakodate, Mails and General, despatched by M. B. Co.
 Sept. 23, Ger. brig *Wilhelmine*, Buse, 281, for Honolulu, General, despatched by Kingdon, Schwabe & Co.
 Sept. 26, Jap. str. *Hiroshima-Maru*, Burdis, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. Co.
 Sept. 26, Dan. 3-m. schr. *Aarhuus*, Sölling, 256, for Hongkong, Rice, despatched by E. B. Watson.
 Sept. 26, H. B. M.'s surveying vessel *Sylvia*, Comd. Hoskyn, 877 tons, for a cruise.
 Sept. 27, Ger. barq. *Bernhard Carl*, Luders, 435, for Bonin Islands, Ballast, despatched by H. Grauert.

PASSENGERS.

Per Am. str. *China* from Hongkong:—Mrs. E. McLean, Miss F. McLean, Miss E. McLean, Mr. H. McLean, Major Emerson, Miss C. Grimstead, Mrs. Stephens, and Mr. Jacob Boll.
 Per Am. str. *China* for San Francisco:—Mrs. Graham, Mr. and Mrs. F. H. Dobbins, Messrs. E. G. Vouillemont, G. Vorwerk, G. V. W. Culbertson, in the cabin. 8 Europeans and three children in the steerage.
 Per Brit. str. *Gaelic* from San Francisco:—Mr. and Mrs. F. P. Leon, Messrs. J. M. Heiman, M. W. Harrington, J. D. Merrian, J. Witkowski, Chas. Patterson, G. H. Bloomfield, W. H. Bandy, T. Bottommay, P. Rotie, and T. C. Parker. For Hongkong: Col. L. F. Hall and Miss May Edwards; and 288 Chinese in the steerage.
 Per Frch. str. *Tunais* from Hongkong:—Messrs. Leuz, Martinotti, Mazzocetto, Imberti, Andreossi, Riccardi, Butta, Rossolo, Ferrero, Gerosa, and Maurer.
 Per Brit. str. *Malacca* for Hongkong:—Captain and Mrs. Sturrock and child, Messrs. King, Allen, Wylie, Spring, Dickson, Bourne, and Webster in the cabin; 27 Europeans and 7 Chinese in the steerage.
 Per Jap. str. *Saikio-Maru* for Shanghai and ports:—For Kobe: Messrs. Livingston, Rossi, Heise, Meyers, P. Ozier, W. H. Thompson, Zimmerman, E. R. Smith, and 21 Japanese. For Shimonoseki: 2 Japanese. For Nagasaki: 3 Japanese. For Shanghai: Mr. and Mrs. F. Braga, and 4 children, Messrs. Harrington, H. Hertz, and Rosi.
 Per Jap. str. *Nagoya-Maru* from Shanghai and ports:—Mr. and Mrs. Iwasaki Yanoski and Master Goto, Mr. and Mrs. Larkin, Mr. and Mrs. Green, Miss Chisman, Mr. and Mrs. Kiozaku, Mr. and Mrs. Nomo, Mr. and Mrs. Konio, Captains Kent and Beattie, Mrs. De Beer, Messrs. Nickel, Alexander, Hamill, Westphal, Houseal, Viranti, Macgregor, Singleton, Wauchope, Penny, Westphal, Ginsberg, 2 Japanese Ladies, and 14 Japanese in Cabin, 3 Europeans, 8 Chinese and 504 Japanese in the steerage.
 Per Brit. str. *Gaelic* for Hongkong:—Dr. and Mrs. Stout, and Mr. Grapo.
 Per Brit. str. *Sunda* from Hongkong:—Captain Dundas, R.N., Mr. and Mrs. Edmund Sharp, Messrs.

T. Tami, K. Andos, P. S. Savio, G. Main, W. J. Crake, and G. Crake; and six Chinese on deck.

Per Brit. str. *Belgie* from Hongkong:—For San Francisco: Miss Huntley, Mrs. Peel, Mr. Young Wyn Chuen, Mrs. Young Hing Po; and 46 Chinese in steerage.

Per Brit. str. *Loudoun Castle* from Kobe:—Messrs. Smith, Broom, and Gun; and 50 Japanese in the steerage.

Per Frch. str. *Tibre* for Hongkong:—Major Huskisson, Messrs. Thompson, J. Culty, G. Nelson, S. Tamplin, A. Koch, and Chun Wo.

Per Jap. str. *Hiroshima-Maru* from Shanghai and ports:—Messrs. C. J. Melhuish, Watteroff, E. R. Smith, Hahnhuber, J. Adrian, Elliott, Morse, Mrs. Nishimura, Miss Ikida, Mrs. Hayeno, Miss Laurence, and 24 Japanese in the cabin; 4 Europeans and 3 Chinese, and 426 Japanese in the steerage.

Per Jap. str. *Nagoya-Maru* for Shanghai and ports:—Mrs. Kageko, Miss Hutchins, Mrs. E. Bouyer and child, Rev. Mr. and Mrs. Stout and 2 children, Rev. Mr. Foss, Mrs. Takasu and infant, Mr. and Mrs. Omura, Mrs. Sugiyama, Capt. Paul, Messrs. John G. Walsh, J. C. Hurd, R. Reiff, T. Lenz, Watanabe, Nakabayashi, Tack Chng, A. T. Freeman, D. Lanien, Osaki, Fujino, A. B. Perea, Kobayashi, and E. Jubin.

Per Brit. str. *Belgie* for San Francisco:—Mrs. Peel, Mrs. Young Hing Po, Messrs. O. Westphal, Young Wyn Chuen, and 1 Japanese, 46 Chinese in the steerage.

Per Brit. str. *Loudoun Castle*, for Shanghai:—Messrs. F. J. Smith, D. A. M. Gunn, and A. Broom.

Per Brit. str. *Yorkshire* for Kobe:—Mrs. John Goddard and 4 children, Mr. and Mrs. P. Heineemann, child, and servant, Messrs. G. Wauchope, Masuda, W. H. Smith; 3 second class, and 20 in the steerage.

Per Jap. str. *Akitsushima-Maru* for Hakodate:—Messrs. Evers and Pardun.

Per Jap. str. *Tokio-Maru* from Shanghai and ports:—Capt. F. Dunn, Capt. Hardie, Mr. and Mrs. Focke, Mr. and Mrs. Rickerby and child, Dr. Harris, Messrs. Eames, Loishima, E. H. M. Gower, Gribble, Reiff, Rossi and Kostileff, and 15 Japanese in Cabin; 2 Europeans, 3 Chinese, and 323 Japanese (including 72 prisoners) in steerage. For America: Mr. and Mrs. Dudson and 5 children, Mr. and Mrs. Love, and Mr. Talbot Olyphant.

Per Jap. str. *Hiroshima-Maru* for Shanghai and ports:—H. E. Hanabusa, Minister to Corea, Mr. Iwasaki Yanoske, Mrs. Cobden, Mrs. De Beer, Capt. Lees, Mr. and Mrs. Stewart and family, Capt. Hutchinson, Messrs. Kent, Beattie, Halenhuber, D. Scott, and 26 Japanese in Cabin.

Per Am. str. *City of Tokio* from Hongkong:—For Yokohama: Mr. and Mrs. H. Shugio. For San Francisco: Mr. and Mrs. D. H. Bailey, child and servant, U. S. Consul at Hongkong, and Mr. H. L. Dalrymple in the Cabin; and 4 Europeans, and 54 Chinese in the Steerage.

Per Frch. str. *Volga* from Hongkong:—From Marseilles: Mr. Bloom. From Naples: Messrs. J. Vignano, C. Ferreri, G. Hughes, F. Biffi, G. Civetta, F. Polacco, P. Saccone, A. Moretti, E. Oltolini, and Mrs. Cappelletti. From Singapore: Mr. Tovingord. From Hongkong: Mr. Alb. Dousdebés.

REPORTS.

The American steamer *China* reports:—Sailed from Hongkong August 30th at 3 p.m., had N. E. winds and fine weather throughout, and arrived at Yokohama September 7th at 7.20 p.m.

The British steamer *Gaelic* reports:—Left San Francisco August 21st at noon. Had moderate weather across: arrived in Yokohama at 2 a.m. on the 11th Sept. Length of passage 19½ days. Passed P. M. S. S. *China* at 10 a.m. on the 10th instant steering East.

The British ship *Lothair* reports:—Had a remarkable fine passage throughout, 118 days from London.

The British steamer *Sunda* reports:—Left Hongkong on the 9th instant. Had fine weather to Van Diemen's Straits, where experienced squally wet weather, with thunder and lightning; thence fresh south-westerly winds to port. Arrived 2 p.m. 15th September.

The Japanese steamer *Hiroshima-Maru* reports:—Left Shanghai at 4.20 p.m. on the 12th. From there to Nagasaki light variable winds with heavy thunder and much rain. Arrived in Nagasaki on the 14th at 6 a.m., leaving again at midnight. Arrived at Kobe on the 16th at 3.50 p.m. Left Kobe on the 17th at midnight, and arrived here at 6.50 a.m. this day (19th), light variable winds and fine weather from Nagasaki.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

Business in imports has been limited to some moderate transactions in Yarns, No. 28/32 being in greater demand. Shirtings are neglected, and other cotton piece goods are quoted without enquiry.

The steamers *Yorkshire* and *Strathairly* from London *via* Hongkong, the ship *Lothair* from London, the barque *Clifton* from Antwerp, and the barque *Bernhard Carl* from Hongkong, have arrived. Transhipped cargo ex steamers *La Seine*, *Khedive*, and *Gange* from London, and *Sindh* and *Yangtse* from Marseilles is also to hand.

ARTICLES.	PRICES.	REMARKS.
COTTON PIECE GOODS.		
G. E. Grey Shirtings—	\$1.30 to 1.75	Small business.
7 lbs., 38½ yds. 39 in. per piece.	1.60 to 2.35

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Our last report dated 8th instant noted an excited market and an advance of about \$70 per picul. This, however, only continued for a few days: buyers would not follow, and arrivals coming in freely, holders gave way, and nearly the whole of the above-mentioned rise had been subsequently lost. Home advices appear to call for this, latest telegrams showing a decline of sixpence, with miserable deliveries considering the low range of prices ruling in the European markets. Settlements for the period under review amount to about 1,400 bales, arrivals being 2,400 bales, leaving an unsold stock on the market of close on 2,000 bales. There appears every reason to believe that the quantity of silk for export this season closely approximates that of last, though the course of prices will no doubt have a considerable influence on the total export.

The last steamer hence on the 19th instant took 464 bales, bringing up the export to 4,144 bales, against 12,695 bales same date last year, divided as follows:—

	1876/7.	1877/8.
England.....	bales 6,509	bales 2,675
France.....	" 5,758	" 1,005
Italy.....	" 412	" 294
United States.....	" 16	" 170
Total.....	bales 12,695	bales 4,144

Owing to the change of monsoon the next steamer does not leave until the 2nd proximo.

TEA.—During the rather lengthened interval since date of our last issue a greater amount of activity is apparent on our tea market, and prices have materially hardened, though for the present we make but little change in our quotations.

Settlements for the period amount to some 10,000 piculs, comprised mostly of low grades, which considering their present quality command full figures.

Supplies are coming in but slowly, and stocks are in consequence much reduced and do not greatly exceed piculs 6,000.

The quality of most parcels shows the bad effects of the hurried and imperfect style of preparation too general this season, and should warn the producers against rushing their Teas in such an immature state forward to a market where they cannot command immediate sale and final preparation in the hands of foreigners.

BIRTH.

On the 28th instant, at No. 71, Bluff, the wife of ARTHUR BELLAMY, of a daughter.

On the 29th September, at No. 38, Bluff, the wife of JOHN GRIFFIN, of a daughter.

DIED.

On the 9th October, at No. 67, Yokohama, EMILE MASSAIS, Doctor of Medicine of Paris, aged 37 years.

Summary.

OUR last MAIL SUMMARY was dated the 28th ultimo, for despatch by the P. M. Steamer *City of Tokio*, which left on the following morning. Since then we have received the following mails:—

Per P. & O. *Bombay*, London, 17 Aug., arrd. 30 Sept.
 „ P. M. *City of Peking*, S. Fr'sco, 12 Sept., „ 3 Oct.
 „ M. M. *Tibre*, M'seilles, 26 Aug., „ 10 Oct.

And despatched the following:—

Per O. & O. *Sunda*, for Southampton 2 Oct.
 „ M. M. *Tanais*, for Marseilles 9 Oct.

LATEST telegraphic advices from Europe are to the 10th instant.

By a somewhat curious coincidence both the last outgoing and incoming French mails experienced trifling accidents. The *Tanais* was delayed going out: the *Tibre* coming in. When the latter vessel was off Rock Island a portion of her machinery broke down; and the repairs necessary delayed the steamer for forty-four hours. The *Thabor*, having H. I. H. the Commander-in-chief on board, with her escort, the *Seiki* and *Kasugakwan*, passed the *Tibre*, then under sail, at about 2 p.m.

on the 9th; and to her assistance, should she require it, the *Kasuga* was ordered to go by Admiral Kawamura. The repairs having been effected, the courteously proffered aid was not necessary. The Japanese man-of-war was requested, however, to stand by while the repaired machinery was being tested; and when this was done, and the *Tibre's* engines were found to work properly, the *Kasuga* rejoined her consorts. The *Tibre* arrived at six a.m. on the 10th inst.

THE cholera epidemic has continued to make a certain amount of ravage among the native population during the past fortnight. That the death rate is not greater is in very large part owing to the energetic steps, not only taken but persevered in, by the Board of Health for the disinfection and protection of the foreign settlement, and by the Governor and subordinate Kencho authorities for the same precautionary measures in the native town. The epidemic has declared itself in many other parts of the Empire. It has been especially severe in the neighbourhood of Kobe, owing it is said to infection introduced by soldiers returning from the war against the Satsuma insurgents, now ended. In Yokohama three more cases, out of twice that number occurring among foreigners, have proved fatal. Two occurred in a house in the heart of the settlement in which the Japanese servants had first been attacked. The only Europeans on the premises, the householder and his wife, were seized, the woman first. She died in a few hours, and after her funeral the husband was attacked and soon afterwards succumbed. The other fatal case is that of Dr. Massais, a French medical practitioner, himself a member of the Board of Health, and joint Surgeon in charge of the General Hospital. He was taken ill at noon on Sunday, the 7th instant, and died early on the morning of the following Tuesday.

THE insurrectionary war being now terminated, the troops and police are gradually returning. Those arriving by sea in Yokohama are sent to Yokoska harbor where they are kept for a time in quarantine, and gradually sent thence to their stations. Several of the police forces specially enrolled for service against the rebels have been disbanded; and both police and military establishments are being reduced to a peace footing. Government too is beginning to count the cost of the war. The sum of fifty million dollars has been actually expended, a sum nearly as great as the entire estimated annual revenue. A large amount remains to be paid in the shape of pensions, rewards, and compensations. Where the extra revenue required by the Government is to come from is a matter on which the native press is commencing to make surmises. A foreign loan, a domestic loan, and the issue of more

paper money are means generally suggested; and their respective merits and demerits are debated. It is by no means unlikely now that a foreign loan may be attempted to be floated, and as the insurrection is thoroughly suppressed, the chances of a favourable reception of the proposals of Japan for an extension of her foreign credit are somewhat better than they were.

PRINCE Arisugawa-no-Miya, the Commander-in-chief of the army, arrived from the South during the night of the 9th instant in the lighthouse tender *Thabor*. Next morning salutes were fired by the men-of-war in the harbour and the Kanagawa fort; after which His Highness landed at Benten, and proceeded to Tokio by the 9.34 train. There was no particular demonstration on the landing of the Prince. Some of the nobility and high officials, amongst whom were Sanjo, Iwakura, Ito, Oki, Nomura, Kawaji, General Ida, Admiral Nakamita, and the young Arisugawa, the Prince's son, met the Commander-in-chief at Benten, and afterwards accompanied him to Tokio, where great preparations had been made for his reception.

A RAILWAY accident, the first case of collision which has occurred in Japan, took place on Monday the 1st instant, on the Kobe-Kioto railway, between a special train of empty carriages and a passenger train. The two foreign engine-drivers and one native fireman were badly injured, and a guard and fireman (natives) were killed. No other person was at all injured. The two engines and several carriages in both trains were considerably damaged. The accident was caused through the special train being despatched prematurely; and a searching inquiry is now being held at Kobe into the origin of this error.

A CASE has been heard in H. B. M.'s Court before the Acting Law Secretary, and will be found reported at length within. The plaintiff claimed from the master of the steamer *Atholl* a sum for damage caused by chlorine gas arising from chloride of lime which formed part of the cargo. The learned judge held that "leakage" in a bill of lading does not mean damage to goods by leakage from other goods, and dismissed the contention raised on that point by defendant's counsel as irrelevant to the issue. Judgment was given for the plaintiff.

CHINESE traders are looking for small craft to load with grain, here and at Kobe, for ports in China. There is nothing to show that the demand will be lasting.

OUR silk market has experienced a very great improvement. For latest quotations we refer to the market report at the end of this issue.

SHOOTING licences will be issued by the Kencho from the 15th instant at a fee of ten yen.

FOREIGN LIQUOR-SELLERS IN THE SETTLEMENT.

Sic utere tuo ut alienum non lēdas. Such was the admonition with which an article in the *Japan Gazette* of the 6th February, 1875, on the subject which we will now re-open, was headed; and such is the appropriate text which we now select. A certain class of land-holders in this settlement so employ their own as to be eminently hurtful to their neighbours and the community; and these same people are probably very loud in their declamations, denunciators of exorbitant ground-rents, and agitators for an abatement.

A meeting was to have been held the other evening by the foreign public-house keepers of the Homura Road and neighborhood, and similar localities, for the consideration of a very important subject. Through the sickness of one of its promoters it was indefinitely adjourned. Had it, indeed, been held, its results would probably have been of the barest, and have had no consequences; so, to us and the foreign community, it is only useful inasmuch as it affords an opportunity to revert to a subject which was, nearly three years ago, prominently brought before the public, through action taken in a Court of law, and dropped for the time in despair, through the inability of the press, public opinion, and the law in the way the case was brought, to remove an evil which since then has steadily progressed from bad to worse, until now it has become so prominently obnoxious, that the duty of all those whom it in the minutest sense concerns is to do their best to endeavour to eradicate it.

From points of view, pecuniary and sanitary, the presence of Japanese liquor-sellers and storekeepers in the Settlement, affects the interests not only of the foreign publicans of the Homura Road, whose case is scarcely deserving of pity, but of the whole community. Advisedly we speak thus of the foreign publicans. They are in great measure, if not altogether, to blame for the existing state of things of which they complain. An effort was made some years since to protect their interests by a measure which would have tended towards the exclusion from the Settlement of their Japanese competitors. A tax on public-houses was agreed to by the Board of Consuls for their nationals; and the Kencho undertook to impose a similar tax upon natives who might desire to retail liquor. This import would have borne but lightly upon the foreign, while it would have been almost prohibitive to the native, grog-shop-keeper. When, however, an attempt was made to levy the tax upon the men of the latter class, they all with one accord made excuse; and their excuses had to be accepted. The fact is that they had, with a certain amount of cunning, which, as often happens, has re-acted to their own detriment, discovered a break in the continuity of the thread of diplomatic legislation, owing to which they were able successfully to combat the claims made upon them by their Consuls. These gentlemen were instantly placed in a false position *vis-à-vis* the Kencho officials, who, quite naturally, complained of the infraction of an agreement, and represented their inability, in justice, to tax the native liquor-seller while his foreign congener could retail his perilous stuff, and pay nothing for the privilege. *Hinc illæ lacrymæ.* The cunning contumacy of the Homura Road "saloon-keepers," has been the real cause of the major part of the grievance of which they complain.

The Japanese residents in the cabins of the Homura Road, and elsewhere in the Concession, live on land owned by foreigners, leased in most cases to other foreigners, and by these latter invariably sublet, on a scale of conditions of considerable length and elasticity, to the native occupants in the nominal capacity of servants or agents. Let us now refer to a case which was brought forward in February 1875. In this case the complainant applied in H. B. M. Court, before Judge GOODWIN, for the ejection of three Japanese from premises on lot No. 123, leased by complainant to the defendant, who was alleged to have sublet the property, contrary to a clause in the lease, which required that the holder should not, without the consent of the owner, sublet the whole or any part of the property. The defendant's plea was identical with the one which would be brought forward to-day by any one of the lessees of land in Homura road who might be similarly attacked. It was that the Japanese in question were his servants, not his tenants. His Honour, in giving judgment, evidently saw the abuses that *might* be covered by such a plea. He "non-suited" the plaintiff, "thereby entitling him to bring the action again, should he be able to procure better or further evidence."

Here we will reproduce a portion of the argument which we put forward on that occasion, and which is as good to-day as it was then.

To sub-let is to grant to another a part of one's interest under a lease. Between the original lessor and the under-tenant there is no privity of contract; and these parties cannot take advantage, the one against the other, of the covenants, either in law or in deed, which exist between the original lessor and the lessee. Mr. Benson's remedy was therefore against Jaffray, the original lessee. He failed to disprove the allegation that the Japanese occupants were in Jaffray's service; what is the result? Admit that they are his servants; by establishing them as shop-keepers on the premises, has he in fact sublet a portion of the property to them? We are afraid that this question must be answered in the negative. The abstract proposition, that a man may employ an agent to do that which he himself may rightly do must be admitted. But this leads us to the second question, namely, whether in the circumstances under consideration, a man may employ a Japanese agent to carry on his business for him in the Foreign Concession? If this question is answered affirmatively, then there is no legal objection against every other house in the place being tenanted by Japanese, provided only the native occupier can acquire the colourable protection of the foreign owners.

Let us take the case in its legal aspect. The effect (of the lease) is, that the whole of the land granted to foreigners is conceded to them in perpetuity, for their own occupation, upon the payment of a stipulated annual rent, and is transferable only to subjects or citizens of a nation having a treaty with Japan. This arrangement has been duly entered into by our own Representatives and the Japanese Government, and is as much a law as any statute that has been passed by the legislature. It is not only binding upon every foreign land-holder, but every foreigner coming to Japan is bound to know it and conform to it. Its object being that a certain portion of land shall be exclusively tunable by foreigners, it follows as a corollary from the prohibition against transfer that no foreigner may place a Japanese in possession of any portion of the land so conceded, or in occupation of any building erected on that land. Mr. Benson could not do it without risking the forfeiture of his property. How, then, can it be said that Mr. Jaffray may do it, simply because Mr. Benson neglected to tell him not to? This is straining at a gnat and swallowing a camel. Mr. Benson may or may not have been guilty of neglect in not inserting the condition in his lease; but that is wholly beside the question. The true point is, whether it is permissible for Jaffray, the lessee, to do what Benson, the lessor, is prevented from doing by the obligations under which he holds the land of the Japanese Government in convention with the United States of America. The power derived cannot be greater than that from which it

is derived. The property demised takes with it all the liabilities attaching to it in the hands of the lessor at the time of the lease; nor can the lessor effectually assign any greater right than he himself possessed at the time of the demise; conversely, neither can the lessee assume to himself any rights not possessed by his landlord. It is a condition running with the land itself that it shall be used in no other manner than that for which it was granted; and it is simply—let us say, monstrous—to argue that the absence of a covenant in a lease confers a positive power, the exercise of which is prohibited to all foreigners. Suppose an action of ejection to be brought against a foreigner resident in the Japanese town. Would it be a good answer that he was not restrained by the lease under which he held? Surely not. He would be ordered to march inside the limits at double-quick. We cannot for the life of us see the difference in principle. At all events, we deem it highly improbable, and indeed repugnant to the conditions under which foreigners hold land in Yokohama, that Japanese can legally be permitted to occupy any tenement within the confines of the Settlement.

Two ways of removing the blot and nuisance to which attention is now again drawn occur to us as practicable. The first is legislation by the united Diplomatic Body. If the foreign Ministers will in concert agree to the imposition of a tax upon all foreign hotel-keepers, in the shape of a fee to be paid for publicans' licenses, the native authorities may probably be counted upon for the enactment and enforcement of a measure which will press so hardly upon Japanese liquor-sellers that their presence in the Settlement need no longer be redoubted. The second must depend for its success upon the law as it stands, and a machinery which requires, when put in motion, to be looked after by one who understands all its wheels and the way they work with, and within, each other. Judge GOODWIN's judgment showed that the matter was by no means legally terminated, when Mr. BENSON was nonsuited. It remains now to be seen whether any one man, or any body of men, has sufficient public spirit to institute and carry through a prosecution, which, under proper professional conduct, shall remove from our midst an element commercially and sanitarily objectionable, and whose presence is in direct violation of treaties and the leases by which foreign land-renters possess their holdings.

BLUFF GROUND-RENT.

THE recent graceful concession made by the Japanese Government to holders of land in the foreign settlement of the City of Tokio, leads us to imagine that a long-suffering portion of aliens resident on Japanese soil may look forward with hope to an opening in the cloud, which for some years has pressed heavily upon them in the shape of a waking nightmare of taxation known as the Bluff Ground rent.

At the commencement of external relations the then Government of Japan set aside certain sea ports for the accommodation of foreigners, the principal being Kanagawa or properly Yokohama. This settlement is a low lying piece of land bounded on the south by a hill of about 100 feet in height. When commerce increased, foreign population grew larger, and experience of the climate showed that, during the summer months at all events, a more salubrious spot for domestic residence than the flat of the settlement was eminently desirable. The Government, upon representations being made to them, expressed their willingness to make a further grant of ground for the use and benefit of foreigners; assessing the terms upon which property in such land might be acquired as

follows:—a purchase price of not lower than 25 cents per *tsubo*; equivalent, in more familiar measure, to sixty pounds ten shillings sterling English money per acre.* In addition to the purchase price the lease of the land in perpetuity was made dependent upon the lessee paying an annual ground-rent in advance of twelve dollars per hundred *tsubo*, or again reduced to acres and sterling, twenty-nine pounds and ten pence per acre. In consideration of the purchase money, which was to be expended in road-making, and such necessary matters as might be required to render the Bluff suitable as a settlement, and the annual payment of the ground-rent so conditioned, the Japanese Government undertook to permit possession and use of the ground, and to provide police, drainage and other municipal requisites. When these conditions were made public they could not have been understood in the sense in which we now see them, or it seems clear that no foreigner would have consented to become a purchaser, not of the land, but of a perpetual liability for that land. These considerations, if present in the minds of men, were evidently ignored and altogether set aside; for at the first land-sale the prices obtained for the lots sold ranged from the "upset" price of 25 cents to three dollars per *tsubo*. Subsequent sales showed that the pressure of ground-rent was being felt, and from the prices then realised, and from the surrounding circumstances of proprietorship we feel justified in basing our calculations upon an average valuation of one dollar per *tsubo* or £242 per acre for suburban land. Those of our readers who have not entered into the question of figures will be startled to find that a Bluff lot measuring 1,210 *tsubo*, or one statute English acre, of ground, costs them annually \$307.82, or £61.11.3†, in addition to the money expended on the original purchase of the land, and the outlay incurred for the erection of buildings to utilise it.

This heavy burden upon the landowners of the Bluff was the cause of a public meeting held in the Chamber of Commerce on the 28th September, 1876, when a Committee was appointed to consider the whole question and to recommend such course of action as might be warranted by the collected data. Many men who attended that meeting felt that the landowners had no reasons to urge upon the Government sufficient to authorise a memorial for a reduction of ground-rent, and it was generally understood that the meeting was adjourned *sine die*. During the interval the Committee may have been engaged in the preparation of a report; but the lapse of time points to the conclusion that they have abandoned, as impracticable, an appeal upon any basis of right; a decision we thoroughly endorse. Whatever the hardship that now presses upon the landowner may be, and we admit it is serious, it is absolutely beyond question that the only prospect of amelioration lies in an appeal, *ad misericordiam*, to the Government of Japan. We have entered into a deliberate agreement for the payment of an annual rental for the land we occupy, but we have been taught by experience that it is a burden we can no longer support without an effort to lessen it; and how to commence the attempt is the problem that calls for solution.

When the British Government entered upon the actual rule of India, the greatest difficulty was experienced in adjusting and settling titles to land, and in the equalization

of the rent levied upon lessees in perpetuity. It was gradually discovered that a fixed annual ground-rent was productive of innumerable evils by bearing with undue pressure upon some, and giving undue advantages to others. A subject so important in the eyes of a Government having an especial tenderness for anything bearing the appearance of property, engaged the earnest attention of the Indian legislature, the result being the enactment of the Act of 1859, which provides that the rental of land shall be assessed upon its lowest valuation. This provision was based upon the principle that every freeman is entitled to hold and occupy land upon payment of a fair rent to either the person who sublets, or to the absolute owner, the lord of the soil. This enactment further provided that the occupancy of land for twelve years or upwards, gave the tenant the rights of ownership, subject to the payment of such assessed ground-rent, and to any written contract reserving to the lawful owner the right of re-entry. To meet the anticipated outcry of the confiscation of the rights of landlords, a provision was inserted for the enhancement of rents on the following grounds, and on these only:—

1.—That the land is found by measurement to be in excess of the quantity paid for.

2.—That the rate of rent is below the prevailing rates paid by the same class of holders of similar lands in the places adjacent.

3.—That the value of the produce or the productive powers of the land have been increased otherwise than by the agency or at the expense of the holder.

While in order to secure the landholder from unjust or arbitrary re-assessments these rules were embodied in the public law, and the Courts of Justice were opened to all who wished to appeal from the decisions of the executive officers.

In making this abridged summary from Sir GEORGE CAMPBELL'S paper on the "Tenure of Land in India," our intention has been to show that the object of a government is to encourage the tenant at will to foster habits of thrift for the purpose of becoming the owner of the ground upon which he lives, secure from charges upon the land which might eventually render its possession a burden instead of a benefit; and to so adjust the ground-rent as to make it an inducement to purchase and hold proprietorship in land. Therefore, while freely admitting that Bluff property cannot with propriety be placed upon the same basis as land devoted almost solely to agricultural purposes, still we think it is widely removed from those causes which render land for building purposes in towns and cities necessarily liable for the heavier expenses connected with it. No trade or business is carried on on the Bluff, and the houses are merely very humble habitations, made cheerful by a strip of garden ground.

In the recent Tokio suits we were much struck with one of the grounds of defence, which was generally to the effect that the Japanese Government had broken their contract with the land-renters, by permitting aliens to reside upon lands not within the boundaries of the concessions set apart for their use. This appeared an *argumentum ad ignorantiam*, and as such misconceived as before a Court, but nevertheless we are constrained to acknowledge that a similar plea, but of far greater significance, may be urged with some propriety in favor of Bluff land-renters. On the Western Bluff there are, we are credibly informed, several plots of ground rented

from the Japanese Government ostensibly by Japanese subjects, but really by foreigners, who, paying a merely nominal ground rent, are thus enabled to sublet the houses and grounds for a sum much under that possible when the ground rent of \$12 per 100 *tsubo* is payable. This abuse of the leniency with which the Japanese Government is frequently disposed to interpret its own laws in favor of foreigners, has not gone far, but it has commenced, and if not speedily checked will deteriorate the value of Bluff property to a great extent. We feel that the matter has only to be made public to ensure its correction.

Shortly, the position of Bluff land-renters is a very hard one; but in appealing to the Japanese Government to relieve them of a share of their burdens, they do so in no spirit of cavil, with no intention to evade their just liabilities, but rather in the expectation that a thorough revision of the treaties may speedily take place, embracing a reduction of the ground rent of their bungalows and cabbage gardens, in return for which their respective countries must, in justice and courtesy, grant a *quid pro quo*.

It is not on behalf of the wealthier foreigners we care to appeal. There is a large and growing section of this community forced to be content with a very moderate share of the very modest income derived from foreign trade with Japan, upon whom the present scale of house-rent forms an almost insupportable tax. In the suburbs of London an excellent twelve-roomed house with extensive grounds may be had for £80 to £100 per annum: in Yokohama a person must be satisfied with a vastly inferior residence of one-third the accommodation of the other at a much higher charge; a burden directly traceable to the scale of ground-rent levied on Bluff lands.

THE PENAL CODES OF JAPAN.*

WHEN we heard that a paper on the criminal law of Japan was about to be read before the Asiatic Society, by a gentleman qualified by education, by knowledge of the native language, and possession of intimacy with, at least the practice, and with some of the elementary principles of the law of England, by the performance of his duties as interpreter in the British Courts here, we expected that through the medium of that useful and respected society, a work was to be communicated to the world, useful to the students and the politician, interesting to residents in Japan, and to those who desire a knowledge of the laws passed for the protection of life and property, by the legislators of what is looked upon as the most progressive amongst the eastern comity of nations. Within the limits of a paper, or even of a series of papers, to be read before such a society, it would be perhaps difficult to give an adequate idea of the system of law adopted in the codes, at the same time with detailed information on the scale of punishments awarded for the infraction of the different laws. But we must confess feeling some disappointment in reading the pamphlet before us, that the writer has not extended the scope of his labours, and given to us,—as in his preface he informs us he originally intended, "a general idea of the Japanese Penal Codes by giving a short

* Exchange at 4 shillings per dollar.

† Exchange 4s. Interest 12 per cent per annum.

* Transactions of the Asiatic Society of Japan. A Summary of the Japanese Penal Codes. By JOSEPH H. LONGFORD, H. B. M.'s Legation.

"sketch of the plan and system on which they are founded, and a translation of the more important laws contained in them, and of those which showed points wherein Japanese criminal law differed most widely from that of England and other European countries,"—or, by appending to his summary, extracts or specimens of the different enactments, have given us the means of judging for ourselves the spirit of the laws. From an ethical point of view, the consideration of first principles of laws is more important, than a scale of punishment for the infraction of laws. In a legal point of view, the preciseness of the definition of a crime, the logical classification of offences, the adaptability of punishment to offence, are respectively made the test of good legislation by the practical lawyer, the theoretical codifier, and the humanitarian. Is the enacting part of each clause so wide as to include all possible infractions of the rule therein enjoined? Is the workmanship so slovenly, the construction so loose, that it is possible to drive a coach and four through any part of it? Is the web so flimsy that while the small fry are entangled in its meshes the old fish break through?

To judge of the penal codes by these tests we must await the production of a complete translation of the codes, which is vaguely shadowed forth to us in the preface as a possible production of the future. If Mr. Longford's judgment is correct, it would seem that the result of the new and revised codes has been to produce, either a series of penal clauses, incomplete in themselves, and for the interpretation of which constant reference, and re-reference, to previous or following clauses is requisite; or, that the arrangement adopted, which has much in it to be commended, has been rendered worthless by the necessity of constant reference to principles to be evolved from other enactments. In the preface Mr. Longford says:—"I found, however, that the manner in which all the laws in the codes depend one upon the other rendered it necessary, in order to arrive at a correct apprehension of the penalties with which any transgression of them is to be visited, to have a knowledge not only of the law immediately applicable to the particular transgression, but of many preceding or following it, and either explanatory of references in it or providing aggravation or mitigation of punishment in the case of particular classes of offenders, or in consideration of particular circumstances connected with the offence." If these words mean anything, they mean that the benefit which is supposed to result from codification, viz., clearness of notification of the things you may do and may not do, and facility of determining at a glance what is to be the result of the infraction of any given rule, has in some unexplained manner been thrown away. The advantage to the good citizen was to be that he had a guide to his path, the advantage to the criminal, the certainty of what he would "get" as soon as he made up his mind what crime "to go in for."

However the work might have been improved, the author, as far as he has gone, has done his work well, and has afforded us a means of judging what crimes are recognised by Japanese law, and, what the punishment for those crimes. By careful study, too, we may gather, or guess at, some of the leading principles which have guided the framers of the Codes; and we are given some specimens of the curiosities of legislation.

In examining the pamphlet before us in detail, we propose to give a short sketch of

the history of the Codes, to touch very lightly on the method and scale of punishment: to compare with the laws of Western nations some of the most important chapters and clauses in the Codes; and, if our space will allow us, to discuss the XIIIth chapter of the Code, which relates to criminal procedure, evidence, means of procuring evidence, and judgment.

"The criminal laws of Japan as they stand at present are comprised in two codes, respectively entitled the 'Chief Points of the New Fundamental Laws,' and 'The Revised Fundamental and Supplementary Laws':—grand, sounding titles; but somewhat misleading:—enactments concerning such offences as "breaking government notice boards," "tattooing the body," "women cutting their hair short without any particular reason for doing so," "passing places where 'no thoroughfare is marked,'" can hardly be with propriety called the chief points of the leading principles of the new laws; although a descending scale of punishments for assaults on officials of Imperial Government or Department appointment, might find a place among the Supplementary Laws. The necessity of amendment of the criminal law was soon forced on the notice of the Mikado's Government, as one of the first steps to be taken towards carrying out the plan of bringing the country under the government and jurisdiction of a central authority, and the two Codes of 1871 and of 1873 respectively are the result of the labours of the commission appointed for that purpose. The Code of 1871 "is simply a selection from the two Chinese Codes," of Ming and Tsing, adapted to the progressing state of Japan, and purged from the barbarous severity of the punishments which disgraces the laws of that country. The code of 1873 is a further amelioration of the severity of the law prescribing the punishment of death, for violation of the rights of property. We have no means of judging how far the resemblance between the laws of China and Japan is retained; but, if we are not mistaken, the framers of the "Codes" have availed themselves of the labours of the committees appointed by the Belgian Senate and Chambers to revise the *code pénal*, the reports of whose proceedings form the most recent, and most valuable, collection of rules and suggestions for criminal legislation; the result of long and frequent discussion of learned and able men, actuated by feelings of humanity, and guided by experience. There are two classes of punishments. 1.—Death;—by hanging, by decapitation, and by decapitation with exposure of head. 2.—Penal servitude;—for progressive periods from 10 to 100 days, from 1 year to 10 years, and for life; beside which there appear, in a debateable ground, pillory, and imprisonment without hard labour, —generally undergone in the private house of the offender, and apparently sacred to the noble and the samurai—and torture, but this privilege is taken from samurai who commit crimes of "a very disgraceful nature." Moreover, a samurai who commits an offence of this class, such as robbery, embezzlement etc., is considered to be unfit for his rank: he incurs the stigma of degradation, and is then in a fit state to serve out his time of penal servitude like a commoner.

Looking at the table of punishments given on the forty-second and following pages of the pamphlet we find the punishment of death still very frequent, and there is altogether a great want of elasticity in the scales of punishments, even though partly remedied by a further ordinance of December 1st, 1874, which allows a discretion of mitigation to the judge.

Punishments are graduated according to the result of the offence, a method of just and almost universal acceptance, as far as relate to the offences against the person; as in English law, mayhem, assaults occasioning harm, whether grievous bodily, or bodily, and common assaults have all punishments applicable to the result of the attack, the severity of the wound inflicted. Applied as measure of punishment for offences against property, the system does not give such good results. For "violent robbery," including housebreaking, when committed by men armed with weapons or clubs, is punished by penal servitude for life, irrespective of the amount stolen, but for "violent robbery without weapons" the punishment varies with the plunder, so that men who have planned an attack on a merchant, returning from market and supposed to have a large sum of money upon him, and who, after garotting him, find only empty pockets, will escape with two years' penal servitude; but if they find 5 yen on him will get three years. Plunder to the amount of 30 yen is required to raise the scale to penal servitude for life. On examining the Codes, it soon becomes apparent that the leading principle which is retained throughout the whole, is the subjection of the individual to the head of the family. The father has not now, if he ever had, the absolute power of life and death over his children:—he incurs a mitigated penalty of 3 years for the wilful murder of his child or grand-child: where death is caused by excessive beating as correction for a fault, a penalty of 2½ years penal servitude. But as punishments for offences against property have been graduated according to the amount of plunder, so are punishments for assaults graduated according to the nearness or remoteness of relationship: the eldest brother has the full privilege of bullying the younger sons. "Assaulting an elder brother or sister, uncle or aunt, or maternal grand-parents shall be punished by penal servitude for 2 years," and so with ascending punishments to wilful murder which is punished by decapitation with exposure of head; "Where the offence is committed by a senior on a junior relative no penalty shall attach to the former unless a cutting wound is caused, when punishment as provided in the ordinary law shall be inflicted according to the greater or less gravity of the wound, one degree of mitigation being, however, allowed for each successive degree of closeness of relationship that there is between the parties. * * * Beating a younger brother or sister, a nephew or niece, or a daughter's child so as to cause death, shall be punished by penal servitude for 3 years, and the wilful murder of any of these relatives by penal servitude for 7 years, but no penalty shall be inflicted if they are accidentally killed." And so we find that a husband "who kills his wife for using abusive language towards or assaulting his parents or grand-parents, instead of appealing to the authorities, shall, if information of his crime be given to the authorities by the parents, be punished by penal servitude for 1 year, and by penal servitude for 90 days if in the assault the wife has inflicted any wounds on either parents or grand-parents."

These extracts will show the position of the younger members of the family towards their elders as the criminal law regards them. We can find no mention of a mother-in-law; but should infer from the last extract that a man who killed his mother-in-law would be held to do a meritorious act. But the principle of seniority, is carried, out of the

family, into every rank and condition of life, and is then made a badge of despotism. The life, the person, of the official is protected, or rather an offence against either of them is avenged, according to his rank, whether of Departmental, Government, or Imperial appointment; and this not (as far as we learn from the summary) with reference to offences against the official *in the execution of his duty*, where additional protection is a just adjunct, but merely as a privilege of rank; for we find that punishment is inflicted in a descending scale for assaults committed by the senior on the junior. This is carrying beyond all bounds the dictum of the pompous knight, "If a trifle stolen in the street is termed 'mere pickery but is elevated into sacrilege if the crime be committed in a church, so 'according to the gradations of society the 'guilt of an injury is enhanced by the rank 'of the person to whom it is offered, done, or 'perpetrated, sir." And to have to consider, amidst the turmoil of a street row, whether our opponent is an official or not, or to guess how many stripes he might happen to have on his arm when in full uniform; is requiring too much reverence for the powers that rule us.

While the official is protected, and the father and uncle secured in their respective privileges; the Chief of the clans, the Father of the people, the Head of the state, is but casually mentioned in the Codes. There is no law relating to high treason; as in the Twelve Tables there is found no punishment for the crime of parricide, for no Roman citizen could murder his father, so it seems to be considered impossible for a native of Japan to *imagine the death of the Mikado*. The offences of "conspiracy and "riot," which are classified, oddly enough, together with robbery in the third chapter of the codes, meet with fitting and severe punishments; but the summarized definition of them would lead to the opinion that the law is aimed, rather against agrarian rioters, and rick-burners, and too energetic petitioners of the Government for supplies of corn and rice to relieve temporary distress, than against those who "levy war within the realm," or "seek to compass the death of the sovereign"; and it is from this classification of the said offences with robbery, instead of among offences against the state, as would be the case in English Law, the Indian Code, and the *Code Pénal*, if they related to rebellion or concerned the sovereign, that we must conclude either that the crimes of treason and rebellion are not dealt with in the Codes; or that the framers have adopted an inferential method of dealing with them, when they provide, in the first chapter, for the "Determination of cases to which there is no "law applicable;" that "in case of the commission of any offence to which there can "be found no law applicable, the degree of "punishment that is to be inflicted for it is "to be determined by an accurate comparison "of the case with others already provided for "by the laws. Such punishment must, however, be reported to and approved of by the "Emperor before being carried out."

Chapter II. of the Codes deals with "Domestic Law," literally "House and "Marriage" Law;" and includes offences relating to unfair levy of land tax by officials, with accumulated punishment in case the official was bribed: misrepresentation of value of land with a view to evade payment of tax,—accumulative penalties up to 100 days penal servitude: Fraudulent disposal of land belonging to another, or mortgaging land already pledged to its full value,—penalty vary-

ing up to 10 years. Under the heading "enrolment of the people" we find classed such curious offences as discarding the son of a wife, in favor of that of a concubine; abandoning natural or adopted child; procuring abortion; wanton disposal of property of a parent by a son, or of that of an elder brother by a younger; absconding from place of registration.—How these come to be classed under "enrolment" it is difficult to see; one ought certainly to be attributed to the class of offences against the person, in a subdivision of the title murder; and the last offence is a matter of police regulation. Under the heading "marriage and miscellaneous observances" we find 3 offences,—"ejecting a son-in-law "without due reason," concealing death of parents, and falsely reporting death of parents.

Chapter III. deals with robbery and theft. It would be well in this place to compare the distinction between principal and accessory, in Japanese law, with the distinction between the same persons in English law. "The "principal is he who originates the idea of "committing an offence. * * The accessory is he who joins with the principal in "carrying out the crime suggested by the "latter." This definition requires the presence of the accessory at the commission of the offence. In English law all persons present are principals,—in the first degree, the actual doer of the crime, in the second degree, those aiding and abetting him, either by instigation or by keeping watch and being prepared to render assistance at the commission thereof. An accessory *before the fact*, is defined to be, he who being absent at the time the crime is committed doth yet procure counsel or command another to commit a crime. It will thus be seen that the two chief characters in a crime have changed parts; in Japanese law the actual presence of both persons on the stage is necessary in most cases; for with regard to innkeepers, it is provided that an inn-keeper "who contrives" a robbery with violence, and shares in the booty, shall be treated as principal, although he had not assisted in carrying out the design. This enactment as to inn-keepers shows that they require the same stringent regulations as did those of Western Europe.

This chapter includes robbery with violence, embezzlement of public property, theft of public property, common robbery. By defining violent robbery to include burglary, and the use of drugs for purpose of robbery, the nice distinctions between breaking inner and outer doors, by night, or by day, have been avoided. Violent robbery by armed men is punished with decapitation, if the robbery is accomplished. So that the two questions of fact would be,—use of weapons, and fact of property stolen. Again, if robbery be attempted only, there is a slight mitigation of punishment unless the perpetrators have been guilty of murder or wounding. Violent robbery without weapons is, as we mentioned, punished by various terms of penal servitude according to the amount stolen.

Embezzlement and theft of public property are punished, as we might expect, by heavier punishments than are inflicted for similar offences against property of individuals: there exists the same distinction between the two offences as exists in English law, viz., Embezzlement is the appropriation of property of another, by a person to whose charge it is committed. Theft is the taking and appropriation of the property of another, out of his custody and against his consent, by a stranger to the property.

And, further, under this chapter, there are provisions for sacrilege, and stealing public documents, and Imperial property:—(The Imperial property mentioned is food and raiment. For theft of the Imperial clothing in use, the penalty is penal servitude for life; theft of old clothes 2 years only; but for this latter enactment we should have concluded that the desecration of the Imperial purple was a kind of high treason):—laws relating to the abduction and sale of women:—rescue of prisoners:—trespass in a dwelling house at night:—conspiracy and riot:—harbouring thieves:—anomalies which shew the difficulties which attend the proper classification of offences according to any of the many systems which have been proposed.

Chapter IV. deals with homicide. Murder is either wilful and preconcerted, or wilful though not preconcerted. In the former case evidence of preparation, such as a scheme of revenge, preparing drugs or weapons, is necessary to constitute the crime. Wilful murder, but not preconcerted, is where death results from a wound deliberately inflicted in the heat of a discussion or quarrel, before feeling of resentment can subside. There is a great difference, between the punishments for the attempts to commit these several crimes; but as the punishment for both of them, when completed, is death, there is very little distinction between the two crimes. By English law, murder is defined to be causing the death of another, wilfully and of malice aforethought; and at first sight the same essential acts to constitute the crime would seem to be required, as in "wilful and preconcerted murder;" but, according to the interpretation put upon the words "malice aforethought, there is no necessity for preconcerted action on the part of the committer of the crime, no necessity to prove any old grudge or plan of revenge. No doubt some evidence of motive is given, for the purpose of convincing the jury of the intention to kill, or as a means of pointing out the perpetrator by showing for whose benefit, or to satisfy what grudge the deed was done. But, as a pure legal definition, "malice" means without sufficient lawful excuse. From the various technical distinctions which have arisen, the English law of murder is one difficult of definition for the purpose of a Code. The framers of the Indian Code have got out of the difficulty, by abolishing the term malice; and making the degree of criminality depend on the question of intention with which the act caused death was done. Causing death by doing an act with the intention of causing death, etc., is culpable homicide; and culpable homicide is murder, when the act is done with intention, to cause death, or of causing such bodily harm as is likely to cause death, etc: except in certain cases where provocation, or obligation of the law, either mitigates or justifies the act. This way of dealing with the subject renders necessary numerous clauses devoted to exceptions; but it affords the clearest of all definitions. It is the definition adopted by the *Code Pénal*, and approved of by the Belgian Commissioners. Their opinion on the question, affords the clearest argument in favour of the division of "homicide" into voluntary, and involuntary, and the further subdivision of, voluntary with intention to kill, and voluntary with intention to attack, the victim, being the one most consonant to justice, and most easily dealt with in classifying for a code.

The Japanese law goes further than the laws of western nations, in justifying the killing of another in self-defence, or under the greatest of all provocations, the killing

by a husband of an adulterer caught in *flagrante delicto*.

These Codes, though founded on the Chinese, have been framed with the intention of improving the law by rendering certain the conviction of criminals, and thereby asserting respect for the law, as well as of mitigating the severity of the punishments; since such severity of law, while it inflicts penalties out of all proportion to the character of an offence, renders callous the criminal, while the object of the sanction of laws in protecting the citizen is lost. We are, then, the more astonished to find that no provision is made in these Codes to supply the want of a law to vindicate the majesty of justice, and purify the streams thereof.

The crime of Perjury is unknown. Bearing false witness against your neighbour, is not avenged; the ears of justice are not offended by falsehood; in civil causes it may be said "*Quid Fori faciam mentiri nescio*." Under the law of the barbarous Celestial Empire, a lie *quâ* lie, passes unpunished, unless by means thereof a false accusation is sustained, and punishment inflicted on the accused, in consequence thereof. Under these Codes false accusation alone is constituted an offence. "Parents or grand-parents guilty of killing their children, and masters their servants shall, if they afterwards attribute the crime to another and innocent person, undergo a punishment increased one degree of severity over that usually inflicted for such homicide," and again in Chapter VII, "A person who lays a false and malicious charge against another shall suffer the same penalty that would have been inflicted on the person falsely accused had the charge been just and well founded, and this penalty shall be enforced irrespective of the degree of gravity of the charge falsely preferred, and without reference to whether the person falsely accused has undergone punishment or not before the discovery of the injustice, the only exception being that when the charge has been of a capital nature and its falseness is discovered before the penalty is carried out, the informer shall be punished by penal servitude for life instead of by death." Here is a slight improvement on the Chinese law, the villain gets his deserts even if his victim escapes the fulfilment of the penalty of the law, but still there is no attempt to vindicate the sanctity of truth. For the offence committed by a man who incites another to lay an information before the authorities, and who, "in drawing up the *plaint*," wilfully exaggerates the circumstances of the case, shall be treated as a participator with the false accuser; and which offence is treated of in the said Chapter VII under the heading, "Inciting and promoting litigation," is aimed at the attorney; not at the witness, not at the perjurer, or the suborner of perjury, as those terms are understood. There is an inexcusable confusion of terms on the part of the author, in the language employed in treating of this offence of malicious information: "*litigation*," and "*plaint*" have no part with criminal law. In English law language they are appropriated to civil suits: the distinction between a criminal prosecution and a civil suit, should be accurately understood by any one who has even dabbled with the science of law with the hope of understanding it. There is another important omission from the list of offences classed in the Codes. There is no definition of, or punishment for, the offences of Libel or Slander. While the person and property of the official, and of

the citizen, is amply protected, there is no care for his character. The Press, as it is at the present day, an important part in the constitution, is the growth of the last few years: its liberty is effectually curbed by some very stringent press-laws which form no part of the Codes. There is then good reason for the omission of press-laws from the Codes, but not for the want of enactments protecting private character from ridicule, or the conduct of the official from wanton and scurrilous abuse. Have *Shôgun* or *Daimio* never been held up to ridicule by cartoon or pasquinade; never been lampooned in a broadside. True enough that Chapter VI, a very short one, inflicts various penalties for using abusive language; but ridicule or falsehood need not be coarse. Moreover, "In all cases in which this offence is committed the abusive language, must have been uttered in the presence of, and actually heard by, the person to whom it was addressed." Language so used need not amount to slander, it is more like vulgar abuse, and is correctly so classed. The offences of libel and slander were known in England, before the press, as such, had any existence: the law was in old days more stringent than it is at present, and the story of the struggle against that law, by means of which the press has gained its present liberty and position is one of the brightest pages in its annals. With a just law of libel, greater liberty might be allowed to the press of Japan, with a better effect upon the character of it, than the most stringent press-laws can ever afford. A muzzled dog is useless as a defender; a chained hound will soon degenerate into a yelping cur.

In thus reviewing the summary of the Codes as they have been laid before us, we have considered those parts which give the best evidence of the spirit of the laws, and which deal with the most important subjects, viz. protection of life and of private property. We may be sure that in all systems the public property will be protected against the individual, but *quis custodem custodiet*. The remainder of the summary gives, with great clearness, the provisions of the Japanese law for the protection of women from violation: the official from temptation of bribery: the coin of the realm from falsification; and official seals from forgery. Altogether, from the way that the framers of the Code have carried out the intention to mitigate the rigour of the punishments inflicted under the old laws, there needs but one step to place the criminal law of Japan on a footing of equality with that of other nations; but that step is an huge stride: the reform of its rules of criminal procedure, and as part thereof the mitigation of officialism. The framing and enacting of good laws is a great step; but the good administration of them, is a greater and a more difficult one. Ask any man who has lived in a country where good laws are badly administered, and in one where bad laws are well administered, which he prefers? and in nearly every case the answer will be the country whose laws are well administered; in which the magistrate has both the will and the power to administer justice—such justice as the laws mete out; and in which both the magistrate and the official is removed, by position, from the temptation or the suspicion of corruption. We propose on a future occasion to notice the part of the work before us which relates to Criminal Procedure. A Code of Criminal Procedure is truly a distinct work from that of criminal law, and as such we propose to deal with it.

"OWNERLESS DOGS" are a very favourite subject with the paragraphists of one Yokohama newspaper. Loudly as the dogs themselves do they howl either because there are so many canine pariahs about the settlement, or because they are despatched in some way or other unsuitable to the feelings of the quadrupeds themselves or the sympathies of their biped sympathizers. The municipality of Florence, if only it could have sway in Yokohama for a brief period, would promptly settle the question, and leave the critics no more subjects for fault-finding. The wooden slab even, hanging round a dog possessing the proud consciousness of being somebody's property, and which resembles a key-ticket, or a flower-label at a horticultural show, would not save the animal wearing it from the prompt attentions of the myrmidons of the too energetic syndic, or mayor, of Florence. This progressive functionary has an expeditious way of dealing with dogs, of which there can scarcely be many left in his jurisdiction. He hands them over to the vivisectionists, one of whom, Mr. Schiff, lately President of the laboratory, a post which popular indignation at his cruelties deprived him of, tortured no less than 14,000 dogs to death in one year! This gives a pretty large daily average—some thirty-eight dogs per day, including Sundays. The professor's time must have been fully occupied by his one pleasant pursuit alone. The *Saturday Review* is our informant on this and other matters relative to the life, or rather daily death in life, of the miserable dogs of Florence, where surely must have originated the comparison which would hint that the "life of a dog" is the most miserable in creation. If Mr. Nomura Yashushi would gain the favour, of the *Herald* for instance, he had better follow in the steps of the Italian syndic, and authorize his police to take "stray" dogs wherever they can find them, "off the box of a carriage, out of a young lady's arms, and off the threshold of an owner's door." He might further arm men with lassoes and send them out of the settlement on to the Bluff, "where the dogs of the farmers and contadini (read, foreign residents) let loose at night to protect property," and to threaten and harass the calves of the unhappy passers-by, would be "liable at any moment to be captured when doing their duty on the farms (lots) of their masters." Some such scheme as this, and a school of vivisection established near Nogé for the benefit of the medical students, might be made practically useful in putting an end to one set of complaints.

TOKIO ATHLETIC CLUB.

AUTUMN MEETING.

Honorary Committee.—HONORABLE J. A. BINGHAM, President, LIEUT. BAILLIE, R.N., AND C. DE BOINVILLE, Esq.

Judges and Starters.—DR. MANNING, R. J. BEADON, Esq., AND A. MILNES, Esq.

Committee of Management.—Messrs. C. DE BOINVILLE, J. HALL, F. W. STRANGE, J. JOHNSTONE, AND G. CHARLESWORTH, Hon. Sec.

Treasurer.—MR. G. E. GREGORY.

Clerks of the Course.—Messrs. E. ST. JOHN AND C. DE BOINVILLE.

We most heartily congratulate the Committee of management, and the other gentlemen actively engaged in carrying out the

Athletic Sports on the 29th ult., on the successful result of the first meeting held under the auspices of the Tokio Athletic Club. True, there were one or two "jar-rings" during the day, such as inevitably occur on the first public exhibition of a newly organized society, but nothing of any serious import. The meeting took place on the Parade Ground opposite the Imperial Naval College; and, as the ground does not belong to the Club, it could scarcely be expected to be in as perfect condition as the running ground of the Yokohama Club. Nevertheless everything was done to render the course level, and if, in places, it was not quite so much so as could be wished, still that was not the fault of the Committee. A rope marked the limits of the course, and it seemed to us as if the corners were rather too angular; had they been more rounded off, the running for the Ladies' Purse and the Mile race would doubtless have been made easier. At one end of the course a covered platform was erected for the accommodation of the ladies, who however did not assemble in great force. The events were, with one or two exceptions, very well contested, especially the Mile race, which caused no end of excitement at the finish. Tokio's representative, Mr. Strange, ran remarkably well the greater part of the distance and the hopes of his friends were raised to a high pitch as he entered the home stretch on the last lap fully twenty yards ahead of Mr. Walker; but fortune was against him as the Yokohama man was comparatively fresh. The time in which this race was run, however, is evidence of the staying powers of Mr. Strange, and we trust that the next time he contests a Mile race Dame Fortune may smile on him more than she has done on this occasion. Rather a large proportion of the prizes fell to our local athletes, but this is no disparagement to the Tokio Club, as it would probably be difficult to find three better runners in the East than Messrs. Watson, Walker and A. H. Dare; and it is no disgrace to be beaten by either of those gentlemen. Moreover they have such a happy knack of getting well off at the start, as frequently to recover their handicaps before twenty yards have been covered. This feature is probably most prominent in Mr. Watson; and an illustration of the way in which that gentleman anticipates the firing of the gun manifested itself in the 150 yards race on Saturday. We refer to this because it created some slight amount of discontent, and Mr. Watson was generally thought to have been in the wrong. But this can hardly be admitted, as the Starter should have put him back a yard for making a false start. However, we venture to predict that the next time Mr. Watson starts for a race in Tokio, he may depend that he will be carefully watched until the gun is fired. Notwithstanding this, and a little misunderstanding which occurred in connection with throwing the hammer, the meeting, as we stated at the commencement, was a decided success. The Tokio athletes did not begrudge the prizes carried off by their Yokohama friends, who, we are sure, will be well pleased if members of the Tokio Club will only come and do likewise at the meeting in Yokohama this month. Sir Harry and Lady Parkes were present, the latter having kindly consented to give away the prizes to the fortunate winners. We had almost forgotten to mention the prizes, which were tastefully arranged on a table placed on the centre of the platform. There were Aneroids, Claret Jugs, Studs, Telescopes, an excellent Fish Knife and Fork,

a pair of immense Vases, which Lady Parkes found too awkward to hand to the winner, Mr. Charlesworth, her Ladyship contenting herself with showing them to that gentleman. Among the most conspicuous of the rewards were two Egg-boilers, one presented by Lady Parkes and the other by officials connected with the Railway Department; and altogether the prizes presented a most imposing appearance. In conclusion we may say that the delightful weather added to the pleasure of the sports, and we hope that it will always be as agreeable at the meetings of the Tokio Athletic Club. A Japanese band was present and did its best to enliven the proceedings. The following is a summary of the different events.

100 YARDS FLAT. Handicap.—1st Prize Eng. Aneroid, 2nd Prize Cigar Case.

F. Walker, 4 yards1
A. S. Watson, scratch2

Nine contested this event, and as the limit man was only four yards in advance of Walker, it scarcely needed a prophet to point out the winner. The time was slow, being 12½ seconds.

THROWING THE CRICKET BALL. Handicap.—Prize, Set of Studs.

J. Hall, 5 feet93 ft. 5 in.

There was some random flinging of the ball by more than one competitor. In fact it seemed as if they vied with each other in trying to knock down the most Japanese. One unfortunate little fellow's head got in the way and the ball bounded off it as if it had struck a lump of something very elastic. The anxiety of the foreign spectators was considerably relieved on observing the lad put his hand to the top of his cranium, and, finding nothing there, stand staring about for a minute as if he could scarcely comprehend what had occurred, and then quietly resume his occupation of looking on. The blow was heard fully a hundred yards off. It would be as well, perhaps, on future occasions if the centre of the grounds was chosen for throwing the cricket ball, as the next head struck may in all probability not prove so elastic as the last one.

THROWING THE HAMMER. Handicap.—Prize, Claret Jug.

W. Tempest, 10 ft.75 ft.

A dispute occurred as to the actual winner of this event, Mr. Gorman claiming a throw of 72 feet 6 inches which, by some mistake, was credited to Tempest, who was declared the winner subject to a protest on the part of Gorman.

POLE JUMP. Handicap.—Prize, Breakfast Cuet.

G. Charlesworth, 10 in.8 ft. 2 in.
F. W. Strange, 12 in.7 ft. 11 in.

The contest between these competitors was very good indeed, and it was some time before it was definitely settled: ultimately Mr. Charlesworth was declared the winner.

150 YARDS FLAT. Handicap.—1st Prize, Egg-boiler, 2nd prize, Batter-cooler.

A. T. Watson, scratch1
W. Platt, 7 yards2

This was a gift to Mr. Watson. Time, 16¼ secs.

LONG JUMP. Handicap.—Prize, Pickle Frame.

Charlesworth, 2 ft. 7 in.19 ft. 4½ in.
Stuart, 2 ft. 6 in.18 ft. 6 in.

Mr. Hall, the scratch man, made some very good jumping, his longest leap being 18 ft. 2 in., but on account of the handicap-ping he was not placed.

HURDLE RACE, 120 yds. 10 Flights. Handicap.—1st Prize French Aneroid; 2nd Prize, Mug.

A. H. Dare, scratch1
G. Charlesworth, 12 yds.2

This event was won with comparative ease by Dare. Time, 19 secs.

PUTTING SHOT. Handicap.—Prize, Fish Knife and Fork.

Mr. Ward was the lucky winner of this prize, throwing, including his handicap, 37 ft. 3 in. Mr. Hall, from scratch, put the shot 37 ft. 1 in.

LADIES PURSE. Handicap, ¼ mile, for members only.

Tempest, 22 yds.1
Gorman, 5 yds.2
Ward, scratch.3

Tempest went off at a rattling pace, evidently determined to make the best of his start. The scratch man tried to overhaul his competitors, but failed, and eventually gave up the contest. Gorman struggled hard to catch Tempest, but did not succeed. The time was very good, being 58½ secs.

HIGH JUMP. Handicap.—Prize, Claret Jug.

The contest for this event lay between Mr. Charlesworth and Mr. A. H. Dare. The former had a handicap of 8 in. but was beaten easily by Dare, who jumped 5 feet 2 inches.

MILE RACE. Handicap.—1st Prize, Egg-boiler, 2nd prize, Coffee-pot.

F. Walker, scratch1
F. W. Strange, 60 yds.2
Paul, 120 yds0
Ward, 100 yds0

This was the best contested race of the day. Mr. Strange ran most pluckily, and it was not until the last lap was half completed that any perceptible decrease of distance between him and Mr. Walker became apparent. The friends of each then ran to encourage the contestants, and a most exciting race took place down the straight, resulting in a win by about two yards for Walker, who was carried off in triumph. Time, 5 min. 7 secs.

HOP, STEP, AND JUMP. Handicap.—Prize, Pair of Vases.

G. Charlesworth, 4 ft. 7 in.39 ft. 9 in.
Hall, Scratch38 ft. 10½ in.

Mr. Watson contested this event but was not placed.

THREE LEGGED RACE.—Two Sets Solitaires.

This event created much amusement and was won by Ward and Platt.

CADETS' RACE.—1st Prize, Telescope, 2nd Prize, Telescope.

Sakamoto1
Imar2

Ten students started but only two ran the race out. Won by about three yards.

THE CONSOLATION STAKES was a walk over for Mr. Gorman.

The sun had now disappeared behind the horizon, and Lady Parkes performed her task of bestowing the prizes on the winners, and congratulating each individual. Cheers were then given for the ladies, Lady Parkes, the Tokio and Yokohama Athletic Clubs, and all then separated, very well pleased with the afternoon's amusement.

YOKOHAMA REGATTA.

At the 11th hour our sporting friends have found out that there is a chance of a Regatta being rowed. More than a month ago the committee issued the programme for the forthcoming regatta, and the notice is still on the boards, at the boat-house; what part of that programme is to be carried out? The slightest possible, as regards quantity, but *le chef d'œuvre* of the *menu* as regards quality; how rarely is the step from gourmand to gourmet taken! But here we have the coarse things, such as scratch fours, club fours, junior sculls in tubs, discarded by the taste of our young men; for whom nothing less than a grand match, between the *élite* of Yokohama and of the Tokio Club will suffice. We would remind our readers in passing that it is only by assiduous practice at the art of rowing that the younger members of the craft can hope to attain to the position among the *élite* which they all seem to aspire to; if they scorn "junior fours" they will never be useful members of a crack boat; the elegant or successful oarsman is not made at one coaching.

Qui studet optatam cursu contingere metam,
Multa tulit fecitque puer; sudavit et alsit;
Abstulit Venere et vino.—

And this is more true of the oarsman than of the competitor in the arena.

As soon as the Committee of the Y. A. R. C. were assured that the Tokio Club would take part in the regatta, they lost no time in getting together the best material they could. It would perhaps have been better if they had taken time by the forelock, as the attempt of the Captain to form a "four" out of the rising men proved futile, and that attempt and its failure has only disgusted the juniors: and they have retired from all part in the regatta. The "veterans," the mainstay of the club, have the work thrust upon their shoulders; and this, as we pointed out on the 17th ulto., was all we could expect. Hence the sneer of "Grand Hotel" at those who have come forward to support the honor of the Yokohama Rowing Club, and have left their private races, in which they were engaged, for a future opportunity.

We have every wish for the success of the Club, and give all honour to the "veterans" who have come forward to deserve success; but we must point out to them that there is an admission of weakness in the fact that they have shrunk from carrying out the programme they put forward, by abandoning their inter-cine races on the plea that they could not get fit to row two races on the same day.

Considering the late day on which they began practice, the "Four" have made great progress. They have taken frequent long steady rows, once round the Lightship, and once into far space beyond the Mandarin Bluff, into which even our glasses could not follow them; but good honest work has been done. A few words on their form; style has been sacrificed to pace. It is well known that the faults of veterans are difficult to eradicate, but this cannot excuse the want of "time," which is apparent throughout the boat; 3 is too quick, while bow is sometimes quick on 3 and sometimes late, as the humour suits him; but he is rarely in time with the rest of the crew. The great fault with 3's rowing is that he works entirely with his arms and shoulders, and throws away the great advantage of his length, not by coming only to the perpendicular as one critic has it, but by stopping short some

three inches before that, and doubling over his oar: a good finish can only be obtained by the oarsman rowing out the stroke with his body until it reaches the perpendicular, and then finishing his stroke by dropping his shoulders and bringing his elbows well past his sides, it is thus that his chest is kept thrown out, and the oarsman sits up at the end of the stroke. 2 while rowing very steadily and well in time with his brother is rowing short, his work is too high for him, at least he seems to finish with his hands up at his throat; in this position he cannot finish well and recover properly, he must either fall too far back—with his body and not with his shoulders—or he must meet his oar, and slouch at the finish, and this latter will be his fault when he comes to try a fast stroke. In spite of faults which we have pointed out, they get on a great pace, their boat travels well, and we know that they can all stay.

Of the Pair-oar we can say little as we have seen little of them. Once or twice we have seen them scratching along at a fast stroke, and about as often we have seen them paddling leisurely, and enjoying the scenery of the harbour. They splash a good deal, screw a little, and make a great splutter for so little a craft. The only excuse we can make for them is that they have had no coaching: left to their own resources, they are getting on somehow. If the majority of members of the Club are too lazy to row, they might at least steer those who try to do their best. But we are afraid that it will never be said of the Y. A. R. C. as it was of a Cambridge crew when they came up grimly to take their then periodical punishment, "that they might reflect, for consolation that

'It was better to have rowed and lost,
Than never to have rowed at all.'"

NAMES OF THE CREWS.

FOUR OARS.

Tokio.	Yokohama.
Strange.	A. Milsom.
Paul.	J. J. Dare.
Manning.	G. Hamilton.
Gorman, <i>stroke</i> .	A. H. Dare, <i>stroke</i> .

PAIR OARS.

Gorman.	Litchfield.
Strange, <i>bow</i> .	Hall, <i>bow</i> .

The aquatic sports to which we referred above came off on the 2nd instant; and the fact of Yokohama having to compete with a crew from Tokio, brought out a larger number of spectators than our regattas usually do. By three o'clock the Bund was well lined with people, anxious to witness the race, who betrayed a considerable amount of patience, as it was nearer four than three when the Mitsu Bishi steam launch was observed rounding the English hatoba with the boats in tow and the crews on board. The day had been delightfully fine and calm, but before the boats started there were indications of a blow, and heavy, black-looking, clouds were observed rising. However, the water was still tolerably smooth when the respective crews took their places in the boats. The Tokio crew had thought it prudent to take a preliminary pull from the boat-house to test their oars; and to get their muscles in proper working order, and their blood up a little: the Yokohama men entered their boat about a quarter of a mile from the starting point, and the others followed suit. The course to be rowed was about the same as usual, being from some distance below the

P. M. Wharf to the English Hatoba, where Mr. Dodds, as Judge, was stationed, gun in hand, on a moored house-boat. Mr. Rickett, who fulfilled the onerous duties of starter, soon got his boats in order, and on asking the preliminary question the first time, "Are you ready?" received a negative reply from the Tokio boat, which had the inside place, and had got foul of the stake-boat. However her difficulties were soon cleared away, and at the word "Go," a capital start was effected. For a few strokes the boats raced level, but the Tokio crew, buckling down to their work soon forged ahead, and when opposite the P. M. Wharf had a lead of a length and a half, and were rowing a fast stroke 36 to 37 to the minute. The pace was too terrific to last, however, and began soon afterwards to tell on the men, who slowed down perceptibly. In the meantime Yokohama had crept up a trifle, rowing on an average about 33. The Tokio crew now began to exhibit signs of exhaustion and to row wildly; and it was evident enough that Yokohama held them safely. Both boats kept on even terms for some distance further, and then Mr. Haselwood's boat gradually forged ahead of the visitors, and won a good race by about two lengths. The time was 7 min. 41 secs.

YOKOHAMA.

A. Milsom
J. J. Dare
G. Hamilton
A. H. Dare, <i>Stroke</i>
A. H. C. Haselwood, <i>Cox.</i>

TOKIO.

F. W. Strange
E. B. Paul
C. J. Manning
H. J. Gorman, <i>Stroke</i>
G. Batchelder, <i>Cox.</i>

The pair-oared race, between Yokohama and Tokio falling through on account of Mr. Gorman not feeling sufficiently well to row, the next event was a double-sculling race between two scratch crews. The crews were:

F. W. Strange, <i>Bow</i>
G. Hamilton
H. B. Henley, <i>Cox.</i>
C. P. Hall, <i>Bow</i>
J. J. Dare
A. H. C. Haselwood, <i>Cox.</i>

The water by this time had become very lumpy, and the little craft felt the effects of it. For some distance after starting the competitors kept even, but eventually the boat guided by Mr. Henley went to the front and won easily by about five lengths. Time, 6 min. 11½ secs.

A scratch race for fours was now got up and three crews enlisted, viz:—

C. P. Hall
G. F. Playfair
F. W. Strange
F. Boyes, <i>Stroke</i>
G. Batchelder, <i>Cox.</i>
H. B. Henley
T. Brewer
G. Hamilton
H. C. Litchfield, <i>Stroke</i>
J. Rickett, <i>Cox.</i>
J. Marrabel
J. Hunt
A. J. Dare
J. J. Dare, <i>Stroke</i>
A. H. C. Haselwood, <i>Cox.</i>

The wind by this time had risen consider-

ably, and the water was very lumpy. The distance to be rowed was only half-a-mile, and so the crews took their seats at the boat-house, and rowed to the starting place. In going there Mr. J. J. Dare was unfortunate enough to break an oar, and the boat he was in had, in consequence, to return. The others went away to a good start, though but few lengths had been traversed ere Mr. Rickett's boat was almost engulfed in the trough of the sea, and shipped a quantity of water. This put her behind, and the other boat getting the lead soon put such a distance between herself and her competitor as to make it plain she would win, which she did in 4m. 30 secs.

This event brought the sports to a close.

CHOLERA.

The subjoined has been forwarded to us by the Secretary of the Board of Health, with a request to publish it:—

Yokohama, Oct. 2, 1877.

The Board of Health beg to call the attention of the public to the following statements and recommendation:—

Disinfectants have the power of destroying the cause and of arresting the spread of most epidemic and contagious diseases. The rules for disinfection recommended by the Board of Health are effective, simple, and are not expensive. They have been thoroughly tested, and are in accordance with the latest experience. A general observance of them will do much to arrest and prevent the spread of cholera.

By order of Board of Health,

STUART ELDRIDGE,

Hon. Secretary.

RULES FOR DISINFECTION.

PRIVIES, WATER CLOSETS, DRAINS, SEWERS, GUTTERS.

Collections of decomposing matters, etc., may be disinfected by either of the following solutions.

1.—To ten gallons of boiling water, add ten pounds of Sulphate of Iron (Copperas) and one pound of Carbolic Acid, and mix thoroughly.

2.—A solution of Sulphurous Acid is probably not much inferior to the above as a disinfectant.

Strong Sulphurous Acid may now be obtained, one bottle of which, added to five gallons of cold water, will make a solution powerful enough for disinfecting purposes.

To prevent infection of water closets, commodes, and privies, and to destroy odour, pour one of above solutions into the jar, box, or sink, three or four times daily at the rate of one pint for every four persons.

Keep a little disinfecting solution in the chamber-vessel used by the sick.

Any masses or surfaces of putrescent materials, ditches, drains, cess-pools, and sink-holes, should daily be disinfected as thoroughly as possible by one of the above solutions; in the case of drains, enough should be used to ensure it passing through the length of the drain.

Coal Tar may be used as a paint upon the walls of collars, stables, and open drains.

Chloride of Lime is a useful disinfectant and deodorizer, but must be used very liberally. Lime is useful as an absorbent and drier in damp places.

Servants' quarters, outhouses, etc., should be frequently lime-washed (white-washed). Special attention should be given to the servants and their quarters. Cases of diarrhoea or even of cholera among servants have already occurred in Yokohama, and may again occur without the knowledge of the master of the house. When such cases are discovered, all the precautions should be taken as carefully as would be the case were the Europeans themselves ill, and especial care should be given to ensure the destruction of infected mats, futons, and Japanese clothing.

Attention is called to the great danger of well-contamination by drains and privies in close proximity thereto. If such exist, the water of the well should not be used, while water from any source should be thoroughly boiled before drinking.

The rooms of all persons sick from epidemic or contagious diseases should be kept very clean, and open to the external air as much as possible. The clothing and bedding should be frequently changed, and well washed with boiling water, after being moistened with solution of Carbolic Acid. The clothing and bedding while in use, and the carpets, floors, walls and ceilings should be sprinkled once or twice a day during sickness and convalescence with a solution of Carbolic Acid. A solution of Carbolic Acid, well adapted to all such uses, may be easily made by shaking together in a bottle Carbolic Acid and water in the proportion of a teaspoonful of the Carbolic Acid to a pint of water. This is best applied by a sprinkler, but may be well applied by dipping the end of a common dust brush into the solution contained in a dinner plate, and throwing it off the brush on to bedding, carpets, walls, &c.

As a rule all bedding, clothing, etc., soiled by the discharges of cholera or diarrhoea patients should be at once disinfected, and afterwards destroyed by fire. For disinfecting buildings and such articles as are not destroyed, the following directions will be found most useful.

RULES FOR FUMIGATING WITH SULPHUR.

ROOMS, BEDDING, CARPETS, CLOTHING, ETC., infected with cholera, the sick having recovered or been removed, should be disinfected by Sulphurous Acid, generated by the burning of Sulphur.

Whitewash the walls; remove a board the whole length of the floor to allow the fumes to penetrate under the floor, upwards behind the plastering of the walls, and between the ceiling and floor above; hang the unsoiled bedding, etc., upon ropes stretched across the room; close every window and door.

Then ignite one or two ounces of Sulphur with a little Alcohol, placed in a saucer set in a plate containing water.

Every person must immediately withdraw from the room. Keep the room closed eight or ten hours, then open and ventilate thoroughly. The Sulphurous Acid with the whitewash forms Sulphate of Lime, itself a good and permanent disinfectant.

PROPAGATION OF CHOLERA.

Dr. John Simon, Chief Medical Officer of Great Britain, writes—

"It appears to be characteristic of cholera, not only in its developed and alarming form, but equally of the slightest diarrhoea which the epidemic can produce, that all matters which the patient discharges from his stomach and bowels, are infective, that the patient's power of infecting other persons is represented almost or quite exclusively by those discharges; that they are comparatively non-infective at the moment they are discharged,

but afterward, when undergoing decomposition, acquire their maximum infective power; and if they be cast away without previous disinfection, they impart their own infective quality to the excremental matter with which they mingle in filth, sodden earth, or in depositories and conduits of filth, and to the effluvia which those excremental matters evolve; that if the infective material, by leakage or soakage from drains or cesspools or otherwise, gets access even in the smallest quantity, directly or through porous soil, to wells or other sources of drinking water, it can infect, in the most dangerous manner, very large volumes of the water; that the infective influence of the choleraic discharges attaches to whatever building, clothing, and like things have been imbued with them, and render these things, if not disinfected, capable of spreading the disease."

THE Kencho official reports of deaths from cholera since our last mail issue, are as follows:—

OYAMA'S CONFESSION.

THE *Choya Shinbun* of the 2nd October gives what it says to have received, as the confession of the ex-Governor of Kagoshima, from a correspondent in Nagasaki. The native journal, however, abstains from vouching for the authenticity of the document. The *Choya Shinbun* says that Oyama's original pension was 136 *koku* of rice; and to this a further pension of 800 *koku* of rice was added as a reward for his distinguished service in the cause of the restoration. He was fifty-two years and seven months old. The confession runs as follows:—

During December of the 9th year of Meiji (1876) I met Hayashi, *Naimu-shoyu*, at Nagasaki, on my way to Kagoshima from Tokio. On the 27th of the same month, I arrived at Kagoshima, accompanied by Hayasaki, with whom I went to the district of Takayama in Osumi, where he had some official business to transact. I arrived there on the 18th January of the 10th year Meiji (1877); and left him on the 21st of the same month. On the following day, the 22nd, I left Takayama and returned home four days afterwards. On the 26th, I attended at the Kencho. On the morning of the 30th, a wonderful report was received at the Kencho, to the effect that, during the night of the 29th, about thirty men had forced their way into the Arsenal in the village of Kusamuta, and had seized the ammunition. Nakajima-Kenhiko, *keibu* of the 1st class, and a number of policemen, were sent to the Arsenal to ascertain the truth of the report. At about 12 o'clock at night Captain Shinno-Gumbachi came to my house, and informed me that about one thousand men had again forced their way into the Arsenal that night, and that they had destroyed all the houses and godowns, and had seized large quantities of ammunition. He requested me to protect the Arsenal. I answered him that he had better visit Nakajima and consult with him. For my part, I immediately went to the Kencho. On my way to the Government buildings I observed many jinrikisha and horses, heavily loaded with ammunition. I called out to twelve or thirteen police sergeants then at the Kencho. In the meantime Nakajima came in and requested me to follow him to a private room, and there told me that a wonderful discovery had been made, which had provoked the Shigakko-to and caused them to seize the Government ammunition in the Arsenal. The discovery was this. Nakahara-Naoi and twenty-one others, in the service of the Keishicho (Police Department) had returned secretly to the Ken (Kagoshima) during December in the 9th year of Meiji (1876). Nakahara had informed his friend, Taguchi, that the Shigakko-to were to be dispersed: that Saigo was to be assassinated; and that, availing themselves of this good opportunity, the naval and land forces were to enter Kagoshima, and attack and kill the Shigakko-to. This information had been obtained by a spy, and in consequence general excitement prevailed. As soon as Kirino-Toshiaki, Shinohara-Kunimoto and others heard about the proposed assassination, they went to Saigo-Takamori, who lived at Takayama in the province of Osumi. It was decided that they should all proceed to Tokio at the head of the old soldiers in the neighbourhood. So the Shigakko-to had broken into the Arsenal and laid their hands upon the ammunition. Many police sergeants, and two officers named Nakajima, were trying to effect the arrest of Nakahara and others, who had come from the East. Kirino and his

brother, Shinohara and many others, arrived one after the other at the Kencho, where I was told by all the same tale, with the addition that a message had been sent to Saigo and that the expedition was to start in a few days. They required me to provide money for them. Since I was of the same opinion as they were about raising the standard, I thought that it was an important matter to raise money. So, on the 1st February, I wrote a letter with my own hand, addressed to Hirata Tayaharu, a member of the Shoei-sha, at Nagasaki. This letter was conveyed to him by a man named Hatanaka, and its purport was to the following effect:—"A number of men who were said to have been detailed to assassinate Marshal Saigo and others, were arrested. The commanders will shortly leave for the East at the head of their troops. So, as we want a large sum of money, 20,000 yen which was committed to the care of Kasano Kumakichi, must be sent to us, together with all the money at present in the office of the Shoei-sha. Besides this 30,000 or 40,000 yen will shortly be collected by Kasano, &c., &c. The people under our jurisdiction are more highly excited now than they were in the time of the war of Boshu. Details will be given by Hatanaka (bearer of the letter)." When the messenger was leaving me I told him that Marshal Saigo was to leave on or about the 12th February. On the same day, the 1st, Lieut.-Colonel Sugeno-Kakubei, Vice-Director of the Arsenal, came to the Kencho and again informed me of the insurgents breaking into the Arsenal. He asked me to protect it against them. If it could not be defended by the forces at the disposal of the Kencho, the matter should be reported to the Kumamoto garrison. But as I thought that the interference of the Kumamoto garrison would be a cause of much trouble to us, I told the Vice-Director that, as the Arsenal would be fully defended by the Kencho, no report would be despatched to the Kumamoto garrison. After he had left the office, I sent a letter to him about the protection of the Arsenal. The Vice-Director answered that water had been thrown upon the remainder of the gunpowder. On the morning of the 2nd, I heard that a report of the disturbance had been sent to the Government by the Saibansho authorities in Kagoshima. So I was obliged to do the same to avoid what difficulties might occur in the future. Shibuya and Nakamura of the Kencho took the document, addressed to the Home Minister. They embarked in Kagoshima the same morning. The document, which purported to give the number of the men, (which was not actually known) who had broken into the Arsenal and stolen the ammunition at Iso, caused the Government to distrust the Kencho authorities. The document was composed by Imafugi in haste, and details were not given in it.

The 4th of February was Sunday; but the Kencho was opened, and I attended there in person. I ordered Minoda, Director of the sixth section, and others of all the sections, to collect all the money at the command of the Kencho, such as the revenue ready to be sent to the Finance Department, the reserve fund, and money for the schools from the Public Educational Department. I sent two officials of the sixth section to the branch office of Kagoshima-ken at Miyazaki in Hinga with an order to the same effect. The money, collected from the various sections of the principal and branch offices of the Kagoshima-ken, amounted to between 120,000 and 130,000 yen. All this and about 21,000 or 22,000 yen, which sum had been placed in charge of the Kencho by the

Arsenal, was all sent to the Shigakko-to. On the 6th, Saigo returned to his home in Kagoshima from Takayama (Osumi). He wanted to see me at the building of the Shigakko, where I had an interview with him on the following day; and he spoke to the following effect:—"If he had been in Kagoshima, he would not have allowed the Shigakko-to to seize the Government ammunition. But he could do nothing at that moment. The projected assassination by Nakahara and others was really ordered by Okubo (Home Minister) through Kawaji (Director of the Police Department). He had determined to proceed to Tokio at the head of his old soldiers, in order to ask a question of Okubo." I told him then that it would be important to notify the matter to the Fu, Ken, and barracks along his way to Tokio, previous to his arrival: if not inconvenience would occur. Saigo requested me, as a copy of the notice was to be sent me, to issue it from the Kencho; and said that his departure for the East should also be reported by the Kencho to the Government, to whom also a copy of Nakahara's and the others' (assassins') confessions should be sent. I consented to his demand. On the 11th, I sent one of the Kencho authorities to the Shigakko to get a copy of the report to the Government. Saigo gave him only the copies of the confessions of Nakahara and twenty-one others, which were not however marked with their nails. (The mark made by the nail of a criminal to a document as a seal, signifies that he admits the truth of the contents). Saigo said on giving the copies that the mark was to be made some other day. I read them through, and believed the statement of Nakajima. As each confession was very long, I copied only the important part, and sent back all the originals to Saigo, through Imafuji of the Kencho. On the same night I received the other document and manifesto to the government and every Fu, Ken, and barracks, notifying Saigo's approaching departure. These were copied, and I appointed 51 messengers, ordering them to take copies to every Ken, and told them that, if their passage was interfered with, they were to require the protection of the police of the Kenin which they were. All their expenses were defrayed by the Kencho. They left Kagoshima on the 14th. As it was desired, in fact, to provoke excitement in every Fu and Ken in favour of our party, they were sent to the Kochi, Wakayama, Yamagata and other Ken, which lie in different directions off that road, between Kagoshima and Tokio, along which our men were to proceed. On the 9th of the same month (February), Kawamura, *Kaigun-Tayu*, and Hayashi, *Naimu-Shoyu*, arrived in Kagoshima Bay, in the *Takao Maru*. We were informed by letter that they would land. But, as the Shigakko-to were strictly watching the coast and other places, I thought that it would be very difficult for them to land, and I went myself to the *Takao Maru* to meet them. They asked me about the condition of the ken, and about the arrest of Nakahara and others, and the breaking into the Arsenal. But, as I personally held the same opinions as Saigo, I gave no accurate replies. Kawamura desired to land and see Saigo. I returned and told the latter of his wish. Saigo said he would have an interview with him. When I returned to the *Takao Maru* the Shigakko-to, armed with rifles and swords, had surrounded the vessel in many small boats. I had no time to continue the talk with Kawamura on board, and so left him. The *Takao Maru* fled from the Bay of Kagoshima. On the 12th, 20,000 yen were sent to me by Hirata at Nagasaki, and brought

by Ishigawa and Hashiguchi, I gave these men 5 yen each out of my own pocket for the message, and sent them back to Nagasaki with an answer addressed to Hirata. The subject of my letter was as follows:—"Your letter, dated the 10th, came to hand at 11 o'clock a.m. to-day, the 12th. I have received what you have sent to me. * * * High excitement prevails throughout our jurisdiction, where people seem able to stand against the entire power of the country. About 15,000 soldiers will be despatched on the 16th inst. (February) on each of the two roads—Okuchi and Kajiki. Large crowds of soldiers have assembled in Kagoshima from various quarters up to this (12th), ready to fight with heaven and earth together. Mr. Shikishi is expected to return shortly. * * * The only trouble on our part is that the number of men is too great, while there are not sufficient provisions for them. Besides, many have come over from Hiuga to join us. I tender many thanks for your having sent the money." In another letter I told him as follows:—"1,500 men with two cannon, and the 2nd and 4th battalions have left for Higo by the Oguchi road, and 7,500 men, and three battalions consisting of 6,500 men, as the Ishikawa road. About 6,000 men are by assembled in Kagoshima as a reserve."

When the projected assassination was discovered we became very anxious that our men should make their way out of the Kagoshima Ken, and that our enterprise should be known outside our jurisdiction. So every entrance to the ken and coast was strictly guarded by the police. Communication entirely ceased, and even the Kencho officials were prohibited to pass the posts without a passport from the Kencho. I detailed this business to the 4th section. But Nakajima and many other police sergeants and police of that section followed Saigo, and inconvenience was repeatedly experienced in the ken from their absence. On or about the 12th February, many officials in the service of the Kagoshima Saibansho petitioned for leave to resign their respective posts in the public service, wishing to take up arms on the side of Saigo. Before their resignation was accepted by the Saibansho, I appointed them to the rank of police sergeant, in accordance with their desire. At the time Saigo started on the expedition, I asked him what should be done with Nakahara and the others. Saigo replied to me to the effect that he expected to reach Osaka at the end of February or the commencement of March, and that he would let me know from there. According to his order, they were kept under guard of the Kencho. About the 21st February, an English man-of-war arrived in the bay of Kagoshima, and I learned from people on board that the Government was shortly about to send war-vessels to Kagoshima. As the jail, where Nakahara and others were imprisoned, was close to the coast, a new goal was built within the grounds of the Kencho. Osu-Tetsuzen, *Daikio-sho* (a high Buddhist priest), with many other priests, who were arrested by the Shigakko-to, were also kept in the same new jail. But I do not know for what reason the priests were arrested and imprisoned by Saigo's men. On the 13th or 14th February, three men, namely, Kawakami-Chika-kata, Osakabe-kio, and Hiwatari-goro, arrived in the Bay in the *Teibo-kan* and went as far as Suno-Mata (13 *ri* from Kagoshima), where they landed. They sent a letter, addressed to Kirino, (in past years, Kawakami was a soldier under the command of Kirino; and the two others belonged to Shinohara) stating that having been informed of the raising of an army by Saigo, they had returned to the Ken, wishing to join his troops. But Kirino

having suspicion that if they really desired to join us, they would have landed at Iso and visited us in person, on his departure, sent their letters to me, requesting that the writers should be strictly examined by the people of the Kencho. Acting on the request of Kirino, I ordered Nigie, police sergeant of the 1st class, to examine them strictly; and I told him that, if they would not voluntarily confess the reason of their return to Kagoshima, torture was to be applied to them. No cause of suspicion was found against them at their examination, and they were allowed to join the men of the expedition. But they were afterwards discharged, as their names were found in a letter in the possession of Nakahara. They wanted to have a passport for Hiuga. But I did not give it, for I much feared that they would cause some injury to Saigo; and so I kept them in prison.

Kishima Kiyoshi was one of the chief partisans of the Shigakko-to. But he committed himself, and was expelled by the other members. On their leaving Kagoshima on the expedition, Kishima repeatedly petitioned Saigo to be allowed to join his men. Saigo did not accede to his wish. I think it was on the 16th February that I sent my letter to Kirino recommending him to allow Kishima to join the troops. The answer from Kirino was to the effect that he consented with all his heart, but Saigo would not hear of it, and that the question whether he should start after him or not was left to himself (Kishima.) I sent the reply to Kishima. Since this time, I have not seen him. On the 3rd of March, Tanaka Seiho, police sergeant of the sixth class, in the service of the Kagoshima branch office at Miyazaki in Hiuga, came to the Kencho, accompanied by Ogura Shohei. (A translation of a sketch of the life of Ogura Shohei was published in the *Japan Gazette* of the 20th September last.) A shizoku of Ohi (Hiuga), Ogura, said:—"The plot to raise disturbances between Kioto and Osaka in favour of Saigo has been discovered, and one of the conspirators, Arima Toda, was arrested, but afterwards escaped with difficulty. As the province of Bungo is not guarded strictly by the imperial troops, it will be very easy for our men to get to Bungo through Hiuga." As I then saw him for the first time I could not, of course, believe his words. So, I only told him that he might be right. When our men advanced on the Hiuga road, Ogura followed them. I rendered no military service to Saigo, and did not assist him by levying troops. When I first heard from Nakajima about the projected scheme of Nakahara and twenty-one other conspirators, I heedlessly believed it, and conspired for Saigo's rising. I was engaged in the arrest of the would-be assassins between the 3rd and 6th February, and confined them in the 2nd police office. Nakajima, police sergeant, and Nakayama, Kono, Furukawa, Kunai, Kabayama and Nirei of the Shigakko-to examined them in a cruel manner. I received their confessions from Saigo and printed many copies of them, in order to circulate them through the ken. But when I was on board with the Mikado's Envoy I was told that the confessions of Nakahara and others, which I believed, were elicited by torture at their examination by the Shigakko-to, in order to create an excuse for raising an army against the Government. In regard to the provisions of food, I also complied with Saigo's demand, and established two kitchens within the grounds of the Kencho on his men leaving Kagoshima.

I acknowledge my fault in having aided the treachery of Saigo-Takamori.
8th July, 1877. OYAMA TSUNAYOSHI.

REVIEW OF THE KAGOSHIMA INSURRECTION.

(From the *Nichi-nichi Shinbun* of the 26th Sept.)

The Kagoshima disturbances were really brought to a final conclusion on the 24th September, and the great work of confirming the present Government was completed in the 10th year of Meiji (1877). The difficulty attached to the establishment of the Government was felt on the day in which the Tokugawa Shogun was overthrown, ten years ago, and which commenced the abolition of the feudal system; and since then public affairs have improved from day by day. But one ken, that of Kagoshima, still remained under the former system of government, and the shizoku under its jurisdiction lived according to the selfish and arbitrary system of samurai. The three provinces, viz., Satsuma, Osumi, and Hiuga, were just as powerful and influential as if they formed an independent country in the Western corner of Japan. When the treacherous ones raised the standard of revolt against the Government at Saga, Kumamoto, and Yamaguchi, they hoped for the assistance of Satsuma. The day in which we have completely suppressed the independent party, as mentioned above, we may be right in saying was the day in which the establishment of the present Government was confirmed. It is reasonable that our learned men should remark that the Government was re-established on the day of the suppression of the insurgents in the South-West.

Although the insurrection will stain our history for thousands of years in the future, still Saigo-Takamori was a man of popularity and ability and talent. He acted as the commander of the insurgents, and the distinguished generals Kirino, Shinohara, Murata, Kishima, Beppu, Hemmi, Fuchibe, Ikegami and others, assisted him in commanding the brave men of the Shigakko, who took the field so many times. The insurgents numbered about 30,000 in all. They marched swiftly as the wind to Higo, having been encountered by no imperialists. At this time, our countrymen were much excited and they could not judge which of the contending parties would gain the victory. But His Majesty the Mikado issued a notification ordering an expedition against the Kagoshima insurgents, and appointed Prince Arisugawa-no-Miya as the Commander-in-Chief of the imperial armies. The complete suppression of the insurrection came after eight months' warfare, and has resulted in the ken hitherto outside the administration of the Japanese Government being brought under the Mikado's Government. This great exploit has been brought about by the decisive action of H. M. the Mikado, and wise administration on the part of the Ministry.

Soon after the Kagoshima insurgents first raised the rebel standard, and forced their way into the imperial arsenals and seized large quantities of ammunition, the land forces were formed into various divisions, and the Navy Department put the men-o'-war in good order. In a few days after the despatch of an expedition against the rebels, the Commander-in-Chief, accompanied by Yamagata, War Minister, established his head quarters at Fukuoka. The insurgents penetrated as far as Kumamoto on the 21st February. The garrison of Kumamoto, including the police, numbered less than 3,500, and the body of soldiers, encamped at Kokura, had not arrived. The Governor of Kumamoto, determined to prevent the insurgents from marching to the North-East of the castle. As Yamagata knew that final victory depended upon the castle of Kumamoto being

taken or not taken, he removed his headquarters to Minami-no-seki, and there co-operated with the Commander-in-Chief. The insurgents laid siege to the castle on one side, and marched along the two roads, viz. Yamaka and Takase, on the other. The rebel troops on the former road were checked at Iwamura, where Colonel Fukuhara was killed; and those on the road to Takase and Kinoha, where general Miyoshi was wounded, were also brought to a stand-still. The insurgents, who fought very well and were furnished completely with arms and ammunition, constructed batteries on the commanding positions of Tawarazaka and Yamaka. Here many great battles were fought. On the 20th March, Lieut.-Generals Nodzu and Oyama stormed and captured Tawara, and on the following days, Lieut.-General Miura seized Yamaka, and drove back the insurgents, who united their forces and proceeded to Kidome, Uyeki, and Torinosu, where battles took place between us and the rebels. Previous to this, Major-General Kuroda, accompanied by Lieut.-Generals Yamada, Takashima, and Kawaji, landed at Hinaku at the head of a large number of men who had been newly enlisted in the East. They fought numerous battles at Miyabara, Yajiro, Uto and Kawajiri, and advanced victoriously to Kumamoto in the rear of the insurgents. At length the insurgents, having seen that they could not capture the castle, retreated from Kumamoto on the 14th April. The imperial troops entered the castle victoriously after the rebels had besieged it for fifty days. This was enough to decide that victory would be on the side of the imperialists in future.

The insurgents, who retreated to the East from Kumamoto, then established their headquarters at Kiyama, and extended their lines between Otsu, Takemiya, and Mibune. They built batteries, and a desperate battle was fought on the 20th April. The insurgents were again defeated and retreated as far as Hitoyoshi. On the 26th of the same month, Lieut.-Generals Oyama, Takashima, and Saga landed at Kagoshima, where the imperialists were again beleaguered by the insurgents. On the other hand, Lieut.-General Nodzu marched on the Mitai road and Lieut.-Generals Yamada and Miyoshi along the river Tamagawa, and seized the castle of Hitoyoshi. Lieut.-General Miura attacked the insurgents on the Okuchi road and Lieut.-General Kawaji marched victoriously on the Sashiki and Yonetsu roads. The rebel troops were defeated everywhere. On the 1st June, Hitoyoshi castle was captured and the insurgents, encamped in strong and commanding positions on Okuchi and Kakuto, fled in disorder, leaving the imperialists masters of the field. The Kagoshima garrison also attacked and completely routed the rebels at Taniyama; and the victors were joined by Lieut.-General Kawaji on the 26th May, who arrived at Kagoshima by land after many brilliant victories. Thus the insurgent army was obliged to leave the imperialists masters of Satsuma, and retreat to Osumi and Hiuga. They were not yet discouraged. One detachment of them crossed the Adzusa mountains, and penetrated to the province of Bungo, where they fought successfully at first. But at last they were again obliged to retreat before Lieut.-Generals Tani and Nodzu. Since the main body of troops belonging to the insurgents were routed at Kagoshima, they could not make any stand at any quarter. Each detachment of the rebel army was defeated one after the other at Miyako-no-jo, Takaoka, Miya-no-jo, Mimidzu and other places, just as easily as the leaves of a tree fall before the wind. They

re-assembled their ill-conditioned forces at Nobeoka, whither the victors followed them quickly. The insurgents were surrounded on Enotake, and thousands of the rebels laid down their arms to the victors. But on the 17th August the insurgent commanders, at the head of a few hundred picked soldiers, cut a way through the imperial lines, and marched through the imperial camps at Mitai, Kobayashi, Iino, Kurino, and Kajiki. On the 1st September they entered Kagoshima, where a few hundred imperial soldiers were stationed. The imperial troops from various quarters followed them to Kagoshima by land and sea. After a bombardment of three weeks the imperialists entered Kagoshima victoriously, and the entire suppression of the rebellion was proclaimed on the 24th September. It is now eight months, or two hundred and sixteen days, since the first battle was fought at Kumamoto between the imperialists and insurgents. The following is the list of names of generals who have served at the seat of war. Prince Arisugawa Takahito, Commander-in-Chief. Three War-Inspectors, viz., Yamagata, Kuroda, and Kawamura. Ten Lieutenant-Generals, viz., Nodzu, commander of the first division, Miyoshi of the second, Miura of the third, Soga of the fourth, Tani of the Kumamoto garrison, Takashima of the first, Yamada of the second, Kawaji of the third, Oyama of the fifth, Prince Higashi Fushimi of the newly enlisted troops. One Major-General, Ito. Each of these officers was aided by numerous colonels and other subordinate officers. Major-Generals Saigo and Torio, who remained in the East, served to the best of their ability in levying new troops and sending provisions and ammunition to the South-West, so that no inconvenience in this respect was caused to the imperialists. Lieutenant-Generals Ida, Shijo, and others, strictly guarded the North and East. The 24th September of the 10th year of Meiji may be remembered by our countrymen in future as the day on which the establishment of the present Government was confirmed.

On his death, Saigo Takamori was dressed in a cotton shirt of Japanese style, and wore leggings and stockings of cotton, and hempen sandals. He had on an old cap and was without mantle or trowsers. He was shot through his right loin and left abdomen. Kirino Tashiaki was also poorly clad, and wore straw sandals. He was shot in the head and breast. Murata, Beppu, Henmi, Ikegami, and other partisans, were dressed in a like poor manner, and each of them was wounded in more or less places. Some of them had as many as ten sword-cuts. The following is the list of the distinguished rebel commanders, whose corpses were found among those of many other people at Iwazaki:—Saigo, Kirino, Murata, Henmi, Beppu, Katsura, Ikegami, Takagi, Yamanoda, Iwamoto, Ishidzuka, Gamo, Kokubu, Ogura, Hirano, Hori, Sato, and Ikenobe. Out of the eighteen, all but three, viz., Saigo, Kirino, and Murata, seem to have committed harakiri, or to have stabbed themselves through the throat. Niino, Goto and Sakata were captured by the imperialists, and Nakajima's fate is not known. One hundred and six rebel soldiers were found dead in a row at Iwazaki, and about 300 were captured. In the last battle on the 24th September, only about thirty imperial soldiers were killed or wounded. The bombardment of Kagoshima was made from fifty-three guns.

A TELEGRAM from Tanoura, dated the 29th ultimo, states that the rebel commander Hiei has been killed. Miyauchi was arrested in Miyazaki: Urakawa has surrendered: where Nakayama and Nakajima are is not known.

THE HEAD OF SAIGO TAKAMORI.

(From the *Choya Shinbun*.)

SAIGO'S STAR blazed in the Eastern sky, and Saigo's head is not to be found in the world. Has he no head? He had eyes, with which he glared through the country of Japan; and he had also a mouth through which he commanded the movements of his picked soldiers, who numbered about 20,000. So he ought to have had his head! But the Generals and forces, both land and naval, who crowded in on all sides of Kagoshima, cannot find Saigo's head, though they call for it everywhere, blow trumpets and beat drums. Is this not curious? We have mentioned in our paper that Saigo would hide his body somewhere, and now we may be right in saying that our statement was quite correct. Cho-o, an ancient Chinese warrior, gave his head to the enemy. In our country Masakado, with seven of his retainers, all dressed like him ready to die for their lord and country, was shot through the head. But Saigo, who selected a judicious time for leaving this world, has very cleverly hidden his head. The eight heads of the potato fellows, namely, Kirino, Murata, Henmi, Beppu, Fuchibe, Ikegami, Kishima, and Katsura, were found among the imperialists. These are called the *Yatsugashira*, the name of a potato which has eight roots. Saigo has alone hidden his head in the most successful manner. If he will show his head even for one second, H. M. the Mikado and ministry will be free from anxiety on one part, and we, newspaper writers, too, on the other part. As long as we do not find his head we feel uneasy. But Saigo was really killed, and there is no reason to suppose that he is still living therefore no inconvenience is likely to arise among us even if his head is not found. It may be regarded among us as a touching story, that the brave warrior who commanded thousands of soldiers, and who checked the imperial forces for eight months after many defeats and in desperation returned to his birth-place to die.

ON THE REVISION OF THE TREATIES WITH FOREIGN COUNTRIES.

No. 2.

(From the *Kinji-Hiron*.)

Who affixed their signatures to the conventions between the Japanese empire and the countries of Europe and America, which are in force at the present time? Who was it composed the original draft? We can give no certain reply to these questions. But we cannot distinguish what is profitable and the reverse and what is good or bad in things, without knowing their origin and considering their results. So that we are obliged to try to distinctly answer the questions. The original copy of the treaties of Japan with the Western Powers was really composed by the hand of foreigners; and the former Shogun's Government affixed a signature to them. Is it not really an afflicting matter that the government of Meiji, and we, the people of a land of freedom, live under such conventions? In the reconsideration of the circumstances of the time in which the two vital questions of opening or keeping closed the country to foreigners cropped up among our countrymen, we observe that the majority of the daimio were in favour of the latter policy. But the Tokugawa Government entered into treaties with foreigners against the popular wish, and without waiting for the decision of the Mikado's Court. As the Tokugawa Government was obliged to open the country by the

exigencies of the time, their bad administration should not be too severely criticised. At that time, our people knew nothing about treaties or trade; and could not have composed the original draft of the convention. So we were obliged to leave this important business to foreigners; and this has caused the outpouring of the terrible poison which envelopes us at the present time.

The treaty was made under the conditions which we have mentioned above. We think we are right in saying that the first step taken by the new government, on its establishment, was towards the revision of the treaties with foreign countries. But it had no practical result; and we have not been able to recover what is our just due from foreigners. What is the reason that we live under the old conventions? The Tokugawa Government, which then had the supreme power of Japan in its hands, as representing the country, sealed the conventions. So the Mikado's Government could not of course abolish them when it was established, and every foreign minister in Japan was notified to the effect that the new Government should preserve the conventions stipulated for by the Tokugawa. No alteration should be made, no matter what inconvenience or loss should accrue to us, before the term fixed for the final revision had expired. It was our most important national business to commence the alteration on the termination of the old convention. That period ended in the 5th year of Meiji, or 1872. Six years have passed and no step has been taken. What is the reason for that?

In October of the 4th year of Meiji (1871) His Excellency Iwakura, *U-Daijin*, visited the treaty countries in Europe and America as Envoy Extraordinary and Minister Plenipotentiary. At that time, foreign newspaper writers remarked that his purpose in visiting the Western powers might be the revision of the conventions. And we have heard that a committee called the *Yoyaku Kaisai Gakari* (the officials, who were deputed to study the work of revision), was appointed from one or two Government departments, and that the original draft of the new treaties is nearly completed. But no definite action has been taken up to this day. Is it because there is no time to touch upon foreign matters, owing to the disturbed state of affairs at home? * * * Who of our countrymen does not desire the revision of the treaties? Who would be content to live under such inadequate conventions? Inconvenience caused by defective laws and regulations, and felt temporarily and only at home, is not a very serious matter; but all questions relating to our intercourse with foreign countries should be carefully considered.

At this moment the disturbances in the South-West are suppressed, and some of our people say that the present Government has been confirmed this year on the foundations established ten years ago. Our opinion is quite different. We cannot say that the foundation of the Government is stable until the treaties shall have been revised. We believe that the first matter demanding the attention of the Government, after the suppression of the insurrection in the South-Western corner is this one of revision. We have published translations from the *Tokio Times*, Nos. 71 and 75, on this subject, and expressed our opinion thereanent in our paper No. 75. (A translation of this article appeared in the *Japan Gazette* of the 27th August.) If the restoration to ourselves of our rightful powers of levying our own taxes in our own territory is as easily acquired as anything which we have put in a bag, we shall of course have no trouble. But the mat-

ter is really the one of most difficulty at present for our country. We must carefully consider the best way to commence. The principal points which we have to insist upon are:—

1.—Our rights as an independent state. The Japanese empire, being an independent country, should in its treaties be on an equality with foreign countries.

2.—Judicial rights. Since we should be on an equality with foreign powers, we should have the right of entire jurisdiction in our own territory. But here foreigners have the advantage of us. If they will not be subject to our laws in our country, then our people in their countries should not be subject to their laws. But, really, all treaties should in this respect be framed like our treaty with China. In other words both our people and foreigners should obey the laws of the country in which they live, as indeed is a maxim of international law.

3.—Rights of levying duties. As the treaties have not been settled upon a proper basis, there is a great deficiency of our exports as compared with imports, and a consequent great decline in our domestic productions, while our money pours into other countries. So we must carefully consider both how best to ameliorate our present miserable condition, and how to maintain our proper position in the future.

THE DEATH OF SAIGO.

(From the *Hochi Shinbun* of the 25th Sept.)

Saigo-Takamori is dead. The rebellious spirit in the South-West is extinguished, and the imperial army will shortly return victorious to the East. The Japanese Government has overcome the difficulties which it encountered in the Western corner of Japan. We, newspaper writers, congratulate ourselves that we shall no longer have to leave room in our paper for war news from the South-West.

What manner of man was Saigo? He was not wealthy, neither had he any large number of personal servants. Nevertheless he obstinately maintained a war in three provinces against the whole imperial forces, for more than half a year, and finally cut his way through the imperial lines in Hiuga and died at his birth-place. Saigo may well have been content to die at the end of his distinguished career. Notwithstanding the abolition of the feudal system and the establishment of the present constitution of government, he lived in accordance with the old system; and for many years has been accumulating weapons of warfare. At length he rose against the government in February of this year. When he first penetrated to Kumamoto, great battles were fought at Uyeno and Tawarazaka, and our countrymen had no idea of what was to come in the future. But when the news that Saigo had laid siege to Kumamoto castle was first received among us, those of our learned men who are accustomed to warfare, expressed their opinion that Saigo could do nothing. It was the forecast of his death at Kagoshima, that he laid siege to the castle of Kumamoto. If he had advanced promptly as far as Fukuoka on the one side and Bungo on the other, instead of halting his large army before Kumamoto, arguing from the power and ability with which he checked the imperialists in Higo, we should probably have received no telegram of the actual suppression of the insurrection. But, very unfortunately for him, Saigo found that his

plans were all mislaid, and he has merely devastated the four provinces of Satsuma, Hiuga, Bungo, and Higo. He has met his end after having caused nothing but heavy loss to his country in life and money. He was badly beaten at Kumamoto, Hitoyoshi, Miyakonojo and Nobeoka. Then, having no chance of restoring his fallen fortunes, he cut his way to Kagoshima through the imperial lines. After that, in a desperate condition, he established his camp on Shiroyama, Kagoshima, where the brave commander fought his last battle and died on the 24th Sept., crowning (*lit. defiling*) his bad conduct. Who will not now express his patriotic joy? All those who were discontented with the present government, have appeared in the South-West, as at Saga, Yamaguchi, Kumamoto, Nakatsu and Ohi. Now all hope of the re-establishment of the feudal system, has been destroyed with the expiration of Saigo's last breath. His must be the last battle fought for feudality in Japan. Should any civil war arise in this country in the future, it must be caused by some other subject.

MISCELLANEOUS.

A TELEGRAM has been received from Nagasaki, announcing that on the 29th ultimo Oyama, ex-Governor of Kagoshima, was sentenced to death by decapitation.

We have been notified that cholera has declared itself among the troops of the Kaitakushi militia in Hakodate. Out of five cases, which occurred between the 25th and 27th ultimo, two proved fatal.

THE Prime Minister has issued a notification stating that the Mikado had named the infant Imperial Prince Yukihito, and assigned him the palace of Takenogoten as a residence. The name by which he will be popularly known is Takeno Miya.

THE authorities have wisely decided upon sending all vessels bringing up troops from the South to Yokoska for a period of quarantine.

HER Majesty's Consul has received notice that shooting licenses will be issued by the Kencho for the coming season, which will date from the 15th instant, and terminate on the 15th April, 1878. The conditions of the licenses will be the same as those of last season.

GENERAL JULIUS STAHEL, who filled the post of U. S. Consul at this port in 1868, has accepted the Consulship of Kobe, and proceeds by to-day's steamer to relieve Mr. Nathan J. Newwitter. General Stahel was so well and favourably known by this community, that we can congratulate our Kobe friends upon the appointment.

THE *Hiogo Shipping List* of the 2nd instant has the following paragraph on the subject of the railway accident on the Kobe-Kioto Railway:—

A collision occurred last night on the railway, about 9 o'clock, close to the Ashiyagawa tunnel. The train from Kobe is reported to have been heavily loaded, and the train coming this way very light, the latter being the most injured. Two Japanese are, we hear, dead; two foreign employes of the railway in the International hospital, and one Japanese in the native hospital. This is all we can hear before going to press, but will give further particulars to-morrow.

It is not expected that traffic will be resumed on the line till noon.

THE Swimming event postponed from the Athletic Meeting on the 29th inst., took place on the 5th inst. afternoon, at half past four, in front of the Basin in Ts'kidji. Although several entries had been made for this race only two competitors, Messrs. J. Stewart and F. W. Strange, put in an appearance. While the contest resulted in an easy victory for Strange it yet reflected great credit on Stewart who shewed pluck throughout. Indeed, a few more such men, with the moral courage to go in and try even against long odds, would put a little of that spirit into athletics in Tokio which until quite lately seems to have been sadly wanting.

A PRIVATE letter from Osaka has been handed to us. We extract the following paragraphs:—

Those wounded soldiers (we have got about 4,000 of them) here in the hospital, are a perfect nuisance, as they insult almost every foreigner that passes by. I am afraid the Government will have some trouble with them in time, as these sons of farmers, when their time of service expires will never be satisfied to settle down to their former mode of life again, having got so accustomed to this lazy way of earning a livelihood.

The new additional class-rooms in our college are now open: they are very conveniently arranged, both for instructors and students.

Cholera amongst the Japanese here is increasing; many are dying.

A FOREIGN gentleman, now in the South, writes from Kagoshima, under the date of the 27th ultimo, as follows:—

I was on shore yesterday (26th September) seeing the ruins of Kagoshima, and went up the hill where Saigo and his followers had come to meet their deaths. They had caves cut in the rocks to hide themselves from the storming party of the imperialists. I was inside some of them, and in Saigo's cave I picked up a small cup and saucer, from which I presume the arch-rebel must have drank many a time. He was shot in three places; and they cut his head off at the entrance to the cave. His blood was still red and wet when I saw it. Not far off from where I stood were some other caves, where Saigo's officers had been quartered. I saw the body of one of them lying outside on its back, with the belly cut open and the bowels protruding, he having committed *harakiri*. The general appearance of everything was horrible, though I saw no dead bodies except the one mentioned. I saw the graves of Saigo, Kirino, Beppu, Murata and several more of the rebel Generals, who were buried side by side. Some of the ships are going away to-night with troops for Kobe. * * * One vessel is here in quarantine on account of coming from Nagasaki, as cholera is there; but she has no sickness on board.

WITH reference to a paragraph which appeared in our issue of the 21st ultimo, and which commenced thus:—"The doctors of the German and Italian men-of-war in harbor have expressed their opinion that the prevailing epidemic is not real Asiatic cholera," we are in a position to state to-day that Dr. Gutshow, of the *Elisabeth*, has not expressed the opinion ascribed to him. All that he has said on the subject is that he has not seen any case of Asiatic cholera: that the few cases of sickness which were shown him by the Japanese officials, at the request of the Consul, had not the symptoms of that complaint. Doctor Gutshow, while he is certain as to what he

has not seen, does not gainsay the earnestly and publicly expressed conviction of ten medical men of the highest standing, based in every instance upon what they have seen.

SINCE the outbreak of the insurrection in February last the Finance Department is said to have expended 34,153,454 yen. This is the sum given by the *Nichi Nichi Shinbun*, which may be considered the official paper.

FROM enquiries we have made we feel justified in stating that the principal seat of the prevailing epidemic is in that thickly populated district lying to the westward of the Ironworks at Ishikawa, and known as Karafuto. This place was formerly a swamp covered with the rankest vegetation, subsequently filled in when the Nigishi canal was in process of being cut. It is easy to understand that water from wells sunk on the spot might easily prove one of the chief causes of the malady. The water of a morass is invariably saturated with the poisonous elements of putrid vegetation, and in this case the danger is enhanced by the drainage of flat land percolating through decomposed gravel, and mixing with the deadly fluid of a swamp contaminated by all descriptions of animal and vegetable impurities. If our statement of the chief locality of the disease is substantially correct, the attention of the Government and of the Sanitary Committee has only to be drawn to the fact to ensure a close examination into the system of obtaining water, and the quality of the water so obtained and used, without filtering or other attempts at purification, by the poor and ignorant people who are now the chief sufferers.

Should the water, or the nature of the ground, at Karafuto, prove, in the judgment of those competent to decide, predisposing causes to the disease now rife among us, remedial measures, such as the immediate closing of all the wells, and, if requisite, the removal of the population to temporary accommodation in less deadly districts, should be at once undertaken.

THE U. S. S. *Tennessee* is now in harbour. Admiral Patterson, U.S.N., in command of the U. S. Squadron in these waters, and several officers, arrived by the *City of Peking*.

WE notice that Fuji has put on his night-cap,—2 days earlier than last year.

AT about 7 p.m. on the 6th instant, there was a succession of smart shocks of earthquake, lasting altogether about one minute.

THE *Kokonoye-maru* (late *King Richard*) Captain Hussey, returned from Yokoska at noon on the 6th. The steamer has been docked and thoroughly overhauled: the screw shaft has been renewed, and the vessel generally fitted for the coast trade. Her saloon accommodation, for thirty first class passengers, is excellent; and altogether the *King Richard* is so superior a vessel that the Mitsu Bishi Company may well be congratulated upon their acquisition. The *Kokonoye-maru* left on the 7th, for Kobe, with mails, freight, and passengers.

ON the afternoon of the 6th instant, the so advertised "Autumn Regatta" came off. A finer day or better weather could not have been picked out. A nice fresh breeze was blowing, but being off the land, there was no sea with it. For the first race, which started just before 2 o'clock five boats entered

with time allowance of 2 minutes per ton. Course round the light-ship and shipping back to a boat moored off the French Hatoba:—

Sloop.	<i>Torment</i> ,	5½ tons,	sailed by Toms
Schnr.	<i>Saigo</i> ,	5½ " "	" Thompson
Sloop	<i>Emma</i> ,	4½ " "	" Bohm
do.	<i>Snowflake</i> ,	2½ " "	" Donald
do.	<i>Maude</i> ,	9 " "	" Perry

The boats got away very evenly, the *Emma* with just a slight lead. The gear of the *Snowflake* got foul after going one hundred yards, which delayed her somewhat, but very quickly she was again on her way. The *Maude* shortly afterwards hoisted her gaff-topsail, but could not stand it, and was obliged to haul it down again.

The *Torment* won, after a very exciting race towards the finish, coming in some 15 seconds after the *Saigo*, which had to give her 6 minutes time allowance. The *Emma* passed the stake-boat third.

The next race was for open boats, with time allowance of 1 minute per foot. Course round the light-ship, and the best way home again. Four entered:—

Mr. Pagdon's	<i>Straight Jacket</i> ,	...17 feet.
"	Charleson's	<i>Maggie</i> ,15 feet.
"	Claussen's	<i>Maria</i> ,19 feet.
"	Hohnholz's	<i>Snug</i> ,20 feet.

These went away to a bad start, *Straight Jacket* last, some seconds behind. There seemed almost too much wind for such small craft; and evidently one of the skippers thought so too, for he was seen to put on a life-belt.

After getting round the light-ship, a boat was seen to capsize: another lost her mast; and the two others went somewhere on a cruise by themselves round the shipping.

SHOOTING licences will be issued by the Kencho, on the personal application of persons requiring them, in a day or two. Ten yen is the amount of the licence fee; and the conditions under which the permit is granted are the same as those of last year.

ON Sunday afternoon the Rev. Jonathan Goble baptized two Japanese—each about 60 years of age—in Homoku bay, according to the form in use among Baptist Christians. The ceremony was witnessed by a number of Japanese who were attracted by the novelty of the proceedings.

WE observe that in one or two places the farmers have commenced to cut their rice, though it will be some time yet before the harvest becomes general. The crops look very well, and there is every prospect of an abundant yield in this part of the country.

THE *Meiji-maru*, which left here on the 28th ult., with the former Treaty Point light-ship in tow, arrived safely at her destination, Hakodate, on the 5th inst.

MORE than one man of business in the settlement has occasion to regret the change of the day of the departure of the homeward mail. When the steamers leave on Wednesday morning people have two clear working days immediately before the close of the mail, and this time is, in this season of comparative activity in the silk market, none too long for their arrangements and correspondence. Consequently, the change of leaving from Wednesday to Tuesday morning deprives many of their Sunday's rest and recreation. It is true that the inconvenience only presses heavily during two months of the year, or in the period of greatest activity; but that is quite long enough, the more that there is no

actual necessity for it. This is a matter which, as was suggested to us the other day, might easily be adjusted by a Municipal Council if we had one. Yokohama being the terminus of the line, one day is almost as convenient as another to the steamship companies for the despatch of their vessels; and a recommendation, addressed to the respective managements by a Municipal Council embodying the wish of the mercantile community, would in all probability result in the mails being made up on any day suggested. Wednesday morning is a very proper time for the despatch of home mails. Tuesday morning is a very inconvenient one. Yokohama labors under many disadvantages as compared with other ports, its remoteness from Europe being one. It might be allowed the full enjoyment of such small benefits as it could derive from that very inconvenience.

We learn that the Government has presented Mrs. England, widow of the late Engineer in Chief, with the handsome sum of 2,000 yen, in recognition of her husband's merit and good services.

DR. E. MASSAIS succumbed on the 9th inst., at half-past four a.m., to the complaint by which he was attacked. His remains were buried at eleven, a number of friends of the deceased—we might say all the male French settlers, and many gentlemen of other nationalities—following the hearse to the graveyard. Dr. Massais will be much missed. He left this world at the early age of 37.

THE *Hiogo News* to hand overland, in advance of the weekly steamer, contains an account of the railway accident on the Kobe-Kioto line. The collision occurred on Monday night, the 1st inst., just before 9 o'clock, at a point between Sumiyoshi Station and the Ashiyagawa tunnel, by a collision between the 8.30 train from Kobe and a return train of empty carriages which had been employed in carrying troops to Kioto. * * * All that is absolutely certainly known is that a train of about twenty-five empty carriages left Nishinomiya just before 9 o'clock and ran against the 8.30 train from Kobe. The stokers of both trains were killed, as was one other Japanese. The two engine drivers were brought back to Kobe and lodged in the International Hospital, and one Japanese was in the Native Hospital. Both engines are considerably damaged, several carriages were smashed, and it was only owing to the accident of the 8.30 train to Osaka being on that occasion almost without passengers that the catastrophe was not more painful.

In the German Consular Court, on the 9th inst., T. W. F. Holm, formerly in the employ of Messrs. Copeland and Wiegand, and at present under a charge, lodged by that firm, of fraud and embezzlement, was accused by Mr. E. Wiegand with discharging fire-arms in the neighbourhood of dwelling houses. The shooting complained of was said to be frequent, and occurred in a compound adjoining the Spring Valley Brewery. The arm used was a rook-rifle, and Mr. Wiegand said that several of the bullets from it whistled past his ears. He considered the shooting endangered him. Mr. C. H. Schmidt, the consular constable, was called as a witness by Mr. Wiegand. The rifle and some of the bullets discharged from it were produced in court. The accused was sentenced to seven days' imprisonment.

NIPPON NOTES.

A TELEGRAM, despatched by Lieut.-General Higashi Fushimi-no-Miya from Kagoshima at 2 A.M. the 25th ultimo, states:—Saigo Takamori was killed by our soldiers. Kirino, Beppu, Henmi and others committed suicide. Sakata surrendered. Our detachment and the fourth division fought the last battle. About 50 rebels were killed at Taniyama.—Another despatch, dated the same day, says that about 100 insurgents had laid down their arms. Yasumura, who was in pursuit of Saigo, took the pistol from his hand, but was wounded. Saigo's head has been discovered where it had been buried.

ONE of the telegrams received by the War Department on the 25th ultimo, according to the *Choya Shinbun*, states that during the battle on Shiroyama on the 24th one of the newly enlisted soldiers, named Yoshimura, discovered Saigo Takamori when just about to shoot himself. The brave soldier wrenched the pistol from his hand and endeavored to bind him. He was wounded by Saigo, while some of the latter's men came up, and cut off and carried away the head of their commander.

A TELEGRAM from Hosojima, Hiuga, says that, on the 25th ult., the imperial headquarters were removed from Hosojima to Kagoshima.

In a letter from Hiuga we read the following:—Saigo Kikujiro, the eldest son of Saigo, and two other men, who laid down their arms before the imperialists on the capture of Nobeoka, have confessed their guilt and been sent to Nagasaki.

H. E. OKUMA, Finance Minister, has returned from Idzu to Tokio, and resumed the duties of his office, which were filled by Mr. Matsukata during his absence.

THE Editor of the *Mondo Shinbun* has been condemned in the Tokio Saibansho to three months' imprisonment, for having violated the press regulations.

SOYEJIMA, ex-Minister of Foreign Affairs, who has been long in China, returned to Japan in the *Tokio Maru*.

EPIDEMIC CHOLERA is said to have spread to the ken adjacent to Kanagawa. A few cases are daily reported from Shizuoka and Yamaguchi.

SAKABE, editor of the *Futsu Shinbun*, was, on the 21st ult., condemned to two months' imprisonment and a fine of 40 yen. On the same day, Ogura, of the *Hokuto Shinbun* in Sendai, was fined 10 yen, for having violated the press laws.

ACCORDING to an official report from the Governor of Kagoshima-ken to the Home Minister, the paper money issued by the insurgents amounts to the value of 141,420 yen.

OWING to the spread of epidemic cholera, all schools in Yokohama, public and private, have been temporarily closed by order of the Kencho.

ARIMA, Inspector of Police is expected to return to Tokio to-morrow at the head of 1,000 police, from Uwajima.

EPIDEMIC cholera is reported from the Ebaragi-ken (Shitachi).

It is said, according to the *Hochi Shinbun*, that the news that Saigo was killed caused great distress among all the officers and soldiers of the imperial forces in the South-West.

MATSUMOTO, Police Inspector of the second class, will shortly leave Tokio for the Kochi-ken at the head of a detachment of 50 police.

THE following are returns of cholera cases among workmen in the coal-mines of Takashima and, coolies engaged for transport in Nagasaki:—

	cases.	deaths.
17th September.	9	8
18th "	17	5
19th "	15	2
20th "	2	2
21st "	7	—
Total.	50	17

THE following official returns of the number of visitors to the National Exhibition during the week ending 27th ultimo have been published:—

21st Sept.	2,821
22nd "	9,940
23rd "	2,310
24th "	4,128
25th "	2,046
26th "	1,860
27th "	2,560
Total.	25,665

THE following returns of the visitors to the National Exhibition during September last are given in the *Nichi Nichi Shinbun*:—

Sundays	10,604
Saturdays	55,396
Other days	58,645
Total.	124,645

THE official returns of the number of visitors to the National Exhibition during the week ended the 4th instant are as follows:—

Sept. 28th	3,360
" 29th	13,129
" 30th	1,674
Oct. 1st	3,610
" 2nd	1,910
" 3rd	2,675
" 4th	2,946
Total.	30,304

THE following returns of silk-worms' egg cards, brought to Yokohama during the week ended the 27th ultimo, are given in the Yokohama (Japanese) Market report:—

Musashi	13,405
Kodzuke	1,522
Shimotsuke	580
Shinano	10,105
Uzen	78,406
Ugo	2,050
Iwaki	10,986
Shitachi	204
Suruga	299
Rikuzen	10,001
Rikuchiu	161
Iwaki	16,700
Shimosa	682
Total.	145,101

On the 29th ult. was celebrated the ceremony of naming, by the Mikado, the infant imperial prince. Officials of and between the first and seventh rank, and all nobles in Tokio, were ordered to attend at the imperial palace. All government offices were closed.

TANAKA, Vice-Minister of the Department of Public Education, will probably visit Paris in order to be present at the opening of the International Exhibition of 1878.

H. E. OKI, Minister of Justice, is said to be about to leave shortly for Kiushiu.

On the 27th ultimo the Imperial bodyguards and the Tokio garrison troops in Kagoshima left for Kobe.

The greater number of the imperial troops in the South-West will shortly return triumphant to the East. Three battalions of infantry and 2,500 police will remain in Kagoshima.

The *Nichi Nichi Shinbun* says that the *ex-Karei* of the *ex-Daimio* Yoshida, and Uwajima, have been discovered and arrested in Shikoku for having provoked excitement among the shizoku in Iyo, in favour of the Kagoshima insurgents. They are now being examined before the Matsuyama Saibansho.

PRINCE ARISUGAWA-NO-MIYA, Commander-in-Chief, has addressed the following order to the Governor of Kagoshima-ken:—

"Those who were leagued with the insurgent troops and resisted the imperial army, having been misled from the right way, are to be pardoned for their crime on condition of their surrendering to the imperialists, and expressing regret for their past disloyal conduct. But many of the insurgents returned to their respective homes from various quarters, and hid themselves. On their discovery and arrest by the imperialists they surrendered against their desire, finding that they were obliged to do so. As this is very wrong for them, those who do not surrender before the 30th September will not be pardoned, and they will surely be condemned on their arrest. It is hereby ordered that this be notified through your jurisdiction."

ALL the imperial troops in the South are now ready to return, but owing to the cholera epidemic they will not land at Yokohama, but at Shinagawa.

WASHIO, *kuwazoku*, who was arrested and confined on suspicion on the commencement of the Kagoshima insurrection, was released from prison on the 1st inst., his examination resulting in a failure to prove anything against him.

The *Naniwa Shinbun* states that, on the 11th September, the members of the Rishshi and Seiken-sha Societies in the Kochi Ken held a meeting, where a certain question was excitedly discussed. But, after the meeting was over, they returned quietly to their homes by the advice of the three wise men of Kochi, viz., Kido, Itagaki, and Hara. On the following day, the local authorities went to the district of Hatagori, where excitement prevailed.

PRINCE Arisugawa-no-Miya arrived in Kagoshima on the 25th ultimo. He has inspected and identified the heads of the commanders of the insurgents, and visited the fields of battles fought between the imperialists and insurgents. The remains of the deceased commanders were buried in an honorable manner by order of the Prince. On the 27th he left Kagoshima, and arrived in and left Nagasaki on the following day. He was expected to stop at Kobe and Osaka for about a week.

ANDO, *Chiukeishi* of police, is to remain in Kagoshima at the head of 1,500 policemen. Watanuki, *Shokeishi*, is expected to leave Kagoshima for the East at the head of the newly enlisted police forces.

The *Osaka Nippo* states that a notification has been issued by the Kochi-ken (Tosa) forbidding the possession of firearms by any man of any class, shizoku or heimin, in that jurisdiction.

THE visitors to the Educational Museum (Kisiku-Hakubutsukan) at Uyeno, during the same month, numbered 49,055.

THE *Choya Shinbun* publishes the following telegrams, despatched from the Mitsu Bishi office in Kobe to the principal office in Tokio, relative to epidemic cholera:—According to a despatch sent at 7.20 on the 1st instant, it was reported to the government that all passengers, who might die from cholera during the passage, would be thrown into the sea. But this has been prohibited. It is as dangerous to stop in Kobe at this time as it is to be on a field of battle. Notwithstanding orders to the contrary the troops commenced to land. If the troops from the South-West should return to Tokio by the Tokaido, epidemic cholera is likely to spread everywhere. Since yesterday (the 30th Sept.) about 40 soldiers have died from cholera, and 70 other cases were reported among soldiers.—Another telegram states that of the attacks among soldiers on board the *Wakanoura Maru*, 6 were fatal: about 50 patients had been under treatment. Of these 50, 16 died in the boats which were taking them to the coast. 40 cases declared themselves among the soldiers who landed, and 11 of these were fatal. Some cases had also occurred among the sailors and engineers. An average of 5 or 6 cases occur in each ship. Out of 200 soldiers ill of cholera in the Hiogo hospital, 80 died.

THE *Choya Shinbun* says:—A telegram from Kobe, sent at 1 p.m. on the 4th instant, announces that about 5,000 (!) soldiers have got cholera, and requests that all the doctors in the service of the Monbusho, Rikugunsho, Kunaisho, and other offices may be sent down. This morning Saruwatari, Ito, and many other physicians of the Kunaisho left Tokio for Kobe by the Tokaido.

KAGOSHIMA is guarded by four battalions, commanded by General Tani, the defender of Kumamoto, and Colonels Nagasaka and Sakamoto.

THE departure from Kobe of the soldiers who recently arrived there from Kagoshima has been postponed in consequence of the cholera epidemic.

THE Police Department has issued a notice, dated the 2nd instant, ordering that all communication with the village of Haueada, in the 4th sub-district of the 7th district in the jurisdiction of the Tokio-fu, where cholera prevails, be interrupted till further notice.

A DESPATCH from Hiogo on the 2nd states that Prince Arisugawa-no-Miya arrived at Kyoto by the 4 p.m. train the same day.

A NATIVE resident in Hakodate is said to have discovered a coal mine in the district of Eyama, Oshima.

On the 5th instant three Generals, Nodzu, Yamada, and Oyama, landed in Yokohama, and arrived at the Shinbashi station by the 3.45 p.m. train from Yokohama. They were received by their Excellencies Sanjo and Iwakura, and other Ministers, Chief Secretaries, and others. They rested at the station for a short time, and then went to the Imperial palace at Akasaka in carriages, which were escorted by cavalry and police. A banquet was given them by H. M. the Mikado.

On the return of Prince Arisugawa-no-Miya to the East, the celebration of his triumph will take place at Echujima, Tokio. H. M. the Mikado will be present.

ADMIRAL KAWAMURA arrived in Yokohama in the *Kasuga-kwan*.

BARRACKS for the accommodation of a detachment of the Kumamoto garrison are to be built in Nobeoka, Hiuga.

FROM the 4th instant prisoners in jail are allowed to receive newspapers.

A BUILDING for the business accommodation of the officials of the Finance Department is to be built at an estimated cost of 18,000 yen. The Gaimusho is to be rebuilt on the site of the splendid building burned down last January. The cost is calculated at about 40,000 yen.

WHETHER Maida-keijiro of Sadowara (Hiuga) a famous rebel commander, has betaken himself, is not known.

Our of the sum of 180,000 yen set apart for the Exhibition in Paris in 1878, 11,000 yen will shortly be sent to that city by the Okurasho.

THE new iron railway bridge of Kawasaki will be completed during next month.

ITAGAKI TAISUKE (ex-Sangi and president of the Rishshi-sha society in Kochi) is said to have sold his house in Tokio. His family has left Tokio for Kochi.

The Finance Department has supplied 2,500,000 yen to the War Department for the purchase of fire-arms and other articles.

A SILK factory has now been completed at Niimachi in Joshu. The official opening will take place shortly in the presence of the Ministers of the Home, Finance, and Public Works Departments, the Post Master General, and others.

MARINES are now stationed in Yokoska, with a detachment at Uraga.

KATO, Under Secretary of the Finance Department, will leave shortly for France and Germany to inquire into foreign methods of conducting banking business.

SODA, an ex-local official of the Kochi Ken, has been arrested and escorted by police to Tokio, where he will be brought before the Daishin-In. He is suspected of some offence.

DURING the time the National Exhibition remains open, the cemetery where are the tombs of the Tokugawa Shogun, close to the Exhibition buildings, will be accessible to the public.

THE civil cases heard in the Tokio Saibansho during last September, were 205.

THIS year 2,929,721 silk worms eggs' cards have been prepared in Japan.

At the commencement of November next, a ceremony is expected to take place at Shokonsha, Kudan, Tokio, in honour of those killed during the Kagoshima insurrection. Horse races will be held.

THE following (so-called) official returns of expenses for the suppression of the Saga rebellion, the Formosa expedition, and those incurred in connection with the difficulty with Corea, are given by the *Nichi Nichi Shinbun*:—

Saga rebellion	916,284.70.4
Formosa expedition	7,718,214.71.6
Corean affair	495,623.25.3
	<hr/>
	9,130,122.67.3

In the suppression of the Kagoshima insurrection, 38,168,573 yen were expended by the Okurasho up to the 30th of last September.

On the 9th instant the disbanding of the police forces who lately returned from the Kochi-ken, took place in the presence of His Majesty the Mikado in the Imperial garden of Fukiage.

A LETTER from Kagoshima, dated the 25th September, is published in the *Nichi-nichi Shinbun* of the 3rd instant. It runs as follows:—

During the night of the 23rd September a general and final attack was prepared for by the imperial army, who were beleaguering the insurgents on Shiroyama in Kagoshima. At about 4 o'clock a.m. on the following day the imperialists commenced to attack and storm the insurgent forts. When the last battle between the imperial and rebel troops was brought to a final conclusion, it was about 7 a.m. The rebel commanders having seen that they had no chance to restore their fortune, appeared from their holes below the ground and approached their principal fort at Iwasaki. At that time the victorious imperialists had reached Taniguchi, close to the last fort defended by the insurgents. A tremendous discharge upon the miserable array of insurgents, who approached the gate of the fort, caused great disorder; and many of them were killed or wounded. Among others, Saigo, who was in a kago, was shot through the loin. "Whether we look to right or left," exclaimed the dying commander, "we are routed, we are routed." Beppu Shinsuke ran to his side, and cut off his head. He then quickly re-entered the fort with Saigo's head in one hand, and his bloody sword in the other. He stood among the rebels and shouted out:—"Now that our Sensei (meaning Saigo) is dead, all is come to an end. Let those who desire to follow the Sensei assemble here." Then he committed harakiri. The other distinguished commanders, Kirino, Murata, and others, who had decided to fight till the last breath left their bodies, determined to kill as many imperialists as they could and to fall fighting. So Ikegami hoisted the white flag in the fort, in order to lead the imperial troops thither. But their plan was suspected, and the soldiers continued their fire upon the fort, on the capture of which we found the remains of the deceased commanders, together with hundreds of killed and wounded. All the survivors were captured or surrendered. Only twenty or thirty bags of rice and a small quantity of ammunition was found. The head of Saigo, which was buried by Beppu at the front of the gate of Tabatsu's house, was disinterred. When the commander's head was brought before General Yamagata, War Inspector, he looked upon it for a minute very sadly and then spoke to the following effect:—"Saigo was really a man of high talent and ability; but having once departed from the right way, he has now died in a miserable manner. I am much grieved for him. Alas!" Lieut.-General Oyama (brother of the late Governor of Kagoshima) was so much affected by the sight of the corpses of the rebel commanders that he had to retire. He was a relation of Saigo's, and an intimate friend of Kirino and others.

A letter from Kagoshima, addressed to the *Hochi Shinbun*, giving an account of the reception of two rebel messengers at the imperial camp, runs as follows:—

It was about 1.45 p.m. on the 21st September. Two rebels, each with a white flag in his hand, were seen before the Kencho building, at the foot of Shiroyama. They coolly entered the camp of Lieut.-General Takashima, commander of the first imperial division, where they expressed their desire to be allowed to pass to head-quarters. They were brought, after a delay of a few minutes, before Lieut.-General Takashima. They courteously made a statement to the following effect:—"Saigo Takamori wished to ask a question of the Government. On his

way to the East, he was met by the Kumamoto garrison troops, and was obliged to take up arms against them. We want to know the reason of the expedition against our head-man (Saigo) by the Government. What has he done wrong? If he had acted in an offensive way, he ought to have been summoned and examined before a judicial court. He and his men could not make up their mind how to act, without knowing the reason why the Government sent an army against them. Now, we wish Takashima to be kind enough to send us back to Shiroyama with an answer to our question." The audacious messengers were brought before Kawa-mura, war-inspector, at the imperial head-quarters at Tanoura. After the war-inspector had asked them the reason of their treacherous conduct he continued, sympathetically: "Go back again to your camp and tell Saigo this. His son Kikunosuke was captured in the battle of Enotake. As I promise him to care for his wife and children on his death, he need leave no trouble for this world. He may make up his mind manfully. As no attack will be made by us upon the insurgents till 5 o'clock p.m. this day (23rd) he will have time to determine whether to fight till the last or to surrender." One of the two messengers was sent back to the rebel camp, where the principal partisans held a council. At this meeting, Saigo is said to have spoken thus:—"He did not desire to leave shame upon his name forever, by laying down his arms before the enemy." All his men expressed a like opinion. Their determination was reported to Kawamura at a few minutes past 5 o'clock p.m. the 23rd. On the following day the last battle took place on Shiroyama.

THE *Mai Nichi Shinbun* says:—Coins to the value of 77,724,017.99 yen were minted at the Osaka mint between January and September last. Of these 51,696,891 yen were gold, 22,946,080.35 yen silver, and 3,081,046.64 yen copper. Paper-money to the value of 106,571,624.60 yen is now current. Of this 12,644,676 yen are in bank-notes. During last August and September, the Paper-money Section issued paper-money to the value of 15,756,764 yen. It is said that notes to the amount of 25,000,000 yen will soon be issued, to replace torn notes which will be called in.

DURING the war, one of the Editors of the *Hochi Shinbun* entered into conversation with a certain Lieutenant-General, who remarked:—"None of the newspapers mention any of the victories gained by the insurgents, while they report minutely every success of the imperialists. I, myself, and several other commanders have been repeatedly beaten by the rebels. Newspapers are unworthy of credence."

BETWEEN the 1st September and the 5th instant, 592,550 silkworms' egg cards were brought to Yokohama, and on the 6th and 7th 189,486 cards arrived.

SINCE Yoritomo Shogun's reign the Shimadzu nobles have been the lords of Satsuma. Many ancient curiosities and books belonging to the house were preserved in the Castle of Kagoshima. When the insurgents invaded that place Shimadzu left his residence to the mercy of the invaders. During the bombardment of Kagoshima his house and godowns were burnt; and with them perished his collection of antiques.

TOKUGAWA, ex-Daimio of Owari, has bought an extensive estate in the province Kitami, Yezo, for which he paid 200,000 yen, and which he wishes to be cultivated by his poor ex-retainers. Each of them will be paid 300

yen a year, and they will serve on the farms for three years. At the end of that term the ex-lord will give 900 yen to each of them.

THE house of Saigo at Takemura was set on fire by the imperial soldiers.

CORRESPONDENCE.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

THE RIGHTS OF THE PEOPLE.

To the Editor of the *Japan Gazette*.

SIR:—Will you kindly allow me to say a word in your columns about what I take to be the one great misconception, in regard to the object of the great insurrection, now happily ended in the South-Western corner of this empire, which, in common with many other foreigners, you have fallen into ever since the outbreak of the late trouble?

Your view I find plainly expressed in your editorial article of the 25th September, as follows:—

We have nothing but congratulations to offer to the Government upon their victory after a protracted struggle; but we do hope that the brave men whom they have conquered will not have fought and bled in vain: that the "cause" which those men put forward as the object and excuse of their revolt will yet triumph; and that the rulers of Japan will spontaneously grant that popular freedom after which the country's best and brightest spirits yearn. We are convinced that until it is granted the country will know no lasting peace and prosperity; and its rulers no permanent tranquillity, and none but a delusive freedom from apprehension.

This, I think, is a compend of the views generally held by a large number of foreign residents in Japan, who have all along, mistakenly as I think, looked upon the present government as the opponent of people's rights and representative government; while they supposed the insurgents were patriots contending for political liberty. But having been, from the first, conversant with many of the most intelligent natives, both officials and civilians, I have found that the whole drift of native public opinion was entirely at variance with that which is expressed in the above quotation from your editorial article, and that the insurgents were regarded, by their own countrymen, as selfish plotters who were making a strong effort to drag the country back to feudalism, in which state they, the *samurai*, could enjoy the special rights and privileges won for them by the might of the sword, ignoring all equal rights of the *heimin* or common people.

The native newspapers are now also saying of the Kochi Ken agitators that, while the word *Minken*, people's rights, is often in their mouths, yet the real thought which is in their hearts is *Shiken*, soldiers' rights, and all that they really desire is to get back to the old feudal estate, which requires no hard labour at their hands, but allows them to swagger about, living upon the fat of the land, and compelling peasant and merchant, rich and poor, to do them reverence.

This, I believe, has been the chief, if not the only, aim and object of all the late uprisings in the South-West; and, therefore, while I can heartily join with you in your congratulations to the Government upon its victory, gained after a long and painful struggle, still I cannot agree with you in the belief that these insurgents have been at all striving for the common good of their country, or that the Government has anything to fear from a similar source in

the future. I can but believe that the right has prevailed, and that the present victory is altogether in favour of impartial law and order, and for the benefit of the entire population, as opposed to the most arbitrary military rule of the old feudal system, whose principle was "*Might makes Right*," and where the sword in the hands of the hereditary soldier was the law for all the people of the land.

I think the true tone of public feeling in regard to the result of this civil war is expressed in a few words which I extract from an article which you have translated into your paper of the 26th September from the *Hochi Shinbun* of the 25th, which speaks of the death of Saigo as follows:—

Notwithstanding the abolition of the feudal system and the establishment of the present constitution of government, he lived in accordance with the old system; and for many years has been accumulating weapons of warfare. At length he rose against the government in February of this year... Who will not now express his patriotic joy? All those who were discontented with the present government, have appeared in the South-West, as at Saga, Yamaguchi, Kumamoto, Nakatsu and Ohi. Now, all hope of the re-establishment of the feudal system has been destroyed with the expiration of Saigo's last breath. His must be the last battle fought for feudality in Japan. Should any civil war arise in this country in the future, it must be caused by some other subject.

Knowing, Sir, your liberality, which admits the rights even of those who hold views opposed to your own, to be heard by the public, I have ventured to ask from you, space in your columns for this, *mine opinion*, and

I remain,

Your humble servant,

PEOPLE'S RIGHTS.

Yokohama, Sept. 29th, 1877.

THE CHOLERA.

To the Editor of the *Japan Gazette*.

DEAR SIR:—Will you kindly allow me space to say a few words upon which I believe to be some of the sources and means of the spread of cholera infection. It has seemed to me quite impossible that the sudden and nearly simultaneous outbreak of this epidemic in so many and widely separated districts of this country, could result from infection imported from abroad; and therefore I have been led to consider whether there are not sufficient grounds to suppose that it has had its origin in some special cause or causes existing in this country, which might be traced out and made to account for the calamity which has fallen upon us.

It is well known that the plague in Europe has often broken out in time of war from the dead upon battle-fields and the wounded in camps and hospitals.

Pariah dogs feed upon the putrid carcasses of the slain, and upon the offensive dressings of the wounds of disabled soldiers in hospital; and the plague breaks out among the dogs and cats whose dead carcasses are quickly devoured by their fellows, or by carrion crows. The crows also becoming infected, fly perhaps far away to die and be in turn eaten by cats or dogs or by their fellows; and this will account for their dead carcasses being so rarely seen lying about.

Also, wounded soldiers are transported from hospital to hospital, often far distant from the seat of war, and everywhere the dogs and cats and crows are watching for any scrap that may be carelessly thrown out which they may gobble up to fill a hungry maw.

And I know of no country where dogs, homeless cats, and hungry crows, are so per-

sistent in their search for offal, and so numerous as they are in this country. They even visit the cesspools and other places which may be imagined, but which I will not describe.

I have seen sick crows, and when my chickens have fallen dead by dozens with "chicken cholera," I have been led to believe that the crows may be also infected with the same disease as well as the scavenger dogs and cats.

We are in the habit of calling these animals and birds "scavengers;" and no doubt in the main their effect upon the sanitary condition of the country may be good, albeit they may themselves, in great numbers, fall a prey to their own greed for garbage and filth. And even though they may be infected with cholera and die of that plague in great numbers, the chances may be but few of the infection returning from them to the human inhabitants of the country.

But still, when we see what means they afford of scattering the infection over the country, and when we remember that our doctors tell us that the infection flows so largely and freely through water both above and under the soil, we must admit that there is real danger that the dire infection might pass from them to us. And I think this will help us in some degree to imagine how the plague is so suddenly scattered from Nagasaki to Hakodate, and nearly simultaneously reported from so many distant points.

Even the droppings of an infected crow upon the roof of a house might flow down into the rain-water; or a dead cat or dog might remain undevoured in some place long enough to contaminate a well or other source of water supply, or even their excrements might produce the same effect. All this goes to show us that it is utterly unsafe to use even rain-water without boiling, so long as the plague remains among us. This also shows how important it is that we should take every precaution to keep everything which may contain infection out of the way of dogs, cats and crows, and even of rats and mice; for, even a mouse might nibble at something that contained the dangerous infection, and soon after might run into your cupboard and nibble at your bread and cheese or cake, and so with all the innocence in the world be the means of conveying the infection to him who should next partake of that food. Cholera does not come without a producing cause, and a calm forethought and wise precautions may, under the Divine blessing, do much to ward off the impending danger.

Respectfully Yours,

THOUGHTFUL.

SHOOTING LICENSES.

To the Editor of the *Japan Gazette*.

SIR,—I notice in your issue of 4th instant, that the long looked for licenses will be granted on the 16th of this month. Why, Mr. Editor, could not these licenses have been issued before—say, from the 1st at least?

It seems very hard on the sporting community not to allow them to indulge in their favorite pastime when they are so willing to pay for it. Surely some reason for this delay should be given to quiet grumblers, like

Yours,

A LAW ABIDING BRITON.

P. S.—In the words "sporting community" I do not of course comprise the slaughterers of unfledged pheasants.

Yokohama, Oct. 8th, 1877.

To the Editor of the *Japan Gazette*.

SIR,—I quite agree with "A Law Abiding Briton" that some reason should be given for the delay in getting out the shooting licenses this season.

At present it falls very heavy on the native professional hunter, who depends on his gun for support, not being able to get his license till the 16th, while snaring is allowed to go on without apparently a check. To the foreigner and native gentleman, who shoot for pleasure, it is simply annoying not to be able to enjoy the pastime from the beginning of the season, namely 1st October.

I am, Sir, yours truly,

ANOTHER LAW ABIDING BRITON.

Yokohama, October 9th, 1877.

THE BOARD OF HEALTH.

As SOME curiosity is expressed as to the work actually done by the Board of Health, we give a short sketch of their labours.

When the existence of cholera in the native town was, in the opinion of nearly all the medical men in the place, evident beyond dispute, five of these gentlemen who had convinced themselves by personally investigating several cases, at once proceeded to make an inspection of the slums which exist in parts of the foreign settlement, and discovered that their condition was both filthy and dangerous. They reported their inspection to the Consular Board, and were constituted a Board of Health, with power to add to their number either medical or lay men whom they might wish, and who might be pleased to serve with them. The Consuls authorized the Board of Health to enter and inspect all compounds and dwellings. Any foreigner refusing to allow such inspection, or to follow the reasonable instructions of the Board, should be reported to his Consul, the Consuls having, on their part, decided on the exercise of such authority as they might have in the matter, and, if necessary, on demanding special powers from their Ministers.

The original Board of Health promptly elected, as members of their body, the leading medical men of the place, the Surgeons of the Royal, Naval, and United States Naval Hospitals; and has since from time to time been enlarged by the election of non professional gentlemen. It now consists of ten medical and fourteen lay members. At first the members of the Board met daily; but, as their labours were organized and defined, daily assemblies were no longer necessary, and meetings now take place every other day.

At the request of the Kencho authorities, conveyed through the Consular Board, the advice of the Board of Health, as to the best measures to be adopted by the natives, was given and has been promptly and thoroughly acted upon.

Nearly all, if not all, the compounds of the foreign settlement have been carefully inspected by members of the Board, who have also given advice and instruction as widely as possible. This work at first fell only to the share of the medical men, each of whom had his particular district; but, as it was found to be very heavy, the settlement has been re-arranged and the respective districts apportioned to the care of one lay and one medical supervisor. Disinfectants in large quantity have been purchased by the Board, to be used in the case of poverty or emergency. Many complaints have been received investigated, and dealt with to the best of the judgment of the supervisors.

Chinese town has been promptly and effectually dealt with. By arrangement with the Japanese authorities it was placed under the joint sanitary control of the principal medical officer of the Kencho and a representative of the Board of Health. Hence the gratifying result has been attained that that portion of the settlement which was a short time since as disgustingly and filthily dangerous as it could be, has been thoroughly purified; and is now in as perfect a sanitary condition as is possible to place it in without entirely destroying and reconstructing it. The greater portion of the necessarily large expense of disinfecting and cleansing Chinese town, a work which demanded a great deal of energy and perseverance, has been borne by the Kencho.

Arrangements are now under consideration to establish, at a proper distance from the settlement, a hospital for infectious cases, an institution which has long been much needed. The standing Committee of the General Hospital are acting in concert with the Board towards the attainment of the desired object.

In all cases of cholera occurring in foreign residences, or within foreign occupied compounds, the Board undertake to superintend the destruction of infected articles and the purification of the premises.

The prompt, courteous, and intelligent action of the Japanese authorities is highly commended by the Board, and shows an example which might well be followed by members of the foreign community, who have also a duty to perform. Under the existing form of native government and the anomalous conditions of foreign residence, the Board of Health can have no legal power save such as is conferred by the action of individual Consuls. Nor have they any funds whatever to draw upon save such as may be furnished by private benevolence. In view of the excellent work which has been already done by the Board and the devotion of the gentlemen serving on it, who have labored earnestly at a task, hard, unpleasant, and not altogether free from danger, we have no hesitation in saying that what funds may be required by the Board will be subscribed for without stint and without grudging.

LAW REPORTS.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Act. Law Sec.*

Wednesday, October 3rd, 1877.

AH CHOY vs. J. GRIGOR AND JOHN PITMAN.

The plaintiff claimed the sum of \$1,050; \$500 of which she alleged had been lent by her to Mr. W. Rangan, deceased, and the remainder the value of property belonging to her and which had been sold by defendants as executors in the estate of William Rangan.

Mr. Ness appeared for plaintiff, and Mr. Dickens for the defendant, Mr. John Grigor.

Mr. Dickens said that he had a few remarks to make before the case commenced. He had been given to understand that the plaintiff was not a British subject, and therefore he asked that proper security be given for costs. Further, it appeared that one of the defendants, Mr. John Pitman, had not been served with a summons, and therefore no legal proceedings could be taken against him in his absence. And so, also, no verdict could be given against John Grigor, as that would be virtually against John Pitman.

Mr. Ness replied and said that with regard to the remarks of his learned friend about the plaintiff not being a British subject, no

proof had been produced that she was not, and as a matter of fact he, Mr. Ness, had been given to understand that the plaintiff was a British subject. He contended also that Mr. Dickens' second application should not be granted.

Mr. Dickens continued to press his applications.

His Honour asked Mr. Ness if he admitted that Mr. Pitman had not been served with notice.

Mr. Ness replied that so far there was no evidence to show that he had not been served.

His Honour then directed the Usher to call Mr. Pitman, and as there was no response to the call,

Consular Constable G. Hodges was sworn and testified that he had not served notice on Mr. Pitman.

Mr. Ness:—Why?

Witness:—Because Mr. Pitman was not in Japan at the time the service was served on Mr. Grigor.

His Honour asked counsel for plaintiff if, as Mr. Pitman had not been served with notice, he could go on with the case.

Mr. Ness produced authority to show that His Honour could go on with the case or strike out the name of Mr. Pitman from the case: Or that service be effected upon Mr. Dickens as attorney for Mr. Pitman.

His Honour said he could not go on with the case as it stood.

Mr. Ness then applied that Mr. Pitman's name be struck out and that the case be proceeded with against Mr. Grigor alone.

Mr. Dickens did not see how this could possibly be done.

His Honour said that, unless it was shown some injustice was likely to be occasioned thereby, he thought the name could be struck out.

Mr. Ness read the 16th Section of the 3rd Order in Council as an authority supporting his application.

Mr. Dickens argued that the rules of this Court overruled the Order in Council, which were merely supplementary of the rules of this Court, and cited several points in law and rules of the Court in support of his argument. He contended that all those who had a direct interest in a case were justly entitled to be served with notice.

His Honour said that Mr. Dickens did not show how Mr. Grigor could be damaged by the name of Mr. Pitman being struck out, and made an order that it be struck out and the case be proceeded with against John Grigor.

The question of the plaintiff being a British subject was again discussed and Mr. Dickens called

F. E. White, who was sworn and said: I am principal constable in this Court and know the plaintiff. I do not know what nationality she belongs to. I don't know whether she is a China-woman, though she has the appearance of being one. She is not to my knowledge registered as a British subject. I have referred to the book and her name does not appear.

To Mr. Ness:—I do not know that plaintiff is not a British subject, she may be.

Ah Choy, cautioned, said:—My name is Ah Choy. I was not born in Singapore, but in Hongkong. I am 31 years of age. I don't know whether I am registered in this Consulate as a British subject or not. My husband was. I have no papers proving that I am a British subject.

To the Court:—I was not married to Mr. Rangan. I have not been registered as a British or any other subject. I have not

been registered in the Saibansho. I came direct from Hongkong to Yokohama.

Mr. Dickens said that all the evidence showed that the plaintiff was not a British subject, though it did not absolutely prove that she was not. The onus rested with her to prove that she was a British subject, and no evidence had been produced, though an assertion had been made to that effect. He asked that the plaintiff deposit a proper sum as security for costs.

Mr. Ness was about to address the Court, when

His Honour said he would not trouble him, and stated that the evidence was not sufficient to show that plaintiff was not a British subject.

Mr. Dickens:—Does it prove that she is a British subject?

His Honour:—I cannot go into that now.

The case was then proceeded with, and Mr. Ness explained to the Court the grounds upon which the plaintiff founded her claim and then called

Ah Choy, who said:—I am a British subject and live at No. 159 Yokohama, and have no business, and am not a Christian. I will speak the truth. In the year 1873 I had \$500. I got it from Mr. Butcher, who left it me as a legacy. Mr. Rangan said he would take care of the money and any time I wanted it I could have it, and he would give me a promissory note which he did. That is the note. I saw him sign his name to it. Mr. Meldrum, who was Mr. Rangan's clerk, wrote the body of it. This money has not been paid back to me either by Mr. Grigor or Mr. Rangan or Mr. Pitman, and the sum is still due to me.

Mr. Ness here called for the inventory. (Put in by Mr. Grigor.) Mr. Grigor sold a carriage after Mr. Rangan's death as well as the ponies and harness which all belonged to me. The carriage was a four-wheeled one. There was a two-wheeled carriage which belonged to Mr. Rangan. The way in which I came in possession of the carriage and ponies was by Mr. Rangan making me a present of them after his return from England. He brought the carriage and harness from England. The ponies were bought in Yokohama. They were all given me together. From the date when Mr. Rangan gave me the carriage and ponies until Mr. Grigor took them away, they were kept and used by myself. I did not consent to Mr. Grigor taking away the ponies and carriage. That is Mr. Rangan's handwriting.

Mr. Dickens objected to the letter produced, as there was no evidence that Mr. Rangan had written or read the body of the letter.

His Honour:—Can you produce an authority in support of your objection?

Mr. Dickens:—Well, common-sense should dictate it.

His Honour:—I am sorry to say that common-sense—

Mr. Dickens:—True, that common-sense does not always coincide with law. I should like to produce evidence, though, that Mr. Rangan could neither read nor write, and that his signature was merely a mark.

His Honour took a note of Mr. Dickens' objection, but refused to grant permission to adduce evidence on the subject of Mr. Rangan being able or not to read.

Mr. Ness then read the letter which plaintiff had received from Mr. Rangan while he was in London.

Witness continued:—Mr. Rangan was in the habit of getting his letters written by some one else, some of which he signed himself, while to others the writer signed his

name for him. Sometimes he wrote in one way and sometimes in another. Mr. Grigor did not tell me how much he got for the ponies and carriage. (Mr. Dickens admitted the proceeds, subject to correction, as mentioned in the inventory.) Mr. Grigor said they were sold very cheap,—"all same thrown 'way."

Cross-examined by Mr. Dickens:—Mr. Rangan and I were alone in the room when that note was signed. I cannot read. Neither could Mr. Rangan read. The clerk, Mr. Meldrum who was present read it to him. Mr. Rangan signed that letter in 1873, in the Spring, I think. That letter says that Mr. Rangan had borrowed \$500 from me. The money was to have been returned at the end of a year, but I never asked Mr. Rangan for the money. Mr. Rangan died in April; and between that time until the 25th of May I saw Mr. Grigor sometimes. Mr. Grigor told me that by the 25th of May all debts due by Mr. Rangan would be collected, and all debts due by Mr. Rangan would be paid, and that all claims should be made before that date. I never asked Mr. Grigor to pay the \$500, and never showed him that promissory note.

Recess till 2 P.M.

On the Court resuming, the cross-examination of the plaintiff was continued:

Witness: Mr. Rangan signed that note at No. 122. The \$500 mentioned in the promissory note was to have been kept for me by Mr. Rangan. This was in 1873, in the Spring, I think. The money was given him in different kinds of notes. The Clerk was present at the time. I got the \$500 same year. It was not given me all at once. Mr. Thomas Wallace gave me the money in three instalments. The first instalment was paid in January of that year, and the last very shortly after. He gave me a little over \$400 in the three times. The other \$100 came by my selling some furniture left me by Mr. Butcher. Mr. Fletcher sold the furniture, which brought a little over \$150. The furniture was sold before the money was got from Mr. Wallace. Mr. Rangan left me in his will \$10,000. I kept the \$500 in my trunk until it was handed over to Mr. Rangan. I never asked Mr. Rangan to return the money. My father died when I was a child, and my mother sold ladies' dresses. I lived with Mr. Butcher, but was not married to him. He died in June 1872. I commenced to live with Mr. Rangan in January, 1873. From June 1872 till January 1873, I received a little money from Mr. Wallace. I did not get any other money from Mr. Butcher's estate than the \$400 and the furniture. From January to the end of August, 1876, I was in Hongkong, and during that time Mr. Rangan gave me \$30 per month. The money was paid through Mr. Bernhard. I did not receive more than \$180. Mr. Rangan promised to marry me, and paid for what I wanted. I could have got money whenever I wanted, but I never asked for any. I never told any person that Mr. Rangan had \$500 belonging to me. Mr. Rangan paid my passage money to Hongkong. He went with me. I came back to Yokohama with Mr. Rangan. I asked Mr. Rangan for this \$500. He did not pay because he had not money enough. Mr. Rangan had plenty of money, but people owed him money; and Mr. Grigor owed him \$10,000.

To Mr. Ness:—No payment was ever made to me of part of the \$500. The \$30 per month given me while I was in Hongkong was to defray my expenses. Mr. Abbott was Mr. Rangan's agent while he was away in

England, and it was Mr. Abbott who sent me the money.

F. E. White, sworn, stated:—I believe the writing of the body of that note to be the handwriting of Mr. Meldrum.

To Mr. Dickens:—Mr. Meldrum was deported for vagrancy. I knew Mr. Rangan very well, and should say that he was both careful and careless. He was particular about his books and had various clerks. I don't remember Mr. Rangan having said he owed \$500 to the plaintiff.

This concluded the evidence for the plaintiff. Mr. Dickens then opened out the line of his defence to the Court. Mr. Rangan was not in a position to render a loan of \$500 necessary. The evidence produced did not establish that claim, but he should produce evidence which would still further weaken it. In the case of a deceased person, something more than a mere assertion, uncorroborated, was necessary to establish a claim against the estate, otherwise fraud would be greatly facilitated.

John Grigor, sworn, said:—I am a British subject and reside at No. 216. I am one of the executors of the late Mr. Rangan. I knew him about 10 years ago, and was pretty intimate with him. In 1873 I was acquainted with his financial position, and he was very well to do. Since his death I have gone through his books and from my knowledge of their contents, I think it exceedingly unlikely that he would borrow \$500 from the plaintiff. As a business man he was very shrewd, and I should say he was a very careful man in regard to money matters. His books were found correct, so far as winding his estate up was concerned. There is no mention in the books of \$500 being owed to the plaintiff, and he never said anything to me. Had there been such a sum owing I should most likely have heard it from both the parties. When I agreed to become Rangan's executor he said that he would give me no trouble as he owed no one any money. He said something about having left something in his will to his housekeeper. The books do not show any transfer of the horses and carriage. He told me that the carriage was too expensive and he wished to sell it, and asked me to find a purchaser. This was some months before his death. I put the usual advertisements in the papers about claims being sent in. During the time limited I never received any claim from the plaintiff, either for the carriage and ponies or for the \$500, though I saw her on several occasions. She sent for me on more than one occasion about her legacy, and I told her that I could not tell her anything about the legacy until everything was settled, and then I would let her know about it. The first I heard of the carriage and \$500 claims was on the 5th of June. The first I heard of these claims was through Mr. Ness. I sold the carriage and horses within a month after Mr. Rangan's death. The plaintiff was present when I handed them to Mr. Cope to sell, and she made no objection, though she said she would like to buy back one of the ponies and basket carriage. The plaintiff claimed the house and furniture. I gave her a considerable quantity of jewellery.

To Mr. Ness:—Plaintiff did not make any formal application for the house and furniture. Store accounts and a few others to the amount of \$100 were not entered in the books. I have not paid the legacy of \$10,000 and am not in a position to say when it will be paid.

E. Abbott, sworn, said:—I was acquainted with Mr. William Rangan, and, during his absence in 1876, I looked after his affairs.

I was asked by Mr. Rangan to pay the plaintiff \$30 per month while he was absent. The total amount paid on account of the plaintiff was \$400, part of which had been remitted to Mr. Bernhard after the return of Mr. Rangan.

To Mr. Ness:—Of my own knowledge, I cannot say that this sum was handed to the plaintiff. The money was not I should say sent on account of a promissory note; in fact, I am certain it was not.

F. A. Cope sworn, said:—I remember a four-wheeled carriage belonging to Mr. Rangan. He showed me the carriage soon after it arrived, and said that he brought it out for his own use, but if he could sell it for anything like what it cost, he would be glad. I recommended him to Mr. Walsh on one occasion. I sold the carriage and other things by auction after his death. No opposition was made by the plaintiff to the sale. The carriage fetched \$185, and the harness about \$72, and the ponies about \$26 and \$19 respectively. The plaintiff wanted me to leave the basket-carriage for her. It was ultimately bought in at the sale by Mr. Plummer for her.

A. Plummer, sworn, said:—Mr. Rangan used to talk to me on business matters sometimes, but he never mentioned having borrowed the sum of \$500. He never said anything about money matters with respect to his housekeeper. I never heard of a promissory note for \$500, nor of his having given the plaintiff a carriage and horses. The plaintiff asked Mr. Stiles and myself to act for her, as she wanted to get her legacy as quickly as possible and go to China. She did not say anything about the \$500 or the carriage.

George Stiles, sworn, said:—I am clerk at the Grand Hotel. I used to do work, off and on, for Mr. Rangan. During the time I acted for him nothing was ever said about a loan of \$500. He was rather strict with regard to accounts. I had the principal charge of his books for the last three years and a half. No entry was made about the transfer of a carriage to the plaintiff.

This concluded the evidence for the defendant.

Mr. Dickens then addressed the Court and argued that the legacy left by Mr. Rangan wiped away the liability of the estate to pay the \$500 whether or not there was an indebtedness; and if the will had been produced the wording of it would most likely have shown that the legacy did away with all other claims. He dwelt strongly upon no books or documents being brought to prove that the \$500 had been lent, or that Ah Choy ever had that sum. The statement in the petition was that the \$500 had been handed over to Mr. Rangan for him to keep for the plaintiff, which was inconsistent with the wording of the promissory note. The learned gentlemen contended that the promissory note had been given by Rangan to induce the plaintiff to take charge of his house. The whole of his evidence showed plainly that it was very improbable that \$500 should have been borrowed or taken over by Rangan, and not entered in his books. With regard to the carriage, the learned gentleman contended that there was no evidence to show that the carriage had ever been transferred to the plaintiff. He asked that a verdict be given for defendant with costs.

Mr. Ness then addressed the Court, and dwelt upon the fact of the existence of the promissory note and of the admitted signature of Mr. Rangan; and also of the plaintiff's statement that she handed over the \$500 herself to Mr. Rangan. With regard to the carriage, the learned gentleman's con-

tention was that it had been bought and given to the plaintiff, and that no other construction could be put upon Mr. Rangan's letter. And he saw nothing inconsistent in the plaintiff not objecting to the ponies and carriage being sold, as the plaintiff doubtless thought the small carriage would be sufficient for her use, and that it would be better for the other carriage to be sold, and for her to get the proceeds.

His Honor reserved judgment.

Thursday, October 4th, 1877.

FELIX BEATO vs. W. S. THOMSON, (Captain of the *Atholl*).

This is a claim for \$367.87, damages sustained to goods during their transit from London to Yokohama in the British steamer *Atholl*.

Mr. Dickins for plaintiff: Mr. Ness, by instruction from Messrs. Jardine, Matheson & Co., for defendant.

Mr. Dickins in opening his case explained to the Court that certain goods were shipped in the *Atholl* under the usual bill of lading to be delivered in good order as received. The plaintiff found that some of the goods were damaged, probably by chloride of lime. It was known that chemicals were on board and probably stowed close to the goods. A demand had been made to the agents for the sum mentioned in the petition as the difference in the value of the goods when delivered and the value they would have been had they been in good order and condition. The answer did not admit that the goods were damaged; or if they were damaged it was under some of the clauses in the bill of lading which exempted them from responsibility. The answer was not in accordance with the rules of the Court, and so it devolved upon the defendant to show under what clause in the bill of lading the damage was claimed.

Anthony Geerts, who objected to being sworn, stated: I was five years a professor of chemistry in a military college. I remember Mr. Beato giving me some carpets to examine which were damaged by chemicals. There were large spots on the carpets. Those are the carpets. The results of my analysis was the finding of a large amount of chlorine and a certain amount of lime. I cut out a piece of the carpet not spotted, and tested it, but did not find so large a quantity of chlorine. It is difficult for me to account for the presence of chlorine; the most probable theory is that the chemical has leaked on to the carpet. I found some other things which were due to the colour of the carpet. The quantity of chlorine which I found would not have existed in the dye of the carpet. As the larger spots are on the outside of the carpet I suppose the chemical must have leaked through. The damage could have been caused by droppings from a cask of chloride of lime.

To Mr. Ness:—I ascertained the presence of chlorine in the ordinary way. I have no time to explain that way. I cannot do it in a few moments. I did not exactly boil the carpet. I extracted it first by water and secondly by acids. I did not ascertain the percentage of chlorine, though I could have done so. The percentage of chlorine in the other part of the carpet has not been determined upon. I cannot tell you the difference of the percentage between the damaged and other parts of the carpet. There are small traces of chlorine and of lime throughout the carpet. I do not know

whether any experiments had been made on the carpet before I made mine. When the carpet was handed to me, I was asked to ascertain what chemicals caused the spots, and whether they were caused by chloride of lime. I did not apply chlorine and lime to the undamaged parts to see if the effects were the same as on the damaged parts. The damage could have been caused by any other chlorine in a more or less concentrated form. Chloride of lime can become liquid if in a damp atmosphere. To have caused the damage the chlorine must have been above the carpet. I cannot tell the date when the damage was caused. The chlorine found in the carpet could have come from chloride of sodium, though it is not very probable. It is possible the damage could have been caused by salt. There is chloride of sodium in salt water and in sea air. It is impossible that the damage should have been done by sea air, as all the carpet would then have been damaged. The percentage of chloride of sodium in sea water is about 3 per cent. If the carpet had been stored a hundred feet from the chloride of lime the damage could not have been done. I cannot account for the black colour, as I was not asked to analyse it.

To Mr. Dickins:—If the damage had been caused by chloride of sodium, I should have found some lime, though not in the same quantity. If the damage had been done by sea water, I don't think there would have been so much chlorine or lime as I found. I don't believe the quantity of chlorine would have been as large if it had been caused by sea water. I cannot state positively that the damage was done by chloride of lime, but am certain it was a chlorine. If the damage had been caused by sea water I should not have found an excess of acid. Any chlorides have acids if not exactly prepared. Chlorides of iron and magnesium have acids if properly prepared. It would be possible if the chlorine could not escape for it to become liquid and then fall down. Even if the escape of chlorine was very great I don't think it would have caused this damage. Many medicines contain chlorines. I found iron in the carpet. Chloride of calcium might have caused the damage, or chloride of ammonium, though in this case I should have found traces of ammonium. The damage must have been caused by a chloride containing lime.

To his Honor:—I don't think that salt water falling on the bales would have caused the damage.

John Hartley, sworn, said:—I was a consignee of goods by the *Atholl*. There were a hundred casks of Chloride of lime, packed in hardwood casks. When I took delivery ninety-seven were in good order and condition and three had the heads out of them.

To Mr. Ness:—I saw the damaged casks on the *hatoba*, and the breakage might have been done on the transit from the ship. The damage had probably not been done long, and most likely the damage to the heads of the casks was done in coming from the ship. The chloride was not damp or in a liquid state.

D. Scott was called and before taking the oath requested His Honour to inform him what was to be his fee.

His Honour said that the rule was that all witnesses living in Yokohama should give evidence without a fee.

The witness was then sworn and said:—I am a master mariner and surveyor, and have not made any survey on these goods. I surveyed the cargo with regard to stowage and dunnage. The stowage was correct.

Felix Beato, sworn said:—I am the owner of the goods mentioned in this petition, and all arrived in good order excepting one bale. The contents of the bale were spotted. I found out the goods were spotted the day after they were delivered. I made a claim to the Captain of the ship. The goods in good condition would be sold at 90 cents per yard. There are 403 yards in a bale. There are eight rolls in a bale each about 50 yards. I cannot say what the goods would fetch now. If sold at auction they might fetch 30, 40, or 50 cents. If I were to buy such goods I should give perhaps 40 cents per yard.

To Mr. Ness:—All the rolls are damaged more or less. I have inspected the eight rolls personally. They cost me 81 cents laid down here. The goods are worth 40 cents, so the damage would be about \$160. Externally the goods were in good condition. I did not see the bale before it was opened. A clean receipt was given for the goods. My book-keeper made the claim. Before taking the goods I heard there was chloride of lime on board, and I warned my clerk to watch for any stains on the goods. The Chinaman told me the goods were damaged. The goods belong to me, and I paid for them before I took delivery.

J. H. Brooke, sworn, said:—A short time ago I was in Mr. Beato's office and he called my attention to some rolls of carpet which were spotted. He asked me what I thought the spots were caused by. I received goods by the *Atholl*, which were strongly impregnated with chlorine gas. The paper was not damaged, but the iron hoops were corroded. The damage I should say was caused by chlorine gas, as water has a great affinity to it.

To Mr. Ness:—My paper was uninjured, though it was strongly impregnated with chlorine gas. I think that, as my paper was impregnated with gas, the damage to the carpet was caused by the same substance.

Recess till 2 P.M.

On the Court resuming its sitting,

Mr. Dickins explained that there was a slight mistake in the petition. If the goods were kept by the plaintiff, he asked that the amount claimed be reduced to one half. Though if the other side were willing to take over the goods, he was willing to let the claim remain as it stood.

The claim was reduced to \$203.50.

Ernest de Bavier, (not sworn) deposed:—I am a merchant in Yokohama and acquainted with the mode of doing business. The custom is that no goods shall be delivered from a ship until a clean bill-of-lading is signed by the consignee. Without such endorsement on the bill-of-lading the goods would not be delivered. After the bill-of-lading has been endorsed the agent of the ship countersigns it. If there are marks on the goods the clerk makes a statement to that effect. If the damage is not visible it would depend on the good will of the agent to admit a claim or not.

To Mr. Ness:—It is usual when the goods are externally damaged that it be mentioned in the bill of lading. The presumption is that if no such statement is made that the goods are in good order.

Henry Engleheart, sworn, said:—I am clerk to Mr. Beato. I remember taking delivery of four packages of merchandise from the *Atholl*. I looked at the bales at the *hatoba*, and they seemed to be in good condition. I then ordered them to be taken to

the godown. The day was a fine one, and the godown is quite dry. All kinds of merchandise were in the godown, but no chloride of lime. The goods were not examined the same day but the following, when they were to be delivered. When the goods were opened the contents were found in the same condition as the sample shown here. The others were in good condition. When I found out the bale was damaged, I wrote Messrs. Jardine & Matheson, (copy of letter produced written on the 14th of August) no answer was received, so I wrote another letter the following day. Mr. Cocking and Capt. Thompson came to the office about 5 o'clock in the afternoon. They saw the goods and the Captain recognised having brought them in his ship. I asked him to take over the goods on account of the ship. He refused, on the ground that we had taken delivery of the goods. He admitted that the damage was caused by chloride of lime. The custom is to endorse a bill of lading before taking delivery of cargo. The usual notice about taking delivery of cargo was put in the papers (Advertisement read and put in). I was astonished to find the goods damaged inside the bale when the outside of the bale was apparently undamaged. Afterwards the wrapper proved to be stained. The value of the goods in good condition would be 90 cents per yard. I would not take them to-day for 40 cents.

To Mr. Ness:—Mr. Beato told me to inspect the goods carefully as there was chloride of lime on board. I looked for the effects of chloride of lime before taking delivery, but could not see any. I don't know how long the goods were lying at the hatoba. I believe they were landed in the morning and were taken away in the afternoon. Messrs. Jardine, and Matheson advised us the goods were at the hatoba, and they were taken delivery of within six hours afterwards. I have no personal knowledge as to when the goods were landed at the hatoba. It was the following morning that the Chinaman called my attention to the bale. The outside wrapping had been removed. I looked at the wrapping directly after, before I left the godown. I saw some spots the same as pointed out now. The wrappings are still in good condition. I did not think it necessary to refer to the spots when I wrote to Messrs. Jardine, and Matheson and told them that the wrappings were in good condition. I was not present when the bales were opened. I have opened the other bales, but did not find the wrappings damaged. Those wrappings belong to these carpets. I don't recollect the words used by the Captain when he acknowledged the goods were damaged by chloride of lime.

W. G. Bain, sworn, said:—I remember being asked to examine some carpets. Mr. Beato asked me if they were damaged by sea-water or some other agency. I examined them and found they were not damaged by sea-water. I cannot say what they were damaged with. Part of my business is to determine whether goods are damaged by sea-water or not.

To Mr. Ness: The test I made was first by appearance and then by tasting.

As the evidence of Mr. Cobden was required, and as that gentleman could not appear this afternoon, the case was adjourned until Tuesday next at 10.30 a.m.

Friday, Oct. 5th, 1877.

A. MINGARD vs. J. H. WIGNALL.

The plaintiff, by his attorney, Mr. H. Degron, claimed the sum of \$66, \$45 of

which he alleged was balance due on a promissory note; and \$21 damages.

The defendant was called but did not appear.

Constable Hodges was then sworn, and said that he had served a summons on the defendant on the 4th of October. He went on board the *Massilia*, a vessel on which the defendant is engineer. Not finding him there, witness returned to shore and on the way met Wignall in a sampan returning to the ship. Witness hailed him and then served him with the summons, telling him that the case was set down for hearing to-day.

A. Mingard sworn, said he was a Swiss subject residing in Yokohama. The defendant was indebted to him in the sum of \$45 the balance of a promissory-note. Wignall originally owed him \$100, for which he gave two notes of \$50 each. The first note was liquidated in two payments. The \$21 damages he claimed for travelling expenses between Yokohama and Yedo in connection with a claim against the defendant which was to have been heard in the Yedo Court, but did not come off.

His Honour said that he could not allow any damages, but would make an order for the payment of the \$45; and interest from May, 1876 till date at the rate of 10 per cent per annum.

Tuesday, October 9th, 1877.

FELIX BEATO vs. W. J. THOMSON.

This case, adjourned from the 4th instant, was resumed this morning.

The plaintiff claimed the sum of \$203.50, for damage done to certain goods on the passage from England to Yokohama in the British steamer *Atholl*, of which the defendant is master.

Mr. Dickins conducted the case on behalf of the plaintiff, and Mr. Ness appeared for the defendant, who was not present.

A. J. Wilkin, sworn, said:—I received some goods by the steamer *Atholl*. I did not see the goods until they were brought to the godown. I can only speak to part of the goods, the wrappers of which had rotted off. There were a few spots on the goods and they were a little faded: otherwise I did not see much wrong with them, though they were reeking with chlorine. I do not recollect having any conversation with the Captain. I instituted a survey of the goods.

Mr. Dickins:—What was the result of that survey?

Mr. Ness:—I object to the witness answering this question.

Mr. Wilkin:—I was ———

His Honour:—Don't answer, Mr. Wilkin. Objection sustained.

Witness:—I was not present at the survey. Mr. Esdale a clerk of mine was present.

To Mr. Ness:—I should imagine the wrappers had been injured by gas. They had become quite rotten.

Martin Burchard, sworn, said:—I received some goods by the steamer *Atholl*. They were slightly stained. They were manufactured cotton goods. I suppose the damage was caused by chloride of lime. There was a strong smell of chlorine about the goods. A demand was made by my firm in consequence of the damage, and the demand was satisfied. The demand was made before we took delivery of the goods.

To Mr. Ness:—My goods were packed in cases, lined with tin. There were external appearances of damage. I should say the damage was caused more by gas than liquid. The goods were discoloured inside and had

become white. The goods were opened in the presence of one my men. I am not sure of the smell of chlorine.

To Mr. Dickins:—Within the last three or four weeks I have been familiar with the smell of chloride of lime, and the smell of the goods was like it.

A. Reddelien, sworn, said:—I am connected with Messrs Kniffler & Co. We had some goods by the *Atholl*. There were seven bales altogether. The wrappers of five of them had rotted off. The contents of the two bales of which the wrappers were not damaged were in the same condition as the others. We made a claim of about \$900, which was satisfied.

To Mr. Ness:—The outside of the bales was damaged. Externally they certainly were in bad condition. That was admitted by all before they were removed to my godown. They were removed with the Captain's sanction. The goods were quite dry as if they had been injured by gas.

To Mr. Dickins:—The wrappers of the two bales were torn but clean, and had a strong smell.

H. Orth, who declined to be sworn, said:—My firm received some blankets by the *Atholl*. Five bales were damaged by chloride of lime. A claim was made for the damage done, which was paid.

To Mr. Ness:—Externally they were in bad condition, and I presume they were damaged by chloride of lime. The wrappers were burnt and not wet. There were no black stains on them. The Captain's attention was called to the goods at the hatoba and he acknowledged the claim.

This concluded the plaintiff's claim:

Mr. Ness called

C. H. Cobden, who was sworn and said:—I had charge of the delivery of goods from the *Atholl*. I saw the goods for Mr. Beato at the hatoba. There were seven or eight packages. I saw the four packages mentioned in the bill of lading. They were in good order and condition when landed and delivered. I had an interview with Mr. Beato. It was after Mr. Beato sent in his letter. When Mr. Beato came to our office, he said he was going to put the Captain in court. He said he knew his man had given a clean receipt for the goods, notwithstanding he had particularly warned him not to take them if then were any signs of damage, as he knew there was chloride of lime in the ship. It was two days after the goods were landed that a complaint was lodged. In the afternoon, after receiving the letter from Mr. Beato, the Captain saw Mr. Englehardt. I heard the Captain tell Mr. Englehardt that he could not entertain the claim as he had a clean receipt for them. Mr. Englehardt then said that he knew that he was in the wrong, but he did not find out that the goods were damaged until after the bales were opened. I did not hear the Captain acknowledge that the goods were damaged by chloride of lime. I heard the whole of the interview between the Captain and Mr. Englehardt, and am certain the Captain did not acknowledge the damage having been done by chloride of lime. I saw all the damaged goods landed from the *Atholl*. None of them were damaged similarly to the damage done to the carpets.

To Mr. Dickins:—I saw the goods at the hatoba and know that they were not damaged. I did not examine the contents. I think the goods were landed. I sent word to Mr. Beato, about 11 o'clock in the morning, and they were taken away between two or three in the afternoon. The day but one after the

goods were taken away, notice was received from Mr. Beato of the damage to the carpets. I did not examine the goods, as I had made up my mind before going there that I would not examine them, having a clean receipt. Our ground for refusing the claim was on account of our having a clean receipt and the goods not having been opened in the presence of the Captain. I do not consider the Captain was in any way damaged by the goods having been opened in his absence and by a clean receipt having been given. I did not take any memoranda of what passed at the interview. I saw all damaged goods landed from the *Atholl*. I know that claims have been paid in Kobe for damage done by chloride of lime. I know nothing of the properties of chlorine gas. The men in discharging the cargo from the *Atholl* were frequently unable to continue their work in consequence of the presence of chlorine gas. There was a large quantity of chloride of lime on board, packed in casks. I have never stated that the damage to these goods was done by chloride of lime and that the defence was a mere formality.

To Mr. Ness:—I mean by saying that the Captain was not damaged by having a clear receipt that he laid no claim against Mr. Beato.

To His Honour:—The Captain said that if the damage had been done on board by chloride of lime, there would have been outward signs of it. Mr. Englehardt said that he had examined the bales and found them in good order and took them away at once.

Mr. Ness addressed the Court. He contended that the plaintiff had failed to prove that the goods were not damaged in London, and that they were unsound on being landed, or that there had been negligence on the part of the Captain of the *Atholl*. He referred His Honour to the bill of lading, which said that the goods were delivered on board *externally* in good order and that they were to be delivered in like *external* good condition, and this had been done. The learned gentleman asserted that according to Dr. Geerts' evidence it was quite possible that the goods were damaged before leaving London. For goods to be "shipped in good order," meant *externally* in good order. In the case of Whittall and another this principle of "external good order" was upheld. It was still to be proved that the goods were damaged when landed, as the evidence was that there were no external marks showing the damage. According to Dr. Geerts the damage might have been done very recently as well as a long time ago. Moreover, there had been no evidence to show that the damage had not been done in the godown of the plaintiff. His learned friend had not asked Mr. Englehardt the question; and there was a fact which supported the supposition that the goods were damaged in the godown, namely that before Mr. Englehardt saw the bales they had been opened; and on other bales being opened they were found to be in good condition. The learned gentleman commented on the unsatisfactory way in which Mr. Englehardt gave his evidence. He had stated that the Captain had made a declaration that the damage was done by chloride of lime, while Mr. Cobden stated most positively that the Captain did nothing of the kind. Then Mr. Englehardt had contradicted himself in saying that the wrappers were damaged, and then writing to the defendant that they were not damaged. He submitted that Mr. Englehardt's evidence should not be entertained. Then Dr. Geerts had stated positively that the damage had

been caused by leakage from something. The bill-of-lading stated that the ship was not liable for breakage, leakage, or damage. The plaintiff had endeavoured to prove negligence on the part of the defendant by the presence of chloride of lime in the ship, but in this he had failed, as was shown by the evidence of Dr. Geerts which proved that the damage was not done by chloride of lime. There was no evidence of the chloride of lime having become liquid and trickled down and done the damage. Then Dr. Geerts had said that, supposing the damage was done by chloride of lime he could not account for the blackness of the spots. The effect of Dr. Geerts' evidence was that the damage might have been done by chloride of lime in a liquid state. The doctor stated that the damage if done by gas would have been extended all over the goods. Defendant's counsel then went into the value of the goods, and argued that, according to the market price if in good condition, and the value of the goods now, the sum claimed was double of what it ought to be. He then went on to say that the bill of lading did not show that the goods were received on board internally in a sound state, and there was no evidence that the goods were unsound when they arrived, the goods were not identified and there was no evidence of negligence in the transfer, or that damage was done in transfer. He relied on the first exception in the bill of lading, which shifted the burden of proof on to the plaintiff to show that the goods were in good condition when shipped, and that they were damaged when landed from the ship.

Recess till 3 p. m.

On the Court resuming this afternoon.

Mr. Dickins was about to address the Court when

His Honour said he would not trouble him; and then gave the following

JUDGMENT.

In this case the plaintiff sues the defendant for the sum of \$203.50 for damage to certain goods shipped on board the vessel of which the defendant is master. The petition alleges a contract by the defendant as a common carrier. The defendant in his answer denies that he contracted as a common carrier, and alleges that the goods were received to be carried upon the terms of a bill-of-lading there set out. He denies that the goods suffered any damage between the time when they were received by him and the time when they were delivered to the plaintiff; and he says, further, that even if the goods were damaged between those times the damage was of a nature for which he is exempted from liability under the bill-of-lading. As the answer does not set out the particular clauses of the bill-of-lading on which the defendant relies, I have asked his Counsel to state them. Mr. Ness informs me that he relies upon the first exception, "weight, measure, quality, contents and value unknown," and upon the exception that "the ship is not liable for leakage." These are the only exceptions upon which he relies, and it is not necessary therefore for me to consider any of the other exceptions in the bill-of-lading. The evidence shows that the goods were shipped on the terms of the bill of lading, which are, so far as we have to consider, the usual terms of bills-of-lading. I find as a fact upon the evidence that the goods were shipped in good order and that they were damaged when delivered. We have the

evidence of Mr. Beato and of Mr. Englehardt that out of the four bales shipped under the bill-of-lading three were received in good order and only one was damaged, and there is the evidence that a great many other goods on board the ship were damaged by chlorine; and I am satisfied on the evidence that the damage to the goods now in question was also caused by chlorine in combination with water, whether fresh or salt does not appear to be necessary to determine. The damage in the one case as in the others, is accounted for by the large quantity of chloride of lime stowed on board. There is, on the other hand, the fact that the wrapper covering the goods was apparently in good order at the time the goods were taken delivery of. The wrapper was afterwards discovered to have spots upon it, but not black spots such as were on the carpet. The wrapper was produced in Court and as Counsel for the defence has contended that it was not identified, I may say that to my mind it was sufficiently identified. The spots are scarcely distinguishable—a little whitening of the wrapper. Now the chloride of lime is spoken of as bleaching powder, and it is not an unlikely thing that in passing through the wrapping, it made these scarcely distinguishable spots, and in combination with other ingredients in the carpet produced quite a different appearance in the carpet. The fact that the carpet was black did not suggest to Dr. Geerts that it was not chloride of lime that produced the damage. In his opinion the damage might have been caused by chloride of lime. Then as to the question as to whether it was caused by any negligence of the master Mr. Ness contends that the exception of leakage throws the onus of proof on the plaintiff. Now if the leakage in a bill-of-lading means damage to goods by leakage from other goods, this contention is right. But it does not appear to me that that is what leakage in a bill-of-lading means. It is not necessary to determine this however, as on the facts I find that there was negligence on the part of the master in storing such a quantity of chloride of lime with other goods liable to be damaged by its action either in the form of gas or in the form of liquid. This case differs from the case decided some time ago in this Court (*Beato vs. The Peninsular and Oriental Steam Navigation Company*) in this, that the clause in the bill of lading exempting the defendant from damage by negligence is not relied on. Whether it could or could not have been successfully relied on, seeing that the defendant in this case is the master and not the ship-owner, it is not necessary to determine. There can be no doubt that the defendant has shown a proper feeling in not attempting to rely on it.

I assess the damages at 45 cents a yard, and as there were 405 yards the amount of the damage is \$180.25. There must be a judgment for the plaintiff in that amount, together with the costs of suit, payable as usual within ten days.

IN THE FRENCH CONSULAR COURT.

Before E. PIERRET, Esq., Consul.

Messrs. REYNAUD AND GERARD, Assessors.

Tuesday, October 2nd, 1877.

J. CLATAUD, a French storekeeper in Tokio, was charged with assaulting Iwasaki and Kuké, two Japanese workmen, in Ts'kidji.

The complaint was made at the instance of the police authorities in Tokio; and the assault complained of arose out of a dispute about money, the complainants, who had worked for Mr. Clataud, having insisted upon payment for painters' work, which the accused said was not finished. The alleged assault then took place.

Translations of the depositions of the complainants, taken before Japanese police officials and sundry certificates were read. The depositions were to the effect that on the 21st August they requested the accused to pay them some money. He at once violently assaulted them, and called for his neighbour, young Mr. Thompson, who ran up and seized a large piece of timber with which he struck them both, inflicting wounds or contusions which involved their obtaining medical assistance, in addition to their being unable to attend to work for a long time afterwards.

A claim for 5 yen hospital expenses, and claims amounting in the aggregate to 4.16 yen for medicine, in all 9.16 yen was put in. A further sum of yen 16.95, for loss of time occasioned by the injuries sustained, was claimed.

Mr. J. Clataud, having been called upon for his defence, denied *in toto* the statement of the Japanese. He entered into the details of his contract with the Chinese builder who employed the Japanese. The work they had to do was painting. After some had been done they were idle for two days, and then came to ask him for some money, thirty rios. He declined to pay, saying that he had nothing to do with them. They then came at him to seize him, and he laid his hand upon the neck of one of them and tried to put him out of the house. The second man then attacked him seizing him by the leg; and a struggle ensued in which Clataud was worsted and forced against the banisters, and had to call for help. Mr. Thompson, Junior, came to his aid and assisted him in putting the men out. He, (Clataud) did not strike either of them at all. They, on the contrary, assaulted him and one of them tried to take his watch from him. After the struggle he gave the work to another painter.

The defence of Mr. Thompson Jun., who was prosecuted by the same Japanese in the British Vice-Consular Court at Tokio, for his part in the affair, was read. It was corroborative of Mr. Clataud's evidence. (Mr. Thompson was fined \$2 for excessive violence in the manner in which he assisted his neighbour.)

A witness having been examined for the plaintiffs on the question of the work done, Mr. Thompson, Chemist, of Ts'kidji was called by Mr. Clataud. He deposed that from his house on the other side of the road he had seen the accused in the hands of the complainants, and heard his call for help. He ran round to the house, but his son had got there before him, and Clataud was clear of his assailants.

The Court retired to deliberate, and after a short time returned, announcing that judgment would be given on Saturday the 6th instant, at 10 A.M.

Saturday, October 6th, 1877.

The Court, judging in first and last instance, this morning delivered the following

JUDGMENT.

After having heard the defence of the accused, the depositions of witnesses, and the plaintiff in his sayings and conclusions, with regard to the complaint above cited:

Seeing that it appears from the oral testimony of Kawai Masuzo, a witness called at the request of the plaintiff, that the work ordered from the latter by Clataud was only imperfectly finished, and that Clataud had to have it completed by another contractor, as is shown by the contract put in by Clataud:

Seeing that, on the refusal of Clataud to pay, Yaki Kumisaburo had the resource of applying to competent authority, instead of persisting with an obstinacy which obliged the defendant to eject him with violence from his house:

Considering that, if Clataud had not been assaulted by the plaintiff and his companion in a passage so narrow that he was not in a condition to free himself, he would not have been under the necessity of calling for help:

Seeing that, if it appears, on one side, from the depositions of the witness Kobayachi Memekichi, that Clataud used violence to turn out Yaki Kumisaburo and the other Japanese, it is attested, on the other hand, by the oral deposition of Mr. Thompson, as well as by the written testimony of his son, that the blows and wounds were given by the latter, who has been punished for this by another Court:

This Court declares that Yaki Kumisaburo is not entitled to the recovery of his claim, and disallows it:

Dismisses the action brought against Clataud;

And rules that the latter is not entitled to any damages. No costs.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Acting Consul-General.

Wednesday, October 10th, 1877.

D. MORRIS, a seaman belonging to the *Cremona*, was charged with being drunk and incapable.

It seems the prisoner came on shore yesterday afternoon with the intention of returning on board immediately. But having a dollar in his pocket he wended his way to a drinking saloon, and soon became oblivious even of his own existence. The police found him lying on the hatoba about 12 o'clock last night.

His Honour ordered the prisoner to be locked up until sent for by the Captain of the *Cremona*.

IN THE JUDICIAL COURT AT KANAGAWA.

Before Mr. ASAINA KANSUI, Vice-President.

Thursday, 11th October, 1877.

GEORGE WHITFIELD vs. TAJIMA KIYEMON.

The plaintiff claimed the sum of \$870.48, balance of account.

It appears from the petition that on the 5th September, 1876, plaintiff entrusted to defendant two hundred large saws of English make but of Japanese pattern on the understanding that the defendant, as he sold them, should pay to the plaintiff \$4.50 for each saw that he sold, and should obtain for his remuneration whatever amount he might obtain above that price. The defendant expected to sell one-half the quantity by the end of December, 1876, and the other half by the end of February, 1877, and in order that he might not neglect to press the sale,

it was arranged that until he paid for 100 saws he should pay to the plaintiff as interest on the value of the saws, and in addition to the price of \$4.50, the sum of \$20 per month; and after he had paid for the first hundred and until he paid for the remaining hundred, the sum of \$10 per month. Defendant paid the interest as agreed up to the 31st March last, when at the request of the defendant, notwithstanding that no payment had been made on account of the purchase money of the saws, the plaintiff consented to the interest from that date being reduced by one half, say, to \$10 per month. Seeing that defendant did not bring the money, the plaintiff demanded the return of the saws, and the defendant constantly replied that he had distributed the saws to various workmen in the country districts, and would bring the money as soon as his purchasers paid him. Defendant afterwards confessed that, on the very day on which he received the saws to sell, he, with the assistance of a man named Yanagishita Tannekichi, residing at Negishi, pawned one hundred of the plaintiff's saws to a pawnbroker named Sakaiya Soshi-ichi, residing at Kanagawa-dai, for the sum of 200 yen, and applied the money to his own use. The plaintiff therefore requested the Court to compel the defendant to return to him immediately the hundred saws illegally pawned, and as many of the remaining hundred as might be found in his possession; and further that he be compelled to pay to the plaintiff the balance remaining due, viz.: \$870.48 with interest from the 1st September to the day of payment, less the sum of \$4.50 for each saw that he may return in good condition.

The defendant in his answer to the petition admitted the amount claimed, but denied malversation, and claimed that as he is now bankrupt this claim be put in with the others. He contended that he bought the saws in the first instance, and as proof thereof argued that he had paid the plaintiff interest, and if the goods had not been purchased that he would not have had to pay interest. That, having purchased the goods they were his own, and he consequently had a perfect right to pawn or do ought else with them that he thought proper.

The defendant did not appear and on the Court sitting His Honour said he would hear anything further that the plaintiff might have to say.

Mr. Whitfield stated that, as he was in England during the time of the transaction, he would ask permission for Mr. Dallas to state the circumstances.

Mr. Dallas then stated that he resided at No. 69. He was not a partner, but book-keeper to the firm and signed the name of the firm per procreation. He stated that the defendant admitted the details in the petition, with the exception of his conduct being fraudulent and his not being the purchaser of the goods. He, Mr. Dallas, contended that the pawning of the goods was fraudulent and illegal. The plaintiff knew that the defendant was not a rich man, and when he entrusted him with the goods for sale, he considered that the goods themselves were security for their value.

In order to save time Mr. Dallas proposed to His Honour to state the circumstances of the case in the Japanese language, which proposal was accepted. At the conclusion of Mr. Dallas' remarks, His Honour requested the plaintiff to send in a statement of the circumstances of the case, and the hearing was then adjourned *sine die*.

HIOGO.

"Cholera" cases are still reported amongst the soldiers arriving from the South, but there are no signs of the disease taking any hold of this locality, and it so far is almost certainly not "Asiatic cholera," but some bad form of diarrhoea arising from causes which might most probably have been prevented. We hear nearly the same story from both Osaka and Kioto. The latter town has had such a cleaning, according to a correspondent, as has probably not happened to it since it has been a city, and the authorities seem thoroughly alive to the situation. The smell of carbolic acid is everywhere and the Fucho has ordered all places of amusement to be closed for 30 days, during which time it is expected troops will be passing through. —*Hiogo News*.

On enquiring yesterday evening (5th inst.) as to the condition of the two engine drivers injured in the railway collision of Monday night, we were informed that it was about the same, and there appeared to be a fair prospect of their recovery, though it was as yet too early to say positively.

In this connection we may mention that it may perhaps be some satisfaction to the public to know that with regard to the natural enquiry to which we gave voice on Wednesday as to why the "train staff" system employed on the Kioto section was not employed also on the Kobe section, a practical comment, if not an exact answer, may be found in the fact that the system has been instituted on this section on and from to-day. —*Idem*.

From the *Osaka Nippo* :—

The Ken Officials are active in guarding against the spread of cholera, and the Kanagawa Kencho has notified the sugar merchants that sugar from China must not be landed carelessly. It is said that one-third of those who have died from cholera in Osaka are sugarmerchants.

Yeiseikioku in Naimusho, has notified the following reports concerning cholera: The report from Kanagawa Ken, made at 6.10 p.m. on the 23rd, says that the cholera patients in the Ken then numbered 158; 7 had died between 1 a.m. and midnight on the 22nd, and 20 were seized between those hours. The report from Hiogo Ken, made at 3.55 p.m. on the 23rd, says that between midnight on the 21st and noon on the 23rd, two persons were seized, one of whom had died. The report from Tokio Fu, made on the 24th, says that from the 22nd to the 23rd 11 persons were seized, one of whom had died. Besides these, three other persons had been afflicted with a disease resembling cholera.

The returns of cholera in Osaka Fu are as follows: On the 22nd, seized, two women, one of whom is under treatment and one dead. On the 23rd four were seized, of whom one (man) is under treatment and three (two men and one woman) dead. On the 24th four were seized, of whom one (man) is under treatment, three (two men and one woman) being dead. On the 25th six were seized and two (one man and one woman) died, four remaining under treatment. On the 26th five were seized, two (one man and one woman) died, and three remained under treatment. Total seized, 10 men and 11 women; dead, 6 men and 5 women; under treatment, 4 men and 6 women.

On the 1st instant the Osaka police officer forbade the sale of unripe fruit and has ordered the coolies who lift water in buckets not to raise dirty water.

SHANGHAI.

An amusing instance of the Chinese propensity for elevating the most trifling matters of routine into high political importance, occurs in the *Gazette* of the 18th September. A Shantung junk gets blown out to sea and wrecked on the coast of Corea; whereupon the King of Corea writes to say that, "on the 31st March last great alarm was felt on a report being received that a vessel of alien build had been stranded on the coast of his kingdom. The authorities despatched to the spot to make enquiries gathered from the language and dress of those on board, that they were beyond a doubt shipwrecked subjects of the suzerain state (China)." They were accordingly taken care of and forwarded to the frontier; and the vice-President of the Board of Ceremonies at Moukden then takes up the parable, and reports to the Throne that "a regulation sanctioned, in 1850, a gratuity of Tls. 30 as payable to Corean officers who come in charge of distressed mariners under circumstances of this kind;" and the precedent has been adhered to in the present case, "as a distinguished remuneration for his (the present officer's) trouble, and in furtherance of the Imperial loving kindness!" —*N.-C. Daily News*.

Foochow.—Though cholera is still, happily, on the decrease, deaths are daily occurring amongst the natives. The mortality is almost entirely confined to the poorer classes whose disregard of sanitary precautions expose them in a greater degree to this dread epidemic. —*Foochow Herald*.

The S. S. *Juan* arrived on the 17th instant, and reports having been in collision with the P. & O. S. S. *Lombardy* off Black Point near Shanghai. Her starboard bow was, we understand, slightly injured, but the damage was fortunately all above water line. The vessel will, we hear, be docked and thoroughly overhauled prior to taking the berth for London. —*Idem*.

HONGKONG.

We understand that the American 3-masted schooner *Rosina* has been sold for \$5,150. The purchasers are Chinese, and they intend to take her to Macao and put her under the Chinese flag. —*Hongkong Daily Press*.

The price of salt has probably reached its highest at the present moment, a dollar being enough to buy only about 120 catties, and it is said the price is even much higher in Macao, where a dollar is the equivalent of about 80 catties. This is owing to the unusually stringent measures being adopted by the Salt Commissioner to enforce the laws of taxing salt, and we are told that recently a new office has been opened at Cap-sui-moon where salt is taxed. Several speculators have attempted to import salt from Annam, where it can be purchased at the rate of about 1000 catties for a dollar, but considering the great outlay which conveyance in foreign bottoms entails, the operation has not been successful. The Customs Blockade is beginning now to tell on even articles of necessity. —*China Mail*.

THE UNION INSURANCE SOCIETY OF CANTON.

This afternoon (16th Sept.) the fourth ordinary meeting of the shareholders in the above Society was held at the Offices, Peddar's Wharf, Hongkong. There were present:—Hon. H. Lowcock (in the chair), Hon. W. Keswick, and Messrs. Hoppius, Sassoon, Barnes, Jackson, Stael, Linstead, Mendel, Heaton, Meyer, Cheyne, Hassell, Remedios and Moore, (Acting Secretary.)

The Acting Secretary read the advertisement convening the meeting.

The Chairman said:—Gentlemen; I do not think it is necessary for me to say much in addition to the Report, which embraces almost all there is to state as to the condition of the office. The business for the year 1876 was very good indeed, the net profits amounting to over \$300,000 out of a net premium of about \$900,000, and of these profits, \$104,000, as shewn in the Report, has already been given to the contributing Shareholders, by interim bonuses of 5 and 8 per cent., while there will be available for future distribution another 5 per cent. Seeing that in addition to the payment of that sum, an equal amount has been placed to the Reserve Fund, I think we may consider we have passed a very good year for the Office. The position of the Society is of course very much strengthened not only by the Reserve Fund being made up to \$250,000 last year but also by our being able, in consequence of such increase, to give to contributors from 1st January this year 66.60 per cent. or $2\frac{2}{3}$ ds. of the profits, instead of only 50 per cent. as hitherto, a fact to which I think attention should be drawn. I hope this increase in the proportion of the profits to be given to contributors will lead to an augmentation of the business. Looking also at the accounts for 1877, I think the working of the Society is better than it has been for some years. With these few remarks I beg to propose the adoption of this Report and accounts as presented.

Mr. Jackson seconded the motion, which was carried.

Mr. Linstead moved that Messrs. J. P. Barnes and H. L. Dalrymple be re-elected auditors.

Mr. Heaton seconded the motion, which was carried.

The Chairman moved that Messrs. G. O. Scott and J. H. Cox be re-appointed auditors.

Mr. Linstead seconded the motion, which was carried.

Mr. Jackson: Gentlemen; we have great reason to be satisfied with the report which has just been presented to us, and I have much pleasure in proposing a vote of thanks to the Chairman, the Directors, and the management for the very satisfactory way in which the business has been conducted. The Union Insurance Society is one of the oldest offices in China, and certainly one of the most respectable. We all rejoice in its prosperity, and I hope it will long continue to prosper.

The vote was carried by applause, and the proceedings then terminated. —*China Mail*.

U. S. S. *Palos* arrived here on the 14th from Shanghai, and will leave on the 20th for Ningpo; besides this steamer we have not seen a European vessel in port since the departure of the s.s. *Europe*, which left this for Foochow on the 2nd inst.; but I hope that as soon as the Northern ports are closed, we will have a regular steamer here, perhaps twice a month. —*Wenchow*, 18th September.

WENCHOW.—For the last eight days we have had very bad weather; day by day rain, and as the atmosphere is getting cold now, I am afraid the paddy which is still green, will suffer very much.

The shooting season is in, but till now our sportsmen have only killed a few snipe; it is said that down at the "Lower Anchorage" there is any amount of game during the season, viz., wild geese, ducks, pheasants, deer, and even wild boar.

Several foreign residents are living in the city and a long way from the Custom-house. It is very disagreeable and tiresome to walk through the streets in Chinese cities, especially when it is rainy and dirty weather; and as chair coolies are very bad here, one foreigner ordered a jinrikisha from Shanghai; but the coolies here did not understand how to manage the thing; another member of our community, however, was struck by the idea to have a donkey for drawing the jinrikisha. I am quite sure that many readers of your journal will heartily laugh, imagining such a vehicle, but I can assure you that it is quite a comfortable conveyance, and recommend the Shanghai residents and others who keep a jinrikisha to employ instead of the coolie a donkey, the latter having certainly many advantages over to the former.

The *lekin* runners are now armed with "swords," which is only, I think, to frighten the Chinese merchants and shop-keepers, and make them open their purses more freely to pay the taxes. All I know is that in case the *lekin* people, whether armed or not, should ever attempt to come near a certain foreign hong here, they will get taxes paid in a coin which no banker will accept, and which afterwards they themselves would have preferred not to have received at all.

VISITORS AT GRAND HOTEL.

Mr. J. F. Pinn, Mrs. Hubbard, Mrs. Geo. E. Baughman, Mr. A. Morton, Mrs. Frank Dunn, Doctor and Mrs. Tripler, Messrs W. P. Mitchell, J. Chapsal, Charles Rickerby, Captain Frank Dunn, Mr. Albert Dousdebés, Dr. and Mrs. C. F. Pollock, Lieut. Coker (R. A.), Mr. and Mrs. James J. Enslie, Rear-Admiral T. H. Patterson (Commanding Asiatic Squadron U. S. N.), Captain G. W. Sumner (U. S. N.), General Julius Stabel (U. S. A.), Lieut. R. Wainwright (U. S. N.), Mrs. Wainwright and child, Lieut. R. G. Davenport (U. S. N.), Captain J. Young (Chief of Staff Asiatic Squadron U. S. N.), Mrs. J. Young, Mrs. Hussey and family, Mr. Ernest Deacon, Mr. L. Grafton Beckham, (H. M.'s 28th Regt.), Dr. J. Barry, Mr. R. F. Lindsell, (H. M.'s 28th Regt.), Lieut. George Talcott (U. S. N.), Mr. J. A. H. Schepel, and Mr. Horace G. Heimann.

Shipping.

ARRIVALS.

Sept. 30, Brit. str. *Bombay*, Briscoe, 1,325, from Hongkong, Mails and General, to P. & O. Co.
Oct. 1, Jap. str. *Atago-Maru*, Thompson, 1,640, from the South, Troops, M. B. M. S. S. Co.
Oct. 1, Russ. corvette *Vladnick*, Captain Novosilsky, 1,069 tons, 8-guns, from Kobe.
Oct. 3, Brit. barq. *Hilder*, Oberg, 306, from Hakodate, General, to Kingdon, Schwabe & Co.
Oct. 3, Ger. barq. *Friedrich Perthes*, Walter, 447, from Hakodate, General, to Kingdon, Schwabe & Co.
Oct. 3, Am. str. *City of Peking*, Tanner, 5,079, from San Francisco, Mails and General, to P. M. S. S. Co.
Oct. 3, Ger. gun-boat *Nautilus*, Capt. Valois, 600 tons, 4-guns, from Nagasaki.
Oct. 4, Jap. str. *Saikio-Maru*, Vroom, 2,145, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
Oct. 9, Brit. str. *Gaelic*, Kidley, 2,756, from Hongkong, Mails and General, to O. & O. S. S. Co.
Oct. 9, Jap. str. *Thabor*, Pendered, 600, from Kobe, Government Service.

Oct. 9, Jap. gun-vessel *Kasuga-Kuwan*, Capt. K. Isobé, 1,015 tons, from Kobe, Government Service.
Oct. 9, Jap. gun-vessel *Seiki-Kuwan*, Capt. Y. Inonyé, 850 tons, from Kobe, Government Service.
Oct. 10, Frch. str. *Tibra*, De Girard, 1,726, from Hongkong, Mails and General, to M. B. M. S. Co.
Oct. 10, Brit. str. *Glencarn*, Gasson, 1,270, from Hongkong, General, to Jardine, Matheson & Co.
Oct. 11, Jap. str. *Nagoya-Maru*, Conner, 1,914, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
Oct. 11, Ger. barq. *Christine*, Weldfang, 540, from Hakodate, General, to Walsh, Hall & Co.
Oct. 11, Ger. barq. *Ta-Lee*, Bruhn, 342, from Hakodate, General, to Walsh, Hall & Co.

DEPARTURES.

Sept. 28, Jap. str. *Meiji-Maru*, Peters, 1,010, for Hakodate, despatched by Lighthouse Department.
Sept. 29, Am. str. *City of Tokio*, Maury, 5,050, for San Francisco, Mails and General, despatched by P. M. S. Co.
Sept. 29, Ger. barq. *Fetisch*, Schmidt, 441, for Melbourne, Rice, despatched by Jardine, Matheson & Co.
Sept. 29, Ger. 3-m. schr. *Friedrich*, Höyer, 295, for Hakodate, Ballast, despatched by H. Grauert.
Sept. 30, Brit. barq. *Undine*, Fawckner, 796, for Hongkong, Rice, despatched by Jardine, Matheson & Co.
Sept. 30, Am. schr. *Ocean Pearl*, Grinnel, 190, for Hakodate, General, despatched by Walsh, Hall & Co.
Oct. 2, Brit. str. *Sunda*, Reeves, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.
Oct. 4, Am. ship *Charter Oak*, Staples, 964, for Hongkong, Rice, despatched by China & Japan Trading Co.
Oct. 4, Brit. barq. *Eme*, Asala, 731, for Kobe, General, despatched by L. Kniffer & Co.
Oct. 4, Jap. str. *Tokio-Maru*, Swain, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
Oct. 4, Italian corvette *Cristoforo Colombo*, Count Napoleone Canevaro, 2,500 tons, 5-guns, for Cruise.
Oct. 5, Brit. barq. *Maitland*, Davies, 715, for Kobe, Ballast, despatched by Wilson & Robison.
Oct. 5, Am. ship *Messenger*, Gilkey, 1,100, for date, General, despatched by Japanese.
Oct. 6, Brit. ship *Lothair*, Orchard, 794, for Kobe, General, despatched by Messrs. Cornes & Co.
Oct. 6, H. R. M.'s *S. Modeste*, Capt. Buller, 14-guns, 60 H.P., 1,913 tons, for Cruise.
Oct. 6, Ger. brig *Oceanus*, Brorsen, 261, for Hakodate, General, despatched by Kingdon, Schwabe & Co.
Oct. 7, Am. str. *City of Peking*, Tanner, 5,079, for Hongkong, Mails and General, despatched by P. M. S. S. Co.
Oct. 8, Am. barq. *Annie W. Weston*, Winsor, 740 for United Kingdom, Rice, despatched by E. B. Watson.
Oct. 9, Frch. str. *Tanais*, De la Marcelle, 1,735, for Hongkong, Mails and General, despatched by M. M. Co.
Oct. 9, Brit. str. *Strathairly*, Cassap, 1,991, for Hiogo, General, despatched by H. Ahrens & Co.
Oct. 10, Jap. str. *Saikio-Maru*, Vroom, 2,145 for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

PASSENGERS.

Per Am. str. *City of Tokio* for San Francisco:—Mr. and Mrs. J. G. Purdon and 3 children, Master C. Purdon, Mrs. and Mrs. H. V. Love, Miss Julia Crosby, Miss M. Campbell, Messrs. C. J. Melhuish, J. H. Longford, W. H. Metcalf, J. B. Eames, Evrode Emery, G. D. Lamill, Major R. C. Goff, Lieut. A. Solokoff, I. R. N., Lieut. A. C. McMichan, U. S. N., Dr. James Harris; and 8 Europeans and 55 Chinese in the steerage.
Per Brit. str. *Bombay* from Hongkong:—Lieut. R. Dinwiddie, R. N., Surg. C. F. Pollock, A. M. D., Mrs. Pollock, Lieut. Coker, R. A.; and 4 Chinese in the steerage.
Per Brit. barq. *Undine* for Hongkong:—Mr. J. Esdale.
Per Brit. str. *Sunda* for Hongkong:—Mrs. Rickerby and child, Messrs. Tempest, Waller, Ah Swee; and 7 Chinese in the steerage.
Per Am. str. *City of Peking* from San Francisco:—Admiral Patterson, U. S. N., Dr. Kendleberger, U. S. N., Comdr. Sumner, U. S. N., Lieut. Davenport, U. S. N., Lieut. Wainwright, U. S. N., Mrs. Wainwright and child, Mr. and Mrs. J. J. Enslie, Tozo Torita, M. Yakayama, Mrs. Taylor and 2 infants, F. C. Beencheat, D. W. Patterson, Bishop Wiley, wife and child, Rev. W. G. Benton, H. C. Luda, Abbott Lawrence, Jr., Julius Stabel, A. P. Kurns, John Tracy, G. T. Marsh

Mrs. O'Hara and family, Rev. Isaac Pierson, and wife, Miss L. R. Person, Miss H. F. Parmelee, Miss Julia N. Wilson, Rev. Isaac, K. Yakagawa, Miss Mary E. Barr, Miss S. J. Anderson, Mrs. E. J. Patterson and 2 children, Miss J. J. Flowers, H. H. Lowry, wife and child, N. Curtis, David Sears, D. L. Pickman, Fredrick Schjoth, R. D. Locke, M. S. Cooper, O. G. Sawyer, U. S. N., and O. Fiji in the cabin; and 7 Europeans and 7 Japanese in the steerage. For Hongkong: Rev. J. Bosguzzi and Mr. Fung Pak in the cabin; and 638 Chinese in the steerage.

Per Jap. str. *Saikio-Maru* from Shanghai and ports:—Mr. and Mrs. Heinemann and child, Mr. and Mrs. Arnot, Mrs. Morse and 2 children, Miss Center, Madame Labastie, Generals Nodzu, Yamada, and Oyama, Drs. Brown and Gottburg, Messrs. Woods, a. n., Burchard, Hotham, Hildebrand, Jubin, 45 Japanese and 1 Japanese Lady and child in the cabin; and 1 European, 1 Chinese, and 544 Japanese in the steerage.

Per S. S. *Tokio-Maru*, for Shanghai and way ports. Bishop Wiley, wife and child, Rev. Mr. and Mrs. Pierson, Miss Pierson, Mrs. C. Alexander, Miss Jennie Chisman, Mr. and Mrs. H. H. Lowry, 2 children and infant, Mrs. Flowers, Miss Flowers, Mr. and Mrs. Fitz Henry and 3 children, Miss Remusat, Miss Parmelee and Miss Wilson, Mr. and Mrs. Focke, Mrs. Cornes, Baron von Gutschmid, Mr. F. Kelly, Mr. Foster, Mr. Aldrich, Mr. Itami, Mrs. Teraiya, Sub-Lt. Afonassief, Lieut. Koltchack, Mrs. Larkin, and 2 children, Messrs. Muraiyama, Kunasigi, Fukumoto, Nishikawa, Kora, Rev. W. G. Beuton, Miss Barr, Mr. R. D. Locke, Mr. A. R. Kains, Mrs. Patterson and 2 children, Messrs. Hone, Sangster, Diok, Hatori, Honjo, Kishi, Mikadeya, Sakane, M. P. Kemperman, Y. Schjoth, K. Kilby, J. H. Gorman, Kunesigi, and Sona.

Per Am. str. *City of Peking* for Hongkong:—Mr. and Mrs. C. D. Harman, Messrs. J. Macpherson Fung Pak, Revd. J. Borgazzi; and 641 Chinese in the steerage.

Per Frch. str. *Tanais* for Hongkong:—Mrs. Keswick, 4 children and servant, Mrs. Huskisson and child, Mr. and Mrs. D'Arnst, Mrs. England and child, Mrs. Rappard and 8 children, Mrs. A. Grubel, Mr. and Mrs. Banfi, Messrs. Ch. Petit, Edal, Mayeda, Ohashi, Kato, Ughes, Smidt, Chiatellino, Isubuti, Ferrero, Pigeon, Kisaki, Sanokisaburo, Kichiyama, Takasio, Kakemoto, and T-akiya.

Per Brit. str. *Gaelic* from Hongkong: Messrs. Ernest Deacon, A. Kiser, and T. Espinez in the cabin; and 90 Chinese in the steerage.

Per Brit. str. *Strathairly* for Hiogo:—Mr. Broadhurst, and 17 Japanese.

Per Frch. str. *Tibra* from Hongkong:—Mrs. Sutton, 4 children and servant, Messrs. Pellegrin, Schépel, Kleibolte, Lindson, Beckham, and Barry.

Per Jap. str. *Thabor* from Kagoshima, via Nagasaki and Kobe.—H. I. H. Prince Arisuzawa-no-Miya, Commander-in-Chief of forces, Admiral Kawamura, Commodore Ozawa, Toda, 1st Secretary to H. I. H., Akizuka, 2nd Secretary to H. I. H., Lieut. Eshia, Akayawa, Fukushima, and Paymaster Kogima.

Per Brit. str. *Glencarn* from London:—Mr. P. MoAnulty.

Per Jap. str. *Saikio-Maru* for Shanghai and ports:—General Stabel, U. S. Consul for Kobe, Lieut. Westphall, Miss Anderson, Mr. and Mrs. Leon, Capt. Hardy, Messrs. Sakurai, Urano, Yamaruma, Ogawara, Yamashiki, Chouo, Watanabe, Izumi, Hashimoto, Heimann, Burnell, D. M. Kenway, Ishizaki, Yerada, Maeda, Loughran, Yenaguchi and Koto.

Per Jap. str. *Nagoya-Maru* from Shanghai and ports:—H. Ex. Fushima, H. Ex. Skatschkoff, H. Ex. Soga, Miss Evelyn Frotheringham, Miss Jane Pie, Mr. and Mrs. Kobots, Messrs. Heimann, Wypar, Teissier, Sarvier, Lieut. G. Talcott, U. S. N., Kirby, Gorman, Kirkham, Ozier, Rieves, Stephen, and 56 Japanese in cabin; 2 Europeans, 1 Chinaman, 167 Prisoners, and 373 Japanese in the steerage.

REPORTS.

The American steamer *City of Peking* reports:—Left San Francisco Sept. 12th, at 12 M. with 56 passengers cabin, 17 Europeans and 638 Chinese steerage, 26 bags U. S. mails, 443 pkgs. Treasure valued at \$774,411.84 2,411½ tons Freight. We bring for this port, Shanghai, &c., 54 passengers cabin and 17 steerage, 21 bags mail, 221 pkgs. specie valued \$303,799.29 and 247½ tons cargo. Have experienced thick and rainy weather during voyage, and with moderate gale on 26, 27 and 28th from North East.

The British steamer *Gaelic* reports:—Left Hongkong at 3 p.m. on the 2nd October. Experienced light variable winds throughout, passed the P. M. S. S. *City of Peking* at 10 a.m. on the 8th off Oosima. And arrived at Yokohama on the 9th at 11 a.m.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

Business in the Import market continues to be very much restricted. Cotton Yarns only show any activity; and for 16/24 and 28/32, a fair demand continues. In Woollens there is a slight inquiry for Mousselines and Blankets. Metals are very dull, what trifling demand there was having subsided.

The steamer *Glencarn*, from London via Hongkong, has arrived with general cargo. Transhipped cargo ex *Bokhara* and *Euphrate* from London, and *Ava* from Marseilles, is also to hand.

EXCHANGE.

In consequence of a rise in India and China and large purchases of Silk, rates have steadily advanced since our last. A considerable business has been done both in Bank and Private Paper. A slight weakness is apparent at the close.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—In our last dated 28th ultimo, we noted a quiet market and a low range of prices: since then the change has been as great as unexpected. Improved Europeans advices caused buyers to enter the market eagerly, which enabled sellers to obtain daily higher rates, the advance being about \$80 per picul. The market closes quieter and buyers do not appear inclined to go on at the advance. Most of the business done has been in Hanks, Oshius have however commanded a good deal of attention. Settlements foot up to 2,200 bales, whilst arrivals during the period under review only amount to 950 bales, thus reducing the unsold stock on the market to 700 bales. Shipments since our last comprise the P. & O. S. S. on the 2nd instant, with 551 bales, and the French mail on the 9th with 1,107 bales, bringing up the export to 5,868 bales against 13,947 bales same period last season.

TEA.—Business has continued much on the same basis as reported in last issue, the demand running mostly on low grades which show an advance of from \$1 to \$1.50 per picul. Settlements for the interval amount to 5,600 piculs, and arrivals being generally on a very limited scale our stocks to hand are still further reduced. It seems now very likely that our total export from Japan will be some 2 million pounds less than that of last season.

The *Cremona* for New York via the Cape has obtained nearly her full complement, and will have despatch about 25th instant. The *Lothair* is expected to follow on the berth. Current rate of freight £2 per 40 cubic feet.

Since the above was in type the market is weaker, and a reduction of \$10 to \$20 per picul would be accepted.

RICE.—A considerable import business has been done lately. The *Fetisch* (barque) has taken 10,000 piculs to Melbourne, the barque *Undine* 18,000 piculs, the ship *Charter Oak* 20,257 piculs, and the P. M. Steamer *City of Peking* 5,955 piculs to Hongkong. 16,900 piculs have gone in the barque *Annie W. Weston* to England. The *Ching-too* will leave for Kobe shortly to load with grain for a Chinese port.

BIRTHS.

At Yokohama, on the 19th inst., Mrs. MACHADO, of a daughter.

At Tokio, on the 19th inst., Mrs. PIPER, of a daughter.

MARRIAGE.

On the 2nd August, at Sydney, New South Wales, by the Revd. Dr. McGibbon, JOHN SMEDLEY, of Yokohama, Japan, only son of Samuel Smedley of Woodlands, Bulli, to ANNIE, youngest daughter of the late John Casement of Ballacarraby, Douglas, Isle of Man.

DIED.

In Tokio, October 12th, MAUD M. PERRY, aged 8 years and 11 months.

October 17th, V. W. PERRY, Esq., aged 47 years, New York and San Francisco papers please copy.

Summary.

OUR last MAIL SUMMARY was dated the 12th ultimo, for despatch by the O. & O. Steamer *Gaelic*, which left for San Francisco on the afternoon of the 13th. Since then we have received the following mails:—

Per P. & O. Malacca, London, 31 Aug., arrd. 15 Oct.
" O. & O. Oceanic, S. Frisco, 29 Sept. " 21 Oct.
" M. M. Tanais, M'seilles, 17 Sept. " 21 Oct.
" P. & O. Sunda, London, 14 Sept. " 28 Oct.

And despatched the following:—

Per P. & O. Bombay, for Southampton.....16 Oct.
" M. M. Volga, for Marseilles.....23 Oct.
" P. & O. Malacca, for Southampton.....30 Oct.

LATEST telegraphic advices from London are to the 1st instant.

DURING the evening and night of the 11th ultimo a very severe gale, cyclonic in its character, swept down the coast. Yokohama encountered a large share though not the full force of the storm. In the harbour several of the vessels dragged their anchors. The German gunboat *Nautilus* came into collision with the Mitsu Bishi steamer *Nagoya Maru* (formerly the *Oregonian*), and sustained some damage to her own boats. The sudden fall of her mainyard, occurring during the collision, was the cause of some of the sailors sustaining slight injuries. The loading of the *Gaelic* having been interfered with and delayed by the storm, the departure of that vessel was postponed for several hours. The cargo of a couple of boats went to the bottom of the Bay, but was subsequently recovered. In a village close to Yokohama a tree fell, injuring a jinrikisha coolie so severely that he died soon afterwards, and breaking a Japanese cottage and so seriously injuring its two inmates, a man and a woman, that they, too, are said to have since expired. In Tokio very severe effects of the gale were experienced. The buildings of the National Exhibition in Uyeno sustained special damage. The front gates, which had been closed at 2.30 p.m., were blown open with great force; and a gust of wind carried away the roof of the Western Hall, damaged the Fine Arts Hall and other buildings, and destroyed or injured many of the articles on exhibition. All damages, however, were promptly, as far as possible, repaired when the gale had subsided, and two days afterwards the exhibition was open as before.

THE American barque *Annie W. Weston*, which sailed on the 8th ultimo for England, was caught in the storm of the 11th, and her cargo sustained such damage that she had to put back to this port, arriving on the 19th. Two of her crew died in the interval with all the symptoms of Asiatic cholera. The British barque *Ville de Lille*, was disabled in the same typhoon. A M.B. Co's steamer fell in with her and towed her into Owashi Bay, whence she has since been towed to Kobe.

CASES have been heard in the British, French, German, United States and native Courts. One Holm, convicted before the German Consul of having falsified delivery notes and stolen beer from his employers, Messrs. Copeland and Wiegand, Brewers, has been sentenced to six months' imprisonment.

WE hear from Shanghai of the conviction of Mr. O. B. Bradford, U. S. Vice Consul and Postal Agent at that port, on a charge of tampering with a letter entrusted to him. An account of the trial will be found in our law reports.

THE shooting season opened officially on the 15th instant, from which day licences were issued on the same terms and conditions as last season. For a fee of \$10, subject to certain police restrictions, sportsmen can indulge their fancy within treaty limits to their heart's content.

THE cholera epidemic cannot be said to have ceased altogether; but it has considerably abated, as may be seen by reference to the official returns within published. The schools, public and private, which were closed as a measure of precaution, have nearly all been re-opened. Following the example of the Yokohama residents, the foreigners in Tokio have established a Board of Health.

AN ancient shell-heap, containing specimens of crockery and other relics of pre-historic man, having been discovered by Professor E. S. Morse, at Omori near Tokio, an interesting lecture on the subject was given by the Professor on the 13th ultimo, under the auspices of the Asiatic Society of Japan.

DR. A. Goertz, surgeon to the Russian Legation, has been appointed to the post in the General Hospital rendered vacant by the death of Dr. E. Massais.

ATTEMPTS are being made to secure by subscription a monthly revenue for the maintenance of the General Hospital. Some agitation has been raised with a view to erecting in a suitable spot a special hospital for the accommodation of foreigners attacked by infectious diseases. The Government are said to have agreed to grant a site for the building.

THE worshipful master and officers of the Otentosama Lodge for the ensuing year have been installed.

THE Nobles' School in Tokio has been officially opened by H. M. the Mikado. Tomorrow being the birthday of His Majesty will be kept as a holiday by both natives and foreigners.

A CHINESE Ambassador is on his way hither from Shanghai, and is expected to arrive shortly.

THE Yokohama Race Club's autumn meeting will be held on the 7th inst. and following days. The Amateur Athletic sports will take place on the 13th; and the races of the Yokohama Racing Association on the 20th, 21st, and 22nd.

POLITICALLY the country is quiet. The trials of the rebels in the South have resulted in a number of convictions. The sentences passed have been some of death but mostly of hard labor for terms varying from one hundred days to ten years. On the whole the Government appear to be using their success with moderation. Shimadzu Hisamitsu is said to be about to repair to Tokio.

CRIMINAL PROCEDURE.

"PENAL laws pressed are a shower of snares unto the people." This dictum has probably been endorsed by the common sense of that thinking portion of every nation that applies itself to the consideration of the well-being and happiness of its fellow-citizens.

It becomes then necessary while considering a system of criminal jurisprudence, to examine the machinery by which such system is worked. The best known systems of criminal judicial procedure, are one—the English, and the American which is founded upon the English, owing its origin to the jealousy of the Teuton race for the preservation of its liberties, intact from the influence of their princes, self-elected though they were. The love of liberty engendered of this jealousy has, though often clouded over and estranged, through successive struggles risen victorious over the kindred charms of feudalism, the venal blandishments of corruption, the behests of kingly license, and the apprehension of rivalry from the advance of alien and meretricious rule: the other, the system adopted by the nations of Latin race, which have followed the civil law in its theory and its forms.

The most noticeable distinctions between the criminal procedure of the two systems, consist in the status of the accuser at the commencement of a prosecution; and in the position of the accused, with regard, first, to the presumption of guilt or innocence, and secondly, to the obligation to, or exemption from, examination as a witness at his trial.

The want of a public prosecutor, of an official charged with the conduct of criminal prosecutions, has been long looked upon as one of the scandals of the law of England. The accuser, at his own risk and cost, lays the information before the magistrate, obtains a warrant to arrest the accused, collects the evidence necessary to procure the commitment of the accused for trial, (or in trivial cases which are within the cognisance of Justices of the Peace, his summary conviction) and is then bound over to continue the proceedings at trial unto conviction under heavy penalties in case of default, and for this purpose has to employ and pay an attorney to draw indictment, compile evidence, and complete the work he has begun. After a great expenditure of money, and of time often still more valuable, the farmer whose hen-roost has been robbed, the merchant who has been defrauded, the banker whose signature has been forged, at last, in the Queen's name, vindicate the majesty of the law. The accuser grumbles, and swears that next time the thief "med go free ere oi go to them domned 'size agin." It is a long time ere his turn again comes round. He is content to take his chance. Englishmen have grown up along with this bad system; and in spite of it, thanks to the integrity of the bench, reverence for judicial virtue awes down the rising indignation occasioned by individual hardship. No other reason can we see for the apathy that exists on this important question. For the last five years, a bill for the appointment of a public prosecutor has been, session after session, before the House of Commons under the charge of the Recorder of London; but is still numbered among the "innocents." "To leave each individual in the community the power of prosecuting for all offences, in the name of the Sovereign, but at his discretion, subject to the power of staying his proceedings, vested in the Sovereign, and at his own cost, subject

to the Court which tries the case allowing him reimbursement; to burden the injured party with the trouble and expense of bringing to justice him by whom he has been injured; to let wealthy offenders buy off their prosecutor, while poor men must stand their trial; to divide the responsibility of a culprit's escape, who ought to be convicted, and of an innocent man's vexation and trial, who ought never to have been tried, among three-and-twenty country gentlemen, or tradesmen in towns, while no professional man is answerable at all either for the omission or the oppression; this is the English system of prosecution, and anything so bad, we may safely affirm, exists in no other country under the sun." Thus wrote Lord BROUGHAM in 1861. The blot still remains. In Scotland the lord advocate, and his deputies, with the procurators fiscal, act as public prosecutors. America has her district attorney. Under the French Code, the process is prepared and the trial conducted by officials appointed by the state.

While the duty and responsibility of the accuser are so widely different, under the English and French Laws, the relative positions of accused persons are wider still. English law is in favour of the accused, a man is presumed innocent until he is proved guilty by incontrovertible testimony, that is by evidence sufficient to carry conviction to the minds of twelve jurymen, whose verdict must be unanimous. The position of the accused is further strengthened by the rules of evidence relating to self-regarding and disregarding testimony. It is the well known maxim of English law that no man is bound to criminate himself. To allege that to answer a certain question would criminate himself excuses a witness from answering some questions which are found too pressing, even in civil cases. The evasion destroys the value of the testimony of the witness so far as the same is relevant to the issue before the jury, but the witness is protected. Applied to evidence in criminal trials, the rule forbidding the interrogation of the accused is of great value, especially so long as the prosecution of criminals is left to the discretion or illfeeling of individuals. Where a latitude is given to the examining authority, *corpus delicti* being established, the accused is placed in great jeopardy under the fire of an astute cross-examination. *Humanum est errare*. In every case where suspicion attaches against a man, there may be some links of circumstantial evidence in themselves sound, but not capable of being wrought into a chain without the self-inculpatory evidence of the accused: explanation is often more difficult to the man of honour, than to the criminal. Circumstances which the dictates of honour forbid the innocent man to disclose might be available for explanation, and the insidious questions relating to his conduct, or to his being at or near the place where, and at the time when, the crime was committed, remaining unanswered and unexplained carry inference of guilt home to the mind of the inexperienced observer. Under the inquisitorial system silence is a proof of guilt. Especially is this a hardship where the accused is deprived of the assistance of experienced counsel. The procedure of the French tribunals admits of the examination of the accused: a case of suspicion having been made out to the satisfaction of the *juge d'instruction*, the accused is obliged to answer the questions put to him, and is called upon to explain the suspicious circumstances weighing against him in the mind of the public prosecutor. Guilt is presumed against the

accused, and he has to prove his innocence:—often a task of difficulty to the experienced man; almost impossible to the weak and unlearned. Some learned jurists have lately advocated the adoption in English law of the rule admitting the evidence of the accused as exculpatory on his own behalf, alleging that the difficulty imposed upon the guilty by the necessity of submitting to cross-examination would be more than compensated by the opportunity of explanation which would be afforded to the accused. They do not extend their recommendation to the adoption of the compulsory examination of the accused: and they forget that silence on the part of the accused even upon the advice of counsel would lead to presumption of guilt. In a recent *cause célèbre* in England would the accused have been in a better position if he had been allowed to give evidence on oath, and have said "the woman tempted me and * *"? To his honour he declined to put such words into the mouth of counsel! The story of Susannah and the Elders is often cited by writers on the law of evidence as an instance of the advantage of the cross-examination of witnesses apart from each other, to the cause of justice. Possibly, it is so cited because it is a case familiar to all. Had the order of procedure been changed, and had Susannah had to submit to an inquisitorial examination, how would she have fared? how explained her presence in the garden under the equivocal circumstances which were alleged against her? If instead of the examination of the Elders, she had been offered the opportunity of giving her evidence in explanation of the circumstances, she would in bashful modesty have hung her head confused and speechless. Her silence would have given consent to her guilt.

In considering the criminal procedure of Japan it is useful to see how the rules of procedure of other nations bear upon the same or relative points: useful as a guide to show what emendations would be desirable to achieve the success the Japanese are striving for, to make their judicial system a pattern for that of other nation. The investigation is of little vital importance to foreigners at the present time, while they live under the jurisdiction of their own several consulates at the open ports. But it may become a means of removing the repugnance which foreigners have to live under the native rule, and on the other hand to allay the unfounded jealousy of the native Government. When the revision of treaties becomes advisable mutual concessions may render possible the excision of the extra-territorial clauses. At present the remark, "there are more Japanese in Japan than there are foreigners," holds good; and if the welfare of the majority is to be considered to the exclusion of that of a minority, the native may be ruled or misruled as his master pleases.

Chapters VII, VIII, XII, XIII of the Japanese Codes (we quote from Mr. LONGFORD's Summary) respectively refer to the administration of the criminal law.

Chapter VII enacts that any magistrate who neglects or declines to receive, and immediately act upon, an information containing a charge of violent robbery, murder, shall be punished by penal servitude for 70 days; if the charge contained be an offence against the provisions of the laws against "controlling and fighting," or breach of "domestic law," the punishment is in a lower degree; and, again, no magisterial officer can take cognisance of an information laid before him, if either of the parties interested

in it is in any way related to him, or has stood towards him in the position of either teacher or pupil; and all officials involved in any dispute concerning marriage, pecuniary transactions, lands and tenements are to plead through, and cause their cases to be conducted by, a member of their household, and not to interfere personally in the cause. These provisions, together with those on bribery and corruption contained in Chapter VIII, ought to secure the purity of the bench from bias, whether the result of nepotism or corruption. The punishments for bribery are regulated according to the scale made in cases of robbery and theft with certain mitigations,—we should be glad to know that this classification had been made by the Japanese, and not by the translator for the simplification of his work; the offence of bribery if classed in the same category with robbery and theft would soon cease to be regarded as a venial impropriety, but be regarded as a “very disgraceful” offence. The punishments for bribery are severe, but unless public opinion combines to put it down, severity will be thrown away. Moreover the official must be placed above temptation or suspicion of bribery. We once heard a Chinaman object to go before a court, which was presided over by a very worthy celestial, on the ground of necessity of making so many presents. As he expressed it:—“that man wage belong 800 taels one year, two piecey secretary have got, he pay each man 1,000 tael. How fashion can do?” Bribery is of three kinds, viz., “bribery for an unlawful object,” “bribery for a lawful object,” and “pecuniary malversation.” The first offence is clear enough. It is committed by an official who receives a present from a suitor, either as a bribe on the specific under tanding that he shall commit an act of injustice, or as a reward for an act of injustice already committed for the benefit of the giver, or by one “who, on the false plea of public service levies any unjust or unlawful contribution and appropriates it to his own benefit, or who by threats and violence extorts money from persons under his jurisdiction.” The description of the second offence is not so clear. Before reading the section we could not guess what could constitute bribery for a lawful purpose, and at same time be a crime; the section seems to be aimed at tardy officials who require an inducement to perform their functions; and, while it punishes the acceptance of a *douceur* for such purpose, the law provides no remedy (as far as we can see) to cure the complaint. With the proverbial disregard of time which characterizes the nation, some pur is necessary; we give the section *verbatim*, as it is not a long one:—“The second offence is one of which an official shall be convicted who receives or agrees to receive a present on the specific understanding that he shall, for the sake of the giver, commit some act which is not in itself an injustice; who levies, though without using the plea of public service, any unjust contribution for his own benefit; who on the strength of his influence and authority borrows or solicits money from the people under his jurisdiction; who receives from a foreigner any present other than that of *ententes* or such articles as may be reasonably supposed to be given as mementoes of friendly intercourse, or who, if a police officer suppresses the discovery of, and appropriates any stolen property that may have come into his possession in the course of the discharge of his duty.” The last offence is very like theft: it certainly would not be styled lawful

even in Scotland Yard at the present time. The section mentions for the second time in the Codes the presence of foreigners; and we are glad to find that our national proclivities are so far considered that an official may safely accept an invitation to dinner; and that we may “stand a bobby a drink.” The third kind of offence under this head consists of doing similar acts on the part of any person, whether official or not, when done, more in the sly style of “undue influence” than of open bribery.

Chapter XII, headed “Arrest,” deals with offences relating to the non-execution or mis-execution of arrest warrants by police officers, resistance to police officers in the execution of their duty, escape and aiding the escape of prisoners, and the maltreatment of prisoners. It is interesting to find that criminals are very slippery fellows; and that policemen have the usual failing of eyesight caused by looking in the opposite direction from that in which the thief has gone.

Chapter XIII is headed Judgment and Imprisonment. Mr. Longford in his summary of this subject has given a very instructive account of the proceedings which take place at the trial of a prisoner. Information of the commission of an offence having been given to the police authorities, and the arrest of the accused effected by them, a report in writing of the circumstances attending the offence and the capture is made to the public prosecutor, who from the information thus afforded him prepares a formal charge against the accused. The charge is laid before a magisterial officer who proceeds to interrogate the accused; this is the preliminary examination before trial, or in trivial cases the magistrate has power to convict summarily. In this examination, as at the trial, the prisoner is the first witness examined, and every effort is made to extract a confession from him: it is not quite clear whether torture is admitted as part of this examination, or only at the trial. If a confession of guilt cannot be obtained from the prisoner, the prosecutor is then required to produce evidence, and upon this and the result of the examination of the accused, he is either released or committed for trial. If committed for trial he is sent before the principal local court of the prefecture within the jurisdiction of which the arrest was made. These Courts are formed by president, judge, examining officer, and clerk. Before such a Court the prisoner is submitted to a stricter examination than before, in which the right of resorting to torture is still recognised by the Codes; for there is a “minute description of the implement” the “investigation whip,” a whip three feet long, one and a half inches in circumference, and half an inch in diameter, made of three strips of bamboo the knots of which have been planed off, bound tightly together with hempen rope; a very nice implement indeed, one thoroughly applicable to the merits of a convicted garrotter or violator of women, or wife-kicker, but an atrocity when applied to extract confession from an accused and possibly innocent man. The result of the examination is thus described by Mr. Longford “When the examining officer is satisfied that he has ascertained the whole truth of the case, he causes his clerk, who besides the prisoner, jailer, and witnesses while actually giving evidence, has been the only person in Court during the trial, to draw up a full statement of it which he submits to the judge.” The judge pronounces the crime and awards sentence, taking into consideration extenuating circumstances if any; the judgment is submitted to the president, who

directs sentence to be carried out. In the event of a capital sentence the judgment and sentence are submitted to the Emperor. This Chapter provides justly severe penalties for judges who knowingly give false judgments. The two great blots in this system of trial are the retention of torture, and the want of publicity of the proceedings. With publicity given to the proceedings the severity of the law against unjust judgments might be relaxed. Public opinion would provide the best safeguard. That torture is still retained in the Codes as a means of extracting confession is a disgrace. That it is retained is clear first from the description of the whip to which we have already referred, and secondly from the direction that “pregnant women whom it may be necessary to torture are to be given to the custody of their husbands, and the torture is not to be inflicted until the lapse of 100 days after delivery” (Chapter XIII offences connected with the trial of women.) “An officer violating this law shall be punished with penal servitude for 90 days, for 1½ years if the infliction of torture produces miscarriage, and for 10 years if the woman dies under it.” Since the publication of the Codes there has been no ordinance issued abolishing torture, although the native press have been instructed to say that the practice of it has been discontinued.

LEAKAGE.

IN the recent suit, *BEATO v. THOMSON*, for damage to goods during transit from London on board the *Atholl*, the defendant's counsel argued that the bill of lading exempts the ship from responsibility for leakage, and relied upon that as one of the principal grounds of defence. The Acting Law Secretary, in giving judgment, referred to the defendant's contention in the following words:—“Then, as to the question whether it was caused by any negligence of the master, Mr. NESS contends that the exception of leakage throws the onus of proof on the plaintiff. Now, if ‘leakage’ in a bill of lading, means damage to goods by leakage from other goods, this contention is right. But it does not appear to me that that is what ‘leakage,’ in a bill of lading means,” and dismissed it from further consideration as irrelevant to the issue.

The numerous claims made against steamers arriving at this port, for damage to cargo arising from various causes, render every decision, bearing upon the arguments advanced for the purpose of reducing the liability of the vessel, of great importance; and, as the learned judge did not positively overrule that portion of the defence grounded upon non-liability for damage to cargo caused by leakage from other cargo, the following judgment recently delivered elsewhere may be of common interest.

Tuesday, February 6th, 1876.

THRIFT v. YOULE.

APPEAL FROM INFERIOR COURT.

Shipping—Bill of lading—“Not accountable for leakage.”

The common form in a bill of lading “not accountable for leakage” exempts the shipowner only from loss to the leaky package, and not from damage done to other packages by a liquid escaping.

Appeal from the City of London Court.

The plaintiff was a shipowner; the defendant an owner of cargo on board the plaintiff's ship.

The action was brought for balance of freight due under a bill of lading under which the plaintiff carried in his ship from Villa Real in Portugal to London 1100 barrels of sardine oil and 106

bundles of palms, undertaking to deliver the same in London on payment of 200l. freight. The bill of lading also contained the exception, "Not accountable for rust, leakage, or breakage." The ship duly arrived in London, when it was found that by the leakage of one of the oil casks the palms had been injured, and that the cargo was otherwise damaged. The defendant paid the freight less an amount sufficient to cover the damage sustained. The plaintiff proceeded in the City of London Court for the balance of freight, and the defendant thereupon gave notice under the County Court Orders 1875, Order 10, rule 1, of a counter claim for the damage sustained by bad stowage and the leakage to the amount of 23l. 0s. 6d.

At the hearing before Mr. Commissioner Kerr, that learned judge gave judgment for the plaintiff for 6l. 15s. 9d., finding that the plaintiff was entitled to 12l. 10s. 10d. for balance of freight, but that the defendant was entitled to 5l. 15s. 1d. for the bad stowage, but he held that the damage to the palms by leakage was covered by the bill of lading, and that the plaintiff was not responsible for it, at the same time giving leave to the defendant to move to set aside the verdict and enter judgment for the defendant for 10l. 9s. 8d. The defendant having obtained a rule at chambers accordingly.

Charles Hall, for the plaintiff, showed cause.—The words "leakage and breakage" are not limited to what takes place within the package or cask. Taken in their natural sense they exempt the ship from all liability resulting from leakage or breakage.

The Hélène, 1 Bro. & L. 429; 2 Mar. Law Cas. O. S. 390.

The Nepoter, L. Rep. 2 A. & E. 375; 3 Mar. Law Cas. O. S. 355.

McLeod, for the defendant.—This is the first time it has been contended that this common form of a bill of lading could cover damage done by leakage of other goods. The cases cited are not applicable.

Grove, J.—I am of opinion that the rule must be made absolute. By the bill of lading the shipowner is "not accountable for rust, leakage, or breakage." That means to say that if casks or packages break or leak the shipowner is not responsible for the damage to those casks or packages or their contents. But there is nothing in the words to release a shipowner from other consequences of that leakage. In the case of "rust" that would be very unlikely to damage anything but the thing itself, and we may fairly conclude that the other words are intended to cover only damage to the package broken, leaking, or rusty, and not the consequences of that damage. The shipowner says he will not undertake that the goods will not rust, break, or leak, but nothing further. To allow a shipowner to avoid the consequences of leakage from one package to the rest of his cargo would be a very formidable affair, and we are not warranted in doing so upon the authority of the cases cited to us. In *The Hélène* (*ubi sup.*) it was only decided that the loss of oil by leakage, however great, so long as it happened without negligence, was covered by the word "leakage" in the bill of lading. In *The Nepoter* (*ubi sup.*), Sir R. Phillimore held that the words would not cover damage by leakage if it was caused by neglect of proper precautions on the part of the shipowner.

Denman, J.—The natural interpretation to be put upon the word "leakage," in the connection in which it appears before us, is the diminution in quantity of the article itself. The word is merely intended to protect shipowners from the liability for damage to packages containing liquids. It is not intended to protect the shipowner from injury to other parts of the cargo resulting from the leakage. The decision of Sir R. Phillimore is in accordance with our views, because he declined to extend the meaning of "leakage," and confined it to damage to the thing itself. We decline to extend the meaning of the word.

Rule absolute with costs.

MISCELLANEOUS.

In Tokio on the night of the 10th Oct. at 11.30, a fire broke out on the premises of a timber merchant at Mita, Koganji Mon. No. 25, at the foot of the hill on which stands the former British Legation. In spite of the rain, which was falling in torrents, and the absence of wind, the flames were not extinguished until several houses had been destroyed.

By the *Nagoya Maru* we are in receipt of full particulars of the recent accident upon the Kobe and Osaka Railway; by which it appears to have been not nearly so serious as was at first supposed from the garbled and exaggerated accounts published here. By some error (on whose part is not yet clearly ascertained) a special train of empty carriages left Nishinomiya Station for Kobe before the ordinary train from Kobe had arrived, and came in collision with the latter between Nishinomiya and Sumiyoshi Station. One guard and a fireman were killed; the two engine-drivers, and one fireman severely wounded; but no other person was injured in any respect. The two locomotives, and several carriages in either train, were of course considerably damaged. A searching investigation into the cause of the premature despatch of the empty carriage special train is being made at Kobe.

At a meeting of the Board of Health held on October 10th, 1877, the following resolutions were unanimously passed:—

Resolved:—That in the death of our colleague Dr. E. Massais, brought about by cholera, the result of exposure to infection, voluntarily incurred in his devotion to the public welfare; this organization, and the community as well, have sustained a severe loss, as his professional skill and high personal qualities had endeared him to all who knew him.

Resolved:—That the members of the Board of Health tender their sincere sympathy to the family and friends of our lamented colleague.

(Signed) STUART ELDRIDGE, M.D.,
Secretary of Board of Health.

THE *Hiogo News* of the 3rd October states that no notification had so far appeared on the subject of shooting licences. Its remarks on the subject are one answer to those sportsmen who complained here of the shooting season commencing officially on the 15th instead of the 1st October:—

It has been the practice here to commence *pro forma* on the 1st of October, though for full four weeks after that pheasant shooting involves immense labor under a sun far too hot to be pleasant, for a very small return. In the absence of any notification from the Government, a few enthusiasts did, we believe, go out on Monday morning, just "to keep up the charter," but as yet, except for the first hour after daylight, the toil must be so great in this kind of country as to destroy the pleasure, for which reason the delay of another fortnight at least in the issue of licenses will be no practical injury or deprivation to anybody whatever. As to the head of game in the neighborhood, we have the same conflicting accounts as usual before the rice is cut, and no certain conclusions can be drawn from such opposite facts as one man flushing half a dozen birds in ten minutes and another drawing a favorite bit of cover blank. Many of this year's birds are, besides, not yet full grown, and on the whole we do not think that any one will lose any appreciable amount of sport who is content to wait for at least two or three weeks more before commencing his season.

H. I. H. PRINCE ARISUGAWA-NO-MIYA WAS, on the 10th ult., appointed to the command-in-chief of all the Imperial armies, the same high post as was held by the late Marshal Saigo, previous to the Satsuma rebellion.

FORTUNATELY for Yokohama, the gale on the 11th of last month was not of very long duration, or we should have had, in all probability, the painful task of enumerating many more cases of damage to life and property than we now have to chronicle. As it is the destruction has been considerable. The steamers in harbour got up steam before the severest part of the gale came on, and so were able to resist the force of the wind, with the exception of the German gunboat *Nautilus*. Three schooners, the *Otsego*, *Reindeer*, and *Beatrice*, however, were not so fortunate. The *Otsego* dragged her anchor and came into collision with the *Mary Jane*, doing some trifling damage, and then drifted to the stern of that vessel, where she managed to hold fast. The *Beatrice* drifted past the French mail steamer and almost as far as the *Elisabeth* before she was brought up. The *Reindeer* became entirely unmanageable, and went ashore below Kanagawa, where she now lies. The Pacific Mail tug, in going to the assistance of some cargo boats, had two men washed overboard, but they were rescued. One cargo boat went to the bottom, and two others over to Kanagawa. The *Parmenio* being altogether without, or with very little, ballast, seemed at times to be in imminent danger of capsizing, and great anxiety was felt for her safety until the storm had somewhat abated. The *Nautilus* was lying a short distance in front of the *Nagoya Maru*, and was observed by the officers of the latter vessel to be drifting. The *Nagoya Maru* gave out as much chain as possible in order to avoid the threatened collision, but all to no purpose. On came the German gun-boat striking almost broadside on the cat-heads of the *Mitsu Bishi* steamer, and down came the main-yard of the man-of-war with a crash, injuring some of the men. Two boats belonging to the *Nautilus* were smashed, and some other damage was done. A detachment of native police, with a number of coolies armed with ropes and boat-hooks, were told off for duty and took up their station at the English hatoba. But as the wind blew off the land their services were not likely to be required in that quarter, unless, indeed, they had been

needed to rescue some rather venturesome foreigners. On shore the damage done was pretty equally distributed, and was confined mostly to fences, plaster and roofs. The bund, after the gale was over, presented anything but a picturesque appearance from the destruction to fences; and in Main Street some of the buildings do not look quite so handsome to-day as they did yesterday morning; and the once elaborate signboard of a certain tradesman bears unmistakable evidences of having suffered. Some buildings in the swamp suffered severely; and the large iron shed at No. 202 is almost completely wrecked. At the English Hatoba a sampan and two foreign boats were caught up by a gust and carried over the wall into the sea. Many fences and gardens on the Bluff are complete wrecks; and several dwellings have suffered more or less severely. When the gale was at its height a large pine tree, in the neighbourhood of the Miokoji temple, and overhanging the village of Kitagata at the rear of the Bluff Gardens, broke off about three feet from the ground and fell on a Japanese dwelling, smashing it to atoms. The occupants, a man and his wife, were both severely injured, a bough pinning the man to the ground, and it was with great difficulty that he was extricated. His injuries are so severe that his life is despaired of. An old jinrikisha coolie was passing at the time the tree fell, and was knocked down by it. He was picked up and carried to the hospital at Noge yama, but died at about eight o'clock last night. In the neighbourhood of Homoku several houses were destroyed, but no lives lost.

TOKIO experienced severe effects from the gale. The *Nichi-nichi Shinbun* says: A heavy gale and rain storm visited Tokio and the vicinity, and effected more or less serious damage in all directions. The buildings of the National Exhibition at Ueno sustained special injury. Several trees planted in a row along each side of the Hirokoji (Square Road), close to the Ueno Gardens, were torn up by the roots, and numbers of trees, both large and small, in the gardens were broken or blown down. The mound in the garden, through which the wooden pipes bringing water from the lake Shinobazu to the fountain, was injured for a considerable distance, and inundated the roads. Numerous vases of all sizes, containing valuable plants, were tossed about hither and thither in the Exhibition Gardens. The front gate was closed at 2.30 p.m.; but soon afterwards the two leaves forming the gate were forced open with tremendous violence, and a gust of wind rushed into the Western Hall, laden with small pebbles and branches of trees. This carried away in one moment the roof for the space of about 120 feet, and threw it down close to the Zoological Hall. Not much damage was done to the articles on exhibition, which were removed to the Machinery Hall. The roof of the Western Hall was however entirely ruined. The officials and about sixty coolies worked hard to protect property. One official and five coolies were injured more or less seriously. The Fine Arts Hall and other buildings were damaged a little. Four or five days will be required to complete the repairs. The *Choya Shinbun* says:—The long structures, now inhabited by newly enlisted troops, and lately occupied by the Public Works Department, were hurled to the ground, and many people inside were wounded. Not a single wooden or bamboo fence is to be seen undamaged; and the roofs of the houses in Akasaka and other elevated positions have been stripped of their tiles.

MR. DENISON, U. S. Acting Consul, has received a letter from the Hon. Jno. A. Bingham stating that shooting licenses will be issued to American citizens on substantially the same terms as last year.

THE cargo of two boats, which were wrecked during the late gale while coming off from the *Glencarn*, has been recovered and is now stored in the Government godowns at Kanagawa. It consists principally of bale goods. The contents of another boats, being iron, are still at the bottom of the harbor, and will have to be recovered by divers.

WE see in the *Hiogo News* Shipping List that Messrs. Browne & Co. have despatched, on the 15th October, the British steamer *Yorkshire*, 1,771 tons, from Kobe with a cargo of rice for Madras, the first direct shipment, we believe, of that grain from Japanese ports to India. Chinese in Kobe have sent the British schooner *Iris* with wheat to Amoy.

A FOREIGN passenger by the *Hiroshima Maru* from Kobe states that he is convinced that no cases of cholera have declared themselves on board. The three hundred prisoners, more or less, who were brought by her were very closely crowded together; and two of them died on the passage between Kobe and this. The vessel has not been put in quarantine; but, as a precautionary measure, as soon as the cargo is discharged will be fumigated.

THE *Annie W. Weston*, which put back on the 19th ult., sailed on the 8th with a cargo of rice for the United Kingdom. Two cases of what is supposed to have been Asiatic cholera declared themselves among the crew. One man, Thomas Thompson, died on the 10th, and the other, Andrew Croylston, survived till the day after. On the 11th the vessel encountered the typhoon; and, after making very heavy weather, fell into the trough of the sea and took in a great deal of water. The cargo is all damaged, and seventy-five tons were thrown overboard. All is well on board now; and the barque, which, under the inspection of Dr. Tripler, has been thoroughly fumigated and disinfected, is lying some distance out in the harbour. We subjoin an account given by Captain Winsor of the events of his short voyage:—

"We encountered on the 11th Oct. about 70 miles off the Kii Channel, almost the entire strength of the cyclone which passed over Yokohama on the afternoon of the same date. The vessel having been thrown on her beam ends, a large quantity of water got into the hold through the fore-castle; and the captain supposes a great part must have found its way through the ventilators also, as these project above the deck. It took the entire crew nearly two days after the gale abated to free the ship from the water which she had made; and as she has been tight since then, it may be inferred that the greater part was taken in from the deck. Some sails were cut away. All the fittings about the deck, such as water casks, the loose things about the fore-castle, sailors' bags and clothing, and a great quantity of stores in the cabin were lost, the sea having full play; but fortunately the hull of the ship suffered no material injury, and the spars all held out well.

"About twelve hours before the height of the storm, one of the seamen was seized with violent pain in the bowels and cramp, and after a few hours died; and during the worst of the gale another man was taken ill with the same symptoms and died very speedily. The Captain had the bodies thrown overboard; and

every particle of their bedding and clothing that was left in the fore-castle was also thrown into the sea. The two men mentioned were the stoutest and healthiest of the crew, and had been in the vessel since she left New York. It is presumed that a large portion of the cargo is damaged, as the smell arising from the hold is very nauseous.

"The lowest reading of the barometer during the storm was 29° 36'. The wind was from S. S. E. to S. W."

It is worth mentioning for the instruction of those who grumble at the information contained in Reuter's telegrams, at the same time as they pay no subscription, especially with reference to the result of the French elections, that the telegram dated the 16th October must have been despatched from London early on the morning of that day, by which time the results of the voting in the different arrondissements on the 14th could hardly have been compiled and compared in Paris. We may mention, too, that telegrams are coming through very slowly. A private one dated London, 16th ult., 7.30 p.m., and sent direct, was only received on the 19th at 4 p.m. The remarks which have been made come with a specially bad grace from the source from which they emanated.

We subjoin the score of the base-ball match played on the 18th October.

Owing to the inability of several of the Tokio men to be present, this game resulted in an easy victory for Yokohama and Visitors. Only seven innings were played, when the game was called in on account of darkness.

THE meeting of the Yokohama Amateur Rowing Club took place at the Y. U. Club on the evening of the 17th ult., the object being to consider the advisability of rebuilding the boat-house, to meet the requirements of the Club. As many honorary members have joined for the sake of bathing during the summer months, the present boat-house is too small to accommodate all with comfort.

Mr. Dodds, being called to the chair, explained to those present the Committee's scheme, and read a statement of finance, which showed a balance in hand, but not sufficient for building purposes.

During the late gale the house was almost entirely unroofed, and as expensive repairs were necessary, it was considered the best course to seize the opportunity and reconstruct the building on a larger scale. For this purpose a sum of about \$1,000 more than the funds in hand is required, and having settled the question as to rebuilding in the affirmative, some little time was taken up in arranging as to how this should be done. Ultimately it was proposed and carried that the committee should be empowered to raise a sum not exceeding \$1,000 at a rate of interest not more than 10 per cent. per annum, in the best way they think fit. It is calculated that this loan can be paid off within three years.

A question then arose as to the amount of ground required. The plan kindly made by Mr. McRitchie was for a house thirty-four feet in width, and the ground to be six *ken*, or thirty-six feet, this leaving only a foot on both sides. This was thought not sufficiently wide in case of fire occurring in any building that might be erected on either side, and it was proposed that a larger piece of land be rented to allow of a clear space of at least 6 feet on each side. This met with no little opposition, and the dinner-gong sounding, the majority of the members departed without having decided the question. The meeting was now reduced to some ten members when it was pointed out that although the new house had been decided on, and the question of raising the necessary funds settled, that the committee had not been authorized to rent the ground required. The old agreement, being from month to month, was very unsatisfactory, and it was understood by the meeting that the committee could now get the ground required on the site of the present boat-house, obtaining a lease for a term of five years, terminating however at the option of the Japanese Government, should they require it. (This same clause is in the M. B. M. S. S. Co.'s lease with the owner, for the land they have beyond). The length of notice to be given by the Japanese authorities, when they want the ground, for the boat-house to be moved was not stated, but these details will no doubt be satisfactorily arranged before the lease is entered into.

Some of the propositions would have been more fully discussed if the Committee had been a little more punctual in their attendance, but this unfortunately is not a fault apparently of members of this Club.—*Communicated.*

THE Agent of the P. & O. Company has received authority from the Hongkong office to receive on board vessels of the Company Japanese Mails either direct from the Imperial Japanese Post Office or through the British Post Office.

A CORRESPONDENT writing from Hiroshima, under date the 10th ult., sends us the following items of news:—

On the evening of Saturday, the 7th instant, while the carpenters and other workmen employed in erecting the new Kencho buildings, which are to be in European style, were collecting their tools &c., preparatory to returning to their homes, a large beam, forty feet in length, and two feet in circumference, which had that day been placed in the roof of the building, fell with a terrific crash, killing three of the men on the spot, and injuring

more or less severely, twenty-seven others. The wounded men were at once conveyed to the hospital, where every attention was paid them.

As an instance of the superstition existing among the lower class Japanese, it is said that a large and black cloud was observed by the workmen to be hovering over the building a few minutes previous to the accident, and which, after the accident, suddenly disappeared. This strange phenomenon was at once put down as the reason of the catastrophe, which was believed to have been sent by the gods as a punishment on the men, for some crime committed by them. The survivors have since paid a visit to the temples dedicated to their respective deities, and there pledged themselves to reform, and lead a good life for the future.

Four cases of cholera have occurred in Hiroshima, three of the victims being garrison soldiers. They were at once removed to a small island, distant about 2 *ri* from the town. In the event of any fresh cases occurring the sufferers will immediately be conveyed to the same place. The fourth case, that of a jinrikisha coolie, proved fatal, the poor fellow dying two hours after seizure.

The Kencho officials are using every means in their power to stop the progress of the disease. Orders have been issued prohibiting the sale of *kaki*, and many other kinds of fruits. The floors of the public places have been liberally sprinkled with carbolic acid, and the surroundings plentifully strewn with chloride of lime. The noxious open drains, running in front of the dwellings of the poor, everywhere so plentiful in the interior, have all been covered over with boards, and other measures taken to prevent the disease from spreading.

Any poor person, applying at the house of any of the native doctors, will be supplied with disinfectants, free of charge. It is to be hoped these precautionary measures will at once put an end to the contagion.

The annual meeting for the installation of the Worshipful Master of Otentosama Lodge No. 1263 for the ensuing year was held on Saturday evening, the 20th ult., in the Masonic Hall. About thirty-five brethren, members of the lodge and their visitors, were present. Among them were the R. W. Brother C. H. Dallas, D. G. M. for Japan, and W. P. M. Bourne, Weiller, Singleton, Freame, Crane, Stone, Cox and Langfeldt. The ceremony of installing the new master, Brother Henry Moss, having been concluded, he proceeded to the investiture of his officers. These are as follow:—

Bro. W. E. Clark,	S. W.
" H. Meier,	J. W.
" J. J. Gray	Treasurer.
" C. D. Moss	Secretary.
" C. H. Gaffeney	S. D.
" J. W. Gray	J. D.
" G. Booth	D. of C.
" J. Osborne	Organist.
" J. W. Sutherland	} Stewards.
" J. Budge	
" F. Retz	I. G.
" A. Hearne	Tyler.

The lodge ceremonies were concluded shortly after seven o'clock. At half-past, the brethren adjourned to the banqueting hall, which had been pleasantly decorated, and where a tasteful but substantial collation was provided by the care of Bro. Budge of the Japan Hotel. When this had been done justice to the customary loyal and masonic toasts were given; and then the Chairman, the newly installed master, proposed the health of the R. W. Bro. Chas. H. Dallas, who replied feelingly, stating that eight years ago he was in the same position as was Brother Moss now, and he was convinced that the help which had been accorded to himself in the discharge of his duties by the officers and members of the lodge would be extended to the present master. The next toast worthy of notice, was that of the newly installed W. M., which was drunk with all the honours. A song, an original composition, was sung by the brethren, who at its close were vociferous for the upris-

ing of the author, a demand which that gentleman's modesty declined for some time to accede to. The guests, however, were determined to have their own way, and the bashful poet rose, was cheered, and subsided. Bro. H. Moss returned thanks gracefully for the honour done him, and took the opportunity of alluding to the approaching departure for Hongkong of his immediate predecessor in the chair, whose absence would be felt by the lodge in the loss it would sustain of his advice and help. The lodges in Hongkong would gain by our loss. The speaker here proposed a health which, like the last, was drunk with full honours, that of the departing guest, Bro. J. S. Cox. The health of the officers of the Otentosama Lodge, also enthusiastically drunk, was neatly replied to by Bro. W. E. Clarke. Other toasts, varied with music and a recitation, were proposed, drunk, and replied to, until half-past eleven o'clock, when the health with which all masonic banquets close was done honor to, and the guests dispersed after having spent sociably a pleasant evening.

A SHOCK of earthquake, of slight intensity and about one minute's duration, was felt at a quarter-past eleven on Saturday evening, 13th ult.

At a meeting of the residents of Ts'kidji, Tokio, on Saturday afternoon, October 13th, the following gentlemen were constituted a Board of Health, with power to add to their number.

Henry Faulds, M.D.,	Ts'kidji, No. 18.
W. Donitz, M.D.	" " 28.
D. W. Stevens,	Ts'kidji, U. S. Legation.
Capt. J. M. Batchelder,	Ts'kidji, No. 1.
Charles Hargmeyer,	" " 41.
J. Winckler,	" " 41.
J. Clatand,	" " 33.
Rev. George Cochran,	" " 4.
Rev. Jas. L. Amerman,	" " 10.

All communications may be addressed to the Board, care of J. Thompson, Ts'kidji, No. 33.

JAS. L. AMERMAN,
Secretary.

AS BY AN absurd rule of the Asiatic Society representatives of the Press are, as such, excluded from the meetings of the institution, we are prevented from giving any account of the interesting lecture, delivered by Professor Morse, on the evening of the 13th ult., on the prehistoric remains discovered by him in a shell-heap near the Omori Station. A large audience, consisting of members of the Society and their friends, assembled at half-past eight o'clock at the Grand Hotel; and the small dining room having been found too restricted in space to hold them, the lecture was delivered in the large room.

In our daily issue of the 13th October we published from the *Choya Shinbun* a short article urging that now is the time to establish a representative assembly. For that purpose, as for most other good deeds, there is no time like the present, when a formidable insurrection, the leaders of which are believed to have fought for representative institutions, has been put down, and when the people are waiting and eagerly hoping for progressive and liberal action on the part of the Government. We believe that the advisers of the Mikado have the matter under serious consideration; and we have no intention of depreciating the greatness of the task demanded of them. Still, the peace recently obtained has been gained by the shedding of

much blood and through much suffering, which the country is very likely to lay to the charge of a Government, that has become all but irresponsible, especially if no prompt attempt be now made to meet the popular requirements.

AN important step in connection with missionary effort in Japan has been taken in Tokio which will doubtless have very great influence on the future Christianity in this country. We refer to the opening of a Theological Seminary in connection with the recent Union between the three Presbyterian Missions in Japan, namely, the "American Presbyterian," "Dutch Reformed" and "United Presbyterian" (Scotch). The College is to have a permanent staff of three professors, one nominated by each of the Missions, who will give their strength to this work. In addition it is provided that the assistance of qualified lecturers shall from time to time be obtained when this is practicable. As permanent teachers the Rev. William Imbrie, on behalf of the American Presbyterian Mission, the Rev. J. L. Amerman on behalf of the Dutch Reformed Mission, and the Rev. S. G. McLaren on behalf of the United Presbyterian Mission, have been nominated; but in addition the College has been fortunate enough to secure the assistance of the Rev. Dr. Verbeck (who has undertaken to give 4 hours a week to the work) and of the Rev. David Thompson. The Rev. E. R. Miller of Yokohama has also kindly undertaken to give one lecture a week. The course of instruction will extend over three years at least, and will embrace the Evidences of Christianity, Sacred History and Biblical Literature, Old and New Testament Exegesis, Systematic Theology, Homiletics and Pastoral Theology, Church History, and the Constitution and Government of the Church. A competent Chinese teacher will also be attached to the Institution. There are already nearly thirty students in attendance. Part of the instruction is in the meantime to be given in English; but it is intended that this shall cease as soon as possible, and that the whole instruction shall be given in the Japanese language.—*Communicated.*

DR. A. GOERTZ has been temporarily appointed, by the Committee of the General Hospital, to the post of joint Surgeon of that institution, rendered vacant by the melancholy death of Dr. E. Massais.

THE M. B. Co.'s str. *Toyoshima-maru* arrived at Shinagawa on the 15th of last month from Kobe, and reports falling in with the English barque *Ville de Lille* in lat. 33-57 N., long. 136-28. E., in a disabled state,—masts gone, bulwarks stove in, and she had sustained other serious damage, in the typhoon of the 11th inst. The *Toyoshima-maru* took the wreck in tow to Owashi Bay; but her own machinery being partially disabled she was unable to tow the wreck to Yokohama.

In a letter addressed to the *Echo du Japon* Mr. Hyver, the plaintiff in a suit in the French Consular Court, makes a sort of apology for the insolent expressions which he made use of in speaking of the press during the hearing of the 13th ult. He says that the offensive terms, if he used them, must have escaped him involuntarily; "for he has no reason to insult people who are very respectable, and who have never done anything to him." He says that he read in Court for the first time on Saturday, 13th October, the article in the *Cosmopolitan Press*, according to

which he said "that he was not proprietor of the 'Oriental Hotel.'" He was "indignant with the editor" for misrepresenting him. This is an excuse which, though perhaps better than none, is hardly valid for a sweeping and uncalled for insult.

THE season for fires has opened in Tokio with, for that city, a not very extensive conflagration at Nandomachi, Ushigome. It commenced at about 10 p.m. on the 22nd ultimo, and was extinguished after sixty-four houses were burned to the ground.

THE paddle steamer *Augusta*, wrecked in the gale of July last off Benten, and lately purchased by the Yokohama Salvage and Divers' Company, has been successfully lifted by pontoons, and is now lying at Kanagawa.

WE have not much space, or inclination so to fill it if we had, for long extracts from a letter by one signing himself "Voyageur," and dated Yokohama, August 28th, in the *San Francisco Post*. It contains nothing that is new and true: it is never more than superficial when it is at its best, and is mostly false, as the one sample we do reproduce will show. It is really a pity that the enterprise of the American press should often outrun its justice and discretion. In the East especially its correspondents seem, as we have already noticed in one or two instances, to have a prerogative of defamation. *Mister Parkes* will be surprised to hear, on such good authority as that of "Voyageur," that he has *opposed* the entry of Japan into the Postal Union:—

From all I can see and hear, I infer that the English are losing their popularity with the Japanese, and the Americans and French are gaining. The tone of the English papers has caused much of the ill-feeling. The arrogance of the British Minister is another reason for it, and the large sums demanded upon English contracts is a third. Sir Harry Parkes has a dictatorial manner, and when the Japanese government does not incline to meet his wishes, he throws out mysterious hints about gunboats and coercion. Japan is very anxious to stand well in the family of nations, and is making every effort in that direction. She has entered the Postal Union in spite of Mr. Parkes' opposition, and she proposes in a few years to have an international exhibition. The United States has encouraged her in several ways, and is prepared to do more when the time comes. Judge Bingham, the United States Minister, is highly popular with the Japanese government, and is always most cordially welcomed at the Foreign Office.

And this is the writer of whom the editor promises that he will "confine himself chiefly to themes that will interest practical minds," the author whom he describes as "one of the best known journalists, lecturers, and book-makers" in America.

WE learn from the Agents of the O. & O. S. S. Co., and P. M. S. S. Co., that the five next departures of their respective steamers, from Hongkong and Yokohama for San Francisco will be as follows.

From Hongkong	<i>Oceanic</i> ,	Nov. 8
" "	<i>China</i> ,	" 23
" "	<i>Belgic</i> ,	Dec. 6
" "	<i>City of Tokio</i> ,	" 19
" "	<i>Guelic</i> ,	Jan. 2, 1878
From Yokohama	<i>Oceanic</i> ,	Nov. 17
" "	<i>China</i> ,	Dec. 4
" "	<i>Belgic</i> ,	" 15
" "	<i>City of Tokio</i> ,	" 28
" "	<i>Guelic</i> ,	Jan. 11, 1878

THERE appeared some months since reasonable ground for the hope that the approach from the Grand Hotel Bridge to the Camp Hill would be improved, enlarged, and rendered

safer than it is for the passage of pedestrians, jinrikishas, horses, and carriages. The then Acting French Consul had interested himself in the matter, which is one of some importance to dwellers on the Bluff, and entered into negotiations with the Kencho authorities for the cession of enough of the corner of the now unoccupied French Camp to render the projected improvement thorough and complete. We are unaware whether all hope of the fruition of Mr. Kraetzer's scheme has disappeared. Possibly, when the exact site of the future French Consulate is decided on, it may revive; or the present Consul may deem the renewal of negotiations with the Governor of Kanagawa, with a view to the convenience of a large section of the foreign settlers, a matter worthy of his consideration. But whether this be so or no, and whether or no the passage of the foot of the Camp Hill ever be rendered more pleasant and safer than it is at present by a slice from the rugged corner of the French Camp being incorporated with it, an opportunity now presents itself to the local authorities to remove one element of inconvenience and of danger, namely, the obstruction to an uninterrupted view of the bridge caused by the ugly corner structure of piles and planking, which serves at present as tide-waiters' quarters. A portion of this place is now being rebuilt. Why should it not be removed altogether to the opposite corner, on the same side of the Creek, of the bridge? There it would be no hindrance to the view of the bridge from either side. At present it is a negatively dangerous screen, and should be removed. If its removal is impossible, or very inconvenient, its height might be reduced by one story. People driving, even in a high trap, cannot see over it as it is now. They should certainly be able, in such a place to see through the space it occupies.

THE native silk-worms' egg card dealers have held several meetings lately, in one of the upper rooms in the Town Hall, Honcho dori. The *Mai Nichi Shinbun* says that they decided that, out of 1,200,000 cartons, which now comprise the total stock in Yokohama, 600,000 are to be thrown into the sea, and the remaining 600,000 sold to the Italian *graineurs*, to whom they have addressed a letter giving notice of this determination.

With reference to the foregoing, we have not been able to obtain all the information we could desire on the subject, but feel justified in asserting that the Japanese silk-worms' egg dealers have decided on the destruction of fully half a million cards.

THE *Nichi Nichi Shinbun* contains the intelligence that the Government are busy making arrangements to purchase, with the national money, from those who may hold them, the notes issued by the insurgents. The reason adduced for this very generous measure is that the inhabitants of the provinces where the war was waged were forced to accept those notes from the insurgent soldiers.

THE *Echo* says:—The *Laclocherie* which arrived on Sunday (21st ult.) in our port will not make a long stay there: she will be shortly replaced by the *Champelain*. The *Galissinière* and the *Hugon* will also come shortly to take in the waters of China and Japan the places of the *Atlante* and the *Talisman*.

We read in the same sheet that M. de Perpigna has been appointed Secretary and Interpreter to the Japanese Commission, which is

about to leave in order to take part in the opening of the Paris International Exhibition of 1878.

THE question of the public water supply, always one of great sanitary importance, is doubly so in times of epidemic disease. Both the Board of Health and the Kencho authorities have felt this, and the former in their advice, the latter by their acts, have done their best to ensure that pure water only shall be used for household and culinary purposes. In Homura alone upwards of 130 wells have been closed: indeed very few are left open. Those which have been closed in that district and elsewhere have been found largely contaminated with organic matter, a thing not to be wondered at when we consider the general system of Japanese living. As it is well to know where good water can be obtained, we have, at the request of Mr. A. Gérard, inspected the water-works of which he is proprietor. From a clear hill spring, issuing from the side of his Bluff property, No. 77, the water is conducted through iron-pipes into a large covered stone reservoir, connected also by pipes with the side of the creek, whence as much as 250 tons a day can be discharged into water boats, and thence transferred to the shipping in harbour. This same spring also supplies two fountains, one public and the other conceded to the landholder under whose ground the pipes pass, in Homura, where "No. 77 water" is in great request. An analysis, made by Dr. Geerts at the Imperial Japanese Laboratory, of the water of the spring which affords so generous a supply to the "Navy Water Works" gives the following result:—

Very clear, colourless, without odour, and of pleasant taste. A very few small particles of organic matter are contained in it, but the quantity is insignificant.

Sulphates	- - - -	few.
Chlorures	- - - -	mean quantity.
Chalk	- - - -	little.
Carbonic Acid	- - - -	mean quantity.
Chloride of Ammonium	- - - -	traces only.
Nitrates or Nitrites	- - - -	none.
Organic Matter	- - - -	traces only.

This water is, consequently, very pure, and can be drunk without any danger without being filtered.

Mr. Gerard submitted three other samples of water to Dr. Geerts for analysis. The last was that taken from a fountain at No. 188, in the very heart of the settlement, which is supplied through iron pipes, leading from a hill stream at Ishikawa, quite a mile away, to Mr. Gerard's grant in the Swamp concession, where the constantly flowing jet is in charge of a Japanese agent of his. The analysis of a sample of the water results thus:—

Very clear, colourless, odourless, of pleasant taste.

Sulphates	- - - -	very few.
Chlorures	- - - -	very few.
Chalk	- - - -	very little.
Carbonic Acid	- - - -	mean quantity.
Chloride of Ammonium	- - - -	none.
Nitrates and Nitrites	- - - -	none.
Organic Matter	- - - -	traces only.

This is consequently the purest of all the four kinds, and of extreme purity.

In giving publicity to these analyses we are doing at least as much good for the public as for the enterprising proprietor of the water-works.

THAT a Christian should have been allowed to die where the late Mr. O'Sullivan expired is a disgrace to the community at large. He might as well have been laid outside the Small Pox Hospital, on the vacant plot whose only occupant is a donkey, as in the shed of the said so-called hospital where his last earthly

bed was made. The fault does not lie with the hospital surgeons: it cannot be laid at the door of the hospital management: it is not the neglect of one individual; but it arises out of the apathy of all the foreign residents collectively. Dr. Eldridge and his late colleague have worked earnestly, but in vain, for the establishment of a hospital for foreigners suffering from infectious diseases; and the Committee of the General Hospital would willingly see one built. The community alone do not seem to care about it; and thus it happened that one of their fellow Christians was put to die into a place not fit for a cow-shed, with broken door, wooden windows, gaping sides, and a roof open to the sky, a den fit only for the propagation and shelter of fleas and vermin. And where was this? In some secluded spot? Away, at least, at Mississippi Bay? No such thing; but in the very centre of the inhabited Bluff, in the enclosure covered with ramshackle, tumble-down, hangars, which to the disgrace of the foreign settlers does duty for a Small Pox Hospital; and where, in their very midst, all other infectious diseases which may occur among their fellows must, of necessity, be treated, thence to spread on the wings of the breeze, or by filtration through the soil whither they list. Odd indeed, if the arrow of pestilence shot at hazard from so central a spot should not hit some mark.

AND really something should be done by the community for the funds of the General Hospital. These are at so low an ebb, that the Committee have been compelled to reduce by half the salaries of the Surgeons in charge, who before were not too splendidly paid; and who now, unless the public interfere, will have to discharge their sometimes arduous, often dangerous, and always unthankful duties for the liberal wage of \$25 a month each. This is highly creditable to the foreign settlers.

SOMETHING has been said, and is often repeated, as an excuse, by those who have no desire to assist the Hospital with their purses, that the institution has had two handsome legacies left it. Nothing could be false in fact. The late Mr. Rangan did leave something to the hospital—very conditionally. His legacy is so hampered with restrictions and provisions, and is so very contingently reversionary, that it is practically valueless. If the best should arrive and the claim of the hospital to it be established, it cannot be available for twenty years to come. And, meanwhile, if any homeless Christian should be taken by an infectious disease, there is such a worse than pig-stye as we have above described to lay him in. The other legacy, that of Mr. T. Smith, being a residuary one, and there being no prospect of the smallest residue, can hardly be considered much of a windfall. The Hospital benefits not at all by the deaths of Messrs. Rangan and T. Smith.

THE news from France received by telegraph on the subject of the elections is important and reassuring. Its effect has already been felt upon the silk market here. This appears to be how the matter stands. If the republican majority is really a very great one, then Marshal MacMahon is likely to retire from the Presidency, and not to attempt a *coup d'état*. In the event of his resignation there is little doubt that Monsieur Grévy, President of the Chamber of Deputies, will be elected President of the French Republic. On the other hand, had the majority been but a small one, there can be little question that a *coup d'état* would have been made, and that a revolution would have been

the result. From this trial France appears to have happily escaped, at least for the present.

THE Annual Meeting of the Yokohama Football Club was held on the 24th ult. at the Yokohama United Club, to appoint the committee for the coming season and to make any improvements in the rules that might be approved.

Mr. Hamilton being elected chairman read the minutes of the last meeting and a financial statement, showing a small balance in hand, which has been sent home for the purchase of new balls. The accounts having been duly passed, a committee of three, viz.: Messrs. Hamilton, Playfair, and A. H. Dare, were chosen, after which two amendments to the existing rules were passed viz:—One to allow of a drop kick when the ball is caught on the bound. The other to do away, as far as possible, with the objectionable and dangerous practice of charging to secure a touch down when the ball is against, or after striking, the palings. Any one looking on at the matches last winter, must have noticed the severe falls that took place against the palings, and it is considered that such falls would probably result, some day, in a bad accident; not to mention the damage done to the fencing round the ground.

This concluded the business of the meeting, and with a vote of thanks to the Chairman the meeting broke up.

Several of the old players have left recently, and it is hoped that by bringing this before the notice of the public, new men may be induced to join, and that this fine, healthy winter amusement may receive more encouragement from the younger members of the community than it did last season.—*Communicated.*

A FEW days ago we quoted from the *Saikai Shinbun*, a Nagasaki journal, a report that the Takashima coal mine had been again on fire. This story is entirely baseless. The only claim it has to a vestige of foundation is, probably, the fact that early in last September some shale took fire but was promptly extinguished. Now we read in the *Jiyu Shinbun*, also of Nagasaki, the astounding intelligence that 1,049 persons employed in the minedied of cholera between the third and the tenth inst. As, if this were a fact, the mine should certainly be closed for a time, we applied to the agents, Messrs. Jardine, Matheson & Co. for authentic information, which was promptly supplied. Writing on the 12th ultimo, the Nagasaki agent reports to his principals, up to that date, 227 cases. Of these, 140 had proved fatal, 19 were still in hospital, and 68 had been discharged. In a letter, bearing the date of the 19th ult., he states that from the 12th to the 18th there had been 17 more deaths, making the total 157. At the time of this last mentioned despatch he affirmed that the epidemic was diminishing: that there had been two days' rain which had the effect of perceptibly reducing it; that cool weather was setting in: and that with its becoming settled there were good hopes of the entire disappearance of the disease. It is pleasant to learn that when cholera first declared itself, prompt precautionary and repressive measures were instituted. Hospitals were established, disinfectants, preventive medicines, and flannel bolts were issued to the miners and their families. Blankets were liberally distributed, with instructions to the workmen on coming to the top of the pit to wrap their bodies in them. Those attacked were cared for; and the curious fact having been noted that new arrivals were more frequently victims of the

disorder than those who had long inhabited the island, steps were taken to prevent the influx of workmen from elsewhere. Thus the spread of the disease was certainly checked; and, when we consider that the entire population of the island is, probably, not less than five thousand, the death rate is not so great as might have been expected, and affords no excuse for the unwarrantable and alarming exaggerations of the Nagasaki native paper.

On the morning of the 26th ult. as a betto was driving Mr. E. B. Watson's pony-carriage past the Grand Hotel, Messrs. Copeland and Weigand's beervan was turning the corner from the opposite direction. The pony in the carriage became frightened and suddenly swerved round, capsized the carriage, broke both shafts, threw out the betto, and fell over the bund wall into the sea. The betto was bruised somewhat, but not seriously injured; and, as for the pony, it seemed more frightened than hurt as it emerged half choked from its involuntary bath. The bund wall at this particular spot is below the surface of the road, and it certainly should be raised sufficiently to prevent a shying pony from falling over, or probably some more serious accident than that of this morning may be the result.

We acknowledge receipt from the Exhibition Bureau of the "Official Catalogue of the National Exhibition of 1877." This work will be an invaluable aid to those who wish systematically and intelligently to visit the institution in Uyeno Gardens. The book has been printed by the Kobun-kuwan, or Office for the advancement of Literature, and evinces great care in its compilation and general get-up. It would be hypercriticism to point out its mistakes, which are certainly not so numerous as might have been expected, of orthography and typography. Nor is it responsible for the faulty system of arrangement of articles on exhibition to which we drew attention in our account of the buildings and their contents. The classification of products and manufactures under the ken from which they come, instead of according to their kind, is a great drawback to a comparative inspection of the whole; and this will be materially lessened for visitors by the possession of this work which is what it professes to be, a catalogue *seriatim* giving the designation of the things on view in the order in which they occur, together with the names of the exhibitors. The vocabulary of the botanical and zoological exhibits will be found useful by those who are interested in those subjects. The index, too, should be a great help to visitors who wish to inspect the products of any particular department or ken:—e.g. Nagasaki shows in four out of the six departments under which the articles are classified; and the index displays at a glance what its exhibits are, and where they are to be found.

By a notice suspended in the Court room of H. B. M.'s Consulate it appears that the case "*Iwasaki Yataro versus Philip H. Colomb*" on a motion of Mr. Ness, Counsel for plaintiff, has been set down for hearing before a jury on the 13th November next.

COMPILATION of the daily cholera returns published by us since the commencement of the epidemic show that 351 deaths among natives have so far occurred in Yokohama, and 142 in the vicinity. Total 493.

THE race for the Challenge Cup which was presented by Mr. J. J. Dare last Spring

to the Amateur Athletic Association of Yokohama, the conditions of which were, that it should be held by the winner of a quarter of a mile race, against all comers (members of the Association) for three consecutive meetings, came off on the afternoon of the 27th ultimo. No two finer days for sports than that and the previous day could have been picked out, and it seems a pity that the Autumn meeting of the Club was postponed. The interest taken in this one race shows that, had they taken place at the time originally appointed, a fair number of spectators would have turned out to witness them.

Last Spring Meeting Mr. A. T. Watson found, when he came to the scratch for this race, no competitor, so after a "walk over" became the holder of the cup, another term of possession of which he had to contend for against Mr. Walker this afternoon.

Messrs. A. J. Smith and F. Walker challenged for this, but as the former did not turn up, it resulted in a match between Walker and Watson. In drawing for places Watson had the choice and took inside. After one false, in which Walker got way, they were sent off to a splendid start, but Watson, getting round the first corner with a slight lead, kept it throughout and won in 56½ seconds—the fastest time in which a quarter has been done in the East. At the 100 yards' mark it looked like Walker's race, Watson running all he knew, with Walker going strong; but at about 25 yards from home Walker suddenly shut up, leaving Watson to finish in the above very fast time.

The path was in excellent condition, better than we have ever seen it, and our only regret is that such a close race as it ought to have been was not run out. If competitors will not finish, how are the handicappers to place them in future races?

Mr. Hamilton officiated as judge, holding the tape; Mr. A. H. Dare as starter, and Mr. Pinn as time-keeper.

On the ground, while waiting to see the match, some one had a happy thought, namely, to collect from the spectators sufficient money to purchase a cup to be run for at this meeting to be called the "Spectators' Cup," and which will afford a contest to fill the gap caused by the running of to-day's race. Twenty-five dollars were collected on the spot.

THE best part of a lady's letter is proverbially the postscript. The same holds good of many masculine epistolary effusions; and the last paragraph of a long letter addressed by an occasional correspondent at "Yedo" (it might better, because more properly, be "Tokio") to the *Shanghai Courier* is the only one really worth quoting now:—

Would it not be better for the Japanese Government to try and smooth away those ugly wrinkles on the countenance of the body politic, if they wish to be recognized as an aspiring people desirous of becoming civilized? Whether a change in the personnel of the ministry is necessary or not, in order to correct the present state of affairs, is a matter beyond the ken of foreign residents; but that an immediate and radical change in the tactics of the government is vitally necessary to the welfare of the country, every honest resident, whether native or foreigner, will readily admit. Saigo has always been the friend of the poor and the oppressed; chivalrous, generous and essentially unselfish, the impersonation of virtue and patriotism. Long will his country mourn his loss, if, as it is said, he has fallen in this unequal struggle. And by none will his loss be more deeply felt than by H. I. Majesty who owes the restoration of his sovereignty, in so great a degree to the loyalty and bravery of Marshal Saigo.

We recently took occasion to quote from an American paper, *The Post*, a garbled paragraph on the decline of English influence in Japan generally, and Sir Harry Parkes' diabolical and persistent obstructiveness to the country's progress, on the other, in particular. Now, under the heading of "a Visitor's View of the Situation," we are by no means astonished to see reproduced, with commendation, in a local weekly, addicted to the advocacy of monstrosities, and characterised by nothing so much as childish but virulent hatred and jealousy of everything English, another paragraph identical in idea, but even more spiteful and mendacious. The two letters, the one to the *Post*, and that from which an extract follows in the *New York Times*, are apparently from the same hand. We think we know the hand, and in truth 'tis not a fair hand in this instance; and the gall the pen was dipped in may be found in the inkstand of a foreign editor in Japan, whose sentiments, nay, whose phrases, are here, as if dictated by his mouth:—

Instead of receiving kind words and friendly commendation for her efforts, Japan seems to be the victim of persistent hostility. Especially is the conduct of the English hostile in the extreme, and an observer might suppose that England and Japan were in open warfare. The English papers at home have contained a great deal of adverse criticism of late, and as for the English papers at Yokohama, they steadily abuse the Japanese government, and tell falsehoods about it in a way that would lead to their suppression if they were owned by natives and printed in the native language. They encourage the rebellion, talk about the prospect of the fall of the empire, and suggest that the country is on the verge of ruin. Sir Harry Parkes, the British Minister, after opposing the entrance of Japan into the Postal Union, endeavored to secure from the government a subsidy for the Peninsular and Oriental steamships, carefully concealing the fact that the company is already subsidized by the British government for every mile its vessels run. Failing in this, he has coaxed and bullied it into buying the fixtures of the British Post Office in Yokohama and elsewhere—a lot of old desks and odds and ends that would bring very little if put up at auction. Both the railway lines in Japan were built by Englishmen and are under English management, and their cost was enough to put a great of money into foreign pockets. The grasping tendencies of the English, and their open hostility to everything out of which they cannot make money, has made them unpopular, and the ill-feeling against them is steadily increasing.

It is a pity to see the columns of a journal like the *New York Times* prostituted to such truthless and defamatory rubbish as this. A newspaper, for the value of its foreign news, is of course dependent upon the discretion and industry of its correspondents; in whom, however, it should insist upon the possession of some degree of those qualities, and not send to a country of which they previously know nothing, writers who are content, without taking any further trouble, to collect and distill the venom of the first person, who having some kind of "phobia" is only too glad to bite and inoculate one who, in his turn, is sure to propagate the disease through a large class of readers. It is false that the Yokohama English press is hostile to Japan, or encouraged the rebellion. What faults English writers here have honestly fancied they saw in the administration of affairs, domestic or foreign, they have candidly, and almost without exception temperately, commented upon; just as they did not indiscriminately vilify all the leaders of the late rebellion, or disguise what appeared to be good in their motives. The stupid or mischievous falsehood about Sir Harry Parkes opposing the admission of Japan to the Berne Union have been refuted beforehand in our comments upon the postal question. The tardy delay on the part of England in

recognizing the admission of Japan to the privileges of the Union was a departmental neglect, which we blame and deplore, but for which the British Minister was in no way responsible, and the ill effects of which he, on the contrary, offered to do his best to nullify. The charge of endeavoring, nefariously, for it amounts to no less, to obtain a subsidy for the P. & O. Company, is equally malicious and groundless; and as for the "coaxing and bullying," these measures were quite needless in what was merely matter for quiet negotiation, namely the taking over, with the future control of the English Post Office, the furniture of the office. Here, in Japan, such monstrous allegations fall under the incredulous contempt they merit; but abroad they are unquestionably mischievous, read as they are by numbers of people who have no chance of investigating their truth. This gives, to the libellers who inspire or write such paragraphs as we have with regret alluded to, a power for evil which they abuse without mercy. Secure from punishment, they follow to the bitter end the teaching ascribed to Talleyrand:—"Calumniate, calumniate! some of the slime is sure to stick!"

TRouble has arisen between some of the Italian *graineurs* and the Japanese silk-worms' egg dealers, through the latter being compelled by the coalition of owners and traders in *cartons* to repudiate a contract to deliver at a certain price. We learn now that, in consequence of representations made by the Italian Consul as to the existence of such a coalition, and its ability to prevent, by pressure brought to bear upon native would-be dealers, sales to foreign exporters, a consultation was held on the 28th ultimo between their Excellencies the Italian Minister and the Minister for Foreign Affairs. Such a combination as that existing, it seems, is held by the Italian authorities to be an offence against the freedom of trade, and contrary, not only to the spirit, but to the very letter of the treaty in force between Italy and Japan; and we have reason to believe that H. E. Terashima has been brought to recognize both its irregularity and illegality. Hence intimation should have been, ere now, received of his Excellency's decision by the Governor of Kanagawa.

We may add that, several complaints having been lodged by Italian *graineurs* at the Consulate of their nation, of non-execution by Japanese merchants of contracts entered into for the delivery of cards by the latter, who excused themselves in alleging that they were hindered by causes beyond their control, the Consul procured, from the Kanagawa Saibansho, an embargo upon certain cards in question. We learn now that the dispute has been settled, and the embargo removed, upon promise made by the Japanese traders to deliver the *cartons*, subject to the original agreement.

SOME of the lanes leading to the Homura Road from Main Street are dangerously steep and narrow. The other day a coolie-cart, laden with sugar and propelled by four men, overpowered its drawers, and dashed down the incline leading from the Chartered Mercantile Bank. At the foot of the hill in Homura Road it came into collision with a passing jinrikisha, which it overthrew and smashed, hurling the fare into the roadway and all but breaking his arm. The coolie escaped better than him whom he was drawing: his vehicle fared worst of all.

It has been decided at a committee meeting of the Amateur Athletic Association, owing to the impossibility of finding two days for the Autumn Sports, on account of mail days and Pony Races, to have only one day, and Tuesday, the 13th November, has been chosen. Post entries will be received up to Tuesday, the 6th November; present handicaps to remain in force; and *no withdrawals* allowed. The first event (100 yards) will be run at 0.30 P.M., and the 150 yards at 0.55 P.M. As this is very early, and the Yedo men may be unavoidably detained, the committee will endeavour to arrange some means by which they can compete by a special heat or otherwise.

The Boys' race will be run in heats, according to age; under 9 years; between 9 and 10 years; between 10 and 11 years; and between 11 and 12 years—all from scratch. The winners of these will then be handicapped in the final heat, 3 yards a year. This is a great improvement on former Boys' races, and ought to bring out a large field. We beg to suggest that firsts and seconds of heats, should compete in the final.

At a special meeting of the Yokohama Racing Association, held at the Grand Hotel on the afternoon of the 30th ult., the following members were present:—Messrs. R. de Monbel, J. Middleton, A. Center, C. de Boinville, E. Montron, H. Allen, Jr., C. H. Haswell, T. R. McClatchie, N. P. Kingdon, W. H. Talbot, J. R. Morse, J. R. Anglin, A. Jaffray, A. Donsdebé, J. Reynard, C. O. Herhausen, W. Dillon, Angot, Clark, Capt. Purvis, Messrs. Bayne, G. E. Rice, Helbronner, and others.

Mr. Center was called to the chair; and, the meeting being called to order,

It was unanimously resolved, without discussion, on the motion of Mr. de Boinville seconded by Mr. Kingdon, that the action of the Committee, in accepting certain entries for the approaching meeting accidentally delayed beyond the time originally fixed, should be approved of, but that such action should by no means be allowed to stand as a precedent for a similar course in any ordinary case.

THE *Hochi Shinbun* gives a comparative statement of the number of Christian proselytes in Tokio. According to this estimate there are 240 Protestant, 220 Catholic, and 200 Greek Church converts in the city.

ON THE INCREASE OF PAPER MONEY.

No. 1.

(Abridged from the *Kinji Hiron*.)

As our country is of little extent in width and breadth, and our people are generally poor to the last degree, the annual revenue of the government is small, though the taxes on various things are very heavy. The alteration in the land tax, and the notification of the reduction of taxes, which was issued in January last caused a great decrease in many incomes; while the insurrectionary disturbances in the South-West have inflicted ~~such~~ grievous injuries over the whole area of Kiushiu, that it is thought no taxes can be collected there. Thus, the national income for this year will on the one hand show a considerable decrease, while the expenditure will be materially increased on the other. The sums expended merely in the suppression of the insurrection in the South-West has nearly exhausted our income for one year. Is it not an extraordinary expenditure?

It can hardly be defrayed out of the sums stated in the estimates for the year's expenses. Great difficulties have been experienced in providing for the cost of the war, to which the Government have applied the reserve fund and other moneys set apart for other kinds of business. Still more, there being still a great deficiency, a loan of large amount (15,000,000 yen) was raised from the Nobles' bank; and it is said that old satsu of one *bu* (25 sen) and one *shu* (6.25), which were withdrawn from currency and replaced by new satsu, have been reissued. Notwithstanding these difficulties, however, the Government have found enough for the expense of the war, but now the important business remains to provide funds for necessary purposes. There are three ways of doing this, namely; raising a foreign loan; a home loan; and the issue of paper money. (The requirements of the government are here detailed at some length—money is wanted for the families of those killed in the war, &c.)

A rumor is current to the effect that the Government has recently issued paper money to the value of 20,000,000 yen. This new paper money differs somewhat in colour and texture from the old. Many of the notes are to be found in the hands of tradesmen; and the salaries of officials are paid with them. But we have as yet seen no official notice of the increase in the issue of paper money. As we are anxious for the credit of the Government, we wish we could be sure that it had issued no additional paper money. But the rumour having not only been heard in the streets, but repeatedly mentioned in several newspapers, we cannot refrain from comment, and so make the following remarks:—It is very wrong on the part of the Government to have issued paper-money without any previous notice to the people. Some person may say that, since we are possessed of no political right, the Government can do what they like to increase or decrease the circulation of paper-money without the consent of the people. Others may say that the Government have issued the new paper-money to replace old which has been spoiled. We cannot agree with any of them. * * * * * We do not mean that no paper-money should be issued. We admit that, owing to extra expenditure, the Government's only course to provide themselves with funds was to put more paper into circulation. So we do not say that the Government have done wrong merely in having issued paper-money; but we hold that they should make their reasons for the course known, and notify to the public the amount they have thrown into currency.

THE THREE SOCIETIES IN TOSA.

(From the *Mai Nichi Shinbun*.)

Since the commencement of last September, general excitement prevailed through the entire province of Tosa. On the 17th of the same month, the young and restless members of the *Risshi* and *Saiken-sha* societies of the same ken, who are said to be not less than 500 in number, assembled on the hill of Yokizan and other places. They threatened to take up arms against the Government authorities. Kido, Itagaki and Hara, known as the *Sanketsu* (three wise men) of the Kochi-ken (Tosa) appeared before them and instructed them to disperse. On the following day, seven or eight Kencho officials endeavoured to disperse them. (No reason for their gathering is given in the native paper.) On the 19th September, hundreds of the members of the *Risshi* and *Saiken-sha* occupied the buildings of

the *Chiuritsu-sha*. The president of the latter is the famous loyal ex-retainer of Tosa, named Mayeno. During the revolutionary war in 1867, he fought in battles in the North on the side of the Mikado, and since then travelled through China with Lieut.-General Tani for pleasure. On his return to Japan he changed his opinions which are quite different to those of the other two societies, and entered into friendly relations with the Kencho authorities. Kido, one of the *Sanketsu*, is a man of wealth, and his reputation for wisdom has long been established in the South-West. Taigaku, Maruyama, Kirino, and other distinguished men regard him as their elder brother. Itagaki (ex-Sangi) is a benevolent man, and thousands of poor men in his ken live under his kind protection. None call him by his proper name, but by the honorable *sobriquet* of Jinkun (benevolent lord). He lives at his house at Niha. Hara, the head man of the *Seiken-sha*, is a brave man and of determined character, and is famous for his literary accomplishments. He is followed by many students, from the various ken. People living under the jurisdiction of the Kochi-ken recognise only the three men, and ignore the existence of the Kencho authorities, and hold that any matters in the world could be arranged by the wisdom of Kido, the benevolence of Itagaki, and the courage of Hara. A difference of opinion arose between Itagaki and Lieut.-Colonel Kitamura. The cause is not known. The latter tried to collect all the fire-arms and ammunition in the Kochi-ken by Government order and sent what he gathered to Osaka. But the farmers who raised a riot last year have a quantity of arms and ammunition. Three Chinese firms are said to have been discovered in some port sending ammunition to the Kochi-ken. The members of the *Risshi-sha* are increasing every day and month. Quarrels between the police and the members take place daily.

THE DISPARITY BETWEEN IMPORTS AND EXPORTS.

(From the *Osaka Nippon*.)

Lamentation is everywhere heard throughout the country to the effect that nothing can be done to remove the inequality which exists between our imports and exports; and we have repeatedly commented on the subject. We have now been favoured with a comparative table of the values of imports and exports during July 1877, for the entire empire, which is as follows:—

EXPORTS.		yen.	sen.
Dutiable Articles		1,754,762.65	
Articles free of duty		225,914.01	
Articles for use by vessels in harbours		30,368.90	
Total.		2,011,045.56	
IMPORTS.		yen.	sen.
Dutiable Articles		2,501,045.67	
Government dutiable Imports		47,346.10	
Articles bought by the Government		892.20	
Articles free of duty		87,791.82	
Government articles free of duty		13,195.70	
Total.		2,650,271.49	

Further 1,388,330½ yen in gold and silver coin were exported, while only 31,130 yen and 77 sen were brought back to the country.

THE NOBLES' SCHOOL.

The *Choya Shinbun* says:—On the 17th ult. the official opening of the Kuwazoku School at Nishikicho, Tokio, was celebrated in the presence of their Majesties the Mikado and Empress. At 9 o'clock A.M. their Majesties left the palace at Akasaka in carriages, accompanied by their attendants. The Director and other officials of the school, and Government officials between the first and seventh ranks stood in order on the right side of the principal entrance, and a number of nobles on the other. On the arrival of their Majesties, Prince Arisugawa-no-Miya and a few high officials received them at the gate. Their Majesties rested for a short time in an apartment prepared for them and then went to the principal hall, where the Mikado addressed the assembled nobles as follows:—

"Agreeably to our desire, you have established this school and we are now happy to preside at the ceremony of opening it. The Emperor Jinkotei established the Gakushu in Kioto, where instruction was given to his retainers. Now, following his example, we call this school the Gakushu-in, hoping that you will instruct your children as our ancestor would have wished."

Tachibana, Director of the School, here expressed his gratification at the imperial visit. Her Majesty the Empress then spoke thus:—

"In ancient time, the Empress of Sagatei established the Gakukan-in for the children of the Tachibana families. I have been anxious to follow her example, though I cannot pretend to the possession of her virtues. To-day I myself appear in this school, to which the Mikado has given its name. I hope that the students will be instructed better than those of former times."

Their Majesties next visited each room in the school, and gave sake and fish to those assembled. A donation of 1,000 yen was made by the Mikado to the school and one of 500 yen by the Empress. To-day Her Majesty the Empress Dowager visited the school, which will be open to public inspection to-morrow.

THE REVISION OF THE TREATIES WITH FOREIGN COUNTRIES.

(From the *Kinji-Hiron*.)

No. 3.

The gist of the talk of our slavish controversialists is that "The Japanese empire has no sovereign right of complete jurisdiction the same as foreign countries, and no Japanese can defend themselves from the painful disdain they meet with from foreign residents in our country. Is this not contemptible?" Alas, what do they mean by such words! Have we not put up with foreigners' reproach for our own sake? Our countrymen do not endeavour to obtain equal rights with foreigners, but they are displeased with them for not giving us the same status with other nations in Europe. We are to blame for this. The Japanese empire is really an independent country, and we have an equal position with foreigners in the convention. The convention was drafted by the hands of foreigners, but we have found no partiality on the part of the original writers of the treaties, who did not injure our position as an independent country, to our congratulation. How do we say so? A convention or treaty contains the articles contracted between the sovereign of an independent country and another of equal position. No word of "convention" is used between the sovereign and his tributary, but an order may

be issued; and since we say that the convention was made between such and such two countries, it may be observed that either of them possess an equal right of jurisdiction. Look at the first article of the convention between us and foreigners! This convention is signed by the *Taikun* (Shogun) on one part and by the President of the United States of North America, or by the Emperor or King of such country on the other. Their respective subjects may maintain friendly trade etc. In this treaty the foreigners recognized our independence. In late years, we have entered into a Postal Union and take part in the International Exhibitions held by the Western powers. And we observe no partiality on the part of foreigners; they treat us very politely, in spite of our weak and poor country. No nation in the world should now interfere with our independence.

But in regard to judicial rights and the right of levying duties and taxes, we much wonder at the partial and selfish conduct of foreigners, which destroy our independence. * * * Notwithstanding our desire to revise the convention, foreigners are content with the old one, as it promotes their own benefit and convenience.

TIME FOR A REPRESENTATIVE ASSEMBLY.

(From the *Choya Shinbun* of the 11th October.)

THE insurrectionary disturbances in the South-West were completely suppressed on the 24th September of the 10th year of Meiji, (1877). General tranquility prevails through the empire and we have nothing to trouble us. But suppressed disease may break out from our own negligence; and laziness may cause great calamity. We have not yet quite extinguished the troublesome flame, which is liable again to blaze out in the future. In all troublous times, both ancient and modern, politicians have employed their talents to the utmost to gain popularity, and have administered public affairs with benevolence, according to the general desire of the people. The Government is then not tyrannical. But on the return of peace, politicians utterly change their tactics, and are content with little popularity, and care nothing for the promotion of the people's happiness. They gradually come to use their power and influence selfishly, which at length excites enmity against them and causes disturbances throughout the entire country. Such things may be repeatedly read in history. An ancient sage says that it is easy to establish a thing, but very difficult to maintain it forever in good order. Now what we want to say to the *Daijin* and *Sangi* is this:—"They should not be content with their recent victories; but if they wish to study the wishes of the people, they should administer the government carefully so that none might murmur against the measures taken by the authorities." And this is not a difficult matter to do. It is only necessary to establish a "Minsen-Gi-in," (representative assembly) which we have been waiting for for some years past. If the opportunity now offered of founding such an assembly should be lost, the Government will be open to blame for not having faithfully served the people. The latter will not live long under such a government. So it is as well to have a representative assembly from the present time. * * * If the Government decline to undertake this reform, they will provide a good excuse to discontented parties in future to raise the standard of revolt. It is a serious responsibility for the Government to furnish a justification for treachery by refusing to grant the popular wish.

THE TREATY BETWEEN JAPAN AND COREA.

(From the *Osaka-Nippo* of the 16th October.)

The treaty of friendship between Great Japan and Great Corea, which contains twelve articles, was agreed upon between Kuroda-Kiyotaka, Envoy Extraordinary, Minister Plenipotentiary, *Sangi* and *Kaitaku-Chokuwan*, and Inouye-Kaoru, Vice-Envoy Extraordinary, Vice-Minister Plenipotentiary and *Gikuwan*, on the part of Japan, on the 26th of the 2nd month of the 9th year of Meiji, 2536, era Jinnmu; and Shinkiu, *Daihon-kuwan* and *Chiuku-fuji*, and Injinsho, *Tatokufu*, *Fukuso-kuwan*, on the part of Corea on the 2nd day, 2nd month of Heiji, 485, the year of the era of the establishment of the present Korean government. No alteration in it was to be made without the consent of the two interested governments; and from the date of treaty their respective subjects should hold friendly communication. This treaty, sealed by the representatives of both governments, removed all the causes of those difficulties which have repeatedly threatened to break the old and but partially amicable relations between the two countries. This treaty was indeed an important event in the history of Japan, making memorable the 9th year of Meiji (1876).

The treaty of friendship having been definitely agreed upon between the two countries we have nothing to say as to its inadequacy. But the further consideration of it has excited emotions in our mind. The fifth article is more important than any of the others, and, as it shows our generosity and desire to promote the future welfare of Corea, we have given it special attention. This article runs as follows:—

"The two most favourable ports for trade along the coast of the five districts, viz., Kinsetsu, Chinsei, Zenra, Keisho, and Kankio, will be selected as the ports for foreign trade. These places will be opened within twenty months from the 2nd month of the 9th year of Meiji in the Japanese calendar, and the first month of Nedoshi in the Korean calendar."

On the 24th August of the 9th year of Meiji, 2536 era of Jinnmu, and the 6th day of the 7th month of the year Sheishi, or 485 of the founding of Corea, the supplementary articles to the treaty of friendship, and trade regulations were arranged between Miyamoto-Kochi, *Riji-kuwan* and *Daijo* of the Gaimusho, on the part of Japan; and Chokishin, *Koshu-kangyi*, on the Korean part. Each document contains eleven articles, and is supposed to have equal weight with the treaty of friendship. A paragraph in the 3rd clause of the supplement runs thus:—"Japanese residents in Fusan have hitherto been confined to their settlement by a wall and gate, strictly guarded by the Korean authorities. This will be removed, and the new boundary, over which no Japanese residents will be allowed to pass, will be designated and described. The same system will be followed in the other two ports to be opened for trade."

According to what we have mentioned above, the two ports to be opened along the coast of the said five districts, should have been already selected. But we have observed no government notification nor any notice in the newspapers stating when the two ports were opened in Corea. The 10th month of the 10th year of Meiji (1877) is the term of the twenty months, from the 2nd month of the 9th year of Meiji, in which the treaty was agreed upon between the Japanese and Korean Envoys. Thus the period fixed for the opening of the ports is coming to an end, and we newspaper

editors are eager to raise the question of the opening.

Hanabusa of the Gaimusho has left for Corea as Chargé d'Affaires. His business is said to be to negotiate with the Korean Government on this subject. But as the Koreans are uncivilized, difficulties may arise through their stubbornness, and troubles may in consequence be brought upon their country.

Rumour speaks of recent unpleasantness with Corea, which, after being closed to foreign intercourse for many years, has recently entered into foreign relations. We may expect to see excitement in the country in consequence, just as was witnessed in Japan twenty years ago.

Still we are sure that we shall shortly receive good news from Mr. Hanabusa on the matter of the opening of the two ports.

HOW TO MEET EXTRAORDINARY EXPENDITURE.

(From the *Kinji Hiron* of the 18th October.)

WHEN special troubles occur in any country unusual measures must be resorted to for their suppression, irrespective of existing laws and regulations in force in quiet periods. So, when the Kagoshima men raised the standard of revolt against the Central Government, the latter enrolled thousands of shizoku in the police, and formed them into several divisions, which were distinguished by the name of "newly enlisted troops." They were sent out to the seat of war in the South-West, where with the Imperial body-guards and the provincial garrison troops they served with credit in putting down the insurrection. When the Government first levied troops from among the shizoku our people complained that the authorities were infringing the law for the enrolment of troops. But, as the suppression of the Kagoshima insurgents was too difficult a task for the provincial garrisons alone,—by no means so easy as the stamping out of the Saga, Kumamoto, and Yamaguchi insurrections,—the Government were obliged to adopt special measures to cope with the difficulty.

So it is with regard to other matters. Special financial embarrassments have arisen consequent on the terrible struggle in the South. The money expended solely in the defeat of the rebels in the plains of five provinces, and that which has been consumed in the form of ammunition, attains an enormous total. Further, we want large sums of money for rewards, compensation to the families of the killed and wounded, and to the newly enlisted troops on their disbanding, and for the relief of the poor and houseless in the country devastated by the war. The entire revenues of the Government for one year would not be enough for these demands. Those writers who are distressed because of the difficulties of the present, and desirous of promoting our prosperity in the future, enunciate various schemes: e.g., a foreign loan, a home loan, an increase in the issue of paper money, the levy of new taxes, and a decrease, by special economy, in the annual expenditure of the government. On this subject of finance their opinions have some points of resemblance and some of difference; but, in respect to the establishment of a representative assembly, they are as fully of the same mind as if they had taken counsel together. This should be quite enough to show that representative institutions are generally desired by the people of this land.

All mundane matters have their advantages and their drawbacks. With reference to the

financial schemes propounded above, after careful comparison of the benefits and harm which might accrue from their adoption, we find that in most of them the evil element preponderates. Suppose we raise either a foreign or a domestic loan. The money which we have already borrowed at home and in foreign countries amounts to more than 140,000,000 yen. To this we must add 140,000,000 yen the value of the government bonds given for the pensions of the *kuwazoku* and *shizoku*, and the sum of 15,000,000 yen advanced to the Government by the Nobles' Bank (the Fifteenth National Bank). The total of our indebtedness is thus 303,000,000 yen. Paper money in currency amounts to 94,050,000 yen. From this we may subtract 20,000,000 yen for which a fund of specie is provided, but there is no security to set against the remaining 74,050,000 yen. We should take six years to repay the principal only out of our yearly revenue of 63,000,000 yen. One third of the annual income of the country is absorbed in the mere payment of the interest. How then can our Government raise a new loan?

The excess of our imports causes many millions in gold and silver to disappear from our country year by year, never to come back to Japan. If we do not endeavour promptly to remove such a source of injury to the country, a calamity which will be past all repair will fall upon us in the course of approaching years. If we should raise a foreign loan at this critical time, we should but add to the number of our future difficulties. It would be, perhaps, better to raise a home loan than a foreign one for a part of the sum required. But, again, consider the present condition of the Japanese! Men of all classes complain of their poverty and the dullness of the times; and the cry of "want of money" is everywhere heard throughout the country. So it is not to be wondered at that the development of mines and manufactures makes no progress. It is not advisable either to raise a foreign or a home loan, or to issue additional paper-money, or to levy new taxes. Only one plan which we can commend to the controllers of our finances is to diminish our annual expenditure by strict economy.

LETTER ADDRESSED TO THE LATE SAIGO TAKAMORI BY YAMAGATA ARIAKI.

(From the *Hochi Shinbun* of the 22nd October.)

We take the following letter from the *Heiji Shinbun*, which says it was addressed to the late Marshal Saigo by General Yamagata, War Minister, on the 24th April last.

I, Yamagata Ariaki, beg to address your Excellency Saigo Takamori with great respect. I am your intimate friend, and I know your mind thoroughly. Since you returned to your birth place in the West, many years have already passed, during which I have had no chance of entering into pleasant conversation with you. But the recollection of you has not left my mind even for a single day; and I did not at all expect that I should meet you again upon the field of battle. On your leaving the East for the West, various rumours were soon spread about as to the condition of the Kagoshima *shizoku*, upon whom eager attention was bestowed. All of these reports said that Saigo was their leader. I did not believe them; but I find now that my opinion was wrong and I have nothing more to say on the subject. I am convinced, however, that you must positively have been obliged against your will to raise the standard of revolt. I know this very well. Your virtue and wis-

dom have caused the Kagoshima *shizoku* to regard you as their father. If you, in such a position, should have desired to raise an army against the government, you would have had no trouble to find a pretext for your conduct, and a good chance to place yourself at the head of troops. Now, I observe, in the manifesto issued by the Satsuma men, that their excuse for raising an army was that they merely wished to ask one or two questions of the government authorities. Do you think this a thing to raise an army for? The Saga rebellion had been totally suppressed on one side, and the insurgents of Kumamoto and Yamaguchi were put down in a few weeks on the other. This has promoted some desire among the *shizoku* throughout the country to follow peaceful pursuits to their own advantage. Is this then a good opportunity for raising the banners of rebellion? With your high talent and ability you could have no difficulty in seeing the exigencies of the times, so I believe that it was not your intention to raise an army against the government. Most of our men speak of you in the following strain:—"Since Saigo retired to the West, all those who are discontented with the government, have become eagerly anxious to witness his rising, and then take his side. They speak evil against the administration of the government from the bottom of their hearts. At length they have provoked Saigo to assume the command of troops destined to fight against the authorities." But I do not believe this. If you want to say anything to the government, it is no trouble to come up to Tokio alone, where you can freely present a memorial. The *shizoku* who were educated by you know nothing of what is right or wrong, and they have no ability to know the requirements of the times, and have become much excited and desirous of taking up arms against the government without any reason. And you could not keep them peaceable, even by your wisdom. When they were asked for a reason for their conduct, they each replied to the same effect, that they would die for the honor of their Saigo. Through this you were moved by their enthusiasm and did not desire to survive them. So you gave up your life for them against your conscience, regardless also of the bad reputation you would leave behind. Alas, how sad it is. I sorrow for you so much because I am your intimate friend. But it is too late to discuss the subject now. Why do you delay to make up your mind? Since the first battle was fought between your and our men, many months have already passed, and hundreds of killed and wounded are daily seen in the field on both sides. Friends fight against friends, and relations against relations. We cannot endure to witness such a strife. Neither party has any enmity against the other. The imperialists were obliged to arm for their own protection; and the Satsuma troops have taken the field in favor of Saigo. You are at the head of men of only one province, and have made a desperate stand for many months against the army of the entire country. Your distinguished name is well known everywhere. Many of your generals, who fought skilfully, have been killed or wounded; and it is now clearly shown that the Satsuma men cannot retrieve their fortunes. And what do they expect in continuing the war? Our men say that though Saigo knows that he cannot restore the fortune of war, he desires to live as long as he can. I, Ariaki, am sorry to hear such a report, and hope that you will soon make up your mind (to die), and so relieve your conscience on one hand and save many lives on the other. If you make up your mind, no battle will follow. Some of our

people know your real intentions as I do. I am obliged to ask you from friendly feelings to make up your mind, and I trust you will consider the gloomy state of my mind on your account. I here put down my pen to let my tears flow, and I cannot collect myself sufficiently to write more. I remain, sir, with respect, etc.

SILK WORMS' EGG CARDS.

(From the *Nichi Nichi Shinbun* of the 26th Oct.)

Is it only the sale of *cartons* which has caused the falling off in our trade, and obstructed our mercantile and agricultural business? Our readers will acknowledge that the trade this year in *cartons* has been far from satisfactory, as we have shown from day to day. The editor of the *Mai Nichi Shinbun* in Yokohama does not neglect to inform us of the daily condition of the trade in silk-worms' egg cards, which is a great convenience to us.

Lo! Lo! The trade in *cartons* has injured considerably rather than benefited our country, by obstructing the progress of various branches of business. Who will say this is not so if they are acquainted with the trade in this article in Yokohama, during the autumn seasons for the past ten years? The silk-worms' egg cards were once the most prolific source of profit in Japan. Notwithstanding this, we are justified in saying that they are now most injurious to Japan. When the trade with foreigners was dull at the commencement, the card manufacturers were few in number, and they supplied very little that was not required for home consumption. But on receiving a report from Europe some years ago that a disease had destroyed the silk-worms in Italy, they commenced to export to foreign countries. At this time, the Tokugawa Government became anxious to decrease the quantity of silk exported, and endeavoured to limit the number of egg cards manufactured. Then, the foreign Ministers and Consuls in Japan discussed the question, and expressed themselves against the Government policy of interfering with the trade, and so the authorities were obliged to cease their endeavour to limit the number of *cartons*. The price became higher, and the number of manufacturers increased considerably, and large quantities were brought annually to Yokohama. Subsequently, as the supply was above the demand, the price fell very low, and very many of the manufacturers, dealers, and agents became bankrupt. At the foundation of the present Government the authorities determined to put a limit to the production of *cartons*, and issued an order that all the cardboard, necessary for the industry should be supplied by the Finance Department. But this system was again abolished by the interference of foreign officials, and millions of *cartons* were found heaped up in Yokohama without a purchaser. At length the owners and agents set a valuable heap on fire. This loss on the part of our traders occurred in the 7th year of Meiji (1873). In the following year, the manufacturers, who had not forgotten their defeat of the previous year, held meetings and limited the number of cards to 1,500,000; and out of this lot they anticipated exporting one-half, but they were disappointed, as only 200,000 or 300,000 cards were purchased by foreign dealers. Their resolution to limit the number made was again broken in the 9th year of Meiji (1876)

and nearly 1,200,000 cards were brought to Yokohama, a part of which were purchased by foreigners at a low price. Look at the meetings of the native dealers in Yokohama this year! Thousands of cards are stored in each godown; and it has been resolved that 600,000 cards should be thrown into the sea instead of being burned, as was done in 1873. Is this not sad for our merchants who heap loss upon loss year after year?

Those who seek to make large fortunes in a moment are not likely to have their expectations realized. We have heard that a man in Africa once discovered a diamond in a certain mine. All the men, of all classes, in his country, abandoned their respective avocations, and labored in the mines in expectation of finding such another valuable stone, until at length the entire country was ruined. We do not know whether this be true or not, but it seems to be in accordance with reason.

• • • Now, we will give another illustration. In the sea of Tosa, Shikoku, is a large quantity of coral, and during the Tokugawa, rule restrictions were placed upon the people so as to prevent their getting it. On the abolition of the authority of the daimio any person was allowed to seek for coral after obtaining a license. All the fishermen and salt manufacturers, who live along the Southern coast of Tosa, thereupon abandoned their occupations and endeavoured to get coral. Out of a thousand, one may occasionally obtain a quantity and become rich in a moment. Most of those engaged in the pursuit become very poor and bankrupt. It is so with other things. Now if we set a number of cards on fire this year, and throw others into the sea next year, and bury more in the ground the third year, no permanent price can be established. Is it not necessary that some wise regulations should be made with regard to the production and disposal of *cartons*, and so modify the injury done to the country? This is a subject which should interest the learned in our country, and induce them to frame regulations for the prevention of such national injury as results from the present system of doing business in this branch of our industries.

SHORT ANECDOTES.

(From the Japanese.)

YOSHIKI KATO.

Samanoske Yoshiaki Kato was a man of cool courage, and achieved several glorious exploits in the army of Taiko Hideyoshi. He was a great admirer of Chinese porcelain which he purchased from the Chinese merchants at Nagasaki. He set great store by many sets of valuable dishes which he used in the entertainment of special guests. One day it happened that one of his servants broke a valuable dish accidentally, and fearing the anger of his master retired to his house, where he waited in the expectation of a heavy punishment. However, Yoshiaki received the intelligence with a thoughtful expression of countenance, and summoned the servant before him. "Don't be afraid," said Yoshiaki, "I do not intend to forsake a man for so trifling a fault. Now bring me the remaining nine dishes." (Each set consisted of ten dishes.) His order being quickly obeyed, he himself broke each of them into a thousand pieces, and said, "Now, do not suppose that I have done this out of anger. I did it out of sincere consideration for you. If I kept these dishes, the other servants, whenever they handled them in future, would remember what you had done, and your fault

would never be forgotten." After this event, Yoshiaki did not set so much store by precious crockery as he did before.

MITSUNARI ISHIDA.

Taiko Hideyoshi once happened to go into a country temple, where, being very thirsty, he called for a cup of tea. A little page brought him a very large cup, full of tea, not very warm, and Hideyoshi swallowed the contents at one draught to his great satisfaction, and ordered another cup. The page replenished the same cup, but with warmer tea, which Taiko drank slowly. On his calling for a third cup, the boy handed him, this time, a small cup with very hot tea in it. This thoughtfulness pleased Taiko so well that he begged the priest to transfer the page to himself, and took him into his service.

This boy, who afterwards was made a governor, was Jibushoyu Mitsunari Ishida.

When the Yodo river near Kioto overflowed with the heavy rains, Mitsunari, being then Governor of the province, ordered the population to remove all the bags of rice from the Government stores to the banks of the river, and to stop the water with them. When the rains had ceased and the water receded, he issued another order that whoever replaced the bags of rice with bags of earth should be free to take one bag of the former for each one of the latter which he brought. Thereupon the people started to work with a will, and soon substantial dykes were constructed.

After Mitsunari had the castle of Minakuchi bestowed upon him, he was one day called before his master Taiko, and asked if he had any worthy man serving under him. He replied that a man called Sakon Shima, who had lately entered his service, was his best retainer. "I have heard of his gallantry," said Taiko. "but I wonder how he came to serve you, who have not a revenue large enough to pay him sufficiently." "My lord," replied Mitsunari, "the estate granted to me by your lordship is worth 40,000 koku of rice, and I pay him just one half of that." "You are a fine fellow!" exclaimed Taiko. "I have never before heard of a master who made his servant's income equal to his own." Then calling for Sakon he gave him a suit of clothes, urging on him to continue to show fidelity and respect to his master.

THE DEATH OF TAIKO.

Taiko Hideyoshi Toyotomi died at noon on the 18th day of the 8th month of the 3rd year of Keicho, aged sixty-three, and his remains were buried at the Amida hill on Higashi Yama, Kioto. He had composed a poem when his palace at Shuraku was newly built, and having written it on fine paper ordered one of his female attendants to keep it, and be ready to produce it, whenever required. Before his death, he called for it, and took a pen to sign his name to it; but, before he could write, his hand was paralysed, and he died next day. The poem said, "my life is like a drop of dew; and all fame and prosperity are but a dream."

MORE ABOUT TAIKO.

One evening during his expedition to the East, Taiko assembled his generals; and the topic of conversation turned upon military tactics. One of the officers expressed great admiration for the military skill of Shingen Takeda and Kenshin Uyesgi. "O, the Boze," (for they both used to keep their heads shaved,) exclaimed Taiko with contempt. "If the two lived now, I should have had the pleasure to embellish my processions with them; for I

would have had one of them to carry my sword, and the other to hold my red umbrella over my head; but they don't live, which is my misfortune, but their good luck."

When Ujisato Gamô, having been deprived of his fine dominion and removed to Aizu to a much poorer estate, came to see Taiko, perhaps to solicit his favourable consideration, rather than to thank him, Taiko said suddenly, as soon as the other had made his appearance, "I hear you are a very superior penman; pray just copy this book for me." Thus saying, he gave him pen and ink, so that the veteran could have no time to talk of his own affairs.

SANAI OKANO.

Sanai Okano was a servant of Kagekatsu Uyesgi, but he afterwards became a vassal to Hideyuki Gamo, who allotted him an estate of 10,000 koku of rice a year. He was rich, and it was his delight to scatter about his gold and silver coins in one particular room, and sleep among them, which excited the contempt of many. One day, a quarrel having occurred among his neighbours, he went out to interpose between them, leaving the treasure all scattered about his room, and did not come back till next morning. He presented a great deal of money to his former master towards the expenses of his wars; and, shortly before his death, he offered to his young master Tadasato Gamo, a sum of 30,000 rio and a famous sword called Magamuné; 3,000 rio to his master's brother Tadatomo; while he also distributed sums from five to one hundred rio among his numerous friends, and burnt all the receipts he had taken for money.

KIYOMASA'S STUDIES OF THE CONFUCIAN WORKS.

Kiyomasa Kato, the daimio of Kumamoto, and the most distinguished hero of the Korean expedition, while in Osaka, once said to his friend:—"My friend Maeda (the daimio of Kaga) who was fond of learning, one day invited me and others to his house, where we discussed certain passages contained in the Rongo. He said that we must not forget them. I was ignorant then, and could not make out what they meant, but, thank Heaven, I now understand all, and only regret that I cannot discuss the question with my friend who is no more."

During his voyages from Osaka to his own domains he was always found reading the Rongo, marking passages with red ink. Once when he left his table for a short time, his favorite monkey, who had been watching his master's occupation, seized the pen and smeared the pages of the book in all directions. When Kiyomasa came back he only said, smiling, "Oh! you also wish to study the doctrines of the Saint, do you?" and coolly resumed his work.

DANZAEMON BAN.

Ban was a samurai who served Yoshiaki Kato, in whose army he fought many desperate battles; but, having some disagreement with his master, he deserted him, and after fruitless attempts to secure a position under some other daimio, determined to enter a monastery. To that end he became the disciple of a venerable priest called Dairio (large dragon), and changing his name to Tetsugiu (iron ox), begged for food in the streets of Kioto (according to the common practice of the priests) where he was much respected and loved by the people. One day he had to go to a merchant's house with his master to recite prayers. Having failed to appear at the appointed hour, he was severely rebuked by his master. He bowed low, and

said: "Do not be angry with me for coming late, because you ride on the 'large dragon,' while I ride on an 'iron ox.'"

SHIGETSUGU HONDA.

Sukuzaemon Shigetsugu Honda was a man of most intrepid and determined character, but of a very simple and kind disposition, on account of which he was favored and trusted by the Shogun Iyeyasu, who made him a Bugio (or governor) of the capital, together with Goriki and Amano. Many thought that the Shogun was mistaken in giving him so important an office, but he proved to be a very able officer, and the three men were found to be so well suited to their respective employment, that a common song was sung by people, to this effect:—"Goriki is Buddha and Honda is the demon, while Amano is neither the one nor the other." His simplicity was shown when he wrote home to his wife in the country:—"I send you word; do not let Osen (his daughter) and the horses grow thin." Observing once on the road some coolies carrying a huge iron pot, he stopped them, and on inquiry found that the utensil was to be conveyed to Hamatsu by order of the Shogun, who intended to boil criminals in it. He was very angry to hear it, and ordered the coolies to break the unlucky pot on the spot. That done, he said to the officer in charge, "Go and tell our lord, the Shogun, that the ruler of a nation must try to govern his people so well that no punishment shall be needed: therefore I have destroyed this cruel instrument of torture out of my sincere respect to the Shogun." When the Shogun was informed of the courageous conduct of Honda, he called him and thanked him for his good intention.

ETCHU HIRATSUKA.

Etchu Hiratsuka was noted both for his bravery and obstinacy, and Iyeyasu often tried to induce him to enter his service, but Hiratsuka was deaf to his persuasion and said:—"Naifu (the then title of Iyeyasu) is sweet in his promises, but very mean in his performance; so I do not wish to serve such a man." Afterwards he became a retainer of Mitsunari Ishida, the bitter enemy of Iyeyasu, and when Ishida was utterly defeated by Iyeyasu in a battle at Sekigahara, Etchu was captured and brought before the future Shogun, who said, smiling:—"Now my friend, you were not satisfied with my offers, and accepted the more liberal ones of Ishida, but see what you are to-day!" "Do you say that," inquired the undaunted prisoner, "because I am your captive? Why that is only an usual thing for a samurai, when a battle is lost. Do you not remember when you were one in the house of Ota, where you suffered indignity for three years? Besides," continued the captive fiercely, "you have proved a traitor to the sacred will of the late Taiko, whose poor widow and innocent son you have deceived, and wrested from them the power which you now hold. So foul an act as you have committed is what a true samurai should be ashamed, even to think of. Then, how could I think of rendering any service to such a monster? Now you may cut off my head, but you can not shut my mouth!" "A very madman," cried Iyeyasu, rather enraged, "but I had better leave him to undergo the torture of living in this world, rather than kill him on the spot," and he sent him away unpunished. Soon after, being asked why he did not chastise the insolent man, as he deserved, the future Shogun replied:—"Why there is nothing for which he deserves punishment, except his insolence, which I forgive freely; and I like his courage, which will one day, if he lives, be useful to my posterity."

NIPPON NOTES.

THE following judgment passed upon Oyama Tsunayoshi, is published in the *Hochi Shinbun*:—

"Oyama Tsunayoshi, shizoku of the Kagoshima ken:—

"During your service in the Government as Kagoshima Kenrei, you aided Saigo Takamori and others in their treacherous conduct, without regard to the laws of the country, and you mal-treated Nakahara, police sergeant, and others in their projected plan to assassinate Takamori, in your endeavours to aid the Shigakko-to. You received their confessions and published and notified them through the ken, and suffered Saigo to leave Kagoshima at the head of the old soldiers, for the ostensible purpose of asking a question of the Government. Besides, you sent many messengers to every Fu, Ken, and barracks to provoke excitement. You not only ordered your subordinate officials to serve Saigo, but you also gave him about 150,000 yen, which were in the Kencho at that time, and provided rice and other things for him and his men. So you are deprived of your rank of shizoku, and you will suffer decapitation.

THE cholera cases in Tokio were 204 up to 12 m. on the 9th ultimo. Out of these 97 died, 9 became convalescent, and 98 patients are now in Tokio.

ALL the rebel commanders who committed suicide or were killed in the last battle at Iwazaki, were buried in an honourable manner according to their rank in the monastery of Shokomeiji, Kagoshima. Saigo was buried in the centre, and Kirino, two Saigo's, (relatives of the general) Hemmi, Ikegami, and Beppu on his left side, and Murata, Takagi, Gamo, Ogura, Ishidzu, Iwamoto, and twenty-five other distinguished partisans on his right side.

THIRTY of the petty officers of the imperial body-guards, were killed during the war.

PRINCE ARISUGAWA-NO-MIYA arrived at the Shinbashi Station, Tokio, at 10.45 A.M. on the 10th ult. He and his staff rested in the apartments upstairs for a short time, during which Princes Hei-in-no-Miya and Fushimi-no-Miya and the Prince's father called to see him. At 11 o'clock he left the station in a carriage, with Sanjo and Iwakura, and arrived at the Imperial Palace at Akasaka at 11.40, accompanied by the Ministers and Secretaries. He was admitted to the presence of His Majesty the Mikado, who addressed him thus:—"When the Kagoshima insurgents treacherously rose I appointed you to the command of the army of expedition. You have suffered many hardships and been long away from home. Owing to your talent the suppression of the insurrection has been achieved, and I am much delighted." Words to the same effect were addressed by the Mikado to Admirals Kawamura and Ito. Prince Arisugawa went to his home at Nagatamachi at one o'clock.

IT is not known, says the *Hochi Shinbun*, who cut off Saigo's head in the last battle on the 24th September. Murata is said to have been ordered by the commander to do the deed. The place of interment was betrayed by a coolie, and the head when dug up was covered with mud. Admiral Kawamura, who was Saigo's friend, washed and cleaned the ghastly trophy himself.

WHEN the imperialists attacked and stormed the insurgent fort at Iwazaki, Shiroyama, at dawn on the 24th September, the body of a

young woman who had committed suicide was found in the moat surrounding the fort. She held a man's head in her left hand and a dagger in the other, and was dressed in clothes of the finest kind. She is said to have been the eldest daughter of Saigo Takamori.

THE editor of the *Kanayomi Shinbun* has been condemned to a fine of ten yen for having transgressed the law against slander.

PRINCE Higashi-fushimi-no-miya and Lieut.-General Saga returned from the South in the *Nagoya Maru*, which arrived in Yokohama on the 11th ulto. They at once proceeded to Tokio, and were received at the Shinbashi station at 8.30 a.m. Thence they proceeded to the Imperial Palace. Yamagata, war inspector, is at present at Shimonoseki.

SAKATA and Kabayama, the rebel commanders who were captured at Iwazaki, have been decapitated.

THE corpse of the late Governor Oyama, who was beheaded on the 30th Sept., was handed over to Shirata and ten other shizoku of the Kagoshima-ken, residents in Nagasaki, in compliance with a request they had preferred, and was buried decorously by them in the monastery of Kokudaiji.

ON the 11th ult. Prince Higashi Fushimi-no-Miya, Lieut.-Genl. Soga, and the officers of their respective staffs were met at the Shinbashi Station by the Ministers, and proceeded to the Imperial Palace, where they were thanked, in like terms to those addressed to Prince Arisugawa, by His Majesty the Mikado.

OUT of 157 state prisoners, who were brought up from the South in the *Nagoya Maru* and have been condemned to hard labour for periods from five to ten years, 79 have been sent to the Tochigi-ken and 78 to the Ebaragi-ken.

HIS MAJESTY the Mikado has caused to be presented the sum of 1,000 yen to the representatives of the late Governor Kitajima of the Nagasaki Ken. Of this amount 700 yen were applied to defray the funeral expenses.

THE gale on the 11th ultimo wrought some damage in Kyoto and Osaka. The rivers Kamogawa and Ajikawa overflowed, and a silk factory was destroyed in the Yamanashi Ken.

562,000 yen have already been handed to the Kagoshima Kencho officials for the relief of the destitute in that Ken a further seem of 100,000 yen has now been sent from Tokio.

A NOBLE in Tokio has lately received permission to undertake the cutting of a canal from lake Inba in Shimosa, to Cape Choshi in the East and to Yedo Bay in the West. The cost of the work is estimated at 600,000 yen.

THE damages done to the National Exhibition by the gale on the 11th instant, have been completely repaired and the exhibits have been re-arranged in their former order.

ACCORDING to the *Hochi Shinbun*, a railroad is expected to be constructed between Kobe and the harbour of Kushibe in the province of Tanba. At the end of last September the survey was commenced. This work is projected with a view to increase the facility of transport from the Northern provinces of this island and from Yezo.

THE *Nichi-nichi Shinbun* says:—A telegram to the effect that Ikebe Kichijuro (Leader of the Kumamoto insurgents) was killed by policemen at Koriyama in the Kagoshima-ken, was received at the Police Department at about midnight on the 16th ultimo. It has been repeatedly mentioned in the paper that he was one of those killed with Saigo and others at Shiroyama in Kagoshima. Further details will be given if they come to hand.

On the 11th ult. the *Kanagawa*, *Taihei*, *Sumida*, and *Toyoshima Maru* arrived in Shinagawa with troops from the South.

THE sum of 25,000 yen is to be added to the annual expenditures of the Imperial Household Department, for the period of fifteen years.

H. E. ENOMOTO, Japanese Minister at St. Petersburg, is expected to arrive in Yokohama in a few days.

YAMADA, of the *Sakigake Shinbun*, has been fined five yen for having transgressed the law against slander.

THE *Nichi Nichi Shinbun* says:—At 10 o'clock p.m. on the 12th ultimo, the *Toyoshima Maru* of the Mitsu Bishi Company left Kobe for Yedo Bay with troops from the South. When she was off the coast of Kishiu on the following day, her crew observed a boat at a considerable distance. On approaching her they saw that she contained an imperial officer, dressed in uniform, who ordered them to "stop on government business!" The *Toyoshima Maru* stopped her engines, and took the officer on board, when he told the Captain that:—The *Bukoraji*, a vessel belonging to the War Department, which was heavily laden with munitions of war had been lying in Nagasaki harbor. On the suppression of the insurrection she was ordered to return the ammunition to the arsenal, and left Nagasaki for Kobe on the 4th instant. During the passage she met the gale of the 11th ultimo and lost all her masts. The wrecked vessel was then floating off the coast of Owashi, Kishiu, and at a distance of about 7 ri from the place where the *Toyoshima Maru* was stopped. The latter went at once to her relief and brought her safely to the coast of Owashi.

[This must be a native version of the accident to the *Ville de Lille* and the aid rendered her by the *Toyoshima*, of which we had a short account on the 16th ultimo.—Ed. J. G.]

THE *Mainichi Shinbun* says that great reforms, to be wrought within this year, are contemplated in the Government. Further the three fu and thirty-five ken are to be replaced by two fu and six ken.

THE *Nichi Nichi Shinbun* states that no pen can describe the wretched condition of the five provinces, Higo, Hiuga, Satsuma, Osumi and Bungo. The first four have resembled the hells of the Buddhists, filled with fighting and slaughter. Rice-fields and other grounds which should be cultivated, are overgrown with shrubs and weeds; and many houses have been burned. The rebel troops stopped longer in Hiuga than in the other provinces. They have eaten off all the food which was in the possession of the inhabitants, whose utensils of iron, bronze, lead and tin, were forcibly taken away by the insurgents to be melted into missiles. Scarcely a single metal vessel is to be found in all Hiuga. A letter from Kagoshima, dated the 5th instant, says:—"Since the suppression of the rebellion on the 24th September, nothing eventful has occurred and tranquility prevails among the people. Numbers of the shizoku in Ishiu-in in the Kagoshima ken have subscribed together to erect a small temple in honour of Saigo and other rebel leaders.

Her Majesty the Empress Dowager has made a donation of 300 yen to the Nobles' School.

THE official opening of the new Government silk factory at Niimachi, Joshu, has taken place, and Their Excellencies Okubo, Okuma, Ito, Matsukata and many others left Tokio were present at the ceremony.

THE *Choya Shinbun* says that a letter has been received from some one in the town of

Koga, in the Ebaragi ken, stating that a congregation who had assembled to hear the preaching of a foreign Christian missionary, were dispersed by the police. A similar occurrence is said to have taken place in the Akita ken.

THE beds of the rivers and canals of Tokio are to be cleaned and altered with a view to the improvement of their navigation. The probable cost of this undertaking is estimated at 500,000 yen.

ISHII SADAYO, a lieutenant of Eto Shimpei, the leader of the Saga rebellion, took refuge in Kagoshima on the suppression of that revolt. There he was protected by the Shigakko-to. During the siege of Kumamoto by the Kagoshima men he distinguished himself as a partisan of Saigo, and throughout the late war escaped falling into the hands of the imperialists. A few days ago he was arrested in Nagasaki.

THE telegraph office at Mayebashi in the Kumagai Ken has now been completed and opened.

AN epidemic disease prevails among the cattle of the Awomori Ken, and hundreds of horses have died.

FOUR policemen are said to have been killed on the spot and twenty-five men injured by the fall, during the gale of the 11th instant, of the buildings formerly occupied by the Educational Department in Tokio and then inhabited by troops and police. Many other casualties are reported from all parts of Tokio.

THE Niigata-Ken was visited by a heavy storm of wind and rain on the 6th ultimo. Immense hail-stones also fell, some of them weighing from 30 to 300 or 400 momme. Much damage has been done in all directions, both in the rice-fields and farm-yards.

THE *Mai-nichi Shinbun* takes from the *Naniwa Shinbun* some disastrous news from Korea. It is said that the Koreans have risen against the Japanese residents in Fusan under the pretext that the latter had gone beyond treaty limits. Eleven of the settlers are said to have been killed by the Koreans, who are further said to have made up their mind to expel the foreigners, and to hold no longer to the terms of the treaty between the two nations. General excitement prevails throughout the country and Mr. Hanabusa, of the Gaimusho, who left Japan for Fusan during last September, has returned without having landed at all.

Ito, of the *Kana Yomiuri Shinbun*, was brought before the Tokio-Saibansho on the 13th ultimo, and condemned to a fine of ten yen for having infringed the law against slander.

THE *Mai-nichi Shinbun* says that 1,234,549 silk-worms' egg cards have been brought to Yokohama up to the 12th ultimo. Of these, 170,392 cards only were sold to foreigners.

Two or three army officers, will shortly leave for Europe, as commissioners from Japan to watch the progress of the war between the Russians and Turks.

OFFICIAL return of the number of visitors to the National Exhibition during the week, ended the 11th ultimo:—

5th October	2,858
6th "	12,783
7th "	2,223
8th "	3,612
9th "	2,461
10th "	996
11th "	831
Total		25,764

H. E. KITAJIMA-HIDETOMO, Governor of the Nagasaki ken, died of cholera on the 10th ultimo.

ADMIRAL Kawamura resumed his duties at the head of the Navy Department on the 13th ultimo.

THE *Jiyu Shinbun* in Nagasaki says:—During a battle between the imperial and insurgent troops, close to Nobeoka in Hiuga, Captain — fell into the hands of the latter. He was repeatedly threatened with a cruel death. The captain had been a friend of Marshal Saigo, and asked to be brought before him, which being made known to Saigo, he ordered the captive to be admitted to his presence. The captain, who had fully made up his mind that he would be put to death appeared calmly before the commander and addressed him as follows:—"I have not seen you for a long time, when I bade you farewell in the East. I do not know your reasons for going to war; but I came down to join in the campaign by order of H. M. the Mikado, and with the full determination to kill you, the arch-rebel." Marshal Saigo laughed at this: and said boastfully:—"Oh you obstinate fellow! You speak out without any fear of consequences! I hope that all the men in the imperial armies are as brave as you are!" It was the time for the midday meal; and a table was set before the commander, who ordered one of his attendants to set another table for the captain. When it was brought, "Captain, pray take a seat and eat with me," said Saigo, "This is the last conversation we shall ever have together." The prisoner hesitated how to answer for a few minutes. The proverb that "a falcon will starve to death rather than eat an ear of wheat or rice," came to his recollection, and he replied:—"Thank you for your kind invitation; but I cannot eat the rice of rebels;" and he took from his pocket, and ate a small quantity of *hoshii* (rice boiled and dried). When Saigo had finished his repast, he asked his captive "Is it true that Kido has died in Kioto?" "Yes, it is true." "Is Ijichi in good health?" "Yes, he is quite well." The next question, which he uttered in a thoughtful manner, was this, "Is H. M. the Mikado stopping in Kioto?" "No, he has returned to the East." Then Saigo continued to the following effect:—"My last desire would be to present my respects to H. M. the Mikado in person; but that I can do so is now most improbable. Heaven will not allow the attainment of my desire. It is a most unfortunate thing for the country that Kido left this world before me." The Marshal shed tears and continued:—"As we should gain nothing by killing you, you may return to the imperial camp." As the captain was taking his leave Kirino-Toshiaki came in, and gave him a passport, by favor of which he passed through the insurgent lines.

On the 16th ult. at 9 o'clock a.m. Major-General Yamagata and Lieut.-General Takashima and many colonels, captains, and officers of lower rank, landed at the Port Admiral's Jetty in Yokohama from the *Kokonoye Maru*, together with two companies of the Imperial body guards. They all proceeded to Tokio by the 10.46 train. H. E. Iwakura and other ministers and high officials, civil and military, received them at the Shinbashi Railway Station, whence they proceeded to the imperial palace, arriving there 0.40 p.m. The Mikado's address to Yamagata and Takashima was substantially the same as that to Prince Arisugawa-no-Miya.

THE Gojo bridge in Kioto is to be rebuilt at a cost of 18,779 yen.

10,133 state criminals were tried in the Special Judicial Courts of Kiushiu up to the 29th September. Of these 9 were beheaded, 17 condemned to hard labour for 10 years, 6 for 7 years, 16 for 5 years, 83 for 3 years, 424 for 2 years, 203 for one year, 107 for 100 days, 2 for 70 days, 2 for 30 days, and 9,197 were deprived of their rank of shizoku; and only 67 were released.

Cholera cases are reported from the Ishikawa Ken (Kaga, Noto, and Echizen.)

While the late Marshal Saigo was in Kagoshima, he used to say, according to the *Hochi Shinbun*, that no soldiers in Japan, except the imperial body-guards, could stand against his men, and that the provincial garrison troops, consisting of men of various classes, would flee on the sound of his cannon. But when his men could not take Kumamoto Castle, which was defended only by soldiers of the latter class, he is said to have confessed his mistake, and to have taken pleasure in admitting that the army as now constituted is able to protect Japan.

THE *Mainichi Shinbun* states:—The *Wakamura Maru* arrived in Yokoska with 1,000 troops from the South during the night of the 22nd ultimo. Out of these, 40 soldiers were found to be suffering from cholera on the occasion of the medical inspection, and seven or eight had died. The vessel anchored off Nojima, Kanazawa, for sake of convenience. The patients were immediately sent to the quarantine hospital at Tomioka. Those who were free from cholera were landed at Kanazawa and arrived in Yokohama overland. The *Tokai Maru*, which arrived in Yokoska with 400 soldiers, is also anchored off Nojima. All the soldiers, except 31 down with cholera, landed and proceeded to Tokio by land.

THE Home Department has sent 5,000 yen to the Nagasaki and Hiogo Ken respectively, and 7,000 yen to the Kanagawa Ken, for the establishment of quarantine hospitals and the relief of destitute cholera patients. The outlay in taking preventive measures in the Fu and Ken was first estimated at 150,000 yen. Owing to the spread of the disease 50,000 yen will have to be added to this sum.

GRAVE disagreements are said to have arisen among the owners and agents for the sale of silk-worms' egg cards. Nakayama and two other leaders of the Shiugi-sho (Assembly of Silk Dealers) have been brought before the Yokohama Saibansho.

A telegram from the South, dated the 23rd ultimo, announces that 236 state prisoners were condemned to hard labour for terms between one and ten years, by the Kiushiu Special Courts, on the 22nd instant.

THE *Osaka Nippo* states that the Government recently paid six million yen to the Mitsui Bishi Company for the hire of their ships during the war with the Kagoshima insurgents.

ON the 23rd ult. the infant Prince Tate-no-Miya was taken to the imperial palace at Akasaka, where their Majesties, the Mikado and Empress, saw him for the first time.

THE *Asama Kuwan*, which was stranded off the coast of Hiuga during last July, has been repaired in the port of Saga. She will shortly sail thence for Nagasaki.

THREE Lieut.-Generals, viz.: Tani, Miyoshi, and Miura, who have returned from the South-West to their respective garrison stations, have been ordered to repair to Tokio.

BARRACKS for the accommodation of a detachment of the Hiroshima garrison troops are to be built in the grounds of the old castle of Kochi in Tosa.

SOME extensive military manoeuvres will shortly be executed on the plain of Narashino in Shimosa.

THE Editor of the *Sendai Shinbun* has been fined twenty yen for infringing the law against slander.

THE *Saikai Shinbun* states that, notwithstanding the strict watch kept by the police, two or three persons are killed every night in the streets of Kagoshima.

KIDO, a distinguished member of the Seikensha, in the Kochi ken, is going to establish a private school in Kochi, and has hired skilled European and Chinese instructors.

THE official returns of cholera cases in Tokio between the 22nd September and the 17th October are as follows:—

Cases	348
Deaths	184
Recovered	21 (?)

THE expenses of representing Japan at the Paris Exhibition of 1878 were first estimated at 150,000 yen. But owing to the large number of articles, in excess of those first provided for, to be sent to France, the sum of 33,240 yen has been added to the original estimate.

ON the 20th ult., at 8.30 A.M., the Mikado left his palace of Akasaka for the Educational Museum at Ueno, where he was received by the Acting Minister of Education and other officials. H. M. the Empress visited the museum this afternoon.

H. E. IWAKURA has made a donation of 1,325 yen to the Nobles' School. The visitors to the building, which was open to public inspection on the 19th ult., were as many as 40,000.

THE *Akebono Shinbun* says:—A certain newspaper states that a number of the Japanese residents in Fusan were killed by the Koreans, who refused to maintain the terms of the treaty of friendship with the Japanese, and that H. E. Hanabusa, Chargé d'Affaires, had delayed his landing in Fusan through these outrages. But, according to a letter now received from that harbour, nothing of the kind has happened; and all is at peace. The Japanese settlers have decided on opening a bazaar in the settlement. Hanabusa and his staff arrived in the *Takao Maru*. One of the crew died from cholera during the passage, and this was the reason that the Envoy did not immediately land.

THE number of visitors to the National Exhibition during the week ended the 19th ult. was 20,387.

THOSE of the Kagoshima insurgents, and their partisans from Yamaguchi, Fukuoka, and Kumamoto, who have been condemned to various terms of penal servitude, have been distributed among the various Fu and Ken.

BARRACKS for the accommodation of a battalion of soldiers will be built both in Kagoshima and Miyakonojo.

A TELEGRAM from Kagoshima, dated the 17th ultimo, states that epidemic cholera is rapidly spreading in Satsuma; and that a quarantine hospital has been established on the river Shoji. About 150 cases have proved fatal.

THE Finance Department will shortly send 50,000 koku of rice to Kagoshima for the relief of the destitute.

THE burden of a popular song in the Kochi ken is that, if representative institutions are not granted to the country, they will be brought about by bamboo spears. This would seem to show the tenor of public opinion in that ken.

THE *Choya Shinbun* states that ignorant people of the lower classes in Tokio and Yokohama, when seized by cholera, refuse to be taken to hospital, where they say they will certainly be killed for the sake of their livers, which are sold by the authorities, finding the taxes insufficient, to foreigners who pay a high price for them.

THE Government silk factory at Nii-Machi, Joshiu, was opened in the presence of many high officials on the 20th ultimo. All the houses on either side of the village were decorated for the occasion with the national flag and lanterns. The building was commenced in January of the 9th year of Meiji (1876) and completed last month. Its total cost was about 56,000 yen. It covers 5,800 tsubo of ground and lies 5 ri South from the silk factory at Tomioka. The engines and machines, which have been erected under the direction of Mr. F. Marchin (a German), were purchased in England, Germany, and Spain at a cost of 86,000 yen. Sasaki, of the Industrial Section of the Home Department, has been appointed Director of the new factory, where 33 men and 52 women are now employed.

PRINTING-INK of various colours is now manufactured in the Seinikubu (seal-making department) of the Paper-money Section. It is of good quality and is sold at a low price.

THE Kagoshima Kencho is to be rebuilt on the old site at a cost of 12,500 yen.

IN the sixth regiment of the Nagoya garrison troops, who were sent to the South-West, 164 were killed and 439 were wounded.

TWO or three Buddhist priests of the Honganji monastery (the richest in Tokio or indeed in all Japan) have left for Corea to preach there their doctrine.

A TELEGRAM from the Okayama Ken (Bizen) dated the 20th instant, states that, owing to the outbreak of epidemic cholera, a quarantine hospital is to be established.

THE people of the populous village of Nanase in Wakigori, in the same province, are in a state of serious excitement; and five or six hundred peasants have risen against the authorities, and attacked and stormed the police station, where many policemen were wounded.

THE Japanese man-of-war *Moshun-kuwan* arrived in Kobe from Kagoshima on the 21st ultimo, and the *Tabour-kuwan* has left Nagasaki to replace her at Kagoshima.

MANY cases of cholera declared themselves among the crew of the *Takao-Maru*, which left for Corea with Hanabusa, Chief Secretary of the Gaimusho, and his staff. Preventive measures were taken, but effected no good result. None of the passengers landed in Fusan, and the vessel returned to Nagasaki.

THE *Hochi Shinbun* says that on the 24th ult. the French Minister and his secretaries left Tokio for the extensive drill ground of Narashino, Shimosa, in order to be present at a grand review of the troops from the South.

THREE shizoku, two from Kagoshima and the other from Kochi, were recently arrested in the Kochi-ken, and are to be brought before the Supreme Court in a few days for trial. No reason for their arrest is stated.

THEIR Majesties the Empress and Empress Dowager will visit the female normal school in Tokio on or about the 5th instant.

THE *Kumamoto Maru* left Shinagawa the other day for Kiushiu with 12,800 bags of rice on board; for the relief of those who were rendered destitute by the late war; and the *Suminoye Maru* will shortly follow her with more rice.

THE following account of the number of contributors and the sums of money subscribed to the Asylum in the Ueno Gardens is published in the *Hochi Shinbun* :—

Year	Number of contributors.	Sum of money.
6th year of Meiji	32	1,603.17
7th " " "	29	435.02
8th " " "	27	802.61
9th " " "	83	1,047.12
Total	171	3,887.92

AMONG the ignorant people of the lower classes in the capital and the country, the most ridiculous and superstitious rumours are current, some of which run as follows :— The late Marshal Saigo, of the rank of *Sho-saumi*, having found it convenient and pleasant to leave this gloomy and dark world translated himself from Shiroyama, Kagoshima, to the star known as the *Saigo-boshi* (Saigo's star) on the 24th September. There he has determined to kill his foes with the assistance of heaven. So he first ordered the god of the winds to punish those who took up arms against him. The obedient deity wrought much injury both by land and sea on the 11th instant. Then Saigo commanded the god of pestilence to scatter his poison among the imperialists, who opposed the attainment of his wishes. We find a wonderful drawing in the picture shops, representing Saigo, dressed in uniform and sitting on his star, directing a hundred of his deceased braves with a *saihai* (marshal's bâton.) Each of them holds a small axe in his hand, with which he attacks persons, who instantly fall sick. This is an allegory of the prevailing epidemic sent by Saigo to chastise his foes.

IGNORANT fellows in the Chiba-ken, who believe all kinds of idle rumors, have become much excited by the preventive measures against cholera taken by the local authorities.

THE Finance Department has sent 387,655 silver *bu* each of the value of 25 sen, to the mint in Osaka. 200,000 of them have been re-minted into new coin, of one yen each and the remainder into other coins, of the value of 40, 20, 10, and 5 sen respectively. They will shortly be returned to the Finance Department.

ALL the schools, public and private, in Yokohama and the vicinity, which were closed as a precaution against the spread of cholera are re-opened from the 26th ulto.

THE Daijo-kuwan has issued an order to the *Kunsho-kioku* (Department of Decorations) to issue decorations to the Commander-in-chief and generals who served in the late war.

THE *Saikai Shinbun* states that Saigo-Kikujiro, the second son of the late Marshal, who surrendered to the imperialists, was acquitted at his trial before the Kiushiu Special Court, and was at once released from custody.

LIEUT.-GENERAL Tani, late in command of the Kumamoto garrison, has been also appointed to that Kagoshima garrison consisting of two battalions. He will however, remain in Kumamoto castle.

H. E. TERASHIMA, Minister of Foreign affairs, entertained the German Minister at dinner at the Imperial palace of Ohamagoten on the 27th ultimo.

A number of the newly enlisted troops have been formally disbanded in the imperial gardens of Fukiage. Prince Higashi Fushimi-no-miya was present, representing H. M. the Mikado.

THE following table of cases of cholera which declared themselves in the fu and ken between the commencement of September and the 20th October is published in the *Hochi Shinbun* :—

	Date.	Cases.	Deaths.
Tokio-fu.....	From 14th Sept. to 20th Oct.	529	299

THE *Hochi Shinbun* says that the imperial gardens of Fukiage will be open to the public every Saturday.

H. E. MR. VON WECKHERLIN, Diplomatic Representative of Holland and other states, Captain Von Wickede, of the German corvette *Elisabeth*, and Captain Brinkley, R.A., have had the honour of an interview with H. M. the Mikado.

A fracas occurred between a number of policemen and some of the Tokio garrison troops at Ichigai, Tokio, on the 28th ultimo. The soldiers attacked the Police Station at Sakamachi, and two policemen were wounded.

THE meeting of silkworms'-egg dealers and agents, which was held at the Town Hall on the 25th ultimo, was brought to a close with the decision that the seventh part of the cartons now in stock are to be destroyed, and the remainder exported.

A silk factory will shortly be established in the Yamagata-ken, and the machinery to be used there is being manufactured by the Public Works Department.

AN application to the Home Department has been made by the Exhibitors in the National Exhibition that on the 3rd instant, being the Mikado's birthday, the exhibition may be opened to the public free. They also propose that it shall be properly lighted and kept open at night.

THE *Nichi-nichi Shinbun* states that 44,648,098 92 yen have been absorbed in the expenses connected with the late war up to the 27th instant.

THE *Fuso Maru* has left for Nagasaki to bring back troops thence and the *Rinjo-kawan* and *Chitose Maru* are expected to leave for Kagoshima immediately for the purpose of transporting troops and munitions to the East.

THE sum of 27,000 yen, to provide for expenses incidental on the trial and support of state prisoners, has been transmitted to the Owake Kencho.

THE Kanagawa Kencho has received a telegram from the Government ordering that the Chinese Envoy and his staff, who are expected to arrive shortly, shall be received with special demonstrations of welcome.

IKEDA KICHIJURO and Ishi Sadayo, leaders of the rebellion, were condemned by the Kiushiu Special Court on the 26th ultimo to decapitation. When Saigo and his men invaded Kagoshima, the first mentioned fell sick and had to stop in the house of a district official of Koriyama, where he determined to commit *barakiri*. But he was advised by his landlord to try to join Saigo at Shiroyama, and failed in his attempt to make his way through the imperial lines.

OFFICIAL NOTIFICATION of a modification in the treatment to be given to shipwrecked Korean sailors has been made. Thus :—

When Korean subjects are wrecked in Japan and they wish to repair their wrecked vessel, the local officials, where they land, will allow them to repair the damages done. As the expenses have already been contracted to be paid by the Korean Government, the local authorities will render an account of outlay to the Japanese Governor in Fusan (Corea) who will recover from the Government of Torai-fu.

When a vessel is so much damaged that repair is impossible, the local authorities will instruct the owner to sell it, and will give him the money paid for it. If the vessel cannot be sold, it will be broken up and burned in the presence of the owner.

When a Korean vessel is stranded on an island lying at a distance from our mainland, where there is no wood to complete the repairs, and it is impossible to remove it elsewhere for repair, the local authorities will instruct the owner to sell or abandon his wrecked vessel, according to the necessities of the case.

THEIR MAJESTIES the Mikado, the Empress, and the Empress Dowager visited the National Exhibition on the 26th ultimo. The weather was fine. Their Majesties left the palace at Akasaka in carriages at 8 o'clock a.m., with a large suite of attendants. They were escorted by a force of police, and detachments of the imperial body-guards and cavalry. At 9 o'clock the imperial party arrived in the Ueno gardens, and there rested for a short time in a room specially prepared for their accommodation close to the Exhibition buildings. The Mikado, the Empress, and the Empress Dowager, accompanied by T. E. Okubo and Kawase, Director of the Exhibition, visited each hall, where a short explanation of the principal articles exhibited was given by the chief exhibitors. At noon Their Majesties dined in their special room, and afterwards continued their inspection. Military and naval bands were in attendance and played during the day. At 5 p.m. Their Majesties returned to the palace at Akasaka. The houses and shops on either side of their route were decorated with flags and lanterns. Before dawn thousands of men and women, old and young, had assembled in the Ueno gardens, which at night were brilliantly illuminated with lanterns.

SEVERAL more meetings of silk worms' egg cards' owners and agents have been held again in the Town Hall, Honchodori, since the 25th ultimo. Some members of the Tokio Kaigi-kioku, and officials of the Industrial section of the Kanagawa-ken, attended the meetings and heard what was there discussed. It was decided that the seventh part of the present stock should be thrown into the sea. But those who

are prosecuting the chiefs of the Shingi-sho before the Yokohama Saibansho, did not appear at the meetings.

THE *Mai Nichi Shinbun* states that, according to news received from China, Ajosho, Envoy Extraordinary and Minister Plenipotentiary for China, and his suite, are said to have embarked at Shanghai on board the fifth gun-boat of the Chinese Government, and are expected to arrive at the commencement of this month in Yokohama, where preparations for the reception of the Ambassador have been commenced by the Gaimusho.

A LETTER from the south states that between 3,000 and 4,000 soldiers are yet in Kagoshima, where everything is upside down. Two men-of-war and five or six transports of the Mitsu Bishi Company are always anchored in the harbour. A steamer, name unknown, was stranded recently off the island of Sakurashima. No houses have yet been rebuilt in the town, and the inhabitants, who are gradually returning from the island, have erected sheds and live in a poverty-stricken fashion.

THE Daijo-kuwan has issued a notice to the effect that the Loo Choo *Han* is under the jurisdiction of Osaka.

IN honor of the return of the imperialists from the South, and their victories in the civil war, a grand festival will be held in the temple of Shokon-sha, Kudan, Tokio.

THE *Akrono Shinbun* says that H. E. Kawaso, Japanese Envoy Extraordinary and Minister Plenipotentiary to Italy, returned to Japan with his family on the 25th ultimo.

ON the 25th ultimo a man, apparently a peasant, made his way into the imperial palace at Akasaka. He was promptly arrested and taken to the Police Station.

THE *Mai Nichi Shinbun* says:—Those silkworms' egg card dealers, who brought the chiefs of the Shingi-sha (guild of carton owners and agents) before the Saibansho, did not appear at those meetings, held in the Town Hall, where it was decided that the seventh part of the cards should be thrown into the sea. They returned to Tokio with all their merchandize, and would seem to have had a secret understanding with an Italian dealer, to whom they are said to have sold their best cards in Tokio at the price of about 18 sen a sheet. The Italian, who purchased about 80 boxes of cartons from them brought them by goods-train to Yokohama during the night of the 29th ultimo, and loaded several vehicles with them at the Railway Station in that place. The spies from the guild, who were sent out in all directions to discover what secret sales were made in contravention of the regulations, saw the foreigner in a jinrikisha, followed by several vehicles loaded with the boxes of cartons. The guild's men stopped the convoy; and assembled round the carts, from which they endeavoured to remove the boxes. The Italian became very angry, and some difficulty appears to have ensued. A body of police arrived on the scene. It was about 11 o'clock at night when all concerned returned to their respective homes. We do not know how the matter will end.

A GRAND pyrotechnic display will take place in the public gardens in Yokohama on the evening of the 3rd instant, that being the Mikado's birth-day.

A TWENTY-SIXTH national bank has been established at Kanazawa, in the Ishikawa Ken.

H. E. SANJO, Prime Minister, has been indisposed and unable to attend to his duties for several days.

By official notification the branch office of the Naval Department at Nagasaki has been declared closed.

THE valuable present of three rolls of Yamato nishiki (brocade) was made by H. M. the Mikado to Captain F. Brinkley, R.A., of the Imperial Naval Department, who had an interview with the sovereign at the Akasaka palace recently.

A GRAND review in honor of the Imperial success in the late civil war is expected to take place on the parade ground of Hibiya, Tokio, before the Mikado, shortly.

DURING the three days ending the 16th ultimo, a grand festival was held at Yamazaki in Kumamoto in honour of the late Colonel Yokura, 68 officers, 130 petty officers, and 542 soldiers, who were killed during the siege of Kumamoto castle by the Kagoshima insurgent troops. There were horse races on the first day, and wrestling matches, feasting, and acrobatic performances on the two others.

THE 3rd instant, being the Mikado's birthday, a banquet will be given in the evening by His Majesty to the *Daijin*, *Sangi*, and Ministers of the various Departments, and the foreign Representatives, at the imperial palace of Ohama.

THIS year 2,700,000 silkworms' egg cards have been manufactured in Japan, and about 1,500,000 have already been sent out to foreign countries. Those of the first class, whose value is about 3 yen each, have been sold for about 1.80, and those remaining will not fetch more than three cents at present. 1,200,000 cartons remain in Yokohama. Of these about 360,000 are expected to be purchased by foreigners, and the remaining 840,000 must be thrown into the sea or set on fire. One Ozawa and another person in the village of Minami Niimura, in the Nagano-ken, have addressed the Kansho-kioku (mercantile section) of the Home Department to the following effect:—"All dealers in cartons in Japan should agree not to sell their merchandize to foreigners at a price less than 2 yen per card. Out of the 1,200,000 cards in Yokohama, 200,000 should be taken by native dealers to foreign countries, where each sheet will bring 2 yen. This makes 400,000 yen. Thus it appears how advantageous it is to sell them in Yokohama at 3 sen each. We are ready to provide 10,000 yen for the freight and other expenses of taking the cartons to foreign countries." No answer has yet been returned to the petition.

Six students of the Kaisei Gakko will shortly be sent to France to follow a collegiate course at the expense of the government.

THE number of visitors to the National Exhibition during the week ended the 26th ultimo was 26,152.

MACHIDA KEIJIRO, second son of the ex-Daimio of Hinga, and one of the partisans of Saigo, was arrested in Kumamoto on the 16th of October.

IIAKODATE.

The German brig *Oceanus* had arrived from Yokohama on the 19th. H.M.S. *Modeste* came in from Mororan on the same day, and left on the 20th for Niigata. Passengers on board were Sir Harry and Lady Parkes, Mr. Aston, Dr. Hue, and Mr. Maries. 21st, British barque *Hilda* arrived from Yokohama: 23rd, *Hedvig* from Shanghai.

A few cases of cholera still continue.

CORRESPONDENCE.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

TRAINING NOTES.

To the Editor of the *Japan Gazette*.

SIR:—As no one has offered you any notes on the training this autumn meeting, I venture to send you a few, not with the only object of flattering my own vanity, or seeing my own effusions in print, and being suspected or pointed out as an authority or author, but rather with the view of giving your readers something racy to read, knowing that many of them have a taste that way. In doing so I shall avoid if possible all private matters such as "viaducts," &c., which the worthy "Triton," uses to fill up a portion of the *Weekly Mail* with. It certainly seems to be bad taste to advertise private business or grievances, under the guise of "training notes."

As the Yokohama Race Club entries have closed, I shall commence with the cattle there entered, and with the largest stable, viz. "the Tartan." *Hoolet*, and *Lintie* look the picture of health, and the very pink of condition, and have evidently as yet not lost by the absence of their owner and former trainer; and I think will hold their own against all comers at all distances. *Braemar* and *Tullapoosa*, although reported seedy and dicky when training commenced, have come out in their old form and are going very well. *Mavis* looked wretched for a long time, and does not yet appear very gay, but seems to be able to go all right when wanted or properly put to it; and I think will be able easily to beat anything entered for short distances in the Yokohama Race Club. The natives of the stable all look well, and go well, and will not be beaten. Altogether this stable is very strong. Who, with such ponies as *Hoolet*, *Braemar*, and *Lintie*, and their present jockey to guide them, would not be able to run through any programme on any course in the East.

The next and only important stable is that of Mr. John Peel, who has the only pony able to compete with the Tartans. *Bonny Doon* stands alone and unsupported, and I fear will make but a sorry show against them: this pony seems to be still very soft and short of work. *Anandale* ought to be good for "the Hurdles." The half-breed is still a mystery to be solved only when he meets good ponies in a race. This pony should win "the Griffins," as I think his most likely opponent will have been trained to pieces before the race comes off. Mr. R. J.'s *Grey Friar* seems to be quite equal to the "Trial Plate." I scarcely think his struggles will hurt him much; for the trial will not be great, nor any true test of his speed. *Planet* is in good hard form and ought to stay well; but I never thought this a first class pony; and I now think the only score he made was a fluke, even at a stone advantage. *Vandal* is a good sound pony and in fine form: he ought easily to polish off all his own shipmates. Old *Crusader* looks as well as ever, as do his stable companions; but they are not much on the go. As for the Sanjiu-ban and the Dairy ponies which, by the by, are said by "Triton" to have improved under the change of management, I hope the change of air may assist them. At the same time I think the less said about them the better, as I am of opinion they will never hurt anybody's feelings but the owner's. This I think completes the list for the Yokohama Race

Club. I hope they may have a merry meeting.

The "moral" is—*Tartan*.

Uncertain, *Bonny Doon*.

Uncertain, *Vandal*.

This surely ought to be satisfactory to the Yokohama Race Club; but where the sport will come in I fail as yet to observe.

More by and by.

Truly yours,

EQUI INSTAR.

Yokohama, October 23rd, 1877.

HOUSE NUMBERING.

To the Editor of the *Japan Gazette*.

DEAR SIR,—Of the many reforms necessary in the Settlement of Yokohama and on the Bluff, there are, perhaps, none more urgent (excepting the reduction of ground rent which seem to me excessively high) than a revision in the numbers of the houses. From what I can glean it seems that the lots have been numbered as they were sold. So if Brown purchased a block on one corner of the Bluff to-day, and it were No. 1, and Jones bought an allotment a mile away from Brown to-morrow, that would be No. 2. This necessarily has created much confusion in the numbers, and renders it extremely difficult for a stranger to find any particular house he may desire to.

Now it appears to me that this evil could be very easily remedied by the Kencho, and the numbers so arranged that after No. 1 should come No. 2, and so on according to the positions of the allotments.

Moreover the present is a very suitable time for such an alteration, as I see by circulars that you are making preparations for a Hong List for 1878; and the value of that work would be greatly increased thereby. Trusting that this question will meet with the ventilation it deserves, and that the reform may speedily take place,

I remain, Dear Sir,

Yours faithfully,

JUST ARRIVED.

Yokohama, October 23rd, 1877.

THE FARMERS AND SHOOTING.

To the Editor of the *Japan Gazette*.

DEAR SIR,—In the *Herald* of the 24th inst. there is a letter professing to be written with a view of giving us the native opinion as regards shooting, as practised by foreigners in Japan, or we may perhaps more properly say round and about Yokohama and Tokio, which for thorough anti-foreign sentiments has never been surpassed in the columns of the most hostile to foreigners of the ultra-Japanophile foreign press in this country. "A. G." (by which I mean Anti-Grumbler) has probably never handled a gun in his life; or if he has it was most certainly in pursuit only of the wary sparrow, or cheerful lark, whose residence is generally on those fields of "young wheat, or barley or vegetables" which are injured by sportsmen!!! and their dogs tramping over them.

I have shot for a good many seasons in Japan both in and out of treaty limits, and never yet met with an uncivil word from these farmers who to quote the words of "A. G." look upon foreign "sportsmen as unwelcome intruders and enemies to their interests;" but on the contrary have on many occasions been taken to spots where game was to be found, by these very farmers, who to all

appearance entered heart and soul into the sport, if leaving their crops to look after themselves, and walking four or five miles in company with these "hated sportsmen" for the simple pleasure of the thing, was any test. "A. G." is so thoroughly imbued with an evident hatred of everything foreign, that many of his remarks, though intended no doubt to be satirical, become only childish.

With regard to the amount paid by foreigners for shooting licenses, "A. G." is as badly informed as to that, as he appears to have been in the statements of his regarding the "damage done" "by the sportsmen, their horses, and their dogs in the farmers' fields."

Cock pheasants as a rule are not found calmly basking in the young wheat fields, neither do snipe or woodcock affect growing pea-crops; and I never remember to have yet shot a duck, teal, or goose in a bean-field.

When "A. G." speaks of the damage done by the "horses" of the noble sportsmen, he must be alluding to our Christmas paper hunts, which perhaps may inflict some little damage, but I never yet even saw, though I have seen some wonderful turn-outs in the way of accoutrements for *la chasse*, a mounted gunnist (to use an Americanism) make his appearance.

I have not the least doubt that to a man who has never handled a gun in his life the sentiments and opinions of "A. G." appear right and proper, but to those amongst us who thoroughly enjoy the legitimate pursuit of game, they appear distorted and childish, and perhaps lead us to think more harshly of the petty annoyances and restrictions that we are subject to by being in possession of what is wrongly described, as a "Shooting License," especially when we look back five or six years ago, when we were free to roam anywhere over the country with our dogs and guns, in and out of treaty limits, and when never a word of complaint was heard from these poor farmers whose cause "A. G." has taken in hand so zealously.

We hear a great deal of the wish of the Japanese to learn Western customs, and become a civilized people, and that they are far ahead of the Chinese, their neighbours, in that respect; but such petty annoyances as are put in the way of foreigners desirous of enjoying themselves in a rational way, seem more the ideas of a semi-barbarous nation than one aspiring to be thought civilized. Let "A. G." recommend his government to adopt the more open ideas of China in this matter, from whence we hear no complaints of "trampled crops," or damage of any sort by foreigners when shooting.

I could trespass much longer on your time and space, Mr. Editor, but I think for the present I have said enough.

I am, &c.,

SPORTSMAN.

Yokohama, 26th October, 1877.

"THE ROUND OF THE PAPERS."

To the Editor of the *Japan Gazette*.

SIR:—The real derivation of the word "News" is held by some learned pundits to be from the initial letters of the four points of the compass. Thus:—

N—orth	} = N.E.W.S.
E—ast	
W—est	
S—outh	

That this derivation is the correct one I opine from the fact that intelligence, a synonym oft employed by you journalists,

travels frequently in an orbit, starting from a given point of the compass and thither returning, its circuit being duly made. Or, without actually "boxing," as the mariners have it, all the degrees, it may voyage from one point, say the North, to another, as the South, and straightway return whence it came, as a tennis or racket ball rebounds from the wall it strikes. An instance has recently occurred within my observation. Thus, in an issue of your journal of the 3rd of this current month, I read, after the arrival of "news" by an American mail, that one Valentine Baker, of cavalry and other fame, had been made "Baker Pasha" in the service of the Moslem, with a wage, or screw, of \$10,000 per annum. This same paragraph was given as a matter of local interest in a daily paper of Hongkong subsequently to the time of arrival of yours in that colony. And now, behold, in a Yokohama journal of advertisements, which appears in the morning of each working day, recurs, in similar words, and equally as a matter of general and local import, the self same information. Peradventure, after the return of the next steamboat hence to the Gate of Gold, the dailies of San Francisco will, in their turn, forgetful of what was three months before published in their midst, copy from the *Morning Advertiser* that same item, which will mightily rejoice those who have not yet heard, or have become oblivious, of the astounding fact.

Less improbable events have been brought round afore now, and that within the memory of

Your respectful

and humble servant,

SNEW.

Vane-top, Yedo, October 29th, 1877.

OSAKA.

(From an occasional Correspondent.)

OCTOBER 23RD, 1877.

THE night before last a batch of prisoners broke out of jail, amongst them being a most noted scoundrel; some have been captured, but the majority are still at large. Their flight was discovered about 8.20 p.m. and the alarm was then given.

A disease has broken out among the cows on the Government Farm, Kioto, and the Japanese think it is cholera.

The cholera epidemic among the people is, I am happy to say, abating here, although the authorities (and very properly too) still continue to enforce strict measures for the prevention of its spread. The college, which was at first to be closed from the 16th till the 27th, will not be re-opened, on account of the cholera, until the 5th November.

To-day the castle was open to visitors and a motley crowd availed themselves of the privilege. I think that nearly the whole of Osaka must have been there. As usual on such occasions, *saké* was freely indulged in, and the consequence was that sundry arrests were made by the guard.

The bodies of Saigo Takamori and over 100 belonging to the Shigakko were buried by the Imperialists on the 24th September in the graveyard of Jokoji, Kagoshima.—*Cosmopolitan Press*.

LAW REPORTS.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., *Consul*.*Monday, 15th October, 1877.*

John W. Price, a colored man, was charged with assaulting the Chief Officer of the British barque *Clifton* with a bottle.

The prisoner pleaded that he committed the assault in self defence.

After hearing the testimony His Honour sentenced the prisoner to one month's imprisonment with hard labour.

On leaving the dock the prisoner watched his opportunity; and, taking the Captain of the *Clifton* unawares, struck him a violent blow in the face, completely smashing in his nose.

The prisoner was again brought before His Honour, and received a further sentence of two months' imprisonment.

Before H. S. WILKINSON, Esq., *Act. Law Sec.**Wednesday, October 17th, 1877.*JOHN BRADFIELD *versus* JOHN NORTH.

Mr. Lowder for the plaintiff and Mr. Dickins for the defendant.

The plaintiff's claim is that the defendant entered into an agreement with him to pay the sum of \$3,000 in satisfaction of a promissory note given by one John Thompson, a partner in the defendant's business, to the plaintiff for moneys had and received by the said Thompson and used in the business of the defendant; the advances to Thompson being secured by a bill of sale deemed by the parties to be enforceable against the property of Mr. Thompson.

On the Court sitting Mr. Dickins called the attention of his Honour to the fact that there was no cause of action stated in the petition as required by the rules in the Order in Council. He made application under rule 40 that the defect in the petition be remedied by stating facts which amounted to a cause of action. The learned gentleman then addressed the Court in support of this application, and contended that the wrong party was made the plaintiff and the wrong party the defendant. The proper person to sue, if anybody, for the amount, was John Thompson and not the present plaintiff.

Mr. Lowder maintained that the petition was drawn in accordance with the Order in Council, and referred his Honour to rule 27.

His Honour thought the defendant was too late with his application as it might have been made before. He ruled that it be dismissed.

Mr. Lowder applied for costs in the motion made by Mr. Dickins, which, perhaps, was not a frivolous one, but of such a nature as to justify him in applying for costs.

Mr. Dickins did not see why his client should be mulcted in costs because he was a little late in making the application.

His Honour left the question of costs over for the present.

Mr. Lowder then addressed His Honour and stated the particulars of the claim by Mr. Bradfield of Shanghai, for whom Mr. Talbot was the attorney. In 1876 Mr. Talbot received instructions to dispose of certain property belonging to Mr. Bradfield. Those instructions were conveyed in a letter, the reading of which was objected to by Mr. Dickins. He wished to read a letter;

but Mr. Dickins objected and His Honour sustained the objection. Mr. Lowder explained that his reason for wishing to read the letter was that the Court might the better understand the case. In consequence however of instructions received, Mr. Talbot sold Mr. Bradfield's own one-fourth share of the business to a Mr. Brewer; and then proceeded to negotiate a sale of the promissory note given by Mr. Thompson to Mr. Bradfield for the sum of \$3,341.82 with interest thereon as from the 1 April 1874. The learned gentleman then explained in detail how the business, which was of rather a complicated nature, was terminated. Having concluded his remarks, Mr. Lowder called.

W. H. Talbot, who was sworn and said: I am a public accountant, and attorney for the plaintiff.

Mr. Dickins called for the power of attorney.

His Honour informed Mr. Dickins that he could call for it on cross-examination.

Witness:—In April, 1876, I received instructions from Mr. Bradfield, and in pursuance of those instructions I entered into negotiations for the sale of his part of the business and also with regard to discounting a promissory note. The signature to that promissory note, I think, is Mr. Thompson's. It is similar to signatures to letters I have received from Mr. Thompson. In April I received an offer from Mr. Brewer for the purchase of Mr. Bradfield's quarter share for \$4,000. On receiving this offer I telegraphed to Shanghai, and ultimately sold the share to Mr. Brewer for \$4,000. I informed Mr. North that it was eminently desirable Mr. Bradfield should receive the money due on the promissory note, the business be relieved of the burden of security; Mr. North said he thought so too, and it was arranged that Mr. Thompson and Mr. North should meet, and that meeting took place about the 22nd or 23rd of May 1876 at my office, the result being that North agreed to take over Thompson's liability to Bradfield, to give Thompson credit for a quantity of goods, and to give a sum of money. There was a letter written by Mr. Thompson to Mr. North. I wrote the letter at Mr. North's request and dictation, and saw it signed by Thompson and delivered by him to North. That is a press copy of the letter taken at the time. (Letter put in and read. It was to the effect that Thompson was willing to sell his share of the business to Mr. North on condition that he (North) took over his (Thompson's) liability to Bradfield and gave him \$250.) Previous to 1874 Thompson and Bradfield carried on business as partners as druggists in Yokohama. On the 13th March, 1874, their stock-in-trade was destroyed by fire. Some of the stock was at the hatoba, having been landed for Thompson and Company, and was then transferred to North, Thompson and Co.'s premises. I know this of my own knowledge. The goods handed over to North, Thompson & Co. were paid for in part by me, and in part by North, the latter payments being debited to J. Thompson & Co., in the books of North, Thompson & Co. Bradfield then advanced the sum of \$2,850 as Thomson's share of the capital of the new business. The balance of the account, \$491.82, due from Thompson to Bradfield upon closing the affairs of J. Thompson & Co., and this sum, make up the amount of the promissory note.

Mr. Lowder handed into Court the deed of partnership between North, Bradfield, and Thompson.

Witness:—The amount of the bill of sale was made up of capital and a private account. Bradfield's share was finally transferred to Mr. Brewer on the 31st of May, 1876. That letter was written by Mr. North to me on the 22nd May, 1876. (Letter produced and read, it being to the effect that North had no objection to Mr. Brewer taking over the share of the business, providing he paid a certain amount for Bradfield.) After the meeting on the 23rd May, Mr. North came to me and said he particularly wished to take over Thompson's share, but that he could not afford to pay the whole amount due to Bradfield. I said that Bradfield required money without delay; but if he made a reasonable offer I would telegraph to Shanghai. He offered \$3,000.

Mr. Lowder wished to give evidence on an agreement not reduced to writing.

Mr. Dickins objected.

Mr. Lowder then read a letter from Mr. North to the effect that North would give \$3,000 for Thompson's share, providing he freed him from the liability of Bradfield's interest. That letter was received on the 27th May.

(A letter from Mr. Talbot to Mr. North, dictating terms for the sale of the business to Mr. North was here read and put in.) Mr. North said it was all right. He did not accept the letter in writing.

Mr. Dickins objected to the evidence, alleging that the contract ought to be wholly in writing, or a contract of guarantee, and that evidence outside of the written contract was not admissible.

Mr. Lowder contended that the agreement was not one which should be put in writing under the Statute of Frauds; and produced authority to show that oral evidence under the circumstances could be produced.

Considerable time was spent in the discussion of this point and in finding references to it; but ultimately Mr. Dickins conceded one part of the contention and His Honour then made the following.

ORDER.

I think the whole agreement has not been put into writing and that being so, parol evidence is admissible to supply the missing part, unless the contract is one which must be wholly in writing. The letter of the 1st June 1876 is, on the face of it, an incomplete agreement. It adds conditions which do not appear in the letter of the 27th May and the contract would on the face of it be incomplete until those conditions had been accepted.

The question then is, was this an agreement requiring to be in writing? Mr. Dickins says that it is one which must be in writing to satisfy the Statute of Frauds, for it is an agreement to answer for the liability of another person for which that person remains liable, as it is a contract for the sale of chattels for more than £10. It appears to me unnecessary to consider it in the light of such a sale. It appears to me that the agreement sought to be set up is an agreement to take over the liability of another person, and that the liability of that other person should be extinguished. It is certainly hard to reconcile one part of the letter of the 1st of June with such an intention that relating to the transfer of the promissory note, but looking at the whole of the agreement it appears to me that Mr. Thompson's liability was to be extinguished. I shall therefore allow evidence to show whether the new conditions put into the letter of the 1st of June were accepted or not by Mr. North.

Witness:—I saw Mr. North immediately after the letter was sent to him and he said it was all right. I also saw in that night's paper an advertisement announcing that Mr. Thompson's interest in the business ceased from the 1st June (Mr. Lowder handed in the original copy of the advertisement, which was in the handwriting of Mr. North). Between 30th June, 1876, and the commencement of these proceedings I have had other communications with Mr. North constantly. Then about the month of October Mr. Watson, an assistant of Mr. North, called on me with a letter from Mr. North. Mr. North then told me that he was desirous Mr. Watson should have an interest in the business and proposed his taking off the \$3,000, if I had no objection. I said it did not matter to me who paid the \$3,000, but Mr. Watson never came to me about it again. Between the date of the agreement until June this year I did not press Mr. North for payment. The reason I did not press him was because he always said he was doing his utmost to pay, and by pressing him it might have injured his interests. I knew he was unable to pay. The first time Mr. North repudiated the agreement was in June last. He said he did not owe Bradfield a cent and was not going to pay him anything. When I received that answer I consulted counsel. I never had any power to sell Mr. Thompson's share of the business. He never asked me to sell his share. It is not a fact that I repeatedly endeavoured to sell his share, as stated in the answer to the petition.

Adjourned till to-morrow at 10 a.m.

Thursday, October 18th, 1877.

On the Court resuming this morning Mr. Talbot made a slight correction in his evidence of yesterday and was then

Cross-examined by Mr. Dickens:—I am an Average Adjuster as well as an Accountant. The letter concerning the insertion of the advertisement was produced by Mr. Lowder.

Mr. Dickens:—Did you not give instructions to Mr. Lowder to get that letter.

His Honour:—Do not answer that question. I will not allow what passed between counsel and client to be brought in up here.

Witness:—I may have drawn up deeds and charged for them. I did not draw up a single document in connection with a certain insolvent Company.

Mr. Lowder:—I drew those up if you wish to know.

Witness:—I acted as Accountant to the firm of Bradfield and Thompson from 1870 till the time of the fire. At the time of the fire the indebtedness of Mr. Thompson to Mr. Bradfield was a balance of \$400 odd dollars. I think the value of the stock was \$17,000, and it was insured for \$10,000. I forwarded a copy of— to Mr. Thompson with a letter of explanation. The insurance money was paid in March or April and was entered in this account. There were some irregularities in Mr. Thompson's accounts when he was partner, and part of the liability of Mr. Thompson to Mr. Bradfield was due to this. I cannot speak with certainty as to the value of the stock in trade at the commencement of the partnership between Bradfield and Thompson, but there was a cash account of \$5,400. On the day of the fire I saw some goods on the hatoba for Thompson & Co. I paid \$389 on the 6th of April for those goods I believe the goods were on the hatoba either before or immediately after the fire. I did

not see personally the transfer of the goods to the godown of Thompson & Co. The private ledger of the business will show the transfer of the goods to North, Thompson & Co. It is contained in an item of \$1,788.90 paid to J. Thompson & Co. in December. All the goods that arrived before or after the fire that were taken over by the new business were credited to North, Thompson & Co. The private ledger does not contain the details; they are supposed to be in the journal. I should consider those goods were included in that bill of sale. I have read the deed of partnership between North, Thompson & Co. The sum of \$5,700 was paid to Mr. North. About \$4,500 was paid to him immediately after the deed of partnership was drawn up, and the balance on 31st May, 1876. Mr. Bradfield was in fault in the balance not being paid sooner. The present claim is founded on the letter from Mr. North to me and mine to him, and on the verbal agreement also on the 23rd May, and on the subsequent agreement. There are no other agreements upon which I could base my claim unless, perhaps, a letter written by Mr. Thompson to Mr. North. Mr. North's offer was not to purchase Mr. Thompson's share. I do not exactly remember the contents of the letter. The principal object of Mr. North wishing to get Mr. Thompson's share of the business was to have the whole affair in his own hands. I do not think Mr. Bradfield would have taken over Thompson's share without the security being discharged. Mr. North did not directly put forward that his principal object was to get Thompson's share free of incumbrance. If there had been no security Mr. North might have transacted this business personally with Mr. Thompson. I consider the bill of sale to be a security for the payment of \$2,850 paid by Mr. Bradfield to North, Thompson & Co. This sum was paid into the business account. There is an entry in the ledger for \$3,000 cash, credited to Mr. Bradfield; \$1,595.77 for goods supplied; and cash paid by Mr. Bradfield \$1,104. The first payment was made in August, and the goods were transferred in Dec.; the last item was paid in May 1876. I don't think there is any entry in the books showing the arrival of the goods. Mr. Bradfield paid in all \$5,700 and for part of that the bill of sale is security. It was drawn up as security for capital advanced under the old partnership. Between June and December, 1876, I asked Mr. North several times for a settlement, but never attempted to press the matter. Whenever I spoke to Mr. North about it he always acknowledged owing the amount. I don't recollect telling him that I held him responsible under any particular letter or agreement. All this time I was under the impression that the property of North, Thompson & Co. was mortgaged to Mr. Bradfield, and that Mr. North was of the same opinion until June of this year. I do not recollect any particular occasion when I asked Mr. North for a settlement. I don't remember any person being present. I was in constant communication with Mr. North, and therefore cannot recollect any particular date. On the last occasion, in June this year, I told Mr. North I was obliged to have the matter settled. I was keeping Mr. North's accounts up to December, 1876. Mr. North said to me, either in June, July or August, that he owed \$3,000 to Bradfield and wanted money to pay it off. In June this year he said that he did not owe Bradfield a cent. I had told him before that Bradfield was anxious for a settlement.

Recess till 2.30 p.m.

On the Court resuming

The cross-examination of Mr. Talbot was resumed:—The first time Mr. North repudiated his liability to Mr. Bradfield was in June. I can swear positively that between that time and the previous December he never repudiated his liability. At the time of that agreement I had a Power of Attorney from Mr. Thompson, but it was so informal that I returned it to him. When Mr. Watson saw me it was in reference to the purchase of Bradfield's liability. It was not his object to purchase Thompson's share. Had there been no security on Thompson's share I should have declined to negotiate.

Mr. Dickens asked the witness if he wrote a letter to him dated April 1876 in reference to the loan.

Mr. Lowder objected to the question on the ground that it would force the witness to contradict a date which was concealed from him this morning. The learned gentleman produced authority in support of his objection.

His Honour upheld Mr. Dickens.

Witness:—I wrote that letter (letter read). The application to you for a loan was different to the loan mentioned this morning. I do not think that I spoke to you about \$3,000 owing to Bradfield. Those accounts are in my handwriting. No mention is made in them of a bill of sale. They are the accounts of the firm and not private accounts. About the 11th or 12th July this year I wrote a letter to Mr. Thompson asking him to pay the amount of that promissory note to Mr. Bradfield. The substance of the letter was that if it was not settled legal proceedings would be commenced. That promissory note has not been endorsed over by me to Mr. North. The bill of sale produced has not been discharged. Mr. Bradfield had power to prevent Mr. Thompson retiring from the business by virtue of the bill of sale, and by a clause in the articles of partnership. Bradfield's share was sold to Mr. Brewer in May. After the sale Bradfield was no longer a partner in the business. I know of no other document than the bill of sale for preventing Mr. Bradfield from retiring from the firm after the sale to Brewer. Clause 10 in the deed of partnership contains a provision which would have prevented Mr. Bradfield from retiring from the business (clause read.)

Mr. Lowder said to the witness:—This morning you stated that you relied upon the letters of 27th May, and the first June, 1876, and to a previous conversation between yourself and Mr. North, as forming the whole of the agreement upon which this case is based. Have you any explanation to make on that remark?

Mr. Dickens objected to the question.

His Honour upheld the question.

Mr. Lowder:—You may answer now.

Witness:—I was under the impression at the time when Mr. Dickens asked me what I based my claim on, that he referred only to documents. When Mr. Dickens questioned me about the loans I was not aware of the date of the letter sent to him; if I had been I should not have answered his questions as I did.

A. J. Thompson, Chemist, sworn, said:—I am very much opposed to giving evidence in this case. I remember an agreement entered into between me and Mr. North last year. It was in April or May 1876. The agreement was to the effect that Mr. North was to pay to Mr. Talbot the sum due to Mr. Bradfield; and not only that, but Mr. North was to pay me \$250,

and the firm of North, Thompson & Co. was to give me credit for certain goods. I never knew the amount of my liabilities to Bradfield. I was very glad to get rid of them whatever they were. I admit that promissory note, and think I am not now liable to pay it. My liability ceased about one year and nine months ago, April or May 1876. It ceased three months after I came back to Japan. It ceased because Mr. North had made an arrangement with Mr. Talbot, who was attorney for Bradfield and me, and Mr. North agreed to pay the \$3,000. Four of us were present at the meeting. Mr. Talbot made a deed of partnership after the fire that I was not to return to Yokohama, and the firm was to pay me so much per month. The firm did not pay this so I returned to Japan. But of course I could not have anything to do with the firm on my return. I did not sell Mr. North my share of the business in January 1877. I was very ill at that time. First the assistant of North, Thompson & Co. came up and asked me to sign a paper and I said the date was wrong, and could not sign it. He pressed me to sign as it was wanted to be negotiated. I signed it because I was persuaded to, as it was alleged they wanted to transfer the business to some one else.

Mr. Lowder read a letter from North, Thompson & Co. to Mr. Thompson, dated June 19th, 1876, and also a draft.

Witness:—I signed an agreement that I would not set up business as a chemist and druggist in Yokohama under a penalty. (Agreement read and put in.) That account was rendered to me by North, Thompson & Co., and it is right. I am credited for \$3,000 for my share of the business.

To Mr. Dickins:—The agreement made in Mr. Talbot's office was partly written and partly verbal. It was made about 18 months ago. I don't keep a diary. It must have been in March or April 1876. Mr. North signed the agreement in Mr. Talbot's office. The agreement was written by Mr. Talbot. I never saw that document before; it is not the agreement. Neither do I know anything of that letter. That is a copy of the agreement, signed by Mr. North. The verbal agreement took place on the same day. Under that agreement I was to transfer my share to Mr. North. I consider that it was transferred from the date of that signature. Mr. Bradfield did not owe me any money. I was the man who made the money, and he was the man who took it out of the business. I did not examine the items in the account. The accounts were correct. Bradfield was the most honest man I ever dealt with in my life—too honest to live.

Further cross-examination of this witness was adjourned till to-morrow.

A. H. Cole, editor of the *Japan Gazette*, was sworn and said:—It is our custom to publish a Hong List annually. The notice of Messrs. North, Thompson & Co. in 1876 is on page 66. The *Gazette* office got information from Mr. North of the dissolution of his partnership with Mr. Thompson. Alterations made in that paper (the printer's copy of the Hong List) are made from circulars received from different firms. About this time of the year circulars are sent round requesting the people who receive them to furnish certain information and return them. The information in those circulars is transcribed on to a piece of paper like that (the one in Court) which is a page of the old Hong List pasted on a larger piece of paper so as

to leave a margin for alterations. When it is complete it is sent into the printing office as copy, and the Hong List is set from it. Proofs are then pulled and sent into my office where they are corrected with the original copy; then probably carried to be verified by the representatives of the different houses. That arrangement was followed in 1876, and in 1877. This is the copy for 1877. I made the corrections on that slip of paper myself as it happens. I must have got the information from circulars. I know of no other way of getting the information.

To Mr. Dickins:—I cannot swear positively that I got those particulars from Mr. North. I cannot say that I sent the circular to Mr. North. I cannot swear that the proofs were sent to Mr. North.

Mr. North was put into the box to give evidence on this point and having been sworn, said:—I am the defendant in this case. I cannot say whether I sent a corrected circular to the *Japan Gazette* office for the Hong List for 1877. Very probably I received the circular but did not send it back.

To Mr. Lowder:—I don't recollect giving any information for the Hong List in 1876. Part of this paper (a proof of a galley of the Hong List) refers to the members and assistants of my firm. North J. and Brewer P. stand out as partners. The assistants are Hedley J., Watson A. T., Fitzgerald, Maurice. The word "Maurice" is the only alteration here, and that is in my hand writing. That information was supplied for the Hong List for 1877, because Mr. Brewer's name is there. Mr. Thompson's name is omitted.

This concluded the case for the plaintiff. The Court adjourned till 10 a.m. to-morrow.

Friday, October 19th, 1877.

Mr. Thompson not appearing, testimony was taken as to his having been served with a subpoena to attend this morning.

His Honour ordered a warrant to be issued for Mr. Thompson's arrest.

His Honour asked Mr. Dickins what course he proposed to pursue.

Mr. Dickins:—I suppose we must adjourn.

His Honour:—Then, as it's no use sitting here, suppose we adjourn till the afternoon.

Mr. Lowder:—The witness may come by the half-past nine train, and in that case will be here in a few moments.

His Honour:—Well we will wait a little while, and see if he does turn up.

After waiting some time the Court was about to adjourn when Mr. Thompson arrived.

His Honour:—How is it, Mr. Thompson, you were not here at ten o'clock.

Mr. Thompson:—I could only come by the half-past nine train.

His Honour:—It was your duty to have been here at ten o'clock, you have kept the Court waiting.

Cross-examination of witness resumed:—When I was a partner I was not in the habit of overdrawing my account. That is my signature to that document (a power of attorney in favour of Mr. Talbot.) That power of attorney has never been returned. I had a letter from Mr. Talbot complaining of the power of attorney being informal. Mr. North agreed with me to take over my liabilities, to give me credit for goods, and hand over to me the sum of \$250, but not in writing. If that promissory note was endorsed over to Mr. North I should not consider myself liable to Mr. North and would refuse to pay it or any part of it. That is my signature to that document (a lease of the premises to Bradfield, North and Thompson.) The other signatures look very

much like Bradfield's and North's. I cannot say that my interest in that lease has ever been assigned legally; it has probably been transferred. Between March, 1874, the date of the promissory note becoming due, till June this year, Mr. Bradfield never asked me for payment. I have been asked for payment, first about 18 months ago by Mr. Bradfield's attorney. He threatened me with legal proceedings. Since that time till June this year he did not again apply for payment, but after that he did once by letter. I was not pressed for payment in Mr. Talbot's office, though I was asked for it. Previous to receiving the letter from Mr. Talbot I did not see Mr. Talbot about this subject this year. I remember writing a letter to Mr. North about the 12th July. (Letter read and put in.) The letter from Mr. Talbot was to the effect that the promissory note was due, and unless it was paid legal proceedings would be taken against me. That is my signature to that document (the transfer of Mr. Thompson's share for \$3,000). I repudiate the purport of that document. Between January and the commencement of these proceedings I repudiated the sale to Mr. North verbally repeatedly. Mr. Watson was present on most occasions. I have repudiated it previous to my visit to Mr. Talbot's office in July. I never have been in Mr. Lowder's office. There was not another promissory note between me and Mr. Bradfield.

To Mr. Lowder:—By the word repudiate I mean that I deny having negotiated that transaction. I look upon it as no agreement. If the promissory note was offered to me for payment by Mr. North I should refuse to pay because I consider he purchased my share of the business and my liabilities. The body of that document is in the handwriting of Mr. North. The reason I put my signature to that paper was to oblige Mr. North, in order to enable him to dispose of the business. The reason why I put my name to a document in June 1876, purporting to sell my share of the business and to another document in January, 1877, was that Mr. North might be able to show to Mr. Court that the business belonged to him. I was very sick at the time. At the meeting in Mr. Talbot's office I was not pressed on that occasion to pay the amount of the promissory note.

To His Honour:—I was never paid the \$250. I was not paid because I received goods from North, Thompson & Co. I have received several accounts from North, Thompson & Co., from the time the business was commenced in Tokio. The accounts were never sent in correctly. That document is the nearest approach to a correct statement that I have received. The others were merely invoices. I did not remit a quarter of my receipts monthly to North Thompson & Co.

Mr. Dickins then stated the principal grounds on which he founded his claim. He was forced to say that a greater part of the evidence adduced on the plaintiff's side was incorrect as he was prepared to prove.

The learned gentleman then explained his case, after which the

Court adjourned till 2 p.m.

On the Court resuming,

Mr. Dickins further addressed the Court in explanation of his case, and said that Mr. Thompson who enlivened the proceedings yesterday afternoon had been invited to a, perhaps, well-watered tiffin by Mr. Lowder and Mr. Talbot, and his condition was the result.

Mr. Lowder denied the statement *in toto* both on behalf of himself and his client.

Arthur Thos. Watson, sworn, said:—I am an assistant to Mr. North, a chemist and druggist in Yokohama. I remember calling on Mr. Talbot some time last year with regard to taking over Mr. Thompson's share of the business. It was either the latter part of September or first part of October. My object in visiting Mr. Talbot was to try and purchase Mr. Thompson's share, and I informed Mr. Talbot so. Mr. Talbot replied that he had received offers from Mr. North, but as Mr. North had not come up to time he felt he was at liberty to dispose of the share to whom he pleased. My object was not to purchase a promissory note. Mr. Talbot did not offer to sell me a promissory note. Mr. Talbot made some remark about a bill against the effects of North, Thompson & Co. Nothing was said about a promissory note. In the early part of January I saw Mr. Thompson, and also in the latter part of December. I was requested by Mr. North to go and ask him if he could pay the money that was owing to the firm of North, Thompson & Co.; and if not whether he was willing to transfer his share to North, Thompson & Co. He said he had no money, and would sell his share, and if Mr. North would draw up a deed of transfer he would sign it. Mr. Thompson was perfectly sensible though a little sick. A day or two afterwards Mr. North requested me to go with him to witness Mr. Thompson's signature to the transfer. We went. It was about supper time. Mr. North asked him if he was quite willing to make this transfer, and he said, "Yes, certainly," and asked Mr. North if he had brought it with him. Mr. North replied "No, but if you are willing to give it to me now I will draw one out." Mr. North drew one out in pencil. Mr. Thompson read it and said that would do. He then looked about for a pen and ink but none were at hand, and as we were in a hurry to catch the train Mr. North asked him if he would draw up another copy, sign and get it witnessed and send it down. He said he would do so the next day but did not. The next day but one Mr. North went again. I did not go with him then or afterwards. Those are the only times that I saw Mr. Thompson. Neither I nor Mr. North used any persuasion. Thompson was perfectly sober at the time. Mr. North did not tell me the transfer was wanted in order that he might sell the property to somebody else, and I never said so to Mr. Thompson, because if the share was to go to any one else than Mr. North I should have liked to have had it myself. Between January and July 1877, Mr. Thompson never repudiated the contract except once, when he came down one evening in the latter part of June or beginning of July. He came into the dispensary, and said he had had an interview with Mr. Lowder and Mr. Talbot, and said Mr. Lowder wished to see Mr. North. I said to Mr. Thompson:—"You have transferred your share of the business to us." He said, "Yes, I did sign a transfer but that was no good." Mr. North told him that it was very foolish of him to deny it as he had given it with his own free will and consent. He said "I don't know, they say it's no good:"—meaning I presume by they, Mr. Lowder and Mr. Talbot.

To Mr. Lowder:—I called on Mr. Talbot about the purchase of Thompson's share because I understood he had it for sale. About April, 1876, I had heard it said that Mr. North was about to sell the business to Mr. Court. Mr. North did not tell me, neither did Mr.

Court. I did not know that Mr. North at that time wanted to sell his share of the business. Thompson said he was suffering from pleurisy when we visited him in Tokio.

John North, sworn, said:—Previous to March, 1874, I was in partnership with Dr. Dalliston. About March, 1874, Mr. Bradfield proposed to me that we should amalgamate the two businesses. After a deal of negotiation we came to terms. Mr. Bradfield and Mr. Thompson were to find the same amount of capital as myself. The value of my goods amounted to about \$5,700. Mr. Bradfield was to bring in the same amount. Thompson was at this time in England and I suppose Bradfield acted as his agent. The first lot of goods taken over arrived in April, as is shown by the ledger, private journal, and invoice book. One lot was for £13 10s., dated London, Feb. 10th, 1874. Another lot dated 5th Feb., 1874, amounting to £20 14s. 6d. A third lot £46 10s., and also some goods which arrived from Shanghai. All these goods arrived in April, 1874. Mr. Talbot kept the journal and private ledger and those goods are entered in those books. The ledger contains entries of all goods received since the fire. It states here "North, Thompson & Co.'s journal" and is headed "Stock in Trade from 30th March to 31st December, 1874." and all these goods are debited to the new firm. When the new partnership commenced there were no goods on the *hatoba* or being landed that were taken possession of by my firm; or if they were I was not made acquainted with them and never saw them. The dissolution was caused because Bradfield did not pay. I told him that if some money was not paid on account I should consider the partnership had not commenced. This brought Bradfield to Yokohama, and he gave me a cheque for \$3,000. The remainder never was paid until the settlement in May, 1876, when Mr. Brewer took over Bradfield's share when I went into partnership with Bradfield and Thompson. No intimation was given of a bill of sale. I had some correspondence with Mr. Bradfield, but no reference is made in any of them to a bill of sale or promissory note. Nothing is said in them that he had paid Thompson \$2,800. He said he would pay Thompson's money as well as his own at the time of the negotiation of partnership. During the partnership, in Sept. 1874, Bradfield went to England. He came back about September, 1875. He did not observe the conditions of the partnership. I consider that he paid too much for the goods that he bought. Also before he came back to Japan he drew a draft on the firm for \$197 but the money was not used for the firm. When he came back to Yokohama he said that by the time the draft became due he would be able to pay it himself. He did pay the draft but instead of debiting to himself he debited the wholesale house in London. What brought him back to Yokohama was because I thought the sooner I got rid of him the better; so I gave notice of dissolution, either he to buy me out or I him. The reason I wanted to get rid of him was because I thought he was paying too much for the goods, and charging the firm more than he actually paid for them. For instance I sent home an order for 2000 oz. quinine. This was charged 7s. an ounce. On looking at the price list I saw I could buy 100 oz. at the same price, and I considered that in buying 2,000 oz. I ought to get it much cheaper. After his arrival in Yokohama he said he was perfectly willing to buy my share of the business. His management of the business in London was not satisfactory. After his

arrival in Yokohama he expressed a desire to buy me out. I expressed my willingness to sell. The deed of partnership provided that if he came over he could manage the business conjointly with myself. Between the time he arrived from England and December 1871, he abstracted all the cash out of the bank and used it for his own private purposes, that is the reason the business has been in difficulties.

Mr. Lowder thought that all this was irrelevant.

Mr. Dickens contended he had a right to produce such evidence.

His Honour said that he would not allow anything to be adduced simply to throw discredit on the actions of any particular person.

Mr. John North's examination continued:—Bradfield also sent orders home for larger quantities of goods than were absolutely necessary. At the time the bills for these goods became due, Mr. Bradfield returned to Shanghai, and of course left me to get out of the business the best way I could. In March 1876 I was sick and was away from business about three months. At this time Mr. Talbot and Brewer came to the hospital and mooted to me that Mr. Brewer should take over Mr. Bradfield's share. I made the remark that I had no objection, as I would sooner have Mr. Brewer for a partner than Mr. Bradfield. Mr. Talbot told me that he thought he could raise a loan to meet these difficulties. Mr. Brewer became an active member of the firm in March or April, 1876. That is Mr. Brewer's handwriting on those bills. Bradfield returned to Shanghai in February, 1876. During this time Mr. Talbot was accountant to the firm, and made the last balance sheet out in September, 1876. Up to that time Mr. Talbot was acting for the partners of the firm. There was one letter written by Mr. Talbot, but I cannot say that that is the letter or that it was accepted by me, though I think not. About March there were negotiations between me and Talbot. He wanted me to take over Thompson's share in consideration of paying his liabilities. I was to provide Thompson with goods on credit, take over his liabilities, and discharge a bill of sale. Just then Mr. Talbot came to me and said that Bradfield wanted Thompson to sell. He also said that Mr. Bradfield held a bill of sale upon Thompson's share in the business, and as Bradfield wanted money he would have to press for payment. About this time Mr. Brewer proposed to take over Thompson's share, and I said I would prefer to take it over myself.

Mr. Lowder protested against Mr. Dickens prompting the witness.

Mr. Dickens said he was not, and that to say he was, was a falsehood.

His Honour remarked that he could not allow such language, and severely reprimanded Mr. Dickens for using the expression "falsehood," and hoped he would not have to refer to such a matter again.

Mr. Dickens said he would retract the word, but would stick to the sense that Mr. Lowder's was an unjustifiable accusation.

His Honour did not think this was a full retraction, and that to receive it was not compatible with the dignity of the Court.

Mr. Dickens said that he thought the accusation was most unjustifiable, and was more serious than his own expression. However he would confess that the word "falsehood" was improperly used.

His Honour then intimated that he would pass the matter over.

Witness:—On the 27th May I wrote Mr. Talbot a note, stating that I thought I should be safe in offering \$3,000 for Thompson's

share and interest in the business. At this time Mr. Talbot said there was a bill of sale hanging over Mr. Thompson's share of the business. I expressed my surprise and stated that that was the first time I had heard of the existence of the bill of sale. I ought to have stated that previous to this, and while Bradfield was in Yokohama, he flourished a piece of paper in front of me, and said, "See what Thompson owes me," and I saw it was a promissory note for \$3,000. That is not the note. It was written in Bradfield's handwriting, and so far as my knowledge serves me there was no amount mentioned in sterling, but there was a sum of \$3,000 in one of the corners. There was no stamp upon it. The first time I saw that promissory note (the one in Court) was the day before yesterday. Mr. Talbot stated there was a promissory note, but never mentioned anything about that promissory note. He did not produce any promissory note. Before the first of June Mr. Talbot said there was a promissory note and bill of sale, and that before the share was sold the firm would have to liquidate the bill of sale and the promissory note. I understood that it was a promissory note given and secured by a bill of sale. The share was transferred to the firm in January, 1877. Thompson did not carry out his agreement with regard to the goods. It was stipulated that he should pay me a quarter of his receipts every month, but he did not do so. He never asked me to carry out the agreement. After the letter of 27th May there was a meeting in Mr. Talbot's office. There were present Brewer, Thompson, Talbot and myself. I made a conditional offer that if I could get \$3,000 I would take over Thompson's share, as I was anxious to do so on account of the bill of sale hanging over his share. Talbot wrote me a letter and called a short time afterwards and asked me if I had received the letter, and I said I had. That was the letter of the 1st June. I said I had received it all right, but never accepted any responsibility on it. I applied to Mr. Dickens to raise a loan to enable me to purchase the share. He said he thought he could get one, but afterwards said he could not, and I considered my offer was off. I admitted to Mr. Talbot, between June and December, that if I could get any money I would take over the liability. Between June and December I was a proposing purchaser for Thompson's share. The share could only be sold to me. In September, 1876, Mr. Talbot made up an account, but I never accepted it because he had credited Mr. Bradfield with \$3,000. I said nothing to Mr. Talbot afterwards about it, nor he to me. I did not tell him I would not sign it.

Mr. Lowder called for the account. Mr. Dickens said he had it not.

Witness continued:—Between June and December Mr. Talbot spoke to me once or twice about Bradfield's money, and I always made the same remark that if I could get the \$3,000 I was still willing to purchase the share. He said he hoped I would think it over or he would have to sell it to some one else. He never pressed me to purchase a promissory note. I did not promise to purchase any promissory note alone. Mr. Talbot mentioned that there was a promissory note attached to the bill of sale. I went with Mr. Watson to see Mr. Talbot about the purchase of Thompson's share. The first time I saw the bill of sale was in the latter part of November or beginning of December 1876. I made up my mind that I ought to take notice of it and proceeded to negotiate

with Mr. Thompson direct. The reason I went to Mr. Talbot was because he told me there was a lien over Mr. Thompson's share. If I had not been under the impression there was a lien on his share I should have applied to Thompson direct. Before the transfer took place I frequently spoke to Mr. Thompson about his indebtedness to me. He said he had no money to pay me. As I considered there was no lien over his share of the business, I thought I was at perfect liberty to treat direct with him. I went to Yedo in company with Mr. Watson and asked Thompson if he would transfer his share to the firm on account of his indebtedness to it. I also requested him not to do so unless he was perfectly willing, and not to think that I was pressing him to transfer the share to the firm. He made no objection whatever, and I asked him if he would do it that evening, and he said, no, that he would send it down in the morning. He did not do so. I afterwards went to Yedo and found Thompson in bed. He had been sick but was able to attend to his business. I told him what I had come about and asked him to give me this transfer. He said he had no objection, and if I would write it out he would sign it. I wrote it out and Thompson signed it. I then heard no more about this transfer till July, when he came to my place of business and said he had just left Mr. Lowder's office. Previous to this I had received a letter from Thompson saying that Talbot was pressing him for Bradfield's money. He told me that Mr. Lowder wished to see me at his office. I at first made no objection. Thompson said he had been in conversation with Mr. Lowder and that he considered the transfer was not a legal one. I told him that if that was the case I should keep him to the terms of it, and I should not go to Mr. Lowder's office. With regard to a statement made by Mr. Thompson that he was not able to get any money from the firm, I beg to contradict it by written evidence. Those I. O. U.'s are for money lent to him after his arrival in Yokohama, between January and May.

Mr. Lowder objected to the I. O. U.'s being put in.

His Honour thought the I. O. U.'s were not admissible as Mr. Thompson had not seen them.

Mr. Dickens contended that it was impossible to have shown them to Mr. Thompson as it was not known he was going to make such a statement.

His Honour upheld the objection.

Witness:—I lent Thompson \$20 on Jan. 16th, on May 23rd, \$40. As acknowledgment of those loans I got I. O. U.'s and am willing to produce them. Between January and June, 1877, I saw Talbot. I went to his office about some business and he spoke to me about Bradfield's money, and I told him I was under the impression I should not have to pay it. I told him I had nothing to do with money owing to Bradfield. He asked me what I meant, and I told him I was not liable. He said he knew what I was referring to, viz., the bill of sale. I said, "partly I am." He said, "If you think that bill of sale was no security you are mistaken. The best advice has been obtained from England, and it is still held that the bill of sale over the share is good." No promissory note has been endorsed to me by Mr. Talbot. No bill of sale has been discharged over Thompson's share. Mr. Thompson's share in the leasehold has never been assigned to me. When I contemplated purchasing the share I understood it carried the lease with it.

Some accounts having been put in by Mr. Dickens, the examination in chief of this witness was brought to a close, and the Court adjourned till Wednesday, 24th, at 10 a.m.

Wednesday, October 24th, 1877.

To-day Mr. Dickens said he had a few more questions to put to Mr. North.

Mr. Lowder asked if this was not an unusual course of procedure?

His Honour said that it was generally considered that when an advocate closed his case he was not entitled to open it again. But under some circumstances it was admitted.

Mr. Dickens mentioned that he had forgotten to question the witness on one particular point on the last hearing, and that his questions to-day would not be contradictory to the evidence given.

Under these circumstances Mr. Lowder had no objection.

Mr. John North to Mr. Dickens:—My position was embarrassed in 1876 through Thompson, and I wrote to Mr. Talbot asking him to endeavour to procure me a loan. (Letter read, mentioning the amounts required, one of which was \$3,500.) The \$3,500 was \$3,000 for Mr. Gardner and the \$500 for other purposes. After that date, 24th June, I did not make any request to Mr. Talbot to procure me a loan, though I mentioned I should be glad to have \$3,000 on loan if he could procure it. I wanted that \$3,000 for the purpose of taking over Mr. Thompson's share and relieve the business of the bill of sale which I understood hung over it. I never intended to take over Mr. Thompson's debt, unless so far as the bill of sale over the business.

To His Honour:—I don't think I said that to anybody.

To Mr. Dickens:—I saw Mr. Talbot frequently in September, and he sometimes asked me about Mr. Bradfield's money, and I said I should be very glad to take it over if I could. The accounts in September were drawn up in September. Mr. Bradfield was put in as a creditor for \$3,000. I did not accept that account, but I said nothing to Mr. Talbot about it.

Cross-examined by Mr. Lowder:—Those books are the private ledger, invoice book and journal. There is no cash book in Court. (Cash book sent for.) In April 1874, I did not go to the hatoba myself to see if there were any goods there. For all I know there may have been goods there belonging to the old firm which were taken over by the new firm, but nothing was said to me about it. On folio 31 and 32 in the invoice book the invoice there represents goods originally sent to the old firm. There is a note of the arrival of the goods upon it in my writing. The date is May 25th, 1874.

Mr. Lowder asked the witness if on page 2 in the journal there was an entry of £76.18s. corresponding with the invoice produced?

Mr. Dickens objected, but finally withdrew his objection.

Witness resumed:—Yes, I recognise that.

Mr. Dickens:—I admit that these goods were taken over by the firm.

Mr. Lowder:—Then that is all I want.

Witness:—Dr. Dalliston died in January 1875, I think. I was indebted to him for about \$12,000, but I have paid part of that back. I owe his estate about \$5,000. His executor was Mr. Kirby. Mr. Kirby never actually pressed me, but he said he should like to have the affair settled. I don't remem-

ber writing a letter to Bradfield in 1876 stating that Kirby was pressing me. That letter is in my handwriting. (Letter read and reference was made in it to Mr. Kirby pressing for money). What I call actually pressing me is taking me right into Court. That letter is also in my handwriting. (Letter dated March 8th, 1876, read.) A paragraph in it stated that he (witness) had been visited by Mr. Dickens, who said he was willing to take a mortgage on the property, the mortgage to be made out on demand. Another letter dated May 27th, 1876, was put in, the substance of which was that Bradfield had ordered a large quantity of goods, and Mr. North could not see what he had done so far, and told him that the \$1,300 owing to him would have to stand over. He thought a loan could be obtained from a friend.)

Witness resumed:—I don't recollect now who that friend was. I know I was trying to borrow money but cannot recollect who from.

Mr. Dickens:—The witness has already answered that question.

His Honour:—Now Mr. Dickens, I think that your interruption requires an explanation—stand up please.

Mr. Dickens:—What for?

His Honour:—I am about to address you.

Mr. Dickens:—(Standing up.) Oh!

His Honour then denounced Mr. Dickens' practice of interrupting a witness when he was going on straightforwardly.

Mr. Dickens thought that he was justified in doing so in the present instance in order to save time.

His Honour said he did not wish to impute any motive, but the impression left on his mind was that the witness would not now trouble himself to remember.

Witness:—I do not recollect who I applied to. It may have been to Mr. Dickens and it may have been someone else. I can give no name except Mr. Dickens. I gave Dr. Dalliston a bill of sale over my share in North, Thompson & Co., but it was not registered. I did not until lately take legal advice about the validity of that bill of sale. I mean by "lately," this year; the month I cannot say. I frequently see Mr. Dickens and cannot say at which consultation it was. I went to the Consulate to see the bill of sale in the latter part of 1876, because it occurred to me that Mr. Thompson could not have given a valid bill of sale over the business; or if it existed that it must refer to the old business. With Mr. Brewer I took the advice of Mr. Litchfield as to the validity of that bill of sale some time during the summer of this year. I was at this time requested by Mr. Dickens to pay the amount owing to Dr. Dalliston. He was repeatedly asking me for a bill of sale, up to the date of the bill of sale being signed. There is a bill of sale made out in favour of Mr. Dickens. I was frequently requested by Mr. Dickens to liquidate the debt owing to Dr. Dalliston. I endeavoured to sell my share of the partnership to pay that debt among other things. The person to whom I endeavoured to sell my share was Mr. Court. I did not inform Mr. Watson that I was endeavouring to sell to Mr. Court as I did not think it worth while. Mr. Watson was afterwards annoyed that I did not tell him. I told Mr. Thompson that I was endeavouring to sell my share to Mr. Court. In the latter part of 1876 Mr. Court asked me if I had anything to do with Mr. Thompson's business. I said:—"No, not exactly to do with it: he is merely acting as our agent." He said that the reason he asked was because Thompson had offered to sell his share.

I said:—"If you are in the market I will sell you mine." Mr. Court told me that he was in treaty with Thompson for his share, and the next time I went to Yedo I asked Thompson if it was true, and told him that I had suggested to Mr. Court to buy mine. The negotiations with Mr. Court were broken off because he could not find the money. Mr. Court went through the books, and he came upon the statement about Thompson having sold his share to me. He said he would like to have that matter settled as he saw there was some difficulty about it. I told him I did not think there was any cause for alarm, as the bill of sale had nothing to do with my business. The negotiations with Court extended to January, 1877. I don't remember mentioning to Thompson that Court had raised an objection on account of the bill of sale. I had sent Thompson accounts regularly every quarter. I don't remember crediting him with \$3,000 before that account dated 30th June, 1877. The reason I did not credit Thompson with the \$3,000 before that was because I did not wish to mix the two accounts up. On the 30th June, 1877, I included it in the account because he owed me money for goods, and I owed him \$3,000 for his share. Before I started Thompson in Yedo, I had obtained business premises myself and been to some expense in fitting them up, and afterwards debited Mr. Thompson with those expenses. The value of Thompson's share in my business in May 1876 to an outsider would be about \$4,000. I don't remember an account made out prior to this by Mr. Talbot showing the value of the share. I agreed to purchase it for \$3,000. In December, 1876, Thompson was indebted to me for over \$2,000. Those are some of the accounts rendered to Mr. Thompson in Yedo. I charged him upon the goods I supplied him 50 per cent on cost, I think. The item in that account of \$296 to cash account before purchase was for money I had laid out and money supplied. The words "before purchase" mean cash advanced before the purchase of those goods. The goods were supplied to him on "order or return" and he was at liberty to return them at the end of six months. That account is dated June 20th, 1876, and of course I should know before the end of six months that he had purchased the goods. It stated in the agreement that if at the end of six months he could not pay me a quarter of his receipts monthly, and if, at the end of six months, I found the business was not paying or he was unable to pay me any cash, I was at liberty to take the goods back. That does not refer to the purchase of Mr. Thompson's share. That is an account current rendered to Mr. Thompson on January 31st, 1877. Those are quarterly invoices. In the account current on January 31st, 1877, I did not credit Thompson with \$3,000 as I did not wish to mix up the accounts. The item of \$296 referred to is accounted for by \$40 entered in February 16th, 1876; \$16 March 6th, 1876; \$13 on 17th March.

Some I. O. U.'s were called for by Mr. Lowder and put into Court, after which there was a

Recess till 2 p.m.

On the Court resuming at 2 p.m. the cross-examination of Mr. North was continued.

Mr. North:—I have not been able to account for the \$296. The only way I can account for it is, that in making out the statement I found it did not tally with Mr. Talbot's. I found Mr. Talbot's amount in the

private ledger to be larger than mine, and presuming Mr. Talbot to be correct I thought the difference would be in cash advanced to Mr. Thompson and not put down. Mr. Thompson never before said the account was incorrect.

Mr. Lowder:—Can you show Mr. Talbot's account in the private ledger.

Witness:—Yes, here it is. There is a difference in the gross account. The two accounts ought to show a difference of \$296.

Mr. Lowder:—Can you show me a total which disagrees with that particular total?

Witness:—I cannot looking at the book casually.

Mr. Lowder:—Can you point out to me the two totals you refer to?

Witness:—No, it would take too long.

Mr. Lowder:—Oh, never mind if it takes a week.

Witness:—I cannot do it now. I have looked over my cash book and cannot account for the \$296.

Mr. Lowder:—Just look over those I. O. U.'s. Three of them are dated and three are not.

Witness:—Yes.

Mr. Lowder:—In whose handwriting are they?

Witness:—In Mr. Thompson's.

Mr. Lowder:—Look at them again please.

Witness:—The dates are in my handwriting; and the corresponding amounts will be found in the rough cash book. Here is one, "J. Thompson \$40;" another, J. Thompson \$20."

Mr. Lowder:—Will you point out in the cash book the remainder of those I. O. U.'s?

Witness:—Yes, if you will give me the book and let me look through it.

Mr. Lowder:—Certainly, I wish you to look at it.

Witness:—Here is one for \$40; and another \$16 dated 26th February, but paid on 6th March. I suppose it was not presented before and that is why it was not paid when dated.

Mr. Lowder:—We are getting on rapidly with the I. O. U.'s, and I do not see why we cannot arrive at the \$290.

Witness:—I can't find any more entries of the I. O. U.'s. I don't remember the date when I affixed the date to those I. O. U.'s. It must have been done at the time. I cannot recall any particular reason for affixing a date to those two I. O. U.'s. I have not seen them since until the present case was brought on from the day they were dated. I produced them in order to contradict a statement made by Mr. Thompson. I knew when Mr. Thompson made his statement that I had some I. O. U.'s belonging to him in my safe. Those dates do not recall to my memory anything connected with the circumstances under which they were signed. I should not have let Thompson have money without taking an I. O. U. On all occasions I may not have taken I. O. U.'s from him when I advanced him money.

Mr. Lowder:—Here are five I. O. U.'s to two of which the dates are affixed in your handwriting, while the others have no dates. Now can you tell me how it was you came to put a date to those particular two and not to the others?

Witness:—I cannot. That letter was written in reply to Mr. Talbot's letter of 23rd August 1876. The money referred to was not Thompson's. I did not refer in a letter to Mr. Bradfield that I was about to purchase Thompson's share and that payment of the money owing to him (Bradfield) would have to be put off. That letter is in my

handwriting. There is no mention of any purchase there. (Mr. Lowder read a portion to the Court, in which reference was made to the purchase of Thompson's share.) In January 1877, when Thompson signed the transfer, I did not tell him the value of his share. The value would not have been much more than I paid. Mr. Thompson signed a transfer in October to save the expense of making up the books again. The transfer on that occasion was to North Thompson & Co. The previous transfer in June was to me personally: it was made out in my own name. After the 23rd May, 1876, Mr. Thompson was never consulted in matters relating to the partnership.

I am acquainted with the value of quinine, and wish to modify my former statement about Mr. Bradfield having bought 2,000 oz. It should have been 1,000 oz. I gave that as an instance of Mr. Bradfield's over-charging. I am still under the impression that he over-charged, though the price varies from day to day. But at that time I remember the prices were firm. I did not mention to Mr. Bradfield when we entered into partnership that there was a bill of sale hanging over my share in favour of Dr. Dalliston. There was no necessity, as he was cognisant of it before. I might have mentioned it to him some time previously. I can prove that Bradfield abstracted all the cash out of the Bank and used it for his private purposes.

Mr. Lowder:—You made a statement of a serious nature against my client and I now give you further opportunity of retracting or of proving it.

Witness:—In December he drew \$1,256.54, and there is no entry in the cash book. At the time of his leaving the firm he had only \$1,100 coming to him, the difference he must have abstracted from the business. If he had not, there would have been \$4,000 due to him. Anyhow, I was saving the money to pay a particular creditor at the end of the year, and when I came to pay it I found there were only \$28 in the Bank, the rest having been abstracted and not used for business purposes. I complain about his having drawn out the amount of his money paid into the business.

To Mr. Dickins:—I did not put the pencil marks on the I. O. U.'s after Mr. Thompson made his statement. Mr. Bradfield, in his correspondence, did not ask me to take over any liabilities. He has not even spoken about it. I had confidence in Mr. Talbot because I was under the impression he was acting for me as well as for Mr. Bradfield and Mr. Thompson.

To His Honour:—No promissory note was mentioned to me until the return of Mr. Bradfield from England in September 1875. No mention was made afterwards unless it was in the negotiations this year. I never knew of another promissory note for \$3,341 until I saw it in this Court. I read the letter from Mr. Talbot dated June 1st. I might have thought that the amount of \$341 over the \$3,000 was for interest. Mr. Talbot stated the value of the share was 4,000 and some odd dollars. I offered \$3,000 because I did not think it worth any more. The reason why I advertised Mr. Thompson out on the first of June, was because I was anxious to get rid of him and I should have purchased the share had it not been for the bill of sale. The advertisement was sent in consequence of a verbal agreement between Thompson and myself; and I was under the impression that he was shortly going out. I was labouring then under the impression that a bill of sale was hanging over my property and I was anxious to get hold of his

share to relieve myself of the liability; and I really thought that I could get the \$3,000. If the bill of sale attaches itself to my business even now I am willing to pay it. When I was not able to purchase his share, he was of course a partner. I found out in December that the bill of sale did not hold good. On finding that out I did not tell Mr. Talbot until the interview with Mr. Talbot, when I stated that I did not think I should have to pay. I had two interviews with Mr. Talbot.

Mr. Talbot was put in the box and said: Mr. North came to me in the early part of January with reference to the sale of his half-share to Mr. Court. I then pointed out to Mr. North that it was a great mistake to sell for a sum of money barely sufficient to pay his debts and his passage home. He replied that he was at his wit's end for money, and that he was daily pressed for payment of a bill of sale to Dr. Dalliston, and he was afraid proceedings would be taken under that bill of sale. I said that there was no danger, but if there was, Bradfield's bill of sale being registered might prevent a sacrifice of the business. Mr. North then replied that he did not think Bradfield's bill of sale was a good one. I then said I don't know what makes you think so, but I have taken advice in England. Mr. North then said that he thought Bradfield was too sharp to be put out with a piece of waste paper. Nothing was said of North's liability to Bradfield.

Mr. North said:—I must contradict Mr. Talbot. I said I did not think I should have to pay the amount of \$3,000. He said I know that you are referring to the bill of sale, but we have had the best advice in England, and they all say the bill of sale holds good. It was not about Mr. Court that I went to Mr. Talbot. His name was brought up casually.

Mr. Talbot:—Mr. North said he thought that Bradfield's bill of sale was no good. He did not say that he would not have to pay it.

Mr. North:—I saw very little of Mr. Talbot between January and June; and I do not remember the meeting he refers to in June. During that time Talbot may have asked me to pay Bradfield's money. I don't remember what answer I gave him. I only remember the answer I gave him in the early part of the year. I did not think it was necessary for me to go and tell Talbot about my arrangement with Thompson, especially as Talbot had kept things back from me. He did not tell me of the existence of the bill of sale. I did not find out the purport of the bill of sale until December.

This concluded the evidence.

Mr. Dickins then rose and addressed the Court, remarking at the commencement of his speech that he thought his opening remarks had been found to be justifiable, and that what he had said would be proved had been proved. He then went into the merits of the case, contending that there never was any agreement between Mr. North and Mr. Talbot relative to the disposal of Thompson's share of the business, as all the evidence, both documentary and verbal, went to show. Mr. Talbot, the learned gentleman asserted, was a person well acquainted with the requirements of the law in such cases, yet, and that was the strongest evidence of all on the point, Mr. Talbot had not a line of writing in substantiation of the assertion on his part; nor, indeed, did he succeed in getting Mr. North to agree to anything in the presence of a third party. The agreement, if there was any, was said to be partly verbal and partly written; and the conduct of Mr. North was said to be such that he

acknowledged the debt all through. No doubt there had been some agreement contemplated between Mr. North and Mr. Thompson, but not with Mr. Talbot. Therefore if any person at all was eligible to sue Mr. North, it was Thompson and not Talbot. And even if there had been such an agreement it was evident that it had never been carried out as the \$250, which it was alleged North had to pay Thompson, was never paid; and the strongest proof existing that no such agreement had been made, was, that Thompson had borrowed money from North, for which he gave I. O. U.'s, and which it was not likely he would have done, had Mr. North been owing him \$250. Another proof of the non-existence of such agreement between the parties was the fact that there was no written assignment of the leasehold of the premises of Thompson's share. Mr. Dickins then went into the circumstances which resulted in Mr. Thompson being advertised out of the business before he had transferred his share to North, explaining that at that time Thompson was contemplating selling his share of the business, and there were private reasons why Mr. North should have been anxious to get rid of Mr. Thompson, which it was hardly necessary for him to go into. The learned gentlemen then commented on the correspondence which had passed between the parties and to Mr. North's endeavours to get the \$3,000 for the purchase of Thompson's share; and the power which Talbot possessed to sell Thompson's share of the business, and summarised Mr. Talbot's evidence at length. After which, as it was five o'clock, and it was found impossible to conclude to-day,

The further arguments of Counsel were postponed until 10 a.m. to-morrow.

Thursday, October 25th, 1877.

This morning Mr. Dickins took up the thread of his argument where he left off yesterday, and at some length harangued the Court on the question of the promissory note of \$3,000, dwelling strongly on the circumstance of Mr. Talbot threatening Mr. Thompson with legal proceedings if the note was not taken up, and arguing that Mr. Talbot, as attorney for Mr. Bradfield, could still sue Mr. Thompson for the amount of the note for \$3,000, and that the liability of Thompson had been looked upon as existing, and, so far as anything that was before the Court showed, it still existed. In support of his numerous contentions, the learned gentlemen cited various cases; and then he went into the question of the existence of two promissory notes, remarking that Mr. North's evidence on that point was directly contradictory to that of Mr. Talbot's, and should at least be considered as valuable. North had stated that the promissory note flourished before his eyes was different in many respects to the promissory note in Court. In the former there was no mention of sterling, neither were there any figures in sterling, and it was also in a different handwriting to the note in Court. The learned gentleman then made comparisons of the evidence adduced before the Court, and stated concisely what was Mr. North's position before the Court, concluding a very lengthy address by asking that the counter-claim and the principal claim be decided in his favour.

It being noon when the learned gentleman concluded his remarks,

The Court adjourned till 2 p.m.

On the Court resuming its sitting, Mr. Dickins being absent,

Mr. Lowder addressed His Honour on behalf of his client's case, opening his remarks by saying that, he would pay his absent learned friend the compliment to say that he had made the best of a bad case, and he had expected that yesterday afternoon Mr. Dickins would have thrown up his brief; and he had half expected this morning that His Honour would not require him, (Mr. Lowder) to deliver an address. However, as neither of those events had transpired, it was his duty to make some remarks. The learned gentleman then introduced to His Honour's notice some of the correspondence which had taken place between Mr. Talbot and Mr. North, alleging that the contents of one of the letters was quite sufficient for him to base his case upon. He then referred to what he characterized the "ingenious cross-examination" of Mr. Talbot, more especially with regard to a letter the date of which had been intentionally kept from Mr. Talbot. A slight reference was made to the aspersions by Mr. North on the character of Mr. Bradfield, and then to the substance of the letter of 22nd May, signed by Mr. Thompson and by Mr. North, in which an arrangement was made by consent for Brewer to take over Bradfield's share of the business; and the learned gentlemen also contended that Brewer could not have been considered a partner until the 31st May, 1876. The only reason why Mr. Talbot had not pressed Mr. North before was on account of North being hard up for money, and because Talbot firmly believed that he acknowledged the debt, and therefore did not wish to put him to serious inconvenience. It had also been stated that North was anxious to get Thompson's share before the agreement took place; and this was probably true as he had various reasons for acting as he did. It was admitted by North that Thompson's share of the business was valued at \$4,000, and North succeeded in getting it for \$3,000; moreover he had got Thompson to take over all the expenses he had been to in Tokio, and had induced him to purchase \$2,000 worth of goods at a profit of 50 per cent. The circumstance of Mr. Thompson signing over his share of the business in 1876 in favour of North, and that, according to Thompson's evidence, he had been induced to do it thinking that it was merely a matter of form and of no consequence, was then commented upon. Mr. Lowder minutely summarized the evidence on this point, showing the contradictory statements of the parties, and argued that Mr. Thompson's evidence was to be believed; and he could not see why Thompson should have signed over his share in January 1877 after having signed it over to North in the previous June. He maintained, also, that it was a matter of impossibility for North to have seen the minute particulars he had described respecting the promissory note which he had been shown and which, according to his own statement, was only "flourished before his face." It was clearly shown from Mr. North's evidence that he entered into an agreement for the purchase of the promissory note, as he had stated that Talbot had told him that no arrangement could be arrived at unless he purchased the promissory note. The validity of the bill of sale was then brought forward by the learned counsel, and he maintained that if the defendant intended to base his case upon the circumstance of the invalidity of the bill of sale, it should have been mentioned in the pleadings. But this was not done; and it was evident that, until recently, both plain-

tiff and defendant had looked upon the bill of sale as valid. In support of the contention that the invalidity of the bill of sale should have been referred to in the pleadings, Mr. Lowder cited several cases. So far as he was able to understand the contention of the other side, it was maintained that, because the contract was not signed within thirty days, it fell to the ground. Chitty on contracts was referred to as contradictory of this kind of argument. He then referred to his learned friend's statement that Mr. Talbot had acted in favour of Bradfield by sacrificing the interests of Mr. North and Mr. Thompson, which accusation the learned gentleman clearly pointed out had not the slightest foundation, and showed how Bradfield was actually a loser of over \$1,200 through the action of Mr. Talbot, and that the only parties who had really made anything by the transaction were North and Thompson. With a few more remarks Mr. Lowder brought his arguments to a close.

His Honour then announced that he would reserve judgment.

COPELAND AND WEIGAND vs. E. LEWIS.

This was a judgment summons for \$24.

Evan Lewis was sworn and said that judgment had been given against him privately, and he objected at the time to the amount claimed, as he had never had the beer. The case was heard by Mr. Russell Robertson. He meant by a "private hearing" that it was not heard in Court. The plaintiffs had found their beer-seller guilty of signing chits for beer which had not been had, and that was defendant's reason for not having paid his bill. The original judgment was for \$43, and out of that he had paid \$23.

His Honour said that it was perfectly competent for him to send the defendant to gaol, but he would give him another chance of paying, and would adjourn the case till 4 o'clock this afternoon.

Friday, October 26th, 1877.

N. G. STONE vs. ROBERT JAFFREY.

This was a claim for \$60.50, balance due on the proceeds of the sale of some racing ponies.

Mr. Kirkwood appeared for the plaintiff, and announced that his client was ill in bed and not able to attend. He said there were two issues in the case, one a point of law, which, if decided against him would necessitate his asking for an adjournment.

The learned gentleman then explained to His Honour the circumstances which had given rise to the present action. It appears from his remarks, that there was a racing pony partnership between the plaintiff and defendant. At that time the plaintiff was manager of the Cliff Dairy, and defendant was engaged under him. From certain circumstances the defendant was dismissed from the plaintiff's employ; and after that, for the first time, the defendant laid claim to the sole ownership of the most valuable pony. The plaintiff was naturally surprised at this claim, and demanded from the defendant a settlement of the racing pony partnership. After this the defendant waived his right to the sole claim of the pony in question; and it was arranged the ponies should be sold and the proceeds divided, after deducting \$25 for livery, keep, &c. Various letters passed between the counsel of each party, and ultimately the defendant sent in a claim for

over \$100 for expenses. This was not agreed to, and a proposal to refer the matter to an arbitrator falling to the ground, the present proceedings were instituted.

Mr. Jaffrey, who was present, remarked that if the question of the dispute about the racing pony was to be gone into, he would desire that the case be postponed until his counsel, Mr. Ness, could be present.

His Honour said he would do so if the defendant thought it was to his interests to have the case adjourned, and thus go to the expense of the adjournment and of counsel appearing on the day of trial.

Mr. Kirkwood proposed to put in certain letters and allow the case to be decided on the contents of those letters.

To this proposal Mr. Jaffrey finally consented, and admitted that there was a correspondence between Mr. Kirkwood and Mr. Ness and also admitted the letters.

Mr. Kirkwood then put in a letter showing the amount of the livery expenses charged. The next letter was written without prejudice, in reply to a verbal communication, by Mr. Kirkwood to Mr. Ness, dated September 27th. The next letter was one from Mr. Ness to Mr. Kirkwood dated 28th. After the receipt of that letter an advertisement was inserted in the papers announcing the sale of the ponies, and the ponies were sold on the 2nd October, the net proceeds, amounting to \$284.27, were handed to Mr. Ness. Mr. Kirkwood wrote on the 3rd October to Mr. Ness, demanding half the proceeds of the sale less the \$25 as agreed upon. After tiffin on the 4th, Mr. Kirkwood sent to Mr. Ness a withdrawal of the suit then pending against the defendant, and Mr. Ness returned it immediately by the bearer with his consent.

Mr. Jaffrey was not prepared to consent to the contents of this document, as he had not seen it before.

His Honour then asked Mr. Kirkwood what he proposed to do under the circumstances, as he was not prepared to go on with the case by the admission of only half of the documentary evidence.

Mr. Jaffrey then read a statement which he had prepared, and in which he distinctly denied that he, or any one for him, made an agreement that Mr. Stone was only to bear the sum of \$25 of the partnership expenses attached to the keep of the ponies, and did not see why he should be called upon to pay more than half of the costs, more especially as he had given up, in order to avoid litigation, his right to be the sole owner of the best pony.

Mr. Kirkwood was then put in the box and swore to the receipt of the letter from Mr. Ness, acknowledging the withdrawal of the original suit.

On the 5th of October Mr. Ness sent another letter to Mr. Kirkwood admitting that he had made a mistake in the accounts, and after that another amended account was received from Mr. Ness, and it was on this last amended account that Mr. Kirkwood made his present claim. And he contended that his communication to Mr. Ness, agreeing to the receipt of half the proceeds of the sale less \$25 for expenses had been accepted, as no answer was returned and the ponies were advertised for sale that night. He did not dispute that a larger sum than \$50 had been paid by the defendant for the keep of the ponies, but argued that it was the defendant's own fault, as he had no right in the first instance to take away the ponies from the Cliff Dairy and put them in a livery stable.

This was the substance of the case and upon it His Honour rendered the following

JUDGMENT.

I think the admission and evidence before the Court show an agreement to compromise the original action on the basis of the plaintiff receiving the half of the net proceeds less \$25 as his share of the livery expenses. The original action had been settled on that basis, and the agreement must be upheld. There will therefore be a verdict for the plaintiff in the sum claimed, \$60.50, with \$25 costs, payable as usual within ten days.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET Esq. Consul

Messrs. DEVEZE AND CONIL Assessors.

Saturday, October 13th, 1877.

HYVER *versus* LABASTIE AND TESSIER.

J. P. HYVER, a storekeeper of Nagasaki prosecutes Mademoiselle Marcelline Labastie for breach of trust; and claims an order of the Court that she shall restore to him two houses, alleged to be his property, situated at Sagaramatzu, Nagasaki, and possession of which she has retained by force. He also proceeds against Célestin Teissier, on a criminal charge of having assaulted and threatened him.

Mr. Charles Michel appeared for the plaintiff. Mademoiselle Labastie was represented by Mr. Montague Kirkwood, barrister-at-law; and Teissier by Monsieur Houseal.

This case has several elements of a sensational character. The female defendant had nine or ten years ago accompanied the plaintiff from France, and then and since then lived with him, and served him as barmaid when he kept a hotel in Nagasaki. There she, last year, met and became intimate with a young man named Tessier, who was engaged as cook in the hotel, and for whom in one of the pleadings she is described as having *éprouvé une folle passion*. During the absence of Mr. Hyver in Vladivostock last year Tessier was taken into the house, and Mr. Hyver was upon one occasion ejected from the premises. Tessier was accused of having upon more than one occasion threatened the life of Hyver in the "Oriental Hotel," one of the houses in possession of which the plaintiff claims to be reinstated. The case was first heard before Mr. Marcus Flowers, Vice-Consul for France at Nagasaki, and afterwards removed to this court for final trial.

The depositions taken at Nagasaki having been read by the *greffier*, Mr. Charles Michel addressed the Court for his client. He detailed the business history of Mr. Hyver during the past few years, and showed that after having lost a considerable sum of money in a speculation in shoes, he, acting on the counsels of Mdlle. La Bastie, executed a deed in the early part of 1876, stated to have been for their mutual benefit, transferring the property to her, and some time afterwards went away for a time to Vladivostock, where he made some money. On his return he found that Tessier had supplanted him in the affections of his mistress. An unhappy life was led for some time. At the end of one quarrel he was turned out of the house, and the hotel was closed. There was a temporary reconciliation, lasting only three days, during which the hotel was again opened, to be shut by the woman, while Hyver was laid up with rheu-

matism. Having sundry goods, and wishing for a house to live in, he was weak enough to sign an agreement to lease the smaller of the two houses, at a rent of \$25 per month from his former mistress, whence he was ejected afterwards by order of the Vice-Consul. On several occasions afterwards he claimed from La Bastie his clothes which were left in the hotel, and even these were denied him. Counsel now claimed restitution of the houses and other property, and asked for the punishment of La Bastie and her lover. He based his claim for restitution on the ground that the deed of transfer was not valid, having been according to French law improperly executed. His complaint against Tessier was that he had struck him and on two occasions threatened to injure him, once with a knife and once with a peel.

Two letters of complaint sent by Hyver to the Consul, were read, and then

Mr. Kirkwood addressed the Court stating his client's case. Hyver had brought her hither from France. She had lived with him for nine years, and during that period looked after his interests without wages. At the end of 1875 he had promised to marry her, and the necessary documents were procured; but he broke his promise, transferring however the two houses to her, and saying before he left for Vladivostock to endeavour to make some money, that in any case she would be provided for, and his creditors could not touch the provision he had made. On his return from Vladivostock, seeing how things were between Madlle. La Bastie and her new lover, he wished to regain possession of what he had given her. (Several documents were put in, among others the transfer certified by Mr. Hodges, the then Acting Vice-Consul, and a certificate by the constable of the Court that Hyver had, in his presence, had his furniture and effects handed over to him by La Bastie.) The learned counsel held that the transfer was meant to be *bona fide*, and cited in support of his view that Hyver had written to La Bastie, agreeing to take the second house as her tenant (letter put in), and that the lady had paid the insurance on the hotel building &c. He produced written testimony from the Vice-Consul at Nagasaki as to the general good conduct of Madlle. La Bastie while in charge of the hotel.

Mr. Michel commenced to reply, but Mr. Hyver took the words out of his mouth, and himself addressed the Court. He asked for the production of a single account signed by La Bastie as proprietress of the hotel; but was rather taken aback when a copy of a *Cosmopolitan Press*, issued in May 1876, was produced by Mr. Kirkwood, in which, in the report of a suit heard before the Vice-Consul for France, wherein he (Hyver) was defendant, he is said to have pleaded that he was not proprietor of the "Oriental Hotel." Having recovered a little from his embarrassment, he said something about having some acquaintance with the proprietor of the *Cosmopolitan Press* (*il est un peu de mes amis*) and proceeded to plead that little attention should be paid to newspaper reports, as "those people" (*ces gens*) wrote pretty much what they liked. He concluded with the remarkable assertion (probably unequalled of its kind for gratuitous impertinence) and which elsewhere would certainly have called for the reproof it deserved, for its irrelevancy at least if not for its libellous falsehood, that people connected with newspapers were all a sort of swindlers (*un genre de chevaliers d'industrie*).

The case was adjourned till Tuesday at 10 A.M., the Court promising Mr. Michel,

who said that it would be hard on the Nagasaki witnesses if they were detained after the departure of Wednesday's steamer, to endeavour to bring the case to a conclusion on the next day of hearing.

Tuesday, October 16th, 1877.

The hearing was resumed to-day from the 13th instant.

Mr. Michel addressed the Court in behalf of his client, asking that an order be made for the restitution of the property, on the ground that the transfer was illegal, as by the French law it should have been executed before a notary public.

Mr. Kirkwood replied at some length, urging that the suit be dismissed. He argued that the transfer should be held binding, in equity, as it had been intended to be, and would never have been disputed but for the change in the relations of the parties. If the intention of Hyver was to place the property beyond the reach of his creditors, he had in that respect acted in bad faith, and the Court should not aid him to break his contract. If the transfer were to be set aside, it should be in favor of the creditors and not of Hyver. Counsel asked that the Court should order, if the transfer were found invalid, to compel the plaintiff to execute a valid one. Supposing however the case to go in favor of the plaintiff, he asked that there should be an adjustment of the property, that what was Mlle. Labastie's and what his should be settled, and that the money paid by the lady for insurance, rent, &c., should be returned to her. He referred to the accusation of ingratitude brought against his client and held that under the code it was not applicable to invalidate the contract. With reference to the criminal charge he asked that the case should be dismissed, as of the two parties, if there was culpability, Hyver was the more culpable.

Mr. Houseal addressed the Court on behalf of his client Tessier. He put in some notices, said to be defamatory, and to have been signed by Hyver. Teissier had been engaged as cook and discharged his duties to the satisfaction of every one, and when Hyver returned from Vladivostock, he asked for his wages, and could not get them all. His contract was renewed by Mlle. Labastie who was in charge of the hotel. Counsel asked that the charges brought against his client be dismissed, on the ground that he had already been discharged by the French Vice Consul at Nagasaki, that the defamatory notices posted by Hyver in Nagasaki were sufficient to excuse any threats made, and that the proceedings taken against him were improper.

Mr. Videau, a restaurateur at Shanghai, who happened to be in Yokohama, was called as being able to give some important information on the subject of the transfer. He was examined, but merely stated that he had seen a notice in a Nagasaki paper bearing the name of Hyver, and asserting that he had no interest in the "Oriental Hotel," which would be conducted by Mademoiselle Labastie.

At this stage of the proceedings the Court adjourned until 2.30 P.M., to allow Mr. Kirkwood time to summarise and send in the conclusions to be drawn from his argument.

On the re-assembling of the Court,

The Consul, before going on with the case, wished to ask some questions of the female defendant, to whom he submitted the accounts put in by the plaintiff for expenses incurred

by him in bringing her to Japan, and in her maintenance during the ten years she has been with him. There were two accounts, one of which was composed of details of expenses such as the purchase of the bungalow 28 at Nagasaki, expenses for ground-rent, a gardener, &c., passage from Europe, sundry sums laid out before the voyage, and board at Bordeaux and Nagasaki. The other was for ten years board at the rate of twenty dollars per month, \$2,400, and other sums for toilet and pocket money, making the total of this bill \$3,070.

Mdlle. Labastie was then questioned by, and replied to, the Court as follows:—

Did Mr. Hyver, when he was turned out of the hotel, leave any furniture?

None, seeing that he had taken all his things away in the presence of the Consular constable.

Did Hyver on his return from Vladivostok pay the debts of the hotel incurred during his absence?

No. I paid them myself with the money taken in the business.

Why did you transfer the property in the hotel to Tessier?

Because I wished to open a hotel myself and wished to be entirely beyond the reach of Mr. Hyver, who when he was in the hotel threw things out of the window, and in all directions, some of them striking myself.

Mr. Hyver here addressed the Court, with reference to the argument of Mr. Kirkwood, denying among other things that he had any creditors; and, with reference to the statements of Mr. Houséal as to his misconduct, rebutting them. He expressly wished for a small chain, a family *souvenir*, in the possession of Mdlle. Labastie.

At the request of the Court Mr. Kirkwood read the argument which he had put in.

In answer to a question by the Court why Hyver had transferred the property to Labastie, he replied that he was on a sick-bed, and that at the instance of Labastie he made the transfer, she saying that, if he died, his mother would dispute his will (which had been made out in favor of his mistress.)

Mr. Michel and Mr. Houséal on behalf of their client addressed the Court briefly, and

The Consul then announced that judgment would be given on Wednesday, the 24th instant. Meanwhile as the parties interested were all represented by Counsel, they were at liberty to return to Nagasaki.

Wednesday, 24th October, 1877.

The Court, which was adjourned on the 16th instant, sat again this morning, and delivered the following

JUDGMENT.

The Consular Court of France in Japan, after having heard the parties in their demands, depositions, and conclusions:

After having deliberated according to law, judging publicly and in first instance:

As regards the complaints of Hyver:—

Seeing that Miss Labastie states that by the deed of the 4th January, 1876, Hyver made a gift to her of two houses situated at Nagasaki, 42-A, Sagaramatzu, which she herself subsequently gave to Teissier:

Seeing that the deed of the 4th January, 1876, is only a simple transfer, which was not preceded by the deed of gift which Miss Labastie says was made in her favor: that, in any case, the deed above mentioned can only be considered as being itself a deed of gift:

That, agreeably to articles 931 and 932 of the *Code Civil*, every deed of gift should be

executed before a notary, in the ordinary way of contracts: that it is specially necessary that it should be drawn up in express terms and authentic form:

Seeing that the deed of the 4th January, 1876, has nothing whatever of the character required by the law regulating deeds of gift:

Seeing that the transfer made by Miss Labastie to Teissier is full of irregularities, aggravated by the inability of the said Labastie, who could not, and should not have, disposed of a thing in which she had no right of property:

That further, as regards third parties, the registration of deeds of gift is necessary, and that all deeds of gift of real property, that is to say of property which can be mortgaged, are subject to registration (Art. 939 of the *Code Civil*):

Seeing that the deed of the 24th October, 1876, by which Miss Labastie transferred to Tessier the said property, No. 42-A, is null for the same reason as is that of the 4th January:

As regards the indemnities claimed by Hyver from the defendants:—

Seeing that it has been made out that before his departure for Vladivostok and during his absence from Nagasaki, Hyver did, of his own free will, voluntarily and without any conditions recognised and accepted, leave to Miss Labastie the entire control of his real property and his hotel:

That in resuming, on his return from Vladivostok, the control of his establishment, Hyver tacitly approved the management of Miss Labastie, because he made no complaint on that subject before the proper persons:

Seeing that he has been unable to prove that Miss Labastie improperly detained any clothes, goods, or objects belonging to him: that on the contrary it has been shown, by the depositions of the constable of the English Consulate at Nagasaki, that, on leaving the hotel, he took away all that belonged to him:

Relative to the claims made by Miss Labastie:—

Seeing that the female defendant, having had during a certain time the entire direction of the Oriental Hotel and of the property No. 42 A without control, and without having to give any account to the actual proprietor, she should quite naturally bear the expenses to which this establishment was subject in the same way as she has had part in the profits of the business:

Seeing that it is settled by a rule of law that damages should always be calculated upon the injury wrought or the loss sustained:

That if, during the whole time of cohabitation with Labastie, Hyver did not give her any fixed salary, a course to which he was not compelled, seeing they had made no agreement on this subject, it is nevertheless sufficiently clear that he never ceased during all that time to provide for all her needs:

That, without entering into the details of all the sums that Hyver says he paid for Labastie, who does not acknowledge the whole of them, it is proved that, among others, Hyver paid the price of the passage of the defendant, and further made, in 1874, the transfer to her of a house in Nagasaki known as No. 28-B, a transfer which like the others is irregular in form, but the validity of which the plaintiff has acknowledged before the Court, his intention having always been and being to give this real property irrevocably to Labastie, as her own absolutely and without reserve, a fact of which the Court has taken note:

That even if the contradictory assertions of the two parties should be admitted by the

Court, yet they do not tally with their depositions:

Considering that the Court possesses the means necessary to form an opinion on this subject:

As regards Teissier:—

Putting on one side the question of insulting language, threats, and violence, which the Court has not to consider, seeing that the affair has been already decided at Nagasaki:

Seeing that the same reasons which render null the transfer made by Hyver to Miss Labastie, make *a fortiori* null and void the transfer executed on the 24th October, 1876, to Teissier by Miss Labastie of the property No. 42-A, Sagaramatzu:

For these reasons,

Finds that the transfer authorized by Hyver on the 4th January, 1876, and registered the same day at the English Consulate at Nagasaki in the name of Miss Labastie is null and void:

That the transfer of the same property made in the same form on the 24th October, 1876, by Miss Labastie to Teissier is also null and void:

Orders that the said real property, together with the furniture which forms the actual furniture of the hotel, as well as the title deeds of the property, shall be immediately returned to Hyver:

Dismisses the claims put in by Hyver against Miss Labastie as regards the payment of rent of the said real property, and other sums, whether for alleged profits made by her or for the detention of furniture:

Dismisses the claims of Miss Labastie upon Hyver both for damages and on other grounds whatsoever:

Also dismisses the claims preferred by Teissier against Hyver:

Orders that the present judgment be provisionally executed, notwithstanding opposition or appeal, and without conditions:

Condemns the parties, each in a third and altogether, to pay the costs of the suit.

Before H. PIERRET, Esq., Consul.

Messrs. A. HARMAND AND C. JUBIN *Assessors*.

Tuesday, October 23rd, 1877.

L. KNIFFLER & Co. vs. THE MESSAGERIES MARITIMES COMPANY.

Mr. G. Reddelien appeared for his firm, the plaintiffs. The Messageries Maritimes Company was defended by Mr. F. V. Dickins.

The claim was for \$296, money value of damage alleged to have been done through the negligence of the Company's servants to a portion of a shipment of 33 bales of cloth consigned to the defendants, by the M. M. Steamer *Sindh* which left Marseilles, where the goods were shipped, at the close of July last. The damage was said to have been done by rain-water in Hongkong where the cloth was transhipped to the *Tunais*, in which latter vessel it arrived here.

A survey signed by Mr. Francke, Surveyor appointed by the German Consulate who inspected the goods on their arrival testifying to the damage sustained, was read, as was the complaint of the plaintiffs, and the correspondence between them and the Messageries Maritimes Company.

Mr. Dickins then addressed the Court for the defence. He held that the plaintiff had put in no testimony to prove that the negligence of the Company's servants was the cause of the damage, and that the *onus* of proof lay with them. Mr. Francke's survey only showed the condition the goods were in and not how they came into it. The bill of

lading says nothing of the condition in which the bales were shipped. The plaintiffs should prove the intrinsic value of the goods: they had only given their value on the spot. He denied that the captain or other servants of the Company could be proved guilty of negligence, and urged that the presumption was in favor of the damage having been caused by perils of the sea. There was nothing to show that it arose from rain-water.

Mr. Reddelien replied, testifying to the condition in which he received the goods. When the shipment was landed his Chinaman came to him and told him that most of them were wet. He went to the Custom House, and found that nearly all the bales were very wet on the outside. As his firm were themselves insurers of the goods he had them taken to his godown, and had a surveyor appointed. When the bales were opened but few were found to be damp on the inside. Hence he argued that they had been wet by rain water. He could not say where the damage was done. It might have been at Hongkong or Saigon.

The Court retired for a short time, and, returning, gave the following

JUDGMENT.

The Court, after having heard the parties in their assertions and explanations, and after having deliberated thereon in accordance with the law, judging publicly and in last instance:

Seeing that the claim of plaintiff is not based upon any fact which he can prove, and only reposes upon his personal opinion, as he asserts himself:

Seeing that the survey he caused to be held was made in a manner contrary to established rules, and without any verification by the other side:

That under the circumstances the claim being made upon a French company, the survey should have been asked for at the right time, and ordered by the French Consulate:

For these reasons,

Dismisses the claim of Kniffer & Co., and orders them to pay the costs of Court.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON Esq., Acting-Consul-General.

Saturday, October 13th, 1877.

J. R. ANGLIN vs. NORMAN WIARD.

This case, in which the plaintiff claims the sum of \$129.35 for printing done, and subscription to the *Japan Gazette*, was heard before Mr. Denison, on the 17th September last, when His Honour notified that he would reserve judgment. Not being satisfied, however, with the evidence, Mr. Denison gave notice to the litigants that a further hearing would take place to-day.

On the Court assembling, Mr. Wiard addressed His Honour, and said that he was of the opinion that the plaintiff had no right in the Court as he had finished his case. If His Honour was not satisfied with his, Mr. Wiard's, defence he was willing to give a further statement; but he required time.

Mr. Anglin expressed his willingness that the case should be proceeded with.

His Honour said he would like to have more evidence on the distribution of the 500 copies originally printed; the distribution

of the 80 copies wrongly printed; and also with regard to the original copy from which the book was printed, as well as the usual prices for such work, and the custom in regard to proof reading.

Mr. Wiard declined to give any further testimony on these points, and said he preferred that judgment should be given on the evidence already taken.

His Honour finally agreed to give judgment, without taking further testimony, on Monday next.

Monday, October 15th, 1877.

The Court this afternoon delivered the following

JUDGMENT.

The plaintiff claims the sum of \$129.65, as balance of account for work done and material supplied. The defendant denies indebtedness.

The original claim of plaintiff against defendant was for \$279.65 and defendant having paid \$150 on account, the balance of \$129.65 still remains unpaid.

All the items of the claim are admitted as correct by the defendant, with the exception of two, viz: "500 books, 28 pages \$158" and "100 books, (extra heavy paper) \$42."

It appears from the evidence that the plaintiff printed certain books for, and delivered them to, the defendant, and also that defendant never returned them to plaintiff, and further that defendant made two payments to the plaintiff amounting to \$150.00 on account of the general claim without at the time expressly disclaiming liability on account of the two items above named. It also appears that when defendant made the last payment there was less than the amount of these two items due the plaintiff.

These facts, in the absence of sufficient evidence to the contrary, raise the presumption that the work done was reasonably satisfactory, and also an implied admission on the part of the defendant that the amount charged therefor was reasonable and just.

Therefore, without going further into the merits of the case, I feel compelled to allow the plaintiffs claim.

The Judgment of the Court is that the plaintiff have and recover of and from the defendant the sum of \$129.65 and costs of Court.

IN H. I. G. M.'S CONSULAR COURT.

Before E. ZAPPE Esq., Consul.

Messrs. WM. PARDON } Assessors.
and E. SCHMIDT }

Saturday, October 20th, 1877.

SHIMEMURA KIMBEI vs. BUSCH, SCHRAUB & Co.

The plaintiff, a Japanese subject, claims from the defendants the sum of \$1,804.97, alleged to be the amount of a loan, with interest from the time the loan was contracted.

The defendants plead not indebted. That the value of the loan has been returned to plaintiffs in the shape of goods.

After hearing some testimony, the Court found that it was absolutely necessary to obtain the evidence of certain witnesses, some of whom are in Kobe and one in Berlin, before the case could be gone on with. The depositions of the witnesses in Kobe and Berlin will be taken and forwarded to the Court here, and then the case will be brought on for further hearing, which can hardly come on for six months time.

Before E. ZAPPE Esq., Consul,

AND TWO Assessors.

Saturday, October 13th, 1877.

T. W. F. Holm was brought up on the remanded charge of embezzling certain monies the property of his employers, Messrs. Copeland and Wiegand.

On the Court assembling to-day the defendant was examined with regard to the sale of beer on board the German frigate *Elisabeth*. He confessed that he had sold, in all, beer to the value of \$568.50, for which he had been paid. Out of this he had paid Messrs. Copeland and Wiegand the sum of \$392.40, and had embezzled the remainder \$176.10.

Two Stewards from the *Elisabeth* were examined as to the quantity of beer they had purchased from Holm, after which, the accused was asked if he had anything further to say.

He said no. He had kept the money but with no intention of embezzling it, as it was his intention to have returned it in a few weeks.

The Court then found the accused guilty of continuous embezzlement, and sentenced him to six months' imprisonment and to pay the costs of the trial.

IN THE SPANISH CONSULAR COURT.

Before E. DE OJEDA, Acting Consul.

Monday, October 15th, 1877.

PAGDON vs. PEDRO AVRIEL.

This was a claim brought for the recovery of the sum of \$30, money advanced by the plaintiff to the defendant for the purpose of embarking sailors. Defendant did not give the money to the men, hence the present action.

Mr. Pagdon did not appear, so His Honour ordered the case to be struck out.

Pedro Avriel, the defendant in the last suit, a native of Manila, was then charged with having embezzled the sum of \$75 from Peter Claussen. It appears that on the 27th September the prisoner went to Mr. Claussen and asked him to advance \$75, and he would give as security certain notes. He had to obtain a number of sailors for Mr. Pagdon, and was to receive some money from him with which he proposed to pay back the amount he now asked for. The result was that he got the money. But instead of getting the men for Mr. Pagdon he began drinking. He went to a gambling house and proceeded from there to another house of disrepute, where he remained all night, and in the morning woke up and found all his money gone. He got frightened and did not know what to do for the best. However, he tried to hide himself and went on board the *Carl Ludwig* and remained there. Subsequently it came to Mr. Claussen's ears that Pedro had made away with the money and had absconded. He at once applied to the Spanish Consulate for a warrant, and when that was obtained set about hunting up the delinquent, and finally found him secreted on board the *Carl Ludwig*. Claussen then gave him in charge of the police, and the prisoner was brought before the Consul and remanded to gaol. After this the parties endeavoured to arrange the matter; and for this purpose the prisoner was brought before the Court to-day. Mr. Claussen expressed his willingness to accept the sum of \$25 in

four days, and the balance in monthly instalments of \$25. This the prisoner agreed to, and so was discharged from custody, and relieved from the probability of being sent to Manila to undergo a lengthy term of imprisonment.

IN THE JUDICIAL COURT AT KANAGAWA.

Before Mr. ASAINA KANSUI, Vice-President.

Friday, October 12th, 1877.

H. GRAUERT (as agent for the German ship *Madagascar*) vs. MIYAZAKI HAMPEI.

This was a claim for \$2,800. It appears that the defendant and others chartered from the plaintiff the German vessel *Madagascar* to proceed with general cargo to Hakodate, and from there to proceed to Shanghai with a cargo of seaweed, but they did not carry out the charter-party.

The hearing was resumed this morning from the 26th July.

After waiting some time for the defendant to put in an appearance, the case was commenced.

His Honour told Mr. Grauert that if he had anything to say in addition to what had already been stated, he was at liberty to say it.

Mr. Grauert replied to His Honour by saying that at the last sitting of the Court in this case, Jiu Saburo had not spoken the truth, so he had brought a witness who would refute Saburo's statements.

Robert Bleifuss was then examined, and said that he was in the employ of the plaintiff. Jiu Saburo came to the office, after the case had been given into the hands of the Court, and asked upon what terms the plaintiff would be willing to cancel the charter, thus showing that all the parties concerned knew of the existence of the charter. There was no interpreter in the office at the time the defendant called, none being necessary, he, witness, having sufficient knowledge of the Japanese language to carry on the conversation.

Mr. Grauert informed His Honour that the case was a serious one as affecting agents and shippers. If Japanese were allowed to run round and take charters and throw them up just when they thought proper, the inconvenience and loss, not only to persons here, but to owners of vessels in Europe, would be incalculable. There was no doubt but that the defendant wanted to ignore the existence of the charter owing to some difficulty which had occurred between him and the *Boving Sailor*, but which had nothing whatever to do with the case at issue.

After some evidence from Japanese had been taken, the hearing was adjourned.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Saturday, October 27th, 1877.

Reg. ats. ALI HASSAL, Fireman, S. S. *Malacca*, vs. WILLIAM EIDMANN, Second Engineer, S. S. *Malacca*.

Ali Hassal states:—I was in the Engine-room yesterday, and was told by the Fourth Engineer to do some work. I refused, and the Fourth Engineer complained to the Second Engineer who came and struck me.

Accused states:—Yesterday morning I heard some noise going on in the Engine-room. I met the Fourth Engineer who com-

plained of complainant's behaviour. I asked complainant why he would not do what he was told: he was impudent. I told him to desist, but he still continued. He was stooping down and I gave him a slap on the side of the head with the flat of my hand.

John Roach, Fourth Engineer of the *Malacca*, sworn:—Complainant was working with me yesterday morning, and would not do as he was wanted. I reported him to the Second Engineer. The Second Engineer came round and gave complainant orders. The man refused to obey them. I then said to the Second Engineer, "you can see for yourself." He then went forward to complainant, gave him a slap on the head, and told him to go away.

Case dismissed with a caution.

Monday, October 29th, 1877.

Arthur Bell, Nadal Dubrici, Robert White, William Taylor, Robert Edmunds, and Ake Ridderbjelke, seamen belonging to the British barque *Naworth*, were charged with being absent from that vessel without leave.

On the 25th the accused came on shore to lodge a complaint against the Captain, and, according to the evidence, had not been on board since.

The accused admitted the charge and

His Honour sentenced them to one week's imprisonment.

Joseph William Graham, master of the British barque *Clifton*, was charged by the shipping master, J. J. Ensle, with contravening Section 149, par. 2 of the Merchant Shipping Act of 1854, and contravening Section 166 of the said Act.

Mr. J. J. Ensle was sworn and stated that the articles of agreement of the *Clifton* do not set forth the number of men who are engaged as sailors; further, that a copy of the articles had not been made accessible to the crew.

The defendant stated that he knew of no law requiring that the number of men engaged as sailors should be stated; also, that the articles were handed to him by his Consul at Antwerp, and he understood them to be in order, as they were handed to him without comment. He confessed that he had not exposed a copy of the articles of agreement on board.

Fined £1 for failing to keep a copy of agreement accessible to the crew.

Tuesday, October 30th, 1877.

J. M. Patterson, an engineer employed on the *Massilia*, was charged with being drunk and assaulting a police officer.

Police Constable Schultz deposed to a Japanese policeman coming to him for assistance. He went and found the accused lying asleep in the road. He arrested and took him to the police station.

Takahashi, a Japanese police officer, said that the accused had struck a Japanese and cut a gash in his head two inches in length. He was arrested by some Japanese police, and tied, but at his request his hands were untied and he then assaulted two or three of the police. He also drew a knife and struck one of the men on the head.

Gonda, another Japanese policeman, said that at two o'clock this morning, from information received, he went to the house of a Japanese and saw the master with blood streaming from his head. He arrested the prisoner and took him to the Takashima-cho police station. An interpreter was brought, but the prisoner refused to say anything,

and demanded to be sent to the foreign police station. Takahashi gave orders for him to be taken to the police station. On the way he requested to have his hands untied, and this request was complied with, whereupon he assaulted the witness, striking him on the head and tearing his uniform, and then ran away. As there was a cut on the hat he presumed the prisoner had used a knife. Witness caught prisoner by the legs and wrestled with him, and after that he, Patterson, went to sleep.

The prisoner had no questions to ask, but stoutly denied having used a knife. He stated that he was assaulted by the Japanese first. His ship was at Shinagawa and he came here to see some friends who were going away by the French Mail steamer. He swore most strongly that he never used a knife, and "surely his word was worth as much as that of a heathen Japanese."

Fined \$5 and costs or ten day's imprisonment.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON Esq., Acting Consul-General.

Tuesday, October 30th, 1877.

In re F. V. DICKINS vs. A. DUNN.

The defendant in this case applied for permission to have a new trial on the grounds that, under section 76 of the United States Consular Court Regulations, the proceedings of the Court were irregular; as by law the Court should have been constituted of assessors as well as His Honour, which was not done. 2nd.—That the evidence showed that Mr. Dunn employed Mr. Dickens to attend to his cause against the Japanese in the Saibansho, Tokio, agreeing to pay him the sum of \$500 and disbursements on the final settlement of the cause in that Court. Mr. Dunn maintained that two letters which had been produced on the trial stated emphatically that Mr. Dickens was employed to prosecute the case of Dunn vs. Oil Company to a final issue in the Shihosho. He further contended that Mr. Dickens never made a new petition to the Joto Saibansho, a new Court which had been established during the trial of Mr. Dunn's case against the Oil Company, as had been stated in the judgment rendered by Mr. Denison; but, on the contrary, the petition was sent by the United States Consulate, and was only amended by Mr. Dickens. Mr. Dunn's cause was still pending before the Shihosho, and it was shown by correspondence that Mr. Dickens had withdrawn from it. Another ground for making the application for a new trial was that an error had been made in the judgment as \$10 more had been given than was claimed by Mr. Dickens.

Mr. Dickens objected to a new trial being granted, as no written notice of the defendant's intention to move for a new trial had been given within the time appointed by the Rules of the Court; and the requirements of rules 76, 77 and 78, not having been complied with.

The main question before the Court was relative to the notice of new trial not having been given within the time required by the law.

However, His Honour announced that he would consider the application, and defer his decision for the present.

Thursday, November 1st, 1877.

In re F. V. DICKINS vs. A. C. DUNN.

In the matter of a motion for a new trial filed by the defendant, judgment was rendered in this case by the Consul-General, sitting without assessors, on August 24th 1877. On the 1st September, 1877, the defendant filed a notice of his intention to move for a new trial, and on the 8th of the same month he filed the statement and affidavit required by Sec. 77 and 78 Consular Court Regulations. These papers were served on the plaintiff, and on the 27th September he filed a motion to the effect that the motion of the defendant be disallowed with costs for the reason: "No written notice of the defendant's intention to move for a new trial having been given within the time appointed by the Rules of this Court, as that within which after rendition of the judgment in the said cause such written notice should have been given and the requirements of Rules 77 and 78 thus and otherwise not having been complied with."

The only question at present before the Court is whether the Court has the right to entertain a motion for a new trial, when said motion or a notice of the intention to file such motion, is not filed within the time appointed by the Court Regulations.

"The Regulations for the Consular Courts, of the U. S. of America in Japan" provide Sec. 78th:—"The party intending to move for a new trial shall give written notice of the same as follows. When the action has been tried by a Consul sitting with Assessors, within five days after the rendition of the judgment, and within two days after judgment when tried by the Consul alone." So far as a new trial is concerned, therefore, the judgment became final and absolute upon the expiration of the time within which a notice of the defendant's intention to move for a new trial should have been filed, and this Court is powerless to deprive the plaintiff of the right he has secured by the neglect or default of the defendant, and is equally powerless to relieve the defendant from the effect of the limitations above quoted.

The motion of the plaintiff is granted, and the motion of the defendant is disallowed with costs.

U. S. CONSULATE-GENERAL AT SHANGHAI.

Before the Hon. G. WILEY WELLS, Consul-General.
Shanghai, October 22nd, 1877.

SERIOUS CHARGE AGAINST VICE-CONSUL BRADFORD.

The Court was crowded this morning, chiefly with American citizens, to hear a charge against O. B. Bradford, Vice Consul-General and late United States Postal Agent, of abstracting from the mail a letter addressed by Dr. Macgowan, of Shanghai, to General Myers in San Francisco.

Dr. McCartee acted as Clerk of the Court. The prisoner was brought into Court by the Marshal at a few minutes past ten, and was given a seat in front of the Bench.

Mr. Wells—Mr. Bradford, stand up.
Prisoner having risen, Mr. Wells read the following:

IN THE COURT OF THE UNITED STATES CONSULATE-GENERAL.

UNITED STATES v. OLIVER B. BRADFORD.

Before the subscriber, a United States Consul-General acting Judicially within and for the Empire of China, personally appeared D. J. Macgowan, M. D., who being duly sworn deposes and says, that on or about January 1st 1877, Oliver B. Bradford, being then and there a citizen of the United States of America, and being then and there an acting United States Postal Agent and Deputy United States, Postal Agent at Shanghai, China, and having then and there charge of the United States Mails did then and there unlawfully take from and out of the aforesaid United States Mail,

a letter which was included to be carried by the aforesaid as mail lately deposited by the said D. J. Macgowan, M. D., aforesaid addressed to General W. Myers, San Francisco, California, United States of America, and did then and there unlawfully open said letter with intent and design then and there to obstruct the correspondence of the aforesaid D. J. Macgowan, M. D. and General W. Myers, and did with the further intent and design open the aforesaid letter for the purpose then and there to pry into the business and secrets of the aforesaid Macgowan and Myers contrary to the form of the Statutes in such case made and provided, and against the peace and dignity of the United States of America.

D. J. MACGOWAN, M. D.

Sworn to and subscribed before me this 20th day of October 1877.

G. W. WELLS,

United States Consul-General Acting Judicially.

To this charge, what have you to say; are you guilty?

Prisoner—Not guilty. I never knew of any such letter; I never knew that Dr. Macgowan had addressed a letter to General Myers; and I am not aware that I ever saw such a letter.

Mr. Wells—Are you ready for the hearing?

Prisoner—Yes, Sir.

Mr. Wells—I wish the reporters to note that he pleads not guilty; and that he says he knows nothing of such a letter, never saw such a letter, and never had such a letter in his possession.

Prisoner—Will you allow me to correct your last remark. A letter of that kind may have passed through my hands, and therefore have been in my possession, and I have known nothing about it.

Dr. Macgowan was then called and sworn.

Mr. Wells—State whether or not you are the party that signed the foregoing affidavit making the charge against the prisoner.

Witness (having examined the affidavit)—Yes, that is my signature.

Mr. Wells—It states that you, sometime in January of this year, addressed a letter to General Myers, of the United States Army, in San Francisco. Is that true?

Witness—Yes.

Mr. Wells—Were did you mail it?

Witness—In this Consulate; in the United States Post Office.

Mr. Wells—Have you seen it since?

Witness—No.

Mr. Wells—Or know of any reference to it?

Witness—No.

Mr. Wells—Examine that (handing document) and state what that is?

Witness (having examined the document)—It is a copy of the letter I addressed to General Myers of the United States Army in San Francisco.

Mr. Wells—Is it full and complete?

Witness (having read the document)—To the best of my knowledge it is correct; though there may be some verbal differences I cannot recollect.

Mr. Wells—Why was it mailed?

Witness—It was mailed for the purpose of being carried by the United States mail.

Wells—Was it stamped and sealed?

Witness—Yes, it was.

Prisoner—I do not know that I have any question to ask.

Mr. Coffey, a Consular official, was then called and sworn.

Mr. Wells—Examine that document (produced) and state whose handwriting it is.

Witness (having examined the document)—It is Mr. Bradford's handwriting.

Mr. Wells—What is it?

Witness—It begins "Private, Shanghai, Jan.—The last mail made the American —"

Mr. Wells—Whom is it signed by?

Witness—It is signed "M.," and above this signature "most truly yours, D. J. Macgowan."

Mr. Wells (to prisoner)—Do you wish to ask any question?

Prisoner—No.

Dr. McCartee was then called and sworn.

Mr. Wells—Examine that (handing document), and state whose handwriting that is?

Witness—I believe it to be the handwriting of Mr. Bradford.

Mr. Wells—How is it signed?

Witness—"D. J. Macgowan."

Mr. Wells—What does it purport to be?

Witness—It says "Private, Shanghai, Jan. 1877. To General —" (Some name is written in telegraphic characters.) "Dear Sir,—The last mail made the American residents at

Shanghai acquainted with a most scurrilous attack on Consul-General Myers," &c. (The remainder of the letter, which was about three foolscap pages, was not read.)

Mr. Wells—I will ask Dr. Macgowan one other question—Was the letter addressed to General Myers by you addressed in telegraphic characters?

Dr. Macgowan—No; I omitted to mention that. With that exception the document appears to be a correct copy.

Mr. Wells—I believe that is all the evidence to be brought before me. (To prisoner): Have you any evidence?

Prisoner—I can explain that (the document spoken to as being in his handwriting).

Mr. Wells—I can hear any statement you wish to make, but I cannot swear you. I wish to allow you, as this is a criminal proceeding, every privilege known to the law and you may make any explanations.

Prisoner—Then I will make a statement. I can account to you for that paper.

Mr. Wells—I must tell you that any statement you may make may be used against you.

Prisoner—About the end of March 1877, a letter of which the document (referred to as being in his hand writing) is a copy, came into my hands; and I made this copy of it. I supposed, when making the copy of the letter, that the original had been addressed to Mr. Myers, who had been Consul-General here. This is the first intimation I have had that it belonged to General Myers of San Francisco.

Mr. Wells—To whom is your copy addressed? Is it not addressed San Francisco?

Prisoner—Yes. There were two letters: this and another; and I simply made a copy of it. I presumed that the letter had been to San Francisco, or else had not been out of Shanghai. They belonged to Mr. Myers and I found them on his desk, and I made this, which is a copy of one, and another which is the copy of the other, which I believe you have. There would have been time for the original to have gone to San Francisco and to have come back to Shanghai.

Mr. Wells—Mailed in January, it could have arrived back in March?

Prisoner—It was given time. But as to opening any letter, I never did so; and never saw the letter till the end of March. That is the explanation I have to give as to this.

Mr. Wells—If I understand you, you say you never had seen the letter which passed between Dr. Macgowan and General Myers, nor any letter of the kind; nor had you one in your possession. Is that so?

Prisoner—I mean not on the 1st of January. I understood you to say that I had come into possession of the letter of which this document purports to be a copy, on the first of January; whereas I never saw it till the end of March. Now I see it is addressed to General Myers, San Francisco.

Mr. Wells—Why did you use telegraphic characters?

Prisoner—I am in the habit of using them occasionally. It is my handwriting, and I can tell you to within two or three days of the time I made the copy. It was the time the investigation was going on between Mr. Seward and Mr. Myers.

Mr. Wells—I have no doubt of that. Have you the original letter?

Prisoner—No.

Mr. Wells—What did you do with it?

Prisoner—Put it on the desk where it was found. I do not know where it is. The first I saw of the letter was in March. I do not know where it came from, except that it was on Mr. Myers' desk. But as to taking it out of the mail or anything of the kind, I am above it, and I deny positively that I did so.

Mr. Wells—The Court would say, since you make this statement, that it is a fact known to the Court, to yourself, and the public, that it is next to an impossibility for the letter to have gone to San Francisco and to have been returned so as to have been in Shanghai in March for you to copy.

Prisoner—I can give an explanation.

Mr. Wells—I will hear it.

Prisoner—These are the facts in explanation. I have nothing to conceal about it. I made the copy from the letter, from an open letter which I found.

Mr. Wells—The law under which the charge is brought is section 3891 and 3892 of the Revised Statutes of the United States, and is as follows:—

Sec. 3891. Any person employed in any department of the postal service, who shall unlawfully detain, delay, or open any letter, packet, bag, or mail of letters intrusted to him, or which was intended to be conveyed by mail, or carried or delivered by any mail-carrier, mail-messenger, route-

agent, letter-carrier, or other person employed in any department of the postal service, or forwarded through or delivered from any post-office or branch post-office established by authority of the Postmaster-General; or who shall secrete, embezzle, or destroy any such letter, packet, bag, or mail of letters, although it does not contain any security for or assurance relating to money or other thing of value, shall be punishable by a fine of not more than five hundred dollars, or by imprisonment for not more than one year, or by both.

Sec. 3892. Any person who shall take any letter, postal card, or packet, although it does not contain any article of value or evidence thereof, out of a post-office or branch post-office, or from a letter or mail carrier, or which has been in any post-office or branch post-office or in the custody of any letter or mail carrier, before it has been delivered to the person to whom it was directed, with a design to obstruct the correspondence, or pry into the business or secrets of another, or shall secrete, embezzle, or destroy the same, shall, for every such offence, be punishable by a fine of not more than five hundred dollars, or by imprisonment at hard labor for not more than one year, or by both.

Mr. Wells.—The Court, in coming to a consideration of your explanation and of the charge, is obliged to state that this matter deeply pains him. In all the official positions he has occupied, in all the circumstances under which he has ever been placed, he has never found one which surrounded him with so many embarrassments as this seems to present. Not that I am in doubt in regard to your guilt. I am as well satisfied of your guilt of having opened this letter as if I had seen you do it. Had I a doubt, did a reasonable doubt linger in my mind, I should give you the benefit of that doubt. But all the circumstances conspire to point to you as having that curiosity which, with your zeal, carried you beyond the law. You have seen fit, as an officer entrusted with the responsibility of seeing after the mail of the United States at this place—the mail, that means whereby merchants convey their secrets to their fellow merchants throughout the commercial world and by which family secrets are conveyed,—you, an officer, have seen fit to invade that sanctuary, violate your oath of office, descend to the mean offence of prying into the secrets of others, to satisfy your curiosity, by opening a letter. The evidence is that the letter was mailed here and sealed; and it is impossible to account for your copying it on any another hypothesis than that you opened it; notwithstanding you say you copied it after it was returned from San Francisco. At first you said you never saw such a letter; but after the copy is produced and your handwriting identified, you say you found it on Mr. Myers' desk, it having had time to go to San Francisco and be returned. Both explanations are lame excuses to avoid the penalties you have incurred. And while I say that it is painful to me to be thus obliged to address you, and compelled to visit upon you the penalty which the law commands, yet I will not shirk the responsibility that rests upon me. You have violated the law, as shown by the evidence produced, and it becomes my duty to pass sentence upon you for that offence.

Prisoner.—May I speak, Sir? Do you propose to pass sentence now?

Mr. Wells.—Yes, unless you have something further to say. If so, I will hear you.

Prisoner.—Well, I think my word is as good as the accuser's or any evidence which has been afforded. I adhere to my statement that I never saw the letter until about the end of March 1877. Where it had been in the meantime I do not know. It may have been to San Francisco. There was time for it to have gone and returned. That I could tell by looking at the dates of the departures and the arrivals of the mails. The letter was found on Mr. Myers' desk, and I took a copy of it for Mr. Seward. But I would like to be put on oath.

Mr. Wells.—I shall not put you on oath. The law of the United States does not allow that. It does allow you, and you may make any statement you may wish, but as I have said, it may be used against you. If you wish the sentence to be deferred for a few days, the court will postpone it, to afford you every reasonable opportunity to vindicate yourself. I ask then, do you wish for a postponement? Yet the court feels constrained to say that with your statement before him—having heard the explanation you have made,—there is not, Sir, a shadow of doubt on his mind as to your guilt. That a letter was addressed to Gen. W. Myers, San Francisco, was mailed here, stamped and sealed; that you had charge of the Post Office, and that there is found in your possession, in your own

handwriting, an exact copy of it, there is no question. If, as you say in your explanation, you found the letter somewhere, that does not excuse you; for it was addressed to General Myers at San Francisco. It was placed in the Post Office, you were the Post Master, it was your duty to forward letters, and to see that they were not tampered with; in fact if it had been open you would have had no right under the law to even take it out and read it, much less make copies for use.

Prisoner.—I did copy the letter. The way it came into my hands was, as I have said, that I saw it on Mr. Myers' desk at the end of March; it was near the 27th of March. The letter was in an envelope unsealed. If I had taken the letter out of the envelope or the mail, I would just as soon say so. I am not afraid of the penalty of the law at all. Had I in any way tampered with the letter, I would confess it. My reputation in Shanghai is a pretty good one, I hope; and I do not think that any one man in Shanghai would believe that I did as I am accused of doing. I have nothing to conceal. If I took the letter out of the mail, I would say so like a man and an officer of the United States, as I have been here for a number of years; and you would respect me the more for it. The explanation that I give as to how the letter came into my hands is the God's truth. I never heard of the letter before March, nearly the 27th of March. I never knew it was in existence. To my recollection, I never saw a letter addressed in Dr. Macgowan's handwriting to General Myers in San Francisco. I didn't know anything about it whatever; and as to having one way or other, by implication or otherwise, taken the letter out of the mail, I did not do so. That I am not guilty I call my God to witness.

Mr. Wells.—Any mail deposited in this building to be forwarded is in a United States Post Office to all intents and purposes.

Prisoner.—I understand, Sir, whether the mail was in my hands or in those of another. My statement is not in the least affected by it. There is no evidence that the letter ever came into my hands in January. The evidence that it came into my hands is that given by myself. That there was time for the letter to have gone to San Francisco and be returned by about the 27th of March no person will, I think, deny; there was plenty of time providing the mail left about the first of January. It may have been sent by the person to whom it was addressed to Mr. Myers, who was Consul-General here, by whom it was left on his desk, with various other papers and letters, public and personal. On going to get an official document one evening, I saw this letter and made the copy.

Mr. Wells.—In other words, if I understand you, you admit that you abstracted a letter from the private drawer of the Consul General and copied it. Is that so? You must take one or the other alternative. If you abstracted a letter from the Consul General, and copied it for purposes of your own, or took it and copied it somewhere else, you did a very reprehensible act.

Prisoner.—Yes, Sir; the desk in the other office. The letter was lying there, and that was where I copied it. Those are the facts in relation to it. I had no interest of my own to serve. Things were in a very peculiar state of affairs at the Consulate then.

Mr. Wells.—Mr. Bradford: The Court would be glad if you could give an excuse such as, to its mind, would justify it in discharging and releasing you. But with every latitude I can give you, and after hearing every statement you have made—some of which conflict with your former statements—it has no doubt as to your guilt. Whether as you say you abstracted the letter somewhere, (that in fact you stole the letter from the Consul-General's desk), and copied it for your own motives, or whether, as is said, you took the letter from the United States mail, it will make no difference unless you can prove that the letter came into your possession legally. The evidence is, that there was a letter mailed here, stamped and sealed, addressed to General Myers;—that is positively sworn to; there is no doubt or question about that; neither is there that a copy is found in your possession, in your handwriting, of that identical letter; no one denies that. How, when, or where you obtained the original, no one but you and your God knows; the presumption of law is that it being in your possession as Postmaster, and no one else having access to the mails except through you, not even the Consul-General, that you opened it and made the copy. And I beg to remark that had anyone else,—an ordinary clerk, a Chinaman, or an ignorant man—been guilty of your conduct, the offence

would not have appeared to the Court so heinous as it does in your case. The fact of a man holding such a position as yours, a responsible person such as you were,—one enjoying every power, who indeed has sat on this Bench where I am sitting, and exercised the judicial powers of this office, who had the custody and control of the mail,—such a person having committed the offence demands immediate and severe punishment. Under all these circumstances, and the evidence before me, I feel that I should not discharge my duty if I did not enforce the law. Had I a doubt, I would give you the benefit of it; and while I do not doubt your standing in the community, so far as the outside world may know, and that it was of a high character; yet I am compelled and constrained to say that facts and circumstances, of which I will not speak, are known to me which confirm your guilt as proved here on the stand. I should feel I had been remiss in my duty if I did not inflict the penalty of the law; yet I am willing that you should have time to consider the matter and to give you a re-hearing. I am willing now to wait until some future day before passing sentence if you do so desire; but I have expressed to you my conviction, and it will take evidence of a positive character beyond what you have urged to remove the impressions, in fact the proof, which to my mind "is as strong as Holy writ." Are you ready to be sentenced now?

Prisoner.—No, I would prefer to wait.

Mr. Wells.—For how many days?

Prisoner.—I should like three or four weeks.

Mr. Wells.—I will not give an unreasonable length of time; I will not favour or impede justice. Other matters are pending. I will take the case for Saturday week.

Prisoner.—Will you allow me to speak to you privately a moment?

Mr. Wells.—Yes, Sir, in this place.

(Prisoner then went on to the bench and conversed with Mr. Wells for a few moments, and returned to his place.)

Mr. Wells.—Mr. Bradford, are you ready for sentence?

Prisoner.—Yes.

Mr. Wells.—Stand up. (Prisoner stood up). Mr. Bradford, you have been found guilty, after a hearing of the testimony in your presence, of having opened and extracted a letter from the United States mail for the purpose of obstructing the correspondence between the parties named and of prying into the secrets thereof. In passing sentence I can only refer to what I have already said; but I will add that I wish "that this cup could pass from me." Your position here with me has been that of a subordinate and one I would prefer to have continued had you been found worthy. But you have not; you have followed the devices of your own heart; you have forgotten God and His commandments; you have violated the law; you have prostituted your office. The Court does not wish to harrow your feelings by saying another word which would pain you; and so without referring to the matter further, the Court will sentence you to pay a fine of \$250 and costs, and imprison you in the jail of this Consulate for twenty days, without hard labour, and stand committed until the fine is paid.

Prisoner was then committed to the charge of the marshal and the Court adjourned.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Tuesday, October 30th, 1877.

PILLON vs. MICHEL.

This is a claim arising out of the liquidation of the estate of Messrs. Maigre & Co. Plaintiff sues defendant, the liquidator, for \$100, rent, for January, 1877, of No. 174, of which plaintiff is proprietor. He alleges that defendant, neglecting to credit him with that sum, is responsible to him for it. He further claims \$36.86, interest for five months at one per cent per month (as by agreement) upon a sum of \$737.33, and prefers another account for \$40 for two months' rent, which Mr. Boudou, a partner in the firm of Maigre & Co., refused to pay him for the occupation by his utensils of his property, and for which he held Mr. Michel responsible. The total of his claim is thus \$176.86.

Both parties appeared personally.

Mr. Pillon's complaint having been read, and he having stated his case,

Mr. Michel said that the matter in no way concerned him, and asked that the suit of Pillon be dismissed, and he be condemned to pay the costs. As for the \$100 claimed for rent, he had credited Pillon's account with what that person had told him was due, and in any case, now that the estate was liquidated, and its accounts were closed, it was too late for plaintiff to put in any claim against it. He produced receipts for the two months' rent claimed. He positively affirmed that Pillon's claim had not been made upon him before the estate was finally liquidated.

Mr. Pillon denied this, *in toto*, and said that he had repeatedly made demands for payment upon Mr. Michel. The last time he applied to this gentleman for settlement he was turned out of his office.

Mr. Michel said that this was quite true, and that if the same offence were again offered him by Mr. Pillon he would do as he did before. The plaintiff told him that, of all the business which passed through his hands, some of the proceeds stuck to his fingers. He (defendant) insisted that it was unnecessary to enter into the details of the liquidation of the estate of Maigre & Co., as this claim was brought too late. Mr. Boudou, late of the liquidated firm, was present with Pillon when accounts were adjusted.

After some discussion the Court, having heard that Boudou was at work on board one of the steamers of the Messageries Maritimes, adjourned the case until this afternoon, to allow time to procure his attendance as a witness if possible.

On the Court resuming Mr. Boudou was examined. He testified that in an interview which took place between Messrs. Pillon and Michel and himself, the former had spoken of the omission to credit him with \$100 rent for January.

The Court announced that judgment would be delivered on Saturday next, the 3rd inst., at 10 A.M.

LOSS OF THE BRITISH BARQUE "MERSE."

COURT OF INQUIRY.

FINDING OF THE COURT

After three quarters of an hour, the Court delivered the following:—

1.—We find that the British bark *Merse* of London, official No. 13,777, 629 tons, left Hongkong on the 29th ulto. bound to Newchwang, in ballast, and that at about 11 p.m. on the 2nd instant, the vessel struck on the N. W. corner of the Pratas Shoal, where she was abandoned on the 11th inst.

2.—We find that the weather was fine, but, from the absence of the sun, the position of the ship at noon on the 2nd inst. and subsequent to that hour was uncertain.

3.—We are of opinion that the master, Robert Robertson, No. of whose certificate of competency in 33,015, acted imprudently in trying to pass to windward of a well known dangerous part in the China Sea.

4.—We find that whilst the ship was on the reef the master for nine days did his best to get her afloat again, but without success; but we consider that, although there was no apparent prospect of getting the vessel off the reef, it would have been better had the master remained by the ship until she had begun to sustain such damage as would have put it beyond doubt that she could not be floated.

5.—We are of opinion that the master, Robert Robertson, was guilty of an error of judgment, but we do not think it sufficient to necessitate the suspension of his certificate.

Given under our hands at Hongkong this 23rd October, 1877.

C. MAY, First Police Magistrate.

H. G. THOMSETT, Harbour-Master.

H. H. NELSON, Unofficial Magistrate.

ROBERT MCMURDO, Marine Surveyor.

E. SHREWSBURY, Commander, *Cilurnum*.

—*Hongkong Daily Press*, Oct. 24.

H I O G O.

One would have thought that the recent collision near Sumiyoshi—the extent of the injuries from which have not yet been ascertained—would at least have had the effect of making the line safe for some time to come. It is therefore scarcely credible, had we not the statement on the authority of an eyewitness, that a special train arrived down from Osaka on Wednesday evening last, at about 6.30—only some ten minutes in advance of the regular train—and had no tail lights whatever! Had the special been obliged to stop for any reason between the stations, or had, by any mischance, part of the train become detached and left on the rails, it requires no special acuteness to see what an excellent trap would have been ready set for the driver of the following train. The recklessness of the proceeding would be astonishing under any circumstances, but considering what has only recently happened, we have scarcely words wherewith to characterise it. As the railway drifts more and more into native hands, are we to have the old list of catastrophes which used to occur to the wretched little Osaka steamers repeated on land?—*Hiogo News*.

An unwonted scurrying about of the native police early on Wednesday morning first drew our attention to the fact that something out of the common must have occurred. About the usual number of different stories were passing from mouth to mouth, all that was actually known appearing to be that something very serious had occurred in a native hotel near the Concession, that a local search was being made for somebody, and that bodies of men had been despatched towards Ohno and up the hill roads. We have since ascertained the facts of the case to be that the native detectives had discovered that on Tuesday night one of the most notorious scoundrels in Japan had taken lodging at a hotel in one of the wide streets leading up from the Native Bund, and early on Wednesday morning two of their number went to the place to arrest him, and finding him in bed, at once seized him, for the purpose of tying him up. But whether from their bungling or his own personal powers, he succeeded in drawing a sword from under his bed, and so severely wounded both men that he was able to jump from the first-floor window into the street. A hue and cry was immediately raised, but he made good his escape. He was afterwards tracked to Sumiyoshi, but there, for the present, all trace of him has been lost. We do not know all the particulars of his career, but we are informed that he has already twice escaped from custody in Hiogo, once in Tokio and once in Yokohama, and that he has already shot one policeman, to say nothing of the persons he has injured. Lately he has been going round the country in the disguise of a pedlar of tortoiseshell

hair pins and such things as are in demand at fairs. Knowing the desperate character they had to deal with, it is surprising to us that the police authorities did not send ten men to arrest him instead of two.—*Idem*.

A few days ago there was another soldier-police row. A soldier, who had apparently been concealing more strong liquor about his person than he could conveniently carry, was taken to the station house by the police, whereafter a number of his comrades made a regular attack on the place, in order to release him. They used their side arms, and several policemen were injured, but ultimately three of the soldiers were taken into custody. We shall very likely never hear what is done with the rioters, as by Japanese law they are punishable by the military authorities only.—*Idem*.

We hear that the Japanese are foretelling that some serious elemental disturbance, such as a tidal wave, is to be looked for between the 15th and 19th of next month. We do not know on what they base their calculation, but it is noteworthy that between the 15th and 17th the earth passes through what we believe is called the meteoric belt.—*Idem*.

From the *Osaka Nippo*:—

On the night of the 16th ult. it was telegraphed that the police at the branch station in Koriyamago, Kagoshima Ken, had killed Ikenobe, a rebel leader.

A man who has returned from Kagoshima gives the following report: The bamboos which were used in making the stockades are now used in the erection of the official buildings. In Kagoshima workmen are very busy. Kucho and Kocho have been chosen anew.

A man more feared than Saigo and Kirino was Itsumi Jurota. When the Imperialists were defeated by the insurgents the latter were commanded by Itsumi on horseback, so that when the Imperialists heard that the rebels were commanded by Itsumi, they hesitated to march, thinking that as he was in command the rebels were not to be defeated. Itsumi formerly held the position of a Captain in the Imperial Guard, when it was not known that he had skill in fighting, but it is well known now. The above is reported to have been said by an officer of the army.

A man has said that when Saigo was in Shiroyama, five tall students who resembled him asked for an interview with him and said that now they were surrounded by the Eastern army in ten or twenty rows of fences; that the said army was very watchful; that they (the rebels) were now only 500 or 600 and besides were short of ammunition and provisions, the latter of which they would in a few days have none. "If," said they, "our teacher, we are now defeated, make your escape and renew your attempt; we, five men, will die for you. If your body be not discovered by the Eastern army, you will be searched for by them. We are as you and our countenances resemble yours. Victory and defeat are the lot of the soldier, and we have thought that if defeated we would have to die for you, so when we took up arms last February, we wounded our left arms like yours." They then shewed their wound and the leaders praised them. Saigo said to them that his life must now end and that he did not desire those heroes should die for him personally, but only that they should die, fighting bravely. Thus has Saigo become popular.

A military officer, refreshing himself with "a cup" and smiling, remarked that the days of the month which end with "4" have been unfortunate for the rebels, for on the 14th of March the Imperialists relieved Kumamoto, on the 24th of July took Miyakonojo, on the 24th of August Nobeoka, while on the 24th September Saigo and others were killed.

The merchants of Satsuma and Osumi used to trade to Loo Choo, but since the outbreak of the rebellion their visits have ceased, and the Loochooans, being short of commodities, have lately gone up to Osaka. They chiefly buy tea worth about yen 10 per picul.

Mr. Sumitomo, a celebrated copper merchant, sent some copper some time ago to Corea, where it was well sold, and it is said that a further consignment will be shipped in a few days.

OSAKA.

(From the "Hiogo News" Correspondent.)

Tuesday, October 23rd.

The cholera epidemic appears to be decreasing. On the 15th instant it reached its culminating point, the deaths on that occasion, for the 24 hours ending at noon, having been, according to the official returns, 98. Since then they have pretty regularly decreased. Yesterday's returns were as follows:—

New cases, 64; deaths 24
Old cases, 324; " 17

These 41 deaths make up the grand total of fatal cases since the commencement of the outbreak, to 799, the total number of cases being 1,180, and of those returned as cured only 57. This fell disease would appear to run riot in some districts, whilst others pass through the ordeal unscathed. The neighbourhood of Naka-no-shima is so healthy that the Osaka Fu School which is there situated, remains open, although all the other public schools are closed. As, however, the boys come from all parts of the city, the healthiness of the school's neighbourhood can hardly be deemed a good and sufficient reason for keeping it open. On the other hand the Adjikawa road seems to be a particularly deadly locality. On Sunday I noticed no less than six of the ominous yellow paper notices between the Kuji-bashi and the foreign cemetery, a distance of something more than half a mile.

Amongst the best known of those lately deceased is Mr. Mise, the principal Dutch interpreter at the Osaka hospital. This was a gentleman in whom many Dutchmen took considerable interest. When a mere lad of 17, some three and twenty years ago, he incurred the anger of the government at Nagasaki for having given certain information to a well-known foreign botanist,—he was then a gardener I believe,—and for this he was put into prison and kept there for two or three years. Japanese prisons were then, and perhaps are still, often damp and deadly dungeons, and the result was that poor Mise, when his foreign friends had succeeded in getting the Prince of Tosa to intercede with the Bakufu on his behalf, had had his bodily and, to some extent, his mental health permanently injured. Hence it was that he succumbed to a not very severe attack of choleraic diarrhoea. He was married to a grand-daughter of one of his foreign friends of those barbarous times.

THE "SAIKIO MARU" IN A TYPHOON.

The M. B. Co.'s steamer *Saikio Maru*, Captain Vroom, which arrived Oct. 18 with Japan mails, experienced a typhoon on her way from Yokohama to Kobe. She left Yokohama on the afternoon of the 10th inst.—same day that we experienced a gale here—with a S. E. wind, the weather cloudy, and the barometer registering 39.26. All went well until the following morning, when there were indications of bad weather; and in the forenoon the wind was blowing an E.S.E. gale with an increasing sea, and the barometer had fallen to 29.85. At noon the gale increased, and a heavy sea striking the ship caused the engines to stop. The vessel heeled over to starboard and the sea broke over her. The passengers were ordered below; and when a portion of the cargo had been removed the vessel righted. A typhoon was now blowing with great fury, and continued for about five hours. The vessel laboured heavily and shipped large quantities of water, but rode out the storm admirably, sustaining comparatively little damage considering the strength of the gale. But both her paddle boxes, the butcher's shop, cook house, the "boys" rooms, and other similar internal arrangements were damaged, and a quantity of stores and clothing was washed away. Her hull was not injured, and she was not delayed by the damage. The lowest reading of the barometer was 29.2, which was at 2 p.m., when the wind had hauled to S.S.W.; and an hour later the wind moderated and the sun afterwards appeared. The worst was now over, but a strong S.W. gale continued all night. Kobe was reached at 3 a.m. on the 12th, and thence to Shanghai the vessel had light winds and pleasant weather. The gale, although of short duration, is spoken of by the Captain as the most violent one he has experienced during his eleven years' career on the coast, and a passenger who has spent nearly all his life on Chinese waters represented it as "most fearful."

Captain Vroom reports of the typhoon as follows:—Oct. 10th, cast off from the buoy at Yokohama at 4 p.m., wind S.E., barometer 30.26, cloudy weather. Cleared Cape Sagami at 6.30 p.m., wind N.W., raining and very dark, barometer 30.15. At 11.30 p.m. passed Rock Island, wind E., raining, sea smooth, at 3.30 a.m., Oct. 11th, bore Omay Saki light abeam, wind E.S.E., barometer 30. At 9.30 a.m. thick and rainy weather with increasing gale. When 95 miles from Rock Island, hauled ship away from the land; barometer 29.85, falling rapidly, with suddenly increasing sea from S.S.W. At 11 a.m. the ship's position was 17 miles E.S.E. from Cape Shima. Hauled fore staysail down, and slowed engines; ship's head to sea heading south. At noon wind S.E., blowing a furious gale, with terrible sea from S.E. A heavy sea struck the ship, which caused the engines to stop on their centre for a while, the ship at the same time falling off in the trough of the sea, heeling over considerably to the starboard. Shifted cargo to right ship, seas coming all over her. Ordered all passengers down below and in the after steerage. At 1 p.m. barometer 29.16, wind S. S. E., fearful typhoon. At 1.30 p.m. got up 20-lbs. of steam. Took advantage of a lull in the squalls and brought the ship on her starboard tack, heading south and doing well, but labouring very heavily. At 2 p.m. gale breaking, barometer 29.2, fearful squalls, wind hauling S. S. W., shipping heavy seas

on the main deck. At 3 p.m. gale broken and sun coming through; wind S. W., moderating, barometer 29.25. Sea terrible and ship sending bows clean under. At 3.30 p.m. moderating fast; barometer 29.35; wind S.W., heavy gale; ship heading S.W. At 4 p.m. clearing; sighted the land, bearing N.N.W. about 12 miles, and ship was brought on her course. Had strong gale all night from S. W. by W. with heavy sea on from S.E. and S.W. Rounded Miwa Misaki at 3 a.m. on the 12th, and arrived at Kobe at 2 p.m. same day.—*N.-C. Daily News.*

CHINESE MOURNING.

When we speak of "going into mourning," we do not generally think of more subtle distinctions at the furthest than "deep" mourning or "half mourning." No doubt, if our history were ransacked, interesting details would be forthcoming of the distinctions which obtained in olden times. At present there seems a decided tendency, not only to ignore grades and degrees, but to avoid, as far as possible, consistently with the age's view of decency, the trammels of mourning altogether. Amongst the middle classes of England, ponderous hearses, mutes, hat-bands, gloves, scarfs, crape, hatchments, &c., are rapidly giving way to plain hearses, private carriages, and an unobtrusive band round the hat, though at court, possibly, there may be strictly regulated sumptuary rules to be observed, according to the rank and distinction of the deceased. Among the Chinese, however, there is no such tendency, and the ancient rules as to mourning remain as vigorous as ever. A Frenchman, M. Mercier, has recently published a book upon the lugubrious subject of this paper, in which we are told that the colour adopted in Japan is, and anciently in Spain was, white; that China is represented by yellow; and that other countries have made use of black or brown in giving outward expression to the regretful recollections of their friends. Like most announcements made in Europe bearing upon Chinese manners and customs, this is inaccurate, perhaps not entirely so, but certainly to the extent of misleading. It may be interesting to some to know more upon this subject, and we therefore propose to enter upon the matter in detail.

There are five degrees of mourning in China; respectively, the "Cut Sackcloth"; the "Year's Clothes"; the "Greater Duty"; the "Lesser Duty"; and the "Hemp Cloth"; representing periods of Three Years, One Year, Nine Months, Five Months, and Three Months; and these five go by the generic name of the "Five Clothes." The three years mourning is only worn for husbands, and for fathers and mothers of the following descriptions; namely, own fathers; adoptive fathers of the same surname, who have adopted a junior agnate to be heir; and adoptive fathers who have adopted a stranger from similar or other motives. The mothers run over a much more complicated gamut. Own mothers, whether concubines or wives; the mother-in-law, being the wife of the man of whose concubine the person wearing mourning is the son; * the step-mother, being the maiden-wife married by the wearer's father after the death of the

* Note:—Here we may observe that, contrary to the statement which we have previously made elsewhere, it is possible, though unusual, for a man to have two legitimate wives, (*Tung shih*); for, if his first wife be barren, or invalid, or willing, he may have a second, or even a third. A case of two wives, the first of whom is sick, has come to the writer's knowledge.

first wife; [and here we may mention that there can be no legitimate child by a concubine unless the man has first been married, such child being a "wild child" or bastard]; the step-mother, being concubine of the man whose son's concubine-mother is dead, and who has directed another concubine to act towards the child as own mother; and adoptive mothers, being the wives of adoptive fathers as above described.

The three years is stated to represent the period during which the child was suckled at the breast. The "cut sackcloth" is so called from its being made without stitches, or, at all events, without more than are absolutely necessary to keep the clothes together. Anciently, this appears to have been simply a strip of sackcloth worn across the breast. The three years' mourning is, in practice, completed the day after the expiration of the second anniversary of the death of the deceased, although, in theory, it should be continued for another year. [Perhaps this practice may be accounted for by the curious method of computing time now in vogue amongst the Chinese, (a topic which we hope to discuss in due course), as an instance of which a child, born on the last day of the year, is considered two years old the next day: thus many Chinese are in reality from one to two years younger than they say, and Europeans *vice versa*; notwithstanding this they frequently keep the anniversary of their birth, which however is always held by them to be one year in advance of our computation, because they date their birth from conception, and consider themselves to have lived from ten months to a year in the womb.] As soon as ever the death of one of the above described parents takes place or is heard of, the mourner changes the black silken point or plait at the end of his *queue* for a white one, and, similarly, the black twisted silk knob on the crown of his every-day cap for a white knob. The "cut sackcloth" is only worn for one hundred days, but the white button and tassel are worn during the whole three years, or, as is generally the case, during the whole two years and a day. But, in addition to this period of three years deep mourning, there are other periods of respectively one year, one hundred days, sixty days, and forty-nine days, which are distinguished as follows. During the year succeeding the three deep years a yellow tip and a yellow knob are worn, the white ones having been burnt at the altar of the mourned ancestor; during the one hundred days period, blue tips and knobs are similarly substituted, and, during the two remaining periods, blue tips and knobs are still worn. It might be thought that as "two years and a day" is considered a fair construction of "three years," so, two days might be considered an equally reasonable view of one year, *quare tota lex ridicula est*; but, in accordance, with the English maxim that no legal interpretation can ever be allowed to lead to an absurd result, the common sense of the Chinese nation declines to establish an analogy between the two cases. Thus it may be said that the first class of mourning extends in practice over a period of about three years and a half. Unless a special dispensation is granted by the Emperor, officers must retire from their posts during three years, and in no case can they remain during the hundred days succeeding the death, or the news received of the death, of a parent. Numerous officials now in high office may be adduced as examples. For instance, the present Viceroy of Foo kien has been in retirement since 1874, shortly after he had

been appointed Acting Viceroy at Nanking. The present Viceroy at Ch'eng Tu has also spent a season of retirement since he occupied the post of Governor of Shan Tung. Li Tsung-hi, who replaced Ho Ching at Nanking also emerged from a three years' retirement at his native village in Sz Ch'uan. During the whole of the five sub-periods of the first class mourning, no red can be worn, and unpretending grays are affected. Families with money invariably possess a private temple or "ancestral shrine," whither they resort on proper occasions to sacrifice or burn incense to their ancestors' memory. These occasions are six or seven during the year, i.e., on the 15th of the 1st moon; on the 3rd of the 3rd moon; at the Dragon Festival in the 5th moon; at the festival of the 7th moon; at that of mid-autumn; and at the end of the year. In addition to these they visit the shrine, (*tso chi*), on the anniversaries of the birth, (*sheng chi*), and death, (*sz chi*) of the ancestor. If the family has never been wealthy enough to have built a segregated shrine, a private one is put up in the posterior court of the mansion, (*hon t'ing*), which goes by the name of (*kung p'o t'ing*). The mourning for a husband is still more severe, for the wife should never wear any gay colours at all, even when the full terms of mourning have expired.

The one year's mourning is worn for grandfathers and grandmothers, when the cap-knob and tail-tip are yellow. It is also worn for their natural father or mother by sons who have been adopted by their uncles; sons given to a man in adoption by the man's sister or brother must be distinguished from absolute strangers given in adoption, which latter often find it difficult to obtain a place in the adoption ancestral hall. In fact there is a popular saying, "the adopted son [meaning a stranger] can't get into the ancestral shrine." It will be observed that the son given in adoption by a sister-widow to a brother, is also a stranger in surname, yet the agnatic kinship transmitted through his mother counts in his favour here, and places him in a better situation than a pure stranger. One year's mourning should be worn by husbands for wives, whether first or second; but among the non-official classes, this is frequently neglected. For concubines there is no mourning prescribed unless there are children by her, when she should be mourned for three months (the 5th class), but this also is neglected. Brothers and sister should mourn a year for their brothers, but it is customary only to mourn if the deceased be the elder. Unmarried sisters should be mourned for one year; married, for nine months, but this seems to be generally dispensed with also. It may here be mentioned that brothers and sisters by the same father are of the whole blood. Uterine brothers and sisters are of no relation to each other whatever, and could therefore marry as far as the law goes, though in practice this never occurs. Indeed, as will be seen later on, it is considered disgraceful for a woman to marry again, and certain penalties are visited on families allowing it. A generic term for re-marry is "renew the bow-string" (*sü, hien*), but a term specially applied to re-marrying a maiden, as distinguished from a widow, is "filling up the [vacant] room," (*l'ien fang*). One year's mourning is also worn by the sons of wives or concubines for other concubine-consorts of their father. As before stated, the own son of such a woman wears mourning for three years. One year's mourning is, further, prescribed to be worn by a son for his mother, being his father's ex-wife, who has been sent back to her father's family,

owing to incompatibility of temper. However a good son would generally wear the full period of three years' mourning in such a case. One year's mourning is also worn for the unmarried sisters of a father. Nine months' mourning is worn for own brothers' wives, for first consins, (being father's own brother's children), for unmarried own sisters, and for married aunts (being father's sisters.)

Five months' mourning is prescribed for great grandfathers and great grandmothers, (though 100 days is generally substituted in practice); for married own sisters (ignored in practice); for the wives of cousins, (which cousins are sons of the father's brother); for great-uncles, (being brothers of the paternal grandfather), and their wives; for the sons of such great-uncles, and their wives; for second cousins (being grandsons of the grandfather's brother); for female second cousins of the same kind, if unmarried; for the wives of the above-mentioned first cousins; for the unmarried female first-cousins' of the father; and for the grandfather's unmarried sisters. The lowest grade of mourning is worn for great-great grandfathers, (in practice however 49 days), which are not so very uncommon in rural districts; for concubines with children, (in practice ignored); for female married second cousins of the class above-described; for the wives of male second cousins; for the brothers of paternal great grandfathers; for great uncles (being the sons of the last); and for third cousins, (being the sons of the last again); also for male cousins, being the great-grandsons of the father's grandfather's brother; and for the same degree of cousins-female, if unmarried; for the married female first cousins of the father, and for the grandfather's married sisters. Three months' mourning is also prescribed for the sons of a widow-mother who has married again, and who is considered to have lost her feeling of right, although she has some claim in consideration of her care in bringing the child up.

The wives of third cousins are not entitled to have mourning worn in their honour, nor, of course, are any cousins or their wives in any further degree, nor is the step-mother, married when a widow, by the father, entitled to mourning at the hands of her step-son. Not only does the sumptuary law of the present dynasty prescribe no mourning to be worn by the step-son in honour of such a woman, but neither her second husband, nor her step-son, nor her own son born of her second husband, having official rank, can petition the Emperor for a patent of nobility. Incidentally we may mention here that the wives of all the officers belonging to the nine ranks, are entitled, on petition to the Emperor, to one of seven grades of female titles, of which we may speak in detail hereafter. The ancestral tablets are invariably headed either with the words "Bearing the Imperial Ch'ing [Tartar Dynasty] Patent of—," where the deceased is an official, or an official's wife, or with the words "Waiting for a patent from the Imperial Ch'ing," where no rank has as yet been obtained.

No mourning whatever is worn for relations by marriages, nor for any lineal descendants, nor for any one in a lower agnatic degree. It may also be added that an agnate given in adoption to an agnate in a higher degree reduces his periods of mourning one degree for any one who dies, and for whom he would otherwise have worn mourning previous to adoption.

Corrections and notes upon this subject will be of interest.

NOTICE.

THE partnership heretofore existing between Mr. J. M. KELLY and Mr. ARTHUR WALSH under the style of KELLY & WALSH, Shanghai, and KELLY & Co, Yokohama, has been dissolved by mutual consent.

WITH reference to the above I have admitted Mr. THOMAS BROWN, as a partner, and notify that the business of KELLY & WALSH, Shanghai, and KELLY & Co., Yokohama, will be carried on by us under the same names.

Mr. E. A. SARGENT will sign our Yokohama firm.

ARTHUR WALSH.

Yokohama, Oct. 20th, 1877. 1w.

ARRIVALS.

Oct. 13, Am. barq. *Willard Mudgett*, Dickie, 850, from Newcastle, N.S.W., Coal, to Walsh, Hall & Co.
Oct. 15, Brit. str. *Benarty*, Potter, 1,150, from London, General, to H. Ahrens & Co.
Oct. 15, Brit. str. *Malacca*, Smith, 1,709, from Hongkong, Mails and General, to P. & O. Co.
Oct. 15, U. S. gun-boat *Monocacy*, Comd. Fyffe, 1,370 from a cruise.
Oct. 15, Brit. barq. *Kedar*, Johnson, 532, from Newcastle, N.S.W., Coal, to Walsh, Hall & Co.
Oct. 16, H. B. M.'s surveying vessel *Sylvia*, Comd. Hoskyn, 877 tons, from Odawara Bay.
Oct. 16, Jap. str. *Akitsu-shima-Maru*, Ward, 1,751, from Kosing-kotan, Saghalien, via Hako late, General, to M. B. M. S. S. Co.
Oct. 16, Jap. str. *Kokonoye-Maru*, Hussey, 1,825, from Kobe, General, to M. B. M. S. S. Co.
Oct. 16, Jap. str. *Toyoshima-Maru*, Hubbard, 946, from Kobe, General, to M. B. M. S. S. Co.
Oct. 16, Ger. ship *G. W. Wapius*, Diedrichsen, 538, from Newcastle, N.S.W., Coal, to Walsh, Hall & Co.
Oct. 16, Brit. schr. *Almatia*, Blanchard, 236, from Hakodate, General, to Kingdon, Schwabe & Co.
Oct. 18, H. M. gun-boat *Kestrel*, Comd. Theobald, 592, from Kobe.
Oct. 18, Jap. str. *Kiushiu Maru*, Hay, 690 tons, from Kobe, troops, to M. B. M. S. S. Co.
Oct. 19, Am. barq. *Annie W. Weston*, Winsor, 740 tons, put back, Rice, to Fischer & Co.
Oct. 19, Jap. str. *Hiroshima Maru*, Burdis, 1,870 tons, from Shanghai and ports, Mails and General, to M. B. Co.
Oct. 20th, Brit. Bk. *Kingdom of Sweden*, Smith, 780 tons, from London, General, to Gutschow & Co.
Oct. 20, Jap. str. *Hiogo-Maru*, Christensen, 896, from Kagoshima, General, to M. B. M. S. S. Co.
Oct. 21, Brit. str. *Oceanic*, Parsell, 3,700, from San Francisco, Mails and General, to O. & O. Co.
Oct. 21, French corvette *La Clocheterie*, Captain Riennier, from Kobe.
Oct. 22, Ger. schr. *Friedrich*, Hoyer, 298, from Hakodate, General, to Kingdon, Schwabe & Co.
Oct. 22, Ger. schr. *Augusta Reimers*, Hagenberg, 207, from Takow, Sugar, to H. Grauert.
Oct. 22, Brit. schr. *Tori*, Williams, 55, from Kurile Islands, Skins, to Captain.
Oct. 23, Brit. bark *Naworth*, Williams, 350, from Antwerp, General, to E. Moulron.
Oct. 23, Am. schr. *Julia A. Brown*, Nickerson, 450, from Newcastle, N.S.W., Coals, to Cornes & Co.
Oct. 25, Jap. str. *Tokio-Maru*, Swain, 2,119, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
Oct. 26, Ger. schr. *Lotte*, Haskorl, 25, from Kurile Islands, Ballast, to Captain.
Oct. 27, Ger. frigate *Elisabeth*, Capt. Von Wickede, 2,150 tons, 21 guns, from a cruise.
Oct. 28, Frch. str. *Tanais*, De la Marcelle, 1,735, from Hongkong, Mails and General, to M. M. Co.
Oct. 29, Am. ship *Messenger*, Gilkey, 950, from Hakodate, Fish and Sea Weed, to Order.
Oct. 30, Brit. str. *Sunda*, Reeves, 1,704, from Hongkong, Mails and General, to P. & O. Co.
Oct. 31, Am. str. *City of Peking*, Tanner, 5,079, from Hongkong, Mails and General, to P. M. S. S. Co.

DEPARTURES.

Oct. 13, Brit. 3-m. schr. *Ching-too*, Paikie, 304, for Kobe, General, despatched by Carroll & Co.
Oct. 13, Brit. barq. *Hilda*, Oberg, 306, for Hakodate, Ballast, despatched by Kingdon, Schwabe & Co.
Oct. 13, Brit. str. *Gaelic*, Kidley, 2,756, for San Francisco, Mails and General, despatched by O. & O. Co.
Oct. 16, Brit. str. *Bombay*, Briscoe, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.
Oct. 16, Ger. frigate *Elisabeth*, Captain Von Wickede, 2,150 tons, 22-guns, for a Cruise.
Oct. 18, Jap. str. *Akitsu-shima-Maru*, Ward, 1,751, for Kobe, despatched by M. B. M. S. S. Co.
Oct. 18, Ger. barq. *Friedrich Perthes*, Walter, 447 tons, seeking, despatched by Captain.
Oct. 19, Jap. str. *Nagoya-Maru*, Conner, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
Oct. 20, Ger. brig. *Carl Ludwig*, Petersen, 233 tons, for Dunedin, Tea, despatched by Simon, Evers & Co.
Oct. 21, H. B. M.'s surveying vessel *Sylvia*, Capt. Aldrich, 877 tons, for a Cruise.
Oct. 22, Brit. str. *Oceanic*, Parsell, 3,700, for Hongkong, Mails and General, despatched by O. & O. Co.

Nov. 2, Am. barq. *Cremona*, Gove, 650, for New York, Tea, despatched by Smith, Baker & Co.

PASSENGERS.

Per Brit. str. *Gaelic* for San Francisco:—Lieut. A. K. Bayler, u.s.n., Lieut. Tallcott, u.s.n., Paymaster Barton, u.s.n., Messrs. E. Deacon, Geo. Hamilton, Jos. Taylor, White, F. Schmidt, Leonard, Edmund; and 4 Europeans in the steerage.
Per Brit. str. *Malacca* from Hongkong:—Comm. Aldrich, R.N., Surgeon J. Wood, R.N., Messrs. H. James, J. B. Haggitt, J. M'Gibbon, J. Graham, Chokichi; and 1 Chinese in the steerage.
Per Brit. str. *Bombay* for Hongkong:—Surgeon Greany, R.N., Lieut. Coker, R.A., Messrs. Cruickshank, Hall and Beer; and 4 Chinese on deck.
Per Jap. str. *Akitsu-shima-Maru* from Kosing-kotan, Saghalien, via Hakodate:—Messrs. Pardun and Evers.
Per Ger. ship *G. W. Wapius* from Newcastle, N.S.W.:—Mr. and Mrs. Beveridge and daughter.
Per Jap. str. *Hiroshima Maru* from Shanghai and ports:—Lieut. J. D. Bolles, u.s.n., Messrs. Aldrich, O. Smith, Captain Kleinmann, W. F. Milton, Joseph, Mrs. Cobden, Mrs. Bell, 15 Japanese gentlemen and 1 lady in the Cabin; and 2 Chinese and 367 Japanese in the Steerage.
Per Jap. str. *Nagoya Maru* for Shanghai and ports:—H. Ex. Shatchkoff, Miss M. E. Gouldy, Mr. Dinck, Mrs. Taylor and family, Mr. Landseil, Miss McLean, Mr. Tracy, Miss Pie, Mr. F. Dury, Dr. Hill, R.N., Mr. H. Anson, Mr. McGerrow, Mr. and Mrs. Edmd. Sharp, Mr. Churchill, Dr. Barry, Mr. Tessier,

Miss Labasie, Miss Frothingham, Messrs. Duplaquer, Farmer, W. Smith, and 18 Japanese in the Cabin.

Per Brit. str. *Oceanic* from San Francisco: Mr. de la Camp, Miss Grace Winter, Mr. E. Cavalieri, Mr. and Mrs. Flower and maid, Mrs. Fletcher and son, Mr. M. V. de Maeyer, Mr. J. L. Flood, Mr. Jackson McKenty and niece, Dr. Stillman, Mr. M. de Bavie, Mrs. C. Holcomb, Mrs. Lex, son and maid, Mr. and Mrs. G. W. Knox, Mr. E. J. Fraser, Mr. F. B. Mills; and 1 European, and 4 Chinese in Steerage. For Hongkong: 653 Chinese in Steerage.

Per Frch. str. *Volga*, for Hongkong:—Messrs. Massazza, Viganò, Rionardi, Martinetti, Bossolo, Andreasi, Imberti, Fondra, Maurer, Tonunja, Gerosa, Barucca, Vivet, Vallet, Lusseau, Le Biwetel, Flock, Valentine, Conture, Decugis, J. Caillens and infant, Rouvier.

Per Brit. str. *Glennearn* for New York, via Kobe and China ports:—Mrs. Smith and family, Messrs. J. G. Austin, W. Crake, G. Crake, Main, and Orth.

Per Jap. str. *Tokio-Maru* from Shanghai and ports:—Messrs. Pitman, Taylor, Ellis, Spahn, Cameron, Bloom, Strome, Ronald, Campbell, Dinck, Kennedy, Nicoll, Fuller and 65 Japanese in the cabin; 4 Europeans, 391 Japanese, and 3 Chinese in the steerage.

Per Jap. str. *Hiroshima-Maru* for Shanghai and ports:—Mrs. Holcombe, Dr. Gottburg, Mr. and Mrs. Miyazaki, Mrs. Hirose, Messrs. Kostilef, Yano, Ullman, Ono, Otani, Matsui, Ikeda, Ohara, Watanabe, Hasegawa, Ishii, Toyasu, Yokoyama, Joseph, Burchard, Ah Ching, Yebayashi, Taneguichi, Ikeda, Jr. Kuwabara, Takehisa, Takagi, Koro, and Brenschedt.

Per Frch. str. *Tanais* from Marseilles:—Miss Smith, Messrs. Amano and Mourrier. From Hongkong: Mr. Cullen.

Per Brit. str. *Benarty* for Kobe:—Messrs. J. Goddard, E. de San, J. Winkeler, Groenwort, Nishinomiya, and Sado; and 8 Japanese in steerage.

Per Brit. str. *Malacca* for Hongkong:—Professo, Vanek, Messrs. Vanek, Jun., Wran; and 10 Chinese.

Per Brit. str. *Sunda* from Hongkong:—Messrs. H. Oishe, S. Muramatsu; and 4 Chinese on deck.

Per Jap. str. *Tokio-Maru* for Shanghai and ports:—Mr. and Mrs. Edward Lex, Messrs. Dousdebès, Cameron, Davidson, Hy. Gribble, H. Kniffier, and 19 Japanese in the Cabin.

REPORTS.

The *Willard Mudgett* reports a rather stormy passage. Had a strong gale on the 10th.

The *Benarty* experienced rough weather all the way from Singapore. Had 14 days' passage.

The Brit. barque *Kedar* reports:—Light and variable winds to the Equator; afterwards rain and calms up to 15° North, westerly winds prevailing till arrival.

The British steamer *Oceanic* reports:—Left San Francisco on the 29th September. Experienced very fine weather and smooth sea, the entire trip.

The Ger. schr. *Augusta Reimers* reports:—First part of the passage fine; had a severe gale on the 10th and 11th when in lat. 29-30 N., 129-20 E., wind at N.E., but sustained no damage.

The Ger. schr. *Friedrich* reports:—Thick rainy weather throughout the passage. Sailed from Hakodate on the 17th Sept.

The Brit. schr. *Tori* reports:—Changeable wind and weather, rainy and thick at times.

The *Kingdom of Sweden* reports having left London May 26th; the Downs May 3th. Had westerly winds in Channel, June 1st; hard gale of wind of Start Point, from the south-westward. June 5th signalled ship *Wylo*, for Shanghai, in 28° N., 23° W. Crossed the Equator July 8th, in 29° W.; meridian of the Cape in 43° S., August 4th. Sighted St. Paul's Island August 17th. Anchored at Anjer September 2nd. Passed through Gaspar Straits September 5th; between Natuna and Anambas Islands September 12th. Experienced light variable winds from S.W. to S.E. until September 17th, in 12° N., 113° E., where took N.E. winds, very light. October 3rd sighted southern end of Formosa, beating against fresh N.E. wind to 27° N., 124° E., October 10th, when hard gale of wind from N., force 10, barometer falling from 30.16 to 29.80, and wind shifted to N.N.W., and moderating at noon on the 11th to 25° N., 127° E. Passed through Linschoten Islands, Oct. 12th. Sighted Cape Muroto Oct. 14th: had light N.E. winds and fine weather up the coast. Boarded by pilot off Rock Light, October 15th. Anchored in Kaneda Bay, Oct. 19th.

The American schooner *Julia A. Brown*, Wickerson, reports:—Left Newcastle, N.S.W., on the 13th September. Had East to S. E. winds to the equator, which we crossed fifteen days after sailing. Had twelve days doldrums. Made Rook Island on the 22nd instant, took pilot on board; and arrived at 3 P.M. this day (23rd) thirty-eight days from Newcastle, N.S.W.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

The dullness which we have noted in this market in several preceding issues continues, Cotton Yarns being the only staple wherein there is any approach to activity. For 16-25 there is a slightly improved demand. Some business also has been done in T-Cloths. Trade in Woollens is stagnant. Metals—A slight improvement, some quantity of manufactured iron having been sold. The barques *Kingdom of Sweden* from London, and *Naworth* from Antwerp, both with general cargo, have arrived. Transhipped cargo ex steamer *Indus* and *Kashgar* from London, *Anchises* and *Deucalion* from Liverpool, *Amasone* from Marseilles, and *Egeria* from Hamburg is also to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Our last issue was dated 12th ult. The slight decline then noted was soon regained, and an active business continued, but without further advance, as supplies came in freely and were more than equal to the demand. On the receipt, however, of telegrams from the European market, showing that a portion of the late advance had been lost, there was a complete change on this side, and large quantities of Silk not inspected were for one reason or another immediately rejected.

This acting on a largely increased stock in native hands, at once caused holders to give way, and we have to note a decline of \$40 to \$50 per picul from the top point of October, at which decline a moderate business is being done.

Settlements during the period under review amount to close on 3,000 bales; arrivals amounting to 7,800 bales, leaving an unsold stock in the market estimated at 3,500 bales.

Shipments to date are 8,747 bales against 15,358 bales same period last year; divided as following:—

	1877/8.	1876/7.
England.....	bales 4,695	bales 7,091
France.....	" 2,360	" 7,160
Italy.....	" 530	" 613
United States.....	" 287	" 16
Total.....	bales 8,072	bales 14,880

SILK WORMS' EGG CARDS.—Production has been immensely in excess of demand; and, though final arrangements are not concluded, it is pretty certain that upwards of half a million cartons will be destroyed by the natives.

Arrivals are about 1½ million of cards: purchases to date about 600,000 at from 20 cents upwards.

The *City of Peking* has been detained until the 5th instant, and is expected to take a large number of cards.

TEA.—Operations in tea have been only moderate, settlements since date of last issue per *Gaelic* on the 18th ulto. amounting to 6,200 piculs.

The demand continues on low grades which command far higher prices, in comparison with Good Medium Teas than they are entitled to, considering their low undesirable quality in cup. Fine grades are for the moment slightly easier, but stocks of these are small, and supplies for the season of these classes likely to be limited.

The *Cremona* for New York had despatch to-day, leaving the *Willard Mudgett* on the berth for same destination. Rates of freight nominally £2 for sailing craft.

RICE.—The export business has fallen off considerably. The *Doris Brodersen*, which left on the 21st ult., took 9,000 piculs to Hongkong. The cargo of the *Annie W. Weston*, put back after damage sustained in the typhoon of the 11th ult., will be sold as sea-damaged.

BIRTH.

On the 13th inst., at No. 85, Bluff, the wife of
E. H. E. MANLEY, of a son.

MARRIAGE.

At the Cathedral, Shanghai, on the 24th ultimo,
JOHN TAYLOR, Kobe, to Alicia Mary, eldest daughter of the late Captain RICHARD KIRBY, Newcastle-on-Tyne, England.

DEATHS.

On the 5th instant, at the Convent of the Holy Infant Jesus, 86, Bluff, Yokohama, SISTER ST. DONATIEU, aged 81 years.

On the 23rd instant, at Nagasaki, Mr. A. KASSBURG, aged 89.

Summary.

OUR last MAIL SUMMARY was dated the 2nd instant, for despatch by the P. M. steamer *City of Peking*, which left for San Francisco on the morning of the 5th instant. Since then we have received the following mails:—

Per P. M. China, S. Fr'sco, 11 Oct. arrd. 8 Nov.
" M. M. Volga, M'seilles, 23 Sept. " 10 Nov.
" O. & O. Belgic, S. Fr'sco, 23 Oct. " 13 Nov.
" P. & O. Malacca, London, 28 Sept. " 15 Nov.

And despatched the following:—

Per M. M. Tybre, for Marseilles..... 6 Nov.
" P. & O. Sunda, for Hongkong.....13 Nov.

LATEST telegraphic advices from London are to the 16th instant.

THE third instant was the Mikado's birthday; and in Yokohama at least was celebrated with more than the usual festivity and rejoicing. A general holiday was observed not only in the public offices, but the consulates, and, for the first time on a

similar anniversary, by the foreign banks. The festive leisure of foreigners was, however, rather interfered with by the postponement of the American mail by P. M. steamer *City of Peking*, which should have sailed on the morning of that day (Saturday); but did not leave until the 5th (Monday). The holiday, however, passed off very pleasantly. A native pyrotechnist, residing in Yokohama, with a view, as he announced, to the ultimate purchase of his wares by foreigners, made a grand display of both day and night fireworks. At night-fall the Town Hall and the native town generally were brilliantly illuminated. A banquet was given by the Governor to the Consuls and some foreign naval officers in Yokohama, while the Foreign Ministers were entertained in Tokio at the palace of Ohamagoten.

CHOLERA may safely be asserted now to have disappeared with the arrival of cooler weather. No new cases have been reported in this town or neighbourhood for some time past. Although the epidemic has been very far from severe, yet it has spread far and wide throughout the empire, as cases have occurred in nearly all the provinces. In Yokohama and the vicinity the total of deaths has been under six hundred. Probably the most numerous cases have occurred among the soldiery returning from the war. The authorities have taken the greatest possible pains, by quarantine and other precautions observed in reference to the vessels used as transports, and by providing medical attendance and quarters for those affected, to prevent the spread of infection. In fact, the Central Government and the local officials have proved themselves quite equal to the emergency of pestilence, scarcely less dangerous than that of war, and have battled with and conquered it.

In spite of the many rumours which have from time to time been made current by the native press, Shimadzu Hisamitsu, the Satsuma chieftain, has not arrived in Tokio. Possibly he sees no reason to visit the capital, where the ways of those in power are not as his ways, nor their thoughts his thoughts; and, glad as the Mikado's advisers would beto have him near them, and so to be in possession of some kind of guarantee for his loyalty, they do not care to enforce his attendance. After all, his neutrality during the civil war was, if not a proof of his good will to those in office, at least a token that he had no intention to make or meddle for or against them. Whether he pass the rest of his days in Tokio or in Satsuma, his influence in the country at large or even in his own province can never be much more than a memory, or at best a name. He is the last link between the past and the future history of Japan, a standing but ineffectual protest against the abolition of feudality, and the progress of innovation.

THE first annual report of the Agricultural College at Sapporo has been published by order of H. E. Knroda Kataoka, Colonial Minister, by which it appears that the institution is in a flourishing condition. "A notice of the pamphlet will be found within.

AN inquest has been held before H. B. M. Consul at Hiogo, into the circumstances attending the accident on the Kobe-Kioto line of railway on the 1st ultimo, which resulted, nearly a month after, in the death of an Englishman named Haines, the driver of the engine of one of the trains. The verdict was to the effect that death was caused by the accident, but that there was no evidence to show through whose fault that occurred. Complaints were made that testimony which might have been, was not, adduced.

SEVERAL of the native journals are occupied with the discussion of the questions of the revision of the treaties, and the elimination of the extra-territoriality clause therefrom. They also insist upon the right of this nation to regulate its own customs' tariff. It might be to the advantage of all those interested if the treaties were revised; but the time for the concession to Japanese Courts of jurisdiction over foreigners has not yet arrived.

THE American steamer *Courier*, last from Hakodate, reports that, at about the end of August, an abandoned steamer had been observed by natives drifting off the coast of Okhotsh. No clue has so far been found as to what vessel this may have been.

A VOLCANO of great height, probably Plutcheoski, is reported to have burst into eruption in lower Kamtchatka.

MARSHAL Prince Arisugawa-no-Miya, and other officers engaged in the late civil war, have been fêted and decorated by H. M. the Mikado.

MUCH brisker business has been done in the silk market. That for silk-worms' egg cards may be considered closed. A very large surplus of cartons is left in the hands of the native dealers, and can be put to no possible use. At meetings of those interested it was resolved to throw a quantity into the sea.

THE Autumn meetings of the Yokohama Race Club and Amateur Athletic Association have been held. That of the Yokohama Racing Association will take place next week.

THE Chinese Ambassador to Japan, whose probable arrival was announced for early this month has not yet appeared. It is said, now, that his vessel will first touch at Hiogo, where extensive preparations have been made for his reception.

VICE ADMIRAL HILLYAR, C.B., R.N., has arrived in Hongkong, and assumed the command of the British squadron in these waters, superseding Vice Admiral Ryder, who returns home.

INTERNAL COMMUNICATIONS.

THE work by Mr. Justice Story on the law of bailments has been translated into Japanese. There are more important works than this that should be brought within the reach of the natives. The Japanese are a nation of readers: they think the less. The missionary says; "translate the Bible:" the lawyer would give the preference to Chitty: the doctor, in his saner moments, might clamour for the popular Galen or Aesculapius: we have heard the gourmand say that a translation of a good cookery book would work more civilization than all other works that were ever printed. But, regarding the welfare and progress of this country as of the utmost importance at the present time, there is one work which would be beneficial, above all others, for the lessons it teaches:—"Lives of Engineers," by S. SMILES. What can biographies teach? it may be asked. The answer in this case is ready. A man must learn to walk before he attempts to run. These biographies will teach the Japanese a lesson that they must learn sooner or later, we say it in all sincerity and not captiously. They ran before they had learnt to walk; they have run into railways, steamboats, and Remingtons before they have learned to walk. They have not a road of internal communication to supply a grand trunk railway, or to connect with the freighting of a steamer. There is not a road in the country over which a laden waggon can travel. Over the boasted Tokaido a wain could crawl only in the finest of weather. In bad weather Tokio has to trust to its communication by sea-board for its provisions.

It is not for study by the official that we wish this work of Mr. SMILES' to be translated: it is for the perusal of all people throughout the length and breadth of the land. From the life of Telford the engineer they would learn a good lesson in "self help." A careful study of that life would teach them the value of good roads in facilitating the transport of merchandize, of the necessity of many roads for the spreading of intelligence, and of the comforts of civilization: it would teach them, too, the value of private enterprise in promoting the undertaking. If once convinced of the value of internal communication, if they once discern the necessity there is for it in their own country, they will not await the direction of authority; but will put their shoulders to the wheel and start the coach themselves. The proverb of the horse at the drinking-trough, finds an applicability to the forced march of civilization. Improved carts, coaches, and carriages may be bought by a paternal government, but they are useless to the people without good roads on which to use them. The story of Telford and the roads he made, will enable them to compare England as it was 100 years ago with Japan at the present day, will help them to trace the strides that England made to wealth in fifty years, until good roads and canals were insufficient to transport the produce of the mines and looms, and railways grew to supply the still increasing want. They will read the story of Scotland during the same period, and what was done for her. England, it is true, had at that time some manufactures established, and some mines at work, and the owners required a market for their wares, and a means of obtaining the necessities of life in return. In Scotland it was different: the road-makers were the pioneers of civilization. In the Lowlands agriculture was at a standstill, manufactures there were none. In the Highlands it was

worse. After the rebellion of 1745 the Highlanders were no longer allowed to supply their larder in the old way, by stealing their neighbours' cattle: reiving had been suppressed; but no trade was taught in return. The country was too poor to make its own roads, but a fund was applicable to the purpose derived from the revenues of the forfeited estates, which had belonged to the lords and gentlemen attainted for their share in the rebellions of 1715 and 1745. Grants from these funds were prudently made, and great results followed the operations of twenty years in the Highlands. "Agriculture made rapid progress. The use of carts became practicable and manure was no longer carried to the field on women's backs. Sloth and idleness gradually disappeared before the energy, activity, and industry which were called into life by the improved communications. Better built cottages took the place of the old mud biggins, with holes in their roofs to let out the smoke. The pigs and cattle were treated to a separate table. The dunghill was turned to the outside of the house."

In the Lowlands, as Mr. SMILES says, "What do we find now? Prædial slavery abolished: heritable jurisdictions at an end: the face of the country entirely changed: its agriculture acknowledged to be the first in the world: its mines and fisheries productive in the highest degree: its banking a model of efficiency and public usefulness: its roads equal to the best roads in England or in Europe. The people are active and energetic alike in education, in trade, in manufactures, in construction, in invention. Watt's invention of the steam-engine, and Symington's invention of the steamboat proved a source of wealth and power, not only to their own country, but to the world at large: while Telford by his roads bound England and Scotland, before separated, firmly into one, and rendered the union a source of wealth and strength to both."

Great and important lessons are to be learned by people and rulers, and are well worth the study now, when a serious rebellion is happily suppressed, and it is necessary to ameliorate the condition, and to conciliate the affections of a people lately disaffected. But above all must be borne in mind that this is not the work of a day, but of years. Let the government remember that their part is not so much to do, as to see that what is done is well done.

SAPPORO AGRICULTURAL COLLEGE.*

THE work before us opens with the report of DR. WILLIAM S. CLARK, President of the above Institution, to H. E. KURODA KIYOTAKA, Minister of the Colonial Department.

The history of the college is briefly this. In the autumn of 1875, the plan of the buildings having been approved by Mr. KURODA, the Japanese Minister at Washington was requested to secure the services of a president and two professors. The Massachusetts Agricultural College having been chosen as the model of the new institution, the officers required were selected from among those connected with the former. The services of the president of the American college were lent by the trustees in order to the organization of the Japanese establishment, and he chose as his assistants two of his graduates. They arrived in Yezo on the 31st of July, 1876, and, on the 14th of August following, the institu-

tion having then been completed, was opened ceremoniously by Mr. KURODA in person.

From that time all has gone on swimmingly, the officers being busily engaged, and the pupils zealous and attentive. A short sketch of how the former have employed their time, and most certainly they have not been idle, will prove interesting; and we will let Professor CLARK tell it in his own words:—

In addition to their regular prescribed duties in the recitation room the officers of the college have very cheerfully done whatever they could to advance the interests of the department. Professor Penhallow has spent much time in the tannery, assisting in perfecting the process for converting deerskins into glove and chamois leather, and with good results. He has also prepared plans for a new tannery, and assisted in properly locating it. The drawings and specifications for the new chemical laboratory and its fixtures have also been furnished by him, as well as the sketches of the elevation and interior of the model barn for this report. Besides this he has zealously collected specimens of silk, wool, flax, hemp and other fibres and subjected them to a thorough study with his powerful microscope. Upon the structure of these he has written for this report an introductory essay, which will be followed by other articles as circumstances may permit in years to come.

Professor Wheeler has performed a large amount of valuable work as an engineer under very difficult circumstances on account of the season. In December he surveyed the routes for the enlargement and straightening of the canal from Sapporo to Shinoro. He spent most of the winter vacation, in January, in locating a new highway between Sapporo and Otarunai, and he also located a railroad between the same points. For all the above-named improvements he furnished detailed estimates of the cost of construction and elaborate reports with maps; and also instituted a comparison of these routes with the proposed railroad to Mororan. His general views on the various plans suggested are appended to this report. He also surveyed and prepared a map of the college farm and determined the levels required for the locations of drains.

He furnished the plans and specifications for the model barn, for a soldier-farmers' house and for a weather station. He also held numerous consultations with officers of the Department, and made drawings for the construction of a machine for testing the strength of materials, a sled, a pump and a snow-plow. Experiments were also instituted by him to determine the value of various clays for brick-making. But perhaps nothing he has done is more important than the establishment of a weather station with a full set of instruments, and the careful observation of meteorological phenomena, which he has undertaken. His report upon the subject appended to this, will be found to contain much valuable information in regard to the method of taking such observations, and their importance to the country. His recommendation that another station be established on the north-east coast is worthy the attention of Your Excellency.

Besides the management and control of the college and English school, the President has given two hours of instruction daily, chiefly in agriculture, structural, physiological and descriptive botany, human anatomy and the laws of health and morality. He has also been constantly occupied in directing the improvements carried on at the college farm, including the details of construction of the model barn, and has conferred repeatedly with officers from Nanaye in regard to the planting of forest trees and general farm management. He has also made excursions for the examination of coal beds, fisheries, stone quarries, coniferous forests for the manufacture of tar and turpentine, maples for the production of maple sugar, and wild mulberry groves with reference to the best mode of pruning and treating them for the feeding of silk-worms. The general subject of planting, preserving and utilizing forest trees in Hokkaido is now under his consideration with a view to the preparation and enforcement of a suitable code of laws relating to forestry.

A sketch of the farm buildings from the West or front side of the College Square is given in a frontispiece to the work. The structures are described as of wood, and, though "not above criticism, neat and convenient." They are located in the Northern portion of the city, and comprise lecture rooms, library,

* First annual report of Sapporo Agricultural College, 1877. Tokio; published by the Kaitakushi.

chemical laboratory and dormitories. The absence of chimneys is very conspicuous in the view, and is alluded to by the Professor, who ascribes it to the "Southern origin of the builders." He does not say so; but, presumably, the rooms are heated by the primitive *hibachi*. We are told that, probably as a compensation, they are very well lighted and ventilated. The author is of opinion that excellent quarries might be opened in the mountains West and South of Sapporo and that it cannot be long before "the present shiftless practice of erecting houses and other buildings, without either cellars or chimneys, upon wooden foundations will be abandoned, and the rocks applied to their legitimate uses."

The college farm lies north of the capitol grounds, and contains two hundred and fifty acres. Of these about one hundred acres consist of most admirable tillage land in perfect condition. Last year it produced fine crops of hergrass, clover, wheat, barley, oats, rice, beans, Indian corn, Chinese indigo, potatoes, flax and hemp. About one hundred acres of wild land of excellent quality are devoted to pasturage, and the remaining fifty acres are covered with timber. Within less than one hundred feet from the barn, a substantial structure, of which a view is given, and which is described in detail, flows a clear stream, ten feet wide, which never freezes.

After the farm had been surveyed and stocked, seed imported, necessary vehicles, machines, and implements furnished at once or ordered from America, and lines for new dividing fences run, a fence surrounding the farm was built by contract. Dr. CLARK says it is admirably suited to a country where timber is plentiful and the ground soft, while for swampy lands it can hardly be surpassed. He describes it as follows:—

Oak stakes, six feet long for the upland, and six and a half for the meadows, were sharpened and set one foot apart on the line. They were then driven into the earth with heavy mauls so as to stand four feet high. The stakes are six inches wide, and two or three inches thick, and firmly secured at the top to long strips of oak, which are three or four inches in diameter and overlapped at the ends so as to form one continuous rail. Every stake is fastened to the rail by a loop of a grape or other vine about three quarters of an inch in diameter, long pieces of vine being wound back and forth as far as they will reach, and the ends being firmly fixed so as to prevent unwinding. The vines were made more pliable by placing the coils as they were brought from the forest upon fires built for the purpose. As soon as they became hot the sap in the green wood was converted into steam and softened the woody fibre. The contractor furnished all the materials and put up this fence in a most satisfactory style for thirteen and a half cents per ken, which is equal to about thirty-seven cents per rod. The total amount required to enclose the farm and pasture was more than three miles.

The Professor gives some useful hints on the breeding of cattle, horses, and sheep, and wisely concludes that in the present condition of the Japanese people, the breeding of large horses is not likely to be profitable on account of the limited demand. Oxen can be employed here for farm work much more economically than horses. Sheep may be profitably bred in great numbers by the department as soon as fine sweet grasses can be grown for pasturage and hay. As he says, in regard to swine, the most important thing to be done is to persuade the farmers that it will pay to keep them; and he advises that some intelligent person shall be sent into the villages to explain the advantages to be derived from the various domestic animals, and to distribute breeding stock on favorable terms among the farmers.

The most important portion of Dr. CLARK'S report is that which relates to the cultivation

of beet sugar, which he holds is peculiarly adapted to the present wants and condition of Hokkaido. Soil, climate, cheapness of labor and fuel, abundance of running water, the ease with which lime (indispensable in the defecation of the juice) can be procured, the desirability even of having a cheap and palatable refuse in a place where stock-raising has been commenced, all seem to point to the success of the enterprise if inaugurated. The experiment is more than under consideration. Beet seed of the best sorts has been procured, and careful experiments will be made by Professors BROOKS and PENHALLAW in regard to the quantity and quality of the roots produced on the college farm during the ensuing season. If the subject should receive immediate attention, it would be possible to get a factory into complete running order in September, 1878.

The pamphlet contains, besides the necessary but dry statistical information of the officers and students in the college, its rules and regulations, the books in the library &c., a register of meteorological observations, reports "on transportation routes between Sapporo and tide water" by Professor WILLIAM WHEELER, and on "textile fibres" by Professor D. P. PENHALLAW, both containing information which will be very valuable in the future development of communication in Hokkaido, and of some of its textile resources.

In concluding our notice we are happy to congratulate the Government upon the apparent success and evident promise of their praiseworthy undertaking, and to compliment the Professors employed upon the thoroughness and energy with which their work appears to have been done.

THE MIKADO'S BIRTHDAY.

SATURDAY, the 3rd instant, was indeed a festival day for the Japanese. The weather was delightfully fine, setting at nought the lowering threats of the day before. Punctually at six o'clock, the pyrotechnic artillery of Mr. Hirayama Jinta, whose satellites, it may be presumed, were watching the signs of the times with some eagerness and more anxiety, roared salute to the morn, with voice so loud as to awake most sleepers for many miles around. This was a signal that the weather was likely to be sufficiently fine to warrant the display, which, atmospheric fates being favorable, Hirayama had promised to the public in honor of his sovereign. His ordnance, consisting of five fire-work mortars, strongly bound with bamboo, and showing their mouths some four feet from the ground in which they were planted perpendicularly, was mounted in the Swamp gardens, whence issued the roar aforesaid, followed at short intervals by two others, and each of the three announcing, and being caused by, the hurling into the air of a bomb, whence issued according to programme, after another explosion between earth and sky, 1. "thunder and dark clouds"; 2, "a yellow dragon in white and black clouds"; and 3. "a shower of several dozen of handkerchiefs."

Rising before sun-rise—the veriest laggards with the sun—the Japanese in Homura and its neighborhood, in Benten, Honcho Dori, and all other streets in that locality, commenced the pleasant task of decorating the outside of their houses; and soon each thoroughfare presented a vista of flags and banners. All the Japanese men-of-war were hung with flags, and most of the ship-

ping in harbor were covered with bunting. At noon salutes were fired from the men-of-war, and the Kanagawa fort; while the stillness of the air allowed the booming of the cannon at Shinagawa to be distinguished easily from the echoes provoked by the guns at Yokohama. And then the welkin was undisturbed for a few brief hours, until, indeed, Mr. Hirayama Jinta, the enterprising pyrotechnist in whose display the interest of the day centred, recommenced his detonations which were really a *feu de joie*, in the Public Gardens in the Swamp. The cricket ground had been thrown open to a few by those who hold it; and the sparse groups which dotted it contrasted in a striking manner with the dense crowds thronging the Gardens and their surrounding neighborhood. The day fireworks were a pleasant surprise to every spectator, foreign or native. They were wonders of pyrotechnic art: and some of them might have been the creation of one or more of the geni of Arabian legend. A bomb or a rocket is shot into the air, and from it issues a dragon, or a fish, or an imperial flag, or a cock and hen pursuing and pursued, a Chinese tiger, showers of chrysanthemums and maple leaves, &c. Great treat of all, a loud report: something like a bale of dry goods mounting into the empyrean: an explosion in space: the liberation there of a big bundle of Japanese umbrellas—two dozen according to the bill—which fall, and opening as they fall, then descend gently, a veritable shower of parachutes, which are eagerly hunted after and disputed for when they come within hand-reach by the joyous crowd below. Some of the devices were carried some distance by the light breeze on which they floated. The fish, a gorgeous but flimsy creature of silk, all but fell into a European-occupied compound on the Eastern Bluff. It fluttered in suspense, escaped the hands stretched out to grasp it, was caught by the wind and dived downwards into the midst of a gathering of expectant natives below. The flag was caught by a person who hurried off with it, and soon had it floating in triumph over his godown. The tiger, harmless as Bottom's lion, swooped upon a crowd, who not only dismembered, but went far to resolve to its constituent atoms the carcass of the beast of prey. They were as eager to have a bit of him, as, according to Jules Gérard, the Arab women of Algeria were to obtain a mouthful of the heart of a slain lion for their offspring. So continuous was the discharge of these day fire works that the twenty-nine pieces announced to be displayed between 3.30 and 5.30 p.m. had been finished more than half an hour in advance of the latter time.

At half past six, by which time it was already dark, the show of night fireworks opened with a pyrotechnic representation of the Mikado's crest, the first of series of sixty pieces, whose display lasted till nearly midnight. Magnificent as this show was, it had not so much variety as was possessed by that given in daylight. Imagination had to be drawn upon frequently to find a similarity between the fire-work and its description in the bill; but whether viewed from near or far, from the Bluff or from the gardens themselves, whether the fiery glow drifted by the spectator like a gauze of sparks, or fell around him like a Danae shower, the effect was more than fine, and was witnessed with wonder by strangers, and enthusiastically applauded by natives. Mr. Hirayama Jinta, of No. 68, Otamachi, has merited the thanks of the whole community for the very considerable share contributed by him to a common fund of

enjoyment; and it is to be hoped that he will reap the only substantial reward he is said to covet, a plethora of orders from foreigners for his wondrous wares. His display of the 3rd of November was a magnificent advertisement. He has, however, to be congratulated upon the kindness of the clerk of the weather, who provided him with conditions of atmosphere and temperature, which were altered considerably for the worse on the English Guy Fawkes day. The murkiness and raininess and general unpleasantness of our fifth of November did not matter, however, as there was no commemoration of gunpowder plot in this part of the world. It is very questionable whether many British subjects even remembered the day: it is almost past doubt that their loyalty or love of old customs did not take them to Otamachi, and to an investment in some of Hirayama's apparatus.

As usual, the universal good humour, so often mentioned and always so evident, of a Japanese crowd, prevented jostling. There were no accidents, except one or two to the fireworks. One of these which failed might have been lethal to some one, but its flight and fall were otherwise ordered. A big rocket with its heavy internal charge, undigested and undispersed, fell ponderous in the midst of a group of natives in the garden. The "thud" produced by its contact with the turf was quite loud enough to prove that if a skull had been there, it would have had the same fate as that of the cranium of the old philosopher, whose resplendent baldness suggested the idea of a stone to that very rational eagle which had a tortoise to crack.

At night-fall the native town was gaily illuminated; and all the Machi Gaisho's outer rows of gas jets were put into blaze. Within that, for the nonce, really festal hall, a banquet was given by the Governor to the consuls, some naval officers and other guests. One foreign house and grounds on the Bluff, situated on lots Nos. 16 and 17, were so brilliantly lighted as to afford a very pleasing spectacle from the town. Men-of-war in harbor threw up rockets, which, if they had not suffered by comparison must have been pronounced very fine.

THE Mikado's birthday was celebrated with the customary festivities in Tokio. Public buildings were profusely decorated; and the streets were gay with flags bearing the national emblem. A review was held on the Parade Ground opposite the site of the Gaimusho; but the attendance of spectators was small. Ueno, according to common report—we cannot certainly say according to official announcement—was to have been illuminated; but, when our correspondent went there at eight o'clock, not a lantern was to be seen. The diplomatic body, the heads of departments, some naval officers and a few unofficial guests were invited to a reception at the Ohama-goten, where refreshments were provided, and a fine display of fireworks was given on the lawn.

YOKOHAMA RACE CLUB.

AUTUMN MEETING.

First Day—Wednesday, 7th November.

More admirable weather for out-door sports could not be desired than that experienced on this the opening day of the Autumn Meeting of the Yokohama Race Club. Not a cloud

floated on the breeze; and the bracing air was rendered pleasant and exhilarating by the warm rays of the sun.

The entries for the races were anything but large, three only having entered for the opening race of the day, while at the last Spring Meeting no less than eight ponies came to the post for the first race. In fact there were no large fields during the day. The biggest number of ponies which faced the starter was six for the Autumn Plate. The stand was prettily decorated; and we observed an evident improvement in the situation of the Judge's box, which has been removed to the inside of the Grand Stand compound, undoubtedly making the Judge's task more easy than it has been hitherto. The attendance was only moderately good for such lovely weather, in itself sufficient to entice pleasure seekers into open air. The Band of the Tennessee was present, and enlivened the proceedings, as it has done before, with a choice selection of music.

1.—THE TRIAL PLATE.

For China Ponies that have never won a flat race here up to date of entry. Weight for inches. Entrance, \$5. Once round.

Mr Osborn's <i>Grey Friar</i>	10st 5lbs... 1
Mr Steven's <i>Satisfaction</i>	10st 5lbs... 2
Mr Fritz's <i>Wilhelm Tell</i>	10st 5lbs... 0

This was a hollow race for the commencement of the meeting, as the favourite was the only pony in anything like condition, *Satisfaction* having a soft appearance, and *Wilhelm Tell* looking as if more work and less food would give him a better stride and more wind. The *Grey Friar* went off with the lead, and before a quarter of a mile had been covered established a lead of fifty yards, which he maintained all the way round, and won hard held. In the back stretch, *Satisfaction* ran into second place which he kept, *Wilhelm Tell* finishing some 150 yards in the rear. Time, 2 m. 19½ sec.

2.—THE GRIFFINS' PLATE.

A sweepstake with \$50 added. For Japan Ponies, *bona fide* Griffins. Weight for inches. Entrance, \$10. Five Furlongs.

Mr J. Peel's <i>Ichu Roku</i>	10st 6lbs... 1
Mr Fritz's <i>Fleur de Lys</i>	10st 4lbs... 2

Kuazoku, the third pony entered did not run. According to a critic in the *Advertiser* this morning the black pony was to carry off this event, but in this he was mistaken, as his prophesies will probably be again before the day is over. *Ichu Roku* got rather the better of the start, but suffered his competitor to get and keep on even terms until after passing the trees, when the switch of the black's tail was evidence of punishment and distress. Down the straight the gray came away and won in a canter. Time 1 m. 23½ sec.

3.—THE CHALLENGE CUP.

Value, \$250. For China Ponies. Weight for inches. Entrance, \$5. One mile and a half. To be won at two consecutive meetings by the same stable.

Mr Morrison's <i>Tallapoosa</i>	10st 8lbs... 1
Mr Fritz's <i>Don Carlos</i> ,	10st 5lbs... 2

There were six entries (four tartans) for the Challenge Cup; but *Don Carlos* was the only pony to compete against Mr. Morrison's *Tallapoosa*, and of course he had not the remotest chance. Mr. Marlborough had his work to do to keep his pony back sufficiently to make a show of a race, as can easily be observed from the time, 3 m. 50 sec. Digitized

4.—THE CATHAY CUP.

For China Ponies; winners of two or more races under one mile last Spring, 10 lbs. extra; winner of one race under one mile last Spring, 7 lbs. extra. Weight for inches. Entrance, \$5. Half a mile.

Mr Osborn's <i>Grey Friar</i>	10st 5lbs... 1
Mr Mason's <i>Liddesdale</i>	10st 11lbs... 2
Mr Morrison's <i>Mavis</i>	10st 8lbs... 3
Mr Savile Stuart's <i>Not Proven</i>	10st 8lbs... 0

The hitherto champion half-mile racer met his match to-day in Mr. Osborn's *Grey Friar* and Mr. Mason's *Liddesdale*. The latter was very fractious at the post, and lost several lengths in starting. The *Friar* cut out the running at a great pace with *Mavis* on his quarters, and *Liddesdale* rapidly overhauling both, leading *Mavis* into the straight but failed to catch the fleet little *Friar* who won by some three lengths in the very good time of 61 seconds. The result of this event upset the calculations of the *Advertiser's* tipster this morning.

Faust was declared by his rider, but, on account of said declaration not being made in writing, the pony was not allowed to run. Although his rider was duly weighed out, and the pony ready to start, no word was aid until the other ponies had gone to the post.

5.—THE BRITANNIA CUP.

For China Ponies; winners of six races in Yokohama in 1876 and 1877 excluded; winners of three or more races, 7lbs. extra. Weight for inches. Entrance, \$5. One mile.

Mr J. Peel's <i>Bonny Doon</i>	10st 8lbs... 1
Mr Morrison's <i>Hoolet</i>	10st 8lbs... 2

This race was a match between the two clippers *Bonny Doon* and *Hoolet*; and public favour was about equally divided between the pair. *Bonny Doon* looks much better than he did last spring, and proved by his running that condition is everything in a race. He made the running at the start, and put a couple of lengths between him and the grey on ascending the hill; but in the back stretch *Hoolet* recovered so far as to reach the girths of his competitor, and this position was maintained until after the trees were reached, when it became evident the grey was beaten. *Bonny Doon* came away down the straight, and won by two lengths. Time 2 m. 10 sec.

6.—THE COSMOPOLITAN CUP.

For all Ponies. Weight as per scale. Entrance, \$5. Three-quarters of a mile.

Mr Morrison's <i>Braemar</i>	10st 8lbs... 1
Mr Savile's <i>Crusader</i>	10st 5lbs... 2
Mr Morrison's <i>Lintie</i>	10st 2lbs... 3

This was decidedly the best contested race of the day. Mr. Morrison declared to win with *Braemar*. The start was very good, *Crusader* cutting out the running with *Lintie* forcing him. At the three furlongs *Braemar* ran up and challenged the leader, and a splendid neck and neck race ensued between the pair, and *Lintie* fell a couple of lengths in the rear. Down the straight the trio rattled without any change, but on nearing home *Lintie*, his rider probably fearing *Crusader* would prove too much for *Braemar*, came with a rush, but he was not wanted, as fifty yards from home Mr. Abbott put his pony's head in front of the old veteran, and won by a neck, *Lintie* a length behind. Time, 1 m. 39½ sec.

7.—THE AUTUMN PLATE.

For Japan Ponies. Winner of No. 2, 10lbs. extra; Weight for inches. Entrance, \$5. Three-quarters of a mile.

Mr J. Peel's <i>Annandale</i>	10st 6lbs... 1
Mr Morrison's <i>Distemper</i>	10st 6lbs... 2
Mr Marlborough's <i>Typhoon</i>	10st 2lbs... 3
Mr Fritz's <i>Fleur de Lys</i>	10st 4lbs... 0
Mr Morrison's <i>Disinfectant</i> } (late <i>Crescent</i>) }	10st 2lbs... 0
Mr Pringle's <i>Planet</i>	10st 6lbs... 0

This race was a great take in for the knowing ones, who had it booked for *Typhoon* or *Distemper* as a certainty. However a race is never lost till it is won. *Distemper* ran the grey very closely, but could not pass him; *Typhoon* a good third. Time 1 min. 43 secs.

8.—THE CLUB CUP.

A sweepstake with \$50 added. For China Ponies that have run as Griffins in Japan last Spring; winners at this meeting excluded. Weight for inches. Entrance, \$10. One mile and a quarter.

Mr Mason's <i>Liddesdale</i>	10st 11lbs... 1
Mr Savile Stuart's <i>Talisman</i>	10st 5lbs... 2
Mr Stevens' <i>Satisfaction</i>	10st 5lbs... 0
Mr Fritz's <i>Don Carlos</i>	10st 5lbs... 0

Out of this lot *Talisman* was thought most of, but soon after starting *Liddesdale* went to the front, and soon established a strong lead; though in the back stretch *Talisman* began to look dangerous, and on entering the straight it looked as if he would win. Mr. Urquhart, however, contrived to land *Liddesdale* a winner by a neck. Time 3 minutes.

Second Day—Thursday, 8th November.

The weather on the second was as favourable as on the first day; and the visitors were rather more numerous. The band of the *Tennessee* was again in attendance. Mr. Foote who had charge of the catering department within the enclosure, had neglected nothing for the accommodation of his guests.

1.—THE CELESTIAL CUP.

Value, \$150. Presented. For China Ponies. All winners of two races in Japan excluded. Weight for inches. Entrance, \$5. Once round.

Mr P. Kell's <i>Vandal</i>	10st 5lbs... 1
Mr Savile Stuart's <i>Not Proven</i>	10st 8lbs... 2
Mr Fritz's <i>Wilhelm Tell</i>	10st 5lbs... 0

Three ponies went for this event, and as they walked round the saddling paddock *Vandal* and *Not Proven* were eagerly scrutinized; but the representative of the Devonshire stable had most of public favour. In condition he is much better than last spring, and shows it in pace. The start was a very good one, *Not Proven* having a slight lead. *Vandal*, however, soon ran him level, and on ascending the hill put a slight gap between him and the white pony, which the latter filled up in the back stretch only to be almost immediately left further behind than he had previously been; and this time he failed to lessen it, the grey winning by several lengths, *Wilhelm Tell* nowhere. On the winner entering the saddling paddock, his owner and rider received the hearty congratulations of many friends, showing plainly that the win was a popular one. Time 2 m. 17½ sec.

2.—THE MITSU BISHI CHALLENGE CUP.

Value, \$200. Presented by the Mitsu Bishi Company. For Japan Ponies. To be won at two consecutive meetings by the same stable. To be held in the meantime by the last owner. Weight for inches. Entrance, \$5. Once round and a distance. (Last winner, Mr. Don Carlos' *Kickapoo*.)

Mr Morrison's <i>Distemper</i>	10st 6lbs... 1
Mr Pringle's <i>Planet</i>	10st 6lbs... 2
Mr J. Peel's <i>Ichu Roku</i>	10st 6lbs... 3
Mr Marlborough's <i>Typhoon</i>	10st 2lbs... 0
Mr J. Peel's <i>Annandale</i>	10st 6lbs... 0

All the entries turned out for this race, and each pony had his admirers, and the race itself was such as to make up somewhat for the hollow events of yesterday. In passing the Stand *Planet* was first, *Annandale* second, *Typhoon* third, *Ichu Roku* fourth and *Distemper* last. Down the hollow they closed up a little, and going up the rise *Annandale* challenged the black. *Distemper* ran into fourth and then third place, but had to give way in the back stretch to *Typhoon* who ran up close to the leaders. In passing the trees the cherry colours was still seen first with *Annandale* at his girths, and all the others closing up. The straight was entered without any material change except that all the ponies were close together; but in the run in the awkward going but enduring *Distemper* was put under the lash and ran up to the leader, who, however, held his own until fifty yards from the post, when the tartan pony showed in front by a neck, *Ichu Roku* a splendid fourth and the others well up. The race was very exciting for the last half mile. Time 2 m. 41 sec.

3.—THE COMMUNITY CUP.

Value, \$200. For all Ponies; Japan, 10st., China, 11st. Winners at the meeting, 7lbs. extra. Entrance, \$5. Five furlongs. To be won at two consecutive meetings by the same stable.

Mr Morrison's <i>Braemar</i>	11st 7lbs... 1
Mr Mason's <i>Liddesdale</i>	11st 7lbs... 2
Mr Morrison's <i>Mavis</i>	11st 0lbs... 3
Mr Savile Stuart's <i>Talisman</i>	11st 0lbs... 0

Mavis was evidently sent for this event to force the running, and he did it admirably. The start was a flying and good one, *Liddesdale* showing first in front, but *Mavis* soon ran up to him and put him to his best speed, *Braemar* being third. On entering the straight *Braemar* came with a rush, passed his stable companion, and challenged the grey leading. For some distance the pair raced together, but on nearing home the "tartan" was set going and won by over two lengths. Time 1 m. 20½ sec.

4.—THE MAIDEN STAKES.

For Japan Ponies that have never won a race. Weight for inches. Entrance, \$5. Half a mile.

Mr Fritz's <i>Fleur de Lys</i>	10st 4lbs... 1
Mr Mason's <i>Silverspring</i>	10st 8lbs... 2
Mr Stevens' <i>Exile</i>	10st 4lbs... 3

Fleur de Lys showed in front at the start but was soon overhauled by *Exile*, and the two raced together until entering the straight, when the latter lost his chance by running to the outside rails. *Fleur de Lys* also ran wide; and the chestnut, who had been left in the rear took advantage of this circumstance, put on all speed, and endeavoured to wrest the lead from the black. However, this was not to be, as *Fleur de Lys* recovered from his crooked running, and scored a win by a couple of lengths. Time 65½ secs.

5.—THE VISITORS' CUP.

For China Ponies. Winners in Japan in 1877 of any race under a mile excluded. Weight for inches. Entrance, \$5. Three-quarters of a mile.

Mr J. Peel's <i>Bonny Doon</i>	10st 8lbs... 1
Mr Morrison's <i>Tallapoosa</i>	10st 8lbs... 2
Mr Fritz's <i>Faust</i>	10st 5lbs... 3

The Visitors' Cup proved a gift for Mr. Peel's pony. The start was very good, as, indeed, the starting all through has been, *Bonny Doon* almost immediately going to the front. At the three furlongs *Tallapoosa* put his best leg forward and strove to pass the brown; but his effort proved futile, as *Bonny Doon* came away and won in a canter. *Faust* ran better than his appearance would have led one to suppose, and if he ever comes out in anything like the pink of condition, should make a name for himself. He does not lack pluck and seems to be good tempered. Time 1 m. 38 sec.

6.—THE OWNERS' CUP:

For China Ponies; non-starters and winners at the meeting excluded. Weight for inches. Entrance, \$5. Once round.

Mr Morrison's <i>Lintie</i>	10st 2lbs... 1
Mr Savile's <i>Crusader</i>	10st 5lbs... 2

Out of eleven entries two only came to the post, and the tartan pony went away with the lead and was never after collared, winning by a little over a length. Time, 2 m. 16½ sec.

7.—THE LOTTERY CUP.

For Japan Ponies; non-starters and winners at the meeting excluded. Weight for inches. Entrance, \$5. Five furlongs.

Mr Stevens' <i>Exile</i>	10st 4lbs... 1
Mr Pringle's <i>Planet</i>	10st 6lbs... 2
Mr Morrison's <i>Disinfectant</i>	10st 2lbs... 0
Mr Marlborough's <i>Typhoon</i>	10st 2lbs... 0

This event was as well contested as any race of the day, *Planet*, who really deserves to score a win, being beaten on the post by *Exile*. The race rested between the two from first to last, and the rider of *Exile* was deservedly complimented on the clever way in which he brought his pony past the post, Time, 1 m. 21½ sec.

8.—THE CHINA CRITERION STAKES.

First Pony, \$100. Second Pony, \$25. For China Ponies. A forced entry for all Ponies that have run at this meeting. Winners of one race 10lbs., of two races 14lbs. extra. Ponies that have run twice and have not been placed allowed 7lbs. Weight for inches. Entrance, \$5. One mile and a quarter.

Mr Morrison's <i>Hoolet</i>	10st 8lbs... 1
Mr Savile Stuart's <i>Not Proven</i>	10st 8lbs... 2
Mr Savile Stuart's <i>Talisman</i>	10st 5lbs... 3
Mr Fritz's <i>Wilhelm Tell</i>	10st 5lbs... 0
Mr Fritz's <i>Don Carlos</i>	10st 5lbs... 0

Five ponies came to the post, but it was well known that if there was to be any contest it would be for second place, and not for first, as there could be no question about *Hoolet* winning. *Not Proven* went away at a rapid pace, and on passing the stand was some fifteen or twenty lengths ahead of *Hoolet*, *Talisman* third. Mr. Savile Stuart's pony kept this lead until entering the straight, when *Hoolet* crept up and won easily. Time, 2 min. 59 sec.

9.—THE NIPPON CRITERION STAKES.

First Pony, \$100. Second Pony, \$25. For Japan Ponies. A forced entry for all Ponies that have run at this meeting. Winners of one race 7lbs., winners of two

racers 10lbs. extra. Ponies that have run twice and have not been placed allowed 5lbs. Weight for inches. Entrance, \$6. Three-quarters of a mile.

Mr Morrison's *Distemper* 10st 6lbs... 1
Mr Pringle's *Planet* 10st 6lbs... 2
Mr J. Peel's *Ichi Roku* 10st 6lbs... 3

Silverspring was to have started for this event but his owner was late in declaring him. The running was made by *Planet* and *Ichi Roku* until the trees were reached when the tartan pony spurted, went to the front and was not afterwards collared. Time, 1m. 42sec.

Third Day—Friday, 9th November.

The third and last day of the Yokohama Race Club meeting was every whit as favourable as its precursors; and the attendance on the course was about the same as yesterday. The intervals between the races were again enlivened by the performance of the band of the *Tennessee*.

1.—THE HURDLE RACE.

Value, \$75. For all Ponies; over six hurdles; China Ponies, 10st. 7lbs.; Japan Ponies 10st. Entrance, \$5. Once round and a distance.

Mr Mason's *Liddesdale* 10st 7lbs... 1
Mr J. Peel's *Annandale* 10st 0lbs... 2
Mr Stevens' *Satisfaction* 10st 7lbs... 3
Col. Forrester's *Doncaster* 10st 7lbs... 0

It does not often happen that such a splendid contest for the hurdles takes place as the hurdle race to-day. After one false start the lot got away on pretty equal terms, *Annandale* and *Satisfaction* taking the first jump together, with *Doncaster* directly after. *Liddesdale* got over, though awkwardly, and lost several lengths, which, however, he made up very quickly, and in the dip succeeded in depriving *Satisfaction* of the lead. The pair took the next hurdle together, after which the grey put on more speed. At the three furlongs *Annandale*, who had been lying last, put on a spurt, passed *Doncaster*, and gained on the leaders, who were still taking their jumps almost together without a baulk. At length the last hurdle was reached with *Liddesdale* first, *Satisfaction* a length behind, and *Annandale* on his quarter. *Satisfaction* knocked down his hurdle, and *Annandale* ran through the gap, passed him, challenged the winner and a desperate struggle ensued to the post, *Liddesdale* winning by the barest trifle in 2 m. 43 secs.

2.—THE MERCHANTS' CUP.

A handicap for all China Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, \$5. Compulsory. Open also to beaten Ponies at the meeting. One mile and a quarter.

Mr Morrison's *Hoolet* 11st 4lbs... 1
Mr J. Peel's *Bonny Doon* 11st 10lbs... 2
Mr P. Kells' *Vandal* 10st 8lbs... 3
Mr Savile's *Crusader* 10st 7lbs... 0

Notwithstanding *Bonny Doon* having to carry top weight he started as first favourite, *Hoolet* ranking second in public estimation, while *Vandal* had many friends. The quartette got away to a beautiful start, the brown cutting out the running with *Hoolet* forcing him. On passing the stand the first pair were several lengths in front of *Crusader*, *Vandal* fourth. Down the dip no change took place, but, on ascending the hill, the weight began to tell on *Bonny Doon*; and in the back stretch the white pony was a length in front. Here *Vandal* made a rush,

passed *Crusader*, but struggled in vain to overhaul the leaders. At the trees it looked very much like *Bonny Doon's* race, as he had run level with *Hoolet*, and in this position the pair entered the straight, with *Vandal* pursuing them at the top of his speed a few lengths behind. Whip and spur, spur and whip, was the order, and the white pony again showed to the fore, this time not to be overhauled, though the brown made one more effort a hundred yards from home, but weight told and the game little pony had to succumb to the pony he beat on the first day. The handicapping for this race gave general satisfaction. Time 2 m. 47½ sec.

Vandal was sold before running for this race for \$300.

3.—THE NIPPON HANDICAP.

A handicap for all Japan Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, \$5. Compulsory. Open also to beaten Ponies at the meeting. Once round.

Mr J. Peel's *Ichi Roku* 10st 7lbs... 1
Mr Morrison's *Distemper* 10st 12lb... 2
Mr Pringle's *Planet* 10st 7lbs... 3
Mr Stevens' *Exile* 10st 3lbs... 0
Mr Fritz's *Fleur de Lys* 10st 0lb... 0

Distemper and *Planet* were the favourites for this race. The latter took the lead at the start, but going up the hill was overhauled by *Distemper*, and after a severe struggle was deprived of it by the "tartan" pony who was raced from the start to the finish. The straight was entered with *Distemper* some three lengths ahead of *Planet* and *Ichi Roku*, when the latter was seen to come with a rush, and eventually he defeated the "tartan" pony by two lengths. *Planet* an indifferent third. Time 2 m. 19½ secs.

4.—THE SCURRY STAKES.

For all Ponies. Weight as per scale. Entrance, \$5. Three furlongs.

Mr Morrison's *Braemar* 10st 8lbs... 1
Mr Savile Stuart's *Talisman* 10st 5lbs... 2
Mr Fritz's *Faust* 10st 5lbs... 3
Mr J. Peel's *Ichi Roku* 10st 6lbs... 0

After one false start the lot got away with *Braemar* in front and *Ichi Roku* last. This pony got off badly and then ran very wide, but was not far behind at the finish. *Braemar* was never reached by any of his competitors, and won in 46 seconds.

5.—THE CHINA CONSOLATION PLATE.

For all beaten China Ponies at the meeting; weight for inches. Entrance \$5. Once round and a distance.

Mr Savile Stuart's *Not Proven* 10st 8lbs... 1
Mr Savile Stuart's *Talisman* 10st 5lbs... 2
Mr Fritz's *Don Carlos* 10st 5lbs... 3

Mr. Savile Stuart declared best to win. *Talisman* led off at a great pace followed at a respectable distance by *Don Carlos*, *Not Proven* running a waiting race, till the straight was reached, when he took second place, and a few lengths from home went to the front, winning easily. Time 2 m. 44½.

6.—THE SOLACE CUP.

For all beaten Japan Ponies at the meeting. Weight for inches. Entrance, \$5. Five furlongs.

Mr Morrison's *Disinfectant* 10st 2lbs... 1
Mr Pringle's *Planet* 10st 6lbs... 2
Mr Mason's *Silverspring* 10st 8lbs... 3

This was a very good race between the two black ponies, the "tartan" winning by a couple of lengths. Time 1 m. 22½ sec.

7.—THE SAYONARA STAKES.

A handicap for all Ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winner of No. 2 (third day) excluded. Winner of the Nippon Handicap, 7lbs. extra. Winner of any other race after publication of the handicap, 3lbs. extra. Entrance, \$10. Once round.

Mr Morrison's *Braemar* 11st 6lbs... 1
Mr P. Kells' *Vandal* 10st 12lbs... 2
Mr Osborn's *Grey Friar* 11st 0lbs... 3
Mr Morrison's *Lintie* 11st 4lbs... 0
Mr Mason's *Liddesdale* 10st 12lbs... 0
Mr Savile's *Crusader* 10st 12lbs... 0

Six ponies came to the post for the Sayonara Stakes. After one false start the lot got away moderately well, *Liddesdale* getting the worst of it. *Braemar* took up the running, but *Grey Friar* soon deprived him of it. *Vandal* lay last until half way round, when he was set going and ran through his ponies but could not overhaul *Braemar* who had deprived the *Friar* of his leading position. Time 2 m. 15 sec.

8.—BETTOES' RACE.

CHINA PONIES.—Minimum weight 100 lbs. Once round.

Not Proven 1
Lintie 2
Faust 3
Grey Friar 0
Don Carlos 0
Wilhelm Tell 0
Talisman 0

Time 2.18½.

9.—BETTOES' RACE.

JAPAN PONIES.—Minimum weight 100 lbs. Five furlongs.

Disinfectant 1
Planet 2
Silverspring 3

Time 1m. 31sec.

AMATEUR ATHLETIC ASSOCIATION. OF YOKOHAMA.

AUTUMN MEETING.

Tuesday, November 14th, 1877.

Owing to the inappropriate departures of mails and other causes, this meeting had not only to be postponed from the date originally fixed, but two days' sports had to be crowded into one. The weather was far from agreeable, a strong breeze, laden with dust, having set in from the South-West in the forenoon, and continuing during the day. However, the attendance of spectators was fairly good in the enclosure, and, as usual, outside the rails numbers of Japanese assembled to witness the competition. The very serviceable band of the *Tennessee*, thanks to the good-nature of the Admiral, Captain, and officers, was on the ground, and played during the intervals between the sports.

1.—100 YARDS FLAT: HANDICAP.

Two Prizes. 1st Prize, "Chaa-sze's Cup."

1ST HEAT.

T. L. Boag 15 yards 1
R. Ward 10 " 0
C. P. Hall 6 " 0
A. T. Watson Scratch 0

Boag won this easily in $10\frac{1}{2}$ sec.

2ND HEAT.

Wm. Platt	12 yards	1
F. Walker	2 "	0
E. F. Kilby	6 "	0
H. J. Gorman	8 "	0

This event fell to Platt in $10\frac{1}{2}$ sec.

3RD HEAT.

H. Vincent	15 yards	1
A. J. Smith	11 "	2
R. Nègre	15 "	} 3
A. J. Clode	10 "	

2.—THROWING AT WICKETS.

One Prize.

Out of 36 throws the wicket was only taken once by C. P. Hall.

3.—150 YARDS FLAT: HANDICAP.

Two Prizes. 1st Prize, "Ito Cup."

1ST HEAT.

C. P. Hall	12 yards	1
R. Nègre	15 "	2

Won easily by Hall. Time $15\frac{1}{4}$ sec.

2ND HEAT.

A. T. Watson	Scratch	} 1
F. Walker	3 yards	
W. Platt	10 "	

This was a splendid race, resulting in a dead heat between Watson and Walker, while Platt was only a foot behind. Time $15\frac{1}{2}$ seconds.

3RD HEAT.

R. Ward	11 yards	1
E. F. Kilby	10 "	0

This was won by Ward in 16 seconds.

4.—GRIFFINS' RACE. 440 YARDS FLAT.

Open to Competitors who have never won a Race at a previous meeting of this Association. One Prize. Presented.

H. A. Vincent	1
T. R. H. McClatchie	2
T. L. Boag	0

Vincent got away with the lead and kept it all the way round, winning by a few yards in 62 seconds, McClatchie second.

5.—100 YARDS FLAT: HANDICAP.

For Boys under 12 years of age. Entrance Free. Three Prizes. Presented.

1st heat won by Willie Vincent.
2nd " " Eddie Brooke.
3rd " " Von Hemert.
4th " " Arthur Edwards.

6.—440 YARDS FLAT: HANDICAP.

Two Prizes. 1st Prize, "Spectators' Cup." Presented.

Nègre	1
Gorman	2
C. P. Hall	3
E. F. Kilby	0
J. J. Dare	0
A. J. Clode	0
Ward	0

Seven started, and got away on very even terms. The limit man ran very steadily, and was never headed, doing his distance in 58 seconds, 5 yards ahead of Gorman, who came in 5 or 6 yards ahead of C. P. Hall.

At the bottom of the stretch Ward spurred past his men, but putting it on too soon tailed off again at the top of the home stretch, when Gorman took up the running, and if he had put it on sooner, would no doubt have won, as he finished very strong. C. P. Hall might have reversed positions had he not left it till too late.

7.—THROWING THE HAMMER, 16 LBS.:

HANDICAP.

One Prize.

A. J. Smith	5 feet	1
R. Ward	8 "	2
H. J. Gorman	8 "	3

Smith won this with a throw of 88 feet 4 inches including his handicap, Ward being second with a throw of 85 feet 8 inches including his handicap.

8.—HURDLE RACE. 120 YARDS OVER TEN FLIGHTS: HANDICAP.

Two Prizes.

T. R. H. McClatchie	10 yards	1
T. Charlesworth	10 "	2
Watson	6 "	3
A. J. Smith	Scratch	0

This was a very good race and was won by McClatchie who took his leaps splendidly, Charlesworth a good second with Watson well up. Time 20 secs.

9.—LONG JUMP: HANDICAP.

One Prize.

A. J. Smith	2 feet	1
T. Charlesworth	18 inches	2
J. Hall	Scratch	3
A. T. Watson	"	0

Smith won this with a jump of 19 feet 3 inches, including his handicap. Charlesworth 19 ft. including his handicap, and Hall 18 ft. 9 in. from scratch.

10.—HALF MILE FLAT: HANDICAP.

Two Prizes. 1st Prize, "The Clerks' Cup."

F. Walker	Scratch	1
A. T. Watson	10 yards	2
A. J. Clode	80 "	0
Ward	15 "	0

Four started for this, and they all went very slowly, maintaining their positions for the first lap. After passing the winning post the limit man was seen to come back to his men, and at the top of the home stretch pulled himself together and for about 20 yards came down well, but Walker here put on one of the finest spurts we have seen on this ground, and with a rush passed all his men, and won easily in 2m. 23 $\frac{1}{2}$ sec., Watson a bad second, while Ward and Clode shut up about 60 yards from the tape.

11.—FINAL HEAT. 100 YARDS FLAT.

Platt	1
Boag	} 2
Vincent	

This was a capital race, resulting in a win for Platt by about six inches, Boag and Vincent running a dead heat. Time 10 seconds.

12.—HOP, STEP, AND JUMP: HANDICAP.

One Prize.

J. Hall	Scratch	1
T. Charlesworth	3 feet	2
T. L. Boag	8 "	0

Hall won, clearing 40 feet $5\frac{1}{2}$ inches from scratch, Charlesworth clearing 40 feet 3 inches including his handicap.

13.—FINAL HEAT. 150 YARDS FLAT.

Walker	1
Hall	2
Ward	3
Watson	0

Walker came up well at the finish, and won a well contested race from Hall by about a foot in $15\frac{1}{4}$ seconds.

14.—THROWING THE CRICKET BALL.

One Prize.

J. Hall	Scratch	1
A. J. Clode	2 yards	0
H. A. Vincent	10 "	0
H. J. Gorman	2 "	0
W. Platt	5 "	0
G. Hamilton	2 feet	0

This was won by J. Hall with a throw of 97 yards 2 feet, none of the others being near him.

15.—LADIES' PURSE. 600 YARDS FLAT: HANDICAP.

Open to Members of the Association only. One Prize—"The Purse."

E. F. Kilby	Scratch	1
T. R. H. McClatchie	"	2
C. P. Hall	"	3
F. Walker behind scratch	60 yards	0
H. A. Vincent	12 yards	0
A. J. Smith	Scratch	0
A. T. Watson behind scratch	70 yards	0
J. J. Dare behind scratch	60 yds.	0
R. Nègre	12 "	0

The Ladies' Purse fell to Kilby after a good race with McClatchie, Hall being third. After the race the purse was presented to the fortunate winner, who replied as well as his exhausted wind would allow him; and then three cheers were given for the fair donor.

16.—HIGH JUMP: HANDICAP.

One Prize.

FINAL HEAT: 100 YARDS FLAT.

DEAD HEAT.

Vincent	1
Boag	2

Boag and Vincent, who ran a dead heat in the final heat of the 100 yards for second place, now contested for the second prize. Vincent won by five yards.

18.—ONE MILE FLAT: HANDICAP.

Two Prizes. 1st Prize, "Merchants' Cup."

F. Walker	Scratch	1
A. J. Clode	180 yards	2
T. R. H. McClatchie	150 "	0
A. J. Smith	200 "	0
A. T. Watson	40 "	0

After the first lap, Watson retired into the dressing-room. After the second Mr. McClatchie and Smith retired, leaving Clode and Walker to finish. Passing the dressing room the third time, Clode looked wistfully at it, but went past to the 300 yards' post and stopped, and let Walker pass him. Clode was then prevailed upon to proceed, and ran and walked in. Walker's time 5 m. 38 $\frac{1}{2}$ sec.

19.—100 YARDS: (BOY'S RACE. FINAL HEAT.)

Vincent	1
Edwards	2
Brooke	3

Little Vincent soon shook off his competitors and won with plenty to spare.

20.—POLE JUMP: HANDICAP.

G. Charlesworth	6 inches	1
A. J. Smith	Scratch	2

The jumping was very good, Charlesworth with his handicap being a good match for Smith, eventually winning with a leap of 8 feet 1 inch, which, with his handicap, made 8 feet 7 inches. Smith cleared 8 feet 6 inches, and then had the bar put up to nine feet, which he failed to clear.

21.—CONSOLATION. ONCE ROUND.

For all who have started, but not won a prize at this meeting. One Prize. Presented by the winners at this meeting.

Ward	1
Gorman	0
Dare	0

This was an easy win for Ward, Dare only running as far as the dressing room, and Gorman giving in soon after.

22.—STEEPLE CHASE: HANDICAP.

Three Prizes. 1st Prize, Double-barrelled Gun. Presented by Lieut. Fagan, R.M.L.I.

H. J. Gorman	1
E. F. Kilby	2
R. Ward	0

Only three faced the starter for this event, Gorman coming to the water-jump first, which he cleared in good style. Kilby and Ward took the water like ducks, but soon scrambled on the bank and made tracks after Gorman. Clambering up the hill, the competitors tailed off, reaching the top at somewhat lengthy intervals, Gorman still keeping a strong lead. Ward lost his way somehow, and came down the wrong way. Gorman cleared the second water-jump, and also took the third jump, and then, finding his competitors had not made their appearance, subsided into a walk, and clambered up and down the next hill coming to the last water leap in 13 m. 38 secs.

As Messrs. Hamilton and J. J. Dare had laid the paper for this event, they accompanied the field to see that all went the course.

ON THE REVISION OF THE TREATIES.

No. 4.

(From the *Kinji Hiron* of the 28th Oct.)

We have already in our last issue fully given our explanations of what we think the reasons why the empire of Japan has not forfeited its power as an independent country, and why the convention should be ended. It is indeed great credit for a country to have equal jurisdiction with foreign countries. But if one power has not irresponsible judicial control in its own boundaries, and right of levying such taxes and duties as it may please, its equal sovereign rights are of no value to it. So it is just to say that, as long as these two rights, that of judicial control, and of irresponsible taxation, are withheld, its independence exists only in name.

Every independent country has its own codes. Any man, living permanently or temporarily in such country must obey its laws. (Foreign Ministers, Legation Grounds and men-of-war only can claim extra-territorial jurisdiction.) As our readers are aware of this latter matter, which is familiar to all who know international law, it is unnecessary to say more on that subject. But in regard to the question of jurisdiction generally over foreign residents, which is the most important concern to all parties to our international treaties, we think it advisable to express an opinion.

If justice is badly administered, injury is done to the people, freedom is impossible, and no security for life or property exists. As our treaties with foreign countries have been unjustly arranged, the laws of our land cannot control any foreign residents. This is a perversion of justice. The convention provides that foreigners, "who may commit any crime against Japanese subjects or subjects of any other

nation shall be brought before the Consular Courts of their own nation, and judged according to the laws of their country; and that Japanese subjects who may commit any crime against foreigners shall be brought before the Japanese authorities, and punished according to Japanese laws."

Foreigners in Japan have often acted unlawfully against our people, who have brought them before their own authorities; who both investigated the charges and executed judgment with partiality. We have several times observed the bias of their judgments, as our countrymen well know. But we are obliged to put up with such judgments as are rendered. Is this not indeed lamentable?

Contrary to the practice which prevails in Japan our subjects in any foreign countries are compelled to obey the laws of that country; so, if a Japanese acted illegally in England, he would be arrested by the British authorities, and examined and sentenced in their Courts. This is not only the case with Japanese. People of the French, American, and other nations are treated in a like way, just as Englishmen in those countries must obey their laws, thus maintaining the equality of international rights. But it is not so with our country. Foreigners rule themselves here to their own advantage on the one hand, and bring our people in their countries under their own laws on the other. It is only right and reasonable that so long as foreigners in Japan do not obey our laws, we should not be subject to their laws in their lands. An article in our treaty with China says: "As the laws of the two countries, (Japan and China) differ, the subjects of each shall be under the jurisdiction of their own laws &c. &c." This is not quite as it should be; but is in no way injurious to the rights of either as a sovereign power. We should much like to see this adduced to other foreign governments. Our people in foreign countries should not be subject to their laws. If they do wrong, they should be handed over to our officials; and no foreign tribunal should interfere in their trial and sentence.

If foreigners obstinately oppose our desire for a revision of the conventions with the Western powers, we shall be obliged to do as they do. Some may say:—"Your opinions are right as far as regards the conventions at the present time; but, considering the epoch at which the treaties were made between us and foreigners, our laws were too severe for the latter to be subject to; and even our own countrymen, who were accustomed to live under such an oppressive form of government, could sometimes not endure them. If free people, living under such a government as a limited monarchy, heard of the severity of our punishments, they would tremble with fear, and we could not oblige them to be subject to our laws. The treaty with Corea, which was completed last year, also contains an extraterritoriality clause. A convention between civilized and uncivilized nations must necessarily contain such an article for the protection of the former." This is partly right. But a great difference exists between the Tokugawa government in the year of Ansei (1853) and the Mikado's government in the 10th year of Meiji (1877), when the use of torture has been abolished both in criminal and civil processes. Appeal is allowed, and judgment must be given on the evidence. What excuse is there now for the fear of foreigners to be subject to our laws? In other parts of the world they would not have a word to reply to us. So we say that as long as foreigners, residing in our country, are not subject to our laws, so long Japanese, residing in their countries, should not submit to their

laws. In commencing the work of revision of the treaties with foreign countries, our first object must be what we have said above; and the second to secure that each person shall submit to the laws of the country in which he lives. So long as our judicial rights are not accorded to us, so long also shall we be deprived of our right of levying taxes and duties on goods coming from the foreigner. We will continue this subject in a future issue.

SILK-WORMS' EGG CARDS.

(From the *Nichi Nichi Shinbun* of the 2nd Nov.)

Our readers will acknowledge the sad and unsatisfactory condition this year of the trade in *cartons* in Yokohama, to which we have already alluded in our paper. What is the idea of our readers? As we stated in our paper on the 26th ultimo, (in an article which was translated in the *Japan Gazette* of the 30th October) numbers of the collectors of silk-worms' egg cards have become bankrupt and have reason to assert that the manufacture of *cartons* has injured other branches of mercantile business. Such an unsatisfactory state of trade was caused partly by the desire of the card dealers to make a large fortune in a moment, and to recover their losses of previous years; but the annual defeat of their enterprise was also in part, and indeed nearly altogether, brought about by the folly of the manufacturers and dealers, who take no heed of how to make their trade progressive. How inconsiderate is their conduct.

Our dealers have been totally beaten in this trade of cards from year to year. What measures they have taken to recover their losses have been of no sort of benefit to them; but have on the contrary augmented their misfortunes, for they strive to fight their way out of a position of disaster without considering the origin of their misfortune. At present, it has been decided at their meeting in Yokohama that, following the former bad precedent of destroying numbers of *cartons* by fire, a certain number shall be thrown into the sea this year. This decision was formed without due consideration of what would be beneficial and what a loss in connection with their merchandize. So before the oiled ink of the stamps which they had affixed to their convention was dry, a new question arose among them and their agreement was broken. They are again free to sell their cards at any price they can get. In view of the present depressed condition of this commerce which goes from worse to worse year by year, it is important for the authorities to consider whether they will, by enactment limit the number of *cartons* to be manufactured each year or will leave the manufacturers free to produce what they please and so hasten their own ruin. Secret aid given the dealers in no way advances their trade. Some years past the government interfered, and set a limit on the number of cards to be manufactured. But this measure was soon subverted by foreigners, and people were again allowed to manufacture any number they chose. Rumour has it that, when a million of *cartons* were set on fire on the Umechi (Swamp) Yokohama, in the 7th year of Meiji (1873), the government paid a large amount of money to compensate the owners for their loss. We have no evidence to make us sure that the rumour is true; but neither can it be proved untrue. Since the 8th year of Meiji (1874) rules were agreed to among the manufacturers, with whom the government still interfered more or less. In the season of the following year, three large merchants in Tokio and Yokohama came to the generous

resolution to lend money to the owners of *cartons*, in order to keep up a proper price in spite of foreign dealers. This is said to have been sanctioned by the government who are further asserted to have advanced the money for the loan. This seems to be true. So, indeed! The government would appear to have no regard for the prosperity or decline of business in *cartons*; yet the authorities aid the dealers secretly and indirectly in their business: Thus manufacturers and their agents become careless of dulness in their trade relying as they do upon government aid. The favour shown them by the government is the cause of the stagnation of their commerce.

As we have said above, the annual trade in *cartons* not only produces no profit, but even injures many branches of other business. It might even be best to prohibit the export of *cartons* altogether. The producers of this merchandise are well skilled in the manufacture of silk, which has much more importance and brings far greater benefit to Japan. No foreigners could oblige our government to permit the export of cards, so long as we are an independent nation; and the Italian dealers could not send a fleet of war vessels to Yokohama. But if trade with treaty countries should be injured by the prohibition, the government have only to purchase the *cartons*, or to receive them in payment of taxes, and then to send a certain number of them to the Western powers. In this case, foreigners could find no cause to murmur against the government. But to those people who say that the government cannot prohibit by law the export of *cartons*, and that the authorities have no right to purchase them and send them to Europe, we reply that it is equally wrong to interfere in the business by aid, direct or indirect. Government help is at present all that the dealers have to rely upon. What say our learned men about this?

HOW TO MEET EXTRAORDINARY EXPENDITURE.

(From the *Kinji Hiron* of the 3rd November.)

We argued in our issue No. 87, that when extraordinary difficulties in regard to national finance occur, special measures must be resorted to for their removal, irrespective of existing laws and regulations. (A translation of the article referred to was published in the *Japan Gazette* of the 20th October under the above heading.) According to present circumstances, raising a domestic or foreign loan, the increase of paper money, and the impost of new taxes and duties, would cause much more injury, comparatively, to the country than they would produce benefit. And we go so far as to say that the establishment of a representative assembly, now the thing most popularly desired, might perhaps effect no good. "How?" say you. "Do you not wish for a representative assembly?" This is not our meaning. What we have said above means only that we must perfect some system wherewith we may be able to cope with financial difficulties, without considering whether the government found such an assembly or not.

What is that system? It is only one of extraordinary economy. In a country, whose productions and manufactures are progressive and prosperous, and monetary embarrassment occurs after a long war at home or abroad, it is unnecessary to endeavour to become free from it by economy. This is because productions, manufactures, and other important industries, are sufficient to indemnify the loss in the course of a few years. We will cite an example. In 1870 the Prussians besieged Paris,

and the French paid 5,000,000,000 francs as the price of a treaty of peace. Besides, they had expended an extraordinary sum of money during the war. Since the reign of Louis XVI, several civil wars have raged in France, and the national debt was increased from year to year. Notwithstanding this, troops were sent out to foreign countries to take the field while civil strife continued at home. Great must have been the financial difficulties of the nation. But, at the present time, France is one of the wealthiest countries in the world. According to what we have recently heard, one bank in France possesses a capital of 757,000,000 francs. No other bank in the world has such a large capital. The debt of the country, after protracted struggles at home and abroad, amounted to 7,000,000,000 francs; but wise measures have been adopted to repay this gradually, and it may not be a very difficult matter to liquidate it all in a few years. What has caused the release of France from her financial troubles? Simply and solely fertility in production and progressive manufactures on the one side, and the industry and energy of the French people on the other.

Turning now to the present position of our own countrymen, we ask:—do they possess sufficient energy to remove the difficulties, in the way of a successful financial policy, arising from the war, by making their productions and manufactures progressive and prosperous like those of the French? Silk-worms' egg cards, which were once in the first class of our industries, made a great advance by the industry of their producers and the protection of the Government. But others have not improved at all; and though the Government should induce our people to devote all their attention to manufactures and arts, yet no good result would be wrought within ten years. So, taking into account the condition both of our countrymen and country at present, we find, as we have said, that the best way to refill the empty treasury is simply to practise an extraordinary economy. We can think of no other means whereby to recoup recent expenditure.

What do we mean by the said economy? Merely to endeavour to forego the use of imports, as much as possible. Men and women of high and low class are anxious to adopt the customs and manners of Western nations. Everything in common use—houses, dresses, and furniture—is imported. A man is going to furnish a room. He hangs up maps from England. He dresses in clothes of the American style, and puts on a hat from France, and shoes from Russia. And so it is with women, who dress in European style. Men and women of higher rank than those of the middle classes love foreign customs and use imported wares. Having heard that the Chinese Legation in London, which has recently been built, is constructed altogether in Chinese style, we felt real emotion; and we even believe that some of our own people could have sympathized with us.

The great discrepancy between exports and imports has, of course, its origin for the most part in the unsatisfactory condition of our productions and manufactures. But the peculiar character of our people, who are fond of novelties, and who use imports through the entire country, has partially increased the deficiency of exports. If we were to employ only the most important of foreign things, such as books and machinery, the value of imports would not exceed that of exports. Some person may say that Japanese wares are not so convenient as foreign ones. He is quite right; but will he prefer the comfort of one man to the welfare of the whole country? Will he choose a temporary convenience at the expense

of embarrassment for hundreds of years? It is very agreeable to us to eat foreign cooked dishes from a table, and to drink foreign liquors while seated in a chair. But these comforts will soon cause much injury to trade, and bring indirectly destitution upon the country. The *andon* (Japanese lamp) is not so luminous as a foreign lamp, and the *kasa* of oil paper is more inconvenient than a European umbrella. These Japanese articles are indeed very inconvenient. But such inconveniences will bring about an equality between the exports and imports after a number of years. It is no sign of civilization to build palaces and houses in British style, and to dress in clothes of American fashion, as long as we do not shake off that slavish and low nature, which is the most famous production of Eastern countries. To do thus is to be like a man who covers his dirty body with brocade. Such a one would only make foreigners laugh at him.

Now, as we desire that our people shall not make use of imported goods, we earnestly hope that the government authorities will set the example. If they would use no foreign articles, other people would soon imitate them, because it is the character of our countrymen always to follow the example given by those in power.

Our writers have repeatedly argued that splendid constructions should not be built at present; and there is no necessity for us to dwell on the subject here. But when we are obliged to build such important edifices as Government offices and schools, they should be constructed in Japanese style, and furnished with Japanese furniture. It is quite unnecessary to attempt to surprise visitors to the country by magnificent buildings. Thus, a great reduction in the demand for foreign articles will conduce to equality between exports and imports; and the amount of 8,350,000 yen, which has poured out annually into foreign countries during the past eight years, will remain at home. All the expenses incurred in the suppression of the recent Kagoshima insurrection, which we estimate at 63,000,000 yen (the national income for one year), will thus be defrayed within ten years. Besides this the Government should act with special economy in all respects, and encourage their people to improve native productions and manufactures. Would they do so, difficulties of finance would not be a source of much trouble to them after a few years' time.

COMPARISON BETWEEN EXPORTS AND IMPORTS.

(From the *Nichi Nichi Shinbun* of the 7th Nov.)

The table of exports from and imports to the ports in Japan for the year between 1st July of the 9th and 30th June of the 10th year of Meiji, has been compiled and published by the taxation section of the Finance Department, according to annual custom. Those who read the table can easily see what was the extent of exports and imports for the 9th year of Meiji. As we noticed in our supplement on the 2nd instant, the value of exports for the said year amounted to yen 27,503,457.73.8, and that of the imports to yen 25,121,899.88.2. The former exceeded the latter by yen 2,381,559.85.5. This was the actual profit, produced by trade. When the silk trade was in a prosperous condition, and the price was high, during June and July last year, we supposed that the value of the exports that year would exceed the imports by a considerable sum, which would be enough to make up for the loss which we have suffered from year to year. But, according to the table, the

exports last year exceeded only by one-tenth the imports. Last year the exports were extraordinarily large, while imports were of the average value. Even in such a case, the exports not exceeding by more than one-tenth the imports, how can we thereby make up the deficiency of a year in which the imports may be extravagantly large? From this we are able to judge that foreign articles, imported yearly, are too numerous. According to the reports of the Kansho-kioku, (Board of Trade) published since July last exports were of the value of 2,034,348.21.1 yen during that month, and the imports 2,637,075.80.0 yen. The exports, during the following month, were 1,704,499.83.4 yen and the imports 2,547,533.10.3 yen. Thus imports, during two months only, exceeded by 1,445,760.85.8 yen the value of the articles sent out of the country. We do not yet know the comparative values of the exports and imports for September and October. But, judging by the returns for July and August, we have a right to suppose that the imports, during the four months, July, August, September, and October, amounted to 2,381,559 yen, more than our productions during all the twelve months of last year. If this be right, the value of imports for the current year (from July of the 10th to June of the 11th year of Meiji) will greatly exceed the exports.

Fortunately for us, the crop of silk was very small in Europe last year, and that alone caused our exports to exceed the imports. If such had not been the case we should certainly have suffered much in trade, because, out of the entire value (27,503,457 yen) of the exports last year, silk figured for 14,016,039 yen, or more than half the total amount, including the value of cotton and other threads. Of the other exports tea was worth 5,013,410 yen, *carbons* reached 1,902,270 yen, awabi, sea-weed and other sundries 1,219,028 yen, copper and other metals 428,113 yen, mushrooms 327,864 yen, medicines 224,783 yen, (of which ginseng 19,249 yen) wax 222,100 yen, coals 185,724 yen, crude camphor 176,706 yen, lacquered things 154,032 yen, tobacco 141,732 yen, and fans 127,151 yen. About 150 kinds of goods altogether were exported.

The most valuable of the imports are as under:—Cotton cloth (muslin, &c., &c.) 6,074,143 yen, cotton yarn, 4,155,665 yen, woollen cloth 3,794,433 yen, sugar 2,839,531 yen, flannel &c. 633,106 yen, iron 648,041 yen, kerosine oil 386,515 yen, watches and clocks 291,589 yen, liquors 260,605 yen, medicines 248,249 yen, silks 163,477 yen, blankets 163,445 yen, meal 117,362 yen. About 420 kinds of merchandize in all are imported.

Thus it may be seen that the value of the cotton yarn and two or three other things imported, equals our export of silk; and our readers must acknowledge the deficiency between the exports and imports, from this comparison.

MISCELLANEOUS.

MORE than one of our readers may probably be interested in some news direct from Acheen, in Sumatra, where war between the Dutch and the Acheenese is still waging. By last mail we received, from a correspondent on board one of the transports chartered by the Dutch Government, a letter from which we extract the following:—

At Samalangan we have been lying for nearly a month with a number of troops on board. A fleet of 17 ships, including 10 men-of-war arrived here on the 10th; and after shelling the woods lining the beach for

several hours, about 1,000 soldiers landed or rather were capsized on the beach, there being a heavy sea. They met no opposition that day. The woods lining the beach extend inland about 300 yards, and, beyond, you find a fine open plain. On this plain the troops encamped for the night, close to the wood. About midnight we were all roused by yelling, and shouting, and the rapid firing of rifles. Daylight brought the news that the Dutch had been surprised in their bivouac by the Acheenese, who jumped by hundreds into the camp. I could not find out how many were killed, but I observed that it took nearly all day to bury the dead. The Dutch then retreated to the beach and intrenched themselves behind trees which they cut down. Since that time there has not been very great progress made.

Samalangan is the place whence nearly all the fighting men are drawn for the Acheenese.

As the gunboats were shelling the coast, I noticed a number of Acheenese sitting on the beach. They were evidently marked by one gunboat, as she threw a large shell, which burst immediately over their heads. I watched them particularly through the glass, but not a soul of them stirred an inch. There is no mistake, they really are brave fellows, and, were they armed as well as the Dutch, I am afraid that the latter would have to fight with redoubled energy.

WE are given to understand that the Government have decided to grant a site on which to erect a foreign hospital for infectious diseases. The terms on which the concession is made do not seem to have yet been definitely settled; but the probable location of the new building will be near that occupied by the kerosene godown at Nakamura.

At 2.15 A.M. on the 31st ultimo there was a smart shock of earthquake which lasted about twenty-five seconds.

SOME gentlemen have started a subscription list in aid of the funds of the General Hospital, and we are glad to see their scheme, which is an excellently devised one, well supported. They propose to collect from all residents willing to pay the small monthly contribution of fifty cents, a sum which, while very lightly felt by individual subscribers, will, from the number of contributions already promised, secure a fair revenue to the most useful of our local institutions.

AN inquest has been held at Hiogo on the body of George Haines, the locomotive engineer who died on the 27th from the injuries received, in the collision of the 1st ultimo, on the Hiogo-Osaka Railway. The Jury returned a verdict that deceased "came to his death through injuries received in the late Railway accident on the night of the 1st October, but through whose fault the accident was caused no evidence has been brought before them to shew."

THE American Steamer *Courier* left Yokohama on the 16th June last for Petropaulovski and parts of the Okhotsk Sea. On the *Courier* arriving at the port of Okhotsk, on or about September 1st, the natives reported having seen a steamer a day or two before about fifteen miles to the north. She had been abandoned by her crew and was drifting on her beam ends: the mainmast was broken, though her funnel was standing. The side ports were open, so that it was quite possible to see through the ship: the boats were all gone, the

surmise being that the crew had left in them. A few days after this had been reported to the Captain of the *Courier*, a party of natives, among whom was one European, arrived at Okhotsk, from a place called Yamskay, about 250 miles further north. The European turned out to be a German, a trader in furs &c., who reported that he had seen a steamer, some ten days before it was seen by the natives at Okhotsk, off Yamskay, and his description tallied in every particular with the account given by the natives of Okhotsk. The supposition is that the steamer had met with heavy weather and been abandoned in the Pacific, and drifted to where she was seen: otherwise it is difficult to account for her being in that latitude, as it is a most unusual part for steamers to be in. Had a sailing vessel been in question, it might reasonably have been supposed to be a whaler. The *Courier* left that part of the world without having ascertained any further particulars concerning this ocean wanderer; but, doubtless, further tidings concerning her will come to hand unless she went to the bottom in some heavy weather which occurred shortly after she was seen. From the direction in which she was drifting, it is possible she might bring up on the North end of Sakhalin, or on the coast of the mainland South of Okhotsk.

A CART-LOAD of empty bottles, champagne and other, with labels in a perfect state of preservation, was observed crossing the Maedabashi recently, bound no doubt to the store of one of those numerous marine store-dealers who dwell on the Creek side. What becomes of the numerous wine and beer bottles emptied and discarded by foreigners might be worth inquiring. It is far from improbable that those whose labels are bright and clean may be refilled, recorked, and recapsuled in Tokio, whence they may find their way to the retail stores of Homura and the Homura Road. Of course no foreign resident every buys wine or beer, or spirits in these regions (this is sarcastic); but it would be a pity that the guileless native who is fostering foreign tastes should have to drink mere locally concocted beverage while he thinks he is quaffing Moët et Chandon, Chambertin, Clos Vougeot, Bass, or Hennessy. In the cause of those "who are ready to perish," of the would be refined native who may be poisoned while honestly and religiously endeavouring to rise to a higher state by the cultivation of his palate, we implore those who empty bottles to complete a good work by defacing the labels. In this we are but repeating a request which in many instances is made by the labels themselves.

ON the arrival of the steamer *Dragon* at Vladivostok, about three weeks ago, the master reported that during the voyage from Nagasaki to that port, the chief engineer was missing; and it was supposed that he had jumped overboard. An enquiry was held on the *Dragon* arriving at Hakodate, there being no English Consul at Vladivostok, and from the statements of the master and the owner it was concluded that the man jumped overboard while in a condition of temporary insanity.

PART of the sea-damaged rice ex *Annie W. Weston* was sold on the 6th instant, at public auction by Mr. F. A. Cope and Mr. H. Becker, and realized better prices than were anticipated. The worst lots fetched from 77½ to 85 cents per bag, and the least damaged from \$1.15 to \$1.61.

A GENTLEMAN recently returned from the coast of Kamtchatka, says that a violent eruption of a volcano* which he estimates at about 18,000 feet high, in the neighbourhood of lower Kamtchatka, has taken place. The ground vibrated, off and on, for a period of four days. Under the foot of the mountain is a village containing about 500 inhabitants, but whether they have sustained any serious injury by the convulsion is not known by our informant.

In re IWASAKI YATARO v. CAPTAIN P. H. COLOMB, R.N., the hearing of a motion for striking out the cause from the hearing list was, on the 6th instant, upon the application of Mr. Dickins for the defendant, and with the consent of Mr. Ness for the plaintiff, adjourned *sine die*; and the hearing of the cause, which had been fixed for the 13th instant, was, upon the application of Mr. Ness, postponed until 1st April, 1878, at 10 o'clock in the forenoon.

[We have received the subjoined letter with request to publish it. Ed. J. G.]

U. S. Steamer *Alert*, 3rd Rate.
Yokohama, Japan, Nov. 8th, 1877.

To the citizens and the Ship's Company of the *Tennessee*, and to all whom it may concern.

Messrs.:—Perhaps some of your many readers would like to know of the little boat race, which took place between the gigs of the U. S. flag ship *Tennessee* and this vessel at Hakodate, in the latter part of last September.

Very likely the public have been deceived by the way it has been represented to them, by the men of the big ship *Tennessee*, who have had a month to circulate their own version of the affair without contradiction. Knowing from past affairs, in and about this port, that the *Tennessees* considered themselves (A. No. 1) and unconquerable, we had the audacity (so to speak) to challenge them to a passage of oars, this giving them the right to name the day, length, and shape of course.

When we (*Alerts*) challenged them, the coxswain of the big junk asked what sort of a man was steering our boat. We answered him, "a German." This seemed to tickle him, for he said, "that's just the man I want, for I can outwit him, for he is only a lubber."

And this same man, that made these remarks about one of the *Alerts*, that never done him, or his shipmates an injury, has the audacity to say he acts on the square, which shows how far the same man goes on the square. He, the *Tennessee's* coxswain, immediately showed us square 1st. The course was laid out in a triangle. One of his great points lies in turning a sharp corner, and he supposed our Dutchman (coxswain) did not know a corner from a barrel of sour-kraut. That is where he made a mistake (on square 1st) for at the start both boats were pretty even, until they came close to the light-ship, when the coxswain of our ship let the *Tennessees* go ahead about a boat's length. Then we shot in between the *Tennessee's* gig and the light-ship. When the coxswain of the big ship saw he was outwitted in his own game, he sung out, "A foul!" But it wouldn't go down; for the

judges said, "Go ahead, there is no foul!" So both boats kept on their course. So at square 2nd, or at the second turning point, a dingey was anchored head and stern, with a boy to tend the line: that is to say, when our boat came up to this boat, the boy hauled the dingey up, thereby making two boats' lengths more for us to pull before we rounded her. As soon as we rounded her, the boy let go all the slack line, and ran to the other end of the boat and hauled in on the other line, thereby giving the *Tennessees* a gain of a length and giving her a straight course to our ship.

I here give you a diagram* of the course between the two boats.

This boy was well drilled, and carried out his part of the programme faithfully, but unfortunately we were so far ahead, that square 2nd, availed them naught. Our boat came in twenty seconds before they had the pleasure to pass the winning line. Now as their squares have proved useless, they can think of nothing else but to claim a foul at the first turning point. How absurd after continuing a race to the close, and after the judges had decided in our favor, and that there was no foul. And after all their squares! Poor boys!

They spend their time in writing gingerbread poetry to abuse and ridicule us.

The trip to Hakodate for them was to escape a contagion. Seems to us they received something which makes them feel worse than a spell of sickness.

Since the *Tennessee's* coxswain goes by the appellation of "Tail Block," we will give ourselves the cognomen of

"LEADING BLOCK."

THE Hiogo News of the 31st October has some comments upon the secrecy with which the inquiry instituted by Japanese officials into the accident which occurred on the 1st of that month on the Hiogo-Kobe line has been conducted. It complains, further, that no light has been thrown upon the occurrence by the Coroner's inquest held on the body of Haines, the engine-driver whose death resulted from the accident. "No witness appears to have been summoned, and putting aside the medical testimony and the identification, the only witness examined was Mr. Page, Traffic Manager of the line, and if he had anything to tell he did not tell it." Several assertions have been made, but none appear to have been authenticated, as to the deceased having started without orders, an imputation which he repeatedly denied before his death; about the other drivers being imperfectly instructed as to the special trains they might expect to meet; and other instances of neglect which would appear to point to mismanagement somewhere. Among the witnesses, whose attendance one would think might have been easily procured and whose testimony was very necessary, were the locomotive superintendent, and the driver of the ordinary train from Osaka, which followed Haines' train at an interval of only ten minutes, and who, it was said, being ordered at Nishinomiya to proceed, refused, thereby escaping running into the wreck, only because he happened to know that the engine drawing the up train which was due had not passed him. Our contemporary concludes thus:—

"Under the circumstances the jury could do nothing but what they did—return an open verdict that the man was killed by an accident on the railway, how caused there was no evidence before them to shew. The Jury were very much dissatisfied, and though we believe that

in English law an inquest cannot be re-opened for further evidence, an investigation can be held before a magistrate—in this case presumably the consul—to make enquiry concerning the circumstances. This may very probably be demanded, and we most sincerely hope that such may be the case, both for the sake of clearing away any shadow which it may be sought to fling upon the dead man's memory, and for the protection of other British subjects engaged in the Railway Service."

THE barracks at Gofuka Bashi, where were stationed the Tokio chindai, and Dai San battalions, have been destroyed by fire, caused by an accident to a lamp.

MR. Von Weckerlin, Minister for the Netherlands, has returned to Europe. During his absence he will be represented at the Court of the Mikado by H. E. Sir Harry S. Parkes.

THE body of the late Sister St. Donation was committed to the earth on the 7th inst. with the imposing ceremonies of her creed. The funeral procession was a modest but touching one. Two priests preceded the hearse, which was followed by the sisters of the convent of the Holy Infant Jesus. After them trooped a crowd of the children to whose care and education the latter years of the brief life of the deceased had been devoted, and who will mourn their teacher and friend with a sorrow none the less sincere that it is felt by childish hearts, which as yet have known no poignant griefs.

If cholera cannot be pronounced altogether extinct in Yokohama, yet it is so rapidly diminishing that it bids fair soon to be nothing more than an unpleasant memory.

THE Tientsin correspondent of the *N. O. Daily News* says that Mr. Lay, who has been experimenting at Taku with his torpedoes before some Chinese officials, is about to take his invention to Japan for further experiments, as the Chinese Government do not intend to purchase it. The Lay torpedo is described as "an iron 'cigar shaped' boat, submerged some four-fifths of its diameter below the surface of the water. It is about 2 feet in diameter and 24 feet long. The motive power is carbonic acid gas, confined at a pressure of 6,000 lbs. to the square inch: it is stopped, steered, and fired, by an electric current which communicates with the torpedo by means of a triple cable payed out behind it." It has "travelled through the water at the rate of about nine knots an hour, and seemed well under control except at a certain time when the steering gear evidently became faulty. It carries a charge of 100 lbs. of dynamite, or any other explosive selected. The operator steers it by means of two short sighting poles carrying flags, placed on its deck or upper part."

THE 7th inst. was an unusually gala day in Tokio. Besides the balloon ascents in the presence of the Emperor at the Kaigunsho, the meeting of the annual Shokonsha horse-races was held at Kudan.

The fact that the Emperor would be present at the Kaigunsho attracted, from early morning a vast concourse of people, on and around the parade ground. It was intended to have sent up two balloons—one inflated with coal-gas, and the other with hydrogen—and for several days beforehand the most complete preparations had been made under the direction of the naval authorities. The Emperor arrived on the scene at half-past ten, and proceeded to take his place, not in the Imperial

* There are about fourteen volcanoes in the peninsula, the most remarkable of which, Plutcheoski, is 16,000 feet high. This mountain recently only emitted smoke and embers; but in former times, eruptions used to take place every seven or eight years. Probably it is now once more in eruption, and is the volcano seen by the gentleman who brings us this intelligence.

* Impossible to reproduce it here.

stand which had been erected for him on the ground itself, but in the reception room over the portico of the college. The proceedings commenced with an attempted ascent of the balloon filled with coal-gas. This, however, proved a failure, owing to the rending of the balloon itself. The efforts of the authorities were next directed to the remaining balloon, inflated with hydrogen, and resulted in an entire success. The balloon, attached to a rope, rose to a height of about two hundred yards, and drifted gradually away to the north. After having been kept there for some time, allowing the Emperor and the assembled people to have a fine view of it, the rope was cut and the balloon sailed away and was soon lost to sight. The proceedings then terminated, and at three o'clock nothing more was left of the immense throng of an hour before, but a few coolies bearing away the debris of the stands, and the children carrying off the flowers from the garlands which had decorated them.

The proceedings of this, the first day at the Shokonsha temple were precisely the same, with the exception of the absence of fire-works, as on previous occasions, and they are so well known to our readers that we need not make further mention of them.

THE Australian telegraph line is out of order. Communication between Banjoewang and Port Darwin is interrupted.

PROFESSOR Wm. Wheeler's suggestion, contained in his meteorological report appended to the First Annual Report of Sapporo Agricultural College, which we had the pleasure to review the other day, that a station for observations be established at some point near the extreme Eastern or North-Eastern coast, deserves commendation. Some time since we had occasion to notice a remark, emanating, we believe, from Mr. Joyner, on the peculiar facilities afforded by this country for simultaneous meteorological and seismic observations, with a view to investigating into what connection exists between atmospheric influences and terrestrial perturbations. We think we are right in stating that the Government are in possession already of several valuable and complete sets of instruments. Mr. Wheeler says that a duplicate set belonging to the Kaitakushi is now in Sapporo. The selection of suitable sites for observatories should, one would think, be a matter of comparatively little difficulty.

THE same writer says:—"Connected with a fertile soil, abundant forests of valuable timber, and extensive mineral resources, there could be no better advertisement to invite enterprising settlers and capitalists to Yesso, than the assurance of a climate favorable to the highest excellence of her future agriculture, and promising pleasant, healthful, homes to all her people." This is quite true, and there appears to be ample ground for the belief that the natural resources of the fertile and beautiful island of Hokkaido are as rich as they are, hitherto, undeveloped. The setting on foot, and starting from a substantial basis, of large and remunerative private enterprises, whether mining, manufacturing, agricultural or pastoral, demands extensive capital; and it is needless to say that much private unemployed capital is not to be found in Japan. Hence, the most politic course to be pursued by the Government would be to invite and encourage in every possible way the introduction of money, to be employed in industrial pursuits, from abroad. Circumstances and reasons, the gravity of which we can fully understand and make every proper allowance for, have, so far, prevented their adoption of a policy which they

must see would be to the ultimate benefit, both social and commercial, of the whole country. When the richly timbered, and pastoral districts of Yesso, when its mines and other resources, are open to development by foreign enterprise backed by foreign gold, then that island may safely look forward to a prosperous future. We are afraid that without external assistance its prosperity will be rather remote.

THE season of fires in the capital may now be said to have fairly commenced. Only the other day we had to record a conflagration in the barracks at Gofuku-bashi, and now again the news comes to us of another, and a more serious one in its results, to the inhabitants of the district destroyed.

On the 9th instant, at 7 p. m., a fire broke out in an oil-shop at Shinagawa. The weather was perfectly calm at the time, yet notwithstanding the efforts of the firemen, who were quickly on the spot, the flames spread rapidly; nor could they be got under before some two hundred and fifty houses, covering a distance of about two *cho*, had been burnt to the ground.

The conflagration was caused, as is so often now the case, by an accident to a kerosine lamp. Many houses of public resort were among those destroyed, and, as these usually contain a large number of inmates, the suffering entailed will be far greater than results from fires in any ordinary quarter of the city.

It is stated that an old man and a child were burnt to death.

WE have received, what we are sorry to say is, an imperfect copy of the Third Annual Report of the Commissioner of the Imperial Mint, Osaka, Japan, for the year ending 30th June, 1877. The complete pamphlet only contains twenty-five pages; and the very heart, pages 11 to 18 inclusive, have been omitted by some accident or negligence apparently in the binding of the copy sent to us.

THE silk market has again recovered in a very perceptible manner, and a rise of thirty dollars has taken place during the past three days in the various kinds and qualities. Transactions have been very considerable since the commencement of the week, and have reached the figure of 1,900 Japanese bales.

In silk-worms' egg cards some further purchases have been made; but, nevertheless, we may consider the market nearly closed. The native journals say that the throwing into the sea of a certain quantity of those seven-tenths of the entire production which were condemned to destruction has commenced; but there seems to be an evident unwillingness on the part of many holders thus to sacrifice their goods.—*Echo du Japon*

AT Mr. Becker's recent auction of real estate, No. 23 Bluff fetched \$2,050, and No. 219A Bluff was knocked down at \$950.

WE have received a letter, bearing the signature "Fair Play," with whose proposition that the acquittal in H. B. M.'s Court of the Malay Suliman, charged with stabbing a shipmate and fellow countryman, was right and proper we quite coincide. There was the strongest moral presumption of the guilt of the accused; but not one jot or tittle of evidence on which a conviction could be based. The strongest point against the accused was the "motive" for the act, which, as the learned judge pointed out, Suliman himself supplied, when he admitted that he and the prosecutor had had a quarrel on shore, in the course of which the latter had stabbed him, on

account of a woman. Direct evidence there was none but the word of the prosecutor, which was as directly contradicted by the accused. The weapon with which the wound was inflicted was not found, either on the person of the accused, near the spot where the stabbing occurred, or elsewhere; and there were no blood stains nor traces of a struggle upon his body or his clothes. His attempt to gain the shore immediately after the wounding occurred was certainly suggestive of his guilt; but all the evidence against him amounts to nothing but strong presumption; and that, by our law, is wisely allowed to have no control over the disposal of a man's life or liberty. The innocence of men found guilty and executed on the strongest circumstantial evidence has ere now been established, when too late, to the lifelong sorrow of the juries who convicted and the judges who sentenced them. As regards Suliman, we were astonished not that he was acquitted; but that the jury wasted time in debating on the form of their verdict. This, however, arose, probably, from the nationality of one of the jurors, and his ignorance or forgetfulness of the fact that English jurisprudence, again wisely, allows no mean between the guilt and innocence of the accused, no baneful compromise like that conveyed in the dubious verdict of "not proven." Probably, had the accused been an Englishman, or one who understood English, or even one to whom the terrors of the law could have been intelligibly explained, his narrow escape, in spite of the damning probability, not merely of his having struck a blow which has disabled a comrade for life, but also of his being in intent a murderer, would have been explained to him by Mr. Wilkinson as due, not to any want of moral probability of his guilt, but simply to his good fortune in that there was not sufficient evidence to convict him. No jury in the world could have found that Malay guilty on the testimony adduced.

THE answer to the second question propounded by "Fair Play" is evident, British law was the only law to which Suliman was amenable. He was borne on the articles of the *Sunda*, on board of which vessel his offence was committed, and was as much justiciable by H. M.'s Court here under the extraterritorial jurisdiction provision of the treaties, as if the crime with which he was charged had been perpetrated at sea or actually on British soil. As for the case of the unfortunate girl who was tried in the same Court for an offence on board the *Annie W. Weston*, an American vessel, in *Japanese waters*, the question of jurisdiction was carefully gone into at the time. The girl was, in the first instance, a British subject; and, next, she was not borne on the ship's articles. Under ordinary circumstances she would have been justiciable by the Courts of the country in whose waters the *Annie W. Weston* lay. As it was the extraterritorial arrangement made her amenable to foreign jurisdiction, either British or American, Why she was tried in H. B. M.'s Court was fully explained by the Acting Law Secretary in his decision on a motion made by her counsel that she was not justiciable by that authority. The remainder of Fair Play's letter demands no extended comment. There are wise reasons why every foreigner in Japan should be under the protection of some foreign Consul; and to provide for this it becomes the duty of the Consuls to endeavour, as far as they can, to establish the nationality of every alien enjoying the hospitality of the open ports, the regulations governing the settlement of which he is bound to respect.

On the night of the 11th instant, the second mate of the *Shinagawa Maru*, while in a state of intoxication, fell over the English hatoba into the sea, where he would have stood a fair chance of drowning but for the courageous conduct of a Japanese *sendo* who, at the peril of his own life, jumped into the water and rescued him. It might be thought that the officer would be grateful to his rescuer; but no, instead of returning him thanks he began to abuse him for not saving his hat, and afterwards became very violent, whereupon he was arrested and taken to the police station; but on his representing that his ship was to sail at 4 a.m. he was taken on board and so escaped the punishment he might have received at the hands of his Consul.

ALL the sea-damaged rice ex *Annie W. Weston* has now been sold at auction by Mr. H. Becker and Mr. F. A. Cope. The five thousand bags sold on the 10th averaged \$2.55 per bag; and the balance, 4,450 bags, disposed of on the 12th instant, realized prices of from \$2.76 to \$2.79 per bag.

We are sorry to have again to record riotous conduct of Russian men-of-war's men during their liberty on shore. On Friday night, the 9th inst., three men belonging to one of the Russian war ships went into a drinking saloon, called for supper and numerous drinks, and then refused to pay for their refreshments. The proprietor sent for the police, and Constable Schultz, with a Japanese constable, went to arrest the men. They at once showed fight, snatched the staff from the native officer and attacked Schultz. Finding the Russians were too much for him the constable sent to the station for aid, and Constable Hazel was sent to his assistance. The men by this time had got into a boat, and were trying to get off to their vessel, but were turned back by the police boat. Constable Hazel says that he sprung into their sampan, followed by Schultz, and both were instantly attacked by the sailors with large sticks, Schultz being knocked out of the boat into the water. After much difficulty the men were arrested and taken to the police station, when it was found that a couple of them had received some contusions, which they said were inflicted by the police, who, however, deny using more force than was necessary to effect capture. Word was sent to the Russian Consul, who immediately went to the station and ordered two of the prisoners to be sent on board, and the other to be brought before him on Saturday, which was accordingly done; and, by his order, the man was then sent on board.

ANOTHER fracas occurred on the evening of the 11th instant, in Benten Dori. From the statement of a Japanese it appears that he was sitting quietly in his house when he heard a noise at the door, and, on opening it, was struck by a Russian with a hard stone, weighing about a pound, just below the left temple, inflicting a severe wound. Almost at the same time a row occurred in a native drinking house close by, and the police were again sent for. Serjeant Loxton and a constable immediately repaired to the scene of disturbance, and proceeded to arrest the offenders, which was not accomplished without much difficulty; and in the scuffle one of the Russians got some skin knocked off his nose. We are given to understand that the Russian Consul complains of the ill-treatment the men received, both on Friday and last night, at the hands of the police. With him, we deprecate all unnecessary ill-treatment of men by the police who arrest them; but

it must be remembered that these officers have a duty to perform to the public, and are themselves liable to sustain serious injury at the hands of men whom they attempt to apprehend, and at times are obliged to protect themselves with the staves which are given them for that purpose. No resident, of no matter what position, should endeavour to intimidate, in the future discharge of their duty, the few men who have the sole charge of maintaining peace among foreigners in our settlement. The sailors arrested were brought before Mr. Pelican on the 11th and 12th instant, and ordered to be sent on board their vessel.

THE *China Mail* of the 27th October makes a rather ludicrous—though probably the person most concerned will not think so—mistake, in ascribing to Mr. Chas. Michel, and reprehending him for, the impertinence of Mr. Hyver of Nagasaki in a recent case, in which the latter was plaintiff, heard before the French Consul in this port.

THE same paper in its issue of the 29th ult., in alluding with regret to the recent death from cholera of Captain Mortimer O'Sullivan, says of the deceased:—"Capt. O'Sullivan will be remembered by many as one of the old China hands—whose ranks, by the way, are becoming sadly thinned and irregular—who are wont to discourse with warmth about the lively days of the old opium schooners. He was one of the young and active spirits on the China Coast about thirty years since, and up to within the last few years he was employed in command of vessels trading between Hong-kong and various ports of the outside world. To Japan he found his way a few years ago, and up to the time of his last illness he was engaged in one capacity or other in the Hydrographic Department. He died, after a week's illness, of cholera."

THE manoeuvres at Narashino having been brought to a conclusion the troops engaged returned to Tokio on the 12th inst.

THE cholera epidemic seems to have bid Yokohama and its neighbourhood farewell for this season. The total number of deaths among Japanese, reported officially in the town and the vicinity, were something less than six hundred between the 6th September and the 8th instant.

At 3.45 p.m. on the 13th inst. a sudden and smart shock of earthquake was felt.

COMPARISONS are not always odious; and one recently drawn by the *H. K. Daily Press* between the action of two Governments, is neat; and, while certainly complimentary to the one, might be instructive to the other. "In how different a light does the action of the two appear; the one tenderly solicitous for the welfare of its subjects in provinces recently in arms: the other giving, for it, generous relief to the famine stricken inhabitants of a province, but leaving it to be distributed by officials who appear to have no bowels of compassion, and whose strongest instinct is acquisitiveness." The writer of these words has been struck by the generous conduct of the Ministry of Japan, in making arrangements for the purchase, from those who may hold them, of the valueless notes issued by the insurgent commander during the late civil war. This he compares with the, also laudable, grant of 400,000 taels made by the Central Government at Peking in aid of those who are suffering from famine in the distressed province of Shansi. Decidedly, it is not the

gift he finds fault with, but the manner in which it is to be distributed. He does not, however, while lamenting that it should pass through the fingers of rapacious officials, suggest what other hands should distribute it. But he does disclose a terrible state of things, and one from which all those who have any regard for this land may be thankful that it is, and probably now ever must be, free. He shows a populace shivering with cold and afraid to accept a covering: famishing with hunger and yet shrinking back from the bread offered by its rulers. "When a former grant was made, the people in many places were unwilling to avail themselves of the offer, and even in some cases paid for exemption from the necessity of receiving the Imperial bounty. The local officers to whom the grant was entrusted for distribution, told the people that the sums were a loan to be repaid with interest on the first good year; and the poor people were unwilling to be debtors to such creditors." "Could curses kill as doth the mandrake's groan," who would not curse and extirpate monsters who fatten upon the misery of those they should cherish? They are worse than ghouls; for these only rifle the tombs and eat the festering corpses of the dead. The others tap and drink like wine, to their own repletion, the thin blood of those who starve, yet live and suffer.

SINCE the end of the brief Japanese occupation of Formosa, that island has been specially favored by the attention of its Chinese rulers, who seem to be prodigal in their benevolence towards it, if lavishing gifts of goods which they care not to employ themselves affords any trustworthy criterion of good will. China, for herself, does not appear to be very partial to telegraphs. Li Hung Chang, who is, after all a cautious sort of conservative innovator, or innovating conservative, has the credit of having caused to be constructed, more for his own amusement than for any national good purpose, the first line laid in the Celestial Empire. It was a nice little toy for a very shrewd and well grown baby to play with, and connected the Viceroy's yamen with the arsenal at Tientsin, spanning a distance of three or possibly nearly four miles of intervening space! Nothing has come of this enterprise, and the towns of the Middle Kingdom are as far, apparently, from being joined by electric wire as they were two years ago, before His Excellency's little experiment. With Formosa, however, it is a different matter. Presumably "Feng-shui" is not there to be dreaded. A line of telegraph, thus the second in fact, but the first of any practical utility, laid in Chinese territory, now connects Taiwan-foo and Takao. It is said to have been inspired by H. E. Ting jih Chang; but, possibly, Li Hung Chang may have had something to do with the innovation, especially as the line is worked by students from the Torpedo College at Tientsin. Ting Futai is evidently anxious for the prosperity of the island whose affairs he now directs, and is also anxious to consolidate Chinese dominion there. A good railway between Taiwan-foo and the port would certainly be useful, and would probably tend more than any other work to the promotion of mining undertakings; but, as has been shown by the foreign newspapers in Shanghai, the idea of removing the Woosung railway to Formosa is one of the maddest projects that could ever have entered the brain of a bedlamite. One writer goes heavily, ploddingly, labouriously, to work, to prove that the little engines of China's experimental railway, now, alas, a memory only, are not adapted to

move a heavy mineral traffic up and down steep gradients, and that first and second class carriages are a trifle too expensive, and not quite suited for the conveyance of ores. He succeeds in demonstrating, as a proposition, what might have been taken as an axiom, that the only part of the to be transported railway which will be of the least use when it gets to its new destination, is the rails. Even these, he wails, are not heavy enough to bear for long the traffic which he presupposes will pass over them. What a world this is! Some people will never be contented!

ON THE RIFLE RANGE.

The committee of the Amateur Athletic Association of Yokohama are to be congratulated on the way in which their late Autumn Meeting was carried out. A very long programme, for an afternoon, was got through most creditably: every event was commenced almost on the stroke of the time announced for it to come off; there were no awkward pauses; and, except for those events which required more leisure than impatient lookers-on are willing to give, everything went merrily. The fields might have been larger, and the competition keener, and consequently better time made; but, where the same men meet so often in the several flat races, it is not to be wondered at that their time is none of the best. A man must be A 1, who runs three times in one afternoon, meeting fresh men each time, and does all three distances satisfactorily. Suppose that a man wins his heat in a 100 yards' race, and, before the final heat is run off, wishes to run either a quarter of a mile, or half a mile, where he meets a competitor who has trained for one of these races. If he runs the race out, to make any show in the final heat for the 100 yards, he must be very good indeed. We have seen such men here, but not often. We should like to see the youngsters, if they will pardon the expression, train next meeting for one event, and to win that. This will not necessitate their remaining inactive during the rest of the programme, for they can pick out something else which will not interfere with the event they mean to win. If this were attempted we should see some very good scores. At present the half-mile is done in 2 m. 23½ secs., but what can be expected when the winner toes the mark some half dozen times during the afternoon, meeting men who have already competed three or four times, and, as at last meeting, who compete twice and thrice after. Naturally the time was bad. The handicappers are, however, somewhat to blame in this. The long odds they give are really well meant to bring those entered together at the finish; but who ever heard of 8 feet being given to a man for a "Hop, Step and Jump!" or 15 yards in a 100, or 150 yards' race, to a sprint runner!! or one hurdle in 10 flights to a hurdle-jumper!!! Still, the result of the handicapping was in some cases very good, but we think there should be a limit to the concessions at least in short spurts. More than ten yards should not be granted in 100; or twelve in 150; and three feet is a big distance for any man to give another in a Hop, Step and Jump. Limiting the handicap in the two flat races, would knock out two or three men, but then they would make all the better show in longer distances.

In the Griffins' race we were glad to see Vincent first at the tape, and expect him to show up next time, if he will train for it, very well in the 100 yards, as he showed much

more form and better gait in that, when he made a dead heat for second place, than he did in the quarter-mile.

Nègre's win for the Spectator's Prize was also merited, as he worked during training very hard; and if he would put himself in the hands of a trainer for next Spring, he ought to prove very formidable at the "quarter." Looking at the competitors throwing the hammer, it was long odds on the Tokio men, but none of them had the knack, or neatness of Smith. The hurdle race was well contested; and, had Charlesworth known his ground better, he would undoubtedly have won it. J. Hall ought to have pulled off the Long Jump; but he seemed not at all up to the form of his last performances in Yokohama. We are surprised that the cricket ball was thrown no further than 97 yards 2 feet, considering the favourable wind that was blowing during the trial. The Ladies' Purse was cleverly won by the Hon. Sec., and the new style of regulating this event, which is always the race of the day, gave general satisfaction. Formerly it was an ordinary handicap flat race; but this time the committee decided to penalise all former winners heavily, and the scheme worked very well, bringing the largest field (as this race always should do) of the meeting, to compete for its most honorable token. There will never be wanting men to take the post of Honorary Secretary; for we believe, everyone who has been the Honorary Secretary of this Association has won the Ladies' Purse. The Pole Jump brought out two good jumpers; and as their styles differed, it was difficult beforehand to place the winner. Charlesworth eventually won it, getting over very cleverly. We would like to see more entries for this. Surely there must be more than one pole jumper among us. Pole jumping is one of the prettiest of gymnastic exercises. The Steeple-Chase wound up the day's Sports, and afforded the usual fun at the water jump. Two questions, in conclusion. Why do not all the men who go in for such work as cricket, base-ball, foot-ball, rowing, shooting, &c. put in an appearance at our Athletic meetings? Where are all the new comers?

NIPPON NOTES.

The civil cases, heard before the Tokio Saibansho during October, were 282 in number. The money paid for bail amounted only to 79½ yen.

THE *Saikai Shinbun* says:—On the outbreak of the insurrectionary disturbances in the South-West our countrymen fixed their attention upon the condition of the Kochiken. Nothing extraordinary has, however, happened there, and all is quiet. Koike, the Governor, is a popular man. He recently dismissed all the Kencho officials, being local shizoku, who were connected with any private societies in the ken, and has filled their places with people whom he summoned from Tokio. This has provoked some discontent among the local shizoku.

Two of Saigo's lieutenants, namely Goto and Sakata, who surrendered, have been brought to trial before the Special Saibansho at Nagasaki and condemned to be beheaded.

IMPERIAL messengers have been sent to the five chief garrisons in Japan to inquire after the health of the officers and soldiers, who were engaged in the late war. Horikawa, *Jiju*, has gone to Sendai; Higashizono, *Jiju*, to Nagoya and Osaka; and Tomikoji, *Jiju*, to Hiroshima and Kumamoto.

The *Osaka Nippo* states that at about 7 o'clock p.m. on the 26th ultimo, about 180 convicts in the prison, each of whom was condemned to hard labour for a term between five and ten years, rose simultaneously and endeavoured to force their way out. A fire-bell was hastily struck by a watchman to attract the attention of the police. About 300 policemen ran immediately to the prison, and prevented the offenders from escaping. One corner of the prison was broken through; but none of the convicts could make their way out. It was 12 o'clock when the offenders abandoned their attempt. It is said that boiling water was pumped into the jail to restore quiet among them.

Four or five cases of cholera are reported to have occurred among the convicts in the prison at Tobe.

THE Abbot of the Honganji monastery recently received a present of a nest of three gold cups from the Daijo-kuwan, as a recognition of his goodness in having subscribed 10,000 yen to the relief of the poor of Kumamoto.

THE *Saikio Maru* brought back about 100 policemen from the South. They landed at Yokohama and returned to Tokio.

A TELEGRAM from Nagasaki states that on the 30th ultimo 127 state criminals were condemned by the Special Kinshin Saibansho to hard labour for terms varying from one to seven years.

THE *Akebono Shinbun* says that a draft of the amended newspaper regulations has been drawn up, and submitted to the Gen-ro-in for consideration. The improved regulations are expected to come into force about March next year.

2,650 officers and soldiers of the second division, consisting of Osaka garrison troops, were killed or wounded in the late war up to the 15th April, the date on which the imperial army entered Kumamoto victorious.

THE following tables of imports and exports from the open ports of Japan, during August 1877, and of duty paid thereon, are published by the Okurasho.

	EXPORTS.	
	value.	Duty collected by custom houses.
Dutiable articles.	25,593,187.45.2	855,108.45.4
Articles free of duty...	1,506,395.34.6	
Articles used by vessels in harbours. ...	404,450.34.0

On the 2nd instant His Majesty the Mikado in person bestowed decorations on Prince Arisugawa-no-Miya and eight officers of the War, Navy and other departments, viz., General Yamagata, War Minister, General Kuroda, President of the Agricultural Department, Admiral Kawamura, and Okubo, Home Minister, Oki, Judicial Minister, Terashima, Minister of Foreign Affairs, and Ito, Minister of the Public Works Department. H. M. the Mikado addressed Marshal Prince Arisugawa-no-Miya as follows:—

"The *Kotai* of the Japanese Empire, whose rule has come down in one uninterrupted line for thousands of years, under the protection of heaven, promotes you, Prince Taruhito, Commander-in-chief, and President of the Gen-ro-in, holding the rank of *Nihon*, and having the decoration of the first class, to the rank of *Daijun-i* of the era of Meiji, and gives you the decoration of *Kikukwa-Daijusho*. You may command the reverence and special privileges belonging to that rank."

The patent whence this was read bears the imperial signature.

Similar addresses were made by the Mikado to the Generals and Ministers, who received the decoration of *Asahi-Daijusho*.

THE M. B. M. S. S. *Chitose Maru* sailed for the Bonin islands on the 7th instant.

On the 21st ultimo, three of the Kumamoto shizoku were beheaded by sentence of the Kiushiu Special Saibansho at Kumamoto; and twenty-eight others were sentenced to terms of imprisonment between one and five years.

THE *Chikuba-kuwan*, Japanese man-of-war, will leave for Australia at the commencement of next month.

MR. GREEVEN, of the Industrial section of the Home Department, who has superintended the building of the silk factory at Niimachi, Joshu, recently opened, on the expiry of his engagement with the Japanese Government has received from the Home Minister a present of 300 gold yen. Then a sum of 100 yen has been given to Mr. F. Marchin, of the same section, who set up the machinery in the factory.

It is rumored, says the *Mai Nichi Shinbun*, that the foreign residents of Tsukiji settlement in Tokio have been accorded permission to live, if they please, in the Japanese quarters of Shintomicho, Otomicho, Irifuncho, Odawaracho, Hon-Hachobori and Kobikicho.

On the 26th ultimo Ikebe and Ishie, lieutenants of Saigo, were beheaded at Kumamoto.

KOIKE, Governor of the Kochi Ken, arrived in Tokio on the 3rd instant.

THE branch of the War Office which was established in Osaka after the outbreak of the civil war, was closed on the 31st ultimo.

On the 6th inst. H. M. the Mikado, on visiting Marshal Prince Arisugawa-no-Miya, presented him with a sum of money and a roll of white chirimen (crape). To His Highness' father, Takahito, the emperor also gave money and a roll of yamato-nishiki (brocade) and to the Prince's son two rolls of chirimen, one red and the other purple.

THE *Choya Shinbun* says:—A few days ago the native steamer *Maidzuru Maru* left the coast of Higo with a number of wounded imperialists. She encountered a strong wind; and the passengers were landed at Mogi in Higo. She proceeded to Nagasaki, where she was chartered to take ammunition to Kokura in Buzen. But, a few minutes before she was to leave Nagasaki, she took fire, and was blown to pieces by the ignition of her cargo of powder. No lives were lost.

CAPTAIN Shinno (Imperial army) a Kagoshima shizoku, was deprived of his rank on the 1st instant, it having been discovered that he had aided Saigo against the Government.

THE number of visitors to the National Exhibition during the week ended the 2nd instant was 24,801.

THE Japanese man-of-war *Nisshin Kuwan* will shortly leave for Kagoshima.

BARRACKS of a capacity to lodge one battalion of infantry have been built at the foot of Shiroyama, Kagoshima.

CHOLERA has rapidly declined in Tokio. Only eight cases were reported from dawn of the 6th to dawn of the 9th instant, and no deaths are reported among either old or new cases.

H. E. SANJO has organized a meeting to be held once a month, on the 16th, by *kuwazoku*. It will be called the *Konshinkai* (friendly assembly.)

A BANKRUPT will in future not be eligible for any government appointment.

DECORATIONS will shortly be bestowed upon army and navy officers.

It is rumored that, on the closing of the National Exhibition at Ueno, a Tokio Exhibition will be opened at Tatsunokuchi, Tokio.

ONE of the three men-of-war, ordered by the Japanese Government in England, having been called the *Fuso Maru*, the steamer of that name belonging to the M. B. M. S. S. Co. will in future be known as the *Tagonoura Maru*.

THE shizoku of Yonezawa, ex-retainers of the ex-Daimio Aidzu, formed a company and commenced to establish a silk factory in Yonezawa during last year. The buildings were recently completed, and the machinery, brought from abroad, was set going. This establishment is expected in the course of a few years to produce silk as excellent as that of Tomioka, in Joshu. The factory is well organized both as regards its working capital and rules.

On the morning of the 8th, at 9 o'clock, General Prince Higashi-fushimi-no-Miya left the imperial palace at Akasaka for the drill ground of Narashino, in order to preside at the approaching review in place of H. M. the Mikado. General Saigo accompanied His Highness.

THE following account of the sentences passed upon, and acquittals of, state prisoners brought before the Kiushiu Special Saibansho up to the 31st of last month, is published in the *Saikai Shinbun*:—

Decapitation...	20
Hard labour for 10 years	28
" " 7 " "	10
" " 5 " "	86
" " 3 " "	248
" " 2 " "	946

THE Editor of the *Osaka Nippo* has been brought to trial before the Osaka Saibansho, and sentenced to 30 days imprisonment for having violated the 4th article of the law against slander.

On the 9th H. M. the Mikado gave a splendid banquet at his palace of Akasaka to Marshal Prince Arisugawa-no-miya and one hundred and seventeen army and navy officers, who were engaged in the late war in the South-West.

On the same day Captain Du Bousquet and Rev. G. F. Verbeck of the Gen-ro-iu, were honoured with an interview with the Mikado, on the expiration of their respective terms of engagement by the Government. H. M. the Mikado addressed them each thus:—

"During many years you have industriously transacted important business for our Government. Now we, being informed of the expiry of the term of your engagement, commend you greatly for your meritorious service."

LIEUT. GENERALS Yamada, Miura, Tani, Nodzu, Soga, Miyoshi, Oyama, Kawaji, and Takashima, and Vice-Admirals Ito and Akamatsu have been elevated to the second class of the order of merit; and the decoration of that class "*Asashi-Yukosho*," or Rising Sun, has been given to each of them.

SMALL pox is reported to be prevalent in the Hiroshima-Ken.

A TEMPLE costing 100,000 yen will shortly be built at Shibuya, Tokio, in honour of *Daijin-gu*, an ancestor of the Mikado.

SINCE the establishment of the Imperial Mint at Osaka in the 3rd year of Meiji (1870) to June this year, the following gold, silver, and copper coins have been minted:—

		Yen	Sen
Gold,	20 yen	142,700	00

Total		86,597,218	56

THE number of visitors to the National Exhibition during the week ending the 9th instant was 37,850.

THE *Tagonoura Maru* of the M. B. M. S. S. Co. arrived in Yokohama with 489 policemen from Kagoshima on the 11th instant.

EARLY in the 11th year of Meiji (1878) a National Industrial Exhibition will be opened at the Public Gardens of Matsuyama in the Ehime Ken, Iyo.

On the 22nd instant, a banquet will probably be given at the Ohama-goten, by Messrs. Sanjo and Iwakura, to officers who were engaged in the war in the South-West.

THE *Mai Nichi Shinbun* says that no cholera patients are now under treatment in the hospital for infectious diseases at Ota, which will shortly be set on fire.

ACCORDING to an investigation made at the Kagoshima Kencho on the 25th September, the insurgents who were raised in Satsuma and Osumi only numbered 23,388. Of these 271 were officers, 1,831 petty officers, 165 medical men and 15,600 soldiers. 2,741 officers and soldiers were killed in the field, and 2,711 are missing. The number of the Higo and Hiuga insurgents, who followed Saigo, is not yet known.

On the 10th instant a meeting of dealers in silkworms' egg cards was held in the upper story of the Machigaisho, Honcho-dori.

THE returns of casualties among the police forces who were killed during the Kagoshima insurrection are as follows:—93 officers, 23 policemen of the 1st class, 106 of the 2nd class, 237 of the 3rd class, 163 of the 4th class, 87 attendants and 18 coolies: in all 727.

WAS IT, OR WAS IT NOT, CHOLERA?

To the Editor of the *Japan Gazette*.

SIR:—Returning to Yokohama, my attention has been called to the letter of "Observer" in the *Herald*, evidently written by a warm friend, but his friendship borders on indiscretion, since the communication places me in a position of seeming antagonism to Dr. Eldridge, whereas I have the highest respect for the doctor, personally and professionally.

The wisest of medicos make strange blunders, simply because medicine ever has and ever will be experimental. A curious case illustrates this tendency to professional blunders, occurring in the practice of one of the most eminent physicians and surgeons in the United States, the late Valentine Mott. He diagnosed a case *thirty years ago* as *peritonitis*, and said the patient "could not live a week"! Two other physicians, also eminent, called in consultation, agreed with Dr. Mott. I dined with the *peritonitis* gentleman last year in China, an eminent merchant, and in full possession of all his faculties, body, and mind.

Another case. A great physician and surgeon, a man, too, with an extended European reputation, was consulted by a relative of mine fifteen years ago in New York. He diagnosed the disease as *albuminuria*, and gave my friend about one year to "shuffle off this mortal coil." Fifteen years have passed away and the sick man still lives, and has apparently as much vitality to-day as Turkey in her magnificent fight with Russia.

Dr. Eldridge, a physician in the front rank of his profession in Japan, simply made a mistake. He has been very earnest in stamping out cholera in Yokohama, and his suggestions about the prevention and treatment of the disease, as published in the papers when the disease first appeared, were admirable.

The doctor, however, erred in not consulting me before he wrote that unfortunate note, stating, as Secretary of the Board of Health, that John Gorman died of cholera. He also erred in not accepting my proposition for a *post-mortem*, as the thorough examination of the *cadaver* would have settled the question. I was placed in a false position through this course of the doctor's, but owing to healthy and prompt action the steamer was not "quarantined for five days." The Governor of the Kanagawa-ken and the Postmaster-General Mayesima adjusted their official difference, and the *Nagoya-Maru* proceeded quietly to Shanghai with colors flying *yorashi*.

I may be permitted here to thank Dr. Tripler, a physician as eminent and skilful as Dr. Eldridge, who fully sustained my view of the case, after making a most searching examination without the slightest reference to my own theory.

A thoroughly trained medical man, well up in physiology and versed also in the often obscure study of the human face, can detect disease often, without feeling the pulse, looking at the tongue or applying either auscultation or percussion. If the patient is threatened with *mania a potu*, does it not disclose itself as well by the sodden visage, bleared eye, as by the tremulous condition of the muscles? If the patient is too devoted to Venus and is threatened with that horrible disease "softening of the brain," can you not tell from the wanton eye, the peculiar shape of the jaw, and the lascivious arching of the lips, as well as by any other, so called, medical symptoms? So will the glutton disclose himself to the observant physician, and so on, *ad infinitum*. The pulse and skin and secretions are merely aids, and often mere threads in diagnosis.

Gorman's case bears on the above theory: for months I knew the man was running down. I suspected organic disease of the heart, and possibly *Morbus Brightii*, yet I had no right to force medicine on him, and when I questioned him, the reply was always, "all right." His blood was unquestionably poisoned by excess of alcohol, and so he died; but *cholera did not kill him*.

This *Nagoya Maru* cholera scare, however, gave the Yokohama people a fruitful subject for discussion. I heard of it everywhere; on the Bund, at the Hatoba, at both the Clubs; at those fruitful hot-beds of gossip, all over the world, the barber-shops; and at the historic tea-house of "Black-eyed Susan," on the Tokaido.

In conclusion I beg to tender to Dr. Eldridge my sincere regrets that my unknown and evidently warm-hearted friend published the "Observer" letter. Although I thank "Observer," I ask him not to take up the pen again, unless I request it. With an experience of twenty years of a journalist, I am quite able to defend myself, and sign my name in full.

G. H. COLTON SALTER, M.D.

Y. U. Club, Nov. 12th, 1877.

To the Editor of the *Japan Gazette*.

SIR,—The courteous and learned communication of Dr. G. H. Colton Salter, Surgeon of the *Nagoya Maru*, published in your issue of last evening, calls for some notice from me. This notice shall consist chiefly in a bare statement of facts.

On being called to see Gorman, I received from the other officers of the ship a distinct history of preceding choleraic diarrhoea, together with as perfect a description of the collapse stage of cholera as could be expected from non-professional men. The patient was dead when I arrived; the appearance of the body might have resulted from cholera, or from certain other diseases; several signs were, however, present, which, taken together with the history of the case, afforded fair presumptive evidence as to cause of death: notable among these was the fact that the bladder contained not one drop of urine, a point which will be appreciated by medical men as of great importance.

Taking the history of a severe antecedent diarrhoea—of the finding of the man in a condition of apparent collapse, after a night spent without medical attendance—the condition of the body, especially in reference to the absence of urine, together with the fact of the undoubted existence of cholera both in this port and in that from which the ship had come, I felt it my imperative duty to state, both verbally and in writing, that Gorman's death was *probably* due to cholera, and to recommend that the ordinary precautions be taken without delay. A conversation with Dr. Salter, held later in the day, only confirmed me in the opinion that the case was one of cholera, as I received from him a clear history of choleraic diarrhoea,—a history which was frankly repeated by Dr. Salter upon the certificate of death furnished to the U. S. Consul. Another fact, not without its bearing in the case of Gorman, is, that at the time of the death upon the *Nagoya Maru*, Dr. Goertz and myself were in attendance upon a man who came as passenger by that ship, who landed, suffering from unmistakably choleraic disease, so severe that he has narrowly escaped with life.

Against the positive evidence as to cause of death, which is given above, I find nothing but a vague suspicion, on the part of Dr.

Salter, that Gorman was suffering from heart disease, or Bright's disease of the kidneys. Perhaps the man did suffer from these troubles: possibly he died from the former; but there is not an atom of positive evidence that such was the case. That Gorman, as stated by Dr. Salter, declined treatment at his hands for these suspected troubles, is perhaps ascribable to the fact that, during a considerable period, Gorman had been in the habit of consulting me when he found himself in need of medical advice. I must say that I never saw reason to suspect the existence of either of the diseases mentioned by Dr. Salter, though since reading the wondrous instances of professional blundering cited by the doctor, it has struck me that the man Gorman may have suffered from "peritonitis albuminuria" and "softening of the brain" without my having detected it.

There is undoubtedly, however, some foundation for the assertion that Gorman was injured by the excessive use of alcohol, and was, consequently, in a condition eminently predisposing to the attack of any epidemic disease.

The precautions which I recommended in the case were, that the bedding should be destroyed promptly, and the room of the deceased fumigated. Detention of the ship in quarantine was not urged, or even mentioned by me, simply because I was not consulted in the matter; though I think that stringent measures would have been perfectly justifiable under the circumstances.

I am not aware that I placed any obstacle in the way of a *post mortem*. At 2.45 p.m. on the day of the death, Dr. Salter stated to me that he "should have liked to have had my assistance in an examination of the body;" but as he coupled this remark with the statement that the funeral was to take place at 3 p.m., I replied that there was hardly time, and that I was satisfied as to the cause of death. I should gladly have assisted at a *post mortem* had it appeared to have been seriously contemplated; but it in no way fell to me to demand such an examination. Had the positions of myself and Dr. Salter been reversed, however, I should certainly have requested from the U. S. Consul permission for an autopsy. I confess I am at a loss to understand in what consisted the "searching investigation" of the case, which is stated to have been made by the "eminent and skilful" professional friend of Dr. Salter. A *post mortem* certainly was not made. I cannot even learn that the almost crucial test of an investigation of the condition of the bladder was employed by any other than myself. It appears to me that the "searching investigation," which has enabled Drs. Salter, Tripler, or "Observer," to decide so promptly that Gorman's case was not one of cholera, is on a par with the equally "searching investigation" that enabled one of these gentlemen to assert that the case of the lamented Dr. Massais was not cholera, though the industrious propagator of this report had not had the courtesy to see, or even to call to inquire after his suffering colleague: that consigned to the cholera ward of the General Hospital a patient suffering from slight rheumatic fever; and that enabled two cases of death and burial at sea, days before the arrival of the ship in port, to be reported as "undoubtedly cases of Asiatic cholera," though no medical evidence whatever was available.

To briefly resume,—a case having certainly a suspicious history, and, as certainly, suspicious symptoms, occurred under circumstances specially favouring the infection of others. I saw this case, and, stating that the man *apparently* died of cholera, recommended that precautions be taken. Dr. Salter, feeling—I think unnecessarily in view of the well-known

treacherous nature of choleraic disease—that he might be accused of neglect of duty, is anxious to avail himself of every doubt in the matter. The motive of any other professional man in connecting himself with the case, it is difficult to imagine.

In concluding, I beg leave to call attention to the subjoined copies of the certificates of death given by Dr. Salter and myself: to apologise to the public for having been drawn into a newspaper controversy upon professional topics: to remind them that this controversy was forced upon me; and to decline peremptorily any further discussion of the subject:—

“Yokohama, Oct. 16, 1877.

“I hereby certify that John Gorman, said to be a citizen of the United States, died very suddenly on the *Nagoya Maru* this morning. The symptoms were somewhat obscure. I had been treating him for choleraic diarrhoea, and he was apparently in a convalescent state yesterday afternoon at 5.30. There was no diarrhoea, no fever; he had passed his urine freely, had partaken of a substantial breakfast, and proposed to return to work to-day. Under the circumstances I do not feel justified in stating that John Gorman died of cholera, but prefer to state that he died very suddenly, the cause unknown, but supposed to be disease of the heart.

“(Signed) G. H. COLTON SALTER, M.D.,
“Physician of the *Nagoya Maru*.”

“H. W. DENISON, Esq., Acting Consul General.

“SIR,—I beg leave to report that one Gorman, an American citizen, died this morning on board of the *Nagoya Maru*, apparently from cholera.

I am, Sir, respectfully,

“(Signed) STUART ELDRIDGE, M.D.

“Oct. 16th.”

I am, Sir, respectfully,

STUART ELDRIDGE, M. D.

Yokohama, Nov. 14th, 1877.

To the Editor of the *Japan Gazette*.

DEAR SIR,—When a professional gentleman enters the lists of epistolary controversy, it is at least expected that he should be consistent in his statements and logical in his reasoning, and should observe the ordinary rules of composition applicable to the language in which he writes. To expect from all men compliance with the rules of etiquette, by the observance of which a pretence at least of cordiality is preserved among individuals, is perhaps to hope for too much.

Dr. Eldridge, in replying to the letter on the *Nagoya Maru* case, which had been drawn from Dr. Salter by the enthusiasm of “*Observer*,” has thought proper to accuse me of ill-feeling, or rather the want of feeling, towards one of my late colleagues, and of professional incompetency in regard to two cases therein referred to.

Before defending myself, I will notice briefly one or two points in Dr. Eldridge's letter. Starting with the acknowledgement that the history of Gorman's case, as given by unprofessional men, combined with his observations on the body after death, afforded only fair presumptive evidence of the cause of death, he proceeds to expand it into positive for the purpose of casting a slur on the reputation of Dr. Salter. Even were the application of the “crucial test” alleged, which it is not, as a reason for his springing from presumption to positiveness, it would not be sufficient, for his “crucial test,” so valuable in cases of collapse, does not apply to a patient who never was in the stage of collapse, and was walking about his room the morning of his death.

As to the charges alleged against myself. Being seriously anxious about the state of health of Dr. Massais, I was watching the

progress of his disease, and was constantly in communication with one of the gentlemen attending upon him. It is true that I did not see him, but this was attributable to the fact that I was not requested to do so, and knowing that Dr. Eldridge was in charge of the case, I did not choose to expose myself to a chance of again experiencing Dr. Eldridge's treatment, according to his notion of etiquette, especially, being aware that he opposed almost resentfully any suggestions or inquiries in any case which he had stamped as cholera;—one sample only is necessary, that afforded on his own showing, by his treatment of Dr. Salter in Gorman's case.

As to the cases on board of the *Annie W. Weston*, I formed my judgment of the causes of death of the two men who died at sea upon the statements made to me by her captain, of the symptoms related, and to the occurrence on board previous to sailing, these being my only means of forming an opinion of the causes of death. I reported these as probable cases of cholera, and not, as is alleged by Dr. Eldridge, as “undoubtedly cases of cholera.”

The man Schroom was removed to the Hospital at the express desire of the master of the *Annie W. Weston*, who refused to allow him to remain longer on board, and he was sent to the hospital against my advice and wishes; furthermore, the certificate I gave on his admission was not one of cholera, but as a doubtful case—and I challenge Dr. Eldridge to produce the records of the Y. G. Hospital and prove otherwise. (For further information upon this subject, see Captain Winsor's letter.)

The grounds for Dr. Eldridge's attack upon me are as shallow as any which could be brought forward by the most petulant opponent; and if the secretary of the Board of Health cannot compose a statement more in accordance with facts, it is not to be wondered at that the Japanese officials and the public of Yokohama have ceased to place much reliance on his diagnosis of cholera.

I am, yours very respectfully,

T. H. TRIPLER, M.D.

Yokohama, November 14th, 1877.

Barque *Annie W. Weston*,
Yokohama, Nov. 14, 1877.

In regard to Wm. Schroom, one of my seamen, I beg to state as follows:—On the forenoon of Oct. 29th he was attacked with vomiting, purging, and pains in his stomach. I became alarmed at his condition, which was intensified by the fact that I had already lost two of my ship's company with, what I believe to be, true cholera.

Dr. Tripler, my medical attendant, “did not” pronounce it to be a case of cholera, but, as I was anxious to preserve the health of my ship's company from all possible danger, I determined to run no risks, and insisted on the man being removed to the hospital immediately, which was done, “not” upon Dr. Tripler's advice, but my orders.

(Signed) H. O. WINSOR,
Master of *Annie W. Weston*.

On the 2nd instant Mr. Yamamoto, editor of the *Nippo*, received the following sentence: You have published an opinion about the different ways in which similar sentences of imprisonment were carried out and have said that such differences heretofore existed or will exist in future. You have published these things which have regard to official duties, and have discredited officials, as is provided for in the 4th article of Zamboritsu. For this offence you are sentenced to imprisonment for 30 days.

It is said that a French man-of-war will survey the coasts of the Inland Sea.

LAW REPORTS.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON Esq., Acting
Consul-General.

Friday, November 2nd, 1877.

In re J. R. ANGLIN vs. NORMAN WIARD.

Judgment in this case was rendered in favour of the plaintiff on the 15th of October, and on the 18th the defendant filed a motion for a new trial. Notice of this motion was served on the plaintiff, who filed an objection to a rehearing of the case, on the ground that the defendant had not complied with the Rules of the Court, by which the defendant, to entitle him to a rehearing of the case, should have filed a motion for a new trial within two days from the rendition of the judgment.

The hearing of the motions took place this morning, and His Honour reserved his decision.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.
Messrs. BLAKEWAY and GERARD, Assessors.

Tuesday, November 6th, 1877.

PILLON vs. MICHEL.

This is a claim arising out of the liquidation of the estate of Messrs. Maigre & Co. Plaintiff sues defendant, the liquidator, for \$100, rent, for January, 1877, of No. 174, of which plaintiff is proprietor. He alleges that defendant, neglecting to credit him with that sum, is responsible to him for it. He further claims \$36.86, interest for five months at one per cent per month (as by agreement) upon a sum of \$737.33, and prefers another account for \$40 for two months' rent, which Mr. Boudou, a partner in the firm of Maigre & Co., refused to pay him for the occupation by his utensils of his property, and for which he held Mr. Michel responsible. The total of his claim is thus \$176.86.

Both parties appeared personally.

The case was adjourned, on the 30th ult., until this morning for decision.

JUDGMENT.

The Court having heard the parties in their demands, pleadings, and explanations, after having deliberated thereon conformably to law, judging publicly and in first instance: Seeing that it results from the inspection of the ledger of Maigre & Co. that the rent for the month of January has been duly entered in the accounts of the said firm:

That, in fact, the claim of Pillon, including rent of the property No. 174 to the 31st December, attained the sum of \$1,200, and that his debt was \$562.67, leaving the sum of \$637.33 to his credit: that adding to this the \$100 claimed by Pillon for the month of January makes a total of \$737.33, but that from this the sum of \$44 has to be deducted, the amount of a bill which Pillon acknowledges to have received on account of Michel, and to have paid over to Favre-Brandt, leaving a total credit on the 1st February of \$693.33, while he was credited with \$703.35 at the time of the division, showing a difference of \$10 in favor of Pillon:

Seeing that, from this, the latter has no right to claim rent for January:

As regards interest at 10 per cent. whereof Pillon claims payment from the liquidation:— Seeing that he does not produce any documentary evidence in support of his claim,

and that, in consequence, the demand put forward by him cannot be admitted:

As regards the sum of \$40 claimed by the plaintiff for rent of the workshop during the months of July and August:

Seeing that he does not support his claim by any contract stipulating that the rent should be paid to him by the firm in liquidation: that it is, further, impossible to admit that the firm should have undertaken to pay such a rent for a place simply employed for the purpose of keeping machinery, which in any other place might have been stored at much less expense:

For these reasons,

Dismisses the claim of Pillon, and orders him to pay the costs.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, Nov. 5th, 1877.

Arthur Bell, Nadal Dubrici, Robert White, Alex. Ridderbjellie, William Taylor and Robert Edmunds, seamen of the British barque *Naworth*, were charged by the master with refusal of duty.

On October 29th the accused were sentenced to one week's imprisonment for being absent from the ship without leave. To-day, their term of imprisonment having expired, they were taken on board the *Naworth* by the Police, and, on being requested to turn to, one and all refused, but assigned no reason for refusing.

In answer to a question put by His Honour all the accused said they would never do any more work on board the *Naworth*, and thereupon were sentenced to fourteen days' imprisonment with hard labour—to be sent on board should the ship leave before the expiration of their term of imprisonment.

Before H. S. WILKINSON, Esq., Act. Law Sec., and the following Jury, viz.:—Messrs. H. McGregor; J. W. Sutherland; Ed. Marcus; S. K. Dinsdale; and W. T. Austen.

Friday, November 9th, 1877.

REGINA versus SURIMAN, a Malay.

The prisoner was charged with feloniously wounding one Ketchell, with intent to do him grievous bodily harm on the 11th of August, 1877.

Mr. J. J. Ensle, Barrister-at-law, First Assistant, H. B. M.'s Court, acted as Crown Prosecutor.

Mr. Bishop acted as Malay interpreter.

The prisoner pleaded not guilty.

Ketchell was brought into Court with the assistance of two coolies, he being unable to walk without aid.

None of the five gentlemen of the jury having been challenged, the rest who had been summoned were discharged.

Mr. Ensle then addressed His Honour and the gentlemen of the jury, stating the case for the prosecution, which was, briefly, based upon the evidence adduced in the preliminary examination on the 30th August last.

Dr. S. Eldridge was then sworn and stated that he was attached to the General Hospital. He knew Ketchell, who was received into the Hospital in August suffering from a wound which had been inflicted by a knife or some other sharp instrument, the situation being on the right side of the spine, opposite the eighth dorsal vertebra. The direction of the wound, as far as could be judged at the time he was seen, was at the right side

of the sufferer, nearly upon a horizontal line, inward and forward, that is towards the centre of the body and forward. The wound itself was apparently trifling, but the remoter effects were exceedingly grave, as could be seen from the condition of the man, as there was total paralysis of the whole of the right leg; this paralysis having existed with very slight improvement to the present time. The medical history of the case directed the connection of the paralysis with the stab wound; and the most careful examination failed to reveal any other injury, or any condition of disease which would account for this symptom. After the most careful consideration and consultation of several of their medical colleagues, the Hospital surgeons were compelled to conclude that the paralysis was due to a slight wound of the spinal cord, inflicted by the point of the wounding instrument.

Ketchell, a Javanese, was warned and said that he was formerly a seaman of the S. S. *Sunda* and was now an inmate of the General Hospital. He was suffering from a stab in the back. About 9 o'clock on the 12th day of the month he went to get a little water. He felt a blow, fell down, and cried out, "serang, senang, "I am stabbed by Suriman!" He was conveyed below. The doctor arrived about ten o'clock, stitched up the wound, and he, Kitchell, went to sleep.

To the Crown Prosecutor.—I was on board the *Sunda* when I was stabbed: it was then ten minutes to nine at night. I was at the pump close by the passengers' lamp. This particular lamp was close to the pump, and it was by its light that I recognized the person who stabbed me. The prisoner is that person.

In reply to the Court, prisoner said he had no question to ask of the witness: he would make a counter-statement.

Percy William Case, chief officer of the steamer *Sunda* was sworn. He said:—I was on board the vessel on 12th August last between half-past eight and ten o'clock. I was sitting on the quarter-deck and heard some one call out. I went forward, and found Ketchell laying on deck with a wound in his back. There were several other people there before me. I gave orders to have the wound bandaged up, and asked who had inflicted it. Another officer came from aft, and told me a man had gone down the ladder and got into a boat, which was going towards the shore. I saw the boat, ordered it back, and prisoner came out of it. I put him in irons and kept him on the quarter-deck until the police arrived.

To the jury:—I had heard that the two men had been fighting during the day on shore. I have not been able to find out that any one saw the stabbing. When prisoner came out of the boat I found no sharp-edged weapons nor blood stains on him. I do not know whether the prosecutor was sober at the time he came on board; or whether the prisoner was. The latter when he came out of the boat did not appear to be intoxicated. As far as I can find out no one saw the accused go away from the prosecutor. He was not seen till he got into the boat. No knife was found. I could get no answer, in the confusion, to my question, "who had stabbed the man?" The lamp referred to in the evidence was below the hatchway, and would show upward. It was a dark night. The galley light was not far away. The light was such that by it I think I could have distinguished any one I knew.

To the Court:—Dr. Eakin first attended the prisoner. He has gone to England.

The prisoner was searched for a weapon. No search was made elsewhere.

This closed the case for the prosecution.

The prisoner had no witnesses to call.

He made a statement in defence to the following effect:—

The prosecutor and myself were on shore together. The prosecutor stabbed me in the face and back. It was on account of a woman, who preferred me to the other man. He stabbed me on shore on Sunday. At two o'clock that day I returned on board. The prosecutor returned at six, as I have heard. After he came I wanted to go back on shore to see the woman. I was going; but was stopped by the mate. I heard, then, that the prosecutor had been stabbed. I knew nothing about it. I was put in irons and taken to the jail.

His Honor then proceeded to charge the jury. He briefly summed up the evidence, and left it to the jury whether they had sufficient to convict. If they had, the question of intent would have to be considered. In the eye of the law a man's intentions could only be known by his acts. It was for the jury to decide, in the event of finding that the prosecutor had been wounded by the prisoner, by what intent he was actuated; whether to do grievous bodily harm, in which case they would return a verdict of feloniously wounding, or whether, though he did stab, yet had no intent to injure the prosecutor, in which case they would find him guilty of a misdemeanour.

After some deliberation the foreman of the jury stated that they wished to return a verdict of "not proven."

His Honor declined to receive that verdict, which is not permissible by English law, which he explained to the jury, desiring them to return a verdict of "guilty" or "not guilty."

The jury wished to ask the prosecutor whether any one was present at the time of the stabbing but himself and prisoner.

The question was put by the Court and elicited a negative reply.

The jury then wished to return a verdict to the effect that there was not sufficient evidence to convict the prisoner, and so that he should have the benefit of the doubt and be declared "not guilty."

Of course such a verdict as this could not be received. After some further deliberation, a verdict of "not guilty" was ultimately returned, and the prisoner was discharged from custody.

Before RUSSELL ROBERTSON, Esq., Consul.

Assessors:—Lieut. ARTHUR HAVERGAL, R. N. H. M. S. *Sylvia*, and Mr. H. T. WILLIAMS, master of the British schooner *Beatrice*.

Tuesday, November 13th, 1877.

This was a Naval Court of enquiry into the cause of the continual refusal of duty by several men on board the British barque *Naworth*.

A Redderbjelke sworn said: I went on board the *Naworth* on the second of May this year. There was heavy weather on or about the 30th of June, and I was sent aloft to grease down the mast. This was after I had been disrated from the position of mate. The reason why I was disrated was because the Captain said I was incompetent. One night the Captain told me that if the wind altered right abaft, I should alter the course two points so as to get the wind on the other side. This I did and hauled the fore braces first instead of the main braces, as I considered it did not matter which was done first in

that instance; and when the Captain came on deck he said, "why the — do you haul the fore braces before the main? You understand nothing." Another time, it was after twelve, one night when I had had the watch from eight till twelve, the wind shifted so that I had to haul round the braces for another tack, and when that was done I asked the boatswain if, as the yards were trimmed and nothing left but the staysails to haul over, he could not manage himself with his watch, so that I could let my watch go below. He said he could do very well. I told my watch to go below and went myself, there being so little wind that there was nothing to be afraid of. At 4 o'clock I came up to take my next watch, and the boatswain told me that the jib was split during his watch. The Captain asked me if any of the sails were made fast. I said, yes, and told him which, and amongst them mentioned the jib. The Captain said "yes that is through your — carelessness. You don't know anything and I would not put my sea-boots under your charge;" and called me an old —. I told him it was not my fault the jib was split as it was not done during my watch. The Captain then said:—"The first thing you do is to pack up your things and go in the fore-castle." That was all that was said at that time. As the Captain said no more I took no notice of what passed. Another time the ship was lying without answering her helm, there being so little wind; and just before the Captain came on deck there came a little breeze. The ship was lying E. by N. while the course was S. by W. The wind that came was about W.N.W. The ship had been lying on the starboard tack before and I had to trim the yards. I had the main yards square and let them stop, so as to get headway on the ship so that she would answer her helm; and as soon as the ship answered her helm she came round till the wind was right abaft. The Captain came on deck and said "you — fool, do you believe you can get the ship to luff by keeping the main-yard square?" The wind was a little on the starboard side when I gave the command to haul the port main-brace and lay out the spanker. I think that my action was perfectly justifiable under the circumstances, and that the Captain had no right to call me names. I could not haul the port main-braces until the wind was abaft. Then, another time, when there was very little wind, and the ship was lying on the starboard tack. On the weather side there was lightning as well as on the lee side. All sails were set. The Captain came on deck and said, "why the — do you not take in the spanker?" I did not answer. He then said:—"If the wind was to come from the other side it would be necessary to have the spanker in." As I did not expect the wind from the lee side, I did not take the spanker in, and told the Captain that was my reason. He said, "you don't understand anything about the ship." He then asked me who was on the look out. I answered "White," which was wrong, and I afterwards told the Captain that it was Tom Lane. He said "so you don't know who is on the look-out, and never did, and have not been forward to see the look-out was at his place. You can go into your room. I will keep the watch myself." I said, "all right, sir," and went down. When I had been down a little while the Captain came down and said, "well, I can't get rid of you before we get into Yokohama, and I'm — if I keep you lying in your bunk, so you can go and take the watch." I went up, and took the watch and nothing more

was said then. Another time, in the morning watch, as soon as it was daylight I commenced repairing an old jib to send out instead of a better one; and this repairing took up the time till a quarter to eight, when the better jib was got in and I put out the old one. The Captain at eight o'clock came on deck and, said "why the — dont you haul those weather braces tight, and stretch out the stay-sail halyards. I answered, "I have had no time, sir, because I have been repairing the old jib. The Captain said, "you did not commence the jib at 4 o'clock so that you had plenty of time to tighten the braces before." I told him that it was dark before that time, and, besides, the crew were having their coffee. He said:—"As you can't keep the braces and halyards trimmed, I'll find some one else to do that, and you can go in the fore-castle." As I thought that quite sufficient, I took the log book into the cabin to the Captain and said "here is the log-book if you want to send me in the fore-castle." The book was made up then till date. The Captain said:—"All right, then, but I did not intend to send you forward; but as you are so smart you can just go there." I said, "well I might have misunderstood you, sir, and if you did not mean to send me forward I'll stop aft." "No, no," he replied, "you can just go now, and I'll make you suffer for it before I leave you." I gathered up my things, and went into the fore-castle, leaving my books and some other small things in the room where I had been. Afterwards I got the things I had left behind, except some English books which the Captain had in his cabin, and a map of London which I could not find; and the Captain said that it was not amongst the books he had, and it was afterwards found in the boatswain's chest. Some few days after I was sent forward, I was sent to grease the top-masts; and every week was sent to do the same; and once during heavy weather, the ship rolling heavily and it raining, I went and greased the top-gallant and royal masts and afterwards the mizzen-mast, and before I went I said, "I'll not be answerable if I go overboard." The man, Thomas Lane, cried out to me to be careful and the Captain said "never mind," swearing. "He came with me and can't grease down the masts. If he don't do it well I will punish him." I am not afraid to go to any part of the ship, and can hold as fast as any person, and work; but in such weather as was then, scarcely any body could do that work with greasy hands, and only the single back ropes of the top gallant masts to hold on to, and I considered my life was in danger. After that, when it was required, I had to do the worst jobs that could be found me—taking coals for the steward, hauling water for the steward, and once, when the ship was running with her bows under, I was set to scrub the white paint on the fore-castle head. I cannot recollect every instance when I was put to such work; and the names I was called, but I was several times called "fraud," "impostor," "blood-sucker," "s— of a b—" and so forth. At last one of my legs got very bad, swelling very much from above the knee to the ankle. While I was in that condition I felt I could not go aloft and said so to Thomas Lane, who said, "well there is nothing to do on deck, you can go below," and I went below till I was called by the Captain to show my leg. I did so, and he laughed, and made fun of it, together with the boatswain, James Brown, which I did not like. I had then to take the wheel, and stood there the whole watch. The following morning I did not go at eight o'clock to take the wheel,

as my leg was so bad I could scarce stand by. The Captain called me aft and said that my leg was not bad and that I was like any other g— d— lubber. (Here the witness gave more evidence of a like nature.) You borrowed the books from me. I will swear that you used all the bad language. I cannot say myself whether I am qualified to act as mate. When you called me down into your cabin and asked me what ill-treatment I had had from you, I said it would all be forgotten if you would give me my discharge. You said that I was going about getting my discharge the wrong way, and that I should have asked before we came into harbor.

To an assessor:—The Captain had given me no general orders as to what I should or should not do when on deck. The Captain ordered me aloft to grease the mast in bad weather—through Thomas Lane, I think—but I heard the Captain's order. I received orders either direct from the Captain, or through Thomas Lane, the acting boatswain.

Arthur Bell, able seaman of the *Naworth* was next sworn. He stated:—I have to complain of threatening language, and "evidences" of bad treatment from the day we left Antwerp. The first assault the Captain tried with me, we were in 60 South of the line, wind blowing very strong. This was in June, and the water was breaking over the bows. I had no oil-skin at the time, and used a blanket as a substitute. When the vessel is on a wind, it is impossible to keep a look out on the fore-castle head—you'd be washed off—so I relieved the other watch on the galley. I had no covering on my head, and was blinking with the water in my eyes. The Captain said I was asleep. He jumped on top of the galley, threw me on to the deck, jumped on me, punched me, kicked me, and struck me severely about the head and face, saying he would kick my guts out and murder me. No one else saw it. I felt the effects of the assault for a week, and could not go about my work as before. I used no bad language, and did not attempt to lift my hand in defence. He threw my blanket overboard, and I had no other covering but a sheet till I arrived in Yokohama. From that day to 13th August I experienced nothing but a dog's treatment. The 13th August was Sunday. I had the watch at the wheel from 4 in the morning till 6. When I was relieved I requested my shipmate to let me know if was wanted on deck, as I was going down the after hatch to get two or three yards of condemned canvas. The after-hatch has no fastening on: it is a booby hatch, and every one on board was in the habit of going down it for canvas, seizings, and such like. I had scarcely got inside the hatch, when I heard the noise of cases adrift in the hold. Instead of going for the canvas I went to see what the noise was. There was a space between the beams and the cargo about the length of a man. I found one case swaying to and fro, and came up and told the acting boatswain, Lane, in charge of the deck. He told the carpenter, who entered the hatchway, but did not stop to see where the cargo was loose; but subsequently told the Captain that I had been shifting cargo with intent to broach it. (Here witness made a statement about the carpenter telling the men forward on several occasions that there was grog stowed where it could easily be got at.) About 2 o'clock the Captain came forward where I was mending a lamp, and asked me what I had been doing down the after hatch in the morning. I told him I had gone for canvas. Without waiting for my answer he watched a

hammer I had been using, struck me between the eyes with his left hand, and was in the act of striking me with the hammer, when another able seaman interfered. The Captain turned to him and said he would smash his head or kill him. However, the Captain dropped the hammer, and what with kicking me, and striking me with his fist, left me bruised and bleeding so that I could hardly move. He kicked the breath out of my body. The dog-watch from 6 to 8 was my wheel again. He came and said, "so you thought you was going to broach cargo, did you? I will teach you what the *Naworth* is before you leave her, and then give you three months in Yokohama." He used intimidating language to me in entering the port of Yokohama, before the pilot.

To the master.—You struck me more than twice on the voyage. You often used bad words to me. I was lying down on the galley when on the look-out, because it was impossible to stand up. You had hold of the hammer before the other man pulled you off me. You used all the bad language I have said you used.

To an assessor.—I am suffering from the effects of the ill-treatment I received to this day, and am now under doctor's treatment. All the crew saw how my face was bruised and swollen. I think no one heard the Captain threaten me at the wheel. When I went down the after hatch, I went to the case adrift before I reported it to the officer of the watch. I was lying down on top of the galley, rolled up in my blanket, when I was keeping the look-out.

Here the Court was adjourned till 1.30 p.m.

After the recess

William Taylor was sworn and said: Soon after I joined the ship at Antwerp the master asked for a sail which was found in the bunk which I occupied in the fore-castle. It happened to be cut, and I knew nothing about it. I said I had nothing to do with it. The sail was taken out of the bunk just as it was when I first went there. The Captain called me a b—— liar and said he would knock my head off. I persisted in my statement. The master has used bad expressions to me throughout the voyage. The fore-castle is not in a fit state to live in, and is very leaky. Just as we were arriving in Yokohama I and the boatswain, and two or three more, were hauling the cable out of the chain locker on deck when the captain was talking to the pilot. He said "look at the son's of—— they have all got the sulks to-day." He came to the edge of the poop two or three times and used bad language towards us. I turned round and resented the language. With that the Captain came and struck me, hitting me several times. I attempted to strike him back, but the pilot prevented me. The Captain went to the poop again and said he would knock it out of us before he had done with us. I said "you would if you were allowed," and with that the Captain came at me again and hit me several times. Edmonds, who was down the after hatch, hearing the row, came on deck and seeing who the row was with went to the Captain and said, "don't strike that man." The Captain said "you son of a b——h I will strike you too" That affair passed off. After the anchor was down the Captain went to another barque called the *Clifton* belonging to the same owner. After we had finished the day's work there were no anchor watches picked out, and we all turned in. Between eleven and twelve o'clock the boatswain came and called me out and told

me to fetch the riding light down. I went to the galley to light it and was called to the after hatch by the boatswain, who was having some words, and the Captain came to me and said "you b——w——you'll stand up and fight me will you! What have you got to say for yourself?" I said nothing. With that he struck me in the mouth, splitting both lips, and knocked me down on the deck and kicked and thumped me with his fists. He then left me saying: "you b—— I'll have it out of you yet." That was all that night. Next morning I worked up till breakfast time, and then asked to see the Consul. He said, "you won't see the Consul until I like. I've something else for you to do." I then went into the fore-castle and refused to do any more work until I had seen the Consul. In the afternoon the mate came down, and asked where the meat was, and said, "you'll live on bread and water for the future while you're doing nothing." He went on deck and threw the meat overboard. On the passage out we were put on short allowance of water, and for about a month we had no soup, and had to go without dinner every other day. We were refused permission to save rain-water for ourselves.

To Mr. Williams, master of the *Naworth*.—You accused me of having cut the sail, and when I denied it you called me a b—— liar. We were put on short allowance of water when ten or twelve days out from Banka Straits. You struck me on two or three occasions on the same day. You have not used bad language to me as much as you have to others.

To the Court. — There was no measure on board; there was a bottle that he called a quart and which was no quart. The other men saw the measure. When we were put on short allowance we got two quarts a day. I believe the tanks were short. We had been three months and a half out from our last port when we were put on short allowance of water. Up till then we had our allowance of water measured out with a bucket.

Robert White, sworn, said:—On or about the 30th July I was at the wheel, and the master was below, and the boatswain was forward. There was a squall, and seeing no one coming aft I kept the ship away a couple of points. The Captain came on deck, and saw her a couple of points off and said, "you son of a b——, who authorised you to keep the ship off?" and then struck me in the mouth, cutting my lip. The boatswain, Brown, came aft at the time and saw him do it. Brown said "don't keep the ship away again or the g——d— spars will go over the side." Ever since I joined the ship until the day we came in here the Captain has used bad language to me. One morning when I was at the wheel Brown, the boatswain, struck me, saying "you son of a——, if you don't clear out of this when we get to Yokohama I'll knock the face off you." He struck me again, I think in September. I was looking on the sheet, and he said I did not know what I was about, and knocked my head against the house. Another time I was ordered to the wheel and went down the fore-castle to put on a jacket. When I came on deck the boatswain said, "g——d—you, you've been smoking." I asked how could I be smoking when the Captain had stopped my tobacco? He then struck me several times.

To Mr. Williams:—I shipped as able seaman.

To the Court:—I was disgraced from an able seaman to ordinary seaman. The Captain told me I did not know my work. About a month after I shipped I was disgraced. The

Captain found fault with me on one occasion, but on no other occasion did the master or the boatswain find fault with me. Brown was on deck on the occasion when I kept the ship away two points. I kept the ship off the wind without orders from the officer of the watch.

James Brown, boatswain, sworn, said:—I have only to complain about the crew. I have never struck the boy White. There are only two men in the ship who know their work.

To Mr. Williams.—I have never seen you strike White.

To Court.—I saw the Captain strike Taylor the afternoon we arrived here. I have heard the crew growling amongst themselves against the Captain. White's statement about keeping the ship away is quite correct. The mate is not qualified to do his duty on board a sailing ship as chief officer. On the occasion referred to by the mate, I told him to go below as I could do better without him. The jib was set when I came on deck. I took it in about 20 minutes to four o'clock. I took in the jib because there were two seams split. The jib was split in my watch. I never heard the Captain use bad language to the mate. He told him that he ought to do this and do that. The master always gave me instructions when on watch, and also the instructions I was to pass on to the next watch. I was allowed to take in small sails without reference to the master; anything below the royals. The master and I have had a few words, but he never called me out of my name. On the occasion mentioned by Taylor the Captain came on board, and went to my room and asked who had the watch. I said there was no watch set, and he said that there ought to be. With that I went forward and sung out down the fore-castle. Somebody answered. Says I "you had better 'chalk your watches.'" It was Taylor who answered me. It was his watch. I said, "fetch down the riding light, and I'll light it." So I went down in the room and lit the lamp. Taylor and the Captain had some words, but I don't know what about. I put up the light. I heard Taylor say, "when I get on shore I'll be as good as my master." I did not notice that Taylor had been hit then. I knew that he had been hit in the afternoon. My room is aft, in the cabin. I heard no more until I came to the top of the cabin stairs. I asked the Captain what was the matter, but he made me no answer. The Captain was standing against the carpenter's house when I came on deck. Taylor had gone forward then. I was below about ten minutes. I was never aware that we were on short allowance of water. Pretty often when I came on deck to relieve the watch I found the sails not trimmed. I had nothing to do with serving out the water. We had never less than three quarts of water so far as I am aware of.

Robert Edmonds, sworn, said:—From the time we joined the ship we were on our bare allowance of water. The cook said that he had just enough for cooking purposes. We had two quarts for drinking amongst six. We could never spare any out of that. The first Sunday we were out we got three parts of a bucket between six of us. There is very little accommodation for saving rain water. We had very little rain until we got to the tropics—on the line. We had not an opportunity of washing any clothes or ourselves either. We had a good deal of rain on the line but nothing to save it with. The only thing we had was a small butt used for keeping the deep-sea lead line. We got all our clothes washed here, I heard the boatswain ask

the Captain if he could fill the tanks up; and he said, no, he was not going to put any rain water in the tanks. We went on in the usual way until we got to Anjer Point: the tanks were nearly empty then. We had light winds coming through the Straits of Sunda; had to bring up one night off Anjer, and got under way next morning, and proceeded on the passage. About ten or twelve days after we left Anjer we were put on short allowance of water. I call anything under three quarts short allowance. I believe they measured it aft with a bottle first, and then the water was put in a bucket. That bucket was marked and kept for that purpose, but we always measured the water when it came forward and found that it was a good deal short. We had not sufficient for cooking, and had to go without pea soup for nearly a month. During the whole of that time we were becalmed and had to stand at the wheel on short allowance of water without any kind of awning, which made us feel the want of water the more. I and some more went and slept on the top of the house for a time, until the Captain got the sides of the house scrubbed, and would not allow us to go up there any more because we were dirtying the paint work. We had to sleep on deck in the house abaft the galley. The fore-castle has been kept to live in. The Captain thought to make the ship too hot for us, so that we might run away.

To Mr. Williams:—I did not complain about the short allowance of water, but I have complained to you about the fore-castle. We slept on deck when the ship was lying becalmed.

To Court:—The tanks were aft abaft the main mast. We could not go to them whenever we liked. I have seen the tanks sound-ed and that is how I know that they were nearly empty. The Captain never abused me except on one occasion. He did not take in fresh water at Anjer Point: it was fine weather with light winds when we were there.

Nadal Dubrici, sworn, said:—I am an Austrian. The Captain calls me bad names constantly. He once threatened me with a hammer.

To Mr. Williams:—Yes, you raised the hammer as if to strike me: this was after I attempted to prevent you from striking Bell.

To Court:—I have seen the master strike both Bell and Taylor. The hammer was "handy." Arthur Bell had been trimming the lamps.

Francis Williams, master of the *Naworth*, sworn, said:—I say that the mate was quite incompetent to be mate of a ship. I did not disrate him. He came to me, and said he had written up the log and was prepared to go into the fore-castle. He has acknowledged to me several times that he was not competent to be mate of a vessel. I admit striking Taylor and Bell. All this bad language has been concocted. There has never been any disturbance in the ship. I produce the ship's log book, showing entry of the discharge of the mate, dated June 21st, 1877.

To Court:—I never used any bad language to the mate. We were going with the wind on the starboard quarter. When I went below I told him, if the wind came dead aft, to haul out two points the other way, and bring it on the port quarter. I had not been below long when I heard them hauling the the braces, and I went up on deck and found instead of the wind having shifted the ship had been run off until caught by the lee. The mate had trimmed the head yards to the wind without noticing how her head was

at all; and he was hauling the after yards round when I went on deck. I brought the ship to her course and trimmed the yards to the wind. I brought the ship on the starboard tack again. I had a few words with the mate, and told him that if he did not do different I would send him forward. There was never a day that I had not to find fault with him. I never ordered the mate aloft in heavy weather. I did threaten to put him on bread and water. He stopped at the wheel for twelve hours out of every twenty four for ten days. I knew he had no certificate when I shipped him in Antwerp. I always gave instructions to officers of watches. They were always allowed to take in what was necessary, but were always to tell me if bad weather threatened. The charge of bad language is false. The men have never been on short allowance of water. I did address the crew in unpleasant language on entering the harbour. I may have said they were a lot of —. I measured the water out in a quart bottle. They had three quart bottles full and something over. The bottle was an ordinary quart bottle.

Adjourned till to-morrow at 10 a.m.

Wednesday, November 14th, 1877.

This case was continued this morning from yesterday afternoon, and

Thomas Lane, able seaman, being sworn, said:—To the Captain of the *Naworth*: I have never seen you illusing any of the men, neither have you been in the habit of using bad language to them.

To an Assessor:—After the mate was disrated he went aloft to grease the masts, but did not go aloft in bad weather. I gave him the order to grease the mast. I have cautioned the disrated mate to be careful when he went aloft. All the small sails were reefed. I have never seen the ship take in any water since I have been on board. We were never on short allowance of water. The water might have been a little short in the China sea, but we never wanted for any.

Order of the Court. The Court orders the discharge of A. Ridderbjelke of the British barque *Naworth*, wages to be paid at the rate of five pounds five shillings a month from date of joining the ship up to, and inclusive of, the 21st of June. From the 22nd June, up to, and inclusive of, the date of this order, wages to be paid at the rate of four pounds a month.

The two men, Arthur Bell and William Taylor, are ordered to be discharged from the ship and to receive wages in full up to date. Robert White, who shipped as able seamen, to be discharged from the ship and wages to be paid to him at the rate of three pounds a month up to and inclusive of the 28th May. From the 29th May up to, and inclusive of, the date of this order, wages to be paid at the rate of two pounds per month.

Before H. S. WILKINSON, Esq., Acting-Law Secretary.

Thursday, November 15th, 1877.

FUKUZAWA KOJIRO v. THOMAS ROSE.

The plaintiff claimed the sum of \$488 with \$1,000 indemnity, in all \$1,488.

The plaintiff set forth in his petition that in July, 1877, he, having received an order for 144 steel hammers from the Mining Department, contracted to have them manufactured by the defendant for the sum of \$488, and deposited \$50 as bargain money. On the

completion of the hammers, on the 11th of Aug., they were paid for and delivered to the Mining Department, and all but two proved to be made of iron, coated only with steel. The hammers were consequently rejected by the Mining Department, and in consequence of this the plaintiff suffered severe loss and had to pay an indemnity.

The defendant's answer was to the effect that he did not know such a person as the plaintiff, but acknowledged having entered into a contract for the making of a number of hammers with one Kinokuniya Mitsunjiro on the 25th July, 1877, the hammers to range from 8 to 9 lbs. each, and to be made of the best material: that the hammers were made, with the exception of two or three he had in hand: that the hammers were not made of iron and coated with steel, but that they were made in the usual way the poll of iron and the face of cast steel, or what is known in the trade as cast steel hammers, and that they were honestly and well made of good material.

The plaintiff was represented by his attorney, a Japanese named Tameyoshi. The plaintiff, not being present, was sent for, at the request of the defendant.

Nemoto Yoske, residing in Homura, was called and commenced an oration with much demonstration, which led His Honour to inquire whether he had been indulging in too much sake, and received a negative reply. He then proceeded to give his evidence and said that he made 149 iron hammers faced with steel.

The witness began rambling again, and His Honour refused to take his evidence, as he considered he was drunk.

The plaintiff's attorney said he had another witness to call, but he having some business could not be present to-day.

His Honour remarked that it was his, the attorney's, business to come prepared with his witnesses. He would, however, adjourn the case till the 29th at 10 o'clock, when the plaintiff's presence would be required.

The attorney wished to know what was to be done supposing the plaintiff was sick.

His Honour remarked that no such supposition could be made, and that if he were said to be ill, enquiries would be made as to the truth of it. Moreover, he would be expected to be present unless he was very ill, and if all the witnesses were not present the case would be struck out.

Thursday, November 15th, 1877.

AN CHOY vs. JOHN GRIGOR.

This case was heard on the 3rd October last; and the facts appear from the judgment which was delivered to-day.

JUDGMENT.

In this case the plaintiff sues the defendant as executor for the sum of \$500 alleged to have been lent by the plaintiff to the defendant's testator in his life time, and for interest thereon, and further for the sum of \$350 as the value of two ponies, a carriage, and harness converted by the defendant to the use of the estate of the testator and which it is alleged were the property of the plaintiff.

It is alleged in the petition and admitted in the answer that the testator made his last will dated the 15th of January, 1876, and thereby devised all his real and personal estate of which he should be possessed at the time of his death unto and to the use of the defendant and one John Pitman, their heirs, executors and administrators respectively, upon trust to convert into money such parts

as should not consist of money, and, out of the moneys arising from such conversion and the ready money of which he should be possessed at his death, to pay amongst other things the debts of the testator; that the testator died on the 13th of January 1877, without having revoked or altered the will, and that the same was proved by the defendant and the said Pitman on the 24th of April and 24th of July, 1877, respectively. Pitman was originally joined as defendant, but it appearing at the trial that he was out of the jurisdiction and had not been served, his name was struck out of the petition and the action proceeded against the present defendant alone. The defendant in his answer does not admit the debt alleged to be due, and denies generally that he converted to the use of the testator's estate any property of any kind belonging to the plaintiff.

The defendant further pleads that he offered by advertisement in the local papers to pay all just claims upon the testator's estate, duly presented and proved by a day mentioned, but that the claims preferred by the petition were not presented until long after that day, and no proof of such claims had ever been submitted to defendant. The defendant does not, however, plead that he has distributed all the assets that have come into his hands, and the plea has not indeed been relied on. The other pleas have already been disposed of.

In addition to the defences pleaded in the answer, another defence was raised at the trial, namely, that the plaintiff is a legatee under the will of a sum of \$10,000, a much larger amount than the sums claimed in the petition, and that any debt that may have been due by the testator to the plaintiff has been satisfied by the legacy. It appears from the evidence, that the plaintiff lived with the testator as his wife, without being married to him, from January, 1873, up till the time of testator's death, except for an interval of some months during the testator's absence in Europe, during which time the plaintiff was maintained at the testator's expense. The plaintiff avers that in 1873 she had \$500.00, which had been left her by a Mr. Butcher; that the testator, knowing she had it, advised her to give it to him to keep safely for her, and that she accordingly gave him the money, he giving her in return a promissory note in the following words: "No. 122, Yokohama. Twelve months' after date I promise to pay to Ah Choy, No. 122, the sum of \$500 (five hundred dollars) Mexicans. August 25th, 1873, \$500. W. Rangan."

She says that this occurred in the spring of 1873, and that the note was given to her on the same day that she handed the money to the testator. But the note is dated the 25th of August, 1873, and it is probable that it was given the day on which it bears date. She says that the only persons present when this transaction occurred were the testator and herself and a Mr. Meldrum, who acted as clerk to the testator. The note is in Meldrum's handwriting and signed by the testator, the testator being able to sign his own name, but being otherwise illiterate. Meldrum has been deported for vagrancy, and there is no direct evidence therefore available. But for the defence, evidence has been brought to show that the testator was a particular man, and that if he had received a sum of five hundred dollars it would most likely have appeared in his books, and that it did not appear in his books. Evidence was also brought to show that the testator was in the habit of talking over his affairs with the witnesses and that he never mentioned the loan. But the value of this

part of the evidence is very much diminished by what appears to be the fact, that he never mentioned the promissory note, and it has not been seriously denied that he gave the note. That he did give it, I find as a fact.

It is suggested that the note was given as an inducement to the plaintiff to cohabit with the testator, but I find that the note was given some months after the plaintiff had begun to cohabit with the testator. Under these circumstances, the suggestion is a most unlikely one, and I accordingly reject it. It has also been pointed out that the plaintiff's statement as to her possession of the money has not been corroborated. But she named the person at whose hands she received it, a person still in this settlement, and gave such particulars as would have enabled the defence to have tested the accuracy of her statement. The cross-examination, indeed, appeared to me to indicate a knowledge of the existence of the money, and was directed principally to show that it had been expended by the plaintiff in her own maintenance. But in this it appears to me to have failed. The plaintiff denied that she did expend it, and explained satisfactorily that there was no necessity for expending it for the purpose suggested. It has been urged, too, that the form of the note is not consistent with the plaintiff's account of the transaction: that it would not have been made payable at the expiration of a year if the money had been given to the testator to keep for the benefit of the plaintiff. But I do not think that much importance is to be given to this circumstance as the foundation of an inference, when it is considered that the note was given by one illiterate person to another, and we have no evidence of the capacity of the amanuensis. There is the delay of the plaintiff in claiming the amount after the testator's death to be accounted for, and the fact that while putting forward other claims on the estate she did not put forward this one. But I think this is capable of explanation. She was to receive \$10,000 as a legacy, and she expressed a desire to receive that and get away out of the place. She also, according to the evidence of the defendant, laid claim to nearly everything. Under these circumstances, and so long as she expected to receive all she looked for, she might well abandon any claim to receive this specific sum, nor is it surprising that, finding she could not get the whole or any part of the legacy at once, and that it was not certain how much of it she would get eventually, she determined to make any legal claim she could against the estate.

To sum up, I am satisfied that the promissory note was given, and that the plaintiff, about the time it was given, had money to the amount for which it was given, and the explanation given by her of the circumstance of her paying it over to the testator is a probable one. On the other side there is the absence of the entry from the testator's books, and her delay in making the claim after the testator's death; and, weighing these circumstances, I come to the conclusion that the plaintiff's statement is correct, and I find as a fact that the sum of five hundred dollars was given by the plaintiff to the testator, and that for that sum so given the promissory note produced was given by the testator to the plaintiff. I find also as a fact that this sum has never been paid.

The question then arises: has this debt been satisfied by the subsequent legacy of \$10,000? The rule on the subject of the satisfaction of debts by legacies is thus stated in Williams on Executors: "It is a rule established in courts of equity that where a debtor bequeathes to his

creditor a legacy equal to, or exceeding the amount of his debt, it shall be presumed, in the absence of any intimation of a contrary intention, that the legacy was meant by the testator as a satisfaction of the debt." But then it is added: "This rule, however, though it has long prevailed, has met with the censure of several eminent judges, and the courts have inclined to lay hold of any minute circumstances, whereupon to ground an exception to it."

This rule and one of the "minute circumstances, whereupon to ground an exception to it"—a circumstance which exists in this case—are thus referred to by Wood, V. C., in the case of *Dawson v. Dawson*. (Law Reports, 4 Equity, 504.)

"In the case of a legacy to a creditor, the Court, 'having apparently first laid down the rule that a man should be just before he is generous, and that the testator intended payment and not a benefit, endeavoured by every sort of device to escape from that rule, and has held a direction to pay debts and legacies to be an indication that both shall be paid. In a recent case before me, I held a direction to pay debts alone not to be sufficient to rebut the presumption of satisfaction; but the Master of the Rolls, in two or three subsequent cases, has held that the direction to pay debts standing alone will suffice to prevent satisfaction, as in *Cole v. Willard* and *Pinchin v. Simms*."

And, referring to the case of Lord Chichester v. Coventry, decided in the House of Lords, his Honor says:—

"In the House of Lords nearly every one seems to have relied on that circumstance of the direction for payments of debts. This provision being, 'as they say, a debt, and there being a direction for payment of debts by the subsequent will, they conceived that the rule against double portions was obviated. That seems to have been the principal ground of the decision.'"

It appears, then, that the most recent cases have decided that a direction to pay debts will rebut the presumption that a legacy is intended to be in satisfaction of a debt. That there is a direction to pay debts in the will, or what is the same a trust for the payment of debts is, as already stated, alleged in the petition and admitted in the answer. On this ground, therefore, I hold that the debt has not been satisfied by the legacy. Coming to this conclusion, it is unnecessary to consider whether the giving of the promissory note is a circumstance in itself sufficient whereupon to ground an exception to the rule as to satisfaction. This promissory note differs in one very material point from the promissory note in the case of Carr and Easlabrooke (3 Ves. 561), cited by the counsel for the plaintiff. In that case the promissory note was payable to order: in the present case it is not. And this difference would be a very important element of consideration in arriving at a conclusion upon the question. But it is unnecessary to give any opinion upon the point.

As to the claim for interest, I think this case comes within the principle of *Edwards v. Vere* (5 B. & Ad. 282.) That was a claim for interest on money, deposited with a banker for a fixed purpose, for the time after that purpose had been accomplished, and Denman, C. J., after laying down that, "generally speaking, money, deposited with a banker, does not carry interest," held that no interest was payable in that case, because it did "not clearly appear from the agreement, that the intention of the parties was that interest should be payable by the bankers from the time the authority to retain the money was countermanded," and Littledale, J., was of the same opinion. He considered that no contract by the defendant to pay interest could be implied, "because as soon as the money ceased to be a deposit, it became applicable to the general purposes of the plaintiffs, in the same way as if it had been

paid on their general account into the bankers, and then it is quite clear that the interest would have been payable by law." It appears from the evidence of the plaintiff, that the money was deposited with the testator for safe keeping. The testator in fact acted as the plaintiff's banker. The money was after the expiration of the year—for which no interest is claimed—available for the general purposes of the plaintiff, and the only reason why it was not drawn was that it was not required. The money, according to plaintiff's evidence, was applied for once, and it was not paid. But the testator did not decline to pay it, but advised the plaintiff to allow it to remain, as she would otherwise spend it, and he rendered it unnecessary for her to draw it, by providing for her wants out of his own funds. Even if the case did not strictly come within the principle of *Edwards v. Vere*, I do not think it is a case in which interest ought to be allowed. There is no express agreement in the promissory note to pay interest. The rule in such cases is thus laid down in *Cameron v. Smith* (2 B. & Ad. 305). Bayley, J., says: "I am quite satisfied that the distinction is between those cases, where there is an express undertaking by the party to pay both principal and interest, and those where he undertakes to pay the principal only. In the later case, the interest is no part of the debt, but only in the nature of damages;" and, "although by the usage of trade, interest is allowed on a bill, yet it constitutes no part of the debt, but is in the nature of damages, which must go to the jury, in order that they may find the amount; and it is competent for them either to allow five per cent., according to their judgment of the value of money, or they may even allow nothing, in case they are of opinion that the delay of payment has not been occasioned by the default of the holder." In *Keene and Keene* (27 L. J. C. P. 88), which was an action upon a bill of exchange, Willes, J., said: "The jury are not bound to give interest, but may give it according to the circumstances of the case." And the circumstances of the case here show me, that, so far as any intention can be drawn from them, it was not the intention of either of the parties that interest should be paid. The interest will therefore be disallowed.

The evidence with regard to the carriage is, that the testator, having gone to Europe, and having, after taking the plaintiff as far as Hongkong, left her there, wrote to the plaintiff a letter, in which the following sentence occurs: "I have been laying out a lot of money for you; among other things I bought you a beautiful carriage, which is to go out to Yokohama in the ship *Lothair*." What occurred after the carriage arrived is not very clear, but looking at the whole of the evidence, I find that there never was any delivery of the carriage by the testator to the plaintiff, and it never was in her sole custody. When the plaintiff went out in the carriage, the carriage was driven by the testator, and the testator otherwise acted as if the carriage was his own property. Viewed in the light of the subsequent acts of both of the parties, I am of opinion that the testator did not intend the carriage as an absolute gift to the plaintiff, and the plaintiff did not understand it to be such a gift. I find that the carriage together with the horses and harness was the property of the testator at his death, and this part of the plaintiff's claim must be dismissed.

There will, therefore, be judgment for the plaintiff for \$500. Costs will be allowed to the amount of \$75.

HAKODATE.

Nov. 11th, 1877.

The *Takachiho Maru* arrived last night (10th) at ten o'clock from Yokohama.

The barque *Hilda* left on the 31st ult., and the *Oceanus* on the 1st instant for Shanghai, followed by the steamer *Dragon* on the 2nd for the same port via Nagasaki. On the 9th instant the barque *Hedvig* sailed also for Shanghai.

Range of temperature from 1st inst. 34° to 53°. Prevailing winds Westerly. Rain on 1st, 2nd, 5th, and 6th. Heavy thunder and lightning on the night of 2nd and 3rd instant. Snow fell in considerable quantities on the 7th and 8th.

CHOLERA.—Up to the present some forty deaths are reported as having occurred in Hakodate. The endeavour to introduce it into Fukuyama has been successful. Three deaths are reported from there.

WRECKS.—The barque *Risho* (*Valetta*) has been lost near Akis, and the schooner *Etuku* at Tokachi, with all hands but the Captain. The schooner *Mino* is also reported to have been lost at Kururi. All these casualties occurred during the gale of the 21st October.

OSAKA.

From the *Osaka Nippo* :—

Ikenobe Kitchijuro was known to Mr. Kawano, Kanji of the Gen-ro-in. When he signed his confession the latter asked him "Do you remember that I tried you in the Saga insurrection?" Ikenobe replied, smiling, that he did remember him—he was Mr. Kawano, but that he had heard he had retired from office after some differences of opinion in the Judicial Department, and asked how he came to be still in office. Kawano replied, also smiling, that he had come down to try rebels and that Ikenobe was a criminal, but he believed him to be a bold man, because he had taken command over rebels, and the letter he had written to his mother would certainly be handed over. Hearing this Ikenobe was glad and said he had finished his duty and did not now regret to lose his life.

On the 31st, Sakurada Matsura and Tairi, Shizoku of Kumamoto Ken, who assisted Ikenobe as his aide-de-camp, were sentenced by the temporary Kiushiu Saibansho to be beheaded.

A report from Kagoshima, dated the 29th October, runs as follows: Many people are returning to the town and are living in temporary houses. The town is dirty and the streets are narrow, but the front roads are 5 or 6 ken wide. Tokio police and the new troops raised in Wakayama ken are in garrison. The Tokio Police are armed with rifles, but wear straw shoes and not leather ones. Beef, fish and finer wares are plentiful, one pound of beef being valued at sen 12. Fish is fresh and cheap. The people are dark coloured and the girls dress in the fashion of olden times. On Shiroyama many forts have been built by the rebels. One of them was very strong and many dead bodies were found in it, very putrid. Though those bodies had been covered with earth, the families removed the earth in order to take away their relatives, and did not cover up the other bodies. The tombs of Saigo and others in Jomeikoji are crowded by many persons every day. Cholera is still existing and six or seven friends of the writer are ill from it. In the mornings and evenings the

weather is cool, but hot at noon. Flies and mosquitoes are plentiful and the latter are in force day and night. An old woman has said that had Saigo not returned to Kagoshima, she would not have suffered so much. The people seem to have only lately learned that H. M. the Mikado rules over them. The Ken officials are diligent but the people are still stupid. The Kencho is in Kaiki, with a branch office in Kagoshima. The shizoku have ceased to carry swords, but they retain power over the heimin, as they did in feudal times. It is foreseen that in three years Kagoshima will become the best port in Japan.—*Hiogo News*.

SHANGHAI.

A correspondent calls attention to remarks of the Hon. G. W. Wells, in the case heard before him on Monday, to the effect that it was next to an impossibility for a letter posted in Shanghai in January to have gone to San Francisco and been returned here by the end of March. The correspondent says he addressed a letter to San Francisco by the mail of January 13th, and received an answer by March 27th.—*S. C. and C. Gazette*.

A fact, interesting to naturalists, as illustrating the tenacity of life of the locust, has just come to light. On the night of the 14th July last, a cloud of locusts passed over this Settlement, and numbers of them flew into the windows of houses in their flight, having been either attracted by the lights, or obeying that curious law which forbids insects to deviate to the right or left while either crawling or flying. A solitary specimen (as we mentioned at the time) flew into the bed-room of a gentleman in the Peking road, was captured, and placed under an inverted tumbler for future observation. The tumbler, with the insect under it, was afterward removed by the houseboy and placed out-of-sight, so that the incident was altogether forgotten. On Monday (22nd Oct.) however, while removing a pile of books, the tumbler was rediscovered—the locust still under it, not only living, but so lively that on the edge of the tumbler being lifted, it instantly prepared for a dart for liberty. How the insect has existed for nearly fifteen weeks without food, and with only what little air—if any—could reach it from under the edge of the tumbler, is wonderful.—*N.-U. Daily News*.

H.B.M.'s gunboat *Nassau* arrived on Saturday, 27th Oct., from Japan, and the French corvette *Talisman* returned to port on the 28th from a cruise.—*Idem*.

The China Merchants' Co. were only able to pay the guaranteed 10 per cent. interest, last year, if we remember rightly, by carrying forward a debit balance of Tls. 30,000 to next account, and altogether ignoring such an item as "Depreciation." From the translation of the 1876-7 Report, it will be seen that they succeed, this year again, in paying 10 per cent., and even in writing off the Tls. 30,000 debit balance; but there then remains only a balance of Tls. 10,000, which the Directors admit is again insufficient to permit their making any allowance for "depreciation;" so the steamers and plant are still kept up at least to cost price.—Contrasted with their remark last year, about the purchase of the S. S. N. Company securing the China Merchants "the command of the carrying trade", it is rather amusing to read that "unexpectedly, the business operations

of the Company during the year under review have had to be adjusted to the necessity of the times"; that the Company has "been pressed in many ways by its rivals, and has "had to suffer loss," &c. We ventured to suggest, at the time, that the Chinese were rather premature in thinking the purchase of the S. S. N. was equivalent to purchasing control of the coast and river trade; and they seem to be gradually finding out this truth. —We should explain that the 1875-6 figures in the subjoined accounts do not form part of the official document, but have been inserted for convenience of reference.—*Idem.*

We learn that intelligence has been received of a serious defeat of the Chinese forces under the command of H. E. Tso Tsung-t'ang, in an attempt made in August or September last to penetrate into Kashgaria. The confusion necessarily entailed by the decease of Yakub Khan encouraged the Imperial generals to advance beyond their late acquisitions at Toksun, on the confines of Yakub Khan's territory, but the attempt appears to have resulted in disaster.—*Idem.*

The steamer *Fleurs Castle*, which arrived yesterday (5th Nov.) from London, reports two mishaps during the passage. In the Suez Canal she broke her propeller and had to discharge about three hundred tons of cargo, and, in consequence she was in the Canal six days. In the China Sea she experienced a strong monsoon and confused sea; and, shipping a large sea, her aft wheel and steering gear were carried away.—*Idem.*

We hear that a collision occurred between the French mail steamer *Anadyr* and the British ship *Coriolanus*, about seven o'clock on Wednesday 7th evening. The *Coriolanus* left here (Shanghai) that morning for Swatow, and was a few hundred yards past the Beacon when the collision occurred. Her damage was such that she returned to port yesterday afternoon 8th. It was not known at the Messageries Maritimes office, last evening, what damage the *Anadyr* had sustained, but it was believed not to be extensive.—*Idem.*

If the Chinese officials and literati had intelligence to appreciate the fact, they would find in a memorial from Hangchow, in the *Peking Gazette* of the 13th October, a proof of the advantage of foreign trade to the country. The Superintendent of the Imperial Manufactory memorialises representing the impracticability of the old tariff of rates at which Silk used to be bought for the supply of the Palace. "Not only has production been largely diminished since the rebellion, but two new elements—viz., the imposition of the *lekin* tax and the foreign demand for raw silk, have come in to enhance the market value"—and, of course, in the latter case, increase the earnings and prosperity of the producers.—*Idem.*

Moved apparently by the representations which have been made to him of the extent of the misery in Shansi, and of the rapacity of the official underlings engaged in distributing grain, the Emperor has appointed a high official named Yen Kenming, formerly a Vice-President of the Board of Works at Peking, to travel "throughout the afflicted region, and to superintend with all due diligence, the administration of the relief agencies.—*Idem.*

HONGKONG.

Last night (7th inst.) a farewell dinner was given to Admiral Ryder and Captain Colomb on board the *Audacious*. The ship was illuminated in the course of the evening.—*Daily Press.*

The mail from Yokohama brought the information that Mr. Taro Ando, the Japanese Vice-Consul at this port, has been made Consul by his Government. All who are acquainted with Mr. Ando will be glad to hear of his promotion.—*Idem.*

Amongst the passengers for England by the P. and O. steamship *Nizam*, we notice the names of Admiral A. P. Ryder and Captain P. H. Colomb; also Captain H. N. Hippisley, late commander of the *Hornet*, superseded on his promotion to post rank.—*Idem.*

A race was pulled on the 7th instant between the galleys of the Admiral and Commodore, the latter winning by about five boats' lengths. The course was a straight one, being about three miles from the White Rocks in to the Flag Ship. The *Audacious* boat was manned by Europeans and that of and that of the winners (the *Victors Emanuel's*) by Chinese; and whatever little advantage might have been expected to result to the former from this cause, was neutralized by the "Victors" being in the much lighter boat. We understand that this race has been contemplated for some time, and great interest was felt in, and large sums of money changed hands on, the result. The time occupied by the race was 25 min and 15 secs.—*China Mail.*

A rumour reaches us that the measures of retaliation which the Cantonese Authorities mean to take for the insult they consider themselves to have received from the Macao Authorities, are likely to consist of laying an embargo on all Chinese junks trading with Macao, in the hope thereby to ruin its trade, and consequently its prosperity and endanger even its existence as a Colony.—*Idem.*

THE "JAPAN GAZETTE" HONG LIST

—A N D—

DIRECTORY FOR 1878,

WILL APPEAR ON OR ABOUT THE

31st December, 1877.

THE greatest possible pains are taken in the compilation of this work, which has attained such a reputation for accuracy that it is the indispensable desk companion of every mercantile man in Japan, and is to be found in all the hotels and stores, and in most of the private houses of the foreign settlement. It is also supplied to the various Departments of the Japanese Government, for use in their offices in the Capital, the Ports, and the Interior; to the wealthy Chinese and Native Merchants of Yokohama and the other trading ports, and to numerous foreign houses in China, Europe, and America. Thus it offers unusually favorable inducements to advertisers, as it is literally before the eyes of a numerous public of all classes and nationalities

ALL DAY AND EVERY DAY.

The volume for 1878 will, in addition to the usual Lists of firms, business houses, men-of-war, and officers serving therein, of foreign squadrons on the East Asiatic Station, Advertisements, &c., contain the following information:—

1.—The text of the Treaty of Commerce and Navigation between the Austro-Hungarian Monarchy and the Empire of Japan, signed in Yedo on the 18th October, 1869, which, as it contains the provisions of all the other Treaties, with the most recent additions and alterations of text, has been selected by the proprietor of this HONG LIST as a trustworthy compendium of the privileges acquired, and of the rules and conditions to be observed, by Foreigners of all nationalities in Japan:

2.—The Austro-Hungarian Regulations for trade with Japan, which have been chosen with an object similar to that which has guided the proprietor in the publication of the Austro-Hungarian Treaty, as explained in the preceding paragraph:

3.—The Tariff Convention of Yedo, June 26th 1866, between England, France, America, and Holland and Japan, including a revised Tariff:

4.—The Bonded Warehouse Regulations and Tariff of Charges:

5.—Notifications relating to Foreigners in Japan.

To the above will be added a complete list, (to date of publication) of the M. B. M. S. S. Co.'s Steamers; the Imperial Government Railway Time and Fare Tables; Insurance Rates for the Bluff and Settlement, and other useful information.

Notice to Mariners.

No. 5. of the 10th year of Meiji (1877).

SIRIYASAKI LIGHTHOUSE, FOG BELL.

THE GOVERNMENT of Japan hereby gives notice a 32 Cwt. Fog Bell, which will be rung by machinery, has been hung from the balcony of SIRIYASAKI LIGHTHOUSE.

The Bell will be rung during fogs, or when from snow storms, haze or other causes, the outline of the land is at all indistinct by day or the light by night.

The Bell will be rung continuously at the rate of 15 strokes per minute during such time as the fog or other cause for ringing may last.

Siriyasaki Lighthouse, on the Cape of that name, is in the province of Mutsu and the eastern entrance to the Tsugar Straits, and is the extreme North Eastern point of the Island of Nippon.

It is in 41 degrees 26 minutes 10 seconds North Latitude; and is 141 degrees 29 minutes 25 seconds East of Greenwich.

The Rattler Rock bears from the Lighthouse North 65 degrees East, distant about 1½ miles.

ITO HIROBUMI,

Minister of Public Works.

Tokio, Nov. 15th, 1877.

Shipping.

ARRIVALS.

- Nov. 5, French Corvette *La Clocheterie*, Captain Rieunier, 1,990 tons, from a Cruise.
Nov. 6, Am. str. *Courier*, Clarke, 450, from Hakodate, General and Sea Weed, to Walsh, Hall & Co.
Nov. 7, U. S. sloop-of-war *Alert*, Comd. R. Poyd, 541 tons, 4-guns from Nagasaki.
Nov. 7, Jap. str. *Sumida-Maru*, Goriach, 896, from Nagasaki, prisoners, to Government Service.
Nov. 8, Jap. str. *Nagoya-Maru*, Conner, 1,914, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
Nov. 8, Am. str. *China*, Berry, 3,836, from San Francisco, Mails and General, to P. M. S. S. Co.
Nov. 8, Jap. str. *Tokai-Maru*, Pyne, 1,042, from Kobe, General, to M. B. M. S. S. Co.
Nov. 8, Ger. schr. *Jupiter*, Johnson, 50, from Kurile Islands, Pelts, to Captain.
Nov. 9, Brit. barq. *Pauline*, Tyrer, 472, from London, General, to Gütschow & Co.

- Nov. 10, Brit. barq. *Alice*, Law, —, from New York via Hongkong, Kerosene, to Ed. Fischer & Co.
Nov. 10, Frch. str. *Volga*, Rolland, 1,502, from Hongkong, Mails and General, to M. M. Co.
Nov. 10, Jap. str. *Suminoye-Maru*, Nye, 852, from Kobe, General, to M. B. Co.
Nov. 11, H. B. M.'s surveying vessel *Sylvia*, Comd. Aldrich, 877 tons, from a Cruise.
Nov. 13, Brit. str. *Belgie*, Meyers, 2,627, from San Francisco, Mails and General, to O. & O. S. S. Co.
Nov. 14, Brit. str. *Oceanic*, Parsell, 3,700, from Hongkong, Mails and General, to O. & O. S. S. Co.
Nov. 15, Jap. str. *Meiji-Maru*, Peters, 1,010, from Hakodate, with Lightship in tow, to the Light-house Department.
Nov. 15, Brit. str. *Malacca*, Smith, 1,709, from Hongkong, Mails and General, to P. & O. Co.

DEPARTURES.

- Nov. 5, Am. str. *City of Peking*, Tanner, 5,079, for San Francisco, Mails and General, despatched by P. M. S. S. Co.
Nov. 5, Ger. schooner *Augusta Reimers*, Hagenberg, 207, for Takao, Ballast, despatched by H. Grauert.
Nov. 6, French str. *Tibre*, De Girard, 1,726, for Hongkong, Mails and General, despatched by M. M. Co.
Nov. 7, Am. str. *Courier*, Clarke, 450, for Hiogo, original cargo from Hakodate, despatched by Walsh, Hall & Co.
Nov. 7, Jap. str. *Takachiho-Maru*, Sikemeier, 1,407, for Hakodate, Mails and General, despatched by M. B. M. S. S. Co.
Nov. 9, Am. str. *China*, Berry, 3,836, for Hongkong, Mails and General, despatched by P. M. S. S. Co.
Nov. 9, Jap. str. *Saikio-Maru*, Vroom, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
Nov. 10, Ger. gun-boat *Nautilus*, Capt. Valois, 600 tons, 4-guns, for Shanghai via Kobe.
Nov. 11, Jap. str. *Shinagawa-Maru*, Frahm, 1,169, for Hakodate, Mails and General, despatched by M. B. M. S. S. Co.
Nov. 12, Jap. str. *Sumida-Maru*, Goriach, 896, for Kobe, Mails and General, despatched by M. B. M. S. S. Co.
Nov. 13, Brit. str. *Sunda*, Reeves, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.
Nov. 13, Ger. ship *G. W. Wapuis*, Diedrichsen, 538, for Shanghai, General, despatched by Chinese.
Nov. 14, Jap. str. *Nagoya-Maru*, Conner, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
Nov. 15, Brit. str. *Belgie*, Meyers, 2,627, for Hongkong, Mails and General, despatched by O. & O. Co.
Nov. 15, Jap. str. *Shario-Maru*, Hog, 800, for Hakodate, Mails and General, despatched by M. B. M. S. S. Co.
Nov. 16, Am. ship, *Messenger*, Gilkey, 950, for Hakodate, despatched by Order.
Nov. 16, Jap. str. *Toyoshima-Maru*, Hubbard, 946, for Kobe, Mails and General, despatched by M. B. M. S. S. Co.

PASSENGERS.

Per Am. str. *City of Peking* for San Francisco:—Messrs. W. T. Elliot, E. Cameron, H. Morris, A. J. Little, G. Rossi, Prof. E. S. Morse, N. Bloom, Mrs. Cochran and child, Miss Cochran, Master G. Cochran, Capt. J. P. Fyffe, U.S.N., N. F. Wilton, Miss L. Ki zen, G. D. Emmons, U.S.N., Miss C. Porter, Messrs. P. Saviot, K. Tave, Mrs. G. Perry and child, G. Butta, G. Mazzocchi, H. H. Bellings, E. W. Ellis, and 7 in Steerage.

FROM HONGKONG TO SAN FRANCISCO.

Rev. J. F. Fraser and 4 children, Mrs. Preston and 5 children, Rev. J. C. Nevill, wife and 2 children, Rev. Hartwell's 3 children, 2 Europeans, and 28 Chinese in Steerage.

Per French str. *Tibre*, for Hongkong:—Messrs. Von Weckherlin, Murray, Cox, James, Lieut. Beckham, Messrs. Ferreri, Biffi, Ragnolet, Cavetti, Govani, Moretti, Ottoline, Eaton, Madame V. Cherney, and Ah Ham.

Per Am. str. *Courier* for Vladivostok via Hakodate:—Mr. and Mrs. Flecker, Mr. M. C. Harris, U. S. Consul at Hakodate, Messrs Useel, Laschar, and Polen; and 5 Japanese in the steerage.

Per Am. str. *Courier* for Hiogo:—Mr. Alex. Milne.

Per Jap. str. *Nagoya-Maru* for Shanghai and ports:—Prince Kitashirakawa-no-Miya, Madame Castelli, child and European maid, Mrs. Varuum and child, Mr. and Mrs. Yoshida, Miss Annie Stanley and Messrs. Ide, Iwasaki Yanoaka, Ishikawa, Kawada, J. T. Esdale, A. Wylie, Alex. Innes,

Branchi, Farmer, Riemers, Owen, Kirhoia, Kawano Miyoshi, Fugawa, Kondo, Obato, Sawase, Otsuka, Noda, Iwanari, Hamma, Nagawa, Yoshinaga, Yamada, Toyohara, Nakamura, Shiroke, Hirachi, Hirasa, Kodama, Inouye, Samoa, Tomohira, Takada, Kadota, Inouye, Nakamura, Kawaguchi, Sakai, Yano, Miyoshi, Sido, Takadi, Teraa, Fukuhara, Takasaki, Shigeno, Kagayama, Kuroda, Komi, Obala, Fumuda, Kagawa, Nakamura, Kawamura, Kitamura, Satou, Hadokawama, Yamaguchi, Nagano, Fuku-sawa; and 1 European, 1 Chinaman, and 445 Japanese in steerage.

Per Am. str. *China* from San Francisco:—Messrs. O. Stockleberg, S. B. Saige and wife, Chas. Veit and wife, E. N. Veile, C. A. Barratoni, A. G. Brandon, Mrs. H. Jenkins, W. J. Marsh, B. Schenbe, Rev. J. H. Roberts and wife, Rev. W. S. Ament and wife, A. Mickel, Miss M. O. Sortes, Rev. W. E. Davison and wife, C. S. Phillips. For Hongkong: Miss S. Norwood, Bing Yu and wife, Mrs. Van Dyke, Mr. Chas. Klinck, Rev. Wm. Astmore and wife, and Mrs. N. Ralston.

Per Jap. str. *Saikio-Maru* for Shanghai and ports:—Mr. and Mrs. Roberts, Mrs. Jenkins, Messrs. A. Reimers, Melville, Stephens, Pickman, Leeds, Marsh, Fobes, Flood, Abell, Mr. and Mrs. Ament, Miss Porter, Messrs. Favre-Brandt, MacGibbon, Cavalier, Laurance, Curtis, Lechat, Ch. Braes, Dra. Buckle, and Stillman, and 27 Japanese in the Cabin.

Per Frch. str. *Volga* from Hongkong:—Messrs. Garnier, Fukatsu, Nakao, Farfara, and Harris.

Per Brit. str. *Sunda* for Hongkong:—Mr. and Mrs. D'Iffanger, Dr. Schultze, Dr. and Mrs. Pollock, Messrs. Osborne and Saycer; and 10 Chinese and 6 South Sea Islanders on Deck.

Per Brit. str. *Belgie* from San Francisco:—For Shanghai: Mr. and Mrs. W. R. Lambert, and Mr. E. A. Salter in cabin. For Yokohama: Miss S. Price, Messrs. T. M. Osborne, W. M. Davis, R. P. Hielgers, Danl. Devos in cabin; and 1 Japanese woman in steerage, and 5 Japanese working passage. For Hongkong: J. G. Cas in cabin; and 450 Chinese in steerage.

Per Brit. str. *Oceanic* from Hongkong:—Messrs. R. Walker, P. J. Rose, E. Angel; and 3 in steerage. For San Francisco: Miss Lizzie Bernard, Messrs. H. Meyner and N. J. Newwitt; 148 in steerage.

Per Jap. str. *Nagoya Maru*, for Shanghai and Ports:—Capt. Abbe, Messrs. E. Wethechoff, Mitchell, Mr. and Mrs. Dallas, Messrs. Weiller, A. Langfeldt, Broeschen, Mr. and Mrs. Kikuchi, J. G. Walsh, Mr. Newmann, Schaub, Stone, Mr. and Mrs. Lambeth, Miss A. Stanley, Mr. Graham, Mr. Romusat, Mr. and Mrs. Viele, Mr. Viele, Jr., Mr. and Mrs. Paige, Mr. Brandon, Mr. Baraton, Miss Winter, and 8 Japanese.

Per Brit. str. *Malacca* from Hongkong:—Messrs. Bellasi, Pearsall, Geo. Roper, R.N., C. Farmer, W. Ash; and 5 Chinese deck.

REPORTS.

The Pacific Mail Company's Steamship *China* reports.—Sailed from San Francisco Oct. 11th at 12.15 p.m. To Oct 27th had fresh breezes from S. W. to W. and fine weather, then to Nov. 4th light Southerly winds and calms, then to Nov. 7th fresh gales from South to North with heavy sea, and thence to Yokohama fresh gales from N. E. with fog and rain. Arriving Nov. 8th at 8 a.m.

The British barque *Alice*, Captain W. E. Law, 195 days out from New York, reports:—Reached Auler after a passage of 119 days. From lat. 4° N. to Hongkong had light N. E. winds and Southerly current. Put into Hongkong for orders and left on the 30th Sept. Off the North end of Luzon, from Oct. 6th to 11th, encountered a heavy gale from N. E. to N. W. with a strong Southerly current. Again off the Bashees from Oct. 20th to 25th had a strong gale from N. E. From North Island to this Port experienced a strong North-East monsoon.

The British steamer *Belgie*, Capt. L. Meyers, reports:—Left San Francisco October 23rd, 1877, at 0.30 p.m. and made a southern passage on the 30th parallel, and arrived in the Bay of Yokohama November 13th, at 5 p.m., making the run of 5,134 miles in 20 days and 13½ hours. On the 27th Oct., at 3 p.m., Lat. 32½° N. Long. 142 W., Wong Yow, a Chinese passenger, a native of Canton, died of consumption aged 39 years. On Nov. 13th, at 3.30 p.m. Law Peak a Chinese passenger died of consumption in Uruga Channel.

The British steamer *Oceanic* reports:—Left Hongkong Nov. 8th, at 4 p.m., had light winds and fine weather to Ockseu Islands; thence to Yokosima Island strong monsoon with N. E. and N. N. E. sea. Tuesday at noon, to Wednesday at 6 a.m. strong S. W. wind with heavy rain, thunder and lightning, high sea, shifting suddenly at midnight to West and W.N.W. Arrived at 1.45 p.m.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

This market is still very dull, Cotton Yarn being the only merchandize which shows any approach to activity. 16-24 continue in demand; and for the medium spinings of these numbers there has been a good inquiry, with the effect of inducing a slight amelioration in prices. In Woollens Mousselines are firmer; and the cold weather, probably, has brought about some request for Blankets; while Black "All Wool" Cloth has found buyers.

METALS.—The slight improvement noted in our last has been followed by relapse into the former state of inactivity. Transactions have been limited to the purchase of a few lots of small Bar Iron.

The barques *Pauline*, with general cargo from London, and *Alice* with Kerosene and general cargo from New York, have arrived. Transhipped goods ex *Gange*, *Mensaleh*, and *Gwalior* from London, *Priam* from Liverpool, and *Anadyr* from Marseilles, are also to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Our last issue was dated 2nd inst. During the period under review a large aggregate business has been done, a full portion of which has been for the continent, settlements being close on, 1,900 bales; and prices have advanced \$25 per picul, the rise being more noticeable on the medium than on the finer classes.

From the most reliable sources it is certain that the stock on the market is close on 9,600 bales: this appears to make dealers very sensitive and a day's heavy rejections, of which we have had several since our last, immediately causes a weaker feeling. At the close the market is steady at quotations, though neither buyers nor sellers appear to know what movement the wires from Europe may, at any moment, give rise to.

The bulk of the business has been in Hanks. Oshius have, however, been purchased to a fair extent.

Arrivals have been rather short, not exceeding 1,550 bales. Shipments foot up 10,449 bales against 15,929 bales same period last year.

TEA.—During the interval since the departure of last American mail on the 3rd, prices have shewn a little weakness, of which operators have taken advantage; and settlements for the period to date amount to piculs 5,800 comprising mostly "low grades."

A few parcels of "fine" Teas seems to have found favor but this class, together with higher qualities, has received far less attention than might have been expected, considering the reports current here of the state of the China Green Tea Crop, which is said to be likely to shew a deficiency in comparison with last season of 60,000 half-chests or nearly 4½ million pounds.

Prices close as below, the market wavering.

The *Willard Mudgett* is the only vessel on the berth for New York, the *Lothair* (loading in Hiogo having been withdrawn).

MARRIAGE.

On the 21st Nov., at St. John's Cathedral, by the Rev. John Henderson, Incumbent of St. Peter's Church and Garrison Chaplain of Hongkong, ED. DREY MURRAY, of Yokohama, Japan, to NELLIE, youngest daughter of Robert Chapman, Esq., of Old Charlton, Kent.

Summary.

OUR last MAIL SUMMARY was dated the 17th ultimo, for despatch by the O. & O. Steamer *Oceanic* which left for San Francisco on the following day, probably never to return to these waters, as she will be withdrawn from the trans-Pacific line on the termination of this voyage. On the afternoon of his departure, Captain Parsell entertained a number of his friends at a farewell luncheon on board. Since the 17th ultimo we have received the following mails:—

Per P. M. City of Tokio, S. Frisco, 3 Nov. ar. 23 Nov.
" M. M. Tibre, M'seilles, 7 Oct. " 25 Nov.
" P. & O. Sunda, S'hampton, 12 Oct. " 29 Nov.

And despatched the following:—

Per M. M. Tanais, for Marseilles.....20 Nov.
" P. & O. Malacca, for Southampton27 Nov.
" M. M. Volga, for Marseilles 4 Dec.

AFTER having been open to the public for exactly one hundred days, the National Industrial Exhibition was officially closed on the 30th ultimo. H. M. the Mikado presided at the ceremony in person; and was accompanied by the Empress. A very large number of the principal native officials, the imperial princes, and the chief notables of the empire were present, as were nearly all the members of the Diplomatic Body. The occasion was made an opportunity for a general holiday and festivity in the capital,

which was also largely visited by foreigners from Yokohama, and by Japanese thence and from many miles round. A full account of the closing ceremonies will be found on page 4. The fences enclosing the Exhibition Grounds, and the buildings, which are merely temporary wooden structures, will be taken down and removed. The gardens alone will not, as is at present proposed, be interfered with, but will become a portion of the Public Park at Uyeno. Nearly half of the articles exhibited have been sold while on view. Some have been presented to the Museum of the Educational Department lately established at Uyeno, and are in course of being removed thither: they will greatly enrich the collection. The great majority of the remaining articles will be sold by public auction. The Exhibition has been very popular, and, we should say, eminently successful even in a pecuniary sense. It has certainly been open to adverse criticism in regard to the system adopted of classification and arrangement; but these faults were so evident that they should suggest their own correction in any future undertaking. The exhibitors are said to have arranged among themselves for an exposition to be held annually for six years to come, in some one or other of the provincial towns; and in the seventh year again in Tokio. This scheme, however, is at present immature, and liable to modification.

Most members of the community experience a feeling of relief in the fact that the racing year is over. The Autumn season was brought to a close with the three and a half days' of the Yokohama Racing Association's meeting. It is only due to the Committee to state that this gathering was one of the most successful ever held in Yokohama, and that both in spite of the Race Club having had their races only a fortnight before, and of the lateness of the season. The weather was fine, and the attendance on the three regular days excellent. The knowledge that the imperial stable was represented attracted a crowd of Japanese visitors, some of them of very high rank; and the success of the ponies entered by those who represented the Mikado was greeted with enthusiasm by both foreign and native visitors. The probability of an amalgamation of the Club and Association, or, failing that, the dismemberment of the two societies, and the formation from the *disjecta membra* thereof of a jockey club which shall have the control of racing matters and the Race Course is again mooted. It only remains to be hoped that efforts to arrive at a conciliation may be brought to a happy consummation; and not be again thwarted, as they have been before, by childish pique and merely selfish opposition.

A LARGE iron railway bridge and viaduct has been completed and officially opened on the Tokio-Yokohama line.

SOME alarm has been felt for the safety of the German barque *Christine*, which was despatched hence for Hakodate on the 29th October. The uneasiness arose from a vessel supposed to be the one named, but which subsequently turned out to be a Japanese schooner, having been reported dismasted. Immediately on the news being received in Yokohama the German corvette *Elisabeth* was despatched to the assistance of the distressed vessel, and arrived in Hakodate to find the *Christine* there, anchored safe and sound, having arrived a few hours before. The corvette, however, fell in with the Japanese schooner in distress and towed her into Hakodate.

Mr. Charles Rickerby announces the approaching revival, at the end of this month and year, of the old *Japan Times*.

THE native papers still devote much of their space to the treatment of the subject of the revision of the treaties. The matter, most acknowledgedly, demands attention, and is now occupying the consideration of the Imperial Government and the Foreign Ministers.

Mr. O. B. Bradford, late Vice Consul-General at Shanghai, recently sentenced to a short term of imprisonment for tampering with letters, has pleaded guilty "technically" to a number of other serious indictments. His case is referred to Washington at his own request, and he is kept in custody failing to find bail for \$10,000.

SHIMADZU SABURO (or Hisamitsu) has not come to Tokio. His son, Tadayoshi, the Chief of the Shimadzu clan, has, however, arrived in the capital, and has had an interview with the Mikado.

A GRAND farewell subscription ball was given by the foreign residents of Yokohama to Admiral Patterson, Captain Young, and the officers of the *Tennessee*, in the Town Hall on Monday evening the 3rd instant. The *Tennessee* left yesterday, the 4th, for Kobe on her homeward voyage. During her stay here she has worthily upheld the reputation of the U.S. Navy, and the departure of her officers and men from the station will be much regretted.

THE Russian corvette *Vsadnick* has left for the coast of Yesso to render assistance to another Russian vessel said to have been cast ashore there.

WINTER entertainments have commenced. A concert has been given in the Gaiety Theatre, and the Amateur Dramatic Corps announce an early appearance.

H. E. MR. de Struve, the Russian Minister, left by the French mail on the 4th inst. for Europe on leave of absence. He will be away from his post for several months. Mr. Emile Kraetzer, Chancellor of the French Consulate and for two years Acting Consul in this port, left by the same steamer for France and for promotion to some other post.

DIPLOMATIC DUPLICITY.

THE late prosecution of OLIVER B. BRADFORD, United States Vice Consul-General at Shanghai, for stealing a post office letter, and his conviction upon evidence which barely gave colour to the charge, must have been a source of temporary surprise and entertainment to the Shanghai community: had the affair occurred in Yokohama, we might have had less hesitation in paying some attention to the wisdom of abolishing the extra-territorial clauses from the treaties with Japan, and submitting the liberties of foreigners to the laws of the country in which they are sojourning. Luckily, however, for us we have Consular authorities who are content to follow some rules of law and to submit the impulses of their own judgment to consideration of the value and weight of the evidence upon which criminal charges, involving fine and imprisonment, are brought against men who have hitherto borne irreproachable reputations. The report of the trial of BRADFORD at the suit of the People of the United States, was given at length in the *Japan Gazette* of the 1st November, and we then thought the evidence and the judgment bore their own comment, although a suspicion crossed us that if any of our readers should glance at the address of the presiding judge without reference to the context, he would imagine he had before him an extract from the sermon of a field preacher, though the profanity of the preacher would probably have fallen short of the utterances of the Hon. G. WILEY WELLS. The administration of justice in the East has for many years, owing to the insufficiency of experience on the part of the judges, and the shameful abuse of the license of the bar, been looked upon with distrust and contempt; but considerable improvement has taken place, and it is now but seldom we are treated to a farce, or a bit of very low comedy without the necessity of paying two dollars for the entertainment.

The evidence in the case of BRADFORD consisted almost solely in proof of the letter having been deposited in the Post Office early in January 1877, and a copy in BRADFORD's writing having been found some months later on. Upon this slender thread, and upon the utterly unwarrantable assumption that a letter could not be forwarded from Shanghai to San Francisco, and returned to Shanghai in 86 days, the prisoner was convicted, and the Hon. G. WILEY WELLS proceeded to pass sentence in an address unprecedented in the annals of justice. In consequence OLIVER B. BRADFORD has had to cogitate in prison over the "cussed strictness" of the United States' law. Although impartially we consider the evidence failed against the prisoner, and that the judgment bears upon its face strong indications of previous preparation and foregone conclusion, still Mr. OLIVER B. BRADFORD richly deserves the punishment which has befallen him, in addition to the burden of having forfeited the respect of every man of common integrity and honour. To steal a Post Office letter is a crime which Englishmen are apt to punish with a term at the treadmill or a few years of unpaid labour in the service of the State. To read and copy an open letter found upon the desk of another person entails no penal consequences upon the spy, still we think the latter offence is rarer than the former. Justly or unjustly punished therefore, Mr. BRADFORD, richly deserves what he has got.

The whole proceeding in Shanghai would have been passed without notice, had not

our attention been drawn to a sensational paragraph in an enlightened journal supposed to represent the vaunted civilisation of the Western States of the Union, and commonly known as the *San Francisco Chronicle*. This model newspaper heads two columns of matter with a name respected amongst people of all nationalities resident in China and treats us to "The story of JOHN C. MYERS." It appears Mr. JOHN C. MYERS was for some short time Consul-General at Shanghai, but was suspended by Mr. SEWARD for reasons apparently sufficient, as the suspension was confirmed by no less a personage than the President. Mr. JOHN C. MYERS, however, feeling aggrieved, treats the public to his "story" which consists of one short denial of the charge upon which he was suspended, and a vast quantity of assertions imputing very serious offences to Mr. G. F. SEWARD, the United States' Minister to China.

Mr. MYERS was suspended by the U. S. Minister for having, as was alleged, written a libellous article on the *Shanghai Courier*, but Mr. MYERS pronounces this charge as frivolous and "a mere pretext seized upon" to remove him from his position. To show "how baseless it is he will submit a letter from "JOHN PITMAN, of the firm of BYRNE and PEYFUSS, one of the largest English mercantile houses doing business in China and Japan." Although we are not acquainted with the firm of BYRNE & PEYFUSS, and do not know them as "one of the largest English mercantile houses doing business in China and Japan," still the writer of the letter is certainly deserving of credit, for Mr. JOHN C. MYERS informs us later that he considers the explanation "a sufficient exoneration, as "there can be no question of Mr. PITMAN'S "reliability, his standing as a man of honor "and wealth being unexceptionable." Having thus proved beyond question that Mr. SEWARD was quite wrong and had no justification for his suspension, Mr. JOHN C. MYERS proceeds to urge a series of shameful charges against the Minister, but although we have no intention of reproducing what we honestly believe to be mendacious accusations emanating from the envenomed mind of a suspended officer suffering under the displeasure of his official superior, we cannot avoid touching upon one matter for the purpose of showing the manner in which Mr. JOHN C. MYERS attempts to strain a perfectly proper recommendation from a Minister to a Vice Consul, into "misrepresentation" and "diplomatic duplicity." Mr. SEWARD is stated to be interested in the formation of a wagon-road from Shanghai to the American settlement, and in the construction of the Woosung railway, and Mr. MYERS, indulging in much bathos relating to international law, and the subjugation of the Indian Empire by the same "insidious means," goes on to say that Mr. SEWARD intended "that the originators of the road "should have a monopoly of the building and "retain control of the roads, by which means "he and his confreres would gain millions of "dollars. That SEWARD meant to carry out "this project by means of his official relations "with the Chinese Government and that he "would stop at nothing to realize his ambition "is evidenced by the following extract from "a letter written to O. B. BRADFORD, the Vice Consul-General of Shanghai, in which he "directs the latter to use the machinery of the "Consular office to forward the speculation. "SEWARD, after making a number of suggestions as to the course BRADFORD should "pursue, all of them more or less tinged with "duplicity, goes on to say: 'I would avoid "any declaration which would call into ques-

tion the sovereignty of the Emperor over the "soil, and the right of his government to control works of a public nature. Eastern "people are sufficiently likely to consider us "as aggressive in the pursuit of our purposes "and careless of their rights without our giving them actual facts upon which to support "such a belief.' Was there ever a plainer "intimation thrown out than this? BRADFORD "was plainly directed by these lines to misrepresent matters if necessary to carry his "point."

Truly the recent Shanghai scandal, and the charges so unblushingly given to the world by the *San Francisco Chronicle*, are sufficient to command the attention of the American Government. Perhaps it is not vain to hope that the whole matter may form another of the many reasons why the U. S. Consular service should be subjected to the reform so much required, however, fatal that reform may be to the reinstatement of Mr. JOHN C. MYERS.

THE IMPERIAL MINT.*

A REVIEW of such a pamphlet as that now before us can hardly be much more than a dry collation of figures. It may be none the less instructive, however, for that. This report especially shows what great advances have been made by the institution. It also, certainly, gives rise to a sensation of wonder that so little evident result appears from so much labor. Where, the foreign resident may well ask, where are all these coins, gold and silver, so carefully and laboriously minted? How is it that they do not become, not merely the currency of the empire, but the recognized medium of exchange between native and foreign merchants in their transactions? What is the insuperable difficulty, even, in the way of their replacing the tiresome and risky Mexican as a mutually agreed upon legal tender in the treaty ports of Japan at least, if not of China?

Without reproducing in full the various tables given, we will state the result. Troy ounces of gold of standard fineness, at 900 standard, were imported into the Mint; and 53,627 ounces of gold bullion of various degrees of fineness. Of silver of standard fineness 4,734,130 ounces, and of silver bullion 4,385,659 ounces were brought in. In gold coin 214,218 pieces were struck, of the large value of 1,066,714 yen. 29,185,676 silver coins, worth in all 5,717,954 yen, and of copper coins 85,136,117 in number, equal to 1,106,175 yen, were minted. Thus, 114,536,021 coins have issued from the Mint in the year under review, worth altogether 7,890,843 yen.

The following details we take from the report itself:—

Although the different gold coins (with the exception of 2 yen gold) have been struck, still the number of 20, 10 and 1 yen pieces is so small, that it may be said the coinage of gold has been confined principally to 5 yen pieces.

All the subsidiary silver coins have also been struck (excepting 50 sen pieces); the number of trade dollars is also very great; and owing to the enormous importations of bar silver, the working hours in each Department had to be extended (especially in the Weighing Department) from sunrise to midnight, instead of the usual 9 a.m. to 4 p.m. The largest yield of dollars in one month was over 700,000.

The different denominations of copper coins have been struck, excepting 1 rin pieces, of which none have been made.

* Third annual report of the Commissioner of the Imperial Mint, Osaka, Japan, for the year ended 30th June, 1877. Printed at the *Hiogo News* Office, 1877.

The total value of coins struck at the Mint (gold, silver and copper) from the commencement up to the present year, inclusive, amounts to yen 77,496,226 95/100 or 2 21/100 yen per head, taking the population of Japan to be 35,000,000.

This is not, by any means, a small amount of value for a newly established Mint to turn out in so short a period as has elapsed since its inauguration.

In connection with the Mint are Sulphuric Acid Works, whose operations during the year have been very successful, as will be seen from the following figures:—

SULPHURIC ACID.

Consumed in this country.....	602,612 lbs.
Exported abroad	1,220,794 "
Total amount sold.....	1,823,406 "
Monthly average.....	151,950.50 lbs.
" of last year.....	61,373.83 "
Difference.....	90,576.67 "

Of the quantity exported abroad (viz.: 1,220,794 lbs.) 958,776 lbs. have been sold in the China market through the China and Japan Trading Company, Limited; and as the demand, both for home and foreign consumption, is increasing, it has been deemed advisable to increase the concentrating capacity of the works; and twenty concentrators have been added and been in working order since August last year. Nitric and muriatic acids have also been sold in large quantities during the year.

In the report of the technical advisers to the Mint are several items of interest. Thus:—of the several counterfeit coins examined (trade dollar and subsidiary silver) all, with one exception, were found to consist of tin only. Korean gold dust should be adjudged as of considerable richness. Two samples have been examined. One contained 593.3 per mil of gold and 365.8 of silver with much iridium: the other 826.1 of gold and 142.4 of silver. In the course of the year about 18,000 assays of gold or of silver have been made, a number largely exceeding that of any previous year; and seeming to indicate that there is no dearth of the precious metals, and to suggest that enterprises, native or foreign, for finding them should be encouraged.

But the operations of the Mint have not been confined to the treatment of the precious metals; and the work of the assayers has resulted in interesting discoveries.

Forty-one samples of unrefined copper, representing in all 555 tons, have been analysed during the year; and it is worthy of remark that in not a single sample have the proportions of arsenic and antimony present amounted to more than mere traces, whilst usually they were both absent. To the absence of injurious quantities of these interfering metals in the copper accepted by the Mint, is due the fact that no bars have yet been found brittle in rolling. Some zinc ores (blendes) have been examined, with a view to their utilization, but unfortunately their nature has been found to be such that the zinc could not be profitably extracted from them in Japan, on account of the want of a cheaper fuel and of a more fire-resisting clay than have yet been available. Experiments on the treatment of the old "tempo" sen, necessary for their conversion into the new copper coin, have also been conducted; a process has been devised and a furnace designed, by which this end may be attained. One of the reverberatory furnaces of the Copper Melting Department has been altered to suit and test the process on a large scale, before the erection of the special furnace. The "Akita crude round copper," which has caused considerable difficulty from time to time in the Copper Refinery, has been subjected to an investigation, and its nature accurately determined. In consequence of this, an alteration in the process of refining has been introduced, with highly satisfactory results. Several samples of plumbago, refractory bricks and clays, crucibles and alloys, have also been analysed or tested.

The technical advisers recommend the extraction of the gold and silver from the

vast quantity of ashes, old crucibles, and furnace refuse, which has accumulated since the commencement of the Mint, and now amounts to several hundred tons, as well as the reduction of the copper refinery slag. This, they say, ought, if possible, to form an important part of the work of next year.

Assay reports from the Japanese, American, and Royal English Mints, close a pamphlet whose few pages are full of hope and promise.

TSUKIJI MISSION HOSPITAL.*

THIS institution, now in the third year of its existence, seems to be doing good work. The second annual report, which we have received from DR. HENRY FAULDS, the Surgeon of the Hospital, still reports progress, and announces that the people, for whose benefit the institution was established and is maintained, are more and more giving their confidence to the management. The Mission Hospital, as most foreign residents are now aware, is in connection with the United Presbyterian Church of Scotland, and its objects are "the treatment of the sick from benevolent motives, and the teaching of the great and saving truths of Christianity." The report informs us, that "it has been the strong desire of those carrying on the work that each department of this double duty should help and not hinder the other;" and that "these apparently divergent aims can be harmoniously associated, and that with greater ease and naturalness than many suppose." The often debated question as to whether medical science can be applied to the relief of physical infirmity simultaneously, or in concert, with the inculcation of religious maxims is gone into by the writer, who combats the not uncommon, even among the educated classes, prejudice against the medical missionary. According to Dr. FAULDS, the great aim of the evangelizing healer is to win the confidence of the heathen by his science and skill, to act with all sincerity, and so to gain a hold upon the heart of the patient, which will bring his intellect within the reach of argument and conviction. Bigotry, in its real and worst sense, is eschewed in the Tsukiji Hospital. "In our wards the Buddhist priest or the Confucian teacher are, as a matter of course, welcome, to render by the bedsides of their followers the religious services they may require. Christianity is thrust down nobody's throat, but is offered to all in a courteous brotherly way. The result is that it is generally received in the same spirit, and patients attend the services voluntarily, and often take much interest in them." This is work in the true spirit of proselytism; and it is to be hoped that the bread thus cast upon the waters by Dr. FAULDS and his fellow workers may be returned to them, if after many days. So far the harvest they have reaped has not been a large one; but the future is looked forward to, if not with assurance, at least with hope. Services are regularly held in the hospital, and addresses are delivered on Christianity, to which both outdoor and indoor patients come and listen with attention; "though only one person has yet been baptized, and he was a servant of the institution." We cannot help underlining these last few words. It is pleasant to learn that "this man has, however,

given quite satisfactory evidence of his sincerity, and shows increased attention and activity in the discharge of his daily duties." We have our own opinion, and one at which we have arrived with regret, as to the probable success of missionary effort among the superficially intelligent, but profoundly sceptical, Japanese. We do not agree with the author in his belief that the cause might be advanced by the circulation of a religious newspaper among the Japanese; but we can respect his convictions, and so are happy to reproduce his views on this subject, as well as his rather caustic, and from our view not altogether just, comments upon the action which has rendered the undertaking of such an enterprise impossible to the missionary, or indeed any foreign, body for the present.

"The Treaty limits are not wide, and within these every legitimate way of presenting Divine truth should be adopted. The Japanese authorities are every year showing a more liberal disposition. Even a religious newspaper would probably not be objected to by any of them; but by one of the most incomprehensible pieces of legislation ever indulged in by a British minister, Sir Harry Parkes closed this avenue to missionary operations, in opposition, it is generally believed, to his ministerial colleagues, and certainly without much support from his superiors at home. The feeble plea guardedly urged by a solitary defender was that a foreign newspaper in Japanese might utter treason, though the fact remains true that a foreign newspaper had till then existed, the only one aimed at, without any show of treason, and this law still leaves them free to utter treason in English, the language of all the higher education of the country. Even this poor plea cannot apply to a missionary newspaper, and such an unconstitutional regulation must inevitably be rescinded, when its effects are understood at home to be even more unfortunate than a slight snub to an official blunderer would be. Legislation by popular panic is a bad thing, but when important English laws can be made by a single individual in a panic it is time the constitution were amended. No one supposes that the enlightened government of Japan wishes to suppress religious newspapers, yet the English minister wields over those who would undertake such a greatly needed work, threats of fine and fetters—three months, with or without hard labour, and with or without a fine not exceeding five hundred dollars. The date of this remarkable enactment is 7th February, Anno Domini 1876. Surely His Excellency is entitled to style himself Envoy Extraordinary, nor can it be wondered at that an old and respected American resident should express the hope that 'Her Most Gracious Majesty the Queen of Great Britain and Ireland will revoke this most oppressive and dangerous edict of Her Minister.'"

Turning from this part of the work, however, to one in which the Mission commands all our sympathy, we find that a course of twelve lectures was held in the spring, the, we trust, appreciative attendants on which were the hospital patients and students. The lecturers were native and foreign gentlemen; and the scope of their subjects was a very wide one. Thus, without quoting further, we find "Political Economy," "Water—Its qualities and advantages," "Pure religion a political necessity"—this latter by a Japanese professor—and "David Hume, and his influence on European thought and morals," treated by the orators.

The amount of purely medical work done is as follows:—

Since last report there have been treated	
New Patients	1,316
All	5,230
Of these, Indoor Patients	166

These figures speak for themselves and show, better than words, that the institution must be felt as a great good, an important local work of beneficence. And, still more, its benefits have been wrought with very small means, the total receipts, including \$103 credit balance brought over from last

* Second Annual Report of Tsukiji Mission Hospital, Tokio, in connection with the United Presbyterian Church, Scotland, 1876-7. Yokohama, Printed at the Mission Printing Press.

report, and \$1,247 fees from Japanese patients chiefly, amounting only to \$1,561. The Hospital management has in hand the handsome cash balance of \$66. 60. 5. We should be glad to know that the mere publication of these figures have brought the funds some increment.

"A considerable number of severe and important operations were performed during the year, including many eye operations which were unusually successful—removal of tumours, amputation of forearm, removal of dead bone, osteotomy, abscesses, tapping for dropsy, etc. etc. Several burns were treated during the year—one of them was of extraordinary severity—a drunken man overturned a kerosene lamp and burned almost his whole body. He has entirely recovered, with the exception of some small sores on which skin-grafting has been tried. Two falls occurred from houses. A cut from a sword blade falling edge downwards on a man's foot during the great fire, blows from fists, kicks, dog bites, two gun-shot wounds, etc. A very severe and complicated injury from a carpenter's gouge to the knee joint, caused by the fall of a beam while the man was working, was treated antiseptically under great difficulties with the happiest result. Many cases of severe joint disease have been successfully treated, and these are becoming quite a specialty in our wards. Hip-joint disease is very common in this city, and we have had quite a number of severe cases, all of which have either recovered, or been greatly improved."

We have already exceeded the space which we had at first intended to give to this subject; but our excuse, if any is needed, is that the work merits even more extended comment. The "Miscellaneous Medical Notes" by the Surgeon, pages 14 to 23, will prove interesting to many, other than professional men; the short essay upon the "Danger of Colour Signals" demanding, indeed, special attention at the hands of the Railway Department. Colour-blindness is, as is now well known, alarmingly prevalent, and is the more dangerous that the optical disease, if it may be called so, is often unsuspected even by those who are subject to it. Engine-drivers cannot be supposed to be more exempt from it than their fellow-mortals. We will close this notice with Dr. FAULD's own words, which are momentous. "Coloured lamps do not furnish perfectly reliable signals, an objection which no mere testing of the colour vision of signalmen will obviate. Whether a better system than these afford can be substituted or not, is another and totally different question, which others may try to solve." He might have added. "It is their paramount business to try to solve them."

THE CLOSING OF THE NATIONAL EXHIBITION.

Designed under imperial patronage, and opened with state ceremonies at which the Sovereign himself presided, it was but fitting that the closing of the National Exhibition at Ueno, after the brilliant success which it has achieved during the hundred days of its existence, should have been made the occasion for one of those displays in which the Japan of our day so much delights. The Exhibition Bureau, gratified with the triumph which had been gained by their national experiment, determined to signalize the termination of their labors by a *fiat* which should assure the public that their toil had not been in vain, and that the first Industrial Fair held in Tokio had more than realized the highest hopes of those who organized, and have so well directed it.

The early morning of the 30th November was dull and cloudy, and as the hours were on a drizzling rain began to fall, threatening to mar all the enjoyment of the day. The

rain soon ceased, however; and, before noon, the clouds had opened somewhat; and though the sky was never bright during the remainder of the day, though not a ray of sunlight came to illumine the dulness of a day for possession of which Winter seemed to be struggling with Autumn, yet there was no wet; and, indeed, the cold was not so great as to make several hours spent in the open air at all intolerable.

The Exhibition was opened as usual at seven o'clock in the morning; and very soon after that hour native spectators began to flock thither. As had been previously announced, the centre of the main entrance was closed to the public. It was, for the nonce, a carriage way to be passed only by the imperial visitors in their vehicles. The side turnstiles in this great gate, however, were at the disposal of the public to pass and repass; but as it was correctly imagined that the crush there would be great, and that, if they were the only entrances available, great inconvenience and delay might ensue, the two side turnstiles, East and West, usually used only as means of exit, were opened for the admission of holiday-makers. Tokio, generally, wore a festive appearance; but the evidences of the celebration of a national rejoicing increased as the distance between the Shinbashi Railway Station and the Gardens at Ueno diminished. In Owari-cho and the Ts'kiji end of Ginza the well known flag and lantern appeared only here and there; but in the upper part of Ginza, in Toricho, Onari-Kaido, and Hirokoji, they became more and more frequent, until, at the outskirts of the Ueno Gardens, they were so numerous as in many instances almost to hide the tenements they were intended to decorate. A large, and not very beautiful triumphal arch spanned the broad approach to the Gardens. On each side of it were—literally—walls of *chochin*, red with a white streak bisecting them. In the Gardens the walks were on either side hung with similar lamps, strings and festoons of which also connected branches and summits of the loftiest trees. The circuit of the swamp or pond lying low in the Gardens was girt, too, with lanterns; among which a quick eye could discern the ordnance and apparatus of Mr. Ota, the pyrotechnist of Yokohama, evidently promising some specimens of his art. Due inquiry elicited that a report published a day or two ago in a native journal, that fireworks would not be shown within the Exhibition Grounds, was correct. Wisely, perhaps, the Bureau had decided not to run the risk of bringing any chance of a conflagration within reach of the precious objects committed to their care; so Mr. Ota had to select another locality, and chose the one we have mentioned. Another disappointment, in connection with his proposed doings, was in store for the public. The same fear, probably, which prevented the Directors of the Exhibition from allowing a show of pyrotechny in their grounds, caused the local authorities to prohibit any day fire-works being let off at all. And truly no blame attaches to such precautions. Anyone who saw Tokio yesterday, or still more last evening and night, would think that no care, no preventives against fire, can be too great there. He would wonder, not that disastrous conflagrations, such as have annually to be recorded, occur; but that they are not much more frequent. We confess that a great fire in the capital would not have astonished us last night. It was a real relief when ten o'clock at night had struck, and no fire-bell had clanged out its alarm.

The main entrance reserved for the Mikado and the Empress was draped with blue curtains, displaying chrysanthemums outlined in white. The buildings and grounds were almost roofed with flags and lanterns of the prevailing colours. The improvement in the gardens within the enclosure was very striking to one who had not seen the Exhibition since soon after it was opened. And what is now the site of the late Fair will, when the buildings and fences are removed, and it is again part and parcel of the Ueno Public Gardens, be one of the most pleasant corners of that charming retreat. The central fountain, an unpretending little jet, was modestly playing. At the further side, from the entrance, of the circular drive which surrounds this fountain and its basin, and leading into the Fine Arts Gallery, was an extemporized covered way, at the mouth of which was a porch brilliant with chrysanthemums and surmounted by flags, bright red and white. Here it was that the imperial party was to descend, and here, later in the afternoon assembled all the notables of the ministry, and many of the army and navy.

During the forenoon the Marine Artillery band played a selection of airs. By noon the grounds were already crowded; and it was a matter of some difficulty in the Halls to get near the objects on view. At this time but few Europeans had reached the Exhibition; but natives were there in thousands. A walk through the Halls, and a glance at the exhibits, show how advantageous the Fair must have been to the exhibitors. It is said than nearly half the articles on view have been sold. To the visitor the number of cards bearing the inscription "sold" would convey the idea that the great majority of the articles have been disposed of. A number of things are destined for the Museum, where opportunity will offer for a more leisurely inspection of some beautiful objects, than was possible while they were in the Exhibition. Among others we noticed some ware, which will be more in its place in the Museum than in its heretofore location—some magnificent English pottery presented by Messrs. Londres & Co. of London, and Doulton of Lambeth, and glass ware by Messrs. Green and Nephew of London. Some of these objects we may notice more at length on a future occasion.

By two p.m. the crowd of natives had become dense, and the number of Europeans had perceptibly increased. It was something to say that they were visible at all among the Japanese. Here and there a group might be seen of foreigners who, having come from the port, and doubting their chances of obtaining provisions, had provided their own commissariat, and were refreshing themselves therewith *al fresco* or in *tabernis*. At half-past two a couple of the imperial carriages containing ladies, apparently attendants on the Empress, arrived. At three the police commenced to clear the drives, a task of no small difficulty; but which they accomplished at length with the exercise of great patience and good humour. In many instances their kindness in obtaining good points of view for foreigners, especially ladies, deserves notice. It was a hard task for them to get the slender cords, marking the lines which should bound the advances of the crowd, stretched, and often still harder to restrain the inside pressure which would break them. One rather amusing episode is worth relating. Close to the imperial entrance, at a corner where the crowd was densest and where several foreigners had congregated, was a promising specimen of

young Japan. This youth, who spoke English fluently, was not at all pleased at the presence of the strangers, to whom he endeavoured to make himself particularly obnoxious. For instance, after a cord against which he was leaning had broken, or, as the police imagined, he had cut it himself, a thing which is not unlikely, the civil force with their coolies endeavoured to stretch another. During the operation, he remarked in an incisive voice, slyly implying that some foreign visitor had been the offender, "they," the strangers, "will now have another opportunity of displaying their propensity to break the laws." When the damage was repaired, it was refreshing to see two policemen signal out this reformer, and to watch him tremble at their rebuke. They, it appears, had seen the mean manoeuvre, and invited the rope-cutter and calumniator to pay them a visit on a not very remote occasion.

From three to four o'clock the members of the diplomatic body gradually arrived. Among the earliest to put in an appearance were Their Excellencies of Belgium and Spain. France, Russia, Great Britain, Italy, the United States, Germany, were all represented. In fact, not more than two or three members of the whole corps were absent. About this time or before came many Japanese notables. To name them would be to name nearly all the well known native men of the time. Okubo, Ito, Sanjo, Iwakura, Kawasi, Mayeshima, Matsukata, and other prominent officials, to the number of nearly one hundred, were chatting in groups in and about the porch. At a quarter past four, and when the crush had become almost unbearable, the Imperial party, which had left Akasaka at three o'clock, arrived in carriages. The Mikado was in his state chariot, drawn by two magnificent bay horses. On the front seat, attending on his Majesty, was his chamberlain, Mr. Yoshii. The next carriage brought the Empress and some other ladies. The Princes Arisugawa, Higashi Fushimi, and Fushimi-no-Miya came about the same time. The emperor alighted cold and dignified. He was joined by Sanjo, Okubo, and Bojo, who escorted him to the reception room, where others of the Ministry, and the Diplomatic Body, awaited him. Hither Her Majesty was conducted by Iwakura, and other gentlemen. While the Emperor was getting out of his carriage, two not impolite but over zealous policemen went to two foreign ladies and endeavoured to persuade them to take off their hats. They did not know how much in the open air a Western woman's head-gear is part of her head, and how hard it is to separate the two. Times are changed. In the old days the yakunin might have solved the difficulty by cutting off hat and head at one blow. Yesterday they remonstrated, but in vain, and, finding remonstrance useless, were content to smile.

The passage of the Mikado and his party from the carriages to the reception room was only the affair of a minute or so; and, as soon as those assembled were ready to hear him, he read an address to this effect, speaking to the Home Minister:—

This being the day appointed for the closing of this National Industrial Exhibition, We are here to perform the ceremony in person. We congratulate you upon a success, which has been attained by the institution through your industry and the good services of many officers.

Okubo briefly replied thus:—

I, Toshimitsu, address your Majesty with respect.

On the day set apart for closing this Exhibition, Your Majesty has come in person to preside

at the ceremony, and to favor us with your orders. Our gratitude for this condescension is great. I felicitate myself upon this with great respect for Your Majesty's goodness. For ten years your reign has been devoted to the welfare of the people; and you have directed the establishment of this Exhibition with a view to their advancement. The nation's wealth is dependent upon the nation's industry, on which in turn depends the amount of our productions. Now I, administering home affairs, and superintending the national productions, express the hope that our people will have a good return from their industries, as is Your Majesty's desire, and as a return for your virtues.

The Governor of the Tokio-fu read an address, similar in tenor, to the Emperor, who then addressed the Diplomatic Body, on whose behalf Sir Harry Parkes, as Doyen, replied in terms of felicitation.

As soon as the addresses were finished, and they were commendable for their brevity, a bell rang, and the various buildings of the Exhibition were closed and locked. (In one instance this was done with too great precipitancy, as some unfortunate wight was shut up in one of the Halls and had to put up with an hour's forced reclusion.) The band of the Kiododans then commenced to play: the imperial party became invisible in the rooms prepared for them: the dense crowd outside swayed and surged, their buzz and hum quite drowning the music: the ministers and generals and admirals, beneath their blazing uniforms, were lost to view; and the foreign diplomatists, "by ones, and twos, and threes," disappeared as they came, to meet—the chiefs at a dinner given by one of themselves—the subordinates to partake of a repast provided for them in the Uyeno Seyoken.

Among the sights of the Exhibition while the addresses were being delivered, and afterwards during the performance of the Kiododans' band, was the knoll behind, and to the right of, the Fine Arts' Gallery. This was actually covered with people. From a distance it resembled nothing so much as a swarm of bees. Every foot of space which commanded any view at all of the estrade was occupied. We have seen no official estimate of the number of people present in the Gardens; but should say that, all included, there cannot, at the time of the Imperial visit, have been less than ten thousand persons.

Night was now swiftly falling, and the lanterns which overhung the buildings and grounds were rapidly lighted, and produced a good but rather too monotonous and lurid effect. The predominance—it were better to say the invariableness—of red light was rather trying, and inclined rather to dulness than brilliancy. And, indeed, this was noticeable in the Uyeno Gardens, their neighbourhood, and all that part of the town which was largely lit.

After partaking of a collation, His Majesty re-entered his carriage at about half-past six, and left the Exhibition escorted, as he came, by a guard of lancers. It was then quite dark, and Mr. Ota had already commenced his splendid but too rapidly ended display of fire-works. The Mikado stopped his carriage for a short time to look on these, and then, resuming his route, drove slowly along the densely crowded and in places almost impassable streets, by the way he came, back to the palace of Akasaka. Such, in brief, is the story of the closing of the National Exhibition at Uyeno.

On the 30th ultimo H. E. Mr. de Struve was admitted to a farewell interview with H. M. the Mikado. Madame de Struve at the same time was received by the Empress.

OPENING OF THE ROKUGO BRIDGE.

The new railway bridge at Kawasaki across the Rokugo river, was formally opened for traffic on the 27th ulto. by His Excellency Hirobumi Ito, Minister of Public Works; who, accompanied by His Excellency Yamao Yozo, Vice-Minister of Public Works, and the principal officials of the Kobusho, proceeded from Tokio by the 1.15 p.m. train to Kawasaki. After the 1.19 p.m. up train from Yokohama had passed over the old bridge, plate-layers proceeded with all speed to shift the main line, and form a junction at both ends with the line passing over the new bridge and viaduct, and this having been safely accomplished during the interval between trains, the 2.30 p.m. down train from Shinbashi was stopped at the Tokio end of the viaduct to take up the official party who had arrived there after walking across from the Yokohama end of the structure; and these having seated themselves in the train, it proceeded on its way over the new bridge, which was then declared open for traffic by the Minister of Public Works, with the usual accompaniment, in the partaking of which, a long life was wished to the structure just opened. The party afterwards returned to Tokio, much pleased with their trip, and the occasion which had induced it.

Although the assurances of the Engineers, that the old bridge would hold out to the present time, have been fulfilled, there is little doubt but that the change to the new bridge will afford a considerable measure of relief to travellers between Tokio and Yokohama, by many of whom the old wooden structure was regarded with a feeling of decided want of confidence in its trustworthiness.

We have heard a traveller, who made frequent journeys by night between England and Ireland *via* Holyhead, state that he never settled himself to sleep on the journey from Holyhead until he had safely passed through the tubular bridge across the Monni Straits: and, although observing the progress in the construction of the new bridge at Kawasaki has in some measure compensated for the interruption when crossing the old one, there were, we imagine, few passengers who did not feel something like the gentleman referred to. They will now be able to continue the reading of their book or newspaper without a fear of being suddenly precipitated into the river below. Passengers will not now be able to view the new bridge when passing over it, but ample opportunities have been afforded them during the past eighteen months to observe that it has been erected with much care, and is not only a work of great strength and permanence, but also a feature of interest and ornament upon the line of railway. It has been remarked by persons who profess some knowledge on the subject, that such works as that under notice are of a superfluous strength and permanence, and consequently of an unnecessary additional cost. We are, however, of opinion, that the total unfitness of the timber, procurable in Japan, for the construction of bridges, or indeed of any work in which only a moderate degree of permanence and stability is necessary, has been amply proved not only upon the railway, but throughout the country, in the case of the wooden bridges constantly requiring renewal, and always objects of anxiety and distrust. The nature of this country renders the selection of railway routes along the valleys a matter of necessity, as a saving of expense in construction, and as a prominent object of consideration in the future traffic, which must all arise in the valleys, where the

heavy and sudden rainfalls, with the frequent occurrence of dangerous and overwhelming floods, render it imperative to construct all such lines in the most permanent manner.

In closing this notice we may mention that the strength of each span of the bridge and viaduct had been proved by subjecting them to the most severe tests on the day previous to the opening; the results having been of the most satisfactory character. The greatest degree of deflection exhibited by the 100 feet spans, with four locomotive engines, and having trains laden with earth, side by side, upon the double line, was nine sixteenths (9/16) of an inch; and the greatest deflection exhibited by the short 40 feet spans, with the heaviest weight which it was possible to put upon them, was five sixteenths (5/16) of an inch.

YOKOHAMA RACING ASSOCIATION.

AUTUMN MEETING, 1877.

FIRST DAY,—Tuesday, 20th November.

Although so late in the season as to warrant the prognostications of bleak, chilly, and perhaps wet, weather proving correct, the first day of the Autumn Meeting of the Yokohama Racing Association broke with the prospect of at least being fine, though the atmosphere was decidedly nearer freezing point than the more fastidious could, perhaps, appreciate. However, as the day wore on, the clouds became more detached than in the early morn, and the warm rays of the sun rendered everything cheering and comfortable.

The programme provided was much in the usual style, consisting of eight races, the entries for each of which were very fair, the largest number being for the Russian Cup. Though the majority of the ponies had met before on the course and their qualifications, therefore, were pretty well known, still there was some new blood among the Japanese ponies which added to the interest of the races in which they were engaged. As is usual at race meetings, the "tips," which have been so lavishly given on this occasion, more than once proved fallacious, but in the main were correct, which, however, does not say a great deal for the sagacity of the knowing ones, when almost every pony is so well known that an outsider, who had never visited the course during training operations, would not have a difficult task in spotting the majority of winners by a careful perusal of the race book. The interest manifested in the present gathering is indicative of the growing popularity of the Association among the community, and a guarantee for the success of the race meetings now and hereafter. Several Japanese gentlemen of distinction were present, the attendance was very fair, and the Grand Stand presented a lively as well as an attractive appearance. The band of the U.S.S. *Tennessee* performed with much spirit between the events; and a couple of Minstrels created some amusement and reaped a fair reward for their trouble.

1.—NEGISHI CUP.

Value \$100. For China Ponies that have never won a race. Weight for inches. Entrance \$5. One mile.

Mr Sinbad's <i>The Dwarf</i>	10st 2lbs...	1
Mr W. Fairplay's <i>Mongolian Wolf</i>	10st 2lbs...	2
Mr Robertson's <i>Bravo</i>	10st 0lbs...	3
Mr Sinbad's <i>The Consul</i>	10st 2lbs...	0
Mr Robertson's <i>Sport</i>	10st 5lbs...	0
Mr Earnest's <i>Bébé</i>	10st 2lbs...	0
Mr F.'s <i>Quasimodo</i>	10st 2lbs...	0

The first race of the meeting brought out seven ponies of the eight entered, the favourites being *Bravo* and *Mongolian Wolf*. All the animals looked well, and to the eye of a stranger, it was simply a toss up as to the winner. Mr. Robertson declared to win with *Sport*. The result of the race was a complete take in, *The Dwarf* winning in good style. The start was an excellent one, and *Sport* at once rushed to the front, but was not permitted to enjoy that enviable position, for more than one of his competitors passed him. On going up the rise the ponies, with one exception, went together, and a splendid race took place down the back stretch, first one pony and then another showing slightly in advance, though the *Wolf* seemed to have the best of it. After passing the trees however, Mr. Robertson's *Bravo*, *The Dwarf* and a couple of others were together, and the race looked as if it belonged to any of them almost to the post. Mr. Sinbad's pony won in 2m. 17½sec.; there being scarcely a length's difference between the three first ponies at the finish.

2.—THE GRIFFINS' PLATE.

A Sweepstake of \$10 each (with \$50 added) for Japan Ponies being *bond fide* Griffins. Weight for inches. Five furlongs.

Major Arda's <i>Mameluke</i>	10st 6lbs...	1
Mr Verisoph's <i>Main Chance</i>	10st 6lbs...	2
Messrs Takasaki, Kataoka and } Fujinami's <i>Fukuoka</i>	10st 2lbs...	3
Major Arda's <i>Moustique</i>	10st 0lb...	0
Messrs Takasaki, Kataoka and } Fujinami's <i>Sambungi</i>	10st 6lbs...	0

All the ponies entered faced the starter, and at the word go, *Moustique* went to the fore, but was soon challenged by *Main Chance*. He held his own however till entering the straight, when *Mameluke* and *Fukuoka* went up to the leading pair, and a capital race ensued, all going under the lash. *Main Chance* made a desperate effort to win, but *Mameluke* beat him by a neck. *Fukuoka* a good third. Time 1.23¼.

3.—THE RUSSIAN CUP.

Presented. Value \$: For all Ponies. Weight as per scale. Entrance \$5. Three quarters of a mile.

Mr Robertson's <i>Dibs</i>	10st 8lbs...	1
Mr Fairplay's <i>Chief Mongolian</i>	10st 11lbs...	2
Mr Peter's <i>Skedaddle</i>	10st 2lbs...	3
Mr Ola's <i>Mohstolz</i>	10st 6lbs...	0
Mr F. Mason's <i>Dick Swiveller</i>	10st 5lbs...	0

Some trouble was experienced in getting the ponies off on even terms, and when they did go, *Dibs* was lengths in the rear. *Mohstolz* made the running a length a head of *Chief Mongolian* and *Dick Swiveller*, but at the three furlongs had to give way to Mr. Fairplay's pony, who every one thought would win easily. After passing the trees, however, *Dibs* was set going and went through his horses one after the other with great rapidity, and a hundred yards from home wrested the lead from *Chief Mongolian* and won a very good race; *Skedaddle* being well up for third place. Time 1.36¼.

4.—THE JAPAN SILK CUP.

Presented. Value \$100. For Japan Ponies. Winner of No. 2 and of two races at any meeting excluded. Weight for inches. Entrance \$5. Half a mile.

Messrs Takasaki, Kataoka and } Fujinami's <i>Sekimoto</i>	10st 4lbs...	1
Mr Verisoph's <i>The Moor</i>	10st 2lbs...	2
Major Arda's <i>Monarque</i>	10st 6lbs...	3
Mr F.'s <i>Doctor</i>	10st 6lbs...	0
Mr Steven's <i>Exile</i>	10st 4lbs...	0

The start was not a very good one, but as it happened had little effect upon the race. *Exile* and *Sekimoto* made the running at a

terrific pace and the race would have been very close between the pair had not the former unfortunately run wide at the entrance to the straight, thus leaving the race a gift to *Sekimoto*, who won easily, to the great gratification of the Japanese. Time 64½ sec.

5.—THE NAVAL CUP.

Presented. Value \$: For China Ponies. Winners of three races in Japan excluded. Winners of two races anywhere, and winners at this meeting 7lbs. extra. Weight for inches. Entrance \$5. One mile and a half.

Mr Robertson's <i>Sport</i>	10st 5lbs...	1
Mr Robertson's <i>Favori</i>	10st 5lbs...	2
Mr Sinbad's <i>The Raven</i>	10st 8lbs...	3
Mr Fairplay's <i>Mongolian Chief</i>	10st 8lbs...	0
Mr Earnest's <i>Bébé</i>	10st 2lbs...	0

This race was not so closely contested as might have been expected. *Mongolian Chief* did not appear to be up to his usual form. After starting, *The Raven* and *Sport* held back, and the other three passed the stand together. On the other side of the course, *Bébé* fell behind, and *Mongolian Chief* soon did likewise, and were, very considerably, pulled by up their jockeys when it was certain their chance was gone. *Sport* now went to the front and won easily, with his stable companion coming in for second place, and *The Raven* a bad third. Time, 3m. 31½ secs.

6.—THE NETHERLANDS' CUP.

Presented. Value \$100. For Japan Ponies. Weight for inches. Entrance \$5. Three quarters of a mile.

Don Carlos' <i>Oyama</i>	10st 2lbs...	1
Mr Bencen's <i>Board of Health</i> (late Sandboy).....	10st 4lbs...	2
Messrs Takasaki, Kataoka and } Fujinami's <i>Sannohé</i>	10st 6lbs...	3
Mr Ola's <i>Mohstolz</i>	10st 6lbs...	0
Mr Verisoph's <i>The Convert</i> (late Jim Hills).....	10st 4lbs...	0

Oyama and *Board of Health* soon cut out the running and the race rested between them from first to last, though had *Sannohé* been pressed harder than he was by his Japanese mount, he would have been much closer at the finish. *Mohstolz* was the favourite, but finished fourth. Time 1 m. 36¼secs.

7.—THE GERMANIA CUP, No. 1.

Presented. Value \$150. For China Ponies that ran as Griffins in Japan last Spring. Winners at this meeting excluded. Weight 11st. for 13 hands, to give or take 5lbs. for each inch above or below. Entrance \$5. One mile and a quarter.

Mr P. Kell's <i>Vandal</i>	11st 0lbs...	1
Mr Peter's <i>Skedaddle</i>	10st 9lbs...	2
Mr Robertson's <i>Chance</i>	10st 9lbs...	3
Mr Sinbad's <i>The Sheik</i>	10st 9lbs...	0
Don Carlos' <i>Telephone</i>	10st 9lbs...	0
Mr F.'s <i>The Boojum</i>	10st 9lbs...	0
Mr Steven's <i>Satisfaction</i>	11st 0lbs...	0

After several false starts the lot got away in wretched bad order, *Telephone* stopping at the post until the rest were a hundred yards on their way. The horses came steadily past the stand, and on going up the rise *Skedaddle* put on more speed and passed his ponies until he came near the leaders, *Vandal* and *Chance*. The race lay between the three, the others tailing off, but on entering the straight *Chance* had shot his bolt, and the contest rested between *Vandal* and *Skedaddle*, the former winning pretty easily. Time, 2m. 55¼ secs.

8.—THE JAPAN BANKERS' CUP.

Presented. Value \$100. For Japan Ponies. Winners of two races at any meeting 12-lbs.

extra; other winners 7-lbs. extra. Weight for inches. Entrance \$5. Five furlongs.

Don Carlos' Oyama, 10st 2lbs, 12lbs extra ...	1
Messrs Takasaki, Kataoka and Fujinami's Sekimoto, 10st 4lbs, 7lbs extra.....	2
Mr Verisoph's The Convert, 10st 4lbs, 12lbs extra.....	3
Mr Steven's Exile, 10st 4lbs, 7lbs extra	0
Mr Ola's Mohstots, 10st 6lbs, 12lbs extra	0

This event was a gift to Oyama, as Sekimoto did not go off at anything like a good pace. On entering the straight, however, he went through his ponies in fine style and made a good second. Time, 1 min. 19½ secs.

SECOND DAY,—Wednesday, 21st November.

If the weather was fine yesterday it certainly was surpassed to-day, as more delightful weather could scarcely be experienced than favoured the second day's racing.

We observed a list of names of horses, with the first event for which they would compete attached, posted on the weighing room, and if this system was more indulged in on our course than it has been hitherto, it would be appreciated by the public.

Mongolian Chief, Skeladdle and Exile were scratched for all events to-day.

That Kickapoo should have won the first event was a great surprise, as it was generally thought a gift for Vandal. But Kickapoo is in excellent trim, and the time in which he did the mile to-day, shows that he is well able to compete with first-class ponies.

By two o'clock the number of people assembled was greater than we have seen for many meetings, the stand being literally crowded. The number of natives present to-day was far more than yesterday. The ladies' purse was won by Chance, after which event, the fortunate jockey was taken to receive the prize from the hands of Madame Fauconnet, who complimented him on his success.

1.—THE GERMANIA CUP, No. 2.

Presented. Value \$150. For all Ponies. China ponies winners of four races in Japan excluded, or winners of three races anywhere 10-lbs. extra. Weight as per scale. Entrance \$5. One mile.

Don Carlos' Kickapoo.....	10st 8lbs... 1
Mr P. Kell's Vandal, 10st 5lbs, 10lbs extra....	2
Mr Fairplay's Mongolian Wolf.....	10st 2lbs... 3
Mr Sinbad's The Sheik	10st 2lbs... 0
Mr Ernest's Bébé	10st 2lbs... 0

The result of this event was another take in for the knowing ones, and resulted in favour of the only Japanese pony that ran. The start was very good, Kickapoo at once going to the front, closely attended by Bébé. After ascending the rise, the favourite, Vandal, ran up and challenged the leader, while Bébé fell back. In the back stretch Vandal was put under the lash, but all to no purpose, for just when it seemed he was about to wrest the lead, Kickapoo would quicken his pace, and so the straight was entered, Kickapoo holding his own till the finish and winning with tolerable ease, in the very quick time of 2m. 12½ secs. Vandal second, and Mongolian Wolf a bad third.

2.—THE MAIDEN PLATE.

Value \$100. For Japan Ponies that have never won a race. Weight for inches. Entrance \$5. Half a mile.

Messrs Takasaki, Kataoka and } Fujinami's Sambungi.....	10st 6lbs { 1
Mr Verisoph's Main Chance	10st 6lbs { 1
Major Arda's Moustique.....	10st 0lbs... 2
Mr Alexander's Luck's All	10st 2lbs... 0
Messrs Takasaki, Kataoka and } Fujinami's Fukuoka	10st 2lbs... 0

This was the best contested race of the meeting, and unlike the majority of half-mile races the start was excellent, Main Chance at once taking a slight lead but was soon challenged by Sambungi and Moustique, the latter having started as first favourite. A most exciting race between the trio took place down the straight, resulting in a dead heat between Sambungi and Main Chance, while Moustique was only a length in the rear. Time 64 secs.

In the run off for the Maiden Plate, the Japanese pony got much the best of the start and kept his advantage all the way, winning a good race in 64 seconds. The enthusiasm of the Japanese multitude was great.

3.—THE MITSU BISHI CHALLENGE CUP.

PRESENTED.—Value \$200. For China Ponies. To be won at two consecutive meetings by a Pony or Ponies, the *bona fide* property of the same owner or owners; to be held by the last winner at each meeting until finally won. Weight for inches. Entrance \$5. One mile and three quarters.

Mr Robertson's Dibs.....	10st 8lbs... 1
Mr Sinbad's The Dwarf.....	9st 13lbs... 2

The contest for this event was a hollow affair, being a match between Dibs and The Dwarf, the former being hard held from first to last, though he suffered his competitor to reach his quarters at the finish. Time 4m. 15 secs.

4.—THE TOKIO LADIES' PURSE.

Presented. For all Ponies. China Ponies winners of four races in Japan excluded. Weight as per scale. Entrance \$5. Half a mile.

Mr Robertson's Chance.....	10st 2lbs... 1
Mr Ola's Lodi	10st 4lbs... 2
Major Arda's Monarque.....	10st 6lbs... 3
Mr Fairplay's Mongolian Beglerbeg, 10st 5lbs... 0	
Mr Sinbad's The Sheik	10st 2lbs... 0
Mr Earnest's Raethia.....	10st 5lbs... 0
Mr F's The Snark	10st 8lbs... 0
Messrs Takasaki, Kataoka and } Fujinami's Sekimoto	10st 4lbs... 0

Eight ponies faced the starter, Chance and Mongolian Beglerbeg being favourites. After one or two attempts to get them away, the flag fell to a moderate start, Chance cutting out the running. The representative of the Japanese stable got all behind, but on entering the straight, ran through his ponies well, but was prevented from securing a place through Mongolian Beglerbeg and Lodi edging into the rails. Chance came away from the ruck when a couple of hundred yards from home, and won with plenty to spare. Time 61½ sec.

5.—THE AKINDO CUP.

Value \$. For Japan Ponies. Winners of one race of a mile, or over, 11st. Other Ponies, weight for inches. Entrance \$5. One mile.

Don Carlos' Kickapoo.....	11st 0lbs... 1
Messrs Takasaki, Kataoka and } Fujinami's Sannohé	10st 6lbs... 2
Mr Verisoph's The Moor	10st 2lbs... 3
Mr Verisoph's The Convert.....	11st 0lbs... 0
Mr F's Doctor.....	10st 6lbs... 0

This was a splendid race between Kickapoo and Sannohé, the latter getting well off at the start and holding the lead till the half mile was reached, when Kickapoo ran up to the leader and the pair then shook themselves entirely free from the others. Kickapoo went to the fore, but did not hold the lead long as it was again wrested from him at the trees. Down the straight the pair rattled together, but Kickapoo was a neck ahead at the post. The time was again good, being 2 m. 15 sec.

6.—THE CELESTIAL CUP.

Presented. Value \$115. For China Ponies. Winners of four races excluded. Winners in 1877 of three races 12st.; of two races 11st. 5lbs.; of one race 7lbs. extra; and non-competitors at this meeting 7lbs. extra. Penalties accumulative. Weight for inches. Entrance \$5. One mile and a quarter.

Mr Robertson's Favouri	10st 5lbs... 1
Mr Steven's Satisfaction	10st 5lbs... 2
Mr Sinbad's The Raven.....	10st 8lbs... 3
Mr Fairplay's Mongolian Wolf.....	10st 2lbs... 0

Favouri got off with the lead and was never pushed, winning easily by a little over a length. A good race for second place resulted in favour of Satisfaction by nearly a length. Mongolian Wolf kept far in the rear until it was too late to retrieve his position and finished fourth. Time, 2 m. 55 sec.

7.—THE SILK CUP.

Presented. Value \$100. For Japan Ponies. Non-competitors and winners at this meeting excluded. Weight for inches. Entrance \$5. Three quarters of a mile.

Messrs Takasaki, Kataoka and } Fujinami's Sannohé.....	10st 6lbs... 1
Mr Verisoph's The Convert.....	10st 4lbs... 2
Mr Ola's Mohstots	10st 6lbs... 3
Mr Ola's Lodi	10st 4lbs... 0
Mr Verisoph's The Moor.....	10st 2lbs... 0
Mr F's Doctor.....	10st 6lbs... 0
Messrs Takasaki, Kataoka and } Fujinami's Fukuoka	10st 2lbs... 0

This event was the cause of much dissatisfaction owing to a misunderstanding between some of the jockeys and the starters, the former asserting that the flags fell and they went and raced all the way, Mohstots coming in first. The representatives of the Japanese stable remained at the post with The Convert. The starter declared it to be no race, and so the four who ran the race the first time had to run it over again, to their disadvantage. The contest lay between Sannohé and The Convert, the former winning by over a length amidst the enthusiastic applause of the natives, who maintain a quietness when the Japanese stable loses, which contrasts greatly with their enthusiasm on a victory. Time, 1 m. 41sec.

8.—THE AMERICAN CUP.

Presented. Value \$100. For China Ponies. Winners in 1877 and non-competitors at this meeting excluded. Weight for inches. Entrance \$5. Three quarters of a mile.

Mr F. Mason's Dick Swiveller	10st 5lbs... 1
Mr Robertson's Bravo	10st 5lbs... 2
Mr Sinbad's The Consul	10st 2lbs... 3
Mr F's The Snark	10st 8lbs... 0
Mr F's The Boojum	10st 2lbs... 0

Mr. Robertson's ponies had carried nearly all before them during day, but in this race the blue and white met their match in Dick Swiveller, who, with a Japanese mount, won amidst hearty cheers. Time 1 m. 40 sec.

9.—THE COSMOPOLITAN CUP.

Value \$. For China Ponies that ran as Griffins in Japan at the last Spring meetings and for all beaten China Ponies at those meetings; 5lbs. extra for every race won in Japan in 1877. Penalties accumulative. Weight for inches. Entrance \$5. One mile and a half.

Mr P. Kell's Vandal	10st 5lbs... 1
Mr Robertson's Sport.....	10st 5lbs... 2
Mr Sinbad's The Dwarf.....	9st 13lbs... 3
Mr Sinbad's The Raven.....	10st 8lbs... 0
Don Carlos' Telephone	10st 2lbs... 0

This was a race by moonlight, the evening being far advanced when the ponies left the saddling paddock. It was very hard to decide which pony won. No time taken.

THIRD DAY,—Thursday, 22nd November.

To-day again the weather was fine, and the attendance on the course good.

1.—THE HURDLE RACE.

Value \$75. For all Ponies. Over six (6) hurdles. Weight as per scale. Entrance \$5. One mile and a distance.

Mr F. Mason's <i>Liddesdale</i>	10st 11lbs... 1
Mr Sinbad's <i>The Raven</i>	10st 8lbs... 2
Mr F.'s <i>Doctor</i>	10st 6lbs... 3
The Baron's <i>Tennessee</i>	10st 2lbs... 0
Mr Steven's <i>Satisfaction</i>	10st 5lbs... 0
Major Arda's <i>Moustique</i>	10st 0lbs... 0
Don Carlos' <i>Oyama</i>	10st 2lbs... 0

Oyama started first favourite, but lost many friends on refusing to take a preliminary leap. The start was very good and all the ponies took the first hurdle with the exception of *Oyama*, who baulked. By the time he was brought round to face the jump again the others were far ahead. *Liddesdale* soon took the lead, followed closely by *Doctor*. At the second hurdle *Moustique* came to grief and threw his rider. *Oyama* again baulked at the second hurdle and so lost all chance of winning. *Liddesdale* kept the lead, jumping very prettily, and won with ease by many lengths. *The Raven* second. Time 2.40.

2.—THE OWNERS' CUP.

Presented. Value \$100. For all Ponies. Weight as per scale. Entrance \$5. Three furlongs.

Mr Peter's <i>Skedaddle</i>	10st 2lbs... 1
Mr Fairplay's <i>Chief Mongolian</i>	10st 11lbs... 2
Mr Ola's <i>Mohstolz</i>	10st 6lbs... 3
Mr Ola's <i>Lodi</i>	10st 4lbs... 0
Mr Fairplay's <i>Mongolian Beglerbeg</i>	10st 5lbs... 0
Major Arda's <i>Monarque</i>	10st 6lbs... 0
Mr F. Mason's <i>Dick Swiveller</i>	10st 5lbs... 0
Mr Verisoph's <i>The Moor</i>	10st 2lbs... 0
Mr Hugo's <i>The Minister</i>	10st 5lbs... 0
Mr F.'s <i>The Snark</i>	10st 8lbs... 0
Messrs Takasaki, Kataoka and Fujimami's <i>Sekimoto</i>	10st 4lbs... 0

It is no easy matter to start eleven ponies in a three furlong race; and that it should have given dissatisfaction in the present instance is not to be surprised at. Nine out of the eleven ponies got away on pretty even terms, but *Chief Mongolian* was almost pulled through his jockey presuming it was a false start, and so lost his chance. As it was, however, he finished second, *Skedaddle* winning by a length and a half, *Mohstolz* a good third. Time, 46 $\frac{1}{2}$ secs.

3.—THE VISITORS' CUP.

Presented. Value \$100. For all China Griffins imported in 1877. Winners of one race 6lbs. extra; of two races 10lbs. extra; and of more than two races 3lbs. extra for every race won. Penalties accumulative. Ponies that have run in two races and not been placed 5lbs. allowance. Non-competitors at this meeting excluded. Weight for inches. Entrance \$5. One mile.

Mr Robertson's <i>Bravo</i>	10st 5lbs... 1
Mr Sinbad's <i>The Dwarf</i>	9st 13lbs... 2
Mr Sinbad's <i>The Consul</i>	10st 2lbs... 3
Mr Peter's <i>Skedaddle</i>	10st 2lbs... 0
Mr Fairplay's <i>Mongolian Wolf</i>	10st 2lbs... 0
Don Carlos' <i>Telephone</i>	10st 2lbs... 0
Mr F.'s <i>Quasimodo</i>	10st 2lbs... 0

Telephone got the worst of the start, while *Mongolian Wolf* went off at his best pace, but in the back stretch gave way to *Bravo* who was never afterwards headed, and won by a couple of lengths. Time 2.15 $\frac{1}{2}$.

4.—THE HACK RACE.

Value \$50. For all Ponies, being *bona fide* Hacks and that have never won a flat or hack race. Ponies entered are disqualified from entering any other race, except No. 1

this day. Weight 12st. To be ridden by Jockeys who have not had a winning mount at this meeting. Entrance \$5. Three quarters of a mile.

Mr Hugo's <i>Antidote</i>	10st 8lbs... 1
The Baron's <i>Rebel</i>	10st 6lbs... 2
Mr Alexander's <i>Petitpas</i>	10st 5lbs... 3
Mr Peter's <i>Snake</i>	10st 6lbs... 0

Petitpas soon made a gap between him and the others, while *Snake* wanted to go towards the water and was only brought up by the fence. At the trees the other three got together and a good race ensued all the way home, *Antidote* going to the fore in the last twenty yards, winning by half a length. Time, 1min. 45secs.

5.—THE JAPAN CHAMPION STAKES.

For Japan Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of \$10, with \$5 extra for every race won. Open also to Ponies placed second, at an entrance fee of \$5, to go to the fund. Entries to be made on the Course at the close of the second day's racing. 1st Pony to receive 75 per cent.; 2nd Pony to receive 25 per cent. Weight for inches. One mile.

Don Carlos' <i>Kickapoo</i>	10st 8lbs... 1
Messrs Takasaki, Kataoka and Fujinami's <i>Sannohé</i>	10st 6lbs... 2
Messrs Takasaki, Kataoka and Fujinami's <i>Sekimoto</i>	10st 4lbs... 3
Major Arda's <i>Mameluke</i>	10st 6lbs... 0

This was a well contested race, *Sannohé* going to the front soon after starting, but in the back stretch was overhauled by *Kickapoo*, while *Sekimoto* ran up well. This order was maintained until passing the distance post, when *Kickapoo* was called on and won by a length. Time, 2 min. 14 secs.

6.—THE CHINA CHAMPION STAKES.

For China Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of \$10, with \$5 extra for every race won. Open also to Ponies placed second, at an entrance fee of \$5, to go to the fund. Entries to be made on the Course at the close of the second day's racing. 1st Pony to receive 75 per cent.; 2nd Pony 25 per cent. Weight for inches. One mile and a quarter.

Mr Robertson's <i>Dibs</i>	10st 8lbs... 1
Mr P. Kells' <i>Vandal</i>	10st 8lbs... 2
Mr Robertson's <i>Sport</i>	10st 5lbs... 3

Vandal carried four pounds over. Although only three ponies came to the post, this was decidedly one of the best races of the meeting: a blanket could have covered the three ponies all the way until the straight was entered, first one showing slightly in front and then another, when *Sport* was finished and the race rested between *Dibs* and *Vandal*, the former winning by a neck. Time, 2.57.

7.—THE TOKIO CUP.

Presented. Value \$100. For Japan Ponies beaten at this meeting. Weight for inches. Entrance \$5. Five furlongs.

Mr Ola's <i>Mohstolz</i>	10st 6lbs... 1
Mr Bencen's <i>Board of Health</i>	10st 4lbs... 2
Mr Verisoph's <i>The Convert</i>	10st 4lbs... 3
Mr Ola's <i>Lodi</i>	10st 4lbs... 0
Major Arda's <i>Monarque</i>	10st 6lbs... 0
Mr Verisoph's <i>The Moor</i>	10st 2lbs... 0
Mr Steven's <i>Exile</i>	10st 4lbs... 0
Messrs Takasaki, Kataoka and Fujinami's <i>Fukuoka</i>	10st 2lbs... 0

Exile bolted soon after starting and struck the outside rails, falling heavily and throwing his rider. *Mohstolz* soon took the lead and was never headed, winning in the excellent time of 1 m. 19 $\frac{1}{4}$ secs.

Though the rider of *Exile* was much shaken, he was not seriously injured.

8.—THE CATHAY CUP.

Value \$100. For China Ponies beaten at this meeting, being non-winners of three races. Weight for inches. Entrance \$5. Once round.

Mr Fairplay's <i>Mongolian Chief</i>	10st 8lbs... 1
Mr Steven's <i>Satisfaction</i>	10st 5lbs... 2
Mr Fairplay's <i>Mongolian Wolf</i>	10st 2lbs... 3
Mr Fairplay's <i>Mongolian Beglerbeg</i>	10st 5lbs... 0
Mr Sinbad's <i>The Consul</i>	10st 2lbs... 0
Mr Sinbad's <i>The Sheik</i>	10st 2lbs... 0
Mr Sinbad's <i>The Raven</i>	10st 8lbs... 0

Mongolian Chief, notwithstanding the fact of his coming on the course with a bandaged leg, was first favourite. *The Consul* and *Wolf* made the running for half the distance, when *Satisfaction* collared them and assumed the lead for the time being. *Mongolian Chief* was in the rear till the trees were reached, when he went through his ponies rapidly and by the time the straight was entered was second horse. In the run home he beat *Satisfaction* tolerably easily. The owner of the winner and his jockey met with a lively reception. Time 2.18.

9.—THE COMMUNITY CUP.

Presented. Value \$150. A Handicap for all Ponies that have run at the meeting. To be handicapped by the Stewards at the close of the second day's racing: entries to be made on the Course before the last race. Winners of Nos. 5 and 6 this day excluded, and winners of any other race after the publication of the Handicap 5-lbs. extra. Entrance \$10, 2nd Pony to save entrance fee. One mile.

Mr P. Kell's <i>Vandal</i>	10st 5lbs... 1
Don Carlos' <i>Oyama</i>	10st 12lbs... 2
Mr Verisoph's <i>The Convert</i>	10st 4lbs... 3
Don Carlos' <i>Telephone</i>	10st 6lbs... 0
Mr Robertson's <i>Favori</i>	10st 5lbs... 0
Mr Robertson's <i>Chance</i>	11st 0lbs... 0
Mr Sinbad's <i>The Dwarf</i>	10st 12lbs... 0
Mr Sinbad's <i>The Sheik</i>	10st 2lbs... 0

The last race on the programme brought out a field of eight. The race was an exceedingly good one, resulting in favour of *Vandal* by a neck, *Oyama* having kept the lead all the way until nearly home, *The Convert* being a good third. Time, 2min. 14 $\frac{1}{4}$ secs.

THE OFF DAY,—Tuesday, Nov. 27th, 1877.

THE Bettos' Races, which were postponed on Thursday last, came off this afternoon, the first event being

THE MAYEDA BASHI CUP.

Value \$50. Presented. For all Ponies which have run at this Y. R. A. Meeting. Winners of two or more races excluded. Winners of one race weight for inches: non-winners allowed 7-lbs. Ridden by Japanese or Chinese bettos who are recommended for good conduct. Three-quarters of a mile. 1st Pony 70, 2nd 20, 3rd 10 per cent.

Mr Robertson's <i>Sport</i>	1
Don Carlos' <i>Telephone</i>	2
Mr Robertson's <i>Bravo</i>	3
Mr Fairplay's <i>Mongolian Wolf</i>	0
Mr Hugo's <i>The Minister</i>	0
Mr Sinbad's <i>The Consul</i>	0
Mr Sinbad's <i>The Sheik</i>	0

Seven ponies started, all getting away pretty well with the exception of *Bravo*. The race was closely contested, plenty of catgut being used, until the straight was reached, when *Sport* came away and won by a couple of lengths. Time, 1 min. 43 $\frac{1}{4}$ secs.

Race for Japan Ponies. Three-quarters of a mile. Weight 9st.

Mr Ola's <i>Mohstolz</i>	1
Messrs Takasaki, Kataoka and Fujinami's <i>Sannohe</i>	2
Mr Bencen's <i>Board of Health</i>	3
Mr Verisopht's <i>The Convert</i>	0
Mr F's <i>Doctor</i>	0
Mr Verisopht's <i>The Moor</i>	0
The Baron's <i>The Rebel</i>	0

Mohstolz was the winner of this event with plenty to spare. *The Moor* bolted before the start, and, after the race commenced, he ran to the rails, striking a post with his head, and fell stunned and bleeding profusely. The boy was stunned but after a little while came to.

For China Ponies. Three-quarters of a mile. Weight 9st.

Mr F. Mason's <i>Liddesdale</i>	1
Mr Robertson's <i>Favori</i>	2
Mr Sinbad's <i>The Dwarf</i>	3
Mr Earnest's <i>Raethia</i>	0
Mr Fairplay's <i>Mongolian Beglerbeg</i>	0
Mr. Robertson's <i>Bravo</i>	0
The Baron's <i>Tennessee</i>	0
Mr. Hugo's <i>Antidote</i>	0
Mr. Earnest's <i>Bébé</i>	0

Liddesdale soon went to the front and was never caught. Coming down the straight *Beglerbeg* bolted off the course, struck the outside rails and rolled over. Both the pony and betto were quickly up and away again without losing much time. The race was run in 1m. 40s.

One and a quarter mile. Catch weights.

Mr Fairplay's <i>Mongolian Wolf</i>	1
Don Carlos' <i>Telephone</i>	2

This was a very good race, *Telephone* leading until passing the trees on the way home, when *Wolf* went to the front and won with plenty to spare.

MR. WAGNER'S CONCERT.

A VERY good house assembled in the Gaiety Theatre on the 28th ulto. attracted by a programme which promised some excellent music, and the only fault of which was that it was by some considered a little too long. Although the performance commenced punctually at the time advertised, nine o'clock, it was nearly midnight before it was brought to a close. This apart, which should be no hardship to lovers of music, the concert was in all respects successful, a fact on which we heartily congratulate Mr. Wagner, and a gentleman whom we do not hesitate to name, Mr. Griffin, to whose energy in getting up the concert so much of its pecuniary success is due, and who so materially assisted in the instrumental part of the entertainment. But this is not the first of similar obligations which professionals and the public owe to the talented amateur musician in question.

In consequence of severe illness of one of the performers the two Overtures were dispensed with and the Duo Sonatas for piano and violin were placed first in each part. These fine works were well rendered, especially that in the second part, with the dashing Scherzo and charming Rondo-finale. The first song was Luther's "In dunkler Nacht" given with much expression by Mr. Andersen. Next followed Beethoven's sonata for piano alone, in D. major, the most charming movements being the Largo and Mennetto. The song which stood next received all the advantage of a splendid voice and finished training; but was sung rather too much in the drawing-room style, the words

at times being quite inaudible. The lovely melody brought down the house, and Mr. Hyde graciously repeated the second verse. The first part was brought to a conclusion by Hummel's Trio in G. (Op 6.) which was well executed, the fine playing of M. Dassonville being especially noticeable.

The second part opened with Beethoven's Duo Sonata, as mentioned above. Next followed an old favorite, with the dashing song "Sir Marmaduke," the characteristic accompaniment being an especial feature. Mr. Pearson was loudly recalled, and gave the old ballad "Shall I, wasting in despair?" much to the satisfaction of his numerous admirers. Again the house was brought down by a Flute solo, played by the *bénéficiaire* himself in his own admirable style. The recall was enthusiastic, and the last two movements were repeated. An old English glee followed and the whole was brought to a conclusion somewhere near midnight by a second finely played trio. *Finis coronat opus*. We may add that every thing gave the utmost satisfaction to all who attended, and the success was greatly enhanced by the very fine pianoforte which was used on this occasion. It is immensely superior to any other instrument we ever heard in public here; and we hope the proprietors of the Gaiety Theatre will secure a similar one, and that we may more often be treated to a musical evening such as that just past.

FREE-MASONRY IN KOBE.

(From a Correspondent.)

The Installation Meeting of the "Rising Sun," Lodge, No. 1401 E.C., took place on the 17th inst. On this occasion the Lodge was honored by the presence of B.W. Bro. Dallas, D.G.M., W. Bro., Sands, D. D. G. M., W. Bro. A. Weiller, D.S.G.W., Bro. Marshall, D.J.G.W., W. Bro. Mitchell P. D. G. W., W. Bro. Langfeldt, P. D. B. G. P., and W. Bro. Stone, D. G. S. Of these Bros. Dallas, Weiller, Mitchell, Langfeldt and Stone had come up especially from Yokohama to attend the ceremony. Besides these, all of the officers of the Hiogo and Osaka Lodge, S.C., were present.

The ceremony of installing Bro. Larkin, as W. M. of the "Rising Sun" for the ensuing year, was preformed by the D. G. M. with the two D. G. Wardens in their respective chairs, assisted by Bros. Hughes, Sands, and Marshall, Past Masters of the Lodge. The ceremony was held at the Masonic Hall, Kobe, the property of the Hiogo and Osaka Lodge,—which is by far the prettiest, and best arranged Lodge Room in the east, and which had been tendered to the use of the Rising Sun for the occasion.

On the completion of the work in the Lodge Room, the brethren adjourned to the quarters of the Rising Sun Lodge, where a substantial banquet was laid, which had been prepared under the supervision of the ladies of the families of the Kobe masons. After doing full justice to the repast, the usual toasts were proposed and drunk, and responded to. Several excellent speeches were made, some from the Yokohama brethren; but the Kobeites were by no means outdone in eloquence even by the distinguished brethren from Yokohama. At 12 p.m. the meeting adjourned, after a most enjoyable evening. The date of the installation of Bro. Larkin will be marked as a white day in the annals of free-masonry in Kobe.

The principal officers of the Lodge are as follows.

W. M.	Bro. J. J. Larkin.
J. P. M.	" Hughes.
S. W.	" Thornicroft.
J. W.	" Rymer Jones.
Treasurer.	" Marshall.

LOSS OF THE BRITISH BARQUE "QUEENSBERRY."

It is with regret that we have to record the total loss of the British barque *Queensberry*, Captain Hennings, on the 13th ulto., in the Palawan Passage, China Sea. The *Queensberry*, it appears, was bound from New York to Yokohama, but unfortunately struck on a reef off the south-west coast of Palawan. It was soon found that it would be impossible to save the ship, and the captain and crew accordingly took to the boats. They were not able to save anything from the wreck. After being seven days in the boats, with only one meal of rice during the whole of that time, they succeeded in reaching Bilaboa, where they were most hospitably received and generously cared for by the Governor and the commander of the gunboat *Albay*. They waited at Bilaboa until the arrival of the steamship *Pasig*, in which they subsequently embarked for Manila, and were then sent on by the British Consul at that port to this Colony. Captain Hennings, his wife and children, together with the officers and crew of the *Queensberry*, arrived here on Sunday in the steamer *Mactan*. Captain Hennings wishes to bear testimony to the very kind treatment they all experienced on board the *Mactan* and the *Pasig* at the hands of the captains and officers of both vessels. A subscription list has been opened here, we understand, on behalf of the captain and his family, who have lost everything they possessed in the *Queensberry*. —H. K. Daily Press.

OSAKA.

(From an occasional Correspondent.)

12th November, 1877.

Cholera has now almost totally disappeared. Foreigners may congratulate themselves upon this, as, with the exception of the doctor in the hospital, who of course is always too busily engaged in his duties at that establishment, and has consequently no spare time to attend to outside patients, there is no qualified medical man here, so that, in case of accident, aid has to be called in from Kobe.

The number of wounded soldiers in the military hospitals near the castle is gradually thinning; and a good many more of them would, no doubt, have been fit to be discharged ere this, had it not been for the quantities of saké which used to be passed into the buildings, (at least into one of them) through the drains, by the inmates of one or two small shops close by. These latter must have reaped a rich harvest during the time the hospital was full, and they are still doing a pretty good trade, although not so much as formerly, as the openings of the drains have been mostly blocked up.

A bridge (Kawasaki-bashi) over the Okawa, between Kawasaki (near the Mint) and Amijima, was completed about a fortnight since; and is of great convenience to the residents on either side, as crossing had formerly to be made in ferryboats in the same way as is still the case further up the river.

MISCELLANEOUS.

THE O. & O. steamer *Oceanic* is to be withdrawn from the trans-Pacific line. On the 18th ult., before leaving Yokohama probably for the last time, Captain Parsell entertained a number of his friends at tiffin. In honour of Admiral Pousino, who has lately been superseded in his command in these waters, and who was a passenger by the *Oceanic*, the band of the flag-ship *Boyan* was in attendance, and played during the repast. At half-past three the *Oceanic* tripped anchor, and the parting gun was fired from her bows. As she steamed out of the harbour, the *Boyan's* yards were manned, and the other men of war dipped their flags as she passed, the band of the U. S. S. *Tennessee* playing the Russian national hymn.

A TELEGRAM was received at the German Consulate on Sunday, the 18th instant, announcing that the German barque *Christine*, had been reported by the M. B. S. S. *Shinagawa-Maru* dismasted and in need of assistance. The vessel was despatched by H. Grauert for Hakodate on the 29th October, and H. I. G. M. S. *Elisabeth* left at 4 a.m. on the 20th in search of the distressed ship (The *Christine* arrived safely at Hakodate, the alarm about her proving false.)

COMMANDER C. A. BRIDGE R.N., late of H.M. S. *Audacious*, has been promoted to the rank of captain. Captain Bridge is a well known contributor to the *Fortnightly*, *Blackwood's*, and other periodicals; and is the author of many valuable treatises on naval tactics, the construction of war-ships, and other professional matters.

MR. CHARLES RICKERBY is about to re-establish the formerly well and very favourably known *Japan Times*, a "Weekly Review of Japanese Commerce, Politics, and Literature." Mr. Rickerby founded this paper in 1865, and conducted it until 1870, when he was compelled, for the sake of his health, to return to Europe. It was in the columns of the *Japan Times* that the important announcement was first made to the public that the Treaty Powers had been mistaken in concluding their earlier conventions with the Shogun: that the dynasty of Iyeyasu was a usurpation; and that the Mikado was the real and sole sovereign of Japan. Throughout the struggle for the monarch's restoration to actual power the *Japan Times* consistently advocated the views, and upheld the justice of the cause, of the revolutionary party; and greatly influenced foreign public opinion both in Japan and abroad in its favour. From a few articles known to have emanated from the pen of Mr. Rickerby, and which have appeared since the restoration, both in the *Japan Times* before he left for Europe, and in its successor since his return, it is evident that his opinions remain unchanged; and it is therefore to be expected that the new paper will support the present Government. But of this and of its probable attitude on other important subjects, we must await the appearance of the prospectus announcing the new birth, or, possibly, of the first number of the paper itself. Meanwhile, and although the prospects of foreign journalism in Japan seem hardly so bright as to afford much scope for new, or even for renewed, ventures, we wish Mr. Rickerby in his enterprise all possible success. His past career as a journalist in Japan at least warrants the confidence that the discussion of subjects treated by his pen will be without prejudice; and that his advocacy of any cause he may support will be honest, and uninfluenced by either fear or favour.

ALTHOUGH there are better rooms in Yokohama than the large one in the Temperance Hall for the transmission of sound, and so for the best possible effects of vocal and instrumental music, yet, after all, there is none more appropriate for the purpose for which the recent concert was given—to aid the funds of the Institution itself—and none which otherwise offers so many advantages for the successful carrying out of an entertainment which has no pretension to be anything sensational, or to do more than enable the audience to pass a quiet and agreeable evening while contributing a modest sum towards the support of a deserving institution. Certainly, the chief charm of the concert, which under Mr. Griffin's able management went off so well, would have been lost, had an ambitious attempt been made at a grand and florid performance in the Gaiety Theatre. We should not have heard the delightfully harmonious blending of two and three fresh and clear young voices, as we heard them last evening in "Greeting," "Hearts feel that love thee" from "Athalie"—which as then rendered would make the most callous sensible that he was possessed of a heart,—or in "The Autumn Violet," as which those who sung its praises were quite as charming and fair. A laudatory notice of the gentlemen who kindly performed really laborious parts in the programme would be out of place here, where it is unnecessary to say more of them than that their efforts were as much appreciated as they were well directed. We only hope that the concert which afforded us and others so much pleasure will be the first of a series; and that no attempt will be made to transfer the "violets" from the quiet atmosphere of the Temperance Hall to the glare and heat of the Gaiety Theatre. The receipts on the night of the 15th November were quite sufficient to warrant a repetition of the experiment of a social concert within the walls of the institution it is designed to benefit, where both the audience and those who are good enough to sing and play for their amusement can feel themselves at home.

THE charges preferred at the instance of Mr. J. J. Ensley, of H. M.'s Consulate, acting as shipping master, against Mr. G. F. Williams, master of the *Naworth*, were heard before Mr. Russell Robertson on Nov. 22nd. The first offence with which Mr. Williams was charged was contravention of section 225 of the Merchant Shipping Act, which provides that every master shall use legal weights and measures for serving out the men's provisions on board his vessel. This was proved, and the accused was fined \$2 and costs. The second charge, that of neglecting to post in the fore-castle a copy of the agreement with the crew, was not substantiated, and the sailor who brought it was ordered to bear the costs of the Court.

THERE was a very smart shock of earthquake on the afternoon of the 22nd ulto. at about a quarter to four o'clock.

THE *Echo du Japon*, alluding to the increasing intensity of recent earthquakes, suggests that it is not impossible that we may shortly witness some serious volcanic eruption; and states further that every day subterranean noises are heard in the direction of Fujiyama and seem to augment in violence; while many natives, in the neighbourhood of the mountain, are getting ready to leave their houses. We know not where the editor has found his information: if in the native papers it has escaped the eye of our translator.

THE advisability of connecting the far East and remotest West with each other, and so directly with the rest of the world by telegraph has long been admitted. The great obstacle so far in the way has been spanning so many thousand miles with one continuous cable. It has now been decided to have an intermediate station at Honolulu between Japan and San Francisco, which now seem likely very shortly to be bound together by submarine cable. The project has been taken up in earnest, the originator, Mr. Celso Caesar Moreno, having found enthusiastic supporters in San Francisco, where several meetings had been held before the last trans-Pacific mail left, and where a company was to have been, and probably was, formed and organized on the 8th of this month. Mr. Moreno proposes to lay the line to Honolulu, thence to Japan, and finally to Shanghai, there to connect with the European line, and thus circling the globe with wires. After the completion of this line it is the intention of the projectors to stretch their line to New Zealand, where a connection would be made with the Australian and Indian lines. The cost of the line to China would be about \$7,000,000, which sum would be subscribed by capitalists on the Pacific coast or through the organization of a stock company. Mr. Moreno is sanguine of the success of his scheme. Certainly the execution of the plan is only a question of time; and if even the capitalists of the Pacific Coast should not find the money, there will be no difficulty in raising it elsewhere.

A LARGE number of people visited the Exhibition in Uyeno Gardens on the 25th ultimo, the last Sunday of the season. So many, indeed, were the visitors, native and foreign, from Yokohama, that the five o'clock train from Tokio had not enough carriages to accommodate all those who wished to return, and who in consequence had to wait an hour and a quarter for the next.

ALTHOUGH the desirability of an amalgamation of the two racing sects cannot for a moment be called in question, however near or remote the fusion may be it is not likely to be brought about by ill-advised comparisons. Matters have come to such a pass now that Time, the pacificator as well as the avenger, may well be left to do the needful work. Whether he will be helped in that by those who throw discredit upon the recent meeting of the Y. R. A. is more than doubtful. That gathering was certainly one of the most successful ever held in Yokohama, possessing indeed all the elements which tend to the complete success of race meetings anywhere, fine weather, horses well matched, good riding, and, events evenly contested, a large attendance of spectators, unbounded hospitality, and good humor equally unlimited. The Committee of the Yokohama Racing Association may apply to themselves, with a slight change, the well known couplet of Addison:—

'T is not in mortals to command success
But we've done more, Sempronius, we've deserved it.

They have both deserved and attained it.

AGAIN, if the amount of patronage given to those very dangerous and exciting concomitants of racing here, Race Lotteries, be any standard of the prosperity of the meeting for which they are held, the Autumn gathering of the Association must be, by that test, pronounced eminently successful, two out of three of the lotteries advertised having been largely supported. The pools at the "Bank Exchange" did not fall far short of a grand total of \$10,000.

THE *Mainichi Shinbun* announces that Shimadzu Tadayoshi (son of Hisamitsu or Saburo, ex-Sadaijin) arrived in Yokohama in the *Kokonoyé Maru* on the afternoon of the 24th ultimo. Accompanied by his suite, he and they all dressed in ancient style, he landed at 6 p.m., and put up for the night at the Iwamura Hotel in Otamachi. The following morning he left for Tokio by the 9.34 train. The young nobleman is the chief of his clan.

At 0.55 p.m. on the 24th ulto. there was a slight shock of earthquake.

In the Hiogo-ken, as elsewhere in most parts of this island, the rice harvest has been exceptionally good.

THE *Osaka Nippo* states that Mr. Ozaki, Chief Judge of the Osaka Joto Saibansho, has been appointed Chief Judge of the Tokio Joto Saibansho. As far as we can learn, no notice of this appointment has yet appeared in the Tokio journals.

A TRANSLATION given below from the *Kainan Shinshi* on the conduct of the military in Tosa seems to show that the troops quartered in Kochi have been making themselves obnoxious to the citizens. This is to be regretted, as that town does unquestionably hold some unquiet spirits, whom, in view of fancied wrongs, the example of Kagoshima may not restrain from disaffection, which can but result in trouble to the Government, and in certain disaster to themselves. Central authority is now stronger than ever, sufficiently strong certainly, even in Tosa, to make itself felt and respected, without the expression of tumultuous and ill-advised zeal by its military supporters.

"Medicine is only needed by a sick person, and not by a healthy one. Troops are required in a disturbed district, not in a peaceful one. Now, our province of Tosa is tranquil, and contains no single man of a disorderly character; yet it has been the pleasure of our Government to station in the town of Kochi a detachment of National Guards. We know not what this was done for—whether for the purpose of allowing the troops to fish for katsuo in the sea of Tosa, or to hunt deer in the forests, or to catch the cuckoos in the valleys; but we know that the army is a most important institution for the nation, and that it is not likely that our great Government should send us colonels and captains for such purposes; so there must be other reasons.

"After all, our province is perfectly quiet, and needs not the presence of soldiery; and, besides, Kochi is not a garrison town. Marugame is one, and the people here never desire to have troops among them, regarding them as an annoyance, rather than as preservers of order. The military have already made themselves unpopular: witness the last birthday of the Mikado, when they rushed out of their quarters, at a paltry noise made by some boys, who were quarreling among themselves; and, drawn up in the Public Garden, they fired on the assembled populace. So now we, the people, have come to feel rather uneasy for our safety, while such peace-disturbers are among us. Therefore it is proper, in view of the general welfare of this town, that we convene a special meeting to consult together how to get rid of them, which may be done, perhaps, by means of a petition to the Central Government, or we may be under the necessity in organizing and maintaining a local militia of order to protect our own interests throughout this province of Tosa."

ATTENTION has been so frequently called, here and abroad, by foreign writers, to the glaring appropriation of trade-marks and forgery of labels by native dealers, without any result but that of a probable increase of the frauds committed, that of late the subject has been dropped in weariness if not in disgust. Hence an assertion, in the *Mainichi Shinbun*, if even, as is too likely, it is merely hazarded, yet falls pleasantly upon foreign ears. The journal quoted states that a law to regulate the employment of trade-marks will shortly be promulgated by the Government.

THE following is the report sent to the German Consul by the Captain of the *Shinagawa Maru* having reference to the dismantled vessel seen by him, and then supposed to be the *Christine*, a supposition since happily proved to be unfounded.

Hakodate, 17th Nov., 1877.

"Thursday, November 15th, at 8.30 p.m., in Lat. 41.15 N., Long. 142.41 E. the steam-ship *Shinagawa Maru* passed a dismantled vessel, apparently having been barque rigged, at a distance of about half-mile. At this time the steamer had experienced a heavy N. W. gale, accompanied with a high sea, for 26 hours, sea and wind still the same, wherefore it was impossible to try to render the dismantled vessel any assistance whatever. T. Frahm, S. S. *Shinagawa Maru*."

THE beautiful weather which distinguished the three days devoted to the autumn meeting of the Yokohama Racing Association, no doubt, contributed largely to its success. There were, however, other causes which tended to make the gathering one of the most agreeable held in Yokohama for many years past, the chief of which was the appearance in some force of our Japanese sporting friends, who have too long held aloof from the pastimes and amusements of foreigners. While welcoming them to the races we have the additional pleasure of congratulating them on their winnings: upon the training of their horses which was as excellent as that of any other stable represented on the course: upon the skill and judgment with which their jockeys rode; and upon their formidable, though open and generous, rivalry throughout the contests in which they took so important a part.

When the fact of a previous meeting, held only a few days before, is considered, the general attendance at the course was particularly good. The ladies of Yokohama set the example by gracing the Association's meeting with their presence, the seasonable weather enabling them to display a variety of colour and costume which added life and brilliancy to the sombre hues of the great-coats of the sterner sex. For almost the first time Japanese of respectability mustered in numbers within the enclosure, and on the stand; and on the first and third days several distinguished personages accepted the hospitality of the Association. The spirit of gambling seemed to be almost absent, partly from the uncertainty of the events, and partly from an unfortunate lack of the means wherewith to gamble; and as a consequence there was not a single instance of ill-feeling or vexation. Taken altogether the Autumn meeting was more like a well-ordered, cheerful, picnic party, than the dreary affairs which can be looked back upon as race meetings.

There is no necessity to criticise the racing: because it is probable that they who would appreciate any remarks in that direction, could teach us how to write them; but it is only just to state that each event had a fair show of competitors, who struggled hard to win, as is

testified by the time in which several races were run. As usual the knowing ones were sometimes disappointed, particularly in those races where Messrs. KATAOKA, FUJINAMI and TAKASAKI, who entered ponies belonging to His Imperial Majesty the EMPEROR, were successful. The first feeling was surprise at the able manner in which the ponies were ridden, but there was a general and cordial expression of gratification as the Imperial colours came up to the front. None were more willing to give a cheer, than those who looked upon their own success as a foregone conclusion, and it is fully apparent that the continuance of these agreeable meetings will not only be the means of securing plenty of able amateur jockeys to fill a want which has actually hampered and kept back good racing for several years past, but also of opening friendly social relations between Japanese and foreigners.

With regard to the rule of the Association which provides for the declaration by the owner of the first event for which a pony entered in more than one race is to compete, the opinion was almost unanimous that the regulation is of value, and should be retained, even at the risk of preventing the accession to the ranks of the Association of those gentlemen who still consider that racing, as it is conducted in Japan, should be left untrammelled by any such restriction.

The ill-luck of a few new-comers, yet ardent supporters of the turf, and of one veteran, called forth many expressions of sympathy, and when at last (for each were rewarded with one win) the respective colours were victorious, the vociferous applause testified to the popularity of the owners; and this particularly in one instance, where a very well-known and popular resident who had regarded with indifference his successive disappointments, was finally quite overwhelmed by the congratulations of his friends.

Many thanks are due to the Stewards for the completeness of the general arrangements, which contributed so much to the pleasure of the Autumn meeting of 1877.

THE native papers state that H. E. Mr. Sanjo is again unwell, and has not been able to attend to his official duties since the 22nd ultimo.

THE festival of the New Rice was observed on the 23rd November here and in Tokio. In both places there was the usual display of bunting by day and of lighted lamps by night; and in the capital the imperial relatives, and civil officials of Chikunin rank (from the first to the fourth) appeared at 6 p.m. at the Palace of Akasaka, where the ceremonial festivities did not terminate until ten o'clock.

Festina lente is a very good motto. The Chinese have one in spirit the same. "Do thy work with the most necessary deliberation, but, consistently therewith, the utmost despatch." In all respects the Chinese act upon this counsel. The Celestial Envoy to Japan is making haste hither very slowly; and has (on paper) left Shanghai very many times. He should have been in Yokohama in the early part of last month, and has since been persistently looked for, but in vain, in spite of many announcements. Then he was to have arrived in Kobe a week since; and there, as we were informed by the native journals, great preparations had been made for his reception. All these announcements and preparations now seem to have been premature. The *Hochi Shinbun* says that a telegram from Shanghai states that His Excellency, attended by a suite of forty-seven persons, left that port

for Japan on the 26th ultimo. The Ambassador might be the "it" referred to by one of old :—"Though it tarry wait for it: it will surely come: it will not tarry."

WE regret to announce that Capt. Ward, of the M. B. steamer *Akitsushima Maru*, was washed overboard and drowned off Inaboya Saki during the heavy gale of Saturday, 24th November, between 3 and 4 a. m.

THE *Mai Nichi Shinbun* has a paragraph to the following effect on the subject of the new iron railway bridge at Kawasaki. "The opening ceremony was performed by Mr. Ito Hirobumi, Minister of the Public Works Department, assisted by Yamao, *Kobu-tayu*, and Inouye, Director of Railways. The survey for the bridge was commenced on the 25th Feb., 1875; and the work of construction began on the 20th of the following August, and terminated in thirty-three months or on the 27th instant. Out of the entire sum of 320,000 yen expended on the work, 190,000 yen have been paid for the iron imported from England."

A DEBATING Society has been formed by a number of influential Japanese residing in and about the neighbourhoods of Yokohama and Tokio, and is called "The Yenzetsu-Kai." Its first meeting was held in the Town Hall Yokohama on the evening of the 27th ultimo, when about one thousand people, among whom were several officials of note, assembled to hear the discussions. The subjects introduced were "the advisability of establishing a commercial school in Yokohama," and "the protection of freedom against tyranny." Four gentlemen from Tokio, Messrs Numa, Egi, Yana, and Kai, took part in the discussion, each giving his own views of the questions at issue; and the proceedings were brought to a close about ten o'clock. We understand that the society intends holding monthly meetings, some of which, however, will most likely be held in Tokio.

THE *Tennessee*, which leaves for Singapore, will be much missed in Yokohama, where both officers and men are highly and deservedly popular. Not the least loss sustained by the settlement in this departure will be that of the Band, which has been so freely and generously placed at the service of the public on all kinds of occasions of general amusement. Socially, on the Turf, at the Athletic and Aquatic Sports, in the Theatre, everywhere in fact, the absence of the familiar faces of the gallant *Tennessees* will be much regretted. In bidding the flagship and her inmates farewell, we are paying them the best tribute in our power in expressing the hope that they may be worthily replaced by their successors.

THE Japanese pony *The Moor*, which met with an accident on the Race Course had to be shot, there being no hope of its ultimate recovery.

YET another shock of earthquake. A slight commotion was felt at 11.18 p.m. on the 27th ulto.

H. E. MR. STRUVE, Russian Minister, goes home on leave of absence by next French mail, leaving on the 4th instant. The duties of his office will be discharged *ad interim* by his Secretary of Legation, Baron Rosen.

THERE is still evidence of much latent disaffection in Tosa. The application, alleged to have been made some time since, by the Pro-

vincial Government for the retention of the police enrolled in the early part of this year, and now, according to the *Choya Shinbun* renewed, would not have been sent in had public spirit in the province been tranquil and favourable to the authorities. The *Kainan Shinshi*, a spirited weekly published in Kochi, has of late had several articles hinting in no very vague terms at the popular desire for increased freedom, and especially representative institutions.

WE are requested by a correspondent to call the attention of the Municipal Director, "if there is such a person," to the dangers the community have to fear at the claws of no less an enemy than a full grown wild tiger, which may some day be at large, but which is at the present confined very insecurely in a small cage, not at all strong, in one of the filthy dens on Lot No. 191, Chinese Town. Who will be responsible for the consequences if the brute should happen to break loose as it certainly would do if a fire should take place during his tenancy in that overcrowded and uncleanly part of the Settlement.

ACCORDING to announcement, Mr. Mitchell held his sale of China and Japan Ponies on the 29th ultimo. The attendance was moderately good, and for some of the ponies the bidding was spirited, though none of them reached three figures, the highest bid being for *Main Chance*, a very handsome Japan Pony, who brought \$92. Of the China Ponies, *The Raven* fetched the most dollars, being started at \$50 and knocked down for \$80. The others realized from \$3 to \$70. The following are the ponies sold and the prices they fetched:

"Mongolian Brave," \$10; "Mongolian Beglerbeg," \$23; "Mongolian Wolf," \$31; "Telephone," \$28; "The Consul," \$12; "The Raven," \$80; "The Sheik," \$40; "The Convert" (late Jim Hills) \$51; "Main Chance," \$92; "The Minister," \$14; "Antidote," \$70; "Bébé," \$38; "Quasimodo" \$6; "The Snark," \$17; "The Boojum," \$21; "Pegasus," \$3; "Not Proven," not sold.

After Mr. Mitchell's auction, Mr. Jaffray held his usual sale of Ponies, the highest bid being for *Bravo*, who realized \$200; Sport brought \$100; *Tennessee* \$52; *Sequel* \$22; *Raethia* \$27. *Favori* was knocked down for \$50. The others brought various low figures, one "scrub" being sold for \$1; and for some no bids were obtained.

THE fourth anniversary of the Yokohama Total Abstinence Society was celebrated in the Temperance Hall on the 29th November. The president of the society, Rev. I. H. Correll, occupied the chair, and was assisted in carrying out the programme by Dr. Gulick, and the Rev. Mr. Cochran from Tokio.

The opening service having been concluded, the chairman made a few remarks on the origin of the society, why it was originated, the benefits which accrue to the public from such institutions, and why this especial organization should meet with the sympathy and support of the community. He stated that the society had not done so much good during the past year as in previous years, but still it had done some. We should have liked, as would many others, to have heard read a carefully prepared report by the secretary of the working of the society, but perhaps this was not thought to be necessary, or might have been an oversight, as it was omitted. The evening passed away very pleasantly, being interspersed with songs, instrumental music, and

able addresses from Dr. Gulick and Mr. Cochran, until the long hand of the clock had commenced its ascent towards ten, when the actual business of the meeting came into operation, viz: the election of officers for the ensuing year, and which resulted in the nomination and unanimous election of Dr. Gulick as president of the society, and a more able gentleman to fill the position it would be difficult to find. There was one noticeable feature in connection with the election of officers, and that was that all retiring officers declined, with one exception, to be re-elected. This was much regretted in the case of the resignation of a lady who has been connected with the society ever since its formation, and to whose energetic zeal its present existence is to be mainly attributed. A custom which formerly existed, but which has been allowed to die out, was revived and that was the enrolment of the names of members in a book apart from the pledge book, each member to pay the small sum of 25 cents per month, and to be entitled to have a voice in the working of the organization. The chairman called for signatures to this book. All hung back at first, but on the ice being broken the call met with a warm response from ladies and gentlemen. This brought the business of the meeting to a termination.

Many who attended this meeting in the Temperance Hall did so in the expectation that the annual report of that institution would have been read, and were somewhat disappointed on hearing that it was not to be. This circumstance, perhaps, needs some explanation to prevent misconception. In former years the Temperance Hall was under the control and management of the Temperance Society, and so the anniversary of the one was amalgamated with the anniversary of the other. But last year the Temperance Society gave over its trust to the Christian Association, and, therefore, has now nothing whatever to do with the management of the Hall. It was announced last night, however, that the Christian Association would hold the usual annual anniversary of the Temperance Hall shortly. We are glad of this, as the interest of the community is more directly centred in the welfare of the Hall than in the welfare of the Temperance Society, not from any indifference to the latter, but from the fact that its separate existence has only been known to few; and the attention of the public has always been brought to bear directly upon the Hall itself.

THE German Frigate *Elisabeth*, in the latitude and longitude where the Ger. Bark *Christine* was said to have been seen, fell in with a Japanese schooner, with her mainmast gone. The *Elisabeth* towed her into Hakodate. There the *Christine* arrived all safe, five hours ahead of the *Elisabeth*.

THE Russian Corvette *Vsadnick* left on the 1st inst. for the coast of Yesso, to render assistance to a Russian vessel, the gun-boat *Aleut*, which is ashore on the said coast, and intelligence of whose disaster was brought by the German Corvette *Elisabeth*.

The Japanese are very kind to their invalids as they give them the benefit of a sea voyage up and down the Inland Sea. The S. S. *Naka no Mura* left Kobe with 390 convalescents landing 90 of them at Mori yama and bringing the balance on here. She left again on Wednesday taking away 40 invalids to Kobe. Surely this is very kind.—She tows the *Banrei* store ship to Kobe.—*Cosmopolitan Press*.

NARRATIVE OF DR. FUKUDA-FUICHI.

(From the *Nichi Nichi Shinbun*.)

Dr. Fukuda of the imperial hospital in Kagoshima fell into the hand of the insurgents on their irruption into Kagoshima on the 1st September. He found no chance to escape from them till the 24th of the same month, on which day the last battle was fought on Shiroyama between the imperialists and insurgents. The following is the account of the horrors he witnessed in the rebel camp:—

On the evening of the 31st August, Dr. Fukuda was conversing with his patients in a room of the hospital; and continued the talk till late at night when he retired and was going to bed. A messenger from the Kencho came in a great hurry, and secretly advised the doctor, as the insurgents were close to Kagoshima, to escape to the Post Office on the beach, where a boat would wait for him and his suite to take them on board the *Takachiho Maru*, then anchored off the coast. The doctor and others quickly made ready and left the hospital without taking anything with them. Both officials and private individuals, men and women, old and young, were running hurriedly through the streets; and great excitement prevailed in consequence of the approaching invasion of the rebel troops. The doctor and his party were, fortunately, taken off to the *Takachiho Maru*, on board of which they found a crowd of the Kencho officials, and their families. It was then about midnight. He had no room to stretch his arms or legs and passed the night in a corner of the deck. On the following morning, he looked towards the shore and saw nothing different apparently from affairs at other times. Sad remembrances recurred to him, and he became much distressed on behalf of those who were left behind in the hospital. Meantime two or three *nigiri-meshi* (boiled rice made into balls and flavoured with salt) were brought him for breakfast. He determined to land again, wishing to direct his people to leave the hospital before the insurgents arrived. He, accordingly, landed close to the Nogami bridge and ran to the hospital as fast as his legs could carry him. In a minute after his arrival he heard the report of guns in the North-West; and saw hundreds of men and women running away from before the hospital gate. The doctor took his small trunk, and ran out, accompanied by Messrs. Nishida and Nakagawa. They found no boat at the shore, where thousands of men, women, and children were shouting for help, calling to those on the steam ships anchored off the coast. Dr. Fukuda and his followers changed their route, and crossed the Nogami bridge. Unhappily, the doctor hurt his leg and could not follow the others quickly; but they arrived on the shore on the other side (of the town) after great difficulties. Hundreds of people were striving to get on board two or three boats. A small steamer came to take them off; but could not approach the shore. Nishida and the other companions of Dr. Fukuda threw themselves into the sea, and got on board after swimming alongside. In a moment, the steamer left for the larger vessel which sent her. The doctor and the others on the beach had no idea of how to save themselves from the insurgents who were in hot pursuit of them; so the poor doctor continued his flight along the sea shore; and, when he looked back for the second time, observed a number of the rebels, armed with swords, within about one hundred yards of him; and he heard them shouting, "cut the imperialists to

death!" He was quite overcome by fatigue; and determined to commend his life to the protection of heaven. He saw a house on the road side, with a door a little opened, and he crept into it, and got under the floor, where to his great surprise he found three other men. Dr. Fukuda got close to one of them, and asked him to hide a helpless doctor for a short time.

In a few minutes, rifle balls penetrated the door and loud shouts were heard. A number of insurgents forced their way into the house, calling for the master, who was, much to the surprise of Dr. Fukuda, beneath the floor with himself. The owner crept out and talked for some time with the rebels. One of the latter, armed with a halberd, dragged the doctor from under the floor and asked, "are you a doctor?" in a reproachful manner. His countenance was livid and resembled that of a demon of the Buddhist hell. "Yes, I am," replied Dr. Fukuda. "I have nothing further to live for; and I shall be much obliged to you to cut off my head." "Come along with me," said the rebel, "if you refuse I shall kill you." So Fukuda was arrested and handed over to a soldier to escort him to headquarters, where one of the insurgent leaders politely required him to tend their wounded men. The prisoner was then sent to the hospital of Fukushima.

Dr. Fukuda found in the hospital about ten insurgent soldiers, who were very badly wounded and whose hurts had been dressed in a clumsy manner. On the evening of the day on which he was captured the hospital was removed to a shizoku's *yashiki* standing close to the Shitotsu-bashi, where he found about twelve surgeons and thirty wounded soldiers. At 12 o'clock the prisoner noticed all the men in the hospital were fast asleep. His uneasy mind prevented him from sleeping, and the consideration of what would happen to him in the future came into his mind. He thought that the rebel army which was then beleaguered by the imperialists would soon be done to death as easily as a mouse taken in a bag, yet would not release him before their final battle. He determined to endeavour to escape at the risk of his life, and rose from his bed, and opened the door of his room stealthily. It was then about 1 o'clock, and a dark rainy night; and the dreadful sound of cannon was heard from all directions. In short the outlook was desolate and made the prisoner feel timid. He reclosed the door and returned to bed, preferring to wait for a more favorable opportunity to get away. At dawn he visited the wounded together with the rebel physicians. It was the second day of September, and the cannon balls from the imperialists frequently struck the hospital, which was accordingly again removed to another shizoku's *yashiki* at Iwazaki, Shiroyama. Dr. Fukuda was escorted thither by a rebel soldier. When he passed the building of the Shigakko he there found a large number of the insurgents who were firing upon the imperialists at Komegura, Kagoshima. He arrived at Iwazaki through many dangers and difficulties, and found every *yashiki* filled with insurgent troops. Iwazaki was the centre of the position occupied by them, and Dr. Fukuda thought that as he had penetrated as far as the middle of their lairs he would not be able to return to the imperial camp. Of twelve physicians only six came to the hospital at Iwazaki. They were not only ignorant of medical science, but treated the wounded soldiers cruelly. They were very clever in killing people. Dr. Fukuda was obliged to act under their orders.

On the 3rd September, when he was sitting alone in his room after having tended the wounded as usual, an insurgent soldier brought

him a young man, saying:—"Here, I have brought you some good company," and left the new prisoner in the room. He had been taken by the rebels when they entered Kagoshima on the 1st of the same month. He turned out to be a Kencho official. The prisoners could not talk freely together fearing to arouse the suspicion of the insurgents. Dr. Fukuda became more and more intimate with the rebel physicians from day to day. * * * He kept a diary of all events as they occurred, employing foreign characters in his manuscript, which, unfortunately, in consequence of his having attracted the attention of his captors, he had to destroy. The continual bombardment of the place by the imperialists was the cause of many lives being lost daily. The wounded insurgents were about eighty in number and were treated very carelessly. * * * When the insurrectionary troops made their way into Kagoshima they numbered three hundred in all, and were divided into three parties, commanded, respectively, by Kirino, Henmi, and Beppu. The Doctor was finally found by a party of imperialists, in a cave where, after making his escape from the rebels, he had hidden himself, and at last was reinstated in peace in the hospital.

ON THE REVISION OF THE TREATIES BETWEEN JAPAN AND THE WESTERN POWERS

(Abridged from the *Kinji Hiron* of the 15 Nov.)

No. 5.

We have repeatedly argued on the subject that the treaties with foreign countries should be revised, and have already published four articles advocating revision in recent issues of our paper. In regard to our right to levy duties, this we must consider more carefully than the other matter, and argue it out more thoroughly, because it is the most important of all, as affecting the welfare or misfortune of our country.

The question of levying taxes is the most vital in the national economy; for upon it prosperity or decline in trade depend. Those whose earnest endeavour is always to promote the benefit of their homes and native land, must consider what will advance and what retard progress. The regulations for taxation which are in force at present, were settled by our statesmen, who knew nothing of foreign affairs, in accordance with the desire of foreigners; and so tend to the latter's profit only. They are so inconvenient and injurious as to force upon us the necessity of the revision of the treaties. We are justified in saying so from what has occurred during past years.

The sovereign of every country in the world possessing independent power, makes his conventions with other countries in accordance with international law, and with a view to promote the happiness and profit of both countries contracting. But regulations for trade and taxation are matters of internal policy; and regard only the one country concerned. So we, as an independent nation are free to make our duties high or low, and no matter how high they may be, no foreigners have any right to interfere with them. But the duties in our country are extremely low. Both our trade regulations and those which regard imposts have been settled by negotiation with foreigners; and have equal force with treaties of friendship. So, if foreigners should not consent to revise them, although we might desire to do so, we could do nothing. Is this not hard upon us? We will now cite some of the inconveniences caused by the existing regulations.

In the 1st year of Ansei (1854) the principal points of a friendly convention were arranged with the American Commodore, Perry.

In the 5th year of Ansei (1858) conventions and trade arrangements were made with five countries, viz., England, France, America, Russia and the Netherlands. In these it was stipulated that the rate of duties should not be more than five per cent, or less than three and a half per cent of the original value of the goods imported, which were enumerated; while two per cent was to be levied upon the articles of merchandise not mentioned in the regulations of trade and duties. At that time our countrymen did not know anything about the customs of foreign countries; and so found it necessary to agree to the conventions and regulations as devised by foreigners. In the 5th month, of the 3rd year of Keio (1866) a change in the Custom House tariff was made, whereby our rights and independence were much more grievously injured than before. This we were ourselves the cause of foreigners insisting upon. At that time some of our obstinate people often acted violently against them, and provided them with good excuses for insisting upon provisions in the treaties favourable to themselves.

As very small duties are levied upon imported goods, they are brought in in large quantities from year to year; and are used everywhere throughout the entire country. On the other hand but few articles are exported, while a vast amount of money pours out yearly hence to foreign lands. If we delay any longer in recovering our right to tax our own imports our country will fall; and no means of curing its ills will be found for many years to come. We are now well aware of the conditions and circumstances of the Western Powers and we should be able to settle, satisfactorily, new regulations for Custom House dues with which foreigners have, of-course, no right to interfere.

Some one may perhaps say:—"In the present condition of our country, we are impotent to recover altogether our judicial rights from foreigners. So, we should do better to leave this question on one side for some years to come and be content with the right of levying duties." Such is the generally expressed opinion of Government authorities at the present; but it is not a right one at all. As long as we have not the judicial power in our own hand, we cannot effectually arrange the matter of levying duties. Consider that foreigners do not even conform to the conventions which are very favourable to them and very adverse to us! On the slightest pretext they act selfishly against us, and work us much injury. This is merely caused by the fact of our having no complete judicial control. How can we advance our own welfare, unless we have foreign residents under our administration! As long as we have no jurisdiction over them, we shall not be able to establish our right to levy duties.

The disturbances in the South-West have been brought entirely to an end, and various plans have been recommended whereby to meet the financial embarrassment arising from the late war; but no good has yet resulted. It is most advisable to increase the taxes upon imports to cope with it. No small reforms can overcome the present difficulties. We have already said that, when a special trouble arises, we must encounter it by special measures, irrespective of existing laws and regulations.

The revenues of Governments in Europe and America consist in most part of Customs' imposts; and domestic taxes are not so large as those are. In such countries Custom House dues are generally increased to provide for

extraordinary expenditures. In 1873, France increased those taxes heavily in order to meet the expenses of the war with Prussia. But the annual income of our country consists mostly of the land tax. It would be a good system to defray the unforeseen expenditures of the late war by increasing our Customs' dues; and this would decrease the amount of imported articles more or less. Alas, is not this the time to take in hand the revision of the treaties with foreign countries? Is not this the time?

THE SILK-WORMS' EGG TRADE, 1877.

(From the *Nichi-nichi Shinbun*.)

We have repeatedly furnished our readers with information on the sad and unsatisfactory condition this year of the *cartons*' trade in Yokohama. It may not be out of the way for us to review the condition of the commerce from the commencement of 1877 to the present day. Of course, as our comments are the result of our own inquiries and the conclusions drawn therefrom, we are not certain of being perfectly right in every particular.

According to what we have heard, the first *cartons* were brought this year to Yokohama during the last ten days of August; and at that time the number collected in the hands of the fifty-four agents in the town was estimated at more than 1,000,000, from the reason that the stamped papers, issued by the government and upon which silk-worms' eggs are placed by the manufacturers, numbered more than 1,500,000 sheets. But early in the Autumn a report was cur rent that the *cartons*' trade could not again prosper, and the dealers, who had bought them directly from the makers in the interior and brought them to Yokohama, endeavoured quickly to provide against the loss which they expected to suffer by the close of the season. But, in spite of rumour, the manufacturers sent large quantities of their productions to Yokohama. In the commencement of September last, the price was 40 yen per 100 for the best *cartons*, and 30 yen for the common, in Uyeda, Joshu. This induced producers to send their production in large quantities to this port, without any consideration that unsatisfactory sales would follow. Thus, in the second ten days of the same month, stocks of more than 1,000,000 cards were piled up in the agents' godowns in Yokohama; and the native dealers were eagerly waiting for a chance to benefit themselves. On the other hand the foreigners did not move at all; and at length two or three of our dealers, who have no perseverance, commenced to pledge them their *cartons* at the price of 17 or 18 sen each. The quantity thus disposed of was not great; but the consequence was great embarrassment among the other holders; and here it first became quite evident that the native holders of cards would derive no profit this year in their trade. On the 26th September the market was first opened, and 9,000 cards of Iwashiro were sold at varying prices between 80 and 60 sen each (by Hosoi to No. 168, a foreign firm in Yokohama); and on the following day, thirteen Italian dealers arrived by the French mail. Their arrivals somewhat encouraged the foreigners native owners and agents. But they said on the 3rd October that they would make no purchase of *cartons* for ten days to come. On hearing this, our dealers thought that the foreigners were commencing to tell lies as usual, in order to excite duplicity among the natives, and to purchase *cartons* at a low rate. So holders endeavoured to make a des-

perate stand before them; but the owners from the interior became very fearful of the loss, which they felt was imminent, and desired their agents to sell off as quickly as they could. This caused a fall in the price, and best cards were no dearer than between 30 and 25 sen.

At this time the foreign dealers, having the advantage, announced that they would purchase only the best cards, manufactured at Akita (Ugo), Shimamura (Joshu), Shinogawa (Iwashiro), and Uyeda (Shinshu), and that they had no intention to buy any others even at one *tenpo* each. Our dealers became more and more anxious to sell their *cartons*. According to an estimate made by at the Shiugisho, 1,316,997 cards had been brought to Yokohama up to the 13th October. Of these, only 170,392 cards had been sold, and the remainder were in the godowns. At length meetings of the owners and agents were held at the town hall, at which propositions to reduce the number of *cartons* were discussed, but the majority refused to destroy any. On the 15th the price fell as low as 15 and 10 sen; and their anxiety to sell caused still more and more reduction in price. They met again at the Town Hall on the same day. An Italian dealer addressed a letter to the assembly, which was to the following effect;—"We come yearly to Yokohama to purchase *cartons*; and each one of these costs at least 20 sen to send to Europe. After we leave Yokohama, you (native dealers) sell the remainder to foreign residents at a very low price, and they send them to Europe. Thus those which are sent by them are of course cheaper than ours when they arrive, and we can get no profit. We act very foolishly in sending any home at all. We shall not come in future to Yokohama." The natives who had attended the meetings were much surprised at such a communication, and decided that out of 1,400,000 cards, which were brought into Yokohama as only 200,000 had already been sold, half (800,000) of the remainder (1,200,000) should be exported by foreigners, and the other half should be thrown into the sea. It was intended by this scheme that the number of *cartons* would be kept low for the following year, and to assure the Italians that none would be left after their departure this autumn.

The decision to throw 600,000 *cartons* into the sea in order to maintain the price of the others was positively opposed by three agents, viz.:—Mumakoshi (chief agent of the Mitsu Bussan Kaisha), Tabe, and Tajima, who refused to enter into the arrangement made by the rest of the meeting. At length the agreement was broken, and the Kaigi-kioku found it necessary to issue a notice that all owners and agents were free to sell their *cartons* at any price they might choose. Thus no good has been wrought by the meetings.

Now, the proposal to throw 600,000 cards into the water having fallen through, each of the agents was anxious to sell what he held; and the price fell as low as 7 to 5 sen. The owners felt great enmity against the three above mentioned agents, and talked evil against them. They even repeatedly threatened to force their way into their shops armed with bamboo lances. The principal people of the guild had at one time some difficulty in keeping them quiet. After protracted discussions, it was settled that all the bad *cartons* in stock in Yokohama should be cast into the water, leaving the best ones. This was reported to the Italians; but was never carried into effect; and all sorts of debate occurred between the owners and agents.* * * *

On the 25th October, the owners and agents called another meeting at the town hall, at

which the authorities of the Industrial Department and the members of the *Tokio Zan-shu Kai-sha* were presented. It was again decided that the seventh part of the *cartons* should be thrown into the water, and that the remainder should be sold. Ten regulations were laid down. Each dealer was ordered to send the seventh part of his cards to the *Kaigi-sha* (Town Hall.) But, again, some of them said they preferred to take them home again, and refused to send them to the Hall. They took them to Tokio, where the *Kaigi-sho* could not interfere with them, and sold them secretly to a foreigner. During the night of the 29th October, the buyer brought the *cartons* back from Tokio to Yokohama. When he was having them conveyed to his house from the Railway station, the owners and agents, who were holding meetings in the Town Hall, observed the cases on a wagon. They became much excited, and tried to prevent the foreigner from taking them to his place. Trouble seemed sure to follow; but the row ceased about midnight. Now, much fault is found with those who sold their cards to the foreigner, but nothing is yet settled as to whether they can be punished for having broken the regulations.

According to the decision arrived at to reduce the stock by throwing some of the cards into the salt water, some of the owners and agents sent the seventh part of theirs to the *Kaigi-kioku*. But twenty-four agents again refused, and many days passed without any result. During the first few days, twenty or thirty owners, who were prepared to sacrifice the seventh part of their respective stock, commenced to murmur against the chief managers of the *Kaigi-kioku* to this effect:—"We have already sent the seventh part of our *cartons* to the *Kaigikioku*. Still there seems to be no chance to sell off even a third of the remainder. Our pockets become empty and we can do nothing at present. How can we either stop in Yokohama or return to our homes without money? Now what we desire is to borrow money from the *Kaigi-kioku*, with which we will make our way home." On the other hand others in the same case said:—"We have already sent in the seventh part of our stock, in accordance with the decision, while twenty-four other dealers hold all their stocks in their own hands. Owing to the feeble operations of the *Kaigikioku* the price of *cartons* is still at the lowest, and we cannot even sell the remaining quantity. As we do not expect to do any good through negotiation with the *Kaigi-kioku*, we will enter into no deliberations with the assembly, and will settle our own business on our own responsibility. Then the *Kaigikioku* determined to oblige all the agents to obey the regulations, and to destroy the seventh part of what cards they had. A plan of doubtful honesty was laid to effect this, and was thus conceived. A foreigner pretended to treat with the persons interested. (He is said to be one of a firm living on 186 Yokohama: but he is not known for certain.) Acting on the instructions of the *Kaigisho* he visited all the dealers who persisted in keeping their whole stock of *cartons* in their own hands, and told them that, as he was going to purchase all the *cartons* which they would not send to the *Kaigikioku*, they had best forward them quickly to his godown. So they sent him more than 100,000 cards in one day, not dreaming that they were falling into a snare. However, on the same day as the cards were to be taken over by the *Kaigikioku*, the dealers discovered the scheme, and became so much enraged that the *Kaigikioku's* officers abandoned their project in fear.

Thus, the destruction of the seventh part of

the stocks was not actually effected, and various questions were hotly debated between the holders and the *Kaigikioku*. At length Sudzuki and other owners referred the case of the latter to the Yokohama Saibansho on the 13th instant. * * * * * After several examinations they withdrew their petition, and again entered into peaceful negotiations. On the 17th instant Nakagato and nineteen other agents on the side of the *Kaigisho* brought those who resisted the decision to reduce the stock before the law courts. We do not yet know what has been the result.

The amount of stock to be decreased numbered 539,529 cards. Out of these, 37,680 were taken back to the interior for domestic use; and 501,849 still remain in the town hall in Yokohama. Besides, the number of cards which the agents have not yet sent there in compliance with the decision, is 58,413. So the entire number to be thrown into the sea is 560,262 cards, which should shortly be sunk beneath the waves of the harbour.

What we have written above is an account of the difficulties in the way of trade in *cartons* up to this date. We can yet say nothing of whether the proposed method of destroying the seventh part of the *cartons* will actually be followed or not, and we cannot foresee either whether on the decrease in the stock the price of the remainder will rise. Since the 9th inst., the best *cartons* have fetched only two sen each, and the common ones but one sen. It is very doubtful whether their value will be enhanced by throwing a seventh part into the water or setting an eighth part on fire. Under present circumstances, the reduction or the increase in the stock can scarcely have any effect upon the price. What is the proposal to reduce the number of *cartons* good for? Consider what good was effected by setting a number on fire in 1875? And what benefit followed on depositing them with the *Kaigi-sho* last year? None. And how much good will result this year from steeping them in water? Will it promote our industries? In our paper of the 2nd instant, we showed the disastrous consequences of interference with private business. The editor of the Yokohama trade report says, of the trade in *cartons*, that the owners are very poor, while the Italians on the other hand are very prosperous, and the *Kaigikioku* has brought much trouble on itself.

NIPPON NOTES.

A hospital, built in Anglo-Japanese style, from the designs of Dr. A. Holterman of the Kanazawa hospital, was inaugurated at Toyama (Etchiu) on the 8th ultimo, with the usual ceremonies and feasting. It is to be under the charge of Dr. Tanaka Singo of Kanazawa.

On the 6th ultimo there was a disastrous fire at Niigata, in which about seven hundred houses were burned to the ground. On the following day a fire at Tottori, Inshiu, destroyed about 20 houses.

On the 15th November a fight took place between some soldiers of the Tokio garrison and policemen in front of the temple of Shokonsha, Kudan. Some members of the civil force were wounded.

A banquet has been given by Their Excellencies Sanjo and Iwakura to army and navy officers, 120 in all, at the Imperial palace of Shiba.

The *Nisshin-kuwan*, which was docked some time since in the Yokoska dock, has been completely repaired.

On the 15th ultimo, a fire broke out at Toyokawa-machi, Hakodate, and was not extinguished till fifty houses were destroyed.

The interest on government bonds, which will shortly be due to the *kuwazoku* and *shizoku*, in Tokio only, amounts to 739,951.90 yen for the former, and 314,078.35 yen for the latter.

On the 20th ultimo, awards were distributed among the exhibitors in the National Exhibition, by the Home Minister and other high officials.

The enterprising fire-work manufacturer, who made the great display in the Public Gardens, Yokohama, on the 3rd Nov., at a cost of 800 yen, receives many orders for his wares from natives and foreigners.

The *Nisshin-kuwan* now in Yokohama harbor will soon leave for Kagoshima.

The number of visitors daily to the National Exhibition at Ueno Gardens during the week ended the 16th ultimo, is as follows:—10th 12,033, 11th 2,520, 12th 4,231, 13th 3,321, 14th 3,460, 15th 3,323, and 16th 1,859,—or 30,749 in all.

The *Hochi Shinbun* states that, during the late civil war in the South-West, 334 officers, 789 minor officers, 3,461 soldiers, 58 police sergeants, and 764 policemen were killed on the field of battle.

At 9 a.m. on the 17th of last month, His Majesty the Mikado visited the Paper Money Section of the Finance Department, accompanied by some of his relatives and ministers. He returned to the Akasaka palace at 2.15 p.m. Mr. Edward Chrosene, the Italian professor of engraving, received two rolls of *nishiki* (brocade) as a gift from the Mikado.

The *Nichi Nichi Shinbun* says that granite quarried in the island of Ogoori, will be used for the pillars of the imperial palace, to be built within the grounds of the old Yedo castle. Each pillar is expected to be about 39 feet in height, and they will all shortly be conveyed to Tokio by water.

The same paper states that a telegram to the Government in Tokio announces that the Chinese minister and his followers, more than seventy in number, will arrive in a few days.

Two students of the Naval College will shortly be sent to England for a course of study.

In the riot between the soldiers and police at Shokonsha on the 15th ultimo, six soldiers and five policemen were wounded, two of the latter very severely.

At about 8 o'clock p.m. on the 9th instant a fire broke out in a godown belonging to a large cotton dealer in the town of Kishiwada in the Sakai-ken. A very strong wind was blowing, and the flames spread rapidly, and were not extinguished till about 300 large houses were burned. No fire has previously raged in this town for many years past. The streets being very narrow, and the inhabitants not accustomed to battle with fire, many lives were lost and many people were injured.

On Nov. 22nd, all the governors of fu and ken, who are stopping in Tokio, were ordered to appear at the Akasaka Palace, before H. M. the Mikado, who wished to hear of the condition of the provinces under their respective jurisdiction from their own lips.

MR. UCHIMI TADAKATSU, Chief-Secretary of the Osaka fu, and holding the rank of *Shorokuki*, was appointed Vice-Governor of the Nagasaki ken on the 20th ulto.

It is rumored, says the *Nichi Nichi Shinbun*, that H. M. the Mikado will visit Iiigo, Hiuga, Satsuma and Osumi, in March next year.

THE Japanese man-of-war *Tsukuba-kuwan* which is now in dock in Yokoska, has about completed her repairs. At the end of the year she will leave Yokohama with thirty-four students of the Naval College, and is expected to be absent for about six months, in the course of which time she will visit Sydney and other ports of Australia.

DURING the expedition to the South-West, 980,000,000 pounds of coal were consumed (by the steamers belonging to, or in the employ of, the Government?)

ON the 22nd ultimo, Tokudaiji-Sanenori, Minister of the Imperial Household, received the decoration of Asahi Daijusho.

THE new buildings of the Industrial Section of the Home Department in Komabano, Tokio, have now been completed, at a total cost of about 100,000 yen. The official opening will take place in a few days.

THE Editor of the *Hochi Shinbun* has had to appear before the Tokio Saibansho.

THE gold mines of Ono-no, lying about ten π from Kagoshima, and which had to be closed during the civil war, have been reopened since the suppression of the insurrection. They belong to the Shimadzu clan and pay a royalty to government.

HIS Excellency Iwakura has entertained the Russian Minister at his residence. Several members of the ministry and other high officers of state (fifteen or sixteen in all) were invited to meet him.

THEIR Majesties the Empress and Empress Dowager have visited the Female Normal School and *Kinder-garten* in Tokio.

IT is said, according to the *Hochi Shinbun*, that His Majesty the Mikado will shortly visit the silk factory at Niimachi, Joshiu, recently opened.

THE number of foreign employees in Government offices and schools is four hundred. Two hundred foreigners are in the private service of natives.

A CHINAMAN, in the service of the British Legation in Tokio, wounded with a cooking knife, on the 24th ultimo, a jinrikisha man who happened to be passing the gate. The offender then ran towards the military hospital with the bloody knife in his hand, and wounded three policemen and five other people more or less severely. He was at last arrested close to the Hanzo gate.

THE Japanese man-of-war *Seiki Kuwan*, which is now in dock at Yokosha, will sail for Europe on the completion of repairs, in order to be near the war between the Russians and Turks. She will also visit Italy, France and England.

NEW gas-works are shortly to be erected in Tokio at the cost of 135,000 yen.

THE *Nichi Nichi Shinbun* says that the exhibitors who have shown their wares in the National Exhibition, propose to form six parties, and to have yearly a small Industrial Exhibition in one of the provinces, for five years running, and in the sixth year to combine and hold a Great Fair in Tokio. Their project has been submitted to the Directors of the Ueno Exhibition, by whom it is now under consideration.

OUT of about 40,000 articles, exhibited in the National Exhibition at Ueno, half have been sold while on view; and the remainder, it is said, will be sold by auction.

SAMFUSHIMA, Vice-Minister of Foreign Affairs, is expected to leave for France next month, in order to be present at the Paris Exhibition of 1878.

THE number of visitors to the National Exhibition, during the week ending the 23rd instant, was 52,882.

A RIOT, fortunately producing no fatal results, occurred between the police and military in Tokio on the 20th ultimo.

A FEW days ago H. M. the Mikado made a gift of 3,000 yen to Lieut.-General Higashi Fushimi-no-Miya in recognition of his good services during the recent civil war.

ON the 26th ultimo, Mr. Hakoda, of the *Eiri Shinbun*, was condemned to a fine of ten yen for having infringed the law against slander.

THE adjustment of the land tax is now nearly completed in every fu and ken throughout the empire; and the office, which was especially opened for this business, is expected to be finally closed shortly.

ON the 27th ulto., at 11 a.m. the Captain of the *Fujiyama-kuwan* visited the Russian corvette *Haydamack* and the United States flagship *Tennessee*. When he left them the usual salutes were fired.

THE *Akebono Shinbun* says that there are rumours of great excitement in the Fukuoka, Kumamoto, and Hiroshima Ken.

THE greater part of Yokohama is built on ground which has been made since the opening of the country to foreign trade. This is the reason that there are no wells of good drinking water. An analytical investigation conducted recently under the Board of Health into the condition of the water supply results thus:—Out of 201 wells in the first ward, 142: out of 875 in the second ward, 754; and out of 3,325 in the 3rd ward, 1,073 only, produce water fit for drinking.

ACCORDING to a notice issued by the Police Department, the hospitals for infectious diseases at Ichigai and Mukogaoka, Tokio, which were built during the prevalence of epidemic cholera, have been burned.

ON the 28th ulto. Their Majesties the Empress and Empress Dowager visited the Paper Money Section of the Finance Department.

ON the evening of the 29th ulto. civil officials above the rank of the seventh class, who were engaged in the late war, were entertained in the Imperial Palace at Akasaka.

ON the 21st ultimo the editor of the *Sendai Shinbun* was condemned to 30 days' imprisonment and a fine of 30 yen, by the local court, for having violated the fourth article of the law against slander.

THE *Choya Shinbun*, says:—It has already been stated that all the newly enlisted policemen in the fu and ken would be disbanded in consequence of the suppression of the insurrection. But the Governor of the Kochi-ken (Tosa) recently sent a petition to the Central Government, asking that the police forces, which were raised in Imaharu, Kochi-ken, in the commencement of this year, should be engaged for a much longer period; and that 73,000 yen should be sent to provide for their expenses; but the request was not granted at the time, and the Governor is said to have now renewed it.

SHIMADZU TADAYOSHI, who recently came to Tokio from Kagoshima, visited the Imperial Palace at Akasaka on the 29th ultimo, and had an interview with His Majesty the Mikado.

PRINCE Higashi Fushimi-no-Miya has given a banquet at the Imperial Palace, Shiba, to some of the officers who were actively employed in the recent war in the South.

A CERTAIN Ooi, a shizoku of Kochi, lately in the service of the Mitsu Bishi Office at Yokkaichi, Ise, has been condemned to be imprisoned for life for having stolen about 700 yen from the office.

CORRESPONDENCE.

THE NEW "JAPAN TIMES."

To the Editor of the *Japan Gazette*.

SIR:—I ask you to give me space in your columns for the refutation of vague and unfounded, but, if left uncontradicted, damaging imputations of treachery, ingratitude, and discourtesy, cast upon me by the *Japan Weekly Mail* of the 17th instant. They are almost sufficiently met by the publication of the following correspondence:—

Yokohama, Nov. 13th, 1877.

"My dear ———, I must decide this week about the *Japan Times*, as I have to make arrangements in China to enable me to do what I want with the paper at the beginning of the year. I shall, therefore, announce next week, by circular, that the first number of a new series of the *Japan Times* will appear on December 29th. The only question, then, remaining for decision is—how and where shall it be printed?"

"I understand you to have told me that, in reply to my propositions, made through you to Pearson early last month—1st, that he should sell me the *Mail* for the price he gave for it;—2nd, that he should admit me as a partner in his business;—Pearson refused the first absolutely, and declined the second on the ground that the business would not support us both. And that you then told him from me, that it was probable that I should start a rival paper. I have now to propose another arrangement which I mentioned to you yesterday by word of mouth, but think it best, to-day, to make in writing, viz:—

"That Pearson should drop his weekly and over-land papers, the *Mail* and the *Weekly Mail*, in favour of the *Japan Times* and its *Mail* issue, retaining his job-printing business, and *Daily Advertiser*, on condition of my giving him my papers to print, at a fixed price for the first hundred copies, and at a sliding scale of prices for each additional fifty.

"My view of the arrangement is that it is advantageous to Pearson, inasmuch as there is room for grave doubt whether the *Japan Mail* will be able to stand against the *Japan Times*. There is sure to be some reduction of his present subscription list: and the question for consideration is—will that reduction be so great as to render it impossible for him to persevere with his own paper. Should he, in January, find this to be the case—he will not then have the counterbalancing advantages of printing my paper; as I shall, necessarily, have made arrangements for having the work done elsewhere.

"All the details of the proposed execution of my work at his office we can arrange as soon as he decides to accept the principle. I would only now suggest that the contract should be for one year, subject to a month's notice, should either party wish to terminate it at the end of 1878.

"I am obliged to you for the trouble you have already taken in this negotiation, and hope you will give me a reply in the affirmative to my present proposal."

"Yours very truly,

CHARLES RICKERBY.

———, Esq., Yokohama.

To this letter, which our common friend handed to Mr. Pearson, he brought me on the 16th the following reply:—

Japan Mail Office,

Yokohama, Nov. 16th, 1877.

Dear ———:—Mr. Rickerby's proposal is of so absurd a nature that it will not admit of any reply.

Yours as ever,

G. C. PEARSON.

I think any candid man will allow, that these letters dispose of the insinuation that I had been trying to get hold of Mr. Pearson's paper in an underhand way. For the rest; for reasons not necessary to make public, it was imperative on me to make known my attempt to negotiate for its purchase to several people in Yokohama, and I of course

frequently expressed the hope that I should be successful; a hope which I still entertain. 'My unkind and discourteous criticism' has been confined to the expression of my conviction that Mr. Pearson was incapable of editing such a paper as *Yokohama* requires as a Weekly Review of Commerce, Politics, and Literature: but I have invariably qualified my remarks by expressing my admiration of his efforts in other capacities. I must add that, had I found my opinion of his ability as a journalist to be solitary, I should never have dreamed of reviving the *Japan Times* to compete with the *Weekly Japan Mail*.

Large allowance can be made for Mr. Pearson's want of experience and natural irritation; but as a public man he is open to criticism, and should recollect that neither has he a patent for publishing weekly papers, nor has he any more right to be offended by adverse opinion of his capacity to conduct one, than has Mr. Gladstone to take umbrage at his fitness for guiding the policy of England being called in question.

I have many friends here, who know me well enough to dispense with my defending myself against such an attack. But during my long absence from *Yokohama*, a large number of people have come to Japan, who know me only by name, and it is to these that I ask your leave to address this refutation of a charge of such underhand dealing as is attributed to me by the *Mail*—all ground for which I have been, throughout my negotiation for its purchase, so sedulously careful to destroy.

I am, Sir,

Your faithfully,

CHARLES RICKERBY.

Yokohama, Nov. 19th, 1877.

THE CONCERT.

To the Editor of the *Japan Gazette*.

SIR:—Arriving at *Yokohama* after six weeks' confinement on board a steamer; the waves, roaring chorus to the monotonous thud-a-thud of the screw, affording the only music, I was glad to learn that there was a theatre in the settlement; and still more welcome was the announcement of a concert to be given so shortly after my arrival. I never admired the efforts of amateur representatives of dramatic casts, a gentleman in red playing to a lady in pink, and playing out of all character alike with his own rank and with the part he has assumed, whilst gaudily dressed beings fuss about the stage bent upon frustrating the efforts of the leading lady and gentleman to render themselves intelligible; the exits and entrances of the gaudy wanderers being as little in unison with the plot, as are their dresses appropriate to character or homogeneous in colour. The singer has the advantage over his acting friend: his dress is familiar to him; and after he has conquered the wilful humours of his legs, the nodding of his head, and the perverse irritation of his eyebrows, little action is required of him beyond the occasional lowering of the score to which his gloved hands tenaciously cling.

My friends had yarned to me of sport, and luxury of living, but not one wrinkle on the amenities of social life could I obtain from the ten-years-in-the-East-and-know-all-about-it people. "What is that to you? You would rather see a hare hunted and well killed, than hear the sweetest notes that ever fell from woman's lips." This was the only answer I could ever get to my enquiries. Perhaps I was wrong in consulting only Hongkong residents.

To judge for myself of the capabilities of my new quarters, I attended last night's concert. But, remembering the songstress whose loss all lovers of opera lament, remembering her fine voice compassing soprano and contralto at will, and pure in all the notes of its vast range, remembering her magnificent presence, and who that has ever seen and heard her can forget? to write a notice of the performance is like being required to sing a song of Sion in a strange land.

A small house neatly decorated, without pillars to obstruct the view, and without galleries to puzzle the voice, promised a favourable auditorium, a promise which I soon found unfulfilled. A false roof unadapted either for ventilation or for acoustics, cutting up the notes of the human voice into diamond-shaped fragments, redistributed them in equal portions among the audience. The performance of one gentleman especially was spoilt by this defect; a careful rendering of "Love, the Pilgrim," though deservedly obtaining an encore, was marred in its effect. This gentleman must strive to overcome his nervousness, and not to fear the opening of his mouth, though fragments of his voice are reverberated on his ears.

The programme of the concert was too long, five pieces in each part would have been ample bait to secure a good audience, and from such a programme a selection might have been made at the discretion of the manager. How not to over do it is the great secret of concert giving. Last night's concert seemed to be given by the piano rather than Mr. Wagner; and it was not until the flute solo in Part II that I was convinced of my error.

The flute solo was a treat: this and the Piano solo in Part I. were the best parts. But whilst playing a solo, the performer should not be carried away by the idea that he is conducting an orchestra, and that both his hands being employed, he has to beat time with his head. It was to be regretted moreover that the Glee by the members of the Glee Club was reduced to a trio; unless indeed the absent members were likely to spoil the performance and so the principle of let well alone applied.

Mr. Wagner has evidently plenty of talent at command to enable him to give a series of concerts, but if it is his intention to start monthly "Pops" he must vary his selection of instrumental pieces with some livelier airs. Last night they could not fail to remind one of slow run races, in which, though an occasional spurt was made to try the strength of your opponent, all spirit was reserved for a pretty finish. This and the uncertainty of when the finish would come, must be taken to account for the occasional out of place applause that was given by some admirers to their friends. But above all if Mr. Wagner wishes to make his concerts pay, the price of admission must be reduced:—as Punch's Scotchman said, "For a seat in the back row nine shillings is monstrous." If the dramatic performances at the Gaiety are equal in strength to the vocal efforts of, I suppose I may say, our amateurs, I shall not regret having pitched my tent in *Yokohama*.

I am, yours truly,

NEWCOME.

Yokohama, Nov. 29th, 1877.

SANITARY.

To the Editor of the *Japan Gazette*.

DEAR SIR,—I have noticed of late much discussion in the native papers about the poisoning of wells by the infiltration of sewage from

drains. And I know, from what I have observed, that those box drains, made of plank and covered with the same, such as are so common in front of the houses in native towns, are the most effective generators of pestilential vapours of any kind of sewers that I have ever seen in any part of the world. The plank over the top covers the filth from view indeed; but it only serves to keep out the sun and rain which would have a purifying effect upon the brewing, festering, contents of the drain, and helps on the fermentation, while it fails to prevent the escape of the noxious gases evolved below. And, being covered from sight, this kind of drain serves as a handy receptacle for dead dogs, cats and rats, and all sorts of unnameable filth, which the ignorant people are in the habit of slipping under the plank as the easiest way to get rid of their garbage, and this, together with the surface sewage flowing into these drains, forms a brewing compound of great efficiency in poisoning both air and water.

But there is still another filthy habit that spoils all Japanese wells, and that is the fashion the people have of washing everything at the side of the well. By this most uncleanly habit a cesspool is formed by the side of the well, the filtration from which soon saturates all the surrounding earth, and so poisons the well beyond hope of recovery by any means of cleaning. To prevent this some people have a platform of wood or stone made at the side of the well, but while this may retard the poisoning process it does not effectually prevent it, and generally in the end serves to make it more sure and complete.

If after one or two years use this platform of wood or stone is taken up, it is generally found that the earth beneath has been saturated with filthy water that has leaked through, and that the shutting out of air, rain, and sunlight has favoured the process of fermentation, so that a cesspool is there, doing its poisonous work, out of sight and unsuspected. Therefore the preservation of pure water in wells, necessitates not only its protection from the filth of drains or surface water, but also that the earth be kept as dry and clean as possible about the well, and no kind of washing allowed in its vicinity. An additional protection may be afforded by raising the surface of the ground, for fifteen or twenty feet about the well, a foot or more above the general level, with a mixture of sand, gravel and lime, which will cause all the rain-fall to flow away from the well, and keep a dry hard surface round about the well curb. If the Japanese could be induced to replace their box drains with the open shallow stone drains that have of late been introduced in the foreign settlement, and then to take proper care of the purity of the water in their wells, they would at once remove one of the principle causes of the spread of cholera, fevers, and all pestilential or malarious diseases, with which this country is afflicted during every summer. They have begun to remedy this evil to some extent, and, while there has been a great deal of talk and excitement about the cholera this year, the mortality has been very small as compared with other previous years, when typhus or typhoid fevers, or cholera, or other pestilential diseases have swept away thousands in *Yokohama* and *Tokio* and vicinity, in place of the hundreds that have been this year reported of cholera cases.

In the former years no special sanitary measures were attempted, and no reports were published, and the great mortality was accepted as an unavoidable matter of necessity of fate.

So we see this year the good effects of the cholera scare which has resulted in wise sanitary measures, which has so greatly reduced the death rate of the hot summer season.

And the most effective and useful parts of these sanitary regulations are doubtless those that have more especial reference to domestic cleanliness and purity of food, water and air, rather than the quarantine regulations that are intended to prevent the introduction of disease from abroad, for it can be of little use to fight against the introduction of a disease, the seeds of which are already a bountiful home product.

And while upon this subject I cannot forego the mention of one other home source of danger which exists in the shape of diseased pork. I have visited the native pig-sties about Yokohama and Kanagawa and I find that the pig farmers are in the habit of feeding their porkers upon decayed fish, decayed vegetables, and all kinds of filthy garbage, and that the sties are in a desperate state of foul uncleanness, and the animals almost invariably diseased. At the slaughter houses at O'ta, I have noticed that pigs brought in to kill, were generally very thin in flesh and sickly in appearance, and when I inquired why these pigs were not properly fattened, the reply was that natives do not like fat pork, and that only the lean part, the red flesh, is saleable in the native market, and as the white fat is all waste, it does not pay to fatten pigs for native use. But certainly such flesh, fed upon such unwholesome food, and starved into such an unhealthy state of emaciation, must be anything but wholesome food for the human stomach; and I cannot doubt that the large winter consumption of such unwholesome diet, helps largely to prepare the way for the high rate of the summer mortality. In hope of drawing the attention of officers of the Board of Health, native and foreign, to these important items, I have been led to ask room in your columns for the foregoing remarks;

And remain, Sir,

Yours very truly,
BON AMI.

Yokohama, Nov. 23rd, 1877.

To the Editor of the *Japan Gazette*.

SIR,—Allow me to call the public attention to the great nuisance respecting the time at which the night scavengers commence their work in this city. They start on their rounds just at the very time when it is customary for the people of Yokohama to sit down to their dinner. I am sure that a good appetite (when there is any) must be spoilt by the intermixtures of various perfumes. Can you assist the public by calling the attention of that official who may have charge of scavengers, and of the ubiquitous Board of Health to this nuisance?

I think that the proper time for the useful but unsavoury cleaners to commence their work is after midnight, when other people are supposed to be in their beds.

By inserting these few remarks,

you will greatly oblige

ANTI-SMELL.

Yokohama, 26th November, 1877.

FAREWELL BALL TO ADMIRAL PATTERSON,
CAPTAIN YOUNG, AND OFFICERS OF THE
TENNESSEE.

To the Editor of the *Japan Gazette*.

DEAR SIR,—I should feel obliged by your inserting the following in to-day's issue.

I did not offer my residence, now in thorough repair, to the Ball Committee for hire as your notices and advertisements infer.

The British Consul wrote to me asking if I would allow the residence to be used, it being far the best place for the entertainment. In reply I consented, and placed the same at the disposal of the Committee, of course free of charge. The permission so granted was not acknowledged in these advertisements. This want of courtesy needs no comment. I am only too glad that the Committee have found a more suitable place.

Yours truly,

C. G. WILSON,
Legation Building, 244, Bluff.

Yokohama, Dec. 1st, 1877,

LAW REPORTS.

U. S. CONSULATE-GENERAL AT SHANGHAI.

Before the Hon. G. W. WELLS, Consul-General.

Shanghai, 12th November, 1877.

UNITED STATES v. OLIVER B. BRADFORD.

Mr. Drummond appeared to conduct the prosecution.

Embezzlement and Malfeasance in Office.

It will be remembered that, on the 22nd October last, prisoner, who for many years has occupied a high position in the United States Consulate-General, Shanghai, was convicted of a violation of the Postal Laws, and was sentenced to 20 days' imprisonment and to pay a fine of \$250 and the costs of the prosecution. His term of imprisonment expired two days ago, and he was now brought up under an indictment charging him with embezzlement, extortion, and malfeasance in office. No public announcement had been made of the trial being fixed for to-day, but rumours had been rife, and upwards of fifty persons assembled in the Court, and the greatest interest was evinced in the proceedings.

When the Court was declared open.

Mr. Drummond rose and said that he appeared to prosecute on behalf of the Government of the United States of America.

The Court.—Quite so. The indictment against the prisoner will first be read; the Clerk will now read it. (Addressing the prisoner.) This is simply an arraignment.

Dr. McCartee, who is acting Clerk of the Court, then proceeded to read the indictment. It occupied twenty-five sides of foolscap paper, and embraced twenty-five separate charges against the prisoner of embezzlement and general malfeasance in office. Each charge was set forth in the usual legal phraseology, the first of which ran as follows:—

—Before the subscriber, a United States Consul-General within and for the Empire of China, Acting Judicially, personally appeared J. J. Coffey, who, being by me duly sworn, deposes and says that between the 1st January, 1876, and the 13th September, 1877, Oliver B. Bradford being then and there an officer of the United States of America, charged with the safe keeping, transfer and disbursements of the public moneys of the said United States of America, to wit—Consular clerk of the United States, Clerk of the Court for the Consulate-General at Shanghai, Deputy Consul-General, Vice-Consul-General and acting Consul-General, did then and there receive a large sum of money, to wit, the sum of two thousand dollars (\$2,000), the said sum of money being then and there the money and property of the aforesaid United States of America, and having then and there come

to the hands of the aforesaid O. B. Bradford by reason and by virtue of his, the said O. B. Bradford's offices, aforesaid, and the said O. B. Bradford did then and there wickedly, unlawfully, and feloniously convert to his own use, and did then and there embezzle the aforesaid sum of money, belonging as aforesaid, to wit, the sum of two thousand dollars, contrary to the form of the Statutes in such case made and provided, and against the peace and dignity of the United States of America." The next twenty counts were couched in similar terms, differing only in date and in the amount alleged to have been misappropriated. The second charge alleged that prisoner on the 28th January, 1876, received a large sum of public money for the use and benefit of the United States, the amount being unknown to the deponent, out of which he converted to his own use the sum of \$100. The third count charged the prisoner with embezzling \$150 on the 27th February, 1877; the fourth with embezzling \$80 on the 16th March, 1876; the fifth with embezzling \$50 on the 18th April, 1876; the sixth with embezzling \$125 on the 23rd May, 1876; the seventh with embezzling \$50 on the 26th July, 1876; the eighth with embezzling \$83.50 on the 23rd August, 1876; the ninth with embezzling \$300 on the 6th September, 1876; the tenth with embezzling \$75 on the 13th October, 1876; the eleventh with embezzling \$10 on the 28th November, 1876; the twelfth with embezzling \$36 on the 28th December, 1876; the thirteenth with embezzling \$91.50 on the 30th January, 1877; the fourteenth with embezzling \$63.20 on the 26th February 1877; the fifteenth with embezzling \$73.42 on the 24th March, 1877; the sixteenth with embezzling \$300.39 on the 30th April, 1877; the seventeenth with embezzling \$110.20 on the 29th May, 1877; the eighteenth with embezzling \$183.40 on the 30th June, 1877; the nineteenth with embezzling \$34.01 on the 26th July, 1877; the twentieth with embezzling \$205.30 on the 28th August, 1877; the twenty-first with embezzling \$128.50 on the 12th September, 1877. The other four indictments were as follows:—Twenty second—That the said O. B. Bradford, did, between the first day of January, 1876, and the thirteenth day of September, 1877, at Shanghai, China, be being then and there an officer of the United States of America, charged with the disbursement of the public moneys, did then and there receive and accept and transmit to the Treasury Department of the United States of America certain quarterly accounts containing receipts and vouchers, the said receipts and vouchers having been received by the said O. B. Bradford by reason and virtue of his being such disbursing officer of the public moneys of the United States of America, the said receipts having been then and there received from various creditors of the United States of America, with a view of having the same allowed to him, and in his favour as such disbursing officer, as aforesaid, and did then and there cause the same to be allowed, and did then and there by reason, as aforesaid, convert to his own use of the money of the United States of America, the sum of \$100 contrary to the form of the Statutes in such case made and provided, and against the peace and dignity of the United States of America. Twenty-third—That the said O. B. Bradford was, between the first day of January, 1876, and the first day of October, 1877, being then and there an officer of the United States of America, to wit, Clerk of the Court of the Consulate-General at Shanghai, China, did then and there by virtue of and under color

of his said office extort from divers persons and individual residents of Shanghai, large sums of money, to wit, 1,000 dollars, contrary to the form of the Statutes in such case made and provided, and against the peace and dignity of the United States of America. Twenty-fourth—That the said O. B. Bradford did on the 30th day of July, 1877, being then and there an officer of the United States of America, and being then and there an officer entrusted with the safe-keeping, transfer, and disbursements of the public moneys of the United States of America, a certain sum of money, to wit, the sum of two thousand and five hundred and sixty-one dollars and fifty-five cents (\$2,561.55) came to his hand by reason and by virtue of his office aforesaid, and that he did then and there deposit to his own private credit in the Comptoir D'Escompte de Paris, a bank in Shanghai, the aforesaid sum of \$2,561.55, and did then and there embezzle the aforesaid sum of \$2,561.55, contrary to the form of such Statute made and provided, and against the peace and dignity of the United States of America. Twenty-fifth—That between the first day of January, A.D. 1876, and the thirteenth day of September, A.D. 1877, O.B. Bradford aforesaid was then and there an officer of the United States of America, to wit, a Consular officer. That as such Consular officer aforesaid at Shanghai, China, he was then and there required to render true and just quarterly accounts and returns of the moneys received by him, for the use of the United States of America, aforesaid, and of the business transacted by him as such officer as aforesaid, on behalf and for the United States of America in and from the office of the United States Consulate-General at Shanghai, China, and did then and there wilfully execute and render false and untrue quarterly accounts and returns to the Treasury Department of the United States of America, as aforesaid, of the moneys so received by him, as aforesaid, and of the business so transacted by him as aforesaid, contrary to the form of the Statute in such case made and provided, and against the peace and dignity of the United States of America.

The indictment was sworn to by J. J. Coffey, and subscribed to by G. Wiley Wells, United States Consul-General, Acting Judicially.

The Court (addressing the prisoner)—To this charge, or rather to these charges, what is your plea—guilty or not guilty?

Prisoner (after some hesitation)—I acknowledge procedure on my part upon which these counts may be logically based, but I deny wrongful intent. There is room, of course, for difference of opinion.

The Court.—Mr. Bradford, state first what is your plea, and then any statement you may wish to make will be received. Your plea first, are you guilty?—and any mitigating circumstances you can state afterwards and they will be considered by the Court. The plea will be the proper thing first.

Prisoner—Then, for the formal plea. I plead technically guilty, but innocent of any intent to commit a violation of law or an infraction of the regulations of the Government.

The Court.—The Court will take down your plea in writing, which is a plea of guilty.

Prisoner (repeating his plea to the Clerk, and apparently reading from papers).—Technically guilty, but innocent of any intent to commit a violation of law, or to infract a regulation of the Government.

The Court.—Is your plea of guilty to each and every count in the indictment?

Prisoner.—Yes, to the whole of the indictment.

The Court.—You plead guilty?

Prisoner.—Yes, technically guilty. and may I be allowed to ask, if possible, that the matter be referred to the Home Government.

The Court.—Yes, that is in order.

Prisoner.—Then I make that request, I ask that all questions be referred to the Home Government.

The Court.—I am willing to allow that. The request is that the charges in the indictment, with your plea of guilty, be submitted, with any circumstances in extenuation you may have to make, to the Attorney General through the State Department; and, therefore, it would be proper and right that sentence should be suspended until such time as the Home Government have been advised and information received from them relating to the matter submitted.

Mr. Drummond.—Then I apprehend the Court will defer passing any sentence, in view of the matter being referred to the Home Government, until the matter submitted has been considered by them, and it is their pleasure to reply to this Court.

The Court.—Yes, precisely, the proceedings are in the nature of an appeal or a request for pardon.

Mr. Drummond.—Then the only question remaining now is with regard to the prisoner himself. What is to be done with him until it is the pleasure of the United States Government to forward to this Court their answer to the questions submitted and his explanation? That is, I presume, the next proceeding to be considered, and the point necessarily arises as to whether the prisoner should be detained or whether he should be allowed to have his liberty. That is the point to be now decided, and I presume it is for the prisoner to make an application to the Court, if he has any desire in that respect.

The Court.—Quite so.

Prisoner.—I do, I make application for bail.

Mr. Drummond.—That, of course, is a matter for the Court to decide entirely—the question with regard to bail. In the first instance I am not aware what opinion the Court may have on the point with regard to giving the prisoner bail or not; but the prisoner having pleaded guilty, I presume that it must necessarily be a very difficult matter for the Court to grant bail at all after a plea of guilty has been entered.

The Court.—Where sentence is suspended, the practice of the Federal Courts of the United States, wherein I have had the honor to practice, has been that parties may be bailed. In this instance, I would have no objection to grant the prisoner bail, if he desires. I would be willing to grant him bail until such time as the matter might be properly considered by the Home Government, and an answer returned to this Court by the Attorney General.

Mr. Drummond.—I understand you, then, to decide that bail will be allowed, notwithstanding the plea of guilty, and that that is in accordance with the law and practice of the Courts of the United States of America.

The Court.—That is, where judgment has been suspended, as will be the case in this instance.

Mr. Drummond.—I have nothing further to urge on the point, and it now only remains for the Court to settle the form and amount of the prisoner's bail.

The Court.—I have considered somewhat this morning, and while the indictment was being read, the question in regard to what

bail should be required. The law and the constitution of the United States is that no excessive bail shall be required; the Court will look first to the capacity of the prisoner to give bail, and, secondly, to the nature of the offence. I should think that in this case a bond for \$10,000 would be quite sufficient with two sureties qualifying in the full amount with the prisoner.

Mr. Drummond.—Himself in his own recognizance of \$10,000, and two sureties in \$5,000 each.

The Court.—\$10,000 in all; each surety qualifying to the full amount, viz, \$10,000.

Mr. Drummond.—Then I apprehend there is nothing further to be done.

The Court.—No, not if the Counsel for the Government agrees with the Court as to the bail. If you agree I will make the order for \$10,000 with two sureties.

Mr. Drummond.—I have no objection to make. The charges are very extensive, and are limited to the period of eighteen months past only, and they cover a large sum of money; in addition to which the punishment for such offences is a fine of a very large extent; therefore, it is necessary that the Court should have very substantial security. I have nothing to urge against the amount stated by the Court—it seems sufficient to meet the case entirely. I presume, therefore, that if the prisoner will take the necessary steps to provide his bail—on his own account and his two sureties—I shall be prepared to have the necessary documents drawn up.

The Court.—The prisoner can notify me when he is prepared to furnish bail, and I will notify you. You can prepare documents for the amount, and when the parties are ready, the bonds can be executed here in chambers; it is not necessary for it to be done in open Court. In the meantime the prisoner will be in the custody of the marshal, who will give him every opportunity to take the necessary steps to obtain bail. (Addressing the prisoner.) Of course, Mr. Bradford, the judgment heretofore rendered will have to be complied with before you can be discharged from custody.

Prisoner.—I do not understand you.

The Court.—The former judgment against you must be complied with before you are discharged, and when you have complied with that judgment, bonds, or sureties, will be substituted in the present case for your confinement.

Mr. Drummond.—Then the prisoner will take steps to get bail, and his sureties will have to be approved by the Court.

The Court.—Yes, and their bonds will be substituted for his confinement. Sentence will hereafter be rendered if the petition for pardon is refused by the President. Is there anything further before the Court?

Mr. Drummond.—I have nothing further to say.

The Court.—Marshal, adjourn the Court.

The Court then adjourned.—*N.-C. Daily News.*

The sale of the S.S. *Hwaiyuen late Calabar*, took place this afternoon (16th Nov.) There was a very small attendance. The bidding commenced at Tls. 10,000, by the C.M.S.N.Co.; Mr. Grant advanced to Tls. 12,000, which seemed the limit he intended to go; for though after Captain Bolton bid another Tls. 1,000 for the Company, the Auctioneer waited a long time, and exhausted all his well-known eloquence and ingenuity in the endeavour to draw another "bode," all was in vain, and it fell to the China Merchants at Tls. 13,000.—*S. C. & C. Gazette.*

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON Esq., *Acting-Consul-General.*MESSRS. N. J. STONE AND C. H. HASWELL,
(Assessors.)

Monday, November 19th, 1877.

THE PEOPLE, UNITED STATE, v. JOHN MANNING.

The accused was charged by Captain Winsor, of the American barque *Annie W. Weston*, with wilful disobedience of orders and continual refusal of duty from the 8th of October to the present time.

Manning pleaded not guilty.

John A. Davis, sworn, stated:—I am chief officer of the *Annie W. Weston*. Manning was brought on board on the 6th of October and refused duty. Several times since then he has also refused to turn to when ordered. Most of the time he has been kept confined, and had the same food as the other sailors had, and was in every respect well treated. He never gave me any reasons for acting thus, but on the 13th of October he said he would sooner die five deaths than go to work. I asked him what he calculated on doing, whether he was going to lay in irons and rot; and that it was a pity a man of his physique should be idle. He never did a stroke of work from the 8th of October. It was the 6th of October when Manning was brought on board. The following day he was let out of irons. On the 8th we set sail. On the 12th, there being heavy weather, he was asked to lend a hand, and refused; and that night Captain Winsor put him in my room to sleep while I was on deck pumping all night. After the gale was over he was put in the booby hatch and some mats given him to cover himself with.

To the accused:—It was on Friday, the 6th October, when you were brought on board. There were some words about irons between Captain Winsor and the Deputy marshal. The Captain went below and brought up a pair of irons from the cabin. I did not hear you say when those irons were put on you that they were two small. I did not hear him say that they were big enough; that he had paid a lot of money for you, and that he would have it out of your body. I did not see a piece of skin taken off your wrist and the blood flow when the irons were put on. You were kept a close prisoner below. You had bread and water for breakfast, and good "grub" for dinner, the same as the rest of the sailors. I don't think I said, at the time the gale was blowing, "You son of a—— come out of that, and go to the pumps and get a soaking as well as the rest of the men." I did not say that you would never get on shore again. I told you to go to the booby hatch and hold on as well as you could. I don't know whether Captain Winsor struck you while you were hanging on the rail and in irons. I went below and brought up half a bottle of gin to give to the men. There was not enough in one bottle to go round, so I took another bottle out of the breast of my shirt. I did not give two of the men an extra "tot" each. You were let out of irons at 8 o'clock in the morning. Captain Winsor told me to take your irons off and let you have the same chance as the rest. I did not go below and load my revolver, and come up and say, "——, take a hold there like the rest." My revolver was loaded before, and I asked you to sit where you were and take hold of the rope so as to set the men a good example. The cause of my

telling you to sit there and work was because of your refusal to work. You did not tell me you were sick till afterwards. I did not say "——, you have been offered a fair settlement and would not accept it." Martell asked you to turn to, as two of the men had died and there were only five men to do the work. You did not tell him you were sick and not able to work, but said that you would die first. I don't remember if the second mate said that you were well able to eat your grub, though it is evident you were from the way you got through it. I did not hear you say that you were unable to eat half of what little you did get. I did not see the second mate strike you. I did not see Captain Winsor "pound" you in the face. I did not hit you in the face. I did not pick up a capstan bar, and lift it up and say, "I would like to kill you, you son of a——." I did not hear Captain Winsor say that I was to shut up or his wife would hear it. I did not ask Captain Winsor if that cut on your face did not want sewing up, as I had a palm needle, and would sew up the eye of the d—— son of a—— as well. I did not see Captain Winsor put three pieces of sticking plaster on your face. I saw the plaster on afterwards. When I took you out of the lazeret the *Annie W. Weston* had the lee clew fore-sail, lower main-top-sail, and reefed spanker set. The fore-top-sail was blown away before you were taken up. Both pumps were working all right then. The starboard bilge pump and port main pump were going then. We did not 'bout ship at all on that day. The upper main top sail was not set on the Thursday.

Captain Winsor objected to the questions put by the accused.

Manning said that he had good reasons for asking those questions.

His Honour thought they were irrelevant at present.

Witness to an assessor:—When Manning was taken on board on the 6th October he was asked to go to work and refused. He did not say that he was sick.

Captain Winsor was sworn and said:—On or about the 10th of August 1876, in Cardiff, Wales, while I was in a shipping office, this Manning came in. A man named White, one of the proprietors, asked Manning what he wanted. He said he wanted to ship. He said he belonged to Springfield Massachusetts. I told him I had a ship going to Yokohama and would give him a chance if he wanted it. He was half naked so I purchased clothes for him. He went on board ship about a week before I shipped my crew. He always had more or less trouble with the other men. I had no trouble with him on the voyage to give him cause to disobey my orders or refuse duty. On or about the 17th of last May I gave all my men liberty, Manning being one of them. I told them to be on board at six o'clock the next morning. Manning did not make his appearance till Thursday following. When he came on board his face was badly cut and he had two black eyes. Two days after that I got ready to sail for Hakodate, cleared the ship at the Consulate, and was going to sea the next morning. Manning came to me and said he would like to go to the hospital as his shoulder was out. I told him if he could not go ashore without getting into a fight he would have to stand the consequences. He went on shore; and I sailed the next morning for Hakodate, and arrived from that port on the 10th of July. On the 12th, Manning

was ordered on board by General Van Buren. He did not go that day. On the 13th I came on shore and ordered him to be arrested. He was brought on board and refused duty at once. I then made another complaint against him for refusal of duty. He was brought on shore and had another hearing, but still refused duty and was sentenced to be put on bread and water for ten days, and be put on board again at the time of the ship sailing. On the 6th or 7th of October he was brought on board. On Sunday I went on board and exchanged a pair of irons for a larger pair. I told Mr. Davis to take off the irons that were on him and put on the larger irons. The following morning I sailed and everything went well until the 10th. He had bread and water for breakfast and two good meals for dinner and supper. On the 10th Manning had cause to come on deck. I was on the main deck at the time, and I then asked him why he did not go to work, and what he expected to gain by showing such a mulish disposition. He said that he did not expect to gain anything, and that he had been driven to this. I asked him if I had driven him while he was in gaol. He said no, but the Consul had driven him. I said "It is a pity you did not get the cholera the same as the rest"—two men were then dying from it. He said he did not care a—— how many died and that he would not do a hand's turn if they all died. I had no further talk with him on that day. The next morning the typhoon burst upon us and I ordered Manning to be brought on deck and the irons taken off. At that time my ship was under reefed spanker, small mizen staysails, lower, fore and main topsails and foresail. Just about that time I hauled in the weather clew of the foresail and reefed it snug. That done, the mizen staysail and spanker split, and I hauled them in to save what I could of them. The wind was blowing harder at that time than it had been, and threw the ship on to her beam ends, filling the ship full of water on the starboard side. I gave orders for the lee foretopsail sheets to be cut away so as to right the ship. Soon after I hauled up the lee clew of the foresail. Previous to that I had taken in the foretopmast staysail. All the sails were furled. I went to the pumps and found four feet of water in the hold. All hands got at the pumps. The ship was not strained and made but very little water through her boards. I found the water increasing and asked Manning if he would not lend a hand to save the ship and our lives, and he refused, and as I was giving the men whiskey, I gave him some at the same time and he swallowed it with a good will. At night I put him in the mate's room to save his life, and gave him his food and hot coffee when it could be got, the same as the rest. Just before that I went below to put on a dry shirt and hearing some loud talking on the deck, went up and heard Manning ask Davis "What the——right he had to ask him to turn to." I said "you won't go to work, won't you?" and then struck him three times and thought myself justified in doing so, the weather being so terrible and thought it an impossibility for the ship to keep above water. All of us had been at the pumps all night, and kept at them all the next day until we got so exhausted we could scarcely lift our hands, having neither proper food nor rest. Manning still persisted in not lifting his hand to help us, and held out until the day I arrived in Yokohama and still continued to refuse duty till the 16th.

When he went over the side on Saturday the men said "you dirty big Irish loafer, it is to be hoped you will never return again." I can say that I treated that man more like a passenger than like a prisoner. On the 8th of October, when he was brought on board, I asked him if he was going to his work and he said "no." I went aft and brought a pair of irons and told the Marshall I did not think my irons were large enough and asked him to exchange. He made me an insolent answer and refused, so I took off the irons and put on the small pair, which were a little tight, and the next day changed them and put on a larger pair.

T.H. Tripler, M.D. sworn, said:—When the *Annie W. Weston* arrived here I was requested by Captain Winsor to attend to the medical requirements of his ship. On the following day I saw the prisoner. His face was somewhat bruised, especially about the eyes, where the skin had been broken, but was then healed. I examined his wrists and found the skin had not been broken, or evidence that the handcuffs were hurting him. At this time he was not ironed and the mate was cleaning the handcuffs. He told me that he felt well and had been properly treated by the officers on board. I saw him at intervals of two or three days and on all these occasions he said he felt well, and that his food was of good quality and sufficient in quantity. About a fortnight ago, I called him aft, and had a longer conversation with him than I had previously had; and tried to persuade him to go to his duty. He said there was nothing that would induce him to go to work on board of that vessel. I desired to enquire into the condition of his health more carefully than I had done, and he refused to submit to a thorough examination or take medicine; and added that there was only one thing he wanted and that was his liberty. Since then I have seen him several times and during those interviews he never complained of any physical disability.

To the accused:—I remember lancing a leg of one of the men. I saw you the day after the ship came in. The mate was cleaning the irons at the time. The mate said the lance was dull and would not cut anything and offered to sharpen it on a stone.

The witness here said he did not see what the question had to do with the case.

His Honour asked the accused what he was driving at.

He said that he wished to prove that the doctor had made a mistake in his statement and that he had not enquired into the state of his health until a week ago and did not give him any medicine; and also to show that he was only examining him to get evidence against him to bring to Court.

His Honour to witness:—Did you give any medicine to Manning?

Witness: No, none was required.

Captain Winsor, Cross-examined:—On the 16th of May last, I said you could go to the hospital or stay as I liked. You asked for money and I said I would not trust you with money, but would send some to the Consul. I did not provide you with a place to go to on shore. When I returned from Hakodate I refused to allow you to be discharged, but did not offer you any money.

The accused cross-examined the witness at great length, but the amount of evidence elucidated bearing on the case, amounted to very little.

Manning was asked to give his evidence but said he was unable, so

The Court adjourned till Friday, at 10 a.m.

Friday, November 23rd, 1877.

This case was continued to-day, and the second mate of the *Annie W. Weston* was examined, his testimony being corroborative of the statements made by Captain Winsor and the chief officer of the barque in regard to the continual refusal of duty on the part of the accused; and also with regard to his conduct during the time the vessel was labouring in a typhoon. He asserted that the ship was in great danger, the men worn out with fatigue, that there were four feet of water in the hold and gaining on the pumps, and as the crew were short-handed from sickness the men were unable to be relieved at the pumps. It was then that Manning was called upon to aid in the labour of pumping, but refused. It was thought the vessel would not hold up till the morning, and the Captain gave orders for the boats to be got ready so that the ship might be left at a moment's notice. Manning was again called upon to aid, but still refused, and it was with great difficulty that the crew could be restrained from taking him off the poop, and said that if he did not assist he should not have a place in the boats. During all this time Manning was sitting by the booby hatch looking at the men drop one by one from the pumps with exhaustion. The witness had not seen the accused ill-used, and considered that he had been very leniently dealt with.

After having given his evidence in chief, the witness was asked by the accused as to the amount of sail the ship carried when the typhoon overtook her.

To this Captain Winsor objected, alleging that he did not want to be told by a sailor what sail the vessel ought to carry under such circumstances, as he was quite competent to judge.

His Honour said that the accused had desired before to put these questions but had not been permitted, as at that stage of the proceedings they had nothing whatever to do with the case. But as Captain Winsor had sought to prove that he was justified in striking the accused during the storm as the ship was in danger, it was competent for the accused to prove, if he could, that the ship was not in any danger and therefore that there was no cause for the assault.

The witness was then asked several questions relative to the bearings of the ship, amount of sail on in the typhoon, &c., after which,

The Court adjourned till 10 a.m. on Monday.

Monday, November 26th, 1877.

This case was resumed this morning from Friday last and on the sitting of the Court His Honour asked the accused if he desired to give his evidence. He replied that he wished to have the crew of the *Annie W. Weston* as witnesses. His Honour suggested that he had better give his own evidence first.

The accused was then sworn, and went into lengthy details of how he became acquainted with Captain Winsor at a store in Cardiff, what conversation took place between them, and how this resulted in his embarking in the *Annie W. Weston*, which vessel was about to sail on a voyage to Yokohama. At the time of signing the articles, however, a difficulty arose in respect to wages, Manning having been led to expect four pounds a month, while Captain Winsor was only willing to give three pounds, as that was all he was paying the rest of his

men. This sum was ultimately agreed upon and the vessel sailed for Yokohama. On arriving at this stage of his story, Manning detailed the differences which occurred between Captain Winsor and his crew on the arrival here of the *Annie W. Weston*, and which we reported at the time: how all hands had refused work because they were not allowed to see the Consul: how the Captain had said the Consul would not believe what sailors said: how all hands were brought to jail for refusal of duty, and the results of the examination, viz; that General Van Buren advised them all to go on board and turn to and he would hear what complaints they had to make afterwards; that all followed this advice, Manning among them, but two. The next day Manning went to the Captain and told him he and the others wanted to see the Consul again, and Captain Winsor said that if he (Manning) raked up the case again, he would blow his brains out when he went to sea and throw him overboard. Details of the first voyage to Hakodate were given, in which Captain Winsor was accused of illusing and abusing the accused. On the return of the vessel to Yokohama, Manning had liberty on shore and got into a row with some *Tennessee* men, which resulted in his getting a shoulder dislocated. He went on board and applied to be sent to the hospital. This application, after a day or two, was granted so far as letting Manning come on shore, but Captain Winsor refused to give him a letter to the Consul or an order on the hospital, telling him at the same time to get out of his ship as he did not want him there. So he came on shore, and after some difficulty got an order to go to the hospital, and after becoming convalescent was sent by General Van Buren to board at the Temperance Hall. The vessel in the meantime went to Hakodate, returning on the 10th of July, when Manning was asked if he was ready to go on board and said that he was not. In an interview with General Van Buren and Captain Winsor, the former proposed that he, Manning, should pay the hospital account and Captain Winsor the bill for board at the Temperance Hall, which arrangement the latter refused to agree to. The upshot of this was that General Van Buren made an order in accordance with the proposal made by him; and that Manning was to have the balance of wages due him and to turn to. Captain Winsor did not pay this, and before the matter was concluded at the Consulate, a reward was issued for the apprehension of Manning, and he was taken on board by the police, but refused to turn to, and was brought up before Mr. Vice-Consul Denison, and sentenced to ten days' imprisonment. At the expiration of this sentence he was taken on board in irons which were taken off, and another pair, which were too small, were put on and he was taken below and finally placed in the lazaret and kept on bread and water. On a Monday the barque went to sea; the next day one of the men died, and on the following Thursday another of the men died.

At this stage of the proceedings the Court adjourned till 1.30 p.m.

After recess the accused continued his story, stating that Captain Winsor told him that he had cost him \$120; that he was a pretty looking object to have come with Commodore Perry to open the ports, and then struck him over the right eye: the mate got a loaded revolver and threatened to shoot him if he did not go to the pumps: that he (the mate) never felt like shooting

a man before, but felt very like it then. To this Manning replied that he was sick and not able to work. One of the crew then went to him and asked him to turn to, saying that two of the men were dead: that the Captain would pay him his wages, and that the crew would divide their clothes with him. To this appeal Manning returned the answer he had given the chief officer, that he was sick and unable to work. The Captain, chief, and second officers then struck him until he bled badly. Captain Winsor then ordered a boy to get a deck swab and wash his face, which was the first wash he had had since going on board as a prisoner. They afterwards put some sticking plaster on the wounds, then gave him a glass of grog to keep the cold out, and ordered the steward to bring him some bread and water from the cabin. At night he was put in the mate's room. Accused then sought to prove that the ship was not properly managed during the storm; and that the reason the vessel took in so much water was because she was running with her rails under, owing to the cargo having shifted. Continuing his statement of illusage, Manning said that he had been put in the booby-hatch. One of the men took compassion on him and expressed his sorrow at his being in such a condition. His efforts however met with a cold reception, as he was told to mind his own business and if he had any sympathy to keep it "at home" as it must be needed there. He then gave his version of his interviews with Dr. Tripler, charging the doctor with trying to coax him to turn to by holding out the hope that he might get help and run away. He then wound up his story by reference to some letter which had been sent to Capt. Young of the *Tennessee*.

To the Court Manning said that the first time he refused duty was because Captain Winsor had refused to grant him leave to see the Consul. His second refusal was because he had no right to be left behind, when the ship sailed for Hakodate, without a settlement, and because Captain Winsor did not pay him the balance of his wages when ordered to by the Consul-General.

The accused was then subjected to a cross-examination by Captain Winsor, but nothing further was elicited than had been given in the evidence of one or another, after which

The Court adjourned till 10 a.m. tomorrow.

Tuesday, November 27th, 1877.

The trial of the accused was concluded this morning.

On the assembling of the Court His Honour addressed the accused and said that the Court had considered his application for witnesses from the *Annie W. Weston*, and thought that as he only required them to confirm his own evidence, it was unnecessary to call them, for, admitting that his own evidence was correct in every particular, he had shown no justification for refusal of duty.

His Honour then read the following sentence.

John Manning is found guilty of continued wilful disobedience of lawful commands, and continued neglect of duty on board the *Annie W. Weston*, and is sentenced to three months' imprisonment. The charge preferred by Manning against Captain Winsor and his officers is dismissed.

Shipping.

ARRIVALS.

Nov. 17, Jap. str. *Hiroshima Maru*, Burdis, 1,870, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.

Nov. 18, Am. str. *Courier*, Clarke, 450, from Hiogo General, to Walsh, Hall & Co.

Nov. 20, Jap. str. *Awajishima Maru*, Stevens, 660, from Sendai, Rice, to M. B. M. S. S. Co.

Nov. 20, Frch. str. *Tanais*, De la Marcelle, 1,735, Hongkong, Mails and General, despatched by M. M. Co.

Nov. 22, Jap. str. *Tokio Maru*, Swain, 2,119, from Shanghai and ports, Mails and General to M. B. M. S. S. Co.

Nov. 23, Am. str. *City of Tokio*, Maury, 5,050, from San Francisco, Mails and General, to P. M. S. S. Co.

Nov. 23, Brit. str. *Parsee*, Sargant, 950, from London, General, to L. Kniffler & Co.

Nov. 23, Jap. str. *Takachiho-Maru*, Sikemeier, 1,407, from Hakodate, Mails and General, to M. B. M. S. S. Co.

Nov. 24, Jap. str. *Kokonoye-Maru*, Hussey, 1,133, from Kobe, General, to M. B. M. S. S. Co.

Nov. 25, Frch. str. *Tibre*, De Girard, 1,726, from Hongkong, Mails and General, to M. M. Co.

Nov. 27, Brit. brig. *Maid Marion*, Forrest, 298, from Nagasaki, Coals and Iron, to Ed. Fischer & Co.

Nov. 28, H. B. M.'s *Modeste*, Capt. Buller, 14-guns, 60 H. P., 1,913 tons, from Hiogo.

Nov. 28, Am. ship *Alice M. Minott*, Whitmore, 1,100, from Newcastle, N.S.W., to Walsh, Hall & Co., with Coals for the O. & O. Co.

Nov. 28, Brit. str. *Sunda*, Reeves, 1,704, from Hongkong, Mails and General, to P. & O. Co.

Nov. 30, Ger. frigate *Elisabeth*, Capt. Von Wickede, 2,150 tons, 21-guns, from a Cruise.

Dec. 1, Brit. ship *Neuman Hall*, Slater, 1,523, from Cardiff, Coal, to O. & O. Co.

Dec. 2, Jap. str. *Saikio-Maru*, Vroom, 2,145, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.

Dec. 2, Am. schr. *Laura M. Burnam*, Phillips, 600, from Newcastle, N.S.W., Coal, to Carl Rohde.

Dec. 4, Am. str. *China*, Berry, 3,836, from Hongkong, Mails and General, to P. M. S. S. Co.

Dec. 4, H. B. M.'s surveying vessel *Sylvia*, Comd. Aldrich, 877 tons, from a cruise.

Dec. 4, Am. bk. *Ceylon*, Kelly, 750, from New York, Kerosene and General, to C. & J. Trading Co.

Dec. 4, Jap. str. *Wakanoura Maru*, Wynn, 1,342, from Kobe, Mails and General, to M. B. M. S. S. Co.

DEPARTURES.

Nov. 16, Am. schr. *Julia A. Brown*, Nickerson, 450, for Kobe and Hongkong, General, despatched by Ed. Fischer & Co.

Nov. 17, H. B. M.'s surveying vessel *Sylvia*, Comd. Aldrich, 877 tons, for a Cruise.

Nov. 18, Brit. str. *Oceanic*, Parsell, 3,700, for San Francisco, Mails and General, despatched by O. & O. S. S. Co.

Nov. 19, Brit. schr. *Beatrice*, Williams, 65, for South Sea Islands, General, despatched by H. Cook.

Nov. 20, Jap. str. *Chitose-Maru*, for Kobe, General, despatched by M. B. Co.

Nov. 20, Am. str. *Courier*, Clarke, 450, for Hakodate, Kerosene and General, despatched by Walsh, Hall & Co.

Nov. 21, Jap. str. *Hiroshima-Mar*, Burdis, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Nov. 20, Ger. frigate *Elisabeth*, Capt. Von Wickede, 2,150, for Cruise.

Nov. 23, U. S. gun-boat *Monocacy*, Comd. Summer, 1,370 tons, 6-guns, for Shanghai via Kobe.

Per Jap. str. *Saikio Mar* from Shanghai and ports:—Prince Iwakura, Mr. Ishimaru, Rev. R. Palmer, wife and child, Mrs. McArthur and Chinese child, Mr. and Mrs. Dallas, Mrs. Minami, Messrs. J. G. Walsh, A. Milne, A. A. Fisher, F. S. Goodison, S. G. Richmonds, J. Taylor, O. Smith, Robins, Halmhuber and 40 Japanese in cabin; and 1 European, and 261 Japanese in steerage.

Per Am. str. *China* from Hongkong:—2 Japanese. For San Francisco: Captain Uriel Doane and wife.

Per Frch. str. *Volga*, for Hongkong:—His Excellency M. de Struve, Madame de Struve, Messrs. Kingdon, Donsdebbs, Schmidt, Kraetzer and infant, Mr. and Mrs. David, Messrs. Harris, Negre, de Mountour, Roche, Poo-king.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

The market for Cottons has been more lively during the past fortnight. In yarns 16-24 have been in brisk request; and a good business in 28-32 of the higher class spinnings has also been done. Much of this business is however attributable to the great reduction in prices accepted by holders. The chief inquiry has been on "mock" water, which is much preferred by natives to real water twist, commanding, in some instances, prices equal to the latter. Grey shirtings, too, which at the date of our last were beginning to attract some attention, have found purchasers at firmer prices. Woollens are still comparatively inactive, Mousselines being inquired for, but the firmness of holders checking transactions. For Blankets there is a fair demand.

METALS.—A fair business has been done in Nail-rod Iron, only, at prices quoted, for good brands.

KEROSENE.—Urgent needs have forced the sales of 12,500 cases at \$4.12 to \$4.90, the figures insisted on by holders.

The steamer *Parsee*, with general cargo, from London *via* Singapore, and the ship *Ceylon* with kerosine and general merchandize from New York, have arrived. Cargoes of coal have been brought by the British ship *Newman Hall* from Cardiff, and by the American Schooner *Laura A. Burnham* from Newcastle, N. S. W. Transhipped cargo ex steamers *Poonah*, *Euphrate*, and *Cathay* from London, and *Peiho* from Marseilles, is also to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

TEA.—Business continues steady, the demand being principally for low grades, which are apparently nearly cleared off the market, and further arrivals of the same are not likely to be important.

Some small lots of Finest and Choice Teas have found purchasers, but the total amount does not exceed 400 piculs.

Settlements for the interval since the 17th ulto. are about 5,600 piculs, making the total settlements for Yokohama since opening of the season rather over 90,000 piculs.

We make no change in quotations.

SILK.—Since our last mail issue dated 17th ult., the demand for Silk has been active and continuous, mainly for the continental markets, settlements being estimated at 2,800 bales.

Sellers have met buyers pretty freely, and the advance obtained has been but slight. Considerable annoyance, however, begins to be experienced by the inferior quality of the bulk delivered when compared with the muster bales, which to some extent shows that the better classes of Silks are beginning to be scarce.

Hanks have been most largely dealt in, but the various descriptions of Oshius and Filatures have been rather extensively purchased.

Arrivals have been free, but not equal to sales, the unsold stock on the market is about 3,200 bales.

The French mail yesterday took 1,322 bales, making the export to date as follows:—

	1877/8.	1876/7.
England.....	bales 6,613	bales 8,099
France.....	" 5,351	" 8,012
Italy.....	" 947	" 690
United States.....	" 440	" 25
Total.....	bales 13,351	bales 16,826

BIRTH.

On the 12th inst., at No. 234, Bluff, the wife of
Mr. JAMES R. MORSE, of a son.

MARRIAGE.

On the 11th inst., at the residence of the Rev.
S. B. DAWSON, Yokohama, ALFRED A. FISHER, Esq.,
of Shanghai, to Miss SARAH A. TAYLOR, of San
Francisco.

DEATHS.

December the 9th at No. 73, Yokohama, in the
40th year of his age, TEMPLE WILLCOX, son of the
late Captain Robert Willcox, R.N.

On the 18th inst., at Yokohama Mr. FRANCOIS
PERREGAUX, aged 43 years.

Summary.

OUR last MAIL SUMMARY was dated the
5th instant for despatch by the P. M.
Steamer *China* which sailed for San Fran-
cisco on the 7th. Since then we have receiv-
ed the following mails:—

Per M. M. Tanais, Marseilles, 21 Oct. arrd. 9 Dec.
" O. & O. Gaelic, S. Fr'sco, 17 Nov. " 11 Dec.
" P. & O. Bombay, S'hampton, 26 Oct. " 14 Dec.

And despatched the following:—

Per P. & O. Sunda, for Southampton11 Dec.
" M. M. Tibre, for Marseilles18 Dec.

Latest telegraphic advice, from London are
to the 21st instant.

A GREAT outcry has been raised on the sub-
ject of the export of Japanese coal in steam-
ers; and an attempt has been made to lay
the whole responsibility of what is recogniz-
ed as an abuse upon H. B. M. Minister. The
subject is considered at some length in an
article and paragraphs in the following pages.
As the Japanese say that they intend in the
proposed revision of the Customs' tariff to
abolish export duties altogether in view of
the projected increase in the import dues,
it will matter little to the revenue how coal
or any other native product is exported.

THE talked of alterations in the import
tariff appear not yet to have assumed any
definite shape. They will be considered and
ultimately decided on in connection with the
whole subject of treaty revision. There seems
to be no difference of opinion now on this
question. Natives and foreigners are agreed
that the time has more than arrived for the
settlement of the question, which would cer-
tainly have been set at rest before this, had
the Japanese themselves shown any well
directed anxiety to have it entertained. The
fact is that, talking vaguely about rights
withheld, and so forth, they have never
yet made any definite move towards the
object of their wishes. They have cherish-
ed the longing for the abolition of ex-
territoriality, and probably fondly hoped
that the recent improvements they have
introduced into their civil and criminal
jurisprudence would be taken by foreigners
as sufficient guarantee for the equitable ad-
ministration of justice and a reason for sub-
mitting to native jurisdiction. The Govern-
ment, however, now evidently sees that this
concession cannot be granted yet; and that
in the treaties, however revised, the exter-
ritoriality clause must remain. So, now,
they content themselves with insisting that
the nation has at least a right to the control
of its own revenue, a right which no one
is disposed to deny. They have been badly
advised and are unquestionably in favour
of a protective tariff, which if enforced can
but injure the nascent trade of the country.
It seems probable however, that the matter
will be finally settled in Europe; and there
is yet some ground for hope that the
danger of commercial suicide may yet be
averted by wiser counsels than have so far
prevailed.

A CHINESE Embassy, consisting of two
Ministers and a large suite of subordinate
officials has arrived in Japan. The Legation,
as far as is known at present, will be located
in Tokio. Consulates are to be established
and maintained in Yokohama and other
ports. Chinese residents express great satis-
faction at the change of jurisdiction which
is consequent upon the arrival of represen-
tatives of their Government.

A NEW French Catholic Church has been
built and consecrated in Tokio.

THE Hongkong papers state that the first
and third engineers of the steamer *Yesso* will
be tried on a charge of manslaughter, arising
out of the late lamentable explosion on board
that vessel, which resulted in the death, at
latest advices, of seventy-five persons.

RENEWED press prosecutions are mentioned
in the native papers. Several Editors have
been fined and imprisoned.

MR. F. G. Machado, the British Post-
master, is promoted to the office in Shanghai.
Some one of the Hongkong Post Office staff
will probably replace him in Yokohama, until
such time as the conditions of the complete
transfer of control of postal affairs to the
Imperial Japanese Post Office have been
decided upon. Nothing appears to have been
settled yet. Probably when Mr. S. M.
Bryan, the superintendent of Foreign Mails,
returns from Europe, arrangements for the
transfer may be concluded; and the British
and French Post Offices cease to be. The
Japanese Postal service is now admirably
complete; and, as the country has entered
the Postal Union from the 1st of June last,
there seems no reason for extended delay in
this matter.

THE Society for the Promotion of Chari-
table Objects has now been fairly launched.
It is composed of a number of native gen-
tlemen, whose object in founding it may be
gleaned from the name they have chosen.
While prepared to succour humanity, suf-
fering from any kind of calamity, they pro-
pose to devote their energies and the funds
at their disposal more especially to the relief
of the destitute blind. These they propose
to teach various handicrafts, and so put
them in the way of earning a living. The
prospectus of the Society is a very remark-
able document, and will be read with interest
by many of those abroad who are interested
in all works of benevolence. We reprint it
at length in these pages.

POLITICALLY all is very quiet throughout
the Empire. The native journals continue
from time to time to advocate administrative
reforms, and ask for representative institu-
tions. The *Genro-in*, or Deliberative Assem-
bly, whose sessions were suspended during
the Southern troubles, has been sitting for
the past few weeks. Its deliberations for
the season came to an end on the 20th
instant. H. M. the Mikado has frequently
visited this Council of State during its
session.

A NEW Racing Association, name as yet
undecided, is to be formed, with the result
that the Y. R. Club and Y. R. Association
will be dissolved. This should naturally
bring about what has been long desired, the
fusion into one of the two sections of the
Racing Community.

H. B. M. MINISTER, AND COAL FOR "SHIP'S USE."

SOME people seem to imagine, and they would fain be teachers of public morality too, that while there is reason in the roasting of eggs there need be none in the roasting of Ministers. Certain reputations may be safely attacked:—those of men placed so high that their dignity hinders them from taking notice of assaults however libellous and venomous, and those of men whose weakness or poverty precludes them from any possibility of retort or of obtaining legal redress. To assail such persons is perfectly dangerless. Journalistic attacks upon them afford a cheap mode for a writer to attain a questionable notoriety for smartness, impartiality, and absence of respect for persons. Many objects of this species of infliction perhaps rather like being singled out for vituperation. They think that, if as held by old Athenian law he was infamous who had no friend, so he who has no enemy must be a man of very small account. And they are right in this, at the same time as they are happy in their imperturbation and ability to treat the insults of Grub Street with the same kind of dignified contempt as is evinced by the magnanimous mastiff for the cowardly cur. There are others, however, not so equanimous. High position and the frequency of attack do not render them callous. Each succeeding application of the scribbler's jagged curry-comb produces some fresh abrasion of the moral cuticle, some new irritation the more troublesome that the cause of it is hard to reach. A foot-winged and acute musquito is not as dangerous as a rogue elephant or a man-eating tiger; but the agony of a sensitive organization under its prolonged swoops and painful buzzing may reach the sublimity of torture. We will neither inquire, nor hazard the conjecture, whether Her Majesty's representative here has, by long experience, attained a callosity which renders him morally impervious to such an imputation upon his character, as a public servant and private gentleman, as is contained in the last very vicious attack directed against the citadel of his honour. We will, however, assume that it will pass unnoticed by him; and, that being the case, we will state that it is totally unfounded, unjustified, and unjustifiable. No doubt there have occurred, under very trying circumstances, in Sir HARRY PARKES' diplomatic intercourse with Japanese officials, instances in which he has lost his temper and done and said things which he has been himself the first to regret. He may have been open more than once to a charge of high-handedness, and perhaps unnecessary arrogance in his dealings with members of both the old and new schools of native statesmanship. But, at the same time, it would be both folly and ingratitude to ignore the immense services which he has rendered to foreigners, not merely of his own nation but of every other country represented here, by his insistence upon their rights when these have been imperilled. It is equally well known, and admitted by the Japanese themselves, that his wise counsels have often been of great aid to those in authority. It is as absurd as unjust to reproach him that he has been what he was sent to Japan to be, and what it is not too much to say that many other foreign ministers have not been, a power in the land, a protector of strangers, and an active agent in the extension of their intercourse with the natives, at the same

time as a guide to the latter in the paths of that Western civilization in which they were so anxious to tread.

The gist of the accusation most recently brought against the British Minister, and which is made the occasion for a comparison between him and Mr. O. B. BRADFORD, is that "he issued without sanction from the Japanese Government his notorious proclamation of December, 1869, declaring that 'all native coal exported in foreign steamers shall be held to be shipped for ship's use and shall therefore be passed by the Custom House free of duty.'" The ingenuous and generous critic says:—"We do not see in what particular he is morally less guilty than the disgraced vice-Consul General in Shanghai. The supposititious action in one instance was for the benefit of the United States Minister in China. In the other it was for the benefit of foreign merchants in Japan. In the latter case this Government has been deprived of an immense amount of revenue," and so on, ringing fresh changes on the old peal of charges of wrong and robbery. In plain fact the notification alluded to, itself rebuts the monstrous charge, if any refutation is needed. That document runs thus.

"The undersigned hereby makes known for the general information of H. B. M.'s subjects, that, by an arrangement concluded between the Representatives of the Treaty Powers, and the Japanese Government, all native coal exported in foreign steamers shall be held to be shipped for ship's use and shall therefore be passed by the Custom House free of duty; while all native coal exported in foreign sailing vessels shall pay the export duty of the tariff attached to the convention of Yedo, 1866."

It will be seen by this that the crime of which Sir HARRY PARKES is accused is neither more nor less than forgery of public documents. Did he think it worth while he could bring the disseminator of such defamation as this to a strict account; but he will, most probably, pass it by with the silence and contempt with which he has treated other but perhaps less violent onslaughts of the same assailant. Is it reasonable to suppose that the British Minister would, without authority, have spoken as he does here in the name of the representatives of the Treaty Powers; or that doing so, his notification would not have been promptly repudiated by his confrères of the Diplomatic Body?

Glancing, however, for one moment at the question mooted, we find no reason to deny that this regulation bears the appearance of injustice, and that the practice which it authorizes is liable to abuse. At the same time the Japanese have probably themselves to thank for it, originating, as there is every ground to suppose it did, in native action. Such an "arrangement" as that indicated would not have been made, and such a notification as the one above quoted would not have been issued without good reason; and that reason is not far to seek. It is not mere wild conjecture to suppose that the Japanese, with that peddling and meddling policy which is so dear—in more than one sense—to them, endeavoured to affix some absurd limit to the amount of coal which should be shipped "for ship's use." A steamer going right through from Yokohama to Singapore would require more coal than if she were merely going to Nagasaki. This is so evident as scarcely to need propounding; but that the Japanese should not realize the fact is quite conceivable; and their obtuseness, whether real or wilful, most probably caused the complaints which resulted in the "arrangement" and notification.

Justice can be done without pulling down the firmament. Whatever real grievances

Japan may have—and this coal business though not very serious may still be one—in her relations with foreigners, will be removed when the treaties are revised; and it is not to be imagined that any obstacle will be opposed by the British or any other Treaty Government to their revision. Meanwhile the day of re-adjustment of the foreign relations of this land will not be one jot advanced by such mischievous writing as we have above commented on, any more than the lucubrations will tend to the advancement of the country, or the maintenance of that friendliness which more and more characterizes the intercourse between natives and foreigners. It is but justice to add that the aim of the writer appears to be the disruption rather than the strengthening of what bonds of amity already exist.

It is certain that a great deal of abuse has arisen out of the notification issued by the British Minister in December, 1869, announcing that coal shipped on board steamers should be held to be for ship's use. The matter requires re-adjustment; but, as we have pointed out above, a settlement of the question will not be advanced by any blatant declamation, or accusations of fraud levelled at Her Majesty's representative. As we have already quoted Sir HARRY PARKES' notification, we now reproduce an official document of earlier date, namely a circular memorandum addressed by the Japanese Foreign Office, on the 30th October, 1869, to the representatives of the Treaty Powers.

YOUR EXCELLENCY:—We have the honour to communicate to Your Excellency that Japanese coal is one of the articles subject in the tariff to a specific duty, but we are of the opinion that no duty should be levied on coal that is not put on board of vessels for purposes of trading in it; it is our intention, therefore, to allow in future Japanese coal for steamers' use to be shipped free of duty. Nevertheless when coal is shipped in sailing vessels, the specific export duty will be levied as heretofore, even when in small quantities for the vessels' use.

The above modification will be considered as binding by this communication, if Your Excellency sees no objection to it, although it would be better to have the matter settled by an alteration of the tariff itself.

With respect and consideration.

(Signed) SAWA NOBUYOSHI,
Minister for Foreign Affairs.

(") TERASHIMA MUNENORI,
Asst. Minister for Foreign Affairs.

Addressed to the Representatives of the Treaty Powers in Japan.

Note.—Each of the Foreign Representatives sent an answer stating that he had no objection to the proposed alteration.

The December notification was not by any means a logical sequence of the October memorandum. "All native coal exported in foreign steamers shall be held to be for ship's use, and shall therefore be passed by the Custom House free of duty," is a much more sweeping proviso than that contained in the phrase "no duty should be levied on coal that is not put on board of vessels for purposes of trading in it: it is our intention therefore to allow in future Japanese coal for steamers' use to be shipped free of duty." Any correspondence between the Foreign Office and the Ministers that may have intervened between the two dates does not appear to have been made public. That it existed there can be no reasonable doubt. We repeat that there can be no desire to continue a practice which is evidently unjust; and venture to add that it would have been discontinued ere now had the abuse been made the subject of official complaint.

REFERRING to the above paragraph, and the reproduction therein of the translation of a circular memorandum addressed by the Japanese Foreign Office, on the 30th October, 1869, to the representatives of the Treaty Powers, a document which preceded by two months Sir Harry PARKES' notification of December, in that year, a correspondent obligingly draws our attention to two inaccuracies which occur in the translation. We remark, parenthetically, that we took this translation from the *quasi* official compilation of public state papers published in Tokio.

One error, according to our correspondent, is the insertion of the word "use" in the phrase "for steamers' use." This word is not found in the original; and the true rendering of the passage in which it occurs we give below, reproducing simultaneously, for purposes of comparison, the current translation.

CORRECT TRANSLATION. CURRENT TRANSLATION.

* * * In the case of steamers only in future duty will not be charged low in future Japanese (on coal); whereas that coal for steamers' use to which is taken on board be shipped free of duty. sailing vessels, even in Nevertheless, when coal small quantities, for is shipped in sailing vessel's use, shall pay ex- sels, the specific export duty will be levied as heretofore, even when in small quantities for the vessels' use.

The second error is the omission of any translation of the word *shibaraku* after the word "binding" in the last sentence, which should, accordingly, read thus:—

The above modification will be considered as temporarily binding by this communication, if Your Excellency sees no objection to it, although it would be better to have the matter settled by an alteration of the tariff itself.

Shibaraku means "for a short time," "for the present," "temporarily;" and its insertion in the above paragraph shows that the Japanese Government reserved to themselves the right of re-opening the question at some future time. If circumstances should render it desirable. If they have not done so it is only fair to infer that they have not, so far, seen occasion to object to the present practice.

ONE parting allusion to the circular memorandum. The howl which has been raised in a certain quarter has for its excuse that translation which is received as *quasi* official, and two errors in which we have above indicated. Our obliging correspondent informs us of another and vital mistake in the English rendering. The date is wrong. It should be the 30th November, and not the 30th October, 1869.

"MONEY IS THE HANDMAID OF MERCY, AND HEAVEN THE GUARDIAN OF VIRTUOUS ASPIRATIONS."

FIFTEEN Japanese gentlemen, taking the proverb we have quoted as a motto for their work, have formed themselves into a society for the promotion of charitable objects; and we have very great pleasure in doing all in our power to assist the impulses of wide and disinterested benevolence, when as in this instance that noble quality takes a definite form; and by means of systematic organization is intended to promote the welfare and improvement of those who are afflicted with the direst calamity, except one—insanity—which can rest upon human beings.

In this great country, with its vast population, the outcry of the poor and afflicted must be constantly heard and felt by those

who live amongst them; and the want of proper means of assistance and relief must be ever present to the minds of those men who feel that the world is not all for them.

Animated by principles which are beyond question, the fifteen Japanese gentlemen we have alluded to, have formed themselves into a society to administer the alms of the benevolent in a manner calculated to do the greatest good; and for this purpose they desire to found an institution for the care, education, and maintenance of the indigent blind. The prospectus of this society, which we print below, concludes with an asseveration worthy of the patriarchs of old. If it is a translation the original must be very beautiful, for in the English language its earnestness and sincerity cannot be mistaken, nor its motives be misunderstood. The prospectus, describing briefly the motive power which actuated the foundation of the Society, continues, "As the halt and the maimed are a burden and a care to the whole community, so the education that makes them independent, confers a universal benefit." Naturally the first objects that would engage the charity of the benevolent, are those to whom the light of Heaven is for ever denied; and of whom so large a number form a charge upon this community; a charge which as men we must not attempt to shirk or evade. Consequently the first movement of the Society is the foundation of an

ASYLUM FOR THE BLIND

and we can do no better, than appeal to the charitable in the words of the fathers of the Society. "Fellow-philanthropists! we pray you give us your confidence, and entrust to us any money you propose to devote to charity;" for, "having put our hands to this work we have solemnly sworn that we will never abandon it whatever calamity overtake us. * * * * What fear then that we, lightly misapplying your money, should frustrate the purposes of charity and paralyze the agent of benevolence."

This prospectus deserves more than a mere cursory consideration or perusal. It is in every respect a very remarkable document, indicating, in a high degree, the progress of that spirit of independent civilization which seeks to provide for the "halt and the maimed," with a view to prevent their becoming a burden upon individuals, or upon the State. The munificent charities of the West, and particularly of England, would fail in the chief objects of the promoters, were it not for the system which controls, and the judicious economy which checks, the expenditure of the contributions of the wealthy: consequently, while recognizing without question the necessity of giving out of our abundance the wherewithal to assist those who have been less favoured, there is always anxiety on the part of the giver as to the method in which his assistance can best be bestowed so as to serve some useful purpose, and secure some beneficial end. Much of this anxiety will be removed by the formation of the "Society for the Promotion of Charitable Objects," for the names of the gentlemen who have taken up the matter, are a sufficient guarantee that the funds will be applied in the manner best calculated to secure the greatest good. This is the first time that foreigners residing in this country have had an opportunity of contributing to a public charitable institution; and we feel sure that the opportunity will not be permitted to pass unnoticed, particularly at this season of the year when all mens' hearts are more or less open, and

when a little timely assistance, spontaneously given, might do more to cement our friendship with Japan and its people, than all the treaties that were ever made, or ever can be made by the greatest statesmen in all the world.

THE SOCIETY FOR THE PROMOTION OF CHARITABLE OBJECTS.*

IN a recent address at Bradford, the Marquis of SALISBURY is reported to have said:—"The duty on the part of those who are well off to assist the poor in the time of illness has been recognized from the earliest periods of Christianity." The Revd. A. L. GREEN, a Jew, writes to the *Times* to suggest that the gifted speaker presumably intended to say "the earliest periods of humanity," and adds that the history of humanity does not date *ab initio* from the earliest periods of Christianity, nor awaited such recognition, but from the earliest periods of humanity, as lovingly taught by that holy religion on the morality of which the ethical canon of Christianity is founded—Judaism. The very remarkable PROSPECTUS we were fortunate enough to be able to present to our readers a day or two ago, and which we make no apology for referring to again so soon, curiously supports the comment of the Marquis of SALISBURY's critic, and proves that humanity, or as BACON prefers to call it, *philanthropia*, may and does exist wholly independent of Christianity. BACON indeed uses the word *philanthropy* as synonymous with goodness, and says of it that "of all virtues and dignities of the mind it is the greatest, being the character of the DEITY; and without it man is a busy, mischievous, wretched thing, no better than a kind of vermin. Goodness answers to the theological virtue charity, and admits of no excess but error. The desire of power in excess caused the angels to fall; the desire of knowledge in excess caused man to fall; but in charity there is no excess, neither can angel or man come in danger by it." And we may suppose a similar thought to have been in the mind of CONFUCIUS when he said that "perfect virtue consisted in the practice of five things, gravity, generosity of soul, sincerity, earnestness, and kindness." If goodness is to be found apart from Christianity, a hypothesis which some will deny, it may be discovered, among other authors, in the secular writings of BACON, in the books of CONFUCIUS, and in the prospectus of the "Society for the Promotion of Charitable Objects"; but it is not alone this property, common to each, that has given rise to a train of thought which has brought to our recollection the writings of BACON. Readers of the prospectus may possibly be reminded of the sentiments, the terse style, the wide sympathy, and the deep toleration of the great Elizabethan writer and philosopher, while the gravity, generosity, sincerity, earnestness, and kindness, with which it is penned, mark its authors as students of the writings of CONFUCIUS. Take, for instance, the opening sentence of the manifesto,—"All men are endowed with the disposition to do good,"—and compare it with BACON's saying that "The inclination to goodness is imprinted deeply in the nature of man."

We have already in a previous notice drawn attention to the composition and object of the Society. Among the Com-

* Raku-zen-k'ai.

mittee are to be found the names of some of the leading philanthropists, statesmen, and thinkers of the day, the real workers of the country, to whose efforts in the past is to be attributed much of the intellectual, political, and moral progress that Japan has made during the last ten years, and whose present and future labours will exercise a marked influence upon the mind of the rising generation of Japanese. It is the first privately organized charitable institution that we know of in this country; and even were its originators less eminent, enthusiastic, and earnest-minded than they are, the work they have set before themselves would still be deserving of every encouragement, and will, we hope, attract the active sympathy and support of true and good men of all nationalities.

It would be difficult to find a fitter object for the first attention of the Society than that unfortunately large class in Japan who are deprived of the sense of sight, whose only occupations, so far as we know, have hitherto been those of shampooing, and teaching the *shamisen*. Grim irony of fate! that their sense of touch, unduly developed at the expense of sight, should be devoted to soothing the pain and administering to the enjoyment of others; while the cheap virtue of compassion toward has been blunted in their fellow-beings from the very commonness of the spectacle of sightlessness. What a world is now to be opened to these unfortunates through the instrumentality of this Society. Sight itself, it is true, cannot be given to them; but they may in some measure be taught to feel what others perceive and know through the medium of sight; and thus an imperfect but entirely new sense may be developed for them. In the words of the manifesto, "The cripple is indeed physically imperfect, but his moral endowments are none the less complete, and if every ethical code, whether ancient or modern, teaches us that it is the duty of a humane Government, by educating these faculties, to gain admission for the afflicted to the fraternity of his fellow-men, how much more does such a principle accord with the dictates of that Providence, whose unerring hand, meting out blessing for the just and bale for the evil-doer, has written beyond the reach of all doubt this promise, "Virtue toiling in the darkness shall be rewarded in the noon-day." The work is a truly noble and good work, and worthy of all encouragement. If each of the thousand or fifteen hundred foreigners in Yokohama and Yedo would take the trouble to give but a dollar annually, it would be an appreciable addition to the funds of the Society. And we venture to suggest to the Treasurer that it would be worth while to have suitably inscribed boxes placed in the railway stations, post-offices, theatres, temples, on board men-of-war and merchant ships, and at the numerous places of public resort and amusement, in and around the capital, wherein the charitably disposed might conveniently deposit their contributions without the trouble of writing and registering a letter. We ourselves shall be glad at any time to receive and forward subscriptions to the Society's funds, undertaking that the donor shall be duly furnished with a proper receipt.

We may appropriately conclude this notice by quoting that stirring appeal to the heart of the public of one who, though a monotheist, was one of the gentlest, most benevolent, and best of men:—

"Reader * * * Shut not thy purse-strings always against painted distress. Act a charity sometimes. When a poor creature

(outwardly and visibly such) comes before thee, do not stay to inquire whether the 'seven small children,' in whose name he implores thy assistance, have a veritable existence. Rake not into the bowels of unwelcome truth to save a half-penny. It is good to believe him. If he be not all that he pretendeth, give, and under a personate father of a family, think, (if thou pleasest) that thou hast relieved an indigent bachelor. When they come with their counterfeit looks, and mumping tones, think them players. You pay your money to see a comedian feign these things, which, concerning these poor people, thou canst not certainly tell whether they are feigned or not." And if CHARLES LAMB could find such excellent reasons for relieving those whose distress may have been brought about by their own fault, or even feigned, how much encouragement may we not find to add our mite towards the relief of those whose misfortune it is to have been born blind?

A MUNICIPALITY.

IT is doubtful how far the desirability extends of raking up a subject which, though of vital importance, has no abiding interest in the minds of men whom it most concern. Of one hundred foreign residents in Yokohama ninety-nine would probably express an opinion in favour of the municipal affairs of their settlement being under the control of foreigners. Such almost perfect unanimity prevailing on this point, it must clearly be owing to indolence or apathy on the part of those most interested, that no Municipal Council is to be found in Yokohama, where even the virtual abolition of the office of Municipal Director has been tolerated with little more than a few complaints. Thus, the question arises, what good end is served by the press in attempting to make those who are blind to, or careless of, their own welfare, shake off their sloth, and bestir themselves towards the attainment of what should be an object of their wishes? At the risk, however, of being adjudged tedious, and of addressing a public which may refuse to be charmed into interest, we will once more revert to the subject of a municipality for the foreign settlement.

When Mr. BENSON received his three months' notice to quit the office which he had held for ten years, he was treated strictly in accordance with the sense of the agreement on which the post of Municipal Director was created. But it is by no means so certain that with his dismissal the post itself should have been abolished. In fact there is ample reason for making the contrary supposition. The Municipal Directorate was established in the place of the Municipality, which latter was abolished, not because it was not wanted, but because it did not work so well as it should have done. It is not necessary to say much of the old Council, which, being defunct, is entitled to the benefit of that moral law which decrees that nothing but good shall be said of the dead. Probably, had its members, collectively and individually, been endowed with a little more energy, the office which replaced it would never have been called into being, and consequently never have been so abruptly and peremptorily abolished.

In an article in the *Japan Gazette* of the 30th May last the subject of Mr. BENSON's dismissal was considered at some length. We there showed that the only inference to be drawn from the official documents which

were prepared in connection with the formation of the post, was that the Directorship should be a permanent office, and that, in the event of the local Government availing themselves of the clause which contemplated the dismissal of the first incumbent, another officer should be elected by the suffrages of the foreign residents to replace him. At that time there was much talk of the continuance of the office, and several candidates were ready to offer themselves for election; but the whole business ended where it began. *Vox et præterea nihil*. We asked, further, why the ministers could not have foreseen the contingency which arose, and have provided for it? and pointed out that as, through their negligence, what was then a question—the continuance or abolition of the post—was allowed to become moot at all, it was at least their duty to see that the interests of their nationals did not fall altogether to the ground. We then wrote what we can hardly do better now than repeat. "Yokohama has no Municipal Council; it is probably the most neglected, worst policed town to be found in any part of the (civilized) world: its streets are unwatered in the heats and dusts of summer, unlighted by night, and allowed in places to fall into a hideous and dangerous state of disrepair: burglars can enter its godowns pretty much when they like, and take away almost what they please: jinrikisha coolies are allowed to mass their vehicles in whatever locality suits them, to the hindrance of other traffic, and to importune, annoy, and abuse pedestrians in whatever terms they see fit to employ." There is now little to add to this recapitulation of grievances. They exist still, and will exist so long as foreigners choose to put up with them. An attempt to pass down Main Street after recent heavy rains would have convinced a stranger that some municipal improvement was something more than necessary.

Now, if it is accepted as inevitable that Yokohama is to remain without a Municipal Director, and that the Governor of Kanagawa and his foreign secretary are between them to discharge the duties of that office, foreigners may at least insist that they shall have some return for the very heavy ground-rent that they are compelled to pay into municipal coffers. They have a right to claim the efficient police protection of their property and persons, neither of which recent robberies would prove to be safe. We have an opinion also that the lighting of the streets of the Settlement is not a concession to be made to but a right which might be demanded by them. If they are content to waive all this and more, and to put up with any beggarly provision that may be made for them, well and good, and it is hardly our province or that of any other foreign journal to advocate, with "damnable iteration," the granting of rights withheld; but to which those to whom they are due attach no practical value. For the present, then, we will be content with this indication of a grievous state of municipal deficiency and abuse; and will conclude this chapter of not unreasonable grumbling with a suggestion which may be of some utility. Let the Kencho have full control, as now, of all municipal funds, both to receive and disburse them; but let the Governor associate with himself, as a municipal body, four or five foreign gentlemen of standing and influence. These would not refuse to act, if called upon, and an invitation to the representatives of the foreign settlers to take some part in municipal affairs would come well from the Governor. It would be hearti-

ly responded to; and the co-operation of natives and foreigners would produce good results, not only in municipal improvements, but in happier mutual relations. It would, perhaps, be offensive to Japanese vanity to suggest that native officials might learn something through the interchange of ideas which would be one consequence of such an amalgamation as is here proposed.

AMATEUR DRAMATIC CLUB.

Our local amateurs made their first appearance this season on the boards of the Gaiety Theatre on the evening of the 6th instant. They had selected two pieces; the first "The Liar," by Samuel Foote, a comedy in two acts; and the second a farce by T. J. Williams, entitled "The Lion Slayer." "The Liar" is an ingeniously conceived and cleverly written little piece, sparkling with fun and giving an opportunity for excellent acting. The central figure is a young gentleman from Oxford, naturally bright and good humored, but afflicted with a morbid love of romancing, which he has developed into a practice of most inveterate and apparently purposeless lying. He is attended by a valet whom, aided by the latter's proficiency in the French language, he makes responsible for some of his perversions, or, as he calls them, his "poetical prose," and whom he passes off as a French Marquis in a brilliantly invented account of a supposititious marriage. The interest of the play is well sustained through two sprightly acts, until the curtain falls on the convicted and discomfited, but still unabashed, liar, rejected as a lover, by a bright and amiable girl, who becomes the wife of his friend: discarded as unworthy to be associated with by that friend himself: refused as a husband by a rich old maid whom he had unwittingly beguiled into the belief that he was enamoured of her: disowned by the father whom he had dishonoured and deceived; and "discharged as a master" by the servant who found the part responsibility of his employer's falsehoods a burden too great for him to bear. The farce of "The Lion Slayer" is of itself a fair one; but it requires a constantly sustained *verve* on the part of the principal character to carry it off successfully. The cast is a very hard one for a trained actor, and of course harder by far for any amateur, who is almost certain to fall into one of the errors of extremes, either by under-acting or overdoing his part. The piece was originally written for Buckstone, and first played in the Haymarket Theatre as long ago as the end of 1860. It was then very successful; but its success was owing, no doubt, in great part to the production being well timed. At the present day it loses much of its point. To many of the audience in the Gaiety Theatre, the name of Gordon Cumming is little more than a memory. To many it was, probably, totally unknown; and to them the farce could scarcely have conveyed any meaning. Twenty years ago the name of the lion-slayer of South Africa was a household word in England; and some persons now in the Far East will remember the exhibition of his trophies in Piccadilly or Coventry Street, we forget which. It is on his name and reputation that the plot, if anything so simple as the outline of this little farce can be so called, is hung. A young Cockney dealer in furs, who rejoices in the name of Gulliver Cumming, hearing of some lion-skins for sale in the neighbourhood of a certain village, repairs thither with a view to trade, and in the register of the inn signs his name "G. Cumming." Hence a not unnatural misconception. The

skin-buyer is taken for the hunter, whose supposed arrival is singularly opportune, happening as it does at a time when a lion has escaped from a travelling menagerie, and is lying *perdu* in an adjoining wood. The fame of the visitor is spread in the village and vicinity, and he is waited upon by the local Sporting Club, whose invitation to go and slay the prowling intruder is so conveyed, as to be mistaken by him for one to go and look at the skins which were the object of his journey. At the head of the members of the Sporting Club, and armed with a rifle they have presented to him, he commences a triumphant march, which is turned into a hasty and ignominious flight at the first sight of the king of the forest. The hunter has no idea that the skin he went to find was still on the back of its first possessor. Interwoven with the piece is, of course, the inevitable love adventure, whose episodes are rendered amusing by the heroics of the uncle and guardian of the fair. This character is well, if a little over, drawn. The haberdasher and volunteer officer is an interesting personage.

Mr. Hay's peculiar and often useful vein was turned to good account, in the first piece, in his portrayal of old Wilding, the father of "the liar," and this latter character, in turn, was well sustained by Mr. Bayne, who maintains his well-earned reputation as an amateur actor. Mr. Pearson was, as usual, perfect in his part, and acted it throughout in that finished and polished manner which is so characteristic of his public performances, whether dramatic or musical. Taking into just consideration the immense difficulty which exists in men successfully rendering women's parts, and the really great sacrifice—a hirsute one—made by the "rich old maid," the two ladies of this piece merit sincere compliments for their successful efforts. Miss Ella Herbert's absence was certainly felt; but Mr. Brown, with the advantage of a good feminine voice, and with very natural acting, sustained with much credit the not too easy part of Miss Grantham. Of the two minor male characters little need be said. Mr. Townley generally manages to throw life into his *rôles* . A little more *entrain* would not be amiss on the part of Mr. Bernard. A walking gentleman may "fret" as well as "strut," and he is not condemned to a mere monotony of vocal utterance. On the whole the second act of "The Liar" was better performed than the first. The whole piece would bear repetition, and would be better received on its second than on its first presentation.

The same remark applies to the farce; but a change of cast would probably be desirable. The gentleman who interpreted the character of Mr. Gulliver Cumming was perfect in his words, and *looked* his part to admiration. He is doubtless able to represent higher roles; but his part in this trifle certainly needs more life and energy than he put into it. A favourite low comedian, who did not appear last evening on the stage, should have been cast for "The Lion Slayer." Mr. Brewer was excellent; but hardly realized his old standard of excellence as "The Governor of Tilbury Fort." Once more we have occasion to thank the ladies. Mr. Vivanti looked as fresh and fair as ever: in fact the illusion he created was almost perfect. Mr. Brower's make up and acting deserve commendation. Squire Bantain and Bob were well interpreted by their exponents; while the rustic Sporting Club were inimitable, and one of the members was disguised beyond recognition.

The pleasure of the evening's entertainment was greatly enhanced by the presence of the Amateur Band of the German Corvette

Elisabeth, whose services were kindly lent by Captain von Wickede and the officers. The bandsmen are all sailors on board, selected for their musical talent, and conducted by one of themselves. Manly fellows they looked in their man-of-war rig, and they played like real musicians; but our German cousins are all born votaries of Apollo.

The Gaiety Theatre was filled to overflowing, and the treasury must have had a bumper chest. On this and on their successful efforts to amuse a somewhat particular audience we cordially congratulate the gentlemen of the Amateur Dramatic Club.

A FREE SPIRIT A SOURCE OF NATIONAL PROSPERITY.

(From the (Kochi) *Kainan Shinshi*.)

A slavish person is easy to manage, because he does not esteem himself at all, but an independent spirited person is difficult to govern, because he has a strong love for himself. Therefore it will be seen that the existence of the latter sort of people in a nation establishes the fact that there is a free spirit, while the existence of the former proves just the reverse. Truly, free spirited people are a source of national prosperity, although they may make mischief sometimes. Imagine a high mettled horse that runs a great distance, though it sometimes may wound its hoof: the ocean that affords communication between distant lands, though there is the fear of vessels being wrecked: a poisonous drug, good for the cure of a particular disease, though it kills if wrongly applied. So a free spirited people are the very support of a nation, though they may be difficult to govern.

Suppose a number of extremely meek and obedient persons, having no spirit to return a single word whatever insult they may receive. They will live quite contentedly under the most unjust laws of a despotic government. Can such be called a good people? We think not, except by a bad government and its selfish officials, but they never can be a truly great people, fit to promote their national welfare. Who are a good people, then? Well they are those whose steadfast and determined minds will never shrink from any perils and dangers that duty and honor call upon them to brave. Their loyalty will willingly submit to a just government, and their patriotism will pledge even their lives against despotism and oppression, whatever they may suffer by it. Such are, we should say, a truly great people—such in fact as are free spirited.

Look through the pages of history. What sort of men have achieved the most glorious deeds, saving their nations from utter disgrace, and delivering their fellow creatures out of misery? You will find To who banished Ketsuo (a Chinese King) his wicked monarch: Buo who got rid of the tyrant Chuo (also Chinese); the Englishmen who secured Magna Charta for the good of their posterity; the Frenchmen who brought Louis the Sixteenth to the scaffold, and the Americans who struggled against the tyrant for their independence. Those are the best known among great people in history.

Therefore we consider it absolutely necessary for a great nation to contain some at least of such indefatigable and free spirited people if not many: and we are greatly puzzled at many speakers of the present day who declare warmly that those who clamour loudly against those doings of the government with which they are not content, are rash, thoughtless,

and selfish, aiming at nothing but their personal advantage. Well, a mirror reflects a flower perfectly because the flower is before it, and a calm lake shows the image of the pale moon, because the moon is above it. So people are right to clamour and complain, so long as there is a certain cause for them to do so. This cause is the real object, as the flower or the moon, while the complaint is only the reflected image. Then what right have the speakers to blame the images, instead of the real objects, without which there could be no reflection? Men are neither like yoked oxen nor caged birds, but are entitled to their liberty, in virtue of which they have a perfect right to ask for satisfaction, whenever they are subjected to any unjust treatment by others.

See Europeans and Americans who breathe a free air, and enjoy almost boundless happiness. How came they to possess these? Simply because they are brave, resolute, and rich in an independent and self governing spirit. Look again at the Asiatic peoples, who are sunk under the deep sea of despotism, and subject to every pain and misery. How came they to that? Also simply, because they are timid, irresolute, and entirely destitute of the same spirit that the former possess. However, since Heaven created mankind equal and endowed all with equal rights, there is no reason, we believe, that one should not do what the other does.

Listen, our Asiatic brethren! Make one united effort to regain that precious freedom, which has been long lost to you. Shrink not from so great and important an object, for there is not much difficulty in attaining it, provided you are fully prepared for any peril and hardship which you may encounter. Speak fearlessly, act boldly, and even spill your blood if necessary; but never turn from your purpose, until you attain and secure the object you desire for—the honour of the nation to which you belong!

LIGHT-HOUSE AND TONNAGE DUES.

(From the *Kinji-Horon*.)

Since we opened our ports to foreigners, their ships ply daily with great success. The light-houses, which have been erected at the entrance of ports, or at important places along the coast, number about fifty. On dark nights, in which even mountains are invisible, mariners pursue their course in safety by the aid of these lights. When the high waves roll and they can see nothing else, the lights serve them as a guide, indicating rocks and other dangers. Nothing is of more convenience to mariners than light-houses. The mode of constructing them has been borrowed from Western countries. Whence also people to build them were hired, the material for the structures and their machinery has also been brought from abroad, and the mode of lighting was taught us by foreigners. The expense of maintaining only one light-house, including the wages of the men employed in it, are estimated at least at about 10,000 yen annually. We must of course take measures to defray this outlay, without asking any questions.

Now, the light of the sun being a gift of nature, is possessed by all the nations in the world; and we are all free to use it, without having anything to pay. So, who would think of charging foreigners for its use in Japan? The same applies to us in the foreign countries whither we may go. But artificial light entails much expense. Who would murmur, then, at our demand to make a charge for its use?

To our great surprise, none of the foreigners, who receive much benefit from the lights on their coming to our country, pay any duty for the service they render them as guides to the navigation of our waters. We are justified in saying that they make no distinction between the two lights, the artificial and the natural. Why does not our Government insist that foreigners shall contribute towards the maintenance of light-houses? It is because the treaties between Japan and foreign countries contain no clause providing for it.

Now, various new institutions, such as telegraphs, rail-roads, and post-offices have been introduced into Japan, and both natives and foreigners find it to their convenience to pay something for the convenience. When the enterprises are prosperous their incomes not only meet the expenditure but they produce a considerable profit. It is so with light-houses. Therefore, any Japanese vessels entering a port, where a private light-house is erected, must, by law, pay towards its maintenance according to the number of *koku* they carry. This payment is the just demand of its owners to keep it long in good order. In regard to such as have been built by the Government, we should compel both natives and foreigners to pay dues for them, in order to defray their expenses on the one hand, and to increase the national revenue on the other. Although foreigners may be avaricious, they must be taught the distinction between the lights of heaven and those of art. It is, however, beyond doubt that they will murmur against our demanding from them a duty on light-houses.

According to the tables of shipping, published by the Kanzei-kioku (Taxation Section of the Finance Department), the number of steam and sailing vessels, which enter and leave all the ports in one year, is not less than 1,000. If we levy 30 yen upon each of them, it will give a revenue of 300,000 yen *per annum* to the Government. This is of course not a large sum, but we are not for that reason obliged to forfeit it altogether. So when the time comes to revise the treaties with the Western Powers, the authorities must insist upon the payment of light-house dues; and, at the same time, settle the question of duties on the tonnage of ships, entering and leaving our ports.

* The duty on tonnage is fixed according to the number of tons on vessels' registers and the term of their remaining in harbour. While they are in port, they are under the protection of the local authorities, and they may not move without permission. This is the general rule in all Western countries; and the practice of levying duty on tonnage is in force in China, and regulations for the purpose are included in those for trade between Chinese and foreigners. Ships, which are of more than 150 tons, pay 66.4 sen per ton, and those below 150 tons 16 sen per ton. The Custom House issues a license, in virtue of which they are free to remain in any port for the term of four months. At the end of that term they must again pay duty, if they want to remain in Chinese waters.

When we first entered into treaty relations with foreigners, we did not know of this matter, and we promised them that they should pay no duty on tonnage. Foreign ships pay only a fee of \$15 on their arrival in port and \$7 on leaving. So for the small sum of \$15 paid on entering a harbour, they can stop there for a whole season or a much longer time. Some remain for many years as floating godowns; and we have no power to drive them out. This is again a subject which we want to have altered on the revision of the treaties.

We estimate that the number of tons of the ships, which enter and leave our ports during a year, is 500,000. We should charge them 20 sen per ton, giving them leave to remain for the term of three months. This would yield a revenue of not less than 1,000,000 yen. The entire amount of fees now paid by ships to the Custom House on entering and leaving our ports is only 200,000 yen yearly.

The two subjects which we have above discussed are most important both in relation to the treaties and to financial affairs. So we propound our opinion in the hope of effecting some good in the revision of the treaties.

COMPARISON BETWEEN JAPANESE AND CHINESE.

(Correspondence of the *Akebono Shinbun*.)

Who will say that Japan is rapidly progressing towards civilization? Who will boast that Japan is the England of the East? Considering carefully the present condition of affairs, we observe much that is sad and unsatisfactory which we can hardly endure. Alas! Is not the existence or ruin of Japan dependent upon the present condition of her people? We do not allude to the lower classes, who know nothing. We are full of sorrow. We did not at all expect that those who rank above the middle class among us, would be so foolish and base. Open your eyes and look! No independent countries in the world are so destitute of power and influence as Japan is. Do you know of any? Our countrymen nearly all say that China has no power or influence, and that she is not civilized at all. When at any time we speak about what should be the condition of an independent state, our people talk of Chinese lack of civilization. But it is not so in our opinion: on the contrary we are very far behind the Chinese. We will cite examples. The reason which caused a war between the Chinese and British was, that the former wished to provide for their own welfare by preventing the baneful imports of the latter; and they set thousands of pounds of opium on fire. Although they were defeated and obliged to pay an indemnity their spirit in defending their own interests is worthy of praise. Previous to the establishment of our present Government, the Kagoshima men made war with England: and the Choshu men struggled with the Americans and French at Shimonoseki. What they endeavoured to do, was merely to exclude foreign barbarians from the country. But, in point of fact, they effected nothing in regard to securing the welfare of their country and the safeguard of its people against the reproach and injury which we have suffered at the hands of foreigners. Again, consider the condition of affairs in China since the Chinese opened their ports to trade with these! What they consider injurious and a cause of loss to their country, they oppose in spite of all the demands of foreigners. On the other hand our own countrymen are always ready to comply with their demands and requirements without considering whether they are good or bad, Chinese residents in Japan, though they are but a poor class, maintain themselves by their own labour. But Japanese residents in China are officials, who spend the government money heedlessly, and priests belonging to the monastery of Honganji, and a few adventurers, who endeavour to enrich themselves in our country by exporting thither various articles. Although we apply the reproachful term of *Tonbi* (pig-tails) to the Chinese they preserve their own manners and customs, while we put on foreign clothes and hats, without con-

sidering what injury and loss are to follow. In a word, the Chinese abroad endeavour to enrich themselves with foreigners' money, but our people spend theirs abroad and bring home nothing but debts. Although we are dressed in English style and wear French hats, we are indeed very far behind the Chinese in the matter of domestic policy.

TREATY REVISION.

(From the *Nichi-Nichi Shinbun*.)

THE subject of treaty revision is freely discussed among our people at the present time. We earnestly desire at the hands of the government that extraterritoriality may be abolished, and that the right of levying our own duties may also be restored. The authorities have gone so far as to have addressed a draft convention to the representatives of the Treaty Powers in Japan. As this however falls within the secret pale of diplomatic affairs, we do not desire to discuss here whether the said draft requires the restoration of the two rights,—judicial and financial—or only of the latter one; and we ought to defer our consideration of the right and the wrong of the matter to some other day, because if entered into now it might cause some obstruction to the negotiations pending between the authorities on either side. But, as it may be important for our readers to know what alterations and reforms in the conventions, which are now in force, have been wrought since they were first signed up to this day, it may not be out of place to write a brief account of them.

We hear our disputants declaring that the Tokugawa government authorities soiled the imperial honour by allowing foreigners to interfere with matters of justice and taxation; and that strangers are selfish in attempting to control the rights of a foreign country. In short, they charge all the faults, which have caused the difficulties existing at this day, to them. They are wrong and do not know the circumstances of the times in which the treaties were made. Twenty-four years ago, in the 6th year of Kayei (1853), Commodore Perry, Envoy of the United States, first came to Uraga; and Count Euphemius Pontiatine of Russia and Doncker Curtius of Holland, arrived after him at Nagasaki. Friendly relations were then first entered into between us; and the Kanagawa treaties with the United States and Russia were respectively made in the 1st year of Ansei (1853); and that with Holland at Nagasaki in the following year. This was the first step in the way of having friendly conventions with foreigners, but no trade regulations were yet established. So, in the 4th year of Ansei (1857) such regulations were agreed upon and annexed as a supplement to the Shimada treaty with the United States and the Nagasaki treaties with Russia and Holland. In the following year the treaties, which are now in force, with five powers, viz., the United States of America, Russia, Holland, England and France, were signed at Yedo. The original copy of all these conventions was drafted by Townsend Harris, minister for the United States.

When the Tokugawa government decided to enter into foreign intercourse, and the Kanagawa treaty had to be settled, a number of men in office, of high talent and ability, were appointed to administer foreign affairs. But how could they conduct matters relating to foreign countries of which they were totally ignorant, and while they knew nothing about conventions. So they had only to consider what would be advantageous and what the reverse to our country, abiding by the

draft of the conventions which was drawn by the hands of foreigners. If Harris, the American Envoy and author of the conventions, had been, unhappily for us, an unjust man, what demands would have been made by him! If our authorities had been a crowd of fools and ignoramuses, what calamities would have arisen out of the conventions! But the treaties, which are in force at present, were settled by good men on either sides. We may rejoice that Lord Elgin and Baron Gros, British and French Commissioners, were unable to transgress the bounds of justice, in arranging the terms of the treaties between their countries and Japanese, which were fixed by Harris. It is obvious that when Harris composed the draft, he wished us to expunge the extraterritoriality clause, and to restore to us the right of taxation, at the time fixed for a revision of the treaties, which period is now at hand. According to a writer in the *Tokio Times*, Harris publicly propounded his opinion in relation to the revision of our treaties in March, 1875, which runs as follows:—

(Here follows a translation of the assertion alleged to have been made by Mr. Harris.)

As we mentioned above, Harris composed our treaties with justice, and we see no irrationality in the tariff. Besides, he foresaw that the tariff would not be in force much longer in Japan, and he promised us that in five years after we opened Kanagawa to trade, the tariff regulations might be altered. He expressed himself again on the subject of ex-territoriality thus:—

(Mr. Harris is here again quoted as having expressed an opinion condemnatory of extraterritoriality.)

As we have before mentioned, when we first entered into the conventions now in force, foreigners in Japan were allowed to govern themselves in accordance with their own laws. At that time the foreign representatives in Japan, as well as the cabinets in their respective countries, might not have intended to preserve the ex-territoriality clause in the treaties for a long term of years. On the contrary, it is considered that they might have been disposed to restore this right to Japan, as quickly as possible, according to the wish of Mr. Harris. Notwithstanding this, at the present time, their rejection of the proposal for the restoration of our two rights—judicial and the tariff—and their unreasonable interference in another nation's affairs, was not only caused by bad conventions, but also through domestic difficulties and troubles after the opening of ports to foreign trade, and which materially impedes us in our endeavours to regain these rights.

Let us here cite some examples to show how necessary is an alteration of the tariff. According to the terms of the present conventions, as drafted by Harris, twenty per cent duty was paid upon imports at the commencement of international trade. A short time after the ports were opened, our people began to conduct themselves very badly, and murdered some foreigners, besides throwing every obstacle in the way of free intercourse. At the same time as the Tokugawa Government decided to make great reforms in domestic affairs, the question of *jo-i* (expulsion of foreigners from Japan) and that of *kin-no* (faithful service to the Mikado) were freely discussed; and acquired more and more importance day by day. Some obstinate fellows really wished to expel foreigners from Japan, while others decried the government administration, in justification of *jo-i*. In a word, they considered that nothing would better conduce to the destruction of the

Tokugawa despotism than disturbances in our foreign relations. So, the men of ability and talent united in trying to frustrate the conventions entered into by the Tokugawa Government, wishing to make it lose its credit both at home and abroad. Our readers may already have formed the same opinion on this point. At the opening of the three ports, namely; Kanagawa, Hakodate, and Nagasaki, troubles were quickly raised, which, in the first instance, prevented the Government from opening Niigata or a subsidiary port to trade during the winter, and so caused them to break their contract; and, in the second, obliged them to beg for a delay in the opening of Hiogo, Yedo and Osaka to the Treaty Powers. In the 1st year of Bunkei (1866) a number of commissioners left for the West to negotiate a delay in the opening of the two ports (Niigata and Hiogo) and two cities (Yedo and Osaka) to foreign trade. In the following year, the British Government consented to a delay in the opening, for the term of five years, in the London Protocol, in which it was stipulated that the duty upon wines and spirits from England should be decreased, and that glass and crystal ware should be included among those articles which paid a duty of five per cent. This was the first alteration in the tariff. Notwithstanding this change, by which the duties upon imports were much reduced, the Government did no good during the said term of five years; and those who held the doctrine of *jo-i* had the chief influence in the Imperial Court and with the Daimio. They openly demanded the closing of the ports. The outrage at Namamugi, that is where the Kago-shima men killed an Englishman, gave a plausible justification (for reprisals) to the British Government; and the firing at Shimonoseki (upon French vessels) by the Choshu men lost us the friendship of the French. Therefore, the Government found it necessary to send another commissioner to France in the 1st year of Genji. It was settled in the Paris Convention of the same year (1864) that the Japanese should pay an indemnity of 140,000 yen; and that all matters required for the packing of teas should pay no duty, while the duties upon liquors, white sugar, iron, machinery, hempen cloth and watches should be reduced to five per cent; glass ware, perfumery and ammunition paying six per cent. This was the second change made in the customs' tariff. Our faults obliged us to comply with every demand made by foreigners; and we could do nothing to free ourselves. On the one hand our difficulties continued at home; and on the other foreigners saw (but made no allowance for) the difficulties of the Government. So, foreign powers demanded, to the great embarrassment of the then Government, indemnities for firing upon a foreign ship or for killing a foreigner. Those who had the reins of power, were weighed down with their ever present difficulties; they thought themselves happy to be able to escape from further trouble by decreasing the duties upon imports, without considering the future. According to the Osaka negotiations, concluded in the 1st year of Kei-o, the duties upon both the exports and imports were to be five per cent. In ensuing years the present tariff was arrived at, by which the first class of exports and imports should pay duty according to weight; the second should be duty free; the third included all prohibited articles; and the fourth paid 5 per cent of the original value. This is now in force; and such was the third change in the tariff.

These three unfortunate alterations have been made in the Customs' tariff, the result of which has been a great reduction in our yearly income.

The difficulties in the way of the restoration of our rights were first caused by the Tokugawa Government authorities; but the doctrines of *jo-i* and *kin-no* obliged them to break the conventions with foreigners; and the above described three changes in the tariff in the nine years between the opening of the port of Yokohama in the sixth year of Ansei and the second year of Kei-o, are in the way of our regaining our rights of levying duties. Men of talent now in the present Government are to blame for this. If they had not behaved as they did we should now have no difficulty in regaining our rights at this day. Is this not very grievous? We do not mean to reproach these gentlemen for their past conduct, which we allude to merely to prove the circumstances of the case to controversialists who reproach the Tokugawa authorities without knowing the origin of the changes. Those people we mention were, however, not entirely blameless. If they had carefully attended to the subject of the customs' revenue since the opening of the Kanagawa port, as Harris advised them, how could they have complied with the demand of foreigners to fix the duty at five per cent! But nothing is gained by talking of past times. Ten years have already elapsed since the establishment of the present Government, during which interval the favour shown by our Government to strangers has been great. How, then, can they claim the right to interfere much longer with our domestic affairs in relation to finance? When will the time return for insisting upon the restoration of our rights if we lose the chance at present offered?

HOW TO AMEND THE REGULATIONS OF THE NATIONAL BANKS.

(From the *Akebono Shinbun* of the 14th Dec.)

We have heard a vague rumor to the effect that the regulations of the National Banking Corporations will shortly be amended. If this should happen to be right, we do not know what alteration will be made, and what articles will be added to, or expunged from, the existing rules. But referring to the present condition (of banking), we can not truly say that the rumor of emendation should be quite unfounded. As we have profoundly studied the future conditions which will arise from the work of the banking corporations of the day, it may not be out of place for us to consider the subject here.

Before we go further we must first consider what has been the outcome of the regulations in force up to this day. An emendation was made in August of the 9th year of Meiji; and both the Government and the bankers have had an opportunity to see what advantages or the reverse have resulted from the working of the laws, during the past year. Profit or loss, advantage or injury, must not be pronounced upon hastily and decided by any one benefit derived by individuals. But the matter must be considered in reference to the future and in accordance with the will of the majority: otherwise there can be no hope for prosperity and good order. A thing, which may be convenient at the present, will be injurious in the future; and another, which may be highly advantageous to a particular person will be a source of evil to an entire nation. Those who follow the business of banking among us care only for a small profit for themselves, without considering any sad results to the country in time to come. How then should we be justified if heedless of the future!

As is well-known, the national banks, established in our country, are more than thirty in all; and their numbers seem likely to increase day by day. In a time, like the present, of a dearth of money, great are held to be the conveniences caused by increased circulation. But this is merely a superficial view. The banks effect no good; on the contrary the consequences they will bring about in years to come are fearful to contemplate. What is that? An excess of paper money. Look at the existing conditions of this kind of currency! According to the annual financial statement for last year, the paper money, issued by the Government, amounted to more than 94,000,000 yen. Whence was the expenditure of 40,000,000 yen in the South-Western expedition provided? Our people are very anxious for information upon this point. The issue of paper money must considerably exceed the amount. Are we wrong in imagining that it exceeds it by more than 100,000,000 yen? Now let us look at the amount of treasure in the possession of the Finance Department! The total of the reserve fund against the issue of paper money is not more than the small sum of 200,000 yen. The difference between the debt and security provided is thus great. Can it be said that this is good administration of financial affairs? How much more besides does the nation owe? for our calculation does not include the other debts (Government Bonds for the pensions of the *kuwa-shizoku* for instance.) As this point has been repeatedly discussed, we do not want to revive it here; and we have only made a rough estimate to find out what is good and what bad in the banking regulations.

The number of National Banks increases from day to day; and we do not know how many banks will eventually be established in Japan. At the opening of every bank the paper money in circulation increases. What is the origin of this fancy of our countrymen for banking? The national debt, bearing interest between four and eight per cent, amounted only to 30,680,000 yen in former years; and our people were not anxious to establish banks as they are at present. Last year the Government issued bonds (*kosai shosho*) for the pensions of the *kuwa-shizoku*, which amount to 140,000,000 yen, and which bear interest at less than eight per cent. So the holders of the bonds can issue paper-money by depositing them with the Finance Department as security. (A number of nobles founded the Fifteenth National Bank by pledging their bonds to the Government.) Since the authorities drew up regulations for the issue of paper money by the bond-holders on their pawning their bonds as security, no bond-holders need foolishly keep their bonds in a desk or box, waiting to receive the interest, when due, from the Government. It is much more advantageous for them to issue paper money on pledging their documents to the Finance Department, and thus drawing interest from two sides—the Government and the Bank. So our countrymen have naturally become desirous to establish banks in every province.

If such a desire be much longer freely indulged in, we do not know what result will follow. If the sum of 140,000,000 yen in Government Bonds be pledged in security for paper-money, and hundreds of banks be opened through the country, bank-notes in circulation will be enough to cover these small islands of Japan from one corner to the other; and gold and silver can be but rarely seen. How can paper-money help

destroying the credit of this land? Notes will not only lose their value entirely, but disturbances will follow. The only way of maintaining equilibrium between the value of paper and coin, is to provide that the former may be exchanged against the latter whenever demanded. If we have no equivalent in value for a note it is merely a piece of useless paper. Now, what is the real value of our bank-notes? Is there any good security for their redemption. Government Bonds, which are held as security, were issued by the authorities. They have no real value; and our faith in the Government only maintains an equality between paper and coin. In a word our bank-notes have been issued on the security of the Government's paper money. No great depreciation in the value of Government notes occurred, up to this day, owing to the high credit of the authorities. If this should become, unfortunately for us, low in future, bank-notes will also be of no value, because then the rulers will no longer possess the confidence of the people. It is not unreasonable to surmise that an increase in the issue of paper money will depreciate the worth of bank-notes in circulation.

If our opinion is not erroneous we hope that those who are thinking of establishing banks will fix their attention upon what we have written. Their sole desire is to enrich themselves. They are intent upon a present small personal benefit, without considering what injury to the country may eventually accrue. But, as we have said above, nothing should be for mere private advantage. Still, if our people take up banking, business and carry it out in accordance with the regulations established by Government, the latter cannot interfere with them in their desire to establish more banks. If, however, they are allowed to do so freely, bad effects will appear among us in time to come. Therefore the banking regulations must be amended. Having heard a rumor that alterations were contemplated, we expressed our opinion thus in order to ascertain whether the report is well-founded.

MISCELLANEOUS.

THE delay in obtaining from the Japanese authorities a location for a hospital for infectious diseases arises, it appears, from a mere difficulty of routine. As the present site of the Small-Pox Hospital was agreed upon in one of the terms of a convention, to which four foreign Ministers and two Japanese Commissioners were parties, it is held that any change of site is also matter for purely diplomatic arrangement. The question of the terms on which the proposed new site is to be granted—its resumption at will by the Japanese authorities, and so on—is a secondary one. Of course no immediate cause for hurry exists. It will be quite time enough for the Ministers and others immediately concerned to take active measures when an epidemic of small-pox or other dangerous disease has broken out and is raging with virulence.

THE drainage of the foreign settlement is abominably defective. Even the heavy rains of the 1st inst. afforded no valid excuse for the disgraceful inundation. Main Street looked as though it might be traversed in a cargo boat; and was, actually, during its entire length under water, which in some places lay several inches, and in others more than a foot deep. And yet we are told that we have no occasion for a Municipality, or even for a Municipal Director. *So des-ka?*

NERVOUS people on the evening of the 1st instant, remembering the frequent earthquake shocks which have of late been felt, thought that some vast atmospheric phenomena or terrestrial disturbances were about to develop themselves. Rain had been falling heavily during the day, more than three inches having been registered between four o'clock in the morning and nine in the evening. At about six p.m. the wind, which up to that time had been Northerly, shifted suddenly to the South-West, whence it soon blew a gale. It came in a blast as hot and damp as though it had just swept over the sulphur springs of Ewo-Yama, and was so laden with moisture, that glass and crockery, mirrors and painted woodwork, were all quickly covered with damp which soon began to trickle in little streams. The thermometer rose from 45° to 64°, and the barometer fell rapidly. It was 30.14 in the morning between nine and ten o'clock; and by nine in the evening had fallen to 29.69. Wet and dry bulb thermometers showed no perceptible difference in the temperature they recorded. And all this was, as far as is known here, occasioned by a South-Westerly wind, and nothing more.

Among the passengers by a recent Mail, to Europe, was H. E. Mr. de Struve, Russian Minister, who, with his family, quits this country for a few months on leave of absence. Another gentleman, who will be sincerely regretted, not only by his own countrymen but by a very large number of other foreigners as well as by many natives, left in the same steamer, in the routine of his service, and, we regret to say, in all probability never to return to Japan. Mr. Emile Kraetzer, Chancellor of the French Consulate, and for a long time Acting French Consul in this port, returns to his own country to receive his well merited promotion. His friends, in sorrowfully wishing him farewell, congratulate him upon his prospects of advancement, and trust that he will have of the foreign settlement of Yokohama as pleasant memories as many of its colonists will have of himself and of their intercourse with him.

THE *Echo* states that a *réunion* of French residents was held on the 3rd instant at the Oriental Hotel, to offer to Mr. Emile Kraetzer, Chancellor of the French Consulate, the "punch d'adieux," and a souvenir on the part of the French community, accompanied by an address of which the following is a translation.

Yokohama, 3rd Dec., 1877.

TO MR. EMILE KRAETZER,
Chancellor of the French Consulate.

SIR:—The undersigned Frenchmen have wished to offer you, before your departure, a testimony of esteem in remembrance of the good services which you have never ceased to render to the French community during your occupancy of the French Consulate at Yokohama.

We all sincerely regret the too short sojourn of functionaries among us, but your departure is particularly painful to us, because of the experience which you have gained of Japan and of our affairs, and also of the manner in which you have acquired general esteem and consideration.

We beg you to accept the modest present of a pocket chronometer, upon which we had wished to have had engraved the following inscription:—

A MR. E. KRAETZER,

SOUVENIR

de la communauté française de Yokohama;

but we have not been able to find here an engraver sufficiently skilful.

We earnestly hope to see you return among us; but without doubt promotion to a higher post will prevent the realization of our wishes; and that alone will diminish the sincere regrets which your departure causes us.

Accept, Sir, the wishes which we form for your safe voyage and happy return to your native land.

(Here follow the signatures.)

Mr. Kraetzer replied in a few words impressed with evident emotion:—

Since my departure has been decided upon, I have received from all sides evidences of sympathy and affection which have profoundly touched me. That which you offer me to-day is assuredly the most precious to me. I can only see in this action, so flattering to me and of which I am so proud, an encouragement to continue in the accomplishment of my duties as I have understood them.

After some words of commendation of the departing guest and hopes for his advancement, the French journal adds:—"We must not forget to say that from a philological point of view Mr. Kraetzer has rendered to those of our countrymen who wish to study the language of the country a real service, in translating with much care, accuracy, and clearness, Mr. Aston's excellent grammar. This book is now the essential companion of every Frenchman desirous of familiarizing himself with the Japanese language, and it will last as a useful memorial of the sojourn of Mr. Kraetzer in Japan."

THE ceremony of laying the Foundation Stone of a French Church took place in Tsukidji on Monday the 3rd about 3 p.m. There were a number of distinguished visitors present, the French Minister and his wife, the Colonel of the Military Mission, the Captain of the French Frigate *La Clochette*, and many others.

After the customary prayers had been read in the old chapel a procession was formed, and marched to the rear of the French Mission lot, when Monsgr. Osouf, the Bishop, performed the ceremony of laying the stone, depositing a record of the event in a bottle underneath it. After this, prayers were offered up at each of the four corners of the site of the building; and the proceedings closed.

The day was the *fête* of Saint Francois Xavier, and also the anniversary of the lamented death of the late Vicomte Daru, who, it will be remembered, was drowned in Odawara Bay some years ago. His mother has contributed a considerable portion of the funds for the erection of the Church.

THE Java papers report that during the night of the 16th-17th September, the Australian three-masted schooner *Julia Rietz*, bound for Adelaide with a cargo of tea from China, struck on a reef near Wangi Wangi and was soon in a hopeless condition. The captain and two sailors reached the island of Buton in a boat, after forty hours' rowing, where Captain Pott, of the steamer *Karang*, was requested to go to bring away the crew of the lost vessel, and to ascertain her condition. Of the crew of the *Julia Rietz*, who were nine in number, the six then still on the wreck were taken on board the *Karang* on the 21st September, and conveyed to Macassar with the three who had been landed in Buton. On the 2nd ult. the wreck and the cargo (which was nearly all spoilt) was sold at Macassar by auction, and brought 745 guilders.

As was expected, the farewell ball at the Town Hall given to Admiral Patterson, Captain Young, and the officers of the *Tennessee* was a great success. It was attended by more than three hundred people. Many Russian officers, who would otherwise have been present, were unavoidably kept away through having to attend a banquet given on board the *Boyan* to the departing Russian minister, Mr. de Struve. Still, the ball went off with great *éclat*. The large saloon was divided into a ball and supper room; but, in spite of this reduction in space, and the fact that almost as many persons were present as

at the dance given in honour of the English and French Marines on their leaving Yokohama nearly three years ago, there was no crowding of the dancers. The ball room was tastefully decorated with flowers and flags, the American colours predominating; and the brilliant toilets of the ladies contrasted with the prevailing sombre hue of the dark uniforms and black dress coats of the male guests. A red coat or two would have thrown some extra life and colouring into the constantly changing groups. Many members of the Diplomatic and Consular Corps, and their families, the vice-Governor of Kanagawa, officers from the men-of-war in harbor, and the principal foreign residents were present. After supper Mr. Russell Robertson, as Chairman of the Committee, proposed in suitable terms the health of the departing guests, a toast which was responded to by Captain Young. The supper was excellent. In every respect of the management the committee deserve the highest praise, especially when the very short notice on which the ball was got up is taken into consideration.

A WELL-ORGANIZED Japanese registry office for servants required by foreigners, would in all probability be a successful undertaking. It would be a great satisfaction to many householders to know something as to where their boys and nurses come from, and to have them recommended by some responsible native. It may not be generally known that the base on which such a registry office might be founded already exists. In Homura there are several householders who undertake to recommend domestic servants to foreign establishments; and a recent experience proves that they are willing to take some trouble to secure reparation in the event of their *protégés* misconducting themselves in their new employs. A Homura proprietor recently recommended to a foreign family living on the Bluff a woman as domestic servant. She was hard-working but peevish and insolent; and was once or twice detected in those petty thefts which most foreigners are content to put up with or to pass over with a slight rebuke. Unfortunately, however, through the carelessness of the master of the house, temptation to a larger theft was put in her way. Before retiring for the night the master laid between four and five dollars in silver on the mantel-piece of the sitting room. This, in the early morning, the woman, part of whose work it was to clean this chamber, saw and abstracted. Taking some knives, spoons, and other articles of some value, she went away. More as a matter of form, than in the hope that anything would be heard of her, report was made to the Bluff Police Station; and one of the other servants informed the man by whom the woman had been recommended of the theft. This was about a fortnight ago; and the robbery was nearly forgotten in the house where it occurred, no intelligence having been received, through any source, of the delinquent. One day, however, the man who had placed her saw her in Homura. She fled, and he pursued her into a small house where she had taken refuge, and where he had her arrested, not without some trouble. She at once confessed to the police that she had taken the money, and stated how she had employed it, and what she had done with most of the other articles which she had purloined, and some of which will probably be recovered. It would be advisable for foreigners to endeavour always to obtain some recommendation with new servants; and a registry office conducted by some native generally known to the settlers would certainly be largely supported by them.

A FATAL accident occurred on board the M. B. M. S. S. *Yuko Maru*, recently. A Japanese seaman fell, head foremost, from the mizzen top-mast on to the poop of that vessel, and was killed on the spot.

MANY friends of those on board went off to the *Tennessee* on the 4th instant to bid a final adieu to their friends; and several people were on the Bund to witness the departure of the vessel, which, at eleven o'clock exactly, weighed anchor and steamed slowly out of harbour. No salutes were fired.

UNFORTUNATELY the Japanese Government do not yet appear to see that their revenue might be better employed in the development of the country's internal resources, and in the encouragement of the arts of peace, rather than in the formation of a Navy which is very far from being the first, or indeed any, absolute want of the nation. A paragraph in our Nippon Notes asserts that a new and costly vessel is to be built at Yokoska. It would probably be turned out of an English dock-yard for one third of what it will cost where it is to be built, to say nothing of its probable greater solidity and durability in the former case. But, as its construction at all is a mistake, the question of what stocks it should be turned off is hardly worth considering.

ONE of those rows, which occasionally disturb the monotony of our settlement, occurred on the afternoon of the 6th instant between a number of English and American sailors. The locality, as usual, was the grog-shops. The jolly tars had been imbibing rather freely and a controversy occurred between a representative of each nation, and both concluded that the only way to settle the point at issue was by an appeal to arms. But this they were not allowed to do in their own way, and before many minutes the quarrel became general. Blows were dealt freely and promiscuously on all sides, and many faces were speedily disfigured. Word was sent to the Police Station, and, with wonderful alacrity, a posse of a hundred or so of native police was turned out to quell the disturbance. Each vied with the other in his zeal to be first on the battle field; and, a little more leisurely, followed three of the foreign policemen. This influx of guardians of the peace turned the tide of affairs against both parties, and so settled a battle which was being pretty evenly maintained, though all the combatants seemed to be getting rather tired. No bones were broken; and we trust the affair will not engender any permanent illfeeling between the crews of the respective men-of-war in port, or cause a repetition of these disreputable occurrences which disturb the serenity of the community.

It is always pleasant to be able to congratulate the men-of-war's men in harbour on their successful pursuit of rational amusements. Rifle-clubs, while they aid sailors in the acquirement of knowledge which should be an essential part of their profession, afford also a means of healthy relaxation and emulation. Such institutions exist on board H. M. S. S. *Modeste* and *Kestrel*; and the members of the rival clubs of these two vessels came ashore on the 6th inst. and held a match on the Rifle Range, the men of the former vessel being victorious. After the contest the teams adjourned to a dinner provided at the Star Tavern, which was presided over by the captain of the conquering team, the gunner of the *Modeste*, his confrère of the *Kestrel*, assisting him in the vice-chair.

THE series of nocturnal attacks and depredations has recommenced, and it would be impossible too much to counsel the police to redouble their vigilance. It is still the Bluff which is the favourite theatre for this kind of exploits. Recently the gardener of a house inhabited by a European was assailed during the night by bandits, masked and armed, and only owed his safety to his quietness in allowing himself to be robbed, being unable to do better. On the night of the 14th inst. between half-past eight and nine o'clock, in the little village of Kitagata-mura, another Japanese was in his turn attacked, struck many times with a sabre, one blow on the head putting his life in danger, and it is unnecessary to add robbed afterwards. We very often see, in the evening, the doors of houses on the Bluff left wide open till a very late hour; and it is very imprudent thus to expose oneself and to put temptation in the way of Messieurs the evil-doers.—*Echo du Japon*.

AN official enquiry into the loss of two men, Richard Walsh and Edward Afflick, belonging to the British barque *Pauline*, has been held on board that vessel by Mr. Russell Robertson, H.B.M.'s Consul. From the testimony adduced, it appears that the two unfortunate men lost their lives on the 7th of August last, when the ship was in lat. 38.30 S., long. 47 East. During the previous night a heavy gale had been blowing, but in the morning it moderated somewhat. Still it was stormy and the sea very rough. The mate put two men at the wheel at 8 o'clock, and a couple of hours afterwards he observed a wave rise perpendicularly over the stem. He called out to the men at the wheel to hold fast, then jumped on the deck-house himself and seized hold of an iron stanchion. After the wave had swept over the vessel, he looked towards where the two men had been, and found that both, as well as the wheel, were gone. The ship was hove to as quickly as possible, but nothing was seen of either of them. A verdict was returned to the effect that the two men were lost overboard, under circumstances which made it impossible to render them any assistance.

THE lease of No. 83, the premises formerly occupied as a Furniture Repository by the late Mr. E. Rothmund, has been sold at auction by Mr. H. Becker and realized \$2,000. There was only one bid, for the amount named, and that was made by Messrs. Siber and Brenuwald, the mortgagees, to whom, accordingly, the property was knocked down.

THE *Vsadnick* left Hakodate for this port, on the afternoon of Tuesday, the 11th instant, two hours before the departure of the *Shalio* which arrived on the afternoon of the 4th at Shinagawa. A passenger by the latter vessel informs us that the *Vsadnick*, accompanied by the *Abrek*, which latter arrived from Vladivostok at about the same time as her consort from Yokohama, visited the site of the stranded gunboat *Alent* on the West coast of Yesso near Isashi. The vessel is likely to become a complete wreck. An officer and boat's crew were left to watch the vessel and cargo of stores, the latter estimated at a value of \$150,000. The remainder of the officers and crew were brought into Hakodate by the *Abrek*, for transfer as soon as circumstances will admit to Vladivostok.

THE Agent of the Great Northern Telegraph Company informs us that the Banjoe-wangie-Port Darwin Cable has been repaired.

THE *Shalio Maru* encountered very bad weather off Inuboye Saki, on her passage down from Hakodate. She was hove to for twelve hours on the 13th instant. At about 10 a.m. she shipped a very heavy sea, which started the deck forward, carrying away the binnacle, and smashing sky lights, and wheel-house, injuring slightly with broken glass the men at the wheel, and all but washing one of the officers overboard. Some of the Japanese passengers were seriously alarmed.

It is apparent from the extract from the log of the *Shinagawa Maru*, contained in Captain Frahm's letter published in another column, that the people of the steamer could not by any possibility have aided the dismasted schooner which they passed on the 10th ultimo.

HIS HONOUR, the judge who presides in cases in which foreigners are concerned, at the Saibansho, has taken means to prevent alien parties to suits having any excuse in future for not taking off their overcoats when in his august presence. The hitherto cold, cheerless, uncomfortable Court room has had an addition to its furniture, since Messrs. Whitfield & Dallas were compelled to submit, insufficiently clad, to the severity of the atmosphere, in the shape of a tolerably good, and fair sized, Japanese-made stove, in which a fire sufficient for the purpose of warming the room is kept. His Honour has had further consideration for the feelings and health of those who are compelled to appear before him, and caused some of the pigeon-holes in the windows to be well pasted over with paper (doubtless the remainder of the broken windows will, also, shortly be repaired in like manner) thus adding immeasurably to the comfort, as well as the respectability of the room. For these attentions to their welfare, all foreigners who have to attend this Court will doubtless feel deeply indebted to Mr. Kansui. But, if it is not trespassing too much on the generosity of the Bench, there is still another small item which foreigners, doing business at the Saibansho, would like to be included in those reforms now so conspicuous in Japanese jurisdiction. No very great boon is asked. Indeed what is wanted some might think a right. There is a great want of punctuality, a great difference between the time at which cases are set down for hearing and the time when they are heard. Take Mr. Grauert's case as an example. Every hearing has been set down for ten o'clock, and punctually to time the plaintiff has appeared; but in every instance it has been eleven o'clock, or past, when His Honour has taken his seat. On the day when judgment was given Mr. Grauert was there with his usual punctuality. His Honour came into Court about a quarter to eleven, delivered judgment in three Japanese cases, rose and left the room; and, as he did not re-appear for some time afterwards, Mr. Grauert sent a note to him stating that if judgment could not be rendered, without further delay, he could not wait for it, as his business was being neglected through his absence. There was no reason for the delay: no witnesses had to be examined; merely a decision to be read. However, the effect of Mr. Grauert's note was the return of His Honour within a few minutes; and judgment was pronounced, the delivery occupying only a short time; but the morning of those who had to be present was wasted.

Good sense has at length prevailed over the evil counsels which first divided into two sections, and then kept severed for so long the members of the racing community. An amalgamation of the two Racing Clubs has been so long deferred as to have become impossible. The next best result has, however, been attained. At a meeting of pony-owners held on the 15th it was resolved to form a new society, to be named hereafter, on the broad basis of open membership. So far one of the main principles for which the Y. R. A. fought is vindicated. It remains to be hoped that the other, that of declaration, as embodied in the three additional by-laws of the Association, will be adopted by the new "Jockey Club," or whatever other name the embryo society may adopt.

We are given to understand that Mr. Machado, who has been British Postmaster in Yokohama for the last eight years, has been promoted, and will shortly leave the shores of Japan for China, the field of his future labours. The day of his departure, however, is not yet settled; but, whenever it does arrive, we are sure Mr. Machado will take with him the respect and good wishes of the foreign residents of Yokohama.

The German frigate *Elisabeth* left this port on the morning of the 16th for Honolulu, on her way to Germany. The *Elisabeth* has been a long time in Japanese waters; and, for several months past, almost continually in the port of Yokohama, except when called away for brief periods to render assistance to shipwrecked mariners, or to succour the sick. Ever have the kind-hearted officers of the frigate been ready, at the shortest notice, to get up steam when a report of a wreck, or of a vessel missing, or of a person sick at a remote spot, has been brought to them. And although their object was mainly to succour those of their countrymen who needed help, still they never failed, when out on these errands of mercy, to give what aid they could to distressed persons of other nationalities. The genial manners and gentlemanly conduct of the officers of the *Elisabeth* have won the admiration of all classes of persons, whose good fortune it has been to come in contact with them; and, we are sure their loss will be much felt in our small community.

SOME thieves broke into Mr. Bohm's residence, 114, Creek, last Saturday night and stole his iron safe. No doubt the rascals thought they had secured a fine prize. Their chagrin may, however, be conceived when, on forcing open their cumbersome booty, they found nothing but a few papers, which, though of considerable importance to their owner, are not of the slightest value to the thieves. It is evident that those gentlemen, who follow their profession in the dark when all honest people are supposed to be safe in the arms of Morpheus, are pretty numerous; and are also capable of planning and executing achievements of considerable magnitude, when they succeeded so well on Saturday night in relieving Mr. Bohm of such a weighty article as an iron safe, and in escaping the vigilance of the police.

ANOTHER attempt at robbery occurred on the Bluff early last Sunday morning. The thief probably may have been new at his craft, as he was clumsy enough to arouse the inmates of the bungalow; and then, to use an Americanism, he "scotched."

The Chinese Minister, Ho, whose advent in Yokohama has been so long expected, and in some instances anticipated, has at length arrived, accompanied by a Vice-Minister, Chang, and other officials. The man-of-war *Hoi Hon*, which brought His Excellency and suite, arrived in the harbour on the morning of the 16th between nine and ten o'clock. The German frigate *Elisabeth*, just leaving on her way to Honolulu, as the *Hoi Hon* came into port, saluted the Chinese Ambassador. After having anchored, the *Hoi Hon* hoisted the Japanese flag and fired a salute, which compliment was lazily acknowledged by the Kanagawa fort at noon.

The *Hoi Hon* fell in with some shipwrecked Japanese on her way from Kobe. On the 12th and 13th the weather was exceedingly boisterous, and a large junk, called the *Soyei Maru*, laden with 410 bags of rice, foundered. The crew, seven men in all, lashed themselves to a raft formed of spars, and were tossed about at the mercy of the waves for two days, when the *Hoi Hon* hove in sight, and, desiring these waifs of the ocean, took them on board. All the unfortunate men were thoroughly exhausted; and, notwithstanding the kind treatment they received on the Chinese man-of-war, one of their number succumbed to the hardships he had endured and died shortly after being taken on board. On the *Hoi Hon* arriving in port yesterday morning, the shipwrecked men were sent to the Kencho.

The landing of the Celestials was effected at three o'clock. There was no particular demonstration on the occasion, beyond the fact of an enormous crowd having assembled. Two carriages only were waiting to receive the party, and into one of these the two ministers got as soon as they landed; and were driven immediately to the Kencho. Two more of the important personages seated themselves in the second carriage, and were conspicuous for some time owing to the ponies having an objection to proceed. The occupants of the vehicle kept their seats like stoics, without moving a muscle, until the jibbing horses were coaxed to proceed. The rest of the embassy proceeded in jinrikishas, wending their way through the crowd as best they could. After remaining at the Kencho about a quarter of an hour, the Ministerial party proceeded to the Town Hall, where a tiffin had been provided for them. A good deal of powder was expended during the day, but on the occasion of the Ministers' landing, the only man-of-war which took any notice of the event, excepting the *Hoi Hon*, was a Russian flagship, which fired a salute as the party were proceeding in boats from the Chinese man-of-war to the landing-place.

On the 15th instant, His Excellency, the Minister of Marine, Admiral Kawamura; Admirals Nakamuta, and Akamatsu; Captains Hayashi and Matsumura; a number of other officers of distinction in H. I. M.'s Navy; and several Japanese ladies, wives of the above gentlemen, entertained the officers of the English Naval Mission, Imperial Naval College, Tokio, and their wives, as well as the officers attached to the Elementary Naval School and training ship *Tsukuba-kuwan*, at a banquet at Shiba Riku. Covers were laid for fifty. The dinner was preceded by a very clever display of magic, the magician showing great proficiency both in European and Japanese illusive art. The dining and reception rooms were most tastefully decorated, with flowers and evergreens, and the dinner table was a marvel of beauty, the centre-piece being a screw steamship-of-war of considerable dimensions, wonderfully accurate in detail, and composed almost

entirely of confectionery. The repast was of the most *recherché* kind, and during its progress the naval band played a selection of airs. Dancing commenced almost immediately after dinner; and nothing was left undone by the hosts to minister to the pleasure of their guests.

The Chinese Ministers landed at three o'clock on the 18th in real Chinese state, to the intense admiration of a large number of Japanese and Celestials. The two Ministers were carried in kagos, each borne on the shoulders of eight bearers, and both preceded by heralds bearing banners, and other paraphernalia which are generally to be observed in a Chinese Mandarin's procession. A company of marines escorted the Ambassadors. There was no music, though a great noise was made by beating gongs. Next to the Ministers came the Consuls on horseback; the remainder of the party riding in jinrikishas. The procession wended its way past No. 70, then turned into Homura road and proceeded through Chinese town to the Chinese Club. As they passed through the streets, the people manifested their joy by firing off crackers, which demonstration, however pleasing to the performers, very nearly resulted in a serious accident to one of the mounted gentry. The pony this individual bestrode was evidently unaccustomed to a salute of crackers, as he commenced to prance about in such a manner that it seemed very probable he would deposit his rider on the ground. Two strong bettos, however, succeeded in arresting the playfulness of the animal until the clatter had somewhat subsided.

CHINESE residents celebrated the arrival of the Minister and officials of their nation with, for Celestials, rather demonstrative rejoicing. In the Chinese quarter of the Swamp Concession on the evening of the 17th the national cracker was in great request; and there was a not altogether unsuccessful attempt at illumination of a kind calculated to make the surrounding "darkness visible."

THE *Echo du Japon* states that the destruction of the silk-worms' egg cards remaining unsold was commenced on Sunday last, when a certain quantity were thrown into the canal near the Hanazo-no-bashi—one of the bridges close to the Public Gardens.

THE other day a jinrikisha man picked up a lady's gold hunting watch on the western Bluff road, and took it to the Police Station. The watch turned out to be the property of a lady residing on the Bluff, who, on having it restored, rewarded the honest fellow with twenty yen.

THE question of compelling foreigners to take off their overcoats when in the presence of a Japanese Judge, has been referred to Tokio for solution.

A SERVANTS' REGISTRY OFFICE.

REFERRING once more to a subject which we have recently mooted namely, the extreme desirability which exists for a responsible registry and enquiry office for servants, we are glad to see that our suggestion has been acted upon, and that such an institution has been established. If persevered in it will be successful. We

allude to the "SHOKU TEN SHA, or Mechanics' Association and Servants' Registry Office," whose head-quarters are established at No. 75A Bluff, and whose interpreter and foreign manager, we learn from a circular now before us, is Mr. J. GOBLE.

A registry office for servants for foreigners is, after all, only an extension of a system already prevailing among natives. The great perfection, in many respects, attained by the several departments of the Japanese police force has been often noticed. In very few countries of the world are individual actions open to so thorough a surveillance as they are in Japan, where also most rigorous regulations affecting all changes of residence are in force. Every native, no matter whether servant or employer, is required, when travelling, to carry with him a letter of registry from the place of his birth, which is recorded in each town where he may take up his abode, and where, within a limited period after his arrival, he is compelled, under certain police penalties, to report himself at the Kencho.

Now, there can be no question that the greater part of the dishonesty of servants in foreign employ arises from a two-fold source:—first, that the police are prohibited from making too inquisitive perquisitions in and about foreign houses, and, so, are unable to satisfy themselves of the correctness of each servant's note of registry; and, secondly, that foreigners have, in the majority of cases, no knowledge whatever of the antecedents of their domestics, and are almost uniformly ignorant whether or no these are registered in any place at all. Thus, many absconders from other employments, many whose evil-doings in their native place have made that neighbourhood too warm for them, find, in the foreign houses of the Settlement and the Bluff, real "cities of refuge," where, if they keep tolerably close, they are safe from investigation. Next, when a convenient opportunity offers, they steal in bulk, after having during their residence abstracted in detail, and then abscond, having little fear of an arrest, as they leave little or no clue to their detection behind them. The police are complained to; but they are put upon a cold scent. They have no idea of where the missing servant came from: he is not registered in the books of the Kencho: his masters can give at best a imperfect description of him; and so he escapes scot free, and, while the police are looking for him, is, as likely as not, resuming his course of depredations only a few doors away from the house whence he last levanted.

It seems that the registry office to which we have above alluded may do much to mitigate this evil. Its managers propose to serve as intermediaries between employers and domestics, protecting, as far as possible, the interests and property of the former, and obtaining good employment and certain wages for faithful service. They do not aim at the impossible: they do not give an absolute guarantee for the honesty of those whom they recommend; but they will take such precautions as will be an inducement to faithfulness and integrity on the part of servants, and will, in the case of abuse of confidence, almost certainly lead to the apprehension of the offender and the recovery of abstracted articles. Foreign employers cannot well ask for much more than this; and the evident advantages promised them by the SHOKU TEN SHA should, one would think, prove sufficient inducement to them to give that institution the patronage and support which alone can render it useful and operative.

NIPPON NOTES.

ACCORDING to a notification lately issued by the War Department, the houses of the Governors of provincial garrison towns will hereafter be guarded by soldiers.

ON the 1st instant, a great banquet was given by Prince Fushimi-no-Miya at Nakamura-ro, Riogoku, Tokio. About one hundred and fifty army and naval officers, and many civil officials, were guests. The feast commenced at one p.m. and the convives returned to their respective homes at about ten o'clock.

A SILVER mine has been discovered in the village of Shimomura, Uwajima, Iyo (Shikoku). It is pronounced rich; and a petition for leave to work it has been addressed to the Government.

THE *Choya Shinbun* retails the following story:—When Enatsu Kanjo, a Kagoshima shizoku, who was arrested in the Uyeno Gardens during last summer on suspicion, and is now in the prison of the Tokio Saibansho, passed along the mountainous road of Sasayama in the North during last year, he found a small but curious stone by the road-side. He gave it into the keeping of a native, who lives close by. The stone became larger and heavier from month to month, and is now about three feet square. It resembles granite, and four or five men cannot move it at all. A certain Nakajima, living in Nichome, Sakumacho, Tokio, who has been deputed to take charge of the strange stone by the prisoner, will shortly leave to examine it. It is said to be luminous in the dark.

ON the 4th instant, Kameyama, of the *Hochi Shinbun*, was condemned to one month's imprisonment by the Tokio Saibansho, for having transgressed the 15th article of the newspaper regulations. Iwasawa, of the late *Toyo-kiji Shinpo* in Osaka, which paper has been suppressed on the ground that it was subversive of the peace of the country, has been sentenced by the Osaka-Saibansho to be imprisoned for thirty days and to be fined twenty yen.

AN Exhibition will be opened for the term of fifty days in the public gardens of Matsuyama, Iyo, Ehime Ken, from the 20th March to 8th May, 1878.

THE number of visitors to the Uyeno National Exhibition during the week ending the 30th November was 58,755.

THE *Choya Shinbun* says that the arsenals belonging to the War Department at Wakayama and Kagoshima are to be closed. The ammunition to be supplied to the garrisons will be sent from the arsenal of Kamono, Osaka, where five million snider rifle balls are to be manufactured.

It is rumored, says the *Osaka Nippo*, that Machida Keijiro, a distinguished rebel partizan, shot himself at the mouth of the river Yamagawa, Kagoshima, on the 25th of last month.

A LETTER from Kagoshima states that, contrary to what had been expected, the town of Kagoshima has been in great part rebuilt; and many fine large buildings, such as were not seen before the fire, are observed in the streets. When the remains of the late Governor Oyama were brought from Nagasaki, a number of shizoku and heimin received it in a respectful manner. It is said that, when the treacherous Governor was first ordered by the Mikado's Envoy to come up to Tokio, he made a will to the effect that, if he were condemned to death, his body should be buried within the grounds of his house in Kagoshima. This was done by his family and friends, who built a small

temple to his memory. The places of temporary sepulture of Saigo, Kirino, and others on Shiroyama are marked by large tomb-stones, where flowers and incense-sticks are daily offered. Good order is now completely restored throughout the entire Ken.

A LETTER from Corea, received during the last ten days of November, says that much excitement prevails throughout the country. The cause is not stated.

THE *Nichi Nichi Shinbun* says that a telegram from Nagasaki states that the Chinese Envoy and his suite arrived there on board the steamer *Kaian*, which has before visited Japan, and that the vessel left for Kobe on the 3rd instant.

THE number of visitors to the late National Exhibition at Uyeno during the 100 days ended the 30th ultimo was as follows:—

Sundays(15 cents day)....	31,604
Saturdays(8 cents day)....	159,975
Other days....(7 cents days)....	262,589

Total.....454,168

EIGHTY-FOUR cases, containing various articles, of the aggregate value of 4,948 yen, to be shown in the Paris Exhibition of 1878, have been sent to Europe per the M. M. steamer *Volga*.

ON the 3rd instant nine kuwazoku of high rank were invited to the Imperial Palace, where they were entertained at a banquet. On their leaving, the Mikado made a present of one pair of flower stands, and two rolls of silk to each of them.

THE new offices of the Home and Finance Departments are now completely built: and H. M. the Mikado is expected to visit them in a few days.

TAKINO of the Yokoska Arsenal has been appointed captain of the man-of-war *Fujiyama* in this port.

THE *Nichi Nichi Shinbun* says that about 100 state prisoners who have been arrested in the Kochi-ken, for having incited disturbances, will be sent to Tokio.

ACCORDING to the weekly statistics compiled by the Board of Health up to the 24th November, new cases of cholera in the various districts of the empire were 215; and the old ones 1,627. Out of new and old cases, 359 were cured and 142 proved fatal. The remainder were still under treatment. The entire number of cases from the commencement of the epidemic up to the above date was 12,353. Of these 6,817 were fatal, giving an average mortality of 55.18 per cent.

SOYESHIMA-TANETOSHI, ex-Minister for foreign affairs, who lately returned from China, left again for the same country in the *Saikio Maru*.

THE Japanese man-of-war *Riujo-kuwan*, which stranded off the coast of Kagoshima during the recent expedition, has been completely repaired and is expected to arrive in Nagasaki shortly.

THE 6th instant being the anniversary of the death of Go-Momozo-no Tenno, says the *Hochi Shinbun*, no sentence was passed upon criminals by the Tokio Saibansho.

Iro, *Sangi*, President of the Decoration Bureau, and Generals Yamagata, Kuroda, and Saigo attended at the Daijo-kuwan recently for the purpose of bestowing decorations on army officers.

ON the 10th instant four governors, namely those of Yamaguchi, Owake, Fukuoka, and Kochi-ken who are now in Tokio, visited the Imperial Palace.

THE *Mai Nichi Shinbun* says that the railway bridge Tsukimi at Hacchome, Takashimacho, is to be replaced by an iron bridge. The work of construction has been commenced. It is contemplated to construct one more railway line between Yokohama and Shinbashi, on which trains will run without any intermediate stoppages.

ADMIRAL Ito, on board the *Kasuga Kuwan*, has repaired to the Naval Station at Uraga.

THE *Mai-nichi Shinbun* says that a private company, named the Ki-ito Kaisha (Silk Society) is to be established in Yokohama; and that all the members of Ki-ito Aratame Haisha and other dealers, held a meeting in the Town Hall on the 6th instant.

CHOLERA cases in Tokio between the 20th September and the 3rd instant numbered 807. Of these 240 were cured: 554 proved fatal; and the remainder were still under treatment.

SMALL-POX has of late prevailed in the South-West provinces; and a case of the same disease is now reported to have declared itself in Ginza, Tokio.

A LARGE meeting was held on the 11th inst. at the Tokio Zanshi-kai-sha, where the authorities of the Industrial Departments of the various ken, and the members of the Yokohama Kaigi-kioku, met in order to discuss the subject of the production of cartons for next year.

THE opening of the Fifteenth National Bank (Nobles' Bank) took place on the 8th instant. The gates and entrances were decorated with flags and flowers in European style, and thousands of red lanterns were hung along the lower and upper stories. At 7 a.m. the managers and agents came in carriages, and at noon a number of directors and share-holders, including Sanjo, Iwakura and many other nobles and high officials assembled. At one o'clock p.m. various addresses were delivered by the directors and others. At the close of the addresses a banquet was given, during which a band played. On the following day the managers and agents of all the other banks in Tokio and members of the native press were invited to a feast.

On the evening of the 11th inst. the second meeting of the newly formed Debating Society was held upstairs in the Town Hall.

SHEEP to the number of 194, imported from Shanghai in the *Nagoya-maru*, have been sent to the pasture ground of Noborito, in Shimosa, belonging to the Industrial Section of the Home Department.

It is expected that H. M. the Mikado will visit the silk factories of Nii-machi and Tomioka in Joshiu before the end of the year.

THE *Hochi Shinbun* says that a gunboat of 1,490 tons and 1,250 horse power is to be built at the Yokoska dock. The armament will consist of one 120 pound gun, and six of 65 pounds each. The new vessel is intended to run twenty knots an hour. Admiral Akamatsu will superintend the building; and Mr. Watanabe of the Shidzuoka-ken will make the boilers and engines.

On the 8th instant decorations of the third class were bestowed upon fourteen Colonels and Lieutenant-Colonels, who were engaged in the suppression of the Civil War.

THE term of engagement between the Government and Captain Jourdan of the French Military Mission having expired, that officer has left for Europe. On the 6th instant, a farewell banquet was given him at the Nakamura-ro (tea-house) Riogoku, Tokio. He was honoured with a farewell interview with the Mikado.

THE *Mai-nichi Shinbun* says that the Chinese envoy and his suite arrived in Kobe on the 7th instant, and visited Kioto.

THE annual Exhibition in Kioto will be held next year at the Omiya palace for one hundred days dating from the 15th March.

SIR Harry S. Parkes recently paid a visit to the Gakushu-in (Noble's School) at the Kanda bridge. After resting for a short time he visited all the class-rooms for students of both sexes, accompanied by the director and others. Their Excellencies Sanjo, Iwakura, Okubo, Okuma, Kawaji, Tanaka, Kanda, Shirai, and many other high officials, arrived soon afterwards; and they and the illustrious foreign visitor dined at the school.

CHOLERA has not yet quite disappeared in Tokio; and two cases, one at Shinagawa and the other at Shira-kawa-daimachi, were reported on the 9th instant.

DURING last November the following sentences were passed by the Tokio Saibansho: 127 fines: 20 of hard labour for life: 89 of hard labour for terms between ten years and one year: 196 of hard labour for terms between 100 and 10 days: 10 of imprisonment and 3 of public exposure.

A TEMPLE of Honganji in Osaka, which was burned in a battle between the Mikado's and Tokugawa parties, is to be rebuilt on the old site, at an estimated cost of more than 300,000 yen. The work will probably be commenced in January next.

It is rumoured, says the *Mai-nichi Shinbun*, that Okuma, Minister of the Finance Department, will visit Russia next year officially.

H. M. the Mikado has received the *Daijin* and ministers, and consulted with them.

ALL the articles lately on view at the National Exhibition, which had not been sold at the time of closing, have been exhibited at No. 1, Nichome, Nagatamachi, Tokio: admission free.

THERE provincial governors, viz., Fuji-i of Hiroshima, Tomioka of Kumamoto, and Ishida of Aki at had an audience with the Mikado on the 13th instant.

MEASLES prevail in the district of Naga in the Koshi ken,

Ito, of the *Kana-yomi Shinbun*, recently appeared before the Tokio Saibansho for examination, charged with libelling a certain Sakurai.

APPLICATIONS to the Finance Department for the establishment of new banks are sixty in number.

In consequence of the great expense incurred by the Government in the suppression of the Satsuma insurrection, the commencement of the construction of the proposed new Imperial palace has been postponed until next year.

On the 12th instant, being the anniversary of the death of Kokaku-Tenno, no sentences were passed upon criminals in the Tokio-Saibansho.

THE *Hochi Shinbun* says that the Kagoshima Kencho will shortly be removed to Sakurajima.

SIX STATE prisoners from the Shiroshima ken arrived in Tokio on the 11th instant; and are in custody at the third Police Station. Arima of Kagoshima, who was imprisoned on suspicion, was released on the 6th instant.

THE Chinese cook to the British Legation, whose frenzy proved so fatal to others on the 24th ultimo, has been brought before the Saibansho for trial.

On the 14th instant about seventy prisoners arrived in Tokio from Kagoshima.

THE *Nichi Nichi Shinbun* states that two Japanese retail dealers, having been convicted of forging the labels of Messrs Bass & Co., for the purpose of selling Yokohama beer as the produce of the great English brewery, have been each sentenced, by the Tokio Saibansho, to thirty days' hard labour.

In the recent insurrection the insurgents from the two provinces of Satsuma and Osumi numbered 23,391. Of those, 2,773 were killed, 2,673 are unaccounted for, and 2,531 were wounded more or less severely.

YEBIHARA, proprietor of the late *Hioron Shinbun* suppressed some time since, who has been long in confinement, was recently brought before the special Court of the Genro-in.

GOVERNMENT Bonds for pensions to the *kuwa-shizoku* and *heimin* amount to 181,096,685 yen. Of these 32,695,610 yen bear interest at five per cent.: 26,329,479 yen at six per cent.: and 122,071,596 yen at seven per cent. Of the total, 3,268,487.85 yen are due to *kuwazoku* and the balance to *shizoku* and *heimin*.

H. E. OKUBO, Home Minister, was promoted to the rank of Shosan-i on the 14th instant.

THE *Hochi Shinbun* says:—Lieut.-Colonel Yamazawa, who was sent to Paris by the War Department to study the art of war in Europe, accompanies the Russians in their campaign against the Turks. He has endured many dangers and privations, often risking his life, and has made memoranda of his views and experiences. The Russian Ministry have bestowed a decoration on this brave Lieut.-Colonel.

CAPTAIN JOURDAN, of the French Military Mission, appeared before the Daijo-Kuwan on the 15th instant, for the purpose of receiving the decoration of the fourth class of the order of merit.

ABOUT one hundred and eighty Japanese of Osaka had received, up to the 11th instant, licenses to open places of business in Corea.

THE *Nichi Nichi Shinbun* says that, on Sunday, the 16th, being the day appointed for the rifle match arranged by Imperial army, navy and police officers, the members of the *Kido-shutakikai* (Rifle Club) assembled in the grounds of the Military College of Toyama, where the competition took place. Some foreigners in the service of the Japanese Government, and many others who are fond of shooting, arrived at seven o'clock. At eight a cannon was fired as a signal that the shooting was to commence, and a Band played while the firing was going on. A temporary building, covering an area of about nine tsubo to shelter the contestants, had been erected and was gaily decorated with the national flags and those of Treaty Powers. The prizes were conspicuously displayed in the centre of the building. At noon another gun was fired; and the match was suspended for an hour, commencing again at 1 p.m., and finally terminating at 4 p.m. Colonel Murata, the celebrated marksman won the first prize: Adjutant Taso (Murata's brother) the second; Lieut-General Soga the third.

SOME difficulty having arisen between the proprietor and manager of the *Osaka Nippo*, the publication of that paper was said to have ceased on the 4th instant. This has been since denied.

On the 17th inst. the Gen-ro-in held a special session.

ADMIRALS NAKAMUTA, Ito, and Akamatsu were appointed, on the 15th instant, a Board to consider the subject of bestowal of decorations upon naval officers.

NAEAI, of the *Yomiuri Shinbun*, on the 18th instant was fined five yen for having transgressed the law against slander.

"THE nightingale sings in the new year" is the subject of the poem to be read at the first poetical *r  union* (*Uta*) of the Imperial Household next year.

On the 15th instant, the following civil officials, who were engaged in the late South-Western War, were rewarded at the Daijo-kuwan with the decorations of that class of the order of merit appended to their names.

Kono, Judge, and Yanagiwara, *Gikuwan*, second class; Kishine, Judge, and Hayashi, Vice-Minister of Home Department, third class; Iwamura, Governor of Kagoshima, Sekiguchi, Governor of Yamaguchi, Watanabe, Governor of Fukuoka, Tomioka, Governor of Kumamoto, Kagawa, Governor of Owake, Fuhakoshi and Ishi-i, Secretaries, fourth class; Yasuda and Orita, Secretaries, fifth class.

MR. NOMURA, Governor of Kanagawa, visited the Chinese Ambassador on board the *Hoi Hon* at 11 o'clock a.m. on the 18th inst.

The number of male convicts, confined at Tsukudajima during the year ended 30th June last, was 35,318: that of female convicts, 2,279. Of these, 11,868 men and 1,700 women were discharged.

A BRIEF DESCRIPTION OF A SOUTH-WESTERN ISLAND OF JAPAN.

(From the *Nichi Nichi Shinbun*.)

The following letter is from Mr. Hiro, a Kagoshima Kencho official, stationed in the island Okinajima:—

"On the 28th August, I left the port of Nawa, Loo Choo, and arrived at the branch Kagoshima Kencho, in the island Okinaga, at about 6 o'clock on the following day. This island in ancient times belonged to Loo Choo; but in the 15th year of Keicho (1069), Shimadzu Yoshihisa, Lord of Kagoshima, acting under instructions from the Tokugawa Government, led an armed force against the Loo Chooans, defeated them and took their sovereign prisoner. In the treaty of peace which followed, the islands of Okinaga, Yoron and Tokushima, were ceded to the conqueror. In the 2nd year of Genwa (1615), a local Government was established on the island of Tokushima; and in the 4th year of Genroku (1690) a similar institution was established at Okinaga by Shimadzu. Okinaga lies between 27 and 27½ deg. N. Lat., and 8.40 and 8.48 deg. W. Long., at a distance of 390 *ri* to the South-West of Kagoshima. It is like a banjo in shape; and extends lengthways from West to East. The circumference is 14½ *ri*; and the widest part, North to South, 1½ *ri*. The number of houses is 2,846, and the population 15,638. Numerous rocks surround the island; and even at high tide the water is only four feet in depth. Therefore there is no good port for steamers or large junks; and but few junks of about 400 *koku* can be at one time in the harbours of Wahaku and Inobe. The island of Yoron lies 13 *ri* to the South: Akinaga and Toku-no-shima 18 *ri* to the North: Torishima 18 *ri* to the North-West; and the islands of Loo Choo at 20 *ri* to the South. There are no high mountains, large rivers or dense forests in the island; and the soil is of a sandy, rocky nature. In the thirty-eight villages on the island, good, fresh water can only be obtained from a few wells in some, while in others there are no wells at

all. The climate is very hot, as the island is nearer to the equator by about eight degrees than Tokio, and the thermometer registers between 81 and 82 degrees at the end of August. The islanders are honest; and both men and women formerly ornamented their hair with gold and silver pins, but of late years they have discontinued this custom. Recently the people have become more civilized, owing to the adoption of many of our own customs and manners. Among these innovations are schools, well filled with students.

The principal production of the island is sugar; and about 1,600,000 pounds are yearly exported. No rice nor other grain is to be seen. During strong winds, which visit the island once or twice a year, the waters of the sea are blown over the island, and destroy all the rice and vegetables in one night. The islanders live mostly on potatoes. Fruits, sago, and rice are considered great luxuries.

 We do not hold ourselves responsible for the opinions expressed by Correspondents.

SHOT TO DEATH.

To the Editor of the *Japan Gazette*.

DEAR SIR,—For some considerable time I have been under the impression that capital punishment was abolished in Japan for robbery; but I am, I find, very much mistaken.

On Wednesday last, the 28th November, a sailor or marine was shot on the Rifle Range, on the opposite shore of the river from Ts'kidji, at about 11 a.m., for a series of thefts which he had committed.

The whole affair seems to have been on a par with the vaunted civilization of this country. The unfortunate wretch who was to be executed (for, as I understand, the wording of his sentence was "to be shot to death") was tied to a post; and at ten ken distance, or 20 yards, the firing party was stationed. Only one man was allowed to fire at a time, in place of at least ten who would doubtless have finished him at once. The first shot fired struck the victim in the mouth, and threw him into terrible agonies; but, happily, the next shot lodged in his eye, and so ended his sufferings, the surgeon reporting a further expenditure of cartridges unnecessary waste.

I am surprised that the above should not have been inserted in the personal intelligence of the *Tokio Times*; why, any one may easily imagine.

What with the above execution, and another unfortunate having been sentenced to imprisonment for life for stealing 700 yen, as chronicled in your issue of yesterday, I can only say, with regard to the expunging of the extra-territoriality clause from the treaties, "don't the Japanese wish they may get it?"

Yours faithfully,

T.G.

Tokio, December 2nd, 1877.

"F. L." AND THE *HERALD*.

To the Editor of the *Japan Gazette*.

DEAR SIR,—In consequence of a criticism on a communication I had addressed to the *World*, which appeared in the *Herald* of the 10th instant, I on the following day wrote the subjoined letter to the Editor of the latter journal:—

To the Editor of the *Japan Herald*.

SIR,—As you have thought proper, in your impression of yesterday evening, to attribute to me an unworthy motive in addressing the *World* on the subject of Japanese loans, you will perhaps allow me to say that I purposely acquainted the editor of that journal with the fact of my being in the Japanese service, adding, however, that I was not in the confidence of the government, and had not been consulted with regard to the subject of my letter,—expressly that he might judge of the worth of the opinion I offered. That opinion I still hold, and it is possible that I may endeavour to substantiate it in a second communication, to the journal to which my first was addressed.

Yours faithfully,

F. L.

Yokohama, Dec. 11, 1877.

That letter duly appeared, but with the following Editorial note appended to it:—

[We fail to see that in our paragraph of last night any unworthy motive was attributed to "F. L.," but, on the contrary, we stated that he seemed to have a desire that the *World* should be well informed, but at the same time we stated "it would have been more explicit to let the English public know that he was an official in the employ of the government," and we added that, "had he not been so, possibly he would not have thought it worth his while taking any trouble about the matter." This opinion we of course adhere to; we had no means of knowing what had passed in any private communication to the editor of the *World*, all that we had to do with was what was laid before the public. We see nothing unworthy in an employ   supporting the interests of his employers in any case such as this, when he can fairly and honourably do so.]

Conceiving myself entitled to correct this seemingly wilful misrepresentation of my motive, I yesterday sent to the *Herald* the enclosed letter; and the Editor having refused to publish it, on the ground that "the subject is scarcely of sufficient public interest to necessitate its insertion," I shall be obliged if you will find space for it in your columns.

Yours truly,

F. L.

Yokohama, 13th Dec., 1877.

(INCLOSURE.)

To the Editor of the *Japan Herald*.

SIR,—Replying to my letter of yesterday evening, you reiterate your opinion, my disclaimer notwithstanding, that my communication to the *World* was written "in the interests of my employers" to "defend Japanese credit" (which by the by had not been attacked), and that it would not have been written unless I had been in the service of the Japanese Government, though its avowed object was to inform the English public of the spirit and temper of the Japanese people and their Government. And you can see nothing unworthy in my professing one object while writing with another, pretending to give an unbiassed opinion to the English public, the lenders, while I am really actuated by a desire to promote the interests of the Japanese Government, the borrowers. If I have rightly apprehended your meaning, it only remains for me to regret that I should have troubled myself to write to you on the subject at all.

Yours faithfully,

F. L.

Yokohama, 12th Dec., 1877.

THE *SHINAGAWA MARU* AND A DISMASTED VESSEL.

To the Editor of the *Japan Gazette*.

SIR,—In your issue of November the 23rd I to-day observed a letter from some party or parties (evidently residents of Hakodate) in which they express their indignation against the Captain of the M. B. M. S. S. *Shinagawamaru*, for not attempting to render assistance to a dismasted vessel passed by him on a voyage from Yokohama to Hakodate (supposed by them to be the *Christina*). The

following report will perhaps explain to those interested why I could not assist the dismasted vessel.

"At 3 p.m., November 14th, a strong breeze: took in fore and aft sails and hauled for the land. At 4 p.m. Hon-nami Point bore West by North at a distance of 4 miles. At 6 p.m. strong North-West gale and heavy sea running, steamer making little headway. 7 p.m. severe gale and heavy sea. Steamer fell off in the trough of the sea with her head to the North and Eastward, and would not answer her helm. Set immediately stormsails in order to bring her to; but blew the canvas out of the roping as soon as set, steamer rolling heavily, rails under, and shipping large quantities of water. At 10 p.m. a heavy sea struck the port quarter, taking away native water-closets, quarter boat, etc. Through the remainder of the night and the following forenoon wind and sea the same. At 1 p.m. gale moderating a little, and was able to bring her head to the sea, having then been going with her helm hard a starboard for 18 hours. At 3 p.m. the same day the gale increased from the Westward, the steamer again fell off in the trough of the sea and drifted in that condition. Passed a vessel with apparently nothing but two lower masts standing. She was in sight altogether 8 or 9 minutes. At midnight sea and wind moderating a little, but still strong westerly gale and high sea running. Towards morning wind and sea moderating fast, and the *Shinagawa-maru* steering course for the Tsugar Strait."

I furthermore beg to state that I never reported to any German Consul to have seen a dismasted vessel, neither did I suppose, nor did I have any reason to suppose, the same to be the *Christine*. And in regard to the great indignation felt in Hakodate against the Captain of the S. S. *Shinagawa-maru*, or any other person that, without knowing the circumstances, may feel the same, I wish to say to all those, that what they either feel or think, is entirely immaterial to me.

P. FRAHM,

Commanding

M. B. M. S. S. Co., S. S. *Shinagawa Maru*.
Hakodate, Dec. 10th, 1877.

THE RAKU ZEN KAI.

To the Editor of the *Japan Gazette*.

DEAR SIR,—Having read with great interest your comments upon the prospectus of the above named Society, as well as the very eloquent appeal of that article itself, I am led to write a line asking the Society through your columns to give to the public some more full and clear statement of its foundations, its history hitherto, and its present objects and purposes, as well as its plans and prospects for the future.

If I mistake not, the Society has been in existence for some three or four years, and no doubt the foreign community would like to know what amount of funds has been raised in that time from native or foreign contributors, as well as what other work has been accomplished during that time; and also what amount of funds will yet be needed to enable the Society to begin to build, and how much to complete the erection of the projected Asylum; and how much to furnish and provide it with officers and all necessary appliances; and also what proportion of the necessary fund will be contributed by the Japanese Government? A full and a public reply to each of the above questions, as well as any other information upon this very interesting subject, would doubtless prove to be the very best appeal which the promoters of this great

work could make to the pockets of foreign residents in Japan.

Hoping that you will give this due publicity in your columns, and that it will serve to bring out a full and satisfactory response, I subscribe myself,

Sir,

Yours faithfully,

A FRIEND OF THE BLIND.

Bluff, December 14th, 1877.

OSAKA.

(From an occasional Correspondent.)

December 4th, 1877.

Now that the cold weather comes on robberies are by no means scarce. I hear of several in which the thieves were armed and killed some of their victims.

The house of one of the teachers of the Eigo Gakko was entered some short time ago, and property, consisting of electro-plated ware, boots, &c., carried off. In this case, however, the servants must have been in league with the thieves, as two dogs, that were in the next room to that from which the articles were stolen, did not make the slightest noise.

The master of a cook-shop here, had a dispute with his spouse, in the course of which the former seized some article and threw it at the latter, striking her in the face, from the effects of which she died. The husband I hear has received ten years in which to think over the matter.

There has been exhibited in one of the native hotels a lobster of rather large size. Its dimensions are as follows, length of body two feet: from the extreme end of antennæ to tip of tail four feet and a half.

Our Municipal Council has come to the conclusion that the services of the European constable can be dispensed with, and consequently the latter has received notice to that effect. Whether or not this is a step in the right direction, remains to be seen. It is not long since that officer was fetched out of bed to arrest a drunken soldier, who, flourishing his sword, kept five native policemen at bay, but who was soon taken by the big "bobby" by the scuff of the neck, and marched off to prison. I heard in Kobe the other day that very likely the duties of constable and secretary will be performed by one individual; but of course I can not vouch for the truth. This, however, some of the property owners assert, namely that they will protest through their respective consuls against paying police rates any longer. They rather prefer employing a *mamban* to guard their premises.

Early on Sunday morning last, a fire broke out on board a junk, anchored in the Kidzngawa, laden with about 800 *koku* of oil, of which nearly all was destroyed.

The weather during the last two or three days has been very mild.

HIOGO.

We see that the *Osaka Nippo* is alarmed at the number of Japanese Banks that are being established and the consequent flooding, which it foresees, of the country with paper currency. But is everything that is started in the shape of a Bank presumed to have the right to issue paper money? This is only one part of Banking business, and a part that is very severely held in check in some of the most advanced nations. If the shizoku choose to start Banks all over the country with their capitalised pensions, the Government, (which is itself a great issuer

of paper currency) should certainly see that restrictions are placed upon the tendencies of these speculations towards what we may call the least legitimate of all Banking operations. Indeed the principal matter for surprise is that the Government should have considered it advisable to allow all these Banks to enter into competition with it in the paper money market.—*Hio-go News*.

According to the *Nippo* some Russian officers have been treated with marked politeness by the Osaka Fucho. Russia was the latest of the so-called "civilised" powers to enter into such diplomatic relations with Japan as to station a Minister of Tokio, but he, of all the foreign Ministers, was the first decorated by the Emperor of Japan. Are officers of any other nationality ever treated with the studied politeness extended to Russian officers? The Japanese seem to live in constant terror,—founded or unfounded, we do not at present pretend to say—of the encroaching propensities of their powerful neighbor: is that the secret of decorations and dinners? If so, we are glad of it in one respect, as we may by inference see in it an unconscious testimony to the fact that however acrimonious the arguments may become between Japan and other first class powers, she has no fear that any of them will descend to the use of their physical strength to add weight to their arguments on any question of the adjustment of international relations.—*Idem*.

An occasional correspondent at Kioto sends us the following: The balloon experiment which I notified you about came off on the 6th instant, nearly as per programme, but unfortunately the books which had so large a share in furnishing this rare spectacle to the people of Kioto, although quite correct in everything else, neglected to give sufficient data on which to base an estimate of the probable time required for inflation, and so the principal feature of the spectacle, instead of coming off at 9 a.m. as advertised, was unavoidably delayed until 2 p.m. but with the usual good nature exhibited by the Japanese people on such occasions, the immense concourse of people, probably the largest ever witnessed in Kioto, waited patiently. In the interim, while the larger balloon was being inflated, four or five smaller ones, decked with gay flags, were started and ascended well, sailing away in the direction of Tamba and Wakasa. Finally, at 2 p.m. the patience of the multitude was rewarded by the larger one getting under way, but it was found on trial that the gas was scarcely sufficient to render the balloon buoyant enough to take up any of the genus *homo*, and so a life sized wooden image was substituted, and the balloon, decked with the national and Fu flags, was allowed to ascend to the height of about 600 or 700 feet. "See how the poor boy holds up his head," remarked an old lady near me. "For fear he will get dizzy-headed by looking down, poor thing!" remarked her companion, *sotto voce*. They were evidently laboring under the impression that the "poor boy" had actually gone up in the balloon, and so were many others, but some there were who were in the secret, and confessed to considerable disappointment, supposing, as I heard one remark, that the balloon with its human freight would be allowed to take its liberty and not be tied down to the earth like a "big kite." As a first attempt it may fairly be considered a success. Fifty thousand tickets were sold, and as the expense turned out to be considerably less than was anticipated, the Chingakko will be nothing out by the experiment.—*Idem*.

HAKODATE.

November 19th, 1877.

THE M. B. M. S. S. *Shinagawa Maru* and the German three masted schooner *Friedrich* arrived on the 17th, both from Yokohama. The *Takachiho Maru* which takes this, is circulated to leave at 4 p.m. to-day (19th). The *Shinagawa Maru* reports having passed a dismasted vessel in Lat. 41°15', Long. 142° 40' on the evening of Thursday, 15th, and apparently in want of assistance. The Government refused to send out in search of the disabled vessel. Great indignation is felt here against the Captain of the *Shinagawa Maru*, for not attempting to render assistance to the dismasted ship.

Range of temperature 27° @ 57°. Weather very unsettled and boisterous. Considerable snow has fallen during the last week. The first fire of the season occurred on the night of 14th: it lasted about two hours, destroying about 140 houses. Cholera cases are decreasing.

December 3rd, 1877.

VESSELS IN HARBOUR:—M. B. M. S. S. *Suminoye*, loading for Yokohama. M. B. M. S. S. *Genrio*, Kait. S. S. *Hakodate*, Brit. S. S. *Dragon*, loading for Shanghai. Am. ship *Messenger*, loading for Yokohama. Ger. 3-masted schooner *Friedrich*, loading for Shanghai. Ger. barque *Christine*, loading for Shanghai. Jap. brigantine *Toyo*, and 12 Japanese schooners. Kait. S. S. *Komei* running between Awamori and Hakodate.

Nothing further has been heard of the dismasted vessel passed by the *Shinagawa Maru* on the night of 10th ulto. The *Shalio Maru* fell in with a dismasted Japanese schooner on her way up from Yokohama last voyage, and towed her into Miako. The *Elisabeth* also picked up a dismasted schooner in the strait and brought her in here. The Russian gunboat *Aleut*, was lost on the west coast of Yesso near Esasi on 23rd last month. She was bound to Vladivostock from Nicolaviski, but running short of coal was trying to make this port for a fresh supply. On account of head winds she anchored near Esasi, and, whilst lying there, the wind suddenly shifted and blew heavily, causing her to part her cables, when, to save life she was beached. The Government despatched the *Hakodate* to bring the wrecked people on here and made all preparations for housing them; but we hear it is the intention of the crew to remain near the wreck till the arrival of one of their own men-of-war to take them away.

Range of temperature since 20th November, 31° to 53°. Weather unsettled. The second fire of the season broke out, on the morning of 29th ultimo, at Funabacho, and destroyed some thirty houses and godowns.

December 15th, 1877.

THE Russian gun-boat *Abrek* left for Vladivostock on the 3rd instant: the British barque *Hilda*, and the German barkantine *Julianne* for Shanghai on the 12th, and the American steamer *Courier* for Kobe on the 14th. The British steamer *Dragon* left for Shanghai via Nagasaki on the 7th, and the *Friedrich*, German barkantine, for Shanghai direct on the 8th, the *Christine* following on the 13th.

Range of temperature since 3rd, 27° to 49°. Weather unsettled and variable: occasional snow and rain.

H. I. R. M. S. *Abrek* took away from the wreck of H. I. R. M. S. *Aleut* at Setanai, west coast of Yezo, part of the crew, leaving two officers and eleven men in charge for winter, and, owing to bad weather, also a detachment belonging to *Abrek*. She has gone to try and communicate again with the party ashore.

THE LOSS OF THE "QUEENSBERRY."

An inquiry into the loss of the British barque *Queensberry*, Captain Hennings, was held at the Harbour Master's Hongkong. The Court was composed of Mr. C. May, Police Magistrate (president); Captain Thomsett, R.N., Harbour Master; Captain McMurdo, Government Marine Surveyor; Mr. T. Jackson, Unofficial Justice of the Peace; and Captain Clyma, of the British ship *Oneida*.

FINDING.—"We find that the British bark *Queensberry*, official number 16,928, Thomas Hennings, number of whose certificate is 89,877, was totally lost on a reef lying off the S.W. coast of the Island of Palawan, in the China Sea, on the 13th October last, while on a voyage from New York to Yokohama with a cargo of petroleum oil.

"We find that the chronometers, by which the ship was being navigated, were of a most untrustworthy character, and their incorrectness contributed to the loss of the ship.

"We find that the master, in endeavouring to avoid the shoals on the western side of the Palawan Passage, kept too close to the shoals on the eastern side.

"We find that the master, not being certain of his distance off shore, neglected the precaution of trying to obtain soundings.

"Considering the great sufferings which the master underwent from the time the *Queensberry* was lost to the time when he was able to obtain assistance at the island of Balabac, a period of six days, the Court do not feel disposed to direct the suspension of his certificate. In lieu thereof the Court hereby severely reprimand Thomas Hennings and caution him to be more careful in the use of the lead.

"The Court take this opportunity of calling the attention of the Government to the kindly and generous manner in which the officers of the Spanish Government at the Island of Balabac received and treated the shipwrecked crew of the *Queensberry*. They also call attention to the kindly behaviour of the natives of the Island of Palawan, who readily supplied the crew with such provisions as it was in their power to give them.

"Given under our hands at Hongkong this 29th day of November, 1877.

"C. MAY, First Police Magistrate.

"H. G. THOMSETT, R.N., Harbour-Master.

"T. JACKSON, Unofficial Justice of the Peace.

"R. MCMURDO, Govern't Marine Surveyor,

"S. CLYMA, Commander Brit. ship *Oneida*."

—*Hongkong Daily Dress*.

From the *Osaka Nippo*:—

A merchant of Bingomachi, Osaka, went down to Nobeoka in Hiuga to sell goods, made the acquaintance there of a man about 30 or 36 years of age and lodged at a hotel with him in Hosojima on the 17th October, by which time he had collected yen 3,900. When he woke in the morning his money bag and his companion were both missing, the hotel keeper informing him that his friend had gone away early. The merchant gave information to the police, and the thief, who was found to belong to Oginura in Choshiu, was arrested, but the merchant could not recover his money. The editor sapiently warns travellers to beware of their companions.

On the 10th two Russian corvettes arrived at Kobe and some Russian naval officers have been up to Osaka, where they were entertained at the Fuchō, after which they went to Tennōji, Sumiyoshi, the castle, &c. It is said they will visit Saikio and Lake Biwa.

LAW REPORTS.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, December 5th, 1877.

NOGUCHI YOHACHIRO vs. H. COOK.

The plaintiff claimed as due to him by the defendant the sum of \$300, the balance of purchase money for three spars which had been sold for \$700.

The hearing of this case commenced on the 28th of last month, but, as neither party were ready for trial, His Honour postponed it until to-day.

The first witness examined was the plaintiff, the substance of his evidence being that, in November last year, he sold to the defendant three pieces of timber for 700 yen, and received 400 yen on account. The logs were taken delivery of by the defendant, and the balance due had never been paid. There was no written contract, as he did not think it was necessary to have one, seeing that cash was to be paid on delivery. Witness entered into details as to how he came to sell the timber to the defendant, by which it appears that he first asked 825 yen, but was ultimately induced to come down in his price to 700 yen, providing that cash was paid there and then. This Mr. Cook agreed to and produced 400 yen and 300 dollars, but plaintiff objected to the dollars as he would lose \$6 by their acceptance. It was ultimately agreed that defendant should take delivery of the timber and bring 300 yen at that time. As the plaintiff could not remain in that place he instructed a friend of his to give delivery of the timber and take the 300 yen. He afterwards received a letter from this friend, stating that Cook had taken the timber but had not paid the 300 yen, whereupon he went to defendant and asked him why he had not paid the money. He was answered that the timber was not sound, and was requested to go and inspect it himself. This he did and observed a flaw in one piece of the wood, which he did not know was there when he sold it, and which had been made apparent by the carpenters working at it. Plaintiff represented to Mr. Cook that as the logs were large ones it was impossible to know that they were unsound inside at the time they were sold: that Mr. Cook had examined them himself and found no flaw until the carpenters commenced to work; and he therefore requested the money to be paid as per agreement, which Mr. Cook refused, so the present action was taken.

In answer to questions put by His Honour, the witness stated that he had asked Mr. Cook personally for the money; and that as the timber was large he told Mr. Cook at the time that he could not guarantee that the logs were entirely sound inside.

The defendant stated that both the plaintiff and his friend had guaranteed the sticks to be sound.

To this the witness gave an unqualified denial, and stated that it would be impossible to guarantee that the inside was sound when there were no flaws visible on the outside.

Mukaide Kankichi, a witness on behalf of the plaintiff, was called, and testified to the delivery of the timber to Mr. Cook's coolies. He repeated a long rigmarole of a conversation he had with Mr. Cook, the substance of which was that Mr. Cook had not brought the money with him and had requested witness to come to Yokohama by

the 7 o'clock train the following morning and he would pay him then. This he agreed to. Witness came to Yokohama the following morning and was told by Cook that one of the logs had been landed and found to be in bad condition, therefore he would have to see the principal person in the transaction. Mr. Cook then paid him three dollars for expenses.

His Honour asked Mr. Cook if he had any questions to ask the witness and he gave a reply which has been given on more than one occasion of late in reference to Japanese witnesses, viz: that he did not know the person who was then giving evidence.

On the witness being cross-examined by His Honour it turned out that he had only been present on the occasion of the delivery of the timber, but that it was some one else who had actually done the business.

The defendant was then examined and reiterated his statement as given in our report of the first hearing, viz: that he had purchased the timber for 700 yen on the understanding that it was sound, and that he was to pay the 300 yen after delivery. Two of the logs were eventually found to be entirely decayed inside, and the spars were now not worth a dollar more than the 400 yen which had already been paid. He bought them for masts for the *Delta*, but as they could not be used for that purpose, they were still lying about; and in consequence of being disappointed in this timber he had been put to a great deal of expense. He had transacted a good deal of business with the Japanese, but never before had trouble, for if a stick turned out to be bad, the timber merchants usually took it back or reduced the price. Moreover, with regard to the present transaction, the plaintiff had promised in July to return the 400 yen and take back the logs, but from that day until this morning he had not seen him.

His Honour asked the attorney, who appeared to conduct the case for the plaintiff, if he had any questions to ask the witness. He rose to do so, but evidently did not understand what was required of him as he commenced a speech, so His Honour stopped him and conducted the cross-examination of the witness himself, dwelling mainly on the alleged statement of the defendant that, in July, the plaintiff had agreed to take back the logs and return the money.

The plaintiff was then asked what he had to say on this question, and stated that Cook had made such a proposal to him, but that he did not agree to it.

For the defence Mr. Cook called Takeda Kesaburo, who, he said, was present on the occasion of the contract being made. This witness stated that there was no written agreement, but that it was verbally understood between the parties that the timber was to be good and sound. Mr. Cook said at the time that there might be a flaw in the timber, therefore he would pay 400 yen then, and the balance afterwards, if there was no flaw. The plaintiff and his friend both asserted that the wood was perfectly sound, but gave no particular guarantee as to its quality.

His Honour asked Mr. Cook if he was willing to give up the spars on the return of the 400 yen, and received a reply in the affirmative. The question whether he would take back the spars and refund the money, was put to the plaintiff, who declined to accept the proposal as some time had elapsed since the contract was entered into and the value of timber had depreciated.

The plaintiff's attorney was then asked if he had any further witnesses, and speaking

as though his words were frozen by the chilly atmosphere of the room as soon as they left his lips, finally said he had no more to say.

His Honour then informed him that he should deliver his decision on the evidence already before him. He then gave the following

JUDGMENT.

Upon the evidence of Takeda Kisaburo I find that the agreement was that the balance of 300 yen was not to be paid until it was seen that the wood was sound; and as the whole of the money was payable for sound timber only, plaintiff is not entitled to recover. I do not think there was an acceptance of the timber. The witness Mukaide Kankichi, when he called the morning after the timber was laid down to receive payment, was informed that the timber was unsound and refused payment. The unsoundness moreover, could not have been discovered earlier. The defendant is therefore entitled to rescind the contract and to return the wood and recover the amount paid, or to set off the depreciation, which, upon the evidence of Mr. Cook, I assess at 300 yen. The plaintiff, however, declines to pay the money and receive back the timber. To give him, however, another opportunity of doing so, the order shall be that, upon the payment by the plaintiff of 400 yen into the Registry of this Court, within ten days from this date, the defendant shall thereupon forthwith deliver up the wood to the plaintiff; but if the plaintiff shall fail to pay the said sum of 400 yen within ten days from this date, judgment shall be for the defendant.

It is to be observed that two persons who could have given evidence as to the agreement have not been called. One of these ought to have been called by the plaintiff, that is the timber merchant through whom the agreement was made; and one, Mr. Pagdon, ought to have been called by the defendant. But although the case was adjourned from the last day especially to allow both sides to call all their witnesses, they have chosen to come and have their case decided upon the evidence now before the Court, and it has therefore been decided upon that evidence.

Wednesday, December 5th, 1877.

FUKUZAWA KOJIRO vs. THOMAS ROSE.

This action was brought for the recovery of a sum of \$488, the value of a certain number of hammers which had been made by the defendant, and were alleged to be inferior to the quality stipulated for in the contract, and which sum had been paid for them. For a breach of the contract, the plaintiff also claimed \$1,000 damages.

The hearing was resumed to-day from November 29th.

E. M. Neale was called as a witness for the defence, and testified to the quality of the hammers produced in Court being good; and said that he would prefer iron hammers, faced with steel, to hammers made entirely of steel, for general purposes.

The plaintiff stated that the sample hammer was made of steel, and if the others had been made of the same material there would have been no trouble.

The witness then requested leave to test the hammer in question, and, after having done so, pronounced it as his decided opinion that the body was of iron and the facings of steel. He then tested the English made hammer, which before he had pronounced as most probably steel; and, after the test,

gave as his opinion that the body was of iron and the facings steel.

In answer to a question put by His Honour, the witness stated that if he saw the words "cast steel" on a hammer, he should not expect that the body of the hammer was of steel, unless the Maker's name and the word "warranted" was on it; and it was customary in the trade to call an iron hammer with steel facings a "cast steel hammer."

James Sawyer, an engineer, was the next witness called to give testimony respecting the hammers, and pronounced the English made hammer as made of malleable iron with cast steel facings. The rest of the witness evidence was, in the main, corroborative of the testimony of Mr. Neale.

James Huggins, of 119, was next called, and gave similar testimony to that of the two previous witnesses, adding that it was seldom hammers were made entirely of steel, as they were apt to split or break at the eye; and if an iron hammer did break it could be repaired, while if a steel hammer were to break it would be difficult to repair it. For durability and economy he preferred iron hammers with steel facings to hammers all steel.

Hiki Machiharu, a Japanese official from the Mining Department, appeared in place of Mr. Sassano, who had been summoned to attend, and as he had been concerned in the arrangement for the hammers, his evidence was taken. He stated that the Mining Department had no transactions with the plaintiff, and that the contract for the hammers had been undertaken by one Furuta Kunichi. The hammers were brought home, and were refused because they differed from the sample according to which they were to be made, which was of steel alone. No fine was imposed on the contractor for not bringing hammers according to contract. The hammers were simply rejected. It was agreed that they should be English made hammers; but time went on and as they were not delivered, enquiries were made as to the reason why, and the contractor said that they had not arrived from Kobe. There was no particular hurry for the hammers, but still the contractor had to produce them within a given number of days. The hammers were to be imported, and they were partly rejected because they were not imported.

The plaintiff here stated that Kunichi was simply an agent of his; but the contract was made in his, Kunichi's, name.

The witness was asked if he recognised the sample among the hammers in court, and said he did not.

Fukuzawa Kojiro, the person with whom the defendant said he had made the contract with, was examined and said that he was the plaintiff's banto and had never made any contract with the defendant, but merely went with his brother at the time the contract was made. He was then questioned as to a stamp upon a certain document produced by the defendant, and stated that it was Kunichi seal. He, the witness, attached the plaintiff's name to the document referred to.

Furuta Kunichi was put in the box and said that he was the Yedo agent of the plaintiff, and had had transactions with the Mining Department. At the time tenders were issued for these hammers, he put in a tender in his own name, but was acting as agent for the plaintiff, and his tender was accepted. He sent word to the plaintiff and it was the plaintiff who made the contract with Rose. Witness was not present on that occasion.

He knew nothing about hammers, but in this case a sample was brought and the others were to be made according to that sample. Pointing to the English made hammer he stated that that was the sample. He had not had any conversation with the defendant about the hammers, but affixed his stamp to the document.

His Honour asked the plaintiff how it was that he did not recognise the stamp on the document at the last hearing, and he stated that he had not given Furuta authority to use his own stamp.

The witness stated in cross-examination that the hammers were not rejected because they were not of English make. The reason why he packed the hammers in a cask with gunny bags was not to represent to the Mining Department that the hammers had come by a ship. He had never been with the plaintiff to the defendant's house.

Thomas Rose, the defendant, was next examined and stated his case, which was merely a reiteration of statements made before. After the defendant's examination, His Honour asked him if he was willing to adhere to his former proposal, to take back the hammers and return the money, and he replied that he was not, as he had been put to a great deal of expense and trouble through this suit being taken, and that that proposal was made before. He had no objection to a survey being made on the hammers and was ready to deposit \$16 in the Court for that purpose.

His Honour then made the following
ORDER.

Upon the defendant lodging \$16 in Court, let Mr. Geo. Whitfield be requested to survey the hammers and report to the Court on or before Thursday, the 13th December, at ten o'clock, whether the hammers in question are good serviceable hammers, and whether they are equal to the hammer now in Court marked "Matheson Cast Steel," and to attend the further hearing of the case on the 13th of December at ten o'clock, to when the further hearing is adjourned.

Thursday, December 13th, 1877.

On the 5th instant the hearing was adjourned, by the consent of both parties, in order that a survey might be made of the hammers as they lay in the plaintiff's godown, the Court appointing Mr. Whitfield surveyor.

On the sitting of the Court His Honour reprimanded the plaintiff for not attending the Court at the proper hour, and then read the following report from Mr. Whitfield respecting the hammers:

FUKUZAWA KOJIJO vs. THOMAS ROSE.

Yokohama, Dec. 11, 1877.

Sir.—In accordance with your instructions I have surveyed all the hammers made by the defendant in the above suit, and have subjected two of them, as well as the sample hammer, to minute examination. The sample hammer marked "Matheson, cast steel," I have proved to be steel throughout by its hardening on being plunged in water when at a red heat. When subjected to the same test, two selected hammers did not harden even on the faces, and I had them split in two to examine by the fracture the quality of the materials used in their construction. I find that they are made of wrought iron faced with steel; and I find that the steel used for the faces is only $\frac{3}{8}$ inches thick, and is of inferior quality, probably spring steel.

I have no hesitation in saying that none of these hammers are equal to the sample

hammer, marked "Matheson, cast steel," and that they are totally unfit for any purpose for which that hammer would be appropriate; and, on account of the thinness of the facing and the inferiority of the steel used in the two that I have split, I must pronounce them to be not "good, serviceable hammers," though some may be that much better than those tested as just to bring them within the definition of "good, serviceable hammers."

I remain, Sir,
your most obedient servant,

GEORGE WHITFIELD.

Defendant to Mr. Whitfield.—Do you consider those hammers good and serviceable hammers for any purpose?

Mr. Whitfield.—No, I do not. It is not so much the workmanship, as the material you have used, that renders them useless.

The witness then produced some pieces of steel and explained the difference between them, stating that Mr. Rose had used spring steel when he should have used blister steel.

The defendant denied that the hammers were made of spring steel, and said that the apparent difference between the two pieces produced was because the one had been worked up into hammers and the other had not; and if the latter was used it would have the same appearance as the former afterwards.

His Honour then delivered the following
JUDGMENT.

After the evidence of Mr. Whitfield I have no doubt that the hammers were not of the quality which the defendant contracted to supply. The plaintiff has not accepted them, nor (considering that he ordered them for the use of the Mining Department, and that it was necessary that they should be tested by the Mining Department) do I consider the delivery of the hammers to the Department anything more than was necessary in order to a proper examination of the bulk. The plaintiff is therefore entitled to rescind the contract, return the hammers, and recover the price he has paid for them. But there is no evidence to entitle him to any special damage. Judgment will therefore be for the plaintiff in the sum of \$488, but in order to do justice to all parties, and in view of the fact that the defendant offered before trial to do all that the plaintiff has proved himself to be entitled to, the order will be that the defendant do pay the said sum of \$488 into the Registry of the Court within ten days from this date, and that notice thereof be forthwith given to the plaintiff through the Kencho, and that the plaintiff on returning to the defendant the 139 hammers still in the plaintiff's possession within ten days after the delivery of such notice to the Kencho, be at liberty to take the said sum of \$488 out of Court. But if the said hammers are not so returned within the said ten days after the delivery of such notice as aforesaid, the defendant shall be at liberty to move to have judgment entered for the defendant. There will be no costs.

Friday, December 7th, 1877.

LECHAT vs. HOUSEAL.

Mr. Dickins applied to have the order of the 23rd November set aside and the cause dismissed, on the ground that the defendant resided out of the jurisdiction.

The Court ordered that, the defendant on paying the plaintiff's costs up to, and in-

clusive of, the hearing of this motion, within seven days from this date, the petition be dismissed without prejudice; otherwise, that the case be heard on Thursday, the 17th of January, at ten o'clock; and that the costs of this motion be paid by the defendant, with leave to file an answer within eight days.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON Esq., *Actg. Consul-Genl.*

Tuesday, 18th December, 1877.

THE PEOPLE, UNITED STATES vs. F. G. WILSON.

The accused was charged with illegally imprisoning Shinagawa Shutaro, a Japanese subject.

The complaint stated that in April last, the accused locked the complainant in a godown on lot No. 17, Yokohama, from which he only succeeded in escaping by forcing one of the iron bars of the window.

Wilson admitted the charge of locking the boy in the godown, but pleaded justification on the ground that the complainant had been found stealing nine rolls of butter.

His Honour remarked that the accused had certainly done wrong in taking the law into his own hands and locking Shotaro up. He had not wished the case to be brought into Court, but as the Kencho had insisted on it he was compelled to comply with their desire. However, considering the circumstances of the case, he did not think the accused had been guilty of a very heinous offence, and so would fine him six and a half cents.

Thursday, December 20th, 1877.

THE PEOPLE, U. S., vs. GEO. WILSON AND CHAS. SPENCE.

The accused were charged with taking liquor on board the "Alice M. Minott" and creating a disturbance on board the said ship.

The accused pleaded not guilty.

Captain F. D. Whitmore testified to the prisoners having come on board between 8 and 9 o'clock p.m. on the 18th instant, and that during the night there had been a great deal of noise and disturbance on board, and in the morning all the crew, with one or two exceptions, had been found drunk: that the prisoner Wilson had been fighting with the men and was only quieted after considerable trouble.

C. F. Palmer, first officer, testified to the same effect as the captain, and also that no boats had been alongside about the time the liquor appeared in the fore-castle, and that no liquor was allowed on board at any time: that he himself had never brought any on board, or caused any to be brought. Once a Japanese had brought some off; but witness had made him take it back again.

D. S. Powers, third officer, testified to the same effect as the Captain and first officer, and said that Spence had assaulted him at the time of the disturbance on board while he and the first officer were endeavoring to separate Wilson and Bell who were fighting: that he had seen the second mate bring liquor on board; and that it was a usual thing for the officers to have liquor on board when they could get it. He denied ever having had any himself, and stated that liquor was brought off sometimes by the tailor and shoemaker from shore.

Three seamen, Thos. Bell, Robt. Sully, and Richard Borneman, testified severally to having seen the liquor in the starboard fore-castle about 9 o'clock on the evening in

question, and to having drunk some of it, but denied any knowledge of whose it was or how it came on board; and added that they had seen liquor on board before.

This closed the testimony.

Geo. Wilson and Chas. Spence were each sentenced to pay a fine of \$10 and costs of Court.

IN THE JUDICIAL COURT AT KANAGAWA.

Before ASAINA KANSUI, Vice-President.

Tuesday, December 11th, 1877.

GEO. WHITFIELD vs. TAJIMA KIYEMON.

The plaintiff's claim is for \$870.48, balance of an account due for some saws obtained from him by the defendant.

The defendant admitted the amount claimed as being due, but, as he was a bankrupt, requested that this claim be put into the Bankruptcy Court with others.

The first hearing of the case took place two months ago, when the details of the plaintiff's version were given and published in our issue of October 11th.

To-day, Mr. Whitfield and Mr. Dallas appeared, and as soon as His Honour took his seat he requested those gentlemen to take off their overcoats. This they demurred to, as the atmosphere of the room was not at a very high temperature, and begged to be excused. However, the Judge stated that it was a rule of the Japanese Courts that all persons should take off their overcoats; intimating at the same time that, if it was too cold for them to conform with this rule, they might leave the hearing of their suit until the weather got warmer. This suggestion was not favourably received, so the gentlemen in question thought it better to submit to the rule of the Court, as, though very cold, there was no probability of their freezing to death.

The defendant was then examined relative to the contract made between him and the plaintiff, and his version differed but slightly from the statement of the plaintiff.

His Honour, to plaintiff.—Did you return \$200 to defendant on the 1st of April, 1876, as stated by him?

Plaintiff.—I returned him the sum of \$150 in the early part of that year, and the balance on the 1st of April.

His Honour.—Why was that money returned to defendant?

Plaintiff.—Because the saws did not arrive, and defendant requested to have his money back.

His Honour.—Did you make another contract on the day you returned the last of the money?

Plaintiff.—Yes: I made an agreement with the defendant that I would allow him to sell the saws when they arrived, in preference to any other person, if he would sell them fairly.

His Honour.—When did the saws arrive?

Plaintiff.—They must have arrived about the 5th of June, as the first saws were given to the defendant on the 12th of that month.

His Honour.—Did you receive \$20 monthly as interest from defendant?

Plaintiff.—We received \$20 or 20 yen monthly as part payment.

His Honour.—Why did you receive sometimes yen and sometimes dollars?

Plaintiff.—The defendant paid dollars when dollars were cheap, and yen when yen were cheap.

His Honour.—How many times did you receive \$20?

Plaintiff.—Seven. The twenty dollars were afterwards reduced to ten dollars, and we received the latter amount five times.

His Honour.—How were your receipts for the monthly payments worded?

Plaintiff.—In different ways. I cannot remember exactly, but think some were worded "Received as per agreement;" others "Received as interest on saws;" and others, again, merely as "Received payment."

His Honour, having concluded his questions, announced to the plaintiff that, as he had chosen in his petition to term the action of the defendant "fraudulent," if he wished to proceed criminally—which he must do if he persisted in stigmatising the defendant's conduct as fraudulent—he would reserve judgment in the present case until the decision of the Criminal Court was given.

The plaintiff said that he had thought the judgment in the civil case would be given first, and then, if he thought proper, that he could take criminal proceedings against the defendant.

His Honour intimated that he would agree to that course if plaintiff preferred it.

On second thoughts, however, the plaintiff elected to have the judgment in the civil case postponed until after having taken action against the defendant criminally; and announced that he would make out his complaint in the criminal case and send it into the Court.

The Court then adjourned.

Saturday, December 12th, 1877.

H. GRAUERT (as agent for the German ship *Madagascar*) vs. MIYAZAKI HAMBEI.

This was a claim for \$2,800. It appears that the defendant and others chartered from the plaintiff the German vessel *Madagascar* to proceed with general cargo to Hakodate, and from there to Shanghai with a cargo of seaweed, but they did not carry out the charter-party.

In this case was delivered to-day the following

JUDGMENT.

1st.—That the plaintiff tried to prove the responsibility of Maruokaya *alias* Araki Heibei for executing the charter party of said vessel by the following alleged facts. That, at the time of the contract, one Kikuchi Shozaburo, manager of Heibei's shop was present: that in front of that shop a notice of sailing of said vessel was hung up, and that said Kikuchi Shozaburo, had told, in presence of one R. Bleifuss, the witness for plaintiff, that he acknowledged the contract. Miyazaki Hambei, the defendant, also stated that the contract was so made on having consulted with Kikuchi Shozaburo, manager for Maruokaya. On the other hand, said Kikuchi Shozaburo stated that he was present at the time of making the contract to see how the matter was going on, and that he had hung up the sailing notice in his shop only for the purpose of inviting passengers and to gather freight, but of course not to show that the vessel was chartered by his shop; also that he never said, in the presence of one R. Bleifuss, that he acknowledged the contract.

Thus, there is no proof to show that Kikuchi Shozaburo was concerned in the contract, nor evidence that the contract in question was Maruokaya *alias* Araki Heibei's own. Consequently the above said allegations, both plaintiff's as well as defendant's, are not allowed.

2nd.—That the plaintiff claims from both Maruokaya *alias* Araki Heibei and Miyazaki Hambei, the sum of two thousand eight hundred dollars (\$2,800), but that if said Miyazaki Hambei be only the manager of

Maruokaya, then the latter (Araki Heibei) alone should pay him the said sum. From this it appears that at the time of contracting, the plaintiff did not know whether the contracting party was one person or two. But the said Miyazaki Hambei is not shop-manager for Araki Heibei, nor is he agent for him, and therefore Araki Heibei alone is not obliged to pay the sum claimed. Besides this, there is no proof that the said Araki Heibei was connected with the contract at all. Upon these grounds it is decided that the contract has been made by the plaintiff with Miyazaki Hambei, who signed and attached his seal to the contract.

3rd.—That such being the case, the sum of two thousand eight hundred dollars, which are for damages for non-fulfilment of said contract, and now claimed by the plaintiff, is to be paid by Miyazaki Hambei.

Tuesday, December 18th, 1877.

W. S. CANNON vs. ITO SHIKOJIRO, NAKAYAMA TAMAHEI, AND YANAGITA TAIJIRO, Officers of the Kaigi-Kioku, Yokohama.

This was a claim for 7,685 yen damages for the prevention of the delivery of 46,600 silk-worms' egg cards, contracted for by the plaintiff.

The plaintiff's petition set forward that, on the 26th November, he bargained with a Japanese, Arai Sakichi, of Joshiu, Nakamori, for the purchase of 46,600 silk-worms' egg cards at 3½ cents each, amounting in all to 1,631 yen, and that he paid the sum of twenty-five yen as bargain money, the balance to be paid the following morning at 10 o'clock, when delivery of the cards was to be taken. As soon as he had paid the 25 yen bargain money and got the receipt for it, in rushed four Japanese belonging to the Kaigi-kioku (Silk Dealers' Society) and arrested Arai Sakichi for reasons unknown to plaintiff, thereby stopping the delivery of the goods which he had bought. As he had sale for the above cards to another party, he therefore has lost the sale of the same, and thereby sustained a loss of 7,689 yen.

The defendants' answer was to the effect that the plaintiff only purchased 25 cards and paid \$25 for them, and that Arai Sakichi was arrested for not having his cards stamped; also that plaintiff refused the cards because they were not stamped.

The plaintiff was asked if he had anything to say in reference to the defendants' answer, and remarked that he denied their statement that he only purchased 25 egg cards, as he purchased 46,600. Moreover, they also said that he, plaintiff, refused the cards because they were not stamped. If that was so, how was it possible for him to hold the receipt for the money paid? (Plaintiff then put in a letter from Mr. Andrie's, of No. 77, Yokohama.) The contract for the cards was made in a tea-house near the railway station. The bulk of the cards were there, and plaintiff paid \$25 bargain money, and took away 25 of the cards; and he was present when the policeman arrested Arai Sakichi and took him away, the defendants going with the policeman and his prisoner.

Two witnesses for the plaintiff were examined, after which His Honour informed the plaintiff, that, as it was very necessary for the policeman referred to, to be present in Court and examined, as well as Arai Sakichi, the case would be adjourned for the present and he would receive notice through his Consul when it would be resumed.

PROSPECTUS

OF THE

SOCIETY

FOR THE

PROMOTION

—OF—

CHARITABLE OBJECTS.

MANIFESTO OF THE SOCIETY.

ALL men are endowed with the disposition to do good; in this respect the distinctions of educated and ignorant, sage and simpleton no longer hold.

Yet though this disposition exists, its reality cannot be credited, unless it assume some form of action, and amongst these many forms none takes precedence of that which goes about to support the indigent and infirm, or to succour and educate the deformed; for those gather from the precepts of piety and patriotism moral strength and heart healing, while these, despite their physical infirmities, taught how to become useful members of society, develop powers of diligence and perseverance that ultimately place them in positions of independence.

Accordingly in all civilized countries, there are poor-laws, as well as institutions for the succour of the blind the mute and the insane, maintained either by the government or by private contribution, so that "the lamp of charity glowing overhead, and the breath of benevolence breathing through the land," the very culminating point of philanthropy has been attained.

Now it has hitherto been the custom in our country to leave to the government the execution of all works of charity. Private contributions have never aimed at more than the celebration of festivals or the achievement of pilgrimages, while the nobility and the wealthy have only subscribed to the building or decoration of the temples. But now in these days of universal reform, the people also must consider what effort they can make to further the good work, and in the same spirit that evoked their contributions for other purposes of old, must set themselves to become active members of the new commonwealth.

It behoves us, who are fortunate enough to be men endowed with hearts that guide us to the good and strength to follow this guidance, not to squander the great gifts of a beneficent Creator, but each in our several spheres to perform the duties that fall to our lots with patience and unflinching perseverance, so that, strong in truth and unanimity, we may achieve the purpose of our nature in the exercise of the right.

Did even those, and they are not a few, who—steeped in indolence and lust, wasting their money in idle pursuits, lulled into an evil dream by voluptuous pleasures, or devoted to quarrelling and injustice—know nothing of the priceless pleasures begotten by work and well-doing—did even these turn their eyes honestly inwards and reflect, they would see that the bestowal of even a small alms on a deserving person gives a finer satisfaction of well-doing to the giver, as

well as a thousand times more joy to the recipient, than the lavishing of large sums on unworthy objects.

Western philosophers say that "A man's nature is written in his account-book," and verily it is so!

We then, stirred by the example of the earnest workers of the world, and with the hope that our united action may achieve something for the general good, have formed ourselves into this "Society for the Promotion of Charitable Objects."

Our general aim is to collect funds for charitable purposes, and our especial one to establish an institution for the training and education of deformed persons, a want which is at present entirely unsatisfied.

As the halt and the maimed are a burden and a care to the whole community, so the education that makes them independent, confers a universal benefit. This fact particularly recommends their case to the consideration of thinking men, and ought also to induce us who are blessed with the possession of all our faculties, and who have food and clothes in abundance, to spare a little for the less fortunate by curtailing our own wants. The cripple is indeed physically imperfect, but his moral endowments are none the less complete, and if every ethical code, whether ancient or modern, teaches us that it is the duty of a humane government, by educating these faculties, to gain admission for the afflicted to the fraternity of his fellow-men, how much more does such a principle accord with the dictates of that Providence, whose unerring hand, meting out blessing for the just and bale for the evil-doer, has written beyond the reach of all doubt this promise, "Virtue toiling in the darkness shall be rewarded in the noon-day". That this is the creed of all Christian countries it is unnecessary to say, when philanthropy is the main article of the tenets of Buddhism, and charity the cardinal duty of a Mahometan.

For these reasons then, and because our country is now steadily launched upon the stream of progress, we have formed this Society whose aim is the devotion of all its members' energies to the consummation of benevolent ends; and though we are beholden to the Government for its countenance and moral support, we shall not be dependent upon it, but by the aid of general subscriptions shall endeavour to achieve some work worthy of the State's reform.

We have held many meetings and have decided to devote our energies to the establishment of a college for the blind: and since we see not a few good men who, with the ability and volition to do well, are yet awaiting some opportunity, we, combining our strength, small though it be, have formed this project, hoping nothing more than that it may afford an outlet for the benevolent energy of our countrymen.

None who are physically deformed ought to escape our pity, but we elect first the blind, because compared with other countries our own has a particularly large proportion of them, and also because an apt opportunity just now presents itself.

Follow-philanthropists! we pray you, give us your confidence, and entrust to us any money you propose to devote to charity. We shall either allot it immediately in alms, or else put it by as capital, and apply the interest to the education of the deformed, that these, becoming useful members of society and intelligent units of the commonwealth, your noble aims may have fair fulfilment, and your good deeds large development.

We fifteen men shall form the nucleus of this association, and undertake the duties of management, month about; but what we most earnestly desire is that all the benevolent persons of our country, without distinction of rank or position, should join us and help us where our strength fails, or direct the affairs of the society in our stead.

And now one word in conclusion.

Having put our hands to this work we have sworn solemnly that we will never abandon it whatever calamity overtake us. The proverb tells us, "Money is the hand-maid of mercy," and "Heaven the guardian of virtuous aspirations." What fear then that we, lightly misapplying your money, should frustrate the purpose of charity and paralyze the agent of benevolence!

Names of the Members.

T. IWAKURA.	H. MAYEGIMA.	K. ATSUMI.
T. TAKIYA.	M. MASUDA.	G. KISHIDA.
S. TSUDA.	M. FURUKAWA.	M. SHIMAZI.
M. NAKAMURA.	A. KOMATSU.	Y. SUGIURA.
C. URATA.	S. O-OUCHI.	Y. YAMAOU.

N. B.—The above are given in Japanese alphabetical order.

OBJECTS OF THE ASYLUM FOR THE BLIND.

The aim and wish of the founders of this Asylum is to develop the mental resources of the blind, and teach them arts and sciences which may enable them to become independent members of society. The following is an epitome of the principal practical means proposed for this end.

I.—All those admitted to the asylum will be called pupils, and it is to be clearly understood, as a fundamental principle of the institution, that it is intended to assist the industrious, not the indolent blind.

II.—The heads of instruction will be divided into two classes.

Class I.—To comprise instruction in literature by means of raised type, oral instruction in physics and classics, instruction in singing and playing on musical instruments, Japanese and Foreign, and instruction in trades adapted to the sex and physical condition of the pupil.

Pupils entering this class not to be more than 17 years of age, those who pay their own fees, however, excepted.

Class II.—To comprise, in the main, instruction in handicrafts, with oral instruction in morals every holiday.

Pupils entering this class not to be more than 40 years of age, those who pay their own fees, however, excepted.

III.—Food, clothing and all other necessities will be provided from the funds of the association for the free pupils, but the proceeds of the sale of their work while under instruction will be added to the capital of the asylum; any surplus being, however, placed to the credit of the individual, and the aggregate handed to him when he leaves the asylum.

IV.—Pupils will be admitted on payment of such fees and honoraria as may be determined by the members of the society; the amounts, however, in every case to be minima.

V.—The number of pupils, whether free or on payment, will be regulated by the decision of the members, in accordance with the capabilities of the building, and the condition of the funds.

It appears from an item translated from the native journals into our Nippon Notes that the Government has at length instituted an inquiry into the "assassination" allegations, which played so important a part in the commencement of the recent Satsuma insurrection. Nakahara and his comrades of the police force, who assert that, under severe torture, they confessed to their rebel judges that they had been ordered by a high official of the Government to murder the then Marshal Saigo, are to be brought to trial on a charge of bearing false testimony. For the credit of him whose character has been so seriously impugned it is to be hoped that the investigation will be both a searching and an open one. If the men on trial can, as they probably will, establish that they lied the lies put into their mouths by their tormentors, to whom they furnished a plausible colour for revolt and an excuse for Saigo's participating therein, they will do justice to the defamed Minister. In that case, however, it would be the extreme of inhumanity to punish the poor wretches from whose agonies the calumny was wrung, and who having, as most other men would have done, yielded to the weakness of human nature, have been more than sufficiently punished by their tortures in the first instance, and their subsequent regrets. Nothing but the sincerest compassion can be felt for them.

The other day the Tokio papers called attention to the conviction of two men, and their punishment for forging Baas & Co.'s labels. The sentence of thirty days' imprisonment was totally inadequate to the offence; and shews how lax, still, are some of the notions of trade morality prevailing even in high official native quarters. Nevertheless the arraignment, at all, of the culprits, was a step in the right direction; and we hope will be followed by strenuous efforts on the part of the authorities to put a stop to the glaring, and all but open, system of forgery of trade-marks and tokens, prevailing in this country. It is not only the firm whose labels are falsified which suffers. The consumer is equally defrauded.

We have been able to ascertain the following information, which may perhaps give some clue as to the probable fate of the missing otter-hunter *Caroline*, a small Danish schooner owned by Mr. P. Claassen of this port. Our informant, who was on board the British schooner *Ottosei*, states that the *Caroline* left Clam Bay, Chikotan, on the morning of Friday 19th October, bound for Yokohama with a catch of some 180 skins. The *Ottosei* left some two hours later, bound for Hakodate, and in the evening, at about six o'clock, sighted the *Caroline* off the south end of the island heading to the south-west. A fresh northerly breeze was blowing at the time, which gradually hauled to the eastward, and increased to a moderate gale the following day. On Sunday, 21st, it blew one of the hardest gales the Captain of the *Ottosei* had ever witnessed during an experience of fourteen years on this coast.

In this blow the *Caroline* was most likely lost, probably by capsizing.

There were sixteen hands, all told, on board, viz: Captain Miller, J. Keel, Metzner, one other Eurojean, a native of Urup, and eleven Japanese sailors.

When the vessel left Chikotan she had food only for about ten days; so that, even if she weathered the gale with loss of masts and sails only, her crew must long ere this have died of starvation.

JUDGMENT was given yesterday afternoon by Mr. Acting Law Secretary Wilkinson in H. B. M.'s Court, in the case of Bradfield v. North, for the sum of \$3,000, the amount claimed, less \$977.90 and interest at 10 per cent. Interest on \$3,000 from 30th June, 1876, and on \$977.90 from 30th November, 1875, calculated to 31st December, 1877, when the amount must be paid. Defendant to pay costs of suit. The Court, then, orders, that defendant pay \$2,268.30 by the 31st instant, with costs of Court, less taxed costs of counterclaim to 12th October last.

FAVORABLE advices continue to be received from London as to the condition of the English and French silk markets. The consequence is increased activity in Yokohama and a steady rise in prices. The *Mai Nichi Shinbun* says that "rates, which were between four and five hundred yen at the commencement of the season, have now touched eight hundred yen, and are still advancing." The last mentioned figure has been reached for filatures; and this is probably what the writer means. \$620 have been paid for other sorts.

THEIR EXCELLENCIES the Chinese Envoys paid an official visit to H. B. M. Consul this afternoon.

THE Prime Minister has issued a notification announcing that cotton-netted shirts and drawers of native manufacture may be exported duty free till further notice.

THE silver mines of Ikuno, in the province of Tamba, are reported by a native journal to be in a very flourishing condition; and, lately, to have furnished the Osaka mint with 2,800 pounds of the metal.

THE Chinese Ministers did not return to their lodgings on board the man-of-war last night, but took advantage of the proffered hospitality of the Chinese Navigation Co., who had provided sleeping accommodation for their Excellencies. We hear that, after all, Ho and Chang will stay for a few days longer in Yokohama, and will reside at the house prepared for them by the Kencho, near the Railway Station.

WE have to record a very sad event which happened yesterday evening in Tokio, the suicide of Mr. F. C. Hayes, formerly a Secretary in the Mining Department. Mr. Hayes had been seriously unwell for some little time previous to his death, and was wholly confined to his bed for the last few days, during which time he lay in a very precarious and excited state. No one, however, could have apprehended such a catastrophe as his suicide. It would appear, now, from what is known by those who were about him in his illness, that the anxiety of business had so wrought upon his mind as to cause a temporary derangement which led him, at a moment when no one was near, to shoot himself through the head with his revolver. An inquest was held this afternoon on the body at the Yedo Hotel.

AN inquest was held at the Yedo Hotel in Tokio yesterday, on the body of the late Mr. Frederick Clancy Hayes, before Mr. H. S. Wilkinson, H. B. M.'s Vice-Consul officiating at Yedo, and Messrs. W. B. Mason, G. E. Gregory, and John Crosby, Jurors. The verdict returned was, "that deceased shot himself while in a state of temporary insanity."

ON the 18th inst. at eight o'clock a General Meeting of the Tokio Athletic Club was held at the Seiyoken Hotel, when the Secretary's report for the past year was laid before the members. From this it appears that the Club is in a flourishing state, pecuniarily and otherwise.

The officers for the ensuing year were elected as follow:—

Committee.—Messrs. F. W. Strange, F. Prowse, H. J. Gorman, W. B. Mason, and E. B. Paul.

Secretary and Treasurer.—James Marrable.

We understand that a telegram was received yesterday (12th inst.), saying that Mr. French, Chief Justice of Sierra Leone, has been appointed Chief Judge in China. Mr. Goodwin is to return to Yokohama.—*N.-O Daily News*

An order was sent to London last week, by telegram, to buy 250 Hongkong and Shanghai Bank shares. We are informed that 100 were obtained at the equivalent of 56 premium; of the remaining 150 only 60 have since been procured—at £37 a share, laying down here over Tls. 144, or about 58 premium and exchange 73. The remainder have not yet been forthcoming.—*Idem*

We hear that a native merchant connected with shipping interests has to-day failed for a sum of Tls. 130,000; and that his failure is likely to involve several smaller native business houses.—*S. C. and C. Gazette.*

So far as we can learn, there is nothing positively settled yet with regard to the permanent British Consul at Shanghai; but Sir Brooke Robertson will not come up at present, at all events. Mr. E. H. Parker goes to take charge of the Consulate at Chinkiang, relieving Mr. Donald Spence, who returns here.—*Idem.*

OSAKA.

It is reported that the Mint is about to lose the services of Mr. Dillon, its very able chemist. Really, with all their manifold shortcomings, the way the Japanese carry on that great establishment, with so small an amount of foreign assistance, is most creditable to them. For it must be borne in mind that not one of the native employes has served even the ordinary seven years' apprenticeship to his trade.—*Corr. of the Hiogo News.*

The pot merchants of Osaka have received so many orders from the South that now that pots are wanted in Osaka the price has risen. Iron pots per 100 are now yen 19 for first quality, yen 17 for second and yen 16 for inferior.

A short time ago everybody wanted to see the paper money made by the rebels, which set the photographers to work, and photographs of it sold for sen 5. Now they are being offered for sen 1 each, without buyers.

The most plentiful things in Japan are Banks and newspapers. In the Empire there are two or three hundred newspapers and twenty-three or twenty-four Banks, besides which petitions have been sent in for other twenty or thirty Banks, and the establishment of still more is contemplated. Newspapers and Banks are useful in civilised countries, one protecting the freedom and rights of the people and the other assisting the circulation of money and promoting production. What, however, will be the result of increasing the number of the two

things? The existence of many newspapers is no injury to society, but the establishment of many Banks would be. Banks are matters of political economy. Medicine is for curing disease, but if given in excessive doses the disease is not only not cured, but some other disease is caused. Though Banks are for increasing the circulation of money and increasing production, if they are excessive in number gold coins will be exported, only the paper currency remaining in this country. The prices of gold coins and paper, currency are different now. What will they be when there are more Banks? Gold and silver are most useful in exchange, and when these cease to be, exchange will be difficult. Suppose a man has a piece of wood value yen 1 and wishes to buy 9 sho of sake at 10 sen per sho; he must find out a sake seller who wants to buy wood, and when he has found him he must get the excess in the shape of something that is worth 10 sen and which he wants. Gold and silver have been coined in order to avoid these difficulties. The number of coins in a country should be settled according to the amount of production and the requirements of exchange. If the products are valued at yen 500,000 and the trade with foreigners at yen 1,000,000, coins to the value of yen 1,500,000 will be wanted, but if the goods to the value of yen 100,000 are exchanged in the interior of the country and goods to the value of yen 300,000 with foreigners, then coins to the extent of only yen 1,100,000 will be required. If twice as much coinage (in value) as is necessary is current, the value of coins fall and goods which are usually bought for yen 1 are worth yen 2. When the price of coins is low in Japan, goods are imported from where coins are scarce and Japanese coin will be exported. When coins are scarce in Japan, goods which were valued at yen 2 only bring yen 1½, and goods will be exported. Japanese coins therefore are exported in large numbers because there are many of them and the price is low. Japanese currency is increased just as the Banks are increased; thus the export of coins is increased and only paper money will remain in Japan.

The rebels at present in the prisons of the Tokio police number 446, and have been sentenced to hard labor for periods varying from one year to ten, 122 of them are Kago-shima men, the others being from Kumamoto, Fukuoka and Oita.

On the 10th 52 patients, 15,000 blankets and 3,000 pairs of shoes were sent from the Osaka temporary hospital to Tokio, on board the *Banri-maru*.

On the 8th instant the opening ceremony of the Kwazoku Bank was held, when some hundreds of Kwazoku and others assembled, including two Daijin, Ministers of Finance and members of the Imperial Household. Next day the Bank Directors and newspaper waiters were entertained, and on the day following the families of the shareholders.

It is said that the shizoku of a place formerly called Goken, in Hiogo ken, have petitioned to be allowed to open a free assembly, that their petition has been granted and that they intend to issue a newspaper.

The issue and sale of portraits of Nagahara and others, who were said to have intended the assassination of Saigo and others, were stopped by the Home Department on the 12th.

It is said that rewards will be bestowed upon all those who have held office from the restoration of the Mikado to the present time, and that a list of them is being prepared in the Shokunkioku.

Shipping.

ARRIVALS.

Dec. 6, Jap. str. *Nagoya-Maru*, Conner, 1,914, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.

Dec. 21, Brit. barq. *Pauline*, Tyrer, 450, for Hiogo, General, despatched by Gütschow & Co.

PASSENGERS.

Per Jap. str. *Saikio-Maru* for Shanghai and ports:—Mr. Watanabe, Governor of Osaka, Master Watanabe, Mrs. Nishimura and child, Mr. and Mrs. Price, Capt. Stevens, Rev. and Mrs. Gulick, Mr. and Mrs. Yoshida, Messrs. Videau, Taylor, Adries, Dr. Huz, Van der Pot, De la Camp, Rose, and 23 Japanese in cabin.
Per Jap. str. *Nagoya-Maru* from Shanghai and ports:—Mr. and Mrs. Katsuda, Mr. and Mrs. Nakamura, Dr. Hill, &c., Mr. McCauley, Messrs. P. Colomb, Tomioko, Matsudaira, Hasuno, Ito, Oba, Kudo, Murata, Kawano, Shiotani, Narasawa, Nakai, and Kobayashi in the cabin; and 5 Chinese, and 160 Japanese in the steerage.

Per Am. str. *China* for San Francisco:—Mr. Geo. Heckscher. For New York: Capt. Bryant, wife and three children, Messrs. H. D. Pearsall, Wm. Morse, and P. Sacconi. For Liverpool: Messrs. J. H. Heacocks and Macpherson. For London: Mr. Geo. Harleman; and 18 Europeans in the steerage.

Per Frch. str. *Tanais* from Hongkong:—From Naples: Mr. Dell'Oro. From Marseilles: Mr. and Mrs. Inoué, Messrs. Adlof, and Durand.

Per Brit. str. *Sunda* for Hongkong:—Colonel and Mrs. Spillsbury, Revd. and Mrs. Palmer and child, Mr. and Mrs. Fye Tong and 2 children in cabin; and 12 seamen, R.N., and 4 Chinese in steerage.

Per Brit. str. *Gaelic* from San Francisco:—For Yokohama: Miss L. A. Valentine, Miss R. N. Valentine, Miss S. A. Taylor, Miss F. Kuechele, Messrs. R. Faber, and J. McGregor. For Hongkong: Mr. E. Alford; and 606 Chinese in steerage.

Per Jap. str. *Nagoya-Maru* for Shanghai and ports:—Sir J. Rae Reid and servant, Miss L. E. Valentine, Mrs. Thomas and daughter, Col. Nokii, Miss R. W. Valentine, Mr. and Mrs. Santo, Mr. and Mrs. Fisher, Messrs. Lithfield, Sawers, Barlow, E. H. M. Gower, D. Appleton, Goodison, Caswell, Rawlinson, Smith, Robins, and 33 Japanese in cabin.

Per Jap. str. *Hiroshima-Maru* from Shanghai and ports:—Mr. and Mrs. G. P. Ness, Mr. and Mrs. Mini, Mr. and Mrs. Kotow, Mr. and Mrs. Gah, Mrs. Penney and infant, Messrs. De la Camp, C. F. Meyerisk, C. Maries, and 26 Japanese in cabin; and 346 Japanese in steerage. For America: Mr. White in cabin; and 1 European in steerage.

Per Brit. str. *Gaelic* for Hongkong:—Messrs. Thomas Walsh, R. Faber, Imperial German Navy, John Pitman and A. W. Beare in cabin; and 3 Chinese, and 2 Japanese in steerage.

Per Brit. str. *Bombay* from Hongkong:—Mr. Li Sen Seng. From Southampton: Mr. Levy; and 1 Chinese in steerage.

Per Brit. str. *Bertha*, from London via Hongkong: Capt. W. and Mrs. Cotter, Capt. F. Crighton.

Per Frch. str. *Tibre*, for Hongkong:—Mr. & Mrs. Jourdon, Messrs. Meyorick, Chung Sang, Durand, Suwo Hidesaburo, Kubo Hiromitchi, Massaki Niroku, Otsuka Kakuzo, Assada, Canauka, Chitmitzu, Chibato Sonokiohi, Oukai Kikudji, Nabeshima, Clausan, Ostensen, Mr. & Mrs. Milnes and infant.

Per Brit. str. *Belgia*, from Hongkong to San Francisco:—Mrs. Marshall in cabin, and 151 Chinese in steerage. From Hongkong to Yokohama: Miss Okini and 3 Chinese in steerage.

Per Jap. str. *Hiroshima-Maru*, for Shanghai and Ports:—Mrs. Bogel and child, Mr. & Mrs. Halenhuber, Lieut. von Koblach, Mrs. Grayham, Miss Shaw, Mr. Jatsube, Miss Jurodo, Mr. Macgregor, and 21 Japanese in the Cabin.

Per Jap. str. *Saikio-Maru*, from Shanghai and ports:—Mr. Pelikan (Russian Consul), Messrs. A. Reimers, Cooper, Macclay, G. Rogers, G. Kies, Singleton, Mr. and Mrs. Ide, Mr. and Mrs. Takahashi, and 33 Japanese in cabin: 4 Europeans, 6 Chinese, and 195 Japanese in steerage.

REPORTS.

The British steamer *Gaelic* reports:—Left San Francisco at noon on the 17th. Had North-West winds with heavy sea for ten days, moderate variable winds for seven days, and light breezes from North-East and South-East to arrival on the 11th at 8 a.m. Signalled the P. M. S. S. *China* at 3 p.m. on the 9th steering East.

The British steamer *Zanzibar* reports:—left Hongkong, 8 p.m. on 2nd December, experienced strong monsoon through Straits of Formosa; and from Funnabou head gales to the Islands: from thence to port strong head wind. Passed British barque *Eme* off Cape Negami, bound for this port.

The P. & O. steamer *Bombay* reports:—Left Hongkong at daylight on the 4th December. Strong monsoon through the Formosa Channel, and fresh northerly gales to the Japanese Coast. Between Oo-shima, and Omai-saki, on the night of the 12th, a heavy northerly gale, with a tremendous sea, set in and lasted 12 hours. Thence to port had fresh northerly winds and moderate weather. Arrived at midnight on the 13th-14th Dec.

The British barque *Eme* reports:—Left Kobe Dec. 8th. Had variable winds and pleasant weather in the Kii Channel, and westerly winds to Rock Island where experienced a severe northerly gale on the night of the 12th inst., with a tremendous southerly sea running, lasting to the next afternoon. Thence to port fresh northerly winds and moderate weather.

The *Belgia* reports:—Left Hongkong Dec. 10th, at 3 p.m. Experienced strong north-east monsoons and heavy head sea to 32° N. latitude, thence to port fine weather. Arrived at Yokohama Dec. 17th at 8 p.m.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

This market has shown a marked increase in activity. Extensive transactions have taken place in Yarns, mostly "to arrive," at higher rates, the principal inquiry turning on 16/24 and 28/32 of medium quality. For other Cotton goods also there is a better demand. In Woollens, Mousselines-de-laine have changed hands to a considerable extent; and Blankets and Italian Cloth are fairly saleable.

METALS.—In both Bar and Nail-rod Iron some business has been done during the fortnight.

KEROSENE.—No stocks remain on the market, which has been cleared at a great reduction on rates previously demanded, in anticipation of arrivals which are expected promptly.

The steamers *Zanzibar* and *Bertha*, from London via Hongkong, with general cargo, and the barques *Ceylon*, with kerosene from New York, and *One* with coal from Cardiff, have arrived. Transhipped cargo ex steamers *Indus* and *Pekin* from London, *Orestes* from Liverpool, *Djemmah* from Marseilles, *Utopia* and *Alsatia* from New York, and *Feronia* from Hamburg, is also to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Since our last mail issue, dated 5th inst, we have to chronicle a period of uninterrupted activity in Silk, Continental buyers doing most of the business.

Arrivals have been light, about 1,700 bales, whilst settlements amount to close on 3,000 bales, thus materially reducing the unsold stock on the market, estimated at 1,500 bales.

With such a business prices have not advanced as much as might have been expected, the rise being about \$30 all round, but taking quality into consideration the advance has been greater.

Demand has extended to all descriptions of Silk, but the selection has been very difficult, owing to the inferior bulk delivered: consequently rejections have been heavy, and it is fair to suppose that few buyers have obtained Silk of the quality they desired.

With little exception the unsold stock consists of common and inferior kinds, and but little desirable Silk is likely to arrive until the spring. Shipments to date foot up to 15,798 bales against 17,850 bales same date last year.

TEA.—A brisker tone has been prevalent for the interval since the departure of last American Mail on the 5th inst., settlements amounting to piculs 7,500, a very full amount considering the late period in the season.

Prices shew an advance of \$1 to \$1.50 per picul, and, considering the quality of goods on offer, are hardly warranted. The anticipated "Duty speculation" is no doubt the ground for the improved feeling on the New York Market; but the reaction which may be expected will leave little or no chance for teas shipped late in this season; and this year the quality of the second crop is hardly as good as might be desired.

Stocks are almost nominal, and our ideas, as expressed before, of a diminished export from Japan seem now likely to be ensured.

The *Messenger* has been laid on the berth for New York at £1 10s. per ton of 40 cubic feet, and some amount of freight has gone forward via Shanghai and Suez at £3 17s. 6d. per ton.

GRAIN.—The export of wheat has been essayed. The barque *Parmenio* has taken 6,800 piculs wheat to Amoy. The O. & O. steamer *Gaelic* took 9,070 piculs rice to Hongkong.

Summary.

OUR last MAIL SUMMARY was dated the 22nd instant, for despatch by the O. & O. steamer *Belgie*, which sailed for San Francisco on the 23rd. Since then we have received the following mails:—

Per M. M. *Volga*, M'selles, 4 Nov., artd. 22 Dec.
" P. & O. *Malacca*, S'hampton, 9 Nov. " 25 Dec.
" P. M. *City of Peking*, S. Fr'sco, 4 Dec. " 25 Dec.

And despatched the following:—

Per P. & O. *Bombay* for Southampton.....25 Dec

LATEST telegraphic advices from London are to the 28th instant. Latest letters from the same place are via San Francisco, by the *City of Peking*, to the 11th Nov.

SO SHORT a time has elapsed since our last Mail Summary was issued; and everything but feasting is so very quiet, now as usually at this time of the year, that there is very little to summarize or record. Business has been generally dull, the activity which during the past few weeks has been noticeable in the silk market having been succeeded by comparative depression, owing partly to the dubious nature of advices from home. The silkworms' egg cards remaining at the close of the season, appear to have been rendered useless for the reproduction of grubs. The eggs have been scraped off many of the cartons, which, however, will not be destroyed as was at first intended, but utilized for next year's deposit of eggs. The highest price paid for silk this season was 800 yen for filatures.

MATTERS political are also quiescent. Now and then vague rumours are heard of disaffection in Kochi-ken, but the Government have no apprehension of serious trouble there or anywhere else in the provinces. Kataoka, that member of the Rishishi, or Independent Society, of Tosa, who was made

responsible for the drawing up of a remarkable petition which we noticed some months since, praying for the establishment of representative institutions, and severely but not intemperately criticizing the acts of the present Government, is, with several of his associates, still in prison. A native paper, published in his district, expresses surprise that he has not yet been brought to trial. The paragraph concludes. "If our government arrested these men under mere suspicion, they ought to institute prompt inquiry as to their guilt or innocence, and render as speedy a decision as possible. Then, if this cannot be done, oh! our rulers are not merciful nor their officials wise!"

THEIR Excellencies the Chinese Ministers have visited Tokio, where they have had audiences of the principal officers of the Government, and been admitted to an interview with the Mikado, for the purpose of presenting their credentials.

SEVERAL state prisoners implicated directly or indirectly in the Satsuma revolt have been brought to Tokio.

THE proprietor of the French journal of this port, the *Echo du Japon*, has summoned in the French Consular Court Messrs. Oppenheimer Brothers to produce certain accounts for type and machinery, imported by the defendant on his account from Paris. The Court ordered the production of the documents in question within a maximum period of five months. The case is important only as affecting the responsibilities of commission-agents, who occasionally require to be reminded of them.

THE new buildings of the Tokio Joto Saibansho, or Supreme Court, have been completed. Several new silk factories have been opened or are projected. A government enterprise for filatures, at Niimachi, Joshiu, has been established, and is now at work. The Emperor proposes to visit it in the early part of the new year.

SEVERAL slight shocks of earthquake have been felt in Yokohama and the neighbourhood. A "gentle upheaval of the earth's surface" during a recent storm is reported by a contemporary in Nagasaki.

GENERAL Julius Stahel, at present U. S. Consul at Kobe, has received telegraphic instructions to proceed to Shanghai, there to relieve the Hon. G. Wiley Wells in his duties as U. S. Consul General. Mr. E. S. Benson, an old Japan resident, and for nearly ten years Municipal Director in this port, has gone to Kobe to assume charge of the Consulate there. The reason of the change, as far as Mr. Wells is concerned, can only be surmised. It probably has connection with the abuses in the management of the Shanghai Consulate and Postal Agency exposed in the recent trial of Mr. O. B. Bradford, Vice-Consul.

ROBBERIES of native houses, in the suburbs and immediate neighbourhood of Yokohama, by bands of masked and armed ruffians, are chronicled in the native papers.

TWO of the engineers of the *Yesso*, a steamship on which a serious boiler explosion occurred at Hongkong, resulting in great loss of life, have been committed for trial by the Hongkong Police Magistrate on a charge of manslaughter.

A JAPANESE sailing vessel, the *Miyako Maru*, bound hence for Yezo, has been wrecked, without loss of life, off the coast of Kajima.

THE British ship *Leicester*, Captain Caddy, laden with rice, whilst on a voyage from Hiogo to London, struck upon some rocks near Gebe Island, but was got afloat again. The ship was much damaged. From Sydney we learn that the steamship *Ly-ee-moon*, formerly a Japanese steamer, but now running on an Australian line, was partially destroyed by fire on the morning of the 5th of Nov. The British barque *Ribston*, from New York 128 days out, bound to Yokohama with a cargo of petroleum oil, went ashore on the Brill Reef, sixty-five miles South-West of Macassar, on the 5th November. The vessel became a total wreck and was abandoned. The steamer *State of Alabama* after a number of mishaps on her outward passage, left Hongkong about the 18th instant for this port.

THE weather during the past week has been very cheerful. No snow, except a few flakes, have fallen in Yokohama so far, and the night frosts have been very mild. The season, in fact, so far has been all that could be desired by sportsmen and holiday makers. Game is tolerably abundant and some good bags have been made. Christmas-eve witnessed the usual children's gathering at the Gaiety Theatre, where a Christmas-tree had as usual been provided. A troupe of well known artistes, calling themselves "The Merry-makers" have arrived from San Francisco. Among them are Mr. Washington Norton, of Christy Minstrel fame, and Mr. Karl Steele, also a performer of some celebrity.

A SUIT has been instituted, by the Java Sea and Fire Insurance Company, against Mr. F. A. Cope, to recover an alleged overcharge of commission on the sale by public auction of a cargo of damaged rice ex *Annie W. Weston*. The evidence of Captain Winsor, whose vessel will leave the port shortly, has been taken in H.B.M. Court, the vacation notwithstanding.

It is reported in native circles that Matsukata, Vice-Minister of Finance, will leave early in the year for Europe. Possibly his mission has some relation to the proposed revision of the tariff.

A NEW Racing Society has now been formed, to be called the "Yokohama Jockey Club."

TREATY REVISION.

No. I.

MORE than probably had the Japanese, when grumbling from time to time that the period for the revision of the treaties with Western Powers should have expired, while nothing had been done towards the commencement of the desired work, been a little introspective, they would have seen that foreigners were only in a very small degree, if at all, responsible for the delay. Had they examined into facts more closely, instead of allowing mere fancy to be their guide, they would have discovered that their own rulers had the best title to what blame might be due for the constant relegation to a future date of a question of so great importance to the country. Not one serious attempt to arrange a revision with the Treaty Powers has yet been made by Japan. There has been a great deal of promiscuous and ill-directed groaning: a number of vague and pointless accusations have been discharged as it were at random; and somewhat more definite, but still baseless, charges of tyranny, oppression, and obstruction have been levelled at individual representatives. One of these, indeed, as he has probably been of all the most conscientious friend of the country, the man who has most materially aided it in its march towards civilization, and has done more than any other towards bringing about the vastly improved relations now happily existing between natives and foreigners:—he, not unnaturally, has come in for the largest share of obloquy and abuse. We say advisedly “not unnaturally.” This is a very young nation; and has still some remarkably childish little ways. It is nothing astonishing to see a self-willed child beat the nurse who keeps it out of mischief and from hurt to itself.

Once more, during the past six years, or since the date first appointed as that on which revision of the treaties might be made, no serious desire has been evinced by the Government of Japan to proceed to the work. And, surely, it will not be denied that the initiative should proceed from them, as they are unquestionably the parties most interested in any change. The occasional visit of a Commissioner to Europe, furnished with a sort of roving commission and general instructions to see and converse, can hardly be considered a decisive step towards the well known and very plainly visible object of the nation's wishes and ambition. Nor can the policy of unreasonable and illogical complaints, querulously spread right and left, of the refusal by the strong to comply with the just demands of the weak, be called a methodical way of extirpating a grievance. Even the measure taken recently by the Japanese Cabinet, in addressing a circular to the Diplomatic Body, when it comes to be sounded, is as hollow as a bell. It made some noise, indeed, but a very uncertain one; and a little inquiry shows that those who originated it had no idea of the note they were about to evoke. We have reason to believe that the contents of that memorandum were virtually as stated some time since by the *Herald*, which is certainly not to blame for making public the information which came to it; though the person who furnished it would appear to have been guilty of breach of confidence. In point of fact, however, it was already pretty generally known that the Government, freed, by the cessation of the troubles in Kiushiu, from the tax upon their energies and leisure imposed by the rebellion,

and wishing to undertake some measure which would redound to their popularity, were preparing to take some action in the matter of treaty revision. The semi-official organs first, and then the remainder of the native press, had been discussing the subject for some time previously, here and there with some scintillations of reason, but generally with a queer mixture of wildness and ignorance.

Had, indeed, the Japanese requested, at any time during the past six years, a revision of the treaties, indicating what they wanted altered and what amended, they would have been met half way by the Treaty Powers, and their demands would have been carefully considered, and, if reasonable, granted. They were not, however, prepared with anything definite; and so are themselves responsible for the delay of which they complain. The two great objects of their ambition, as establishing that complete national independence, which they profess themselves so eager for, and claim to be so thoroughly entitled to, are, first, the abolition of extraterritorial jurisdiction, and, second, a tariff of their own devising. Not improbably the consciousness that they could not hope for the concession of the first object has in great measure caused the postponement of the formulation of any demand for revised treaties. And they may rest, even now, assured that the time has not yet arrived for allowing them the exercise of an authority for which they are in no way ripe. Straws show which way the wind blows. The action of judges in native courts in regard to foreigners often show the sublimest ignorance of the rudiments of that civilization which they affect to copy. English suitors are ordered to take off their coats under pain of having their causes put off until the summer. Chinese residents here hail with delight the arrival of the Representative and Consuls of their country, preferring to be amenable to the “barbarism” of their national jurisdiction rather than to the modern “enlightened jurisprudence” of Japan. There is no end to the grotesque and the painful possibilities which would infallibly result from the abolition of extraterritoriality at the present moment. European ladies, who would not or could not at a moment's notice take off their hats while the Emperor or some other big personage might be passing by them, would be hauled off to prison. Foreigners, of no matter what standing, would be treated and addressed with a more marked and studied rudeness than that which at present characterizes the demeanour of judicial officials towards them. Some special costume would be ordered for alien parties to cases in the Courts, with distinguishing emblems to mark plaintiff and defendant; and their witnesses would have to conform to a system of etiquette specially designed for their annoyance. Possibly, some of the degrading usages abolished in favour of natives, would be revived for the benefit of Europeans. The editor of the *Herald*, after being feasted in the Town Hall, would be locked up in the morning “for violation of the Press Laws,” and sentenced to a period of seclusion “without books or papers;” while he of the *Tokio Times* would be engaged as official reporter to the Court in foreign cases, and general apologist, in his own journal and the American press, for every species of judicial error and iniquity so long as they were the results of the administration of Japanese Justice. And then true Justice, who may be supposed to hover occasionally about these tribunals, would dash her scales, and sword, and bandage

to the cold ground, and fly, shrieking, away forever. Further speculation on this subject is useless, as it must be evident to the inmost consciousness of the most maudlin foreign slave to Japanese masters, the most interested advocate of native “rights,” that Japan is not yet fit to have control over foreign persons, property, and interests. The subject, then, of jurisdiction over foreigners by Japanese Courts and Police may be dismissed from consideration for the present. A demand for it could neither be entertained here by foreign Representatives nor at home by their Governments. That the time may come when it may be put forward as a just due; and as such be deliberately but gracefully granted, we sincerely trust. Most emphatically, nevertheless, that time is not to-day. This even the liveliest advocates, among the natives, of treaty revision, begin apparently to see themselves, and are limiting now their outcry principally to a demand for a control of their own Customs' tariff. Here they have justice with them. Probably, in insisting upon justice in this respect from others, their rulers may be guilty of unreasonable and unreasoning injustice to themselves and their country; but that is matter for separate consideration.

No. II.

IT must be confessed that to encounter nothing but concurrence and good will when opposition and malevolence have been expected may be very embarrassing:—nay, in some instances, and especially with shallow natures, even disappointing. To some grievances are sweet. Rachel would not be comforted; and this is intelligible because her troubles were great and cruel. This nation has been so accustomed, by those time-serving teachers who make themselves heard because they minister to pride no matter how unjustified, to vanity however childish, to assume that it has long been entitled to every equality with the most advanced of Western Powers, and that its rights have been and are unjustly and oppressively withheld, that it may be a little puzzled and grieved to find that it has been mistaken. That the rulers, in this matter of treaty revision, and as regards the alteration of the tariff, expected opposition in quarters where they did not find it, is certain. With a cunning which was quite unnecessary, but which is indispensable to any measure of diplomacy according to their notions of statecraft, they waited for the absence of the British Minister to set their machinery for grinding out new treaties in operation. They framed their circular, and assured themselves that their demands would be supported by at least three of the Foreign Representatives, whom we will not indicate, but whose countries have, either altogether or in great part, a protective tariff. This was, they thought, a grand point gained, in view of the impediments which they expected to meet. To their astonishment, however, when Sir HARRY PARKES returned, they found him perfectly well disposed, as far as the matter lay with him, to consider the question of revision, and willing to concede that the right they were prepared to assert was theirs. It was but natural to ask, what they proposed? a question which they were as unable to answer as they were astounded, not to say disconcerted, at finding that they were at any rate to be met half way, when they expected nothing but obstruction. We are of course open to correction; but think we are fully in the right in stating that all the Chiefs of the Diplomatic Body are in

accord on the point that the treaties should be revised at as early a date as is compatible with careful consideration of the subjects involved and international convenience, and agreed that Japan has a right to the regulation of her own Customs' tariff. It is probable that the revision itself will be made in Europe, where Japanese Commissioners, appointed for the purpose, will have every opportunity afforded them for studying the working and comparing the tariffs of other nations. It only remains to be hoped, more for the sake of Japan herself than for that of the foreign trade, that wise counsels will prevail in the arrangement of the proposed new tariff, and that her nascent industries may not be stifled by protection—killed with kindness and injudicious coddling. Assuming, however, as certain, that a revision of the import duties is imminent, we will devote a brief space to the consideration of the import trade of this country, and see how the revenue may be affected by any alteration in the duties thereon. A few categorical questions and answers will best throw light on these points.

First:—What is the value of the total import trade of Japan?

To arrive at a fair estimate of the general foreign commerce of the country, the transactions of the year 1876 may very safely be taken as a basis of calculation. The imports were rather less in value than during previous years, but, on the other hand, the exports were in excess of former corresponding periods. And, under the most favourable conditions of foreign markets, it would be scarcely possible for Japan to have greater advantages than were then obtained, from two directions, namely, the low prices which were paid for imported articles, and the extravagant rates given here for the chief article of export—silk. Business in 1876 will therefore afford the basis most favourable for this country, as far as exports are concerned. To estimate the annual value of imports alone, however, a mean between the business of 1875 and 1876 may safely be taken. Thus, the total value of the imports in 1875 was \$29,467,067; in 1876, \$24,087,515 or a mean of \$26,777,291 per annum.

Second:—What is the average amount of revenue derived from imports annually?

Assessing the actual value of the import dues at 4.38 per cent, a figure as accurate as can be arrived at, and taking the aggregate value of the annual imports at the above valuation, the revenue derived from imports amounts to \$1,172,845.

Third:—Average value, to Customs' duties, of the export trade of this country?

About \$800,000 per annum.

Fourth:—Then, as the Government are said to propose to do away with the export dues altogether, in view of the intended increase in the import tariff, how will the revenue be affected by the abolition?

Stated in round figures the gross Customs' dues of Japan amount to about two million dollars. Thus, the total abrogation of export duties will at once reduce that sum to \$1,200,000.

Fifth:—So, to make up for the deficit thus created, it would appear that a considerable increase must be contemplated in the duties upon imports?

Probably. But what imports there are, the Government would do well to remember, consist almost wholly of actual necessities of a life in any degree removed from barbarism, and are imported more cheaply

from abroad than, by any possibility, they could be produced in the country. That they are already more than sufficiently taxed is evidenced by the limited demand for their consumption at present existing among so large a population as that of Japan, and by the almost cessation of that demand when the raw material has increased in value in the hands of manufacturers to an extent which adds merely five per cent to the purchasing price of manufactured goods imported. Cursory reference to the British Consular Trade Reports for 1876 will show that the value of imported *necessaries*, under which head are classed cottons, woollens, mixed cotton and woollen, and woollen and linen, manufactured goods, all of the commonest description, and suitable only for the clothing of those persons whose poverty prevents them obtaining better, raw cotton, boots, leather, and medicines, amounts to \$14,671,000; or, say, for an average year, about \$16,000,000.

Sixth:—It appears, then, that this commerce in "necessaries," rightly or wrongly so called, cannot be more heavily taxed without being extinguished altogether. What is the utmost extent of revenue that the Government may reasonably expect to derive from import duties?

Granted that the import duty on "necessaries" remains unaltered, there will be an income, from that source, of about \$700,000

Supposing that the duty on sugar imported be raised to twenty per cent., and it can hardly pay more, it would contribute a revenue of ... 530,000

Ten per cent. on all other goods imported would yield 810,000

Total... .. \$2,040,000

In other words, under the most favourable circumstances, the utmost benefit that the Government can hope to derive from an alteration, as they are likely to wish to make it, in the Customs' returns, is some forty thousand dollars *per annum*. Any increase in the import tariff, greater than that above supposed, would tend to suppress the trade altogether, or at best to continue it in a languishing state, its mere existence being supported at the expense of the consumers. This result we will not suppose to be the intention of the Government, however much it may be desired by their selfish advisers.

And lest some of those whose sole stock of argument consists of unscrupulous assurance and a redundancy of words, should, as they are likely to, take exception to the above proposition, as regards the import of "necessaries," we will, in leaving this part of our subject, consider one point in reference to that trade, selecting "cottons" as the item most likely to be attacked. The whole foreign commerce of Japan is really one of "barter," not of actual buying and selling. Imports are exchanged for the produce of the country, notably tea and silk. When these two are in small demand at prices below the measure of production, the consumption of imported goods diminishes in proportion. If, therefore, the duty on imported cottons should be increased, the native will receive a less quantity than he does now in exchange for the results of his own labour and the investment of his capital; for it is contrary to all the axioms of sound trade to assume that the foreign merchant, or any other importer, will pay duty without indirectly recovering it in the "value" which he receives for his goods when he sells them.

No. III.

IN considering the subject of any revision of the import tariff of duties levied by the Japanese Customs, one fact forces itself upon the notice of any practical man, and should certainly be taken account of by those Japanese statesmen and their counsellors who hold that a panacea for the languor and all the other ills of the revenue is to be found in increased taxation of the import trade. That fact is the insignificance of the entire external—import or export—trade of Japan. We have shown how slightly, in view of the proposed abolition of all export duties, the revenue may be affected by the utmost strain of augmented imposts upon imports which that trade can bear without being suffocated. And it is well to endeavour to realize that the total extinction of the trade would scarcely represent a disturbance in commercial circles so great as would be effected by the failure of any average large wholesale house—take for instance that of Messrs. HUNTLEY & PALMER, the Reading biscuit-makers—at home. The present Customs' revenue is short of £400,000 *per annum* in gross, and if the duty on exports is to be remitted and the small income derived therefrom kept up by increased duties on imports, the political economist is startled to find that the lowest average duty of 4.4 per cent. must be retained on 16/27ths of the total imports; be raised to 10 per cent. on 8/27ths, and to 20 per cent. on the remaining 3/27ths; and, with this enormous jump from moderate duties to prohibitive taxation, the Customs' gross revenue still remains at the same figure of £400,000. Again, it is not the tax alone which bears heavily upon the consumer. The importer under increased duties must enlarge his capital to enable him to invest a portion of it in advances to the State in the form of duties. While recovering the duty from the consumer, the importer will naturally add to it the expenses necessitated by the law itself, with full interest for the prepayment; and, thus, the consumer will pay not only a tax to his Government, but charges and interest upon that tax to the capitalist who first advances it; or, in other words, the consumer will have to bear the burden and charges of a tax equivalent to a loan. In some late correspondence the public were informed that foreign loans, generally, are repugnant to the feelings and wishes of the Japanese nation. If this assertion be not mere affectation, we must unhesitatingly describe it as an absurdity. The principle of borrowing and lending enters into every detail of State, as well as commercial, business; and if foreign capital is objectionable to a country possessing no wealth of its own without exterior assistance to develop it, then the accepted system of trade is at an end in Japan.

But, in sober fact, the extent of foreign commerce here is too limited to admit of any increase of Customs' returns. If the duties be extended to the percentages we have mentioned the import trade will decline; and, if they be increased beyond that limit, will probably, as above indicated, be extinguished; or, at least, be carried on by a few monopolists for their individual benefit. JOHN STUART MILL writes, in his chapter on "Government Interference":—"Of these false theories, the most notable is the doctrine of protection to Native Industry; a phrase meaning the prohibition, or the discouragement by heavy duties, of such foreign commodities as are capable of being produced at home. If the theory involved in this system had been correct, the practical conclusions grounded on it would not have been

unreasonable. The theory was that to buy things produced at home was a national benefit, and introduction of foreign commodities, generally, a national loss. It being at the same time evident that the interest of the consumer is to buy foreign commodities in preference to domestic whenever they are either cheaper or better, the interest of the consumer appeared in this respect to be contrary to the public interest; he was certain, if left to his own inclinations, to do what, according to the theory, was injurious to the public."

Abandoning all theories for the purpose of taking a practical view of the position of this country, we have to consider what means Japan possesses of producing at all, irrespective of comparative cost, those commodities she now imports. In the first place there are 30,000,000 mouths to feed; and the accomplishment of this object, without material assistance, is highly creditable to the industry of the people. The principal imports are of material, manufactured or partly manufactured, for clothing, none of which Japan can produce without importing the raw material in much greater quantity than she now does. If forced to adopt that course, the people will find their home manufactures inferior in material, workmanship, durability, and appearance, and immeasurably in excess of the cost of goods of foreign production for which they formerly exchanged their surplus produce of tea and silk. Thus we are brought back face to face with what should be the sternest objection to those fallacies of protection so assiduously advocated by unscrupulous and interested advisers of the Government, who, in their turn, seem eager to adopt any policy which flatters their vanity, no matter at what expense to the prosperity of the people they rule over. The result of protective duties will be to extinguish foreign trade to the prejudice of the majority of the people of Japan, and to the advantage of a few. "In the case of manufactured goods, the whole difference between the two prices (price of production and price of importation) is absorbed in indemnifying the producers for waste of labour, or of the capital which supports that labour. Those who are supposed to be benefited, namely the makers of the protected articles, (unless they form an exclusive company, and have a monopoly against their own countrymen as well as against foreigners) do not obtain higher profits than other people. All is sheer loss, to the country as well as to the consumer."

Strange that those wisecracks whose maudlin conceit persuades them that knowledge will die with them, and that when they sleep all consciousness is in abeyance, should not have seen a much simpler and far more effectual way of increasing the revenue of this country than the clumsy and suicidal one of an augmented import tariff. The economists, native and foreign, of Japan would do well to waste no further time in the discussion of a subject which shows no promise, under existing conditions, of forming any material item in the imperial receipts. It is to an improved internal revenue that they should look; and this is a subject which we trust to have time and space to consider on an early occasion.

THE *Echo du Japon* states that, during the night of Saturday last, a band, consisting of Japanese, masked and armed, broke into a house at Ota, bound the inhabitants, stole all they could lay their hands on, and assailed the women and girls.

MISCELLANEOUS.

A CORRESPONDENT of the *L. & C. Express*, signing himself "Old Cathay," draws attention to some grievances suffered by members of the Consular Corps in China and the Far East. He alludes specially to "the very unequal incidence of the work to be performed," in some cases "the Consul being overworked and his subordinates amusing themselves: in others just the reverse, the Consul constantly away, and his deputy performing all the duties." He continues:—"The only rule as to work which I have ever seen in force in China is the well-known one about the willing horse; and I have certainly often regretted to observe how little thanks and how little credit those who have borne the burden in the heat of the day have often reaped. A man like Sir Harry Parkes, who performed more consular and judicial work in a day when last in Shanghai than most officials do in a week, was noticed and promoted because he was already well-known; but the industry, talent, and conscientiousness of subordinate members are too often destined to blush unseen till, worn out with hard labour and disappointment, 'poor so and so' dies; his friends say, 'Who would have thought it?' and some well-connected junior is promoted to the vacant post to undo the good that has resulted from the patient toil of years."

This and the conclusion of "Old Cathay's" letter read something like the groan of a disappointed man; but the suggestion, that the Minister in China, in his quality of Superintendent of Trade, should, from time to time, visit the Consulates at the ports, and, finding out, by personal investigation, who are the most deserving members of the Consular Body, recommend for promotion those who merit it, is a good one. H. M. Minister in Japan makes periodical visits to the British Consulates in the Treaty Ports, his travels certainly tending to increase his actual knowledge of the working and personnel of the various establishments.

THE *L. & C. Express*, in noticing the volume of the Reports on Trade for the year 1876, issued by Her Majesty's Consuls in Japan, and referring to Mr. Russell Robertson's report on the trade of Kanagawa, pays the well deserved tribute to the care with which it was compiled, and the information it contains, by testifying that it is "very exhaustive and elaborate." Interesting extracts are given from a despatch, dated the 2nd April last, from Sir Harry Parkes to Lord Derby, relating to the newly established trade between Japan and Corea. A great part of the import trade into the latter country is dependant upon the foreign import trade of the former, from which fact a useful hint might be derived in view of the proposed revision of the Customs' tariff. Probably, however, if commerce with Corea is worth cultivating by other nations, it will not be allowed to become a mere monopoly in the hands of one. In one extract we read:—"The total value of the imports into Corea for the two months amount to 37,832 yen (or dollars), and the exports from Corea to 32,049 yen. Of the merchandise sent from Japan to Corea one-half consists of foreign manufactures, such as calicoes, shirtings, lustrings, &c., while rice and wheat form the principal products furnished by Japan herself. The exports from Corea consist chiefly of ox-hides, Korean cotton cloth which is in request among the Japanese, gold ore, ginseng, and other trifles."

The above italics are ours. In another place Sir Harry Parkes says, quoting from a letter written by a Japanese in Fusan; "Trade is more prosperous than it has yet been. The goods, brought from Japan, of whatever kind, meet with a good market, the commodity of first importance being rice; next to that comes long-cloth, and then lastings, the two latter being of British manufacture. Gold and silver specie is allowed to be exported in exchange for rice, which is at present so much needed."

A TRUSTWORTHY correspondent, under date the 24th instant, writes to us as follows:—

"Have you observed Fujiyama?"

"Last evening, the mountain being clearly defined, and quite free from clouds, I observed during a period of about two hours, before and after dark, a small quantity of smoke issuing from the summit, which vanished as it cleared from the peak. Clouds would have remained visible."

DOCTOR A. Goertz, Physician to the Russian Legation, has received the decoration of the "Red Eagle" of Prussia.

We learn that General Julius Stahel, U. S. Consul at Kobe, has received telegraphic instructions from Washington to proceed to Shanghai, and there to relieve Mr. G. Wiley Wells, U. S. Consul-General. Mr. E. S. Benson formerly Municipal Director in this port has left for Kobe to assume charge of the Consulate there *vice* Stahel.

THREE slight shocks of earthquake were felt on the 23rd instant:—one at 8.55 a.m.: the others at 5.5 and 7.35 p.m., respectively.

THE children's annual Christmas *fête* was celebrated on Christmas Eve in the Gaiety Theatre, where, under the presiding care of Mr. Henry Allen, a very fruitful Christmas Tree had grown, blossomed, and matured. From two to three hundred youngsters assembled, and joyously and gratefully received the offerings of Santa Claus. When the tree had been despoiled, the troupe of Japanese acrobats, who are giving a series of performances in the Gaiety Theatre under the management of Mr. J. White, went through a few acts to the great amusement of the juvenile audience.

FROM Sydney we learn that the steamship *Ly-ee-moon*, formerly a Japanese steamer but now running on an Australian line, was partially destroyed by fire on the morning of the 5th of November. The damage done to the vessel is estimated at £5,000. An inquiry has been commenced, as to the circumstances of the fire. The evidence so far shews that there was no fire on board the steamer on Saturday night or Sunday morning, the 3rd and 4th November; and the burning of the vessel could not be accounted for.

A bottle found on the coast of Western Australia, states that the ship *Brunswick*, coal and water logged, was dismantled in July last. Sixteen of the crew were in boats 800 miles off the port.

THE British Consul at Samoa levied a fine of 30,000 dollars on the Native Government, for the collision with the *Barracouta*, and for insulting Commodore Haskings. Pending the decision of the Imperial Government the island is being held as security.

In committing the engineers of the *Yesso* for trial on a charge of manslaughter, Mr. May, Police Magistrate in Hongkong, said he would have to send the case for trial. He had listened to what Mr. Brereton had to say, but the case was one of far too grave a nature for him to settle off hand. The prisoners would be committed for trial, but admitted to bail as before.

THE Christmas-Eve Midnight-mass in the Catholic Church was celebrated with magnificent pomp, the edifice being brilliantly illuminated and gorgeously decorated. It was crowded with people, attracted by sentiments of devotion or curiosity. Probably those animated by the latter feeling were the more numerous. Some people had apparently just quitted their favourite and more congenial haunts, and of course showed respect neither for the sacredness of the edifice nor the solemnity of the occasion. It is useless to remind such scoffers and desecrators that a Catholic Cathedral is not a Music Hall; and a suggestion that, if they cannot conduct themselves with ordinary decency, not to say propriety, they might remain elsewhere, would be unintelligible to them. It is sad to think that a policeman is as necessary to keep some persons in order, as a rod is essential in Solomon's system for bringing up a child.

Gounod's Grand Mass had been selected for the celebration; and the musical direction was confided to Mr. O. Keil, who fully justified the trust reposed in him. A better interpretation of the work of the great master could hardly have been expected, even with much more extended resources than the limited number of the musical community placed at the disposal of the Director. The *Ave Maria*, chanted by a voice of singular power, freshness, and feeling, and Adam's Christmas, rendered by Mr. Pearson, fairly enchanted the audience. A violoncello accompaniment also deserves special praise.

Abbé Pettier preached a short sermon in English; and Monseigneur Osouf, who officiated, addressed the congregation in French.

THE appearance of smoke issuing from the summit of Fujiyama, as described by a correspondent in a paragraph above, arises, we are informed, from the action of a high wind upon newly fallen snow, which, carried away in the form of a light smoke—coloured cloud, is dispersed as quickly as smoke itself would be. This phenomenon has been observed several times during the autumn and winter seasons of the last ten years, but is rarely visible unless the mountain is between the sun and the observer.

THE announcement of the acquittal of Nakahara and the other police officers, charged with bearing false testimony in subscribing to a confession, extracted from them by torture, that they had been deputed by a high officer of the Government to assassinate Saigo, will be received with pleasure.

New year's visitors to Tokio are informed, on the authority of the native journals, that the Museum in the Ueno gardens will be closed on the 31st instant and the 1st proximo.

THE British barque *Ribston*, Captain Brown, from New York, 128 days out, bound to Yokohama with a cargo of petroleum, went ashore on the Brill Reef, sixty-five miles S. W. of Macassar, on the 5th ultimo at about 4 a.m. On the 8th ultimo, owing to calmness and a heavy current, the crew succeeded in salving about 2,500 cases of

oil. Captain Brown proceeded to Macassar in the long boat to procure assistance, and succeeded in engaging two schooners and thirty men, and with these returned to the vessel. Upon their arrival, it was found that the *Ribston* was full of water, and all efforts at pumping were unsuccessful. On the 15th ultimo the vessel was a total wreck, and had to be abandoned, the captain and schooners returning to Macassar. On the 16th ultimo, the wreck and cargo were sold at Macassar by public auction and realized £800. The purchaser was a Chinaman. Capt. Brown and some of the crew arrived at Singapore on the 3rd instant by the *Rajah Brooke*, and reported the loss of the vessel to the Master-Attendant, and applied for a Court of Inquiry to be held.

THE three hundred thousand silk-worms' egg cards which have just been destroyed (*sic*) at Yokohama will, it appears, not be entirely lost. The eggs taken off will be used to make fat (*à faire de la graisse*?) and the cards themselves are sold at the rate of fifteen cents per thousand.—*Echo du Japon*.

NIPPON NOTES.

A LARGE tannery has been established at Nakahara in the village of Togoshi, close to Shinagawa, and was opened recently. Dr. Kishimoto is the proprietor of the new concern.

H. E. SANJO, on the 17th instant, entertained the German and Italian ministers and their wives.

On the 18th instant, six of the Kagoshima insurgents who were recently brought to Tokio, were brought before the Special Saibansho, opened in the Gen-ro-in; and Nakahara and twenty other ex-police sergeants, who, under torture inflicted by the rebels, confessed that they were deputed by Okubo to assassinate the late Saigo, will be tried before Prince Arisugawa-no-miya on a charge of having borne false testimony.

THE *Choya Shinbun* quoting from the *Niigata Shinbun*, states that in January next year the Mitsu Bishi Steam Ship Company will establish a branch office at Niigata. Two steamers will ply twice a month between Niigata and Wajima in Noto, touching at Fukugi in Ecchiu.

THE *Nichi Nichi Shinbun* publishes the following comparative tables of Exports and Imports during the ten years, ending June 1877.

1st year of Meiji (1867)	Exports..... 15,553,472.87.7	Imports..... 10,693,071.84.5
	Excess of Exports	4,860,401.03.2
2nd year of Meiji (1868)	Exports..... 12,908,978.20.0	Imports..... 20,783,633.17.5
	Excess of Imports	7,874,654.97.5
3rd year of Meiji (1869)	Exports..... 14,543,012.59.4	Imports..... 33,740,637.56.3
	Excess of Imports	19,197,624.97.4
4th year of Meiji (1870)	Exports..... 17,968,608.71.5	Imports..... 21,916,727.74.2
	Excess of Imports	3,948,119.02.7
5th year of Meiji (1871)	Exports..... 17,026,647.21.6	Imports..... 26,174,814.94.7

LIEUT.-COLONEL Nagasaka, who remained in Kagoshima in command of the newly enlisted troops and the Sendai Garrison left for Tokio on the 18th instant.

On Tuesday, the 20th instant, the official ceremony of closing the Genroin took place, Marshal Prince Arisugawa-no-Miya presiding.

MORE than one hundred state prisoners were brought to Tokio from Kagoshima by the mail steamer *Saikio-maru*.

THE *Nichi Nichi Shinbun* says that the sailing vessel *Miyako-maru*, which left for Sabusawa in Yezo on the 10th instant, was wrecked off the coast of Kajima on the 13th. No lives were lost.

THE buildings of the new Tokio Joto Saibansho are now completed; and were opened for business on the 24th instant.

A new silk factory on Nirayama Hill in Idzu was opened on the 12th instant.

ACCORDING to the *Mai Nichi Shinbun* the question of the disposal of the silk-worms' egg cards remaining on hand from last season is not yet decided. It was intended to commence destroying the eggs by scraping them from the cards into the Creek, near the Hana-zo-no-bashi, close to the Public Gardens. Stocks on hand amount to 440,186 cards, of which 308,130 should be made away with. It is said, however, that some of the holders refuse to submit to this rule; and have returned, with their cartons, to their respective homes.

THE *Hochi Shinbun* states that, on the 23rd, the Chinese Ambassadors were entertained by the Minister for Foreign Affairs at his house in Tokio.

SOYESSHIMA, ex-Sangi and ex-Minister for Foreign Affairs, who now resides in China, is engaged in the establishment of a large mercantile firm, to be called the *Bussan-Kaisha*.

It is rumored, according to the *Hochi-Shibun*, that the criminal code, which is now in force, will be replaced, early next year, by an amended one, called the *Nippon Keiho* (Japanese Criminal Code).

THE Chinese Envoys have visited the Imperial palace at Akasaka.

A LETTER from Corea to the *Hochi Shinbun* says that, in the famine of last year, an average of one person in every house died for want of food. In a small village of only sixty houses, 130 people were starved to death, and the number of victims throughout the country is estimated, at least, at between three and four millions. This year's harvest has also been small in the Southern provinces; and the people are anxiously awaiting the importation of Japanese rice.

THE railway bridge at Tsurumi, over the river of the same name, is to be replaced by an iron one; the work of constructing which has been already commenced.

ALL the Government offices both in Fu and Ken were closed on the 28th instant for the remainder of the year.

THE following list of Native Banking Corporations was published in the *Ginko-Zasshi*, No. 1, issued by the *Ginko-Ka* (Bureau for the Control of Banking of the Finance Department). Since the alteration of the Banking Regulations in August of the 9th year of Meiji (1876), up to this month, the following establishments have been opened.

National Bank.	Place.	Capital. Yen.	President.
1st	Tokio	1,500,000	Y. Shibusawa.
2nd	Yokohama	800,000	Z. Hara.
3rd	Tokio	200,000	Z. Yasuda.
4th	Niigata	300,000	A. Yagi.
5th	Tokio	300,000	S. Narahara.
6th	Fukushima	100,000	K. Abe.
7th	Kochi	100,000	N. Yui.
8th	Toyohashi	100,000	R. Sekine.
9th	Kumamoto	55,000	S. Mifuchi.
10th	Kofu	150,000	N. Kuwabara.
11th	Nagoya	100,000	I. Ito.
12th	Kanagawa	200,000	W. Ogawa.
13th	Osaka	250,000	Z. Konoike.
14th	Matsumoto	100,000	G. Oike.
15th	Tokio	17,826,100	M. Mori.
16th	Gifu	50,000	K. Watanabe.
17th	Fukuoka	105,000	Y. Sano.
18th	Nagasaki	150,000	D. Nagami.
19th	Uyeda	100,000	J. Hayakawa.
20th	Tokio	250,000	K. Kojima.
21st	Nagahama	100,000	G. Shibata.
22nd	Okayama	50,000	T. Hanabusa.
23rd	Owake	50,000	O. Yukinatsu.
24th	Iiyama	80,000	N. Hachimoto.
25th } 26th }	Not yet opened		
27th	Tokio	210,000	J. Watanabe.

Total capital yen 22,726,100

ON the 26th inst. a review of the police forces, returned recently from the South-West, was held in the Imperial garden of Fukiage in the presence of H. M. the Mikado.

THE Chinese Minister is expected to lodge in the house at Gotenyama, lately occupied by Ito, Sangi.

ON the 25th inst. eight state prisoners were condemned to hard labour for terms of imprisonment between ten years and one year, by the special Saibansho at the *Genro-in*. Nakahara and twenty ex-police sergeants were acquitted.

COMMENTING on the delay in the examination of Kataoka and other members of the Rissisha or Independent Society of Tosa, the *Komin Shinshi* of Osaka remarks:—

Since the arrest of Kataoka Kenkichi, the noted advocate of the people's rights, and some of his adherents, nearly half a year has elapsed without their being brought to trial, which we deplore very much. Those gentlemen were honestly endeavouring to educate our people out of their slavish state, and to uphold their rights, till the time of their arrest. There is nobody but must sympathise with their noble efforts. We do not understand what induced the Government to arrest them; but, taking street rumour into account, the fact may be attributed to their discontent with those in authority, or to their keeping up communication with the Satsuma rebels. Now, if they were really guilty of such conduct, they cannot of course escape the punishment of the established laws, and there is no injustice in punishing them as they deserve; but, if, on the contrary, they are as spotless as the blue sky, it is most deplorable that they should suffer so long an imprisonment. However, we are aware that our government is merciful, and that our officials are wise; and it is impossible that anything so dreadful as the punishment of the innocent as guilty should happen. So, if our government arrested these under mere suspicion, they ought to institute prompt inquiry as to their guilt or innocence, and render as speedy a decision as possible. Then, if this cannot be done, oh! our rulers are not merciful nor their officials wise!

IN every Fu and Ken extra hospitals were established by the Government for the reception of cholera patients. As has repeatedly been said, various idle rumors disturbed ignorant folks both in Tokio and the country. At the end of last month the people of the villages in the Nagase district, Chiba-ken, wished to close the quarantine hospitals in spite of the Kencho: they foolishly imagined that all the sick were to be killed. They stormed the hospital at Mayebara, armed with bamboo spears and spades. Dr. Numano, Director of the hospital, was killed on the spot; and some of the assistants were wounded more or less severely. The rioters then sent back the sick to their respective houses. On the way homeward, they were met by a detachment of police from the Kencho. One policeman was wounded. The ringleaders have been arrested and brought to trial.

THE man-of-war *Asama-kuwan*, now in dock at Yokoska, is to have her machinery removed, and will be transformed into a sailing vessel.

THE *Hochi Shinbun* states that, on the 24th inst., the Chinese Minister, accompanied by six of his suite, arrived in Tokio by the 1.19 train. He at once proceeded to the Foreign Office and had an interview with Terajima, Samejima and other officials. He next visited Okubo, Home Minister.

THE Tokio Exhibition (not the National Exhibition) was closed on the 26th instant, but will be re-opened on the 6th January next, and on every Sunday and *Ichiroku*.

A TELEGRAM from Nagasaki says that at about 10.45 a.m. on the 24th instant, a fire broke out at the Kencho, which was not extinguished till 11.40 a.m.

A TELEGRAPH office has been established at Hagi, Yamaguchi ken, (Choshu) and will probably be opened on the 1st January.

SILK-WORMS' EGG CARDS.

(From the Correspondence of the *Nichi Nichi Shinbun*.)

Our productions are prospering daily and monthly, and numerous articles are exported abroad. But only three articles, viz., silk, tea, and silk-worms' egg cards, have gained any fame in foreign countries.

Carefully considering the present condition of trade, we observe that silk-worms' egg cards have lost the position which they once occupied in trade. This has caused a reaction. On the one hand it has injured the profits derived from trade; and, on the other, has lessened the benefits which accrue to the country from commerce. This is one of the difficulties attending mercantile affairs. And what is the origin of this trouble? It is that the number of cartons is too great. Therefore we desire to cure the disease and prevent continual loss, by negotiating with the manufacturers. But as the manufacturers live mostly in remote places, far away from the capital, they cannot personally observe the condition of trade; and they have no conception of how many cards may be exported each year. We recently got a table of the exportation of cartons, (published by the *Kan-sho-kioku*, Board of Trade), for the last nine years, ending the 9th year of Meiji (1876.) We quote as follows from this circular.

	Number of cartons.	Value yen.
1st year of Meiji (1867)	1,806,320	3,712,351
2nd " " " (1868)	1,377,493	2,500,096
3rd " " " (1869)	1,397,846	2,566,759
4th " " " (1870)	1,400,027	1,285,189
5th " " " (1871)	1,287,046	2,247,365
6th " " " (1872)	1,418,809	3,063,037
7th " " " (1873)	1,335,465	731,578
8th " " " (1874)	727,463	474,920
9th " " " (1875)	1,019,525	1,902,270

In the 1st year, the average price was yen 1.96.8 per sheet: in the second year 1.81.5 in the third year 1.83.6: in the fourth year 91.8: in the fifth year 1.74.6: in the 6th 2.15.9: in the seventh year 54.8: in the eighth year 64.4: in the ninth year 1.86.6.

Thus the price of cartons varies from year to year. We must not consider the six years between the first and sixth year of Meiji, as ordinary years, because the failure of the silk harvest in Europe through disease caused an unnatural rise in prices in the East. In the seventh year (1873) the disease in Europe disappeared, and the quantity of silk (there produced) became sufficient to meet the demand in those countries. But as our silk worms are very good, foreign dealers continued to purchase supplies from Japan. On the other hand, our manufacturers stimulated by their ample returns during the aforesaid six years, produced large numbers of cartons in the seventh year of Meiji, which they sent to Yokohama. Then, to their great disappointment, they found no foreign dealers anxious to purchase their productions. At length it was decided among holders to set a number of cartons on fire, with the hope of causing an improvement in the value of the remainder. Their loss by this means was not small. In the following year (1875), the results were nearly the same. In the 9th year, a report of the bad harvest of silk in Western countries arrived in Yokohama, and again excited our manufacturers to provide large quantities of cartons. They worked day and night and brought numerous cards to Yokohama in a short time. Owing to the number brought into the market being beyond their demand, foreigners waited for the trouble which they expected would result among our dealers, some of whom, again, became anxious to sell

cartons, at low prices, before others could do so. It was now deemed necessary to set a number of cartons on fire as had been done the previous year, in order to cause a rise in the price. But this proposition fell through, and more than 100,000 cards were sent to Europe instead by native dealers.

This is a brief epitome of the trade in silk-worms' egg cards during the last nine years, ending the ninth year of Meiji. The result of the trade last year was somewhat better than in the previous one. But this year thousands of cards brought but a very low figure, and nothing but trouble remained for our poor manufacturers and dealers.

What is the idea of our people on the subject of the trade in cards? * * * That which we earnestly desire is to decrease the number of cards manufactured. If this is not done no benefit will result from the trade, and nothing but loss may be expected.

IS NOT NOW THE TIME TO ESTABLISH A NATIONAL REPRESENTATIVE ASSEMBLY?

(From the *Kinji Hiron* of the 13th Dec.)

It is a general question among our people at present by what measures the Government may be able to remove the difficulties of the day after the cessation of long protracted struggles? We too have discussed the same subject. We admit that one of the most important matters is the bestowal of decorations upon meritorious officers, both civil and military, on the restoration of tranquility. But this is not a means of removing the existing troubles. Can it then be effected by the revision of the conventions with foreign countries? This, again, is certainly a matter of great urgency, and five years have already elapsed since the term fixed as the date of the revision; but it is not by revising the treaties that we shall do away with all our difficulties.

Now, though we are not able to furnish our readers with a detailed estimate of the real expenses of the late South-Western expedition, they may be estimated as at least the entire Government revenue for a year. Is this not a large sum? The Government can hardly make up for this extraordinary outlay by applying to defray it the revenue provided for something else. By some means they must bridge over the great gap in their finances. Shall we raise a loan, or increase the taxes? Shall we issue more paper money? We can not decide which of these three schemes is the best; but any one of them would entail a heavy burden on our people. So nothing ought to be decided upon by our small cabinet without first taking counsel with us (the people). It is the general desire, that a National Representative assembly should be established, where all public matters shall be decided upon by the will of the majority. This is how we think that present embarrassments may be removed. If we should, unhappily for us, happen to resort, unreasonably, to any of the aforesaid three modes of raising money, we can foretell nothing with certainty as to the future existence or destruction of our country.

Difficulty and disturbance have their origin in various reasons from time to time, but nothing is more serious than financial embarrassment. In a country, wherein people progress in civilization, and have a care for their rights and privileges, their desire to protect their property is extreme; and

no command given by a sovereign or a government can compel the subjects to comply with any demands altogether without reason. In the civilized countries of Europe and America, no public matter is transacted without the consent of the representative assemblies. If two or three officials should selfishly administer the Government contrary to the public desire, disturbance may arise at any moment.

During the time when the American colonies were under the jurisdiction of the British Government, they cultivated their own land and defended it from foreign invasion. When they became prosperous, the home Government wished to oblige them to pay taxes without the consent of their own representative assembly. So the Americans took up arms against British authority and established an independent state. This is a good example to show how difficult it is to compel people to pay taxes against their will. * * * If representative institutions are founded among us, we shall be very free from internal disturbances, because no tyrannical sovereign or ministers will be able to govern us absolutely.

The system of public administration in England is very well organized; and the constitution of the United States of America has been made perfect. But we can not of course hope to introduce such into our country. The matter of levying taxes is one of very great consequence to the people; and therefore the Government ought to consider carefully what is advantageous and what injurious to them before making any laws. Is it not of importance to us whether the country shall be able to cope with present financial difficulties? A rumor is current to the effect that the Government is about to issue a large amount of paper money. This is not worthy of credence; but we, of the people, know very well of the existence of pecuniary embarrassment. Is the Government desirous of escaping from present trouble without considering the future? Or will the authorities prefer to establish a representative assembly in accordance to our wishes, where the deficiencies in the Treasury may be freely discussed. We are sure that the Government will certainly look with favour upon the latter measure; and decide in conformity with the welfare of the country.

EXTRA-TERRITORIALITY AND THE TARIFF.

(From the *Nichi Nichi Shinbun* of the 20th Dec.)

After a draft of a revision of conventions, which was addressed by our Government to the representatives of the Treaty Powers in Japan, appeared in the *Japan Herald*, it became a general subject of discussion, both among natives and foreigners. As it, however, falls within the secret domain of diplomatic affairs, we cannot inform our readers in what way, or how far, the negotiation for revision has gone between our Government and foreign representatives. According to a rumor, our Government have only determined on demanding the restoration of the right of levying duties, in the revision of treaties; and the extra-territorial clause will be left as in the existing conventions. This is perhaps true. But as we cannot see the original copy, which was drawn up by the Government, we do not know whether it is true or not. Notwithstanding the secrecy of diplomatic affairs, the excited spirit of our people decided upon having a revision of the treaties, and a variety of opinions were expressed in connection with the

subject, each aiming at the restoration of our rights as an independent country, and the preservation of our power and influence in equal balance with Western Powers. We, newspaper writers, who act as critics of such questions, ought to direct our attention at present to this subject, and we should not neglect to furnish our readers with any news relative to it.

After carefully considering both the native and foreign opinions on treaty revision, we separate the writers into two parties, viz; those who carry on the controversy in a right and reasonable way, insisting on the restoration of two rights—judicial and tariff—on the day of the revision; and those who maintain the impracticability of expunging the extra-territorial clause from the conventions until our laws are improved, and are only willing to concede the right of levying duties. Such views are not only expressed by our own people, but also by foreigners. According to the present condition of affairs we are obliged, against our desire, to be in favour of the latter.

Some of our controversialists, who are in favour of abolishing extra-territoriality as quickly as possible, express their desire to establish a *Tachiai Saibansho* (Mixed Court) according to the laws of Egypt, whilst others insist on establishing a *Meiri Saibansho* (Court of Equity) in imitation of the ancient laws of Rome, wherein complaints between natives and foreigners may be examined and judged. We wrote on the last question some days ago. But, according to reports from juriconsults in Egypt, who were sent thither by the Government, it is not good to establish a Mixed Court in Japan. It would be more convenient to establish a Court of Equity in a part of the country. But if courts of common law and equity are established together there will be some trouble. These questions are not yet settled. What is, then, best for us, since the establishment of courts of equity or mixed courts is of no avail?

No foreigners ought to interfere with us in the alteration of the tariff. But they seem opposed to leaving the entire right of levying duties in our own hands. This is, however, quite unreasonable, and only a very few foreigners insist upon this unjust claim. It may be very easy for us to regain our right of levying duties, because both natives and foreigners have expressed to the Government their willingness to agree to an amended tariff. And on this being granted it will be necessary to alter the dues upon imports. But those who are in favour of the establishment of *Habeas Corpus*, say that 5 per cent or 10 per cent duty upon imports is sufficient to protect the productions of the interior. Those who advocate free trade, say that no heavy duty should be placed upon imports, and that the impost of a protective tax on import articles is not good for Japan. It is not yet decided which of these methods may be the more beneficial to this country.

There are two kinds of duties, viz., specific and *ad valorem*. The former is a duty levied according to the weight and measurement of articles. For instance, one pound of tobacco costs 3½ *momme*, and one hundred pounds of cotton yarn 75 *momme*. The duty imposed on the *ad valorem* system is according to the original value of the articles. For instance, glass, crystal-ware, and spirits pay 5 per cent duty on their original value. The two modes mentioned above are in force in the existing tariff and they give more or less trouble to our Custom House officials. Now, which will be the better for us to adopt in the revision of the treaties, the specific or

ad valorem? Or will it be best to retain both systems, as in force at the present time.

No decision has yet been arrived at on this point, though the question is of great importance to us. Besides this point, there are many others which are being discussed by our people, such as compelling foreign ships to pay light and tonnage dues on entering and leaving our ports. We refer our readers to the writings, and request their careful consideration of these important subjects.

In our issue yesterday (20th), we discussed the principal points in connection with the revision of the treaties, and requested careful consideration by our readers. The Editor of the *Japan Gazette* gives his opinion on the subject of treaty revision in his paper of the 18th and 19th instant. Under the heading of "Treaty Revision, No. 1," he wrote to the effect that the Japanese Government must wait for a more favourable opportunity to expunge the extra-territorial clause from the conventions, than that of the coming revision; and under the same heading, No. 2, he argued that on the restoration of the right of levying duties, it will not be good to put a heavy tax upon imports under the name of a protective tariff. The writer's ideas in some points are consistent with the requirements of our people. But, in a word, his views are nearly the same as those expressed by the *Herald*, and his principal object is to oppose making any concession to the Japanese. Such is the general conduct of Europeans in Eastern nations, and has been so in Japan during the last twenty years. But even statesmen of foreign Governments desire to preserve this unjust and unreasonable clause in the conventions for their own benefit; and therefore it is not right only to censure newspaper writers. * * *

It is impossible at present to expunge extra-territoriality from the conventions in the approaching revision. To all appearance, we are right in claiming the restoration of judicial rights. But suppose that we were Europeans, what then would be our idea! We have no desire to contend for the return of the said right to the Japanese; and we have already argued that we have been the cause of foreigners declining to renounce the principle of extra-territoriality. And, if some day the Chinese or Korean Government ask for an alteration of the treaties between us and them, and demand that Japanese residents in China or Corea should come under the jurisdiction of their laws, our Government surely will not accede to such a proposition; and the people would also oppose it. And it is the same with foreigners in Japan at present. So it may be better for us to say that the time to abolish extra-territoriality has not yet arrived, but the existing conventions should continue much longer in force, during which time both the civil and criminal laws should be improved and perfected, in order to make foreigners contented to live under our laws. This is not impossible nor even difficult. Some persons may say that it will take at least ten or twenty years to effect this change, and that it is a very foolish idea. Ten or twenty years is a long time in the life of an individual, but is a short period in a country's history. Since we opened ports to trade, eighteen years have already elapsed, and nine years have gone by since the establishment of the present Government; and it is now six years since it was first proposed to revise the treaties. So, if we find we cannot complete the revision of our laws in five years, let us take five years more, or even a third term of five years.

SHORT ANECDOTES.

(From the Japanese.)

THE PRIEST'S SERVANT.

"Did you ever hear a story about a priest's servant?" asked the ex-Shogun Iyeyas of his old vassals, while he was spending an evening quietly with them at the castle of Sumpu, the seat of his retirement. "Well, no," answered an old lord. "Then I will tell you the story. There was a certain good priest, who kept an old monastery in a very quiet part of the country, and he had a little boy as his servant, whom he was educating also for the clerical profession. One day it happened that the boy ran away from his master and teacher, and, coming to his father, said, 'Father I do not complain of any hardship which I have to suffer as a postulant priest, but I positively cannot endure the wanton and cruel treatment of my master, to which I am subject every day. When I shave his head, and, as I am unaccustomed to handling a razor, sometimes draw a little blood, I am beaten severely, and when I wash the beans for soup, he grows angry at my not being skilful in doing it.' The poor parent, believing all his son said, hurried to the monastery, and demanded indignantly of the priest to release his son from his engagement, when the other mildly made enquiries, and found out what all the man's irritation meant. 'I must explain all,' said the good monk. 'Now, about the shaving:—it is necessary to shave one's head when one assumes the garb of our profession. I used to let him shave my head, in order to teach him how to shave his own, and now he can do it very well. But, whenever I let him shave my head, he cuts me intentionally. To wash beans it is usual to employ a thick stick, but he uses a ladle, so he breaks two or three ladles every morning.' Then the boy's father knelt before the venerable priest, begging for pardon, and then punished the false-hearted boy. This is but a little story," continued the ex-Shogun, "yet the men who have to govern people may profit by it, as a warning that there are two sides to every question."

THE FORTY-EIGHT BATTLES.

Iyeyas fought forty-eight battles during his life. In every battle he insisted on the most rigid discipline being observed among the troops, and whenever he found himself in a difficult position, he threw away his baton, and used to strike his fist against the saddle on which he was seated, shouting "forward! forward!" and not minding the blood which streamed from his hand by the violent blows on the saddle. So, in his old age, he found his fingers so stiff and hard, that he could not use them except with great difficulty. Once he observed that there was no necessity for armour to be heavy or handsome, because, Naomasa Ii was often wounded, though he wore very heavy armour, while Tadakatsu Honda, whose practice was just the reverse, never received a single cut on the battlefield, though they were both equally daring fighters.

TOSHIKATSU DOI.

Toshikatsu Doi having once possessed a foot's length of Chinese-made string, handed it to his attendant, Jinbei Ono, charging him to keep it always with him, which caused much merriment among his other servants, who supposed their master to be very miserly. After three years had elapsed, his sword string wore out. Doi suddenly reminded Ono of his charge, and he promptly produced the string from his pocket. "Now, you see," said the delighted master, "an

apparently useless thing may be of service sometimes." Then, calling his steward, Yozammon Terada, he said, "I am well pleased with the carefulness of Ono, who attends to his master's orders faithfully. You know that string was manufactured in China with much labour, and came here across the wide sea, so even an inch of it we must not waste thoughtlessly. Now add three hundred koku of rice to Ono's revenue as a reward!" Then, turning to Ono, he said laughing, "you have gained three hundred koku through a foot of string!"

SHOGUN HIDETADA.

When the Shogun Hidetada (the son of Iyeyas, and the second Shogun of the Tokugawa house) was on a visit to his father, the ex-Shogun Iyeyas, at Sumpu, he delayed his return to Yedo for a month. The ex-Shogun one day said to his principal court lady, that the Shogun was young, and therefore he must be very lonely, and requested her to send him the most charming lady in the court, to make his visit more agreeable. The old lady selected a young lady called Ohana, who was noted for her beauty and grace, as the messenger to convey the ex-Shogun's presents to the Shogun. One evening, hearing a noise in the garden, the young Shogun, who was sitting in his state robes, opened the door, and found a beautiful lady gracefully attired, saying she was sent there with presents by the express order of the old Shogun. He conducted her to the upper seat, and, kneeling humbly before her, received the presents, as if he was before his venerable father: then, with lighted candle, conducted the messenger very politely to the garden gate, to the great uneasiness of the fair one, who returned to the old lady, rather disappointed, and told her what was done by the Shogun. "O, the Shogun is so modest!" exclaimed the old lord, when he was informed of the fact, "I am far inferior to him!" When the young ruler was told by his father, through his attendant, that he was too modest, and that he should sometimes tell a "story," the Shogun replied, smiling—"One is delighted to hear the ex-Shogun's 'stories': because they are all truth, but I can not do as he does because I am afraid mine will not be believed, even if I speak the truth."

A COMET.

In the year of Keigen, a comet appeared in the northern part of the sky. The time being after some horrible carnage had just taken place various baseless rumours were current, and the mind of the public was much disturbed. "It is absurd," said the Shogun to his vassals, "to suppose that every one who sees the star, will suffer any evil, for it is but a small star, which shines in the vast sky, and how can we know what country on earth, has to suffer by its appearance? Besides, the will of Heaven cannot be avoided by human power, so a ruler has only to take care and not commit any wrong action." Soon after this the ill-omened star disappeared and tranquility was restored.

OTA.

The Shogun Hidetada once conferred a reward of an annual pension of 500 koku of rice upon one Ota, who had rendered much service to his lord, when the man grew angry, and, throwing the document he had received on the floor, went out in silence. The Shogun was very indignant at such an act, and wished to put the insolent man to death, but his confidential attendant, Masanari Inouye, interfered and begged the Shogun to refer the case to the ex-Shogun, and let him decide accordingly. So Inouye was despatched with all speed to Sumpu, where the ex-Shogun was delighted

to have the solving of the question. "Very good!" said the retired Shogun, a "peaceful age is awaiting the Shogun! Well, it is my opinion that Ota was certainly guilty of very impolite behaviour, but, to reward and punish as each one deserves being the most important point in public administration, it was evidently Ota's intention to warn the Shogun, in good time, of his defectiveness on that point, even at the risk of his own life. There was a similar person whom I had to deal with while I was in Mikawa. He was a foot-soldier by the name of Kinzo Suzuki, and he ate the fish which he caught in a pond, which was strictly forbidden. I was angry at the news, and, summoning the offender before me, threatened him with a drawn sword. He fearlessly advanced towards me, crying: "Have you taken leave of your senses that you exchange a man's life for the life of a bird or a fish?" Then I suddenly recollected that there were some who had been thrown into prison for catching birds in a public garden, and that it was what Suzuki now warned me against, so I rewarded him, and set free all who were confined for that trifling offence. Now go and tell the Shogun that he is to make Ota's pension three thousand koku of rice!" When Inouye brought back the advice, the Shogun was glad to comply with it, and presented a famous sword, named Hidarimoji, to his faithful attendant, with the words:—"I have learned how to reward, and how to punish, through your good sense."

A GOOD NURSE.

The wet-nurse of the Shogun Hidetada was known as Madam Oba, though that was not her real name, which was not known. She was good and wise, and had firm and straightforward qualities. The Shogun loved and trusted her, as if she were his own mother. She had no particular liking for pleasure-seeking, though she could do almost anything, if she liked: but her sole delight was in performing simple and pious works. Twice or thrice a month, she used to collect before her the grooms, kago-carriers, and all other low servants belonging to her child-master, and give them a good feast, waiting upon them herself.

One day while she was busily engaged thus, she was observed by Tamasa Honda, the Tairo, or prime Minister of the Shogun, who happened to be there, and who, surprised, said: "Madam Oba, you have too many servants to undertake such a task. Why do you do it yourself?" "I beg your pardon, sir," said Madam, rather curtly, "have you forgotten when your honour was not rich as you are now? I did not believe what people said about your honour, that you were an entirely altered man, but now it is a realized fact. For myself, I was very poor, and could not do what I wished to do for charity's sake, and now I am quite happy that I can feed these poor people myself. Your honour is the Tairo of the Shogun's Government, and I declare to your honour, that your attention would be better directed towards the poor people, whom you govern." After this, the proud Tairo went out silently, not pleased, but conscience-stricken.

When death approached Madam Oba, she was visited by the Shogun, and asked what she wished to say. "My lord, I have nothing to say for myself," said the lady, in tears, "but I wish humbly to request that your lordship will keep in mind the sacred and wise instructions of the ex-Shogun and attend well to public affairs, so that none can say anything against your lordship in time to come." "Then, have you really nothing to demand for the benefit of yourself or of your

family?" inquired the Shogun anxiously. "No, my lord," replied she, "I know I am too much honoured by your kind attentions, which I cannot repay, and there is nothing for me to wish for more." The Shogun was about to leave the room, when she called out suddenly:—"My lord! My lord! I understand now why your lordship has been so particular in asking if I had no request to make. May I ask is it not my undutiful son, who was banished, that your lordship wished me to refer to? Why, it is his due to undergo the punishment. Now, my lord, if I were so mean as to beg your lordship's favour for him, taking advantage of the occasion, and thereby corrupting the public laws, my soul would be much interrupted in its journey towards the other world, where I am going soon!"

THE GOOD QUALITIES OF SHOGUN HIDETADA.

The Shogun once said:—"People say this life is like an idle dream, and that a step further it is all darkness; so one should amuse himself as much as he can." This is a great mistake. Life is short: therefore one must be careful and diligent in the performance of his duty while he has the opportunity. Even in illness, and he was confined to his bed for months together, he never neglected to arrange his hair and dress himself properly every morning. He used to say:—"Though I am sick, I must attend to important public affairs, which must not be discharged by me improperly."

SHOGUN IYEMITSU.

When the (third) Shogun Iyemitsu was once coming back from hawking, there was a drunken fellow lying in the road, and before the footmen could remove him, the Shogun rode up and asked who he was, and what he was doing. "This is the 20th of the 10th month, my lord," said a footman trembling and kneeling on the ground, "which merchants celebrate in honour of Ebis, the god of wealth, and no doubt this fellow was invited to the festival, and has drunk so much *saké* that he cannot walk." "Well, I suppose," said the Shogun, "he is in perfect bliss, then; give him one of the birds we have killed to day, and leave him alone."

JUZO ISHIDANI.

Juzo Ishidani was a corporal in an infantry regiment in the Shogun's army. One day, during his absence, one of the soldiers killed a stork (*tsuru*) accidentally, which had flown into the garden, so he was bound with cord, to be tried by the corporal. (Such offenders were subject to capital punishment at that time). On returning home, Juzo was informed of what had happened and said, coolly:—"Do you mean to say that the bird fell down in our garden and died? Well it must have been some disease that the poor bird died of, for every creature is subject to disease, and why not a stork? Or perhaps it has eaten some poisonous insect. I will see to it." The next morning he brought the dead bird before the Shogun's court, and addressed the officials there:—"Gentlemen, last evening this poor bird fell down in my garden and died suddenly, through its having eaten some poisonous insect, I presume." "Well well!" said the officials, "never mind since it was not killed intentionally." "Well gentlemen," cried the soldier, "since it died by poison, I will not leave it to any other hand, but I will take the liberty of carrying it home myself." So he did and cooked it at his house, and made a feast, to which he invited all the soldiers under him.

MITO-KOMON GIKO.

A man was brought before the Komon Giko, the lord of the castle Mito, for killing a stork. Giko ordered the prisoner to be kept in jail till next year, it being then the end of a year. Early in the following year, Giko, according to the prevailing custom, gave a feast in his castle to all the priests under his dominion. After the feast was over the conversation turned on the subjects of mercy and charity, the leading virtues of the true Buddhist. "I have a man," said the Komon, "who broke the law by killing a stork, and I shall let you see how I deal with such an offender;" and he ordered the prisoner to be taken out and bound securely to a large tree in the garden, which order being quickly complied with, Giko approached him with a drawn sword, and threatened a blow, while the priests, who had been preaching about mercy and charity, remained silent and without any inclination to interfere on behalf of the poor fellow.

"These dull monks do not understand anything," exclaimed the lord, throwing away his sword. "Do you think I would kill a man for having killed a bird? Only, considering that the public laws are inviolable, I expected your pious interference for his life, and then I would have released him, but all of you look foolish and do not think of mercy, though you speak enough about it. Now, leave here this moment, and be gone to some other part of the empire; for I do not allow any merciless priests to serve in temples, under my own dominion. So he drove away the monks, and released the man who had killed the bird.

CORRESPONDENCE.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

"IF THE BLIND LEAD THE BLIND, BOTH SHALL FALL INTO THE DITCH."

To the Editor of the Japan Gazette.

DEAR SIR:—In the *Japan Weekly Mail* of the 8th December there was a letter signed "*Renaissance du Japon*." After the insertion of that letter in his paper the Editor saw fit in the plenitude of his power and learning to add the following remarks.

"Our correspondent is not quite right in his facts. No Japanese tea worth mentioning is imported into Europe. Silk, raw or manufactured pays, in England at least, no duty whatever."

Now sir I think the Editor in his remark about Japanese tea is not quite right in his facts; for I opine that there is quite a considerable amount of Japanese tea going to Europe, and even in England itself there is a considerable quantity used to mix with China teas, as I have seen with my own eyes in London and Liverpool. Then as to silk. The writer of the letter in the *Mail* did not say that there was any duty charged upon that article in England, but he said "our silk and tea when imported into Europe pay far heavier duties, &c." So the Editor in his note was wide of the mark in this regard also.

And then the Editor of the *Tokio Times* following his blind leader, is also so blind that he does not see the pit, and so in they both tumble together! [See *Tokio Times*. December 15th, page 332. "A native cor-

respondent of the *Japan Mail* falls into the error of stating that silk, as well as tea, is subject to a heavy import duty on entering England."]

Now, sir, I have a friend in America who is Editor of a newspaper, and who is also stone blind, but I have never yet in his paper seen such blind mistakes as that which the two Editors of the two Reviews of Yokohama have fallen into in the above matter!

And what will be the result if the foreign community in Japan and other parts of the East accept the guidance of two blind guides, who have so easily fallen into a pit, going aside out of their way to do so?

Yours sincerely,

A. WARNING.

Nogé, December 19th, 1877.

AMERICAN CONSULAR DUTIES.

To the Editor of the *Japan Gazette*.

DEAR SIR,—In common with, I am sure, a great many of the residents of this city, I was exceedingly pleased to read, in your issue of last evening, the extract from the *New York Times*, regarding the malicious slanders which had been circulated in the United States against General T. B. Van Buren; and I hope he will soon return to resume his appointment in Yokohama. I was also gratified to read the testimony of Capt. Young in support of the general high estimation in which General Van Buren is held in Yokohama, which does honour to the writer as well as the receiver. It appears, however, from Capt. Young's letter, that in the administration of justice in a United States Consular Court, it is important to so shape the sentences passed upon criminals, that they will meet the approval of those gentlemen themselves. This is too good to pass over, and affords a key to the originators of the scandals, which probably emanated from some gentlemen who were not so "satisfied" with the sentences passed upon them as the sailors of the *Tennessee*. Who would support a rotten, effete, Monarchical Government, after such evidence as this of the consideration for criminals which is expected from a Republican Court of Justice?

Yours truly,

FLANEUR.

Yokohama, Dec. 28th, 1877.

LAW REPORTS.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON Esq., Acting Law-Secretary.

JOHN BRADFELD v. JOHN NORTH.

Mr. Lowder for the plaintiff and Mr. Dickens for the defendant.

The plaintiff's claim is that the defendant entered into an agreement with him to pay the sum of \$3,000 in satisfaction of a promissory note given by one John Thompson, a partner in the defendant's business, to the plaintiff for moneys had and received by the said Thompson and used in the business of the defendant; the advances to Thompson being secured by a bill of sale deemed by the parties to be enforceable against the property of Mr. Thompson.

This case was concluded on the 17th October, when His Honour reserved his decision.

Thursday, December 20th, 1877.

This afternoon His Honour delivered the following

JUDGMENT.

In this case the plaintiff sues the defendant for the sum of \$3,000 which, it is alleged, the defendant agreed to pay to the plaintiff in satisfaction of the claims of the plaintiff against one John Thompson. The answer in effect denies the promise; and it denies that there was any consideration for the promise. It alleges further that any offer made by the defendant was made by reason of a misrepresentation on the part of the plaintiff. Other defences were raised at the trial which will be referred to in their place. The facts of the case are these: The plaintiff and John Thompson, previous to March 1874, carried on the business of chemists and druggists in partnership, at Yokohama in a place called the Medical Hall, and the defendant likewise carried on the business of chemist and druggist by himself in a place called the Yokohama Dispensary. During the time the plaintiff and Thompson carried on the Medical Hall, Thompson became indebted to the plaintiff, and gave to the plaintiff by way of security a bill of sale over his, Thompson's, interests in the partnership property that was then in or might thereafter be brought into the Medical Hall. In March 1874, the Medical Hall was destroyed by fire. Thereupon the plaintiff proposed to the defendant that they should combine their establishments, and that the defendant, the plaintiff and Thompson, who was then in England, should enter into partnership. This proposal was accepted. It was agreed that the capital should consist of \$11,400, the defendant to contribute the half, \$5,700, and the plaintiff and Thompson to contribute \$2,850 each. Whether the plaintiff was authorized by Thompson at the time to enter into this agreement does not appear, but, if not, the agreement was, as will be seen, subsequently ratified by the latter, and the business of the new partnership was carried on as from the 13th of March, and was carried on at the Dispensary premises, thereafter called the Medical Hall and Dispensary. In the fire at the Medical Hall all the stock in trade was destroyed, but there were certain goods which had been ordered for the Medical Hall on their way—whether they had been landed or not is disputed—and these goods were taken over by the new firm. On striking the balance at the time of the fire, Thompson was found to be indebted to the plaintiff in the sum of \$491.83; and the plaintiff either paid or arranged to pay the \$2,850 Thompson's contribution to the new firm. On the 1st of April, 1875, the plaintiff and Thompson, who were then both in England, executed the deed of partnership which had been previously executed by the defendant, and Thompson gave to the plaintiff his promissory note for \$3,341.83, being the amount of the two sums of \$491.83 and \$2,850 just mentioned. There was an attempt to show that Thompson really did not owe the plaintiff this money when he gave the note. But Thompson himself when examined did not dispute his indebtedness, and for the purpose of the case it must be taken that Thompson was really indebted to the plaintiff in the amount of the promissory note at the time it was given. In the course of 1875 the plaintiff and Thompson both returned to Yokohama. In consequence of the defendant's illness the plaintiff had charge of the business, and we have heard a good deal as to the way in which he conducted it, which does not, it

appears to me, bear upon the present case. The evidence adduced on this point seems to have been intended to show that the defendant in entering into the negotiations hereafter referred to, was animated by a justifiable desire to get rid of the plaintiff as a partner. But, whether this is correct or not, it throws no light upon the questions with which we have to deal. The only transaction of importance to this case which took place during the time is admitted on the record. The plaintiff had drawn in London upon the firm for £194. 10s. for his own use; and this bill when it arrived was paid by the plaintiff out of the moneys of the firm, and charged, not to his own account, but to the account of the person in whose favour it was drawn. It is admitted that the amount paid to retire that bill, \$977.96, is due from the plaintiff to the defendant, together with interest on it from the 30th of November 1875, the day on which the money was paid. In February 1876 the plaintiff went to Shanghai, and while the plaintiff and the defendant continued to correspond with each other, the more important of the transactions between them were conducted by Mr. Talbot, who held a power of attorney from the plaintiff, and who at the same time acted as accountant to the firm. In May 1876 the share of the plaintiff in the partnership was transferred to Mr. Brewer. Some question was made as to the exact time of the transfer, but there is no doubt that, at latest, plaintiff ceased to be a partner on the 31st of May. In the meantime the negotiation which is the subject of the present action had commenced.

On the 23rd of May there was a meeting in Mr. Talbot's office between Mr. Thompson, Mr. Talbot and the defendant, at which an understanding was arrived at that the defendant should take over Thompson's liability to the plaintiff, give Thompson credit for goods to be used in a business which he was to start in Yedo and give him a sum of money, and that, in consideration of this, the defendant should receive Thompson's share in the business. During the interview a letter was written by Mr. Talbot, signed by Mr. Thompson, and given to the defendant. The defendant does not remember receiving the letter, but upon the evidence I find that he did receive it. The following is a copy of it:—

Yokohama, 23rd May, 1876.

JOHN NORTH Esq.

DEAR SIR,

I am willing to dispose of my share in the business of North, Thompson & Co. to you in consideration of your taking up my liability to Mr. John Bradfield, and paying over to me a sum of \$250 in cash.

Yours faithfully,

J. THOMPSON.

After this interview the defendant had another interview with Mr. Talbot, following upon which the defendant, on the 27th of May, wrote to Mr. Talbot the following letter:—

Yokohama, 27th May, 1876.

DEAR MR. TALBOT,

I think I shall be safe in offering \$3,000 for Mr. Thompson's share and interest in the business, subject to Mr. Bradfield freeing Mr. Thompson from all further liability.

I saw Mr. Dickins yesterday and I asked him if he could find me the \$3,000: he told me that he could not give me a definite answer but he thought it would be all right, and he would let me know when he returned from Kobe.

Yours truly,

J. NORTH.

On the 1st of June, Mr. Talbot, in reply to that letter, wrote as follows:—

Yokohama, 1st June, 1876.

JOHN NORTH ESQ.
Yokohama.

DEAR SIR,—I beg to acknowledge receipt of your letter of the 27th May, offering me the sum of three thousand dollars in lieu of all demands now held and owing to my principal, Mr. John Bradfield, and secured upon the interest in your business belonging to Mr. John Thompson.

In reply I have to inform you that I accept your proposal, subject to the following conditions.

1.—That Mr. Thompson agrees to transfer his interest to you in consideration of this payment, and of any other considerations which may be agreed upon between you.

2.—That payment of three thousand dollars be made to me within thirty days from this date, free from any deductions whatever.

And in consideration of the foregoing I agree to transfer to your order by endorsement Mr. Thompson's promissory note to Mr. Bradfield for \$3,341.82, with interest to 18th June 1876 equal to \$862.72, in all \$4,204.54; and to discharge the mortgage in the Registry of H. M. Court.

Further I consent to your advertising the dissolution of partnership from this date.

Yours faithfully.

W. H. TALBOT

For JOHN BRADFIELD.

Mr. Talbot gives an account of a conversation he had with the defendant on the subject of this letter. He says:—"I saw Mr. North immediately after sending in the letter of the 1st of June—the letter was sent in early in the morning—and Mr. North said the letter was all right. In reply to my question was it all right? he said it was all right. I will try and get the money at once." Mr. North also gives an account of the same conversation. He says:—"Shortly after Mr. Talbot wrote the letter of the 1st of June, he called and asked me if I had got his letter. I said, yes, all right." Two questions have arisen upon this conversation. The first is as to the effect of it, and the second is as to whether it is admissible in evidence or not. The conclusion I arrive at upon the first question is that the defendant, in telling Mr. Talbot that the letter was all right, intended Mr. Talbot to believe that he accepted unconditionally the terms proposed in that letter, and I find further that Mr. Talbot did so believe.

The second question came up for decision during the trial, and I then ruled that the evidence was admissible. I shall, however, refer again to the point after considering what are the terms of the contract of which the defendant in that conversation expressed his acceptance. It is desirable in the first place, however, to see what was the subsequent action of the parties in the matter.

On the 1st of June, the day on which Mr. Talbot's letter was written and the interview between him and the defendant took place, the defendant sent to one of the local newspapers the following notice in his own handwriting with a request that it might be published:—

The interest and responsibility of Mr. John Bradfield and Mr. John Thompson in our firm ceases from this date.

NORTH, THOMPSON & CO.

Yokohama, June 1st, 1876.

On the 7th of the same month, the defendant wrote to the plaintiff a letter in which the following passage occurs:—

Mr. Talbot writes to you this mail in reference to an entry of \$990 odd made in the cash book last November to the debit of Messrs. Dakin. It appears that this amount was drawn in sterling by yourself last September whilst you were in London. I can't think how you could have made the

mistake by entering it to Dakin. Of course this will reduce the amount of the payment I have to make for Thompson's share, which is fortunate for me just now. We are starting Thompson up in Yedo. Of course we give him credit for the stock.

And on the 19th of the same month the defendant wrote, in the name of his firm, to Thompson the following letter:—

Yokohama Medical Hall and Dispensary.
June 19th, 1876.

J. THOMPSON ESQ.

DEAR SIR,—We beg to enclose you a copy of a letter which we wish you to write to us signed by Mr. Watanabe and yourself, and it would be as well to furnish him with a translation of it. We are very pleased that you have succeeded in getting the permit at last. We hope that no further difficulties will be placed in your way. We will have your things packed off at once and trust everything will give you satisfaction.

It occurred to us the other day that as our Mr. North takes over your late interest and liabilities in our firm, it would be only just to ourselves to have some guarantee that you will not start business again in the same line either in Yokohama or its neighbourhood for a certain number of years. This is quite usual in such cases and quite in order, and to sign this and to settle one or two things we would like you to come to Yokohama as soon as possible.

Wishing you every success, and any reasonable thing we can do for you, we shall be only too happy to do it.

We are

Yours truly,

NORTH, THOMPSON & CO.

The word "late" is interlined, between "your" and "interest," as if to prevent any misapprehension as to the taking over being complete. The following is a copy of the enclosure:—

Tokio, June 1876.

MESSRS NORTH, THOMPSON & CO.

Yokohama.

DEAR SIRS,—

You have been good enough to advance us goods on sale or return to the amount of two thousand dollars to enable us to open a dispensary and drug store at No. 8 Owaricho Nichome Tokio. To repay you the said amount of \$2,000, we will remit you one quarter of the amount of our receipts monthly; payable on the 15th of each month, and we agree as follows. That you may at any time during business hours inspect our books of accounts, that we will insure the goods and fixtures to the full amount of their value and for every invoice of goods we receive from you we will grant you a proper receipt. If at the end of six months we have omitted to make you regular payments or we find that the profits of the business will not admit of our doing so, or that we refuse to comply with any of the above stipulations, we will allow and shall be quite willing for you to take the goods and fixtures away; and any balance there may remain we will undertake to pay as early as possible.

The letter of which the foregoing enclosure is a draft, was written out and signed on the 20th of June by Thompson and Watanabe, and sent to the defendant; and on the 21st of June Thompson gave the defendant the following undertaking:—

I hereby guarantee that for value received I undertake not to commence the business of a chemist and druggist or in any similar business in the settlement of Yokohama or within a radius of five miles of the said settlement for the term of 14 years under the penalty of \$5,000.

J. THOMPSON.

To Messrs. NORTH, THOMPSON & CO.
Yokohama, June 21st, 1876.

All this evidence points to a belief on the part of the defendant that he had come to a definite agreement with the plaintiff. His sending the notice to the newspaper is referable to the consent in Mr. Talbot's letter; his reference to the money which he would have to pay to the plaintiff points to money payable it may be *in futuro*, but the payment of which was not subject to any contingency; and the reference, in the letter to Thompson, to the latter's late interest and liability points

to a completed transaction. The 30th of June passed, and the money was not paid; the reason of its non-payment being that the defendant had not the money and could not procure it—a fact of which Mr. Talbot was aware, and consequently did not press for payment. The defendant says that, not being able to pay the money at the time named, he deemed the bargain off, and thought no more about it.

But the fact of the defendant taking such a view would not alter the contract; and it is to be considered, moreover, whether his subsequent conduct is consistent with his having taken such a view. If the agreement was off, Thompson remained a partner, yet we find the defendant some months afterwards revising the proof of the Hong List for 1877, in which Thompson's name was omitted as a partner, although it had appeared in the Hong List for 1876. Again, an account was furnished to him by Mr. Talbot in September, in which the plaintiff had been credited with the \$3,000; and the defendant did not make any objection to that account. He says that he did not accept it, but he read it and saw that the \$3,000 were credited to the plaintiff, and if he had considered the bargain off it is natural to suppose that he would have said so to Mr. Talbot. On the contrary, up till January of this year, nothing was said by the defendant to Mr. Talbot, to lead the latter to believe that the defendant considered the contract to be off. As to what took place at the interview in January, there is a conflict between the evidence of the defendant and that of Mr. Talbot. They are agreed so far that on that occasion the defendant expressed a doubt as to the validity of the bill of sale from Thompson to the plaintiff. The defendant says that he then told Mr. Talbot, with reference to this bill of sale, that he thought he would not have to pay the \$3,000, the subject of this action. Mr. Talbot denies this. But even taking the defendant's own version of the interview, it is clear that he referred to the agreement as an agreement which, but for the invalidity of the bill of sale, was a subsisting agreement. He in no way spoke of it as an offer which had been made to him and which he had not been able to accept, but as an accepted offer, and an agreement concluded, from which he considered himself relieved by reason of the nature of the bill of sale, and by reason of that only.

Up, too, till about the time of this interview nothing was said by the defendant to Thompson to intimate to him that the contract was off, and that the consideration upon which he had given the undertaking of the 21st of June had failed. The value of that consideration is not here in question. In the meantime, Thompson's account with the defendant was getting in arrears; and, about the time of the interview with Talbot—whether some days before or some days after does not appear—the defendant obtained Thompson's signature to the following document:—

In consideration of the sum of three thousand dollars (\$3,000). I hereby transfer all my share and interest in the firm of North, Thompson & Co., No. 61 Yokohama, to the said firm of North, Thompson & Co., the said transfer commencing October 1st, 1876.

J. THOMPSON.

January 2nd, 1877.

Witnessed, J. HEINTZ, l.s.

There is a lamentable conflict of evidence as to the representations made by the defendant to induce Thompson to sign this. But I am glad that, from the view which I take of the bearing of this transaction on the case, I am

spared from entering into a consideration of the circumstances under which it took place. I have to express my satisfaction that Mr. Thompson appears to have been ashamed of his share in it. It was never mentioned by the defendant to Mr. Talbot.

Before this, about the month of October, there had been an interview between Mr. Talbot, the defendant and Mr. Watson, the defendant's assistant, and an interview between Mr. Talbot and Mr. Watson. Those interviews were concerning the taking over of Mr. Thompson's share by Mr. Watson, instead of by the defendant. The witnesses do not give the same account of the words that were used, but all that took place was quite consistent with the defendant being still bound by his agreement.

After the interview in January and until June of this year, nothing appears to have passed between the defendant and Mr. Talbot as to the payment of the money. But in June Mr. Talbot pressed the defendant for a settlement, when the latter refused payment and repudiated any liability to the plaintiff. Thereupon, these proceedings were taken. But before their institution, Mr. Talbot wrote to Mr. Thompson demanding payment of the promissory note which was one of the subjects of the agreement between the plaintiff and the defendant. This demand has been referred to as showing that Mr. Talbot considered Thompson to be still liable. But I shall refer to this point later on.

We have now to consider the construction of the contract. Reading the letter of the 27th of May from the defendant to Talbot, and the letter of the 1st of June from Talbot to the defendant, together, it appears to me that the contract is an original contract between the plaintiff and the defendant for the extinguishment of the plaintiff's claim upon Thompson, subject to Thompson agreeing with the defendant for the transfer of his share. The stipulation as to the discharge of the mortgage directly contemplated the extinguishment of the liability of Thompson; and although the stipulation as to the transfer by endorsement of the bill of exchange is consistent with the keeping alive of the remedy upon it, it is inconsistent with the keeping of it alive in favour of the plaintiff. It has been urged that the agreement may be considered as an agreement for a guarantee to the amount of \$3,000, Thompson remaining liable to the plaintiff. But the terms of both letters are totally irreconcilable with such a suggestion. The expression in the defendant's letter is "subject to Mr. Bradfield freeing Mr. Thompson from all further liability;" and Mr. Talbot accepts the defendant's offer as an offer to pay \$3,000 dollars "in lieu of all demands." This language is too clear to require any elucidation from the subsequent acts of the parties, or to allow of it receiving a different construction from any act of the parties inconsistent with it. Even, then, if Mr. Talbot's demand upon Mr. Thompson to pay the amount of the promissory note were inconsistent with the clear construction which it appears to me the words bear, it could not be allowed to affect it. But it does not appear to me that it is inconsistent with that construction. The acts of a person towards obtaining a remedy after a contract has been broken are to be viewed in a very different light from the acts of the same person while the contract is supposed to be subsisting, and it was after the defendant had repudiated the contract that the demand upon Thompson was made.

It has also been urged that it may be considered as an agreement for the transfer by

the plaintiff to the defendant of Mr. Thompson's share. But, whatever conclusion might be drawn from the defendant's letter alone, Mr. Talbot's letter completely negatives this suggestion. The acceptance of the proposal is there expressed to be subject to the condition that "Mr. Thompson agrees to transfer his share." It is to be observed, too, that Thompson, in his letter to the defendant of the 23rd of May, speaks of himself as the person who has the share to dispose of. He says, "I am willing to dispose of my share."

Now, as to the objection that this is a contract which ought to be in writing, signed by the defendant, in order to satisfy the Statute of Frauds, this objection was founded principally upon a construction of the contract which, it appears to me, the contract will not bear. It was founded on the contention that the contract was either one of guarantee, or for the sale of Thompson's share in the partnership property. But the view I have taken of it is that it is neither one nor the other. It is an agreement that the defendant should pay the plaintiff \$3,000 in consideration of Thompson's debt to the plaintiff being extinguished, and as to such an agreement the principle laid down in *Goodman vs. Chase* (1 B. and Ald., 301) applies. After referring to the particular facts of that case, the Court said:—

And then the case would be that the defendant promised to pay a certain sum of money in consideration of the debt between the plaintiff and Chase junior being put an end to; which, being a detriment to the plaintiff, would be a good consideration for an original promise, and take the question entirely out of the Statute of Frauds.

There is, therefore, here a good consideration for the promise of the defendant to pay the \$3,000, and the contract is not subject to the Statute of Frauds, and parol evidence of his promise is therefore admissible. It has been urged indeed by Mr. Dickens that where an offer is made in writing, parol evidence of the acceptance is not admissible when the person accepting is the person to be charged, whether the contract is one coming under the Statute of Frauds or not. The only authority which he could cite for this proposition was the case of *Reuss vs. Pickslay*, (L.R., 1 Exch., 342). Now, the point decided in that case is, that, in cases which are subject to the Statute of Frauds, parol evidence of an acceptance of a written offer is admissible, when the person to be charged is the person making and signing the proposal. How this decision supports Mr. Dickens's contention I fail to see. The decision is based on the ground that a written proposal and a verbal acceptance make a good and binding contract, and, on principle, parol evidence is admissible to prove any fact whatever which could be proved by writing, unless the Statute of Frauds requires the proof to be in writing, or unless it has been actually reduced to writing, and the conclusion we have already come to is, that the Statute of Frauds has no application whatever to the present case. I think the point is free from all doubt. If there were any, it would be entirely removed by the judgment in *Parker v. the South-Eastern Railway Company*, 2 C. P. D., 416. Mellish, L. J., there says:—

In an ordinary case, where an action is brought on a written agreement which is signed by the defendant, the agreement is proved by proving his signature, and, in the absence of fraud, it is wholly immaterial that he has not read the agreement, and does not know its contents. The parties may, however, reduce their agreement into writing so that the writing constitutes the sole evidence of the agreement without signing it; but in that case there must be evidence independently of the agreement itself, to prove that the defendant has assented to it. In that case, also, if it is proved

that the defendant has assented to the writing constituting the agreement between the parties, it is, in the absence of fraud, quite immaterial that the defendant had not read the agreement, and did not know its contents.

And

If a person who ships goods to be carried on a voyage by sea receives a bill of lading signed by the master, he would plainly be bound by it.

The condition in the contract as to the time of payment, I look upon as an ordinary stipulation that the money was to be paid at the time named, and not in any sense, as is contended for the defendant, an agreement that the defendant should be off his bargain in case he could not, or would not pay at the time named. The clause in Mr. Talbot's letter in which he consents to the defendant advertising the dissolution of partnership from the date of the letter—interpreted as that clause is by the act of the defendant in advertising it on that very day, and the act of Mr. Talbot in at least tacitly assenting to it—shows that it was understood on both sides that the agreement should come into force at once, and that the defendant should at once have the benefit of one of the considerations for his promise. And under such circumstances, it is not to be presumed, in the absence of an express stipulation, that the promise was contemplated as one which he was at liberty to fulfil or not. It is not now necessary to examine whether the consideration was a valid consideration or not. It was evidently deemed so, it appears to me, by both the parties, and their agreement concerning it is as good an indication of their intention as if it were valid in every respect. The subsequent acts of the defendant already referred to satisfy me that he put the same construction upon the condition as is here put upon it. It is true that he has endeavoured to explain those acts upon a different hypothesis, but it appears to me that his explanation fails to reconcile them with it. The rule, moreover, which now prevails in all the Courts in England as to time not being of the essence of the contract, so far as it bears upon a case like the present, is in favour of this construction. Time is not to be deemed of the essence of the contract, unless it has been made so by express stipulation, or by necessary implication. Here there is no such express stipulation, and the implication, as I have shown, is all the other way. The contract, if conditional, was conditional in one respect only. It required that there should be an agreement on the part of Thompson to transfer his share to the defendant; and the terms of the contract admit of that agreement having been, in the contemplation of the plaintiff and defendant, already arrived at, or of being one that it was intended to conclude. The evidence satisfies me that Thompson had already agreed to the transfer, and that it was so understood both by the plaintiff and the defendant. Thompson's offer of the 23rd of May was known to both Talbot and the defendant, and the defendant, by assenting to the terms of Talbot's letter, acted upon that offer; and the contract between the plaintiff and the defendant, and the contract between the defendant and Thompson, were completed at the same moment. Nor does it appear to me that this conclusion is in any way weakened by the fact that Mr. Talbot's letter contemplated that for Thompson's agreement to transfer his share there should be, in addition to the payment of \$3,000 in discharge of Thompson's liability, such other considerations as might be agreed upon between Thompson and the defendant, and that additional terms

were subsequently agreed to between them. For there had been another consideration mentioned in Thompson's letter (and additional terms had been verbally agreed upon) and of these Mr. Talbot was aware. But it is to be observed that even if the condition had not been fulfilled on the 1st of June the results would be the same. For there can be no question that it was fulfilled during the course of that month, and whenever fulfilled (as there was in the meantime no revocation) the contract at once came into force. If the view that the condition was fulfilled on the 1st of June is taken, then the agreement between the plaintiff and the defendant having come into force on that day, it could not be affected by the question whether the defendant and Thompson introduced new terms into their agreement. In either case, it does not concern the plaintiff whether the terms, old or new, were observed by the defendant and Thompson, or by only one or neither of them. The plaintiff has nothing to do with that. The condition in his contract was that Thompson and the defendant should come to an agreement, not that they should keep it.

The objection as to want of consideration, or failure of consideration, it is desirable to consider in the first instance by itself. The strongest view to take in favour of the defendant is that the bill of sale is of no value at all, and, taking this view, does the contract disclose a good and valuable consideration? It appears to me that it most decidedly does. There was a liability of Thompson towards the plaintiff, altogether independent of the bill of sale, and the case of *Goodman vs. Chase* shows that the extinguishment of liability was a good consideration. The contract discloses other considerations, but it is unnecessary to discuss them. There is a sufficient consideration to support the contract without their aid.

It was argued that the only consideration upon which the defendant made the promise was the freeing of the partnership property from the bill of sale, and it was contended, that as the bill of sale was not binding over the property of the partnership, there was no consideration. But it appears to me that to argue that on these grounds there is no consideration, is to confound consideration with motive. The same argument was used on behalf of the defendant in the case of *Thomas v. Thomas*, (2 Q. B., 164.) E. V. Williams, the defendant's counsel, there said:—

What is meant by the consideration for a promise, but the cause or inducement for making it? Plowden, commenting on *Sharrington v. Strotton*, says, "Note: That by the civil law *nudum pactum* is defined thus: *Nudum pactum est ubi nulla subest causa, sed ubi subest causa fit obligatio, et parit actionem.*

But Denman, C. J., said:—

This is in terms an express agreement, and shews a sufficient legal consideration quite independent of the moral feeling which disposed the executors to enter into such a contract.

In that case it was decided that what was put forward as the sole consideration was no part of the consideration. In this case it is enough (for this part of the case) that what is put forward is not the only consideration. The contract shows sufficient legal consideration, quite independent of what is put forward by the defence to be the consideration. But it is pleaded that the defendant was induced to enter into the contract by the representation of the plaintiff that the bill of sale was a valid bill of sale, and was available over Thompson's share of the partnership property. There is no doubt that the plaintiff represented that the bill of

sale was so available, and it must, I think, be taken for the purposes of the present case that it was not. It is admitted on the part of the defendant that the misrepresentation was an innocent misrepresentation. If it had not been admitted, the evidence is quite sufficient to satisfy me on the point. There is no doubt that Mr. Talbot believed it, and if the plaintiff had not believed it, I am satisfied that he would have taken precautions, which he did not take. The evidence shows the defendant's estimate of him on this point is correct. "He is not a man to be put off with what he considers a piece of waste paper." This objection to the contract has also been put, upon the ground that there was a mutual mistake as to the validity of the bill of sale as affecting Thompson's share. Now, in the case of misrepresentations and in the case of mutual mistakes either of law or of fact, it is necessary that the misrepresentation or mistake must be in some material point. Is it, then, a material ingredient in the present contract that the bill of sale should be available against Thompson's share? It appears to me that, looking at all the circumstances of the contract, it is not so. If the contract had been a contract for the purchase of a bill of sale by an independent party, it would have been material to such a contract that this bill of sale should have been available against the share. And other cases can be supposed in which that element might have been a material ingredient. But in the present case the bill of sale was intended to be discharged, and even its discharge was only a collateral incident to the contract. The defendant is really in no worse position by reason of the bill of sale proving valueless. He gets all he proposed to himself to get—that is, the discharge of Thompson from his liability to the plaintiff, which Thompson stipulated for as the consideration, or part of the consideration, for the transfer of his share to the defendant. And looking at the whole tripartite agreement, he obtains from that all he proposed to himself to obtain. He obtains Thompson's share for \$3,000, and he has not been deceived as to the value of that share. But he says he would not have entered into the agreement with the plaintiff if he had known that the bill of sale was not available against Thompson's share in his business. He does not say he would not have purchased that share, or that he would not have given so much for it, but that he would have made the bargain direct with Thompson himself. Now, on this point the case of *Fellows v. Lord Gwydyr* shows that a misrepresentation causing a man to make a bargain with one man rather than with another, will not in itself give any title to relief in equity. In that case the plaintiff made a bargain with the defendant Page for the sale of certain articles, and used the name of Lord Gwydyr as vendor. The defendant Page in his answer said he was induced to enter into the agreement only out of respect to Lord Gwydyr's family, on the supposition that he was dealing with Lord Gwydyr, and upon the confidence that Lord Gwydyr would not permit him to sustain any loss which might be incurred by the re-sale of the materials. He added that the fittings up and decorations had not produced nearly the sum of £1,500. The question was whether the concealment from Page of the circumstance that his contract was not with Lord Gwydyr but with Fellows, would deprive the latter of the assistance of a Court of Equity. But the Vice-Chancellor was of opinion that even if Fellows had used the name of Gwydyr in order to conceal his bargain with

that nobleman, that was no fraud upon or injury to the defendant Page. The case would have been different if Fellows had known that Page would not have treated with him, except as representing Lord Gwydyr. The plaintiff had certainly practised concealment, but that concealment had not proceeded from any fraudulent intention, nor was it in itself calculated to do injury to Page.

Now, there is nothing to show that the plaintiff believed that the defendant would not have entered into the contract with him unless the bill of sale had been a valid one over the share. Nor, after hearing the plaintiff's evidence, am I satisfied that the plaintiff would not have entered into the contract if the bill of sale had never been mentioned. Thompson was indebted to the plaintiff in a much larger sum than \$3,000, and was being pressed by him for payment. He had his remedy against the share and against all the rest of Thompson's property by a suit in court. But that would have resulted in proceedings which the defendant was anxious to avoid. The defendant, moreover, wished to obtain Thompson's share for himself, and there is no reason to believe that Thompson would have parted with it on any terms that would have left him still indebted to the plaintiff. Even that would not have been enough for him. Part of the inducement for him to part with his share was the prospect of being started in business in Yedo by the defendant, and that could not have been done with advantage to either of them if Thompson's liability to the plaintiff continued.

Another objection taken by Mr. Dickens is that the plaintiff has not fulfilled the conditions precedent to his right to recover: that he ought, before action brought, to have discharged the bill of sale and to have endorsed the promissory note to the defendant. But this is not necessary. *Ferry v. Williams* (8 Taunton, 62) is an authority to show that all that is necessary on the part of the plaintiff in such cases as the present is a readiness and willingness to perform his share of the contract: and there was such readiness and willingness on the part of the plaintiff.

Judgment must, therefore, be for the plaintiff in the sum of \$3,000, the amount claimed, and for interest thereon, less the sum of \$977.96 and interest, admitted to be due from the plaintiff to the defendant. The parties have, in their dealings, fixed the interest at ten per cent per annum, and it will be calculated at that rate,—the interest on the \$3,000 from the 30th of June, 1876, the date upon which it was payable, and the interest on the \$977.96 from the 30th of November, 1875, the day on which the bill was paid. It will be calculated up till the last day of this month, the day on which the balance so found due to the plaintiff is to be paid. The judgment will carry costs. The order will, therefore, be, that the defendant do pay to the plaintiff the sum of \$2,268.30 on the 31st of December instant, together with taxed costs of suit, less the costs of the counter-claim up to the 12th of October.

Wednesday, 26th December, 1877.

The JAVA SEA and FIRE INSURANCE Co.,
and The SECOND COLONIAL SEA and
FIRE INSURANCE Co.

v.

FRANCIS AUGUSTUS COPE.

The plaintiffs in this case claim the sum of \$554.18. It appears that the defendant sold

a quantity of damaged rice for the plaintiffs, and for which he deducted five per cent commission. The plaintiffs state in their petition that this is in an overcharge; and that the defendant is not entitled to more than three per cent.

Mr. Dickens appeared for plaintiffs. The defendant appeared in person.

Mr. Dickens moved that the evidence of Captain Winsor, of the American barque *Annie W. Weston*, be taken, as his ship was about to leave the port.

The motion not being opposed, His Honour made an order under Rule 244 that the evidence be taken.

Henry Otis Winsor, sworn, stated:—I am master of the American barque *Annie W. Weston*. I left Yokohama on the 8th of October last, for Falmouth, England, with a full cargo of rice. On the 11th of October I encountered a severe typhoon which caused my cargo to become badly damaged by getting water into the ship. I deemed it imprudent to proceed on my voyage with the cargo in such a badly damaged condition, and so put back to Yokohama, arriving here on the 19th October, and immediately reported myself to Messrs Fischer & Co., my charterers. I consulted with Messrs Fischer & Co., and also with Mr. Von Hemert, my underwriter, about discharging the cargo. They advised me to discharge the cargo as soon as possible, and I did so. Before I commenced I saw Mr. Cope. I instructed Mr. Fischer to act as my agent in the sale of the damaged portion of the cargo. Some time after that I saw Mr. Cope, and asked him if he was going to sell the cargo. He replied that he was. About the 1st of November I called at Mr. Cope's office, and asked him if he would not return me a small commission. Previous to that I had asked Mr. Cope what the usual commission was for selling damaged cargo and he said five per cent. He had always charged Jardine, Matheson & Co. that for selling their damaged sugar. Mr. Cope said: "Let us step outside, as I do not wish my clerk to understand anything about my agreements." I told him that I would be the greatest loser as I was the largest owner in the ship, and would like a return commission. He said that he would see Mr. Becker about it and let me know. I asked Mr. Cope who Mr. Becker was; and he said that he was a gentleman who was going to assist him in the sale of the cargo. I instructed Mr. Cope to hold the proceeds of the sale for me and on account of all concerned. The parties concerned beside myself were the owner of the cargo (a Japanese), Mr. Von Hemert (the underwriter), and Mr. Fischer. Mr. Von Hemert is the party now concerned. He is the underwriter, and the cargo is abandoned. A few minutes before the sale, I asked Messrs. Becker and Cope about the little commission I had talked about. They said to me:—"If we have to give Mr. Von Hemert one per cent and Mr. Fischer one per cent, we won't get anything if we have to give you a commission." I said: "If you are going to pay those gentlemen a commission, why not return me a small commission, as I have been through everything except death, and have no money in my pocket, having returned here in distress?" Mr. Wallace was by and said that he would sell that cargo for less than five per cent. But before this Mr. Becker and Mr. Cope said:—"We'll see Mr. Fischer, and see what he says about it (the little commission)." They spoke to Mr. Fischer in my presence and said:—"Captain Winsor is going to interrupt the sale." Mr. Fischer wanted to

know what the trouble was. They said:—"Captain Winsor wants a return commission." Mr. Fischer said:—"That is your business, not mine." Mr. Becker turned round and said:—"Captain, we'll give you one per cent if we sell the cargo, which will amount to about \$200." I said "very well" and they sold a portion of the damaged part that day. While Mr. Cope was selling, Mr. Wallace made a remark to me and asked what they charged for selling that cargo, and I told him five per cent. Mr. Wallace said to me:—"That is all bosh: I would have sold it for three." I told Mr. Wallace then that I had been given to understand that five per cent was the usual commission, Mr. Cope having told me so. The cargo was sold on three separate days. I was present at the sale. Not over three hours were occupied at any one of the sales. Mr. Becker made out the account sales and handed me the proceeds. He handed me the first day's in cash—some two thousand dollars. The other proceeds he handed me in a cheque on the Hongkong and Shanghai Bank. I signed a receipt for the proceeds. I then asked Mr. Becker if he was going to give me the return commission he had promised. He felt a little indignant about returning me the commission and said: "We can't give you any commission." Mr. Cope was by at the time. I said, "Did you not agree before the sale, to give me one per cent? Mr. Fischer was by and heard you say you would do it." Mr. Becker said: "Well, we can't help that." I said: "You are not gentlemen of your word. You agreed to give me that one per cent and now I want it. But if you give me \$150, I don't care for the balance, as I need a little pocket money." They finally agreed to give me \$150, and gave me a cheque on the Shanghai Bank.

To defendant:—I never handed the account sales to Mr. Von Hemert. I handed them to Mr. Fischer, who was my agent. Mr. Fischer made no remark when I gave him the accounts. Mr. Von Hemert told me that Mr. Becker was his tenant, and he wanted to get his rent out of him, and wanted him to participate in the sales. I may have seen Mr. Becker's name in the papers without knowing him. I did not know but what you and he might be in company. Mr. Becker, so far as I know, was employed expressly at the request of Mr. Von Hemert. I went to the German Consulate in company with Mr. Von Hemert and Mr. Fischer to see about taking proceedings against Mr. Becker. I did not authorize Mr. Fischer to write to you agreeing to take \$187.53. I never authorized Mr. Fischer to write you two letters on the subject. I have never seen the printed scale of commissions and charges published by the Chamber of Commerce. Your clerk was in the office when you said "let us step out;" And you did step out, too. I acknowledge those two letters and the three receipts to be mine.

The evidence was then read over to, and signed by, the witness.

Before RUSSELL ROBERTSON ESQ., CONSUL.

Friday, December 8th, 1877.

Richard Lynch was charged with assaulting Jonathan Chadwick, Second Engineer on board the British Steamer *Bertha*, on the 25th instant.

The accused pleaded not guilty.

The complainant stated that on Christmas day Lynch went to his cabin and asked for grog. He was told that he could get none,

and was requested to go forward. This he refused to do, and so the complainant closed the door in his face, but in so doing jammed his fingers between the door and the lintel. Lynch cried out, and the door was then opened sufficient to free the man's fingers, but was immediately after closed and locked. Lynch then burst open the door, rushed into the cabin, struck the complainant with the back of his hand, and then butted him in the mouth with his head.

The complainant called a witness who substantiated his statement.

For the defence the accused called a fireman of the *Bertha*, who made a statement to the effect that Lynch went to the complainant's cabin door and asked for a "tot" of grog and was told to go forward. Chadwick at the same time closed the door on his fingers, and in order to release his fingers, the accused pushed open the door. This witness denied there having been an assault committed.

His Honour thought that there had been an assault, and fined the accused \$2 and costs, or two days' imprisonment.

IN THE FRENCH CONSULAR COURT.

Before MONS. H. PIERRET, CONSUL.

MESSRS. CONIL AND GERARD, Assessors.

Saturday, 22nd December, 1877.

LEVY v. OPPENHEIMER.

This was a demand for the production of certain original accounts for goods purchased by the defendant, a partner in the firm of Oppenheimer Frères of Yokohama, from sundry houses in Paris, in, as stated by the plaintiff's petition, his character of commission agent.

Mr. Degron appeared for Mr. Lévy, proprietor of the *Echo du Japon*. Mr. I. Oppenheimer appeared personally.

Mr. Degron, in stating his case, held that the demand was a mere demand for a right. The defendant was a commission agent, and in that capacity had bought the printing press in question, charging a commission of five per cent, and interest at the rate of two per cent upon advances.

Insisting upon the letter of the plaintiff's petition, Mr. Oppenheimer held that the matter of the printing press had been finally settled and should not be revived. He admitted, in answer to a question by the Court that he had in some cases acted as an agent for the plaintiff.

After some discussion it was decided that the plaintiff's attorney should be allowed to amend his petition without further delay.

Meanwhile it was established that the printing press had been ordered by Mr. Lévy who had covenanted to pay a certain price; that when it arrived here, owing to the increased cost of material in Europe consequent on the Franco-Prussian war, Alenzer in Paris had charged more for it than the price which appeared in a former prospectus of their firm. It cost here \$4,025 instead of \$3,500 the price mentioned in the order. The transaction terminated in Mr. Oppenheimer consenting to forego the augmented charge and in Mr. Lévy taking over the press on paying the price first mentioned with commission and costs of freight.

With regard to the account for this press, as well as other vouchers demanded by the plaintiff, Mr. Oppenheimer contended that he was a merchant and not an agent; basing

his contention, in the case of the press, upon the fact that he lost fifteen per cent on the transaction, and in the other cases that there had been no advance of money on the part of the plaintiff, who had, besides, either accepted the accounts furnished and paid for them, or thrown the goods ordered back upon the hands of the plaintiff, who had to sell them, then, at his own risk.

Mr. Degron for plaintiff held that Mr. Oppenheimer was a salaried agent and nothing more, and in so much liable to furnish original accounts for goods purchased by him on commission, whenever called upon to do so. He quoted at length from the Code on the duties and liabilities of agents.

Mr. Gambet-Gros having been called by Mr. Oppenheimer in support of his allegation that the printing-press business had been amicably settled by arrangement, mutually agreed to by the parties before Mr. Plichon,

The Court reserved judgment until Thursday, the 27th instant, at 10 a.m.

This morning the Court delivered the following

JUDGMENT.

The French Consular Court at Yokohama, deciding 1st upon the petition of Lévy that Oppenheimer Frères be compelled to produce the original accounts and vouchers which they must have received at the same time as the goods which Lévy directed him to procure from Europe on his account, from the house of Alauzet at Paris, in July, 1874, in consideration of a commission agreed upon for the benefit of Oppenheimer Frères, which claim was the principal object of his suit against Oppenheimer Frères:

2ndly, upon four other claims of the same kind relating to divers goods received from Paris by Lévy, in 1873 and 1875, under analogous conditions, which claims were formulated in the course of the hearing, in Lévy's conclusions, and which the Court added to the original petition with the consent of both parties:

After having heard the parties in their demands, pleadings, explanations and conclusions, judging publicly, commercially, and in last instance.

Seeing that if there arises from articles 94 of the Commercial Code, and 1,984 of the Civil Code, a difference between the principles of Civil law, in questions of orders and of contracts for commission, in commercial matters this difference could not be taken advantage of by Oppenheimer Frères; for the rights and duties of an agent, acting in the name of an employer, are clearly defined by article 1,984 and the following ones of the Civil Code:

Seeing that article 1,993 of this Code says expressly that "every proxy is compelled to render an account of his conduct, and to inform his principal of all he has received in virtue of his power of attorney, even when what he may have received should not have been due to the principal:"

Seeing, further, that it would be quite contrary to the nature of this contract that the proxy or commission agent, charged to act and stipulate in the name and for the sole and best interests of his employer, should become the gainsayer of the rights which the latter employed him to exercise:

Seeing that the action which arises between the employer and the agent, in order to claim from this latter the execution of an order, and the rendering of an account of his actions,

can only be limited, in the same way as all actions *real and personal*, by a term of thirty years, and that it is only after that delay that the agent is no more liable to any claim on account either of sums collected or his actions in the conduct of business (Code Civil Art. 2,262):

Seeing that, if Oppenheimer Frères, in the order relating to the four cases of machinery which they got in July 1874 from the firm of Alauzet in Paris, exceeded their powers in making the purchase at a price higher than that indicated and specified by Lévy, to whom Oppenheimer admits having given a prospectus of an earlier date, showing a wrong price; on the other hand, although in law and in equity an agent who, voluntarily or involuntarily, leads into error one of his constituents, should be held to be responsible for even trifling mistakes, for he ought to keep himself posted as to the fluctuations of the prices of the articles, orders for which he accepts, nevertheless the voluntary and express acceptance by Lévy from Oppenheimer (of the machine) for the settlement of this matter, after a friendly arrangement come to between the two parties, cannot be called in doubt, and was admitted by the parties themselves at the previous hearing:

For these reasons:

Decides that Oppenheimer Frères have not the right of limitation which they appear to claim without reason:

Refuses the demand of Lévy as regards the question of the four cases of machinery sent in 1874 by the firm of Alauzet of Paris to Oppenheimer Frères, and by them delivered to him:

Orders that Oppenheimer Frères shall hand to Lévy, within a maximum period of five months dating from the delivery of the present judgment, the original accounts or certified copies thereof, as well as the vouchers relating to the following goods which they received on account of Lévy:

1st. In September 1873, printing type and other things from the house of Laurent Deberney, and the house Boeldine, of Paris:

2ndly. At the end of 1873, six reams of paper and envelopes from an unknown house in Paris:

3rdly. At the end of 1873, *Menus* from Dovois in Paris.

4thly. July, 1875, 25 reams of paper ordered from the firm of Oppenheimer at Paris:

Orders Oppenheimer Frères to pay the costs of the suit.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON Esq., Acting Consul-General.

Monday, December 24th, 1877.

A. E. CHRISTIAN vs. F. D. WHITMORE.

The plaintiff is a pilot, and the defendant captain of the American ship *Alice M. Minott*. The petition set forth that the defendant was indebted to the plaintiff in the sum of \$66.10, for piloting the *Alice M. Minott* inwards to Yokohama, that vessel drawing 21 feet of water, and plaintiff was to be paid at the rate of \$3 per foot, which amounted to \$63; and he demanded \$3.10 for provisions supplied.

The defendant's answer was to the effect that the plaintiff was engaged to pilot the *Alice M. Minott* into Yokohama, at \$3 per foot for every foot of water the vessel drew, which amounted to \$60. This sum, together with \$3.10 for provisions

supplied by the plaintiff, the defendant into Court and prayed that the petition be dismissed with costs.

The plaintiff called the Chief Officer of *Alice M. Minott* to testify to the depth of water the vessel drew, and that person stated most emphatically that she only drew 20 feet; adding, that if she drew more she would not have been able to get away from Newcastle.

The plaintiff then made a statement about some conversation which took place between him and the defendant, during which, he said, the latter stated the *Alice M. Minott* was drawing 21 feet of water.

The defendant, his chief and third officers, were then examined, and all stated that the ship only drew 20 feet.

His Honour gave judgment for the plaintiff for \$63.10, the amount paid into Court by the defendant: plaintiff to pay the costs of the trial.

HI O G O.

Osaka is coming out in the ship building line strongly; yesterday a sailing vessel, built on the Katsugawa, left for Hiogo, that was by far the largest ever built here. She was launched about a week ago, but I only saw her from the opposite bank of the river. A foreigner who has been on board her describes her as being very broad in the beam, 34 feet; as having good lines, but as being better adapted for carrying a large cargo than for speed. She did not appear to my informant as being very strongly built; her tonnage he estimated at about 500 tons; she is copper fastened. Near her stocks no less than four steamers are being built; one of them has the engines of the old *Pahloong* and an indifferent looking boiler to boot. I wonder whether the Japanese Authorities will take warning by the awful slaughter which took place at Hongkong the other day, and organize a system of boiler inspection; I fear not. Should they do so, I recommend them to look after a piece of patchwork, intended to do duty for a boiler, which I am told is, or was very lately, to be seen on the premises of a native blacksmith within gunshot of the Governor's residence. In this infernal machine—as it probably will prove to be—the old man-hole is covered with a patch, whilst another plate is not much bigger than a sheet of foolscap.

The Japanese passion for copying the outcomings of foreigners' brains is, as most of us are aware, carried sometimes to an excess. The other day the foreign head of the Osako Chemical School was both surprised and amused at his interpreter reading to him what purported to be an original contribution to a Tokio scientific periodical, but which turned out to be identical with a paper contributed by the listener to a Dutch periodical some three years ago!

The season, so far, has been a mild one; last week I saw plum blossoms, and yesterday, in the admirably kept garden of the French Mission, peas over 3 ft. in height and full of blossom.

On Monday one of our residents shot a fox on the Concession in broad day-light and another nearly succeeded in becoming a vulpicide a few days before. Lot No 21 being enclosed, has become covered with a sort of dwarf jungle and affords fine cover for reynard.—*Corr. of the Hiogo News.*

DESTRUCTIVE FIRE ON BOARD THE STEAMER "LY-EE-MOON."

This splendid clipper steamer, which was recently purchased by the Australasian Steam Navigation Company, and employed by them in the Fijian trade, and which has lately been lying alongside the Company's works at Pyrmont, has just suffered from a dreadful casualty by fire, which has gutted the vessel, and entailed a heavy loss upon the enterprising owners. All appeared to be perfectly safe on board the steamer till about midnight on Saturday. All the parties on board at this time were the carpenter, and boatswain, and one of the stewards. About 1 o'clock on Sunday morning the watchman on the A. S. N. Company's works observed a more than ordinary light shining through the cabin windows. He immediately went on board and gave the alarm to the boatswain and the others on board, stating that he thought he had perceived the smell of fire on board. The boatswain and carpenter made their way to the steamer's saloon but on bursting open the doors they were forced back by the flames which rushed out on them. Within ten minutes from this the ship was in flames in the whole of the amidships sections. The powder magazine, which had been carried into the wheel-house on the hurricane deck, exploded, through the heat below, it is believed; and this explosion being heard by Mr. Morris, the watchman at the Insurance Fire Brigade station in Bathurst-street, led him to give the alarm.

Capt. Munro, the Marine Superintendent, who lives close by, was promptly on the spot, and he wisely gave directions that the burning steamer should be cast adrift from the wharf, and by means of chains she was moored to the Company's buoy off the wharf, and the wind being from the north-west, the fire was confined to the forward part of the ship.

Within a quarter of an hour after the alarm being given, Mr. Bown had his steam fire-engine on the Company's wharf, and other companies with engines were also promptly on the scene of action, the whole of the surroundings—the harbour and both shores with the buildings thereon—being lit up by the reflection of the flames. Superintendent Bown connected some 400 feet of hose which was passed over boats, and the steam fire-engine having been got to work, the fire was gradually got under. Provision had been made for scuttling the vessel; but these operations were discontinued when it was seen that the firemen had got the flames thoroughly under control. A number of rivets had been punched out with the view of starting a plate so as to let the water into the hold; but these holes were refilled, while there seemed to be no other resource but to sink the ship. It was suggested by some persons that she should be scuttled by a shot being driven into her from a cannon, and this was done, but without any damage to the vessel as the shot rebounded harmlessly off her hull. By half-past 3 o'clock in the morning the fire was entirely out; although the engines continued to throw a stream of water on the smouldering debris for some time after. The damage consists of the deckhouses and the whole of the upper deck. The main and foremasts have gone over the side, but the mizenmast stands intact. A portion of the main deck has been burnt through, but owing to the exertions of the brigade firemen, a large quantity of coals (about 100 tons) were prevented from catching fire, so that very fortunately the hull of

the vessel has been preserved intact. The framework of the upper deck, through the intense heat, has collapsed; and strange to say, although this heat twisted the iron boats "davits," the tackling belonging to the boats was not in any way injured. From the stem to abaft the engine-room all has been destroyed; but the engine itself has been preserved, owing to the judicious manner in which the bulkheads had been placed, and the damage to the machinery will not be of an extensive nature.

Captain Trouton, manager of the company, states that he has made every inquiry of the steward, boatswain, and carpenter respecting the fire, and that he (Captain Trouton) believes that the fire originated somewhere near the captain's cabin, or under the companion-way leading to the upper deck near which is placed the linen locker. But all agree that the fire broke out somewhere amidships.

The loss will probably amount to some £4000 or £5000. The firemen of the various companies are deserving of great credit for the part they played; and it is stated that but for services rendered by the Insurance steamer and firemen, the vessel would have in all likelihood been totally destroyed. Captain Burns, owner of Pyrmont ferry boats, when the alarm was given, got up steam in one of his boats, and towed a large punt belonging to the A. S. N. Co. alongside the burning steamer. This punt, so towed, had on board a manual engine which afterwards was effectual in preventing the spread of the flames in the after part of the ship.

The *Ly-ee-Moon* is of 670 tons register. She was formerly employed in the China trade. She was built to run letters before telegraphic communication, for Jardine, Mathieson, and Co., of Hongkong. When so employed the *Ly-ee-Moon* was a paddle boat, and was the fastest boat in the Chinese waters; but she was subsequently supplied with compound engines (those which she has now) and turned into a screw steamer.

She will probably be at sea again in a few months, with nothing to show of the damaging consequences of Sunday morning's fire.—*Sydney Morning Herald*.

A JOURNEY ACROSS CHINA.

We are indebted to the courtesy of Lieutenant Gill of the Royal Engineers, for the following particulars of a journey from Shanghai to this place, just performed by him and Mr. Mesny of the Chinese Service. Nothing official attaches to the journey, and Lieutenant Gill came out from England to Shanghai by himself, with the object of undertaking it.

Shanghai was left in February last, and the journey to Hankow made in a steamer. It took four days. From Hankow, Lieutenant Gill went to Chung Khing at the invitation of Mr. Baber, who our readers will remember, came here last year overland from China as a member of the Grosvenor Mission. Some days were passed with Mr. Baber, and then a trip was made northwards for a little distance. At Tsi-liu-ting, the fire wells were seen. These wells go down some 3,000 feet below the surface, and an inflammable gas finds its way out of them. It is supposed the strata has a bed of petroleum under it. There are brine wells also in the place, and these go down to about the same depth. The natives manufacture excellent salt out of the brine. From Tsi-liu-ting, Mr. Gill went to Cheng-tu, from thence to Sung-pan-ting on the borders of Koonoor, and on to Liung-

ngan-fu. The return to Cheng-tu was made by a different route. Here Mr. Gill remained till he was joined by Mr. Mesny of the Chinese Service, and then the two began their long, perilous, and arduous journey to Burmah over land.

Chung-tu was left on the 10th of July, or some four months ago, and, on the 25th of the same month, Tachien-lu was reached, distant about two hundred and ninety-one miles. Here, the travellers met a body of Roman Catholics, and a French Roman Catholic Bishop, from whom they received much kindness. After a halt of about a fortnight, the station was left for Li-thang, which was made in two days. The next station was Ba-thang, some three hundred and seven miles from Ta-chin-lu, and this was reached on the 25th of August. Ba-thang is almost in the thirtieth degree of latitude, and quite on the borders of Tibet. From Ba-thang, the travellers went to Atun-tze, a distance of one hundred and seventy miles, which they reached on the 5th of September. Atun-tze was left on the 9th of September, and Talifu reached on the 27th of the same month, a distance of three hundred and sixty-one miles being traversed. From Talifu, the next station was Man-wyne, which they got to on the 24th October. Bhamo was reached on the 1st of this month, Mr. Cooper kindly sending on his boat to meet the intrepid tourists.

Mr. Gill speaks of the natives as quiet and far from hostile. But he describes that part of the journey from the point at which he was joined by Mr. Mesny, as very arduous, graphically comparing it to "continually going up a staircase." Roads there are none, the way consisting of mere tracks through a rocky, mountainous country. In the neighbourhood of Ba-thang, ranges were crossed some fifteen thousand six hundred feet high. The scenery in this direction, and, indeed, all through, is said to be very pretty. The most common tree near Ba-thang was the pine, which, in some places, was seen in magnificent forests, and the trunks of many of which were about three feet in diameter. On their way down from Mandalay, it is said, the gentlemen were much struck at the difference between the two political sections of the country—Native and British Burmah. In the latter, the cultivated fields, smiling homesteads, and contented looks of the people, offered a striking contrast to what obtained in the other.—*Rangoon Daily Review*, 17th November.

HAKODATE.

20th December, 1877.

The American steamer *Courier* left on the 19th instant for Kobe. The M. B. M. Steamer *Takachiho Maru*, which takes this, has been daily circulated to leave for Yokohama during the past week. She may possibly get away to-night or to-morrow morning. Communication with Awomori is tolerably frequent now, as the Kaitakushi keep two small steamers on the line, and the Hokaido Shokwai (or Company) one, the *Zensae* (formerly *Nijapatam*).

Only one submarine cable across the Tsugar Strait is now in working order.

Range of temperature during the last five days 21° to 48°: weather very unsteady but mostly cold. Snow in heavy squalls to-day.

The Consuls have had two meetings at the Custom House regarding a proposed innovation in the Customs' rules hitherto followed at this port. No distinct agreement has been yet come to; but the commissioner has seen fit to modify very considerably his first demands.

PROSPECTUS

OF THE

SOCIETY

FOR THE

PROMOTION

—OF—

CHARITABLE OBJECTS.

MANIFESTO OF THE SOCIETY.

ALL men are endowed with the disposition to do good; in this respect the distinctions of educated and ignorant, sage and simpleton no longer hold.

Yet though this disposition exists, its reality cannot be credited, unless it assume some form of action, and amongst these many forms none takes precedence of that which goes about to support the indigent and infirm, or to succour and educate the deformed; for those gather from the precepts of piety and patriotism moral strength and heart healing, while these, despite their physical infirmities, taught how to become useful members of society, develop powers of diligence and perseverance that ultimately place them in positions of independence.

Accordingly in all civilized countries, there are poor-laws, as well as institutions for the succour of the blind the mute and the insane, maintained either by the government or by private contribution, so that "the lamp of charity glowing overhead, and the breath of benevolence breathing through the land," the very culminating point of philanthropy has been attained.

Now it has hitherto been the custom in our country to leave to the government the execution of all works of charity. Private contributions have never aimed at more than the celebration of festivals or the achievement of pilgrimages, while the nobility and the wealthy have only subscribed to the building or decoration of the temples. But now in these days of universal reform, the people also must consider what effort they can make to further the good work, and in the same spirit that evoked their contributions for other purposes of old, must set themselves to become active members of the new commonwealth.

It behoves us, who are fortunate enough to be men endowed with hearts that guide us to the good and strength to follow this guidance, not to squander the great gifts of a beneficent Creator, but each in our several spheres to perform the duties that fall to our lots with patience and unflinching perseverance, so that, strong in truth and unanimity, we may achieve the purpose of our nature in the exercise of the right.

Did even those, and they are not a few, who—steeped in indolence and lust, wasting their money in idle pursuits, lulled into an evil dream by voluptuous pleasures, or devoted to quarrelling and injustice—know nothing of the priceless pleasures begotten by work and well-doing—did even these turn their eyes honestly inwards and reflect, they would see that the bestowal of even a small alms on a deserving person gives a finer satisfaction of well-doing to the giver, as

well as a thousand times more joy to the recipient, than the lavishing of large sums on unworthy objects.

Western philosophers say that "A man's nature is written in his account-book," and verily it is so!

We then, stirred by the example of the earnest workers of the world, and with the hope that our united action may achieve something for the general good, have formed ourselves into this "Society for the Promotion of Charitable Objects."

Our general aim is to collect funds for charitable purposes, and our especial one to establish an institution for the training and education of deformed persons, a want which is at present entirely unsatisfied.

As the halt and the maimed are a burden and a care to the whole community, so the education that makes them independent, confers a universal benefit. This fact particularly recommends their case to the consideration of thinking men, and ought also to induce us who are blessed with the possession of all our faculties, and who have food and clothes in abundance, to spare a little for the less fortunate by curtailing our own wants. The cripple is indeed physically imperfect, but his moral endowments are none the less complete, and if every ethical code, whether ancient or modern, teaches us that it is the duty of a humane government, by educating these faculties, to gain admission for the afflicted to the fraternity of his fellow-men, how much more does such a principle accord with the dictates of that Providence, whose unerring hand, meting out blessing for the just and bale for the evil-doer, has written beyond the reach of all doubt this promise, "Virtue toiling in the darkness shall be rewarded in the noon-day". That this is the creed of all Christian countries it is unnecessary to say, when philanthropy is the main article of the tenets of Buddhism, and charity the cardinal duty of a Mahometan.

For these reasons then, and because our country is now steadily launched upon the stream of progress, we have formed this Society whose aim is the devotion of all its members' energies to the consummation of benevolent ends; and though we are beholden to the Government for its countenance and moral support, we shall not be dependent upon it, but by the aid of general subscriptions shall endeavour to achieve some work worthy of the State's reform.

We have held many meetings and have decided to devote our energies to the establishment of a college for the blind: and since we see not a few good men who, with the ability and volition to do well, are yet awaiting some opportunity, we, combining our strength, small though it be, have formed this project, hoping nothing more than that it may afford an outlet for the benevolent energy of our countrymen.

None who are physically deformed ought to escape our pity, but we elect first the blind, because compared with other countries our own has a particularly large proportion of them, and also because an apt opportunity just now presents itself.

Follow-philanthropists! we pray you, give us your confidence, and entrust to us any money you propose to devote to charity. We shall either allot it immediately in alms, or else put it by as capital, and apply the interest to the education of the deformed, that these, becoming useful members of society and intelligent units of the commonwealth, your noble aims may have fair fulfilment, and your good deeds large development.

We fifteen men shall form the nucleus of this association, and undertake the duties of management, month about; but what we most earnestly desire is that all the benevolent persons of our country, without distinction of rank or position, should join us and help us where our strength fails, or direct the affairs of the society in our stead.

And now one word in conclusion.

Having put our hands to this work we have sworn solemnly that we will never abandon it whatever calamity overtake us. The proverb tells us. "Money is the handmaid of mercy," and "Heaven the guardian of virtuous aspirations." What fear then that we, lightly misapplying your money, should frustrate the purpose of charity and paralyze the agent of benevolence!

Names of the Members.

C. URATA.	S. O-OUCHI.	Y. YAMAOU.

N. B.—The above are given in Japanese alphabetical order.

OBJECTS OF THE ASYLUM FOR THE BLIND.

The aim and wish of the founders of this Asylum is to develop the mental resources of the blind, and teach them arts and sciences which may enable them to become independent members of society. The following is an epitome of the principal practical means proposed for this end.

I.—All those admitted to the asylum will be called pupils, and it is to be clearly understood, as a fundamental principle of the institution, that it is intended to assist the industrious, not the indolent blind.

II.—The heads of instruction will be divided into two classes.

Class I.—To comprise instruction in literature by means of raised type, oral instruction in physics and classics, instruction in singing and playing on musical instruments, Japanese and Foreign, and instruction in trades adapted to the sex and physical condition of the pupil.

Pupils entering this class not to be more than 17 years of age, those who pay their own fees, however, excepted.

Class II.—To comprise, in the main, instruction in handicrafts, with oral instruction in morals every holiday.

Pupils entering this class not to be more than 40 years of age, those who pay their own fees, however, excepted.

III.—Food, clothing and all other necessities will be provided from the funds of the association for the free pupils, but the proceeds of the sale of their work while under instruction will be added to the capital of the asylum; any surplus being, however, placed to the credit of the individual, and the aggregate handed to him when he leaves the asylum.

IV.—Pupils will be admitted on payment of such fees and *honoraria* as may be determined by the members of the society; the amounts, however, in every case to be *minima*.

V.—The number of pupils, whether free or on payment, will be regulated by the decision of the members, in accordance with the capabilities of the building, and the condition of the funds.

SHANGHAI.

•We understand that the total applications for the Loan have amounted to £3,700,000, of which about £1,000,000 was applied for in London, and nearly a similar amount in Shanghai. It was expected that it would be taken up readily, but we fancy the actual success has been greater even than the promoters anticipated.—*N.-C. Daily News.*

The Governor of Honan estimates the number of persons requiring relief in that province at 2,000,000; and says 300,000 piculs of rice monthly are required to feed them. All the money allotted to the province, together with the grain appropriation, has only enabled the accumulation of some 140,000 a 150,000 piculs.—*Idem.*

We hear of a private telegram having been received yesterday (20th), advising insurance against war risks, which looks as though England might be dragged into the war. Other telegrams, however, make no such allusion.—*Idem.*

Some 5,500 bales of silk are said to have been settled since the last mail, and it is expected that the *Djemnah* will probably take over 7,000 bales, including 2,500 kept over from the previous week. The improvement in the aspect of French politics, in consequence of Dufaure's succeeding in forming a Ministry is, we presume, the chief cause of this large business. But it is a noteworthy fact that the Chinese do not seem to have been influenced by the news, and this large business has been done without causing any material rise in the market. In fact, it was not till some 4,000 bales had been settled, that a higher rate was established, and the rise has not exceeded Tls. 5 to 10 a picul. This is a curious, and, we might almost say, unprecedented feature; the Chinese being generally keenly alive to profit by any improvement in the foreign demand. In the present instance, however, it is said, they can replace their stocks at about Tls. 20 a picul less, in the interior; and until yesterday afternoon they were willing sellers. We hope it may prove that they, and not foreigners, are mistaken.

It is rather curious that nearly as much silk has been bought during the last four days, as during the first four months, of the present season.—*Idem.*

A decree covering thirty-eight pages of the *Peking Gazette* of the 27th November, grants postponements of taxation in many hundreds of townships in the province of Shantung, in consequence of the suffering experienced through "flood, drought, locusts, alkalisation of the land, &c."—*Idem.*

The same *Gazette* mentions the munificent gift of Tls. 17,000 to the relief funds in Shansi, by a notable of the Ping-yao district named Li Chen-she, "in fulfilment of the wishes of his deceased mother." The family is evidently one of great wealth, as reference is made to former contributions which had been rewarded by the conference of rank and title.—*Idem.*

The P. & O. S. N. Co.'s steamship *Thibet* took the following silk:—For London, 1,148 bales; Lyons, 32; Marseilles, 10; Milan, 105; Basle, 10; Bombay, 124; Penang, 10; Singapore 12; Hongkong, 5; total, 1,456 bales; and 28 bales waste silk, for London, and 2 for Bombay.—*Idem.*

The Viceroy and the Governor of this province (Kiangsu) ask formal sanction to the disbursement of considerable sums required to meet the expenses of capturing the flights of locusts which have overspread the province on both sides of the Yangtze. "The drought of the season is likely to have encouraged the development of fresh broods, and although the most active efforts have been instituted to cause their extirpation, it has not been possible to effect this altogether." In one district alone, Tls. 2,400 have been expended in rewards for destroying the insect, and altogether very large sums are needed. The scale of rewards given is 80 cash a catty for the grub before it emerges from earth; 10 to 20 cash for the larva in its first stage of development, and 5 to 10 cash a catty for the fully developed insect.—*Idem.*

TIENTSIN.—I hear that the Spanish Minister has not had quite such a triumph over the Chinese in his treaty and negotiations, as was stated. The Chinese are boasting that they have given him nothing in the new treaty, and that he has even had to surrender one of the principal clauses of the former treaty permitting Chinese to emigrate to Cuba; and that all future emigration is surrounded with such onerous conditions that it is rendered unfeasible. If this report be not true, the sooner it is contradicted the better. 8th Dec.—*Idem.*

The fifteen steamers that were at Taku ten days ago have returned to Shanghai, and the Northern trade may now be considered over for the winter. We have often mentioned, during the last three weeks, that ice was accumulating in the Peiho River, and we understand that it is now about a week since it was closed to navigation above Taku. The steamers *Hweiyuen*, *Golden Horn* and *Maharajah* were the last whose cargo had to be lightered by the *Leeyuen*, *Yungching* and *Yehsin* over the Bar and taken to Taku; these six steamers have all arrived here during the last two days, and the *Maharajah* and *Golden Horn* are now taking in cargo for the South. The majority of the steamers which run on the Northern line, are now either anchored in the river or on the berth for Southern ports.—*Idem.*

Amongst the arrivals by last English mail was Mr. Barnett, a coal mining engineer, we understand, engaged by the Chinese for opening the Kui-ping mines in the North. We notice that our morning contemporary expects a duplicate of this gentleman.—*Idem.*

Shipping.

ARRIVALS.

Dec. 22, Jap. str. *Hiogo Maru*, Christensen, 596, from Kobe, General, to M. B. Co.
Dec. 22, Frch. str. *Volga*, Rolland, 1,502, from Hongkong, Mails and General, to M. M. Co.
Dec. 24, Brit. ship *Duke of Abercorn*, Binnie, 1,050, from Shanghai, Ballast, to Ed. Fischer & Co.
Dec. 24, Brit. barque *Oceana*, Firth, 450, from Nagasaki, coal, to Jardine, Matheson & Co.
Dec. 24, Brit. brig *Oceanus*, Brorson, 320, from Shanghai, Iron, Kerosene, &c., to Lane, Crawford & Co.
Dec. 23, Jap. str. *Takachiho Maru*, Sikemeier, 1,407, from Hakodate, Mails and General, to M. B. M. S. Co.
Dec. 25, Brit. str. *Malacca*, Smith, 1,709, from Hongkong, Mails and General, to P. & O. Co.
Dec. 26, Brit. barq. *Lord of the Isles*, Watt, 300, from Takao, Sugar, to Chinese.
Dec. 27, Am. str. *City of Peking*, Tanner, 5,079, from San Francisco, Mails and General, to P. M. S. S. Co.

Dec. 29, Jap. str. *Tokio-Maru*, Swain, 2,118, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
Dec. 29, Am. str. *City of Tokio*, Maury, 5,050, from Hongkong, Mails and General, to P. M. S. S. Co.

DEPARTURES.

Dec. 23, Brit. str. *Belgic*, Meyer, 1,716, for San Francisco, Mails and General, despatched by O. & O. Co.
Dec. 25, Brit. str. *Bombay*, Briscoe, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.
Dec. 27, Brit. ship *Duke of Abercorn*, Binnie, 1,050, for Owari Bay, General, despatched by Ed. Fischer & Co.
Dec. 25, Russ. gun-boat *Vsadnick*, Capt. Novosilsky, 1,068 tons, for Naga-aki.
Dec. 27, Am. ship *Alice M. Minott*, Whitmore, 1,100, for Hiogo, to Load Rice for Europe.
Dec. 27, Jap. str. *Saikio-Maru*, Vroom, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
Dec. 28, Brit. str. *Zanzibar*, G. Gardiner Fox, 1,604, for Kobe, General, despatched by Findlay, Richardson & Co.
Dec. 29, Brit. barq. *Alice*, —, 65', for Kobe, Ballast, despatched by Ed. Fischer & Co.
Dec. 29, Brit. brig *Maid Marion*, Forrest, 298, for Kobe, Ballast, despatched by Ed. Fischer & Co.

PASSENGERS.

Per Frch. str. *Volga*, from Hongkong: Mr. and Mrs. Nordenstedt, Messrs. Baldwin, Katti, Nurtz, Nakamura, Kono, and Koshira.
Per Brit. str. *Belgic* for San Francisco:—Messrs. G. Farley, Jnr., Wm. White, Geo. W. Pye, and two in steerage.
Per Brit. str. *Bombay* for Hongkong:—Surgeon Ferguson, R.N., Messrs. Campion, R.N., Maires, B. Cooper, Snowden, Espury, Stokes, Ling Koye, Lim Poh; and 13 Chinese in steerage.
Per Brit. str. *Malacca* from Southampton:—Messrs. T. Obata, Mochinaki, Nakimigawa, and Nabeshima. From Brindisi:—Mr. Arnold; and 7 Chinese on deck.
Per Am. str. *City of Peking* from San Francisco:—For Yokohama and Shanghai, etc.: Mr. Paul Fitzsimons, U.S.N., Miss A. Gotz, Mr. and Mrs. M. G. Moore and family, Dr. and Mrs. H. H. Winn, Rev. and Mrs. T. C. Winn, Messrs. J. F. Twombly, A. Platt, H. S. Chipman, H. F. Kinnear, Mr. and Mrs. Wash Norton, Messrs. John Drew, K. F. Kirk, George E. Ratcliffe, T. Mitsunaka, and Carl Steele in the cabin. For Hongkong: Mr. and Mrs. J. Brander, Messrs. John Higgin, and W. K. Robertson in the cabin; and 632 Chinese in the steerage.
Per Jap. str. *Saikio-Maru* for Shanghai and ports:—Miss Gotz, Mr. and Mrs. Bosman, Mr. and Mrs. More and 3 children, Mr. and Mrs. Nordenstedt, Mr. and Mrs. Griffin, Lieut. Mikani, Lieut.-General and Mrs. Miura, Messrs. Eda, J. A. Stewart, P. Fitzsimmons, P. Rouley, R. H. Elliot, J. Walsh, E. C. Kirby, E. S. Benson, T. Shann, H. N. Tileston, and 23 Japanese in the cabin.
Per Jap. str. *Tokio Maru* from Shanghai and ports:—Mr. and Mrs. E. D. Murray, Mrs. Graham, Mrs. Gurado, Mrs. Buckle, Yates, Messrs. B. Dallas, T. Fousset, C. Riddle, F. Low, Doukin, Litchfield, Ishikawa, and 12 Japanese in cabin; and 4 Europeans, 4 Chinese, and 178 Japanese in steerage.

FOR AMERICA.

Messrs. J. S. Fearon, O. E. Vreeland, and W. Evarts.
Per Am. str. *City of Tokio* from Hongkong:—Messrs. Chas. E. Hill, H. M. S. Ismael and servant.
FOR SAN FRANCISCO.
Mrs. Loring in cabin; and 2 Hindoos and 163 Chinese in steerage.

REPORTS.

The American steamer *City of Peking* reports:—Left San Francisco Dec. 4th, at 12 M., with 24 cabin, and 637 Chinese steerage, \$397,304.00 dollars treasure, 782,29/40 tons cargo, and 26 bags mails. We bring for this port and Shanghai, &c.: 19 passengers cabin, 211.13/40 tons freight, 20 bags mails. Weather: strong West, and South-West winds with rough sea.

The American steamer *City of Tokio* reports:—Left Hongkong on the 22nd Dec., with 4 cabin, 2 Europeans and 171 Chinese steerage passengers, 1,547 tons cargo, and 3 packages Mails. Had strong monsoon, with head sea, up to the islands; thence to port, smooth sea, with fog and rain.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

In the week's interval since the publication of our last report, the demand then noticed for Yarn still continues at firmer rates: large contracts have been made to arrive; and the Hongkong market has been cleared of all its surplus stock sent on to this port. Other goods are unchanged and quiet. Sugar has fallen considerably, Formosa brown being without buyers at \$4.00.

The ship *Arbecarne* with general cargo from London via Hongkong, the ship *Duke of Abercorn* in ballast from Shanghai, and the brig *Oceanus* with iron, kerosene, &c., from Shanghai, have arrived. Transhipped cargo ex *Gange* (23rd Oct.), from London; *Iraouaddy* (4th Nov.), from Marseilles; and *Malwa* (9th Nov.), from London, is also to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Immediately after the issue of our last report, dated the 22nd instant, telegrams respecting the political situation in Europe caused several buyers to pause; this, coupled with the Christmas holidays, has produced an almost entire suspension of business, nor does it appear likely that it will be resumed until after the termination of the native New Year holidays, a week hence.

Settlements during the short period under review hardly amount to 200 bales; arrivals during the same period being about 300 bales.

Most of the above business was done at about last quotations. Holders appear disposed to accept rather lower rates, but during the last few days the business done has hardly been sufficient to test prices: we therefore repeat our last quotations.

The P. & O. S. S. hence on the 25th inst. took 778 bales, bringing up the export as follows.

	1877/8.	1876/7.
London.....	bales 8,234	bales 9,066
France.....	" 6,654	" 8,342
Italy.....	" 1,193	" 715
United States.....	" 552	" 62
Total.....	bales 16,633	bales 18,185

TEA.—Our market has been nearly suspended owing to the Christmas holidays. Settlements since date of last issue amount to 940 piculs, and prices shew no alteration. Supplies come in slowly, and Stocks to hand are mostly low class fine Teas.

The *Willard Mudgett*, for New York, has promised despatch to-morrow, leaving the *Messenger* on the berth for New York at £1 10s. per ton of 40 cubic feet.

DESCRIPTION.	PRICES PER PICUL.	REMARKS.
SILK:—		
Mayebashi } Hanks 1 to 2	\$ 600 to 610	All more or less nominal.
